The observance of the second days of the holy days (see Festivals) has been discontinued, as there is at present no uncertainty concerning the proper day. Minyan is not determined by the presence of ten men. The Dukan of the priests is abolished, since the privileges of priest and Levite are sacerdotal and thus bound up with nationalism. The priestly benediction is recited by the reader with reading changed from "Aaron and his sons, the priests, Thy holy people" to "Aaron and his sons, the priests of Thy holy people" (from כהנים to כהני). In the understanding of what the proper observance of the Sabbath requires, Reform Judaism rejects the legalism of the rabbinical scheme, with its insistence on ‘Erub, teḥum, and similar legal fictions. Work is interpreted to be "labor for profit," and not merely such work as was undertaken at the construction of the Tabernacle in the desert (see Sabbath). Many of the Reform congregations have introduced supplementary Sunday services, or have set the Friday evening service at an hour later than the "reception of the bride Sabbath" (קבלת שבת), and have changed its character by introducing "lectures." The regular sermon constitutes the principal feature of the Reform service. Reform synagogues are generally called "temples" after the Hamburg precedent, probably to indicate that they take the place of the temple in Jerusalem, which Orthodoxy looks forward to as the to-be-restored sanctuary.

——**History:** Although the Reform movement in Judaism as such dates from the opening years of the nineteenth century, still its beginnings must be sought in the radical changes wrought in the life of the Jews during the closing quarter of the eighteenth century. That stirring era of emancipatory efforts of various kinds, political, educational, social, and religious, affected no section of the people more markedly than it did the Jews, who, in the ghettos to which they had been forced to confine themselves for centuries, had been virtually cut off from the life of the world.

Predisposing Factors.

Various agencies combined at this time in urging the title of the Jews to the common rights of mankind. Politically, the American and the French revolutions occupy the foremost place; the influence of the doctrines which these struggles brought to the fore gradually effected the removal of the political disabilities of the Jews, particularly in France, England, Germany, and Italy. Educationally, the work of Moses Mendelssohn furnished the impetus; his translation of the Pentateuch into pure German was the "open sesame" which unbarred for the Jews the gates leading to the treasure-houses of the world's learning. This translation achieved, too, what may be termed a linguistic emancipation; as long as Yiddish was their language the Jews were debarred from the intellectual companionship of the masters of thought, but when they succeeded in acquiring the German language in its purity, the domain of Kant and Lessing, Goethe and Schiller, was open to them, and their outlook upon things was changed materially.

In connection with this the founding of schools wherein secular instruction was given to Jewish children may not be overlooked; in 1778 the Freischule, the first of its kind, was opened in Berlin; in 1781 the emperor Joseph II. of Austria issued his famous "Toleration Edict," wherein he commanded the establishment of such schools throughout his empire. Hartwig Wessely addressed an epistle to his coreligionists urging them to comply with the injunction of the emperor. But a number of rabbis pronounced the ban upon this epistle of Wessely's, as they had upon Mendelssohn's translation of the Pentateuch. They felt that the acquisition of the culture of the age which the knowledge of German and the newer education were making possible would result in a breaking away from the old religious moorings; and this proved to be the case. Religious reform was the outcome of the educational and linguistic emancipation.

Attitude of Mendelssohn.

Mendelssohn is spoken of frequently as the founder of the Reform movement in Judaism. This rests upon a misconception. True, he made the movement for religious reform possible by giving the impulse to modern education and culture among the Jews. But a religious reformer he was not. His conception of Judaism was that it is a divine legislation, and he held that since the ceremonial law was revealed by God, it will have potency in all its minutiæ until such time as a distinct second revelation repeals it ("Jerusalem," p. 31). The Reform movement, through its foremost expounders, taught the very opposite. Whereas in Mendelssohn's view every ceremony has eternal validity, the reformers claimed that ceremonies are the transitory expressions of the religious spirit, and must be accommodated to the changing needs of successive ages. The spirit of an age also is a revelation of God, and this may demand the abolition of observances that had religious sanction at one time, and require the institution of others (Holdheim, "Gesch. der Berliner Reformgemeinde," pp. 94, 127; *idem*, "Das Ceremonialgesetz im Gottesreich (Messiasreich)," pp. 58, 68; "Ueber die von Mendelssohn in Jerusalem Geäusserte Ewige Verpflichtung des Ceremonialgesetzes," in "Israelit des Neunzehnten Jahrhunderts," vi. 153).

An indication of the tendency in the closing years of the eighteenth century to disregard traditional customs is presented by a remarkable book which appeared in Berlin in 1793 under the title "Besamim Rosh." It was a collection of responsa purporting to be by Asher ben Jehiel, the great rabbinical authority of the fourteenth century, and was published by Saul Berlin, son of Hirschel Levin, chief rabbi of Berlin. In it such reforms are sanctioned as the use of rice and pulse on Passover, and of cheese and wine procured from non-Jews; the use of a knife for shaving; riding on the Sabbath; the cancellation of the obligation to abstain from eating during the Fast of Esther; eating before the stars appear on all fast-days except the Day of Atonement; the suspension of fasting on Tisha‘ be-Ab in order that the feast at a circumcision may be partaken of; the elimination of piyyuṭim from the service on New-Year's Day. All of these dispensations were, of course, conditioned by circumstances.

Obviously, Saul Berlin, influenced by the forward tendencies of his age, wrote these responsa and ascribed them to Asher ben Jehiel, not daring to advocate such reforms in his own name, but hoping to obtain sanction for them by crediting them to a paladin of Rabbinism. The book and the author were assailed by Marcus Benedict, the chief rabbi of Moravia, who denounced the production as spurious; and it was defended as zealously by Hirschel Levin, the father of Saul Berlin. A letter addressed by this Levin to the Berlin congregation throws a most interesting light upon conditions at this critical juncture, when the old Judaism was struggling to retain its hold and the new had not yet made its appearance. The old rabbi recognized that changes were impending; Judaism seemed to him in great danger and to be nearing dissolution. Because of this distressing condition of affairs he stated in his letter that he desired to resign his office and end his days in the Holy Land, since he could not endure any longer to witness the decay of religious life among his people. From expressions like this it becomes evident that many Jews had ceased to conform to rabbinical practise. There was a conflict between the traditional interpretation of the faith and the larger life the people were leading. Partaking of the philosophical and literary culture of the time, numbers failed to find religious satisfaction in the observance of many forms, customs, and ceremonies which had been accepted unquestioningly by their fathers as constituting an essential element of the faith. The old Berlin rabbi, and such as he, knew but one rule for the Jew, and that was the faithful observance cf every item of religious practise as codified in the Shulḥan 'Aruk. About him, however, were hundreds upon whom this obligation sat lightly, or who disregarded utterly many an injunction that he considered of supreme importance.

Berlin's "Besamim Rosh."

But although change was in the air, the eighteenth century witnessed only one practical demonstration of the working of the new spirit; and this occurred not in Germany, but in Holland. In 1796, after great agitation, a congregation was organized in Amsterdam under the name of "Adath Jeshurun," whose avowed purpose was to introduce certain reforms; but the results were painfully inadequate: they consisted merely in the abolition of some piyyutim wherewith the synagogal service had become overburdened, and the use of the vernacular in public addresses.

Israel Jacobson.

In as far as any one individual can be credited with being the pioneer of the movement for introducing reforms into the Synagogue, that credit belongs to Israel Jacobson. Jacobson noted with distress the indifferent attitude of many Jews toward their faith, for he was deeply attached to his ancestral religion; he came to the conclusion that this indifference was due to the fact that Judaism had degenerated into a lifeless formalism which could not possibly appeal to such as regarded religion as the depositary of spiritual truths. Form and ceremony had usurped the place of the essentials. The services in the Synagogue were unintelligible, and the disorder and indecorum prevalent there did not tend to further the spirit of devotion. Jacobson became convinced that the only method whereby these abuses could be corrected was the reform of the service. He proceeded cautiously. He began his activity in the cause of Reform by founding a school at Seesen, in which the children were instructed in secular subjects in addition to the Hebrew branches, and a religious service was instituted. Features were introduced at these services which would not have been tolerated in the Synagogue, such as songs and sermons in the vernacular. These services were attended frequently by adults who, becoming accustomed to hearing the German language at a religious service, were readily enlisted in the cause when the time came for inaugurating reforms in the house of worship; and when the children who attended this and similar schools grew to maturity, they likewise became hearty supporters of the new movement.

But Jacobson's real opportunity did not come until the time of the French occupation of Westphalia. On March 31, 1808, a Jewish consistory was established in that province after the French model, and Jacobson was named president. Determining to use his position to carry his Reform ideas into practise, he induced his colleagues to found at Cassel a school similar to that at Seesen. A place of worship was built in connection with the school, and every Sabbath services were conducted partly in Hebrew and partly in German; a member of the consistory (which was made up of the president, three rabbis, and two laymen) preached a sermon in the vernacular, and German songs were sung. The rabbinical members of the consistory took pains to explain that these reforms were not antagonistic to any traditional rabbinical enactments. The success of this departure encouraged Jacobson to take a bolder step. At his own expense he erected a temple at Seesen, placing in it an organ, and forming a choir from among the pupils of the school.

First Reform Temple, 1810.

This, the first Reform temple, was dedicated with elaborate ceremonies on July 17, 1810. The occasion was described bombastically as the "festival of the Jewish Reformation." Jacobson was lauded extravagantly by sympathizers of the movement as the regenerator of Judaism. He took these praises seriously. He really thought that the religious ills that had been corroding the very vitals of Judaism were now removed. But the evil was beyond his power to fathom. The reforms wherewith his name is associated were purely external. He did what he could, according to his light; but he did not penetrate to the seat of the distemper that was playing such havoc with the inherited traditions. Observing that many an unesthetic custom had crept into the divine service, and that the prayers were unintelligible, he thought that the introduction of German sermons, German songs, and German prayers would render the religion a living entity to his generation, as it had been to the fathers; but these few external reforms touched merely the surface of the trouble. Still, with all his limitations, his fame is secure as the opener of a path that many others followed later.

This first attempt at Reform was purely local; it

First Berlin Reform Synagogue.

did not spread beyond Westphalia. When the French occupation of that province ceased, the French institutions, among them the Jewish consistory, were abolished. But this did not end Jacobson's activity in the cause of Reform. At the Feast of Weeks (1815), on the occasion of the confirmation of his son, he established a Reform service in his own house in Berlin, whither he had removed from Cassel. From that time a weekly service was conducted in Jacobson's home, the distinguishing features of which were music by a choir, with organ accompaniment, and sermons and prayers in German. (It may be stated here that the first confirmation service in the history of Judaism was held at Cassel, in 1810, under Jacobson's supervision.) The attendance at these services soon exceeded the accommodations afforded by Jacobson's house, and in consequence Jacob Herz Beer, a wealthy banker, father of the composer Meyerbeer, instituted similar services in his home. But the government, appealed to by the Orthodox party to stop these services on the ground that they undermined the traditional Jewish faith (1817), ordered all private synagogues closed. Beer evaded immediate obedience to this decree by the subterfuge that, because the communal synagogue was undergoing repair, his private temple must be used as a temporary house of worship for the community. The struggle between the two parties now began in earnest. The rabbis of Berlin, whose chief was Meyer Simon Weyl, were opposed unalterably to any reforms, even the preaching of sermons in the vernacular. A number of compromises were suggested, but none proved acceptable. The outcome of this first clash between the two schools of Jewish thought in Berlin was a complete victory for the traditionalists. The government was reactionary and opposed to reforms of any kind anywhere. On Dec. 9, 1823, a decree was issued to the effect "that the divine services of the Jews must be conducted in accordance with the traditional ritual and without the slightest innovation in language, ceremonies, prayers, or songs." This decree stopped effectually, for the time, all efforts at reform in the Prussian capital; the Beer temple was closed, and the old order was continued.

The Hamburg Temple.

In 1817 Eduard Kley, who had been one of the preachers in the private Reform temple at Berlin, removed from that city to Hamburg to accept the post of principal of the Jewish Free School in that city. He began to agitate for a reformed service almost immediately, and, finding a number of sympathizers, organized a Reform society. Active steps were at once taken for the erection of a house of worship, and on Oct. 18, 1818, the building that became famous as the Hamburg Temple was dedicated. The bitterest opposition was engendered. But the issue between the traditionalists and the reformers was not as clear-cut as it might have been; although protesting ostensibly against Rabbinism, the reformers sought to justify their reforms from the rabbinical standpoint instead of standing firmly and uncompromisingly upon the right to institute such changes in custom and interpretation as the altered conditions of their day demanded. The Talmud was the norm of authority for Rabbinism; for centuries Judaism had been held to be synonymous with Talmudism. It excites little wonder therefore that the early reformers sought to find Talmudic support for their innovations. It was an artificial attempt. The spirit of the new time was opposed to the spirit of Rabbinism, and the religious point of view of the Jew who was an emancipated citizen of the state was altogether different from that of his forefather, the isolated pariah of the ghetto.

Like other compromises, this too was unsatisfactory, but it was not recognized to be so till a much later day. The introduction of the first reforms, however, really sounded the death-knell of the authority of the Talmud as the absolute rule for Jewish practise among those who followed the Reform teaching, although years before the Reform movement took shape this question had been decided; for to all intents and purposes the Talmud, or rather its codification, the Shulḥan 'Aruk, had lost its hold upon Jews of modern culture. It is true that it continued to be recognized officially, and the struggle promised to be long ere its authority would be renounced definitely by any representative body. (This step was later taken by the Central Conference of American Rabbis, at the Rochester meeting in July, 1895; see "Year-Book of Central Conference," No. 6, p. 63.)

From the present standpoint the issue between the party of tradition and the party of Reform is seen to have been well defined; the two parties represented two incompatible tendencies. The former held to past practise and custom in all particulars; the latter declared that the dead hand of the past must not be permitted to rest upon the present, and that, unless the expression of religion conformed to the requirements of living men, these would drift away from its influence altogether. The one party defended the principle of stability and immutability in religious practise and belief, the other that of progress and change. That this difference was not understood at first is rendered very apparent by the Hamburg movement. There was no thoroughgoing definiteness. A few changes in the liturgy, the introduction of German prayers, and the use of the organ comprised Reform for the Hamburg Temple. As in the innovations made by Jacobson at Seesen, the estheticization of the service seemed to be the be-all and end-all of the work of the reformers, though it is true that the partial omission and the partial modification of the prayers for the coming of a personal Messiah indicate some consciousness of the deeper significance of the new phase whereon Judaism had entered.

The three rabbis of Hamburg, Baruch ben Meïr Oser, Moses Jacob Jafe, and Jehiel Michael Speier, issued a proclamation denouncing the heresies of the new movement; they even attempted to induce the senate of Hamburg to close the new house of worship. This caused the reformers to bestir themselves. The officers of the new congregation requested expressions of opinion from rabbinical authorities on the validity of the reforms they had introduced. This resulted in the publication of "Nogah Ẓedeḳ," with an appendix, "Or Nogah" (Dessau, 1818), containing a number of opinions favorable to the new departure. The rabbis of Hamburg appealed also to their colleagues for support in the stand they had taken. They received twenty-two responsa ("Eleh Dibre ha-Berit," Altona, 1819), all approving the position taken by the rabbis of Hamburg and violently denouncing the reformers. These condemnatory opinions had no practical result. The Orthodox party did not succeed in having the temple closed by the government. Shortly after the dedication Gotthold Salomon was called from Dessau to fill the office of preacher in conjunction with Eduard Kley. In 1820 the Hamburg reformers established a branch synagogue at Leipsic, where services were conducted during the great yearly fairs. Merchants from all over Europe gathered at these fairs, and the ideas expressed in sermons preached in the Reform synagogue were spread through many distant communities, and frequently became an incentive to work along the lines of Reform. I. L. Auerbach of Berlin was the preacher of this cosmopolitan congregation.

The Progress of Reform.

During the third, fourth, and fifth decades of the nineteenth century many congregations in Germany, Austria, Hungary, France, and Denmark introduced reforms to a greater or less extent. These reforms were usually in the direction of greater decorum, fewer piyyuṭim, music by a regular choir, and sermons in the vernacular. Such was the so-called Vienna program, which was adopted by the congregation of the Austrian capital under the guidance of its preacher, Isaac Noah Mannheimer, and its cantor, Solomon Sulzer. Confirmation was introduced quite generally. A number of governmental edicts were issued during these years containing instructions to the heads of the Jewish communities to remove the abuses which had crept into the synagogues and to introduce reforms; among such edicts may be mentioned those of Saxe-Weimar (1823), Anhalt (1835), Hanover (1837), Baden (1838), Middle Franconia and Saxe-Meiningen (1839).

Abraham Geiger had been elected rabbi of Wiesbaden in 1832; in 1835 he began the publication of his "Wissenschaftliche Zeitschrift für Jüdische Theologie," through which he exerted great influence as a leader of Reform; in 1837 he called a rabbinical conference, which met at Wiesbaden, but had no practical result. In 1838 the Jewish community of Breslau determined to appoint a rabbi who belonged to the new school as a colleague of S. A. Tiktin, who had served the community since 1821 and was a representative of the old school. Abraham Geiger was appointed, but Tiktin had no sympathy with the feeling that actuated his congregation, and therefore he did all in his power to prevent Geiger's coming to Breslau. A discreditable campaign of abuse was directed against Geiger by Tiktin's followers. They hoped to make his acceptance of the position impossible by inducing the Prussian government to withhold from him the naturalization papers necessary before he could enter upon the position to which he had been elected. They entered all kinds of accusations against his religious soundness, and he was compelled to remove to Berlin in order to give his whole time and attention to the matter. After fifteen months he succeeded in securing his naturalization papers; he preached his inaugural sermon as rabbi of Breslau on Jan. 4, 1840, when he used these words: "Judaism is not a finished tale; there is much in its present form that must be changed or abolished; it can assume a better and higher position in the world only if it will rejuvenate itself; all should unite in this work."

The Geiger-Tiktin Affair.

Geiger displayed great activity, preaching in the vernacular, instituting classes for the young, and delivering lectures on Jewish history and literature. Tiktin refused to recognize him as a colleague. The situation in the community becoming intolerable, it was suggested that there be a separation of functions, that Tiktin be recognized as the rabbi, with jurisdiction in all cases which required rabbinical decisions, and that Geiger act merely as the preacher. To this Geiger would not consent. The relations between the two became so strained that the governing board of the congregation was forced to suspend Tiktin from office. In order to fortify himself in his position Tiktin had addressed various rabbis of Upper Silesia for an expression of opinion, all of whom agreed with him. In June, 1842, he issued a pamphlet entitled "Darstellung des Sachverhältnisses in Seiner Hiesigen Rabbinatsangelegenheit," in which he included some of the responsa he had received.

This constituted an appeal to the larger Jewish world and advanced the controversy beyond the local stage. Tiktin and his colleagues stated their position clearly and unmistakably. They read Geiger and all who thought as he did out of Judaism and declared for the inspiration of the Talmud. According to these rabbis, Judaism was a fixed and practically immutable system. Tiktin accused the governing board of the congregation of having "selected a dayyan who in spoken and written discourse denies unreservedly the authoritative validity of traditional Judaism, and whose call and mission appear to be to extirpate it root and branch for all time." This placed the governing board upon the defensive; it therefore determined to call for the opinions of well-known rabbis as to the justice of the claims of the Tiktin party. It received seventeen replies, which were published in two volumes under the title "Rabbinische Gutachten über die Verträglichkeit der Freien Forschung mit dem Rabbineramte." These rabbis were unanimous in the opinion that freedom of thought is compatible with the exercise of rabbinical functions, and they condemned Tiktin and his sympathizers for the attitude they had assumed. The board accordingly addressed a letter of confidence to Geiger; but the bitter feelings that had been engendered were not removed. Even the death of Tiktin, in March, 1843, did not end the conflict. The opposition, being certain that Geiger would be elected chief rabbi, resolved to form a new congregation. Affairs were growing increasingly unpleasant in the community, and the government was invited to interfere; a rescript was issued ordering that Geiger be the chief rabbi, that a second rabbi be elected, that there be no split in the congregation, and that thereafter the government be not called upon to settle the internal controversies of the Jewish community. Geiger was established firmly in his position, and the cause of Reform had achieved a decided victory.

The Prayer-Book Controversy.

In 1842 the Hamburg Temple again became the storm-center. In 1839 a committee had been appointed to revise the prayer-book used by the congregation. The publication of the revised edition in 1841 called forth from Isaac Bernays, the ecclesiastical chief of the Orthodox community, a proclamation ("moda'ah") warning all Israelites not to use the book and declaring that any one doing so would fall short in his duty as a Jew. This brought forth a counter declaration from the Temple officers rebuking Bernays for his presumption. Both these documents were ordered removed from the synagogues by the senate of the city. Bernays then issued a caution ("azharah"): "It is forbidden to pray the obligatory prayers and benedictions from the book entitled 'Prayers for Israelites,' which appeared here during the past year." This unprecedented action of Bernays caused such a commotion that the Temple directorate found it necessary to secure from accredited theological authorities opinions in regard to the prayer-book. Twelve rabbis of high standing responded, and their opinions were published in a volume entitled "Theologische Gutachten über das Gebetbuch nach dem Gebrauche des Neuen Israelitischen Tempelvereins zu Hamburg." All the writers, from the conservative Isaac N. Mannheimer to the radical Holdheim, condemned Bernays' action, and declared that the prayer-book was permeated with the spirit of Judaism and that any one who prayed from it performed his full duty as a Jew.

Reform in England.

In 1836 several members of the Ancient Synagogue of Spanish and Portuguese Jews (Bevis Marks) of London petitioned the Mahamad to introduce into the service "such alterations and modifications as were in the line of the changes introduced in the Reform synagogue in Hamburg and other places." This petition caused the elders to take steps to insure greater decorum at the services. This, however, did not satisfy the reformers. They petitioned a second time in 1839; the reforms which they advocated were a diminution in the length and number of prayers, a more convenient hour of service on Sabbaths and holy days, sermons in English, a choir, and the abolition of the second days of the holy days. This petition was disregarded. The reformers then took a more decided step; not wishing to secede from the congregation, they requested permission to erect a branch synagogue in the West End, near their homes, where they might introduce the desired changes while the mother synagogue continued along traditional lines. This was refused on the ground of an "askama" (rule) of the congregation forbidding within a radius of four miles of the synagogue the erection of any house of prayer or the holding of any service not of a domestic nature. This forced the reformers to organize an independent congregation, which was done at a meeting held April 15, 1840. The new congregation was to be called the West London Synagogue of British Jews. In a communication addressed by the organizers of the new congregation to the elders of the Bevis Marks Synagogue, on Aug. 24, 1841, they announced their intention of opening a new place of worship and of introducing changes and innovations in the ritual. The elders passed a resolution denouncing the movement as schismatic. The ecclesiastical chiefs of the Portuguese and German congregations, H. H. Meldola and Solomon Herschel, issued, on Oct. 24, 1841, a warning directed against the new congregation and its prayer-book, "Forms of Prayer Used in the West London Synagogue of British Jews," which had appeared in the preceding August. The warning against the congregation and its prayer-book was sent to all the congregations in England: the London congregations received it favorably; the congregations in Liverpool and Manchester disapproved of it and returned it; the Plymouth congregation burned it.

The new congregation dedicated its synagogue Jan. 27, 1842, the Rev. D. W. Marks, who had been elected secretary and minister, preaching. Just before this event took place the chiefs of the two Orthodox communities promulgated an order (not repealed until 1849) which read out of the Jewish communion the members of the Reform congregation. These latter then resigned from the Bevis Marks Synagogue—the break was complete. In the meantime the reformers had been compelled to acquire a burial-place; for, being excommunicated, they were not permitted burial with their fathers. The Board of Deputies of British Jews likewise took sides against the reformers, and refused to certify to the official position of the Rev. D. W. Marks as the secretary of a congregation. This caused much inconvenience, notably in the matter of marriages. The minister of the Reform congregation, not being a registered official, could not perform the marriage ceremony legally; this had to be done by the registrar, after which the minister performed the religious ceremony. This condition lasted until the passing of an act of Parliament in 1856 which empowered the minister of the West London Synagogue of British Jews to register marriage ceremonies; and this act established the full autonomy of the congregation and placed it on an equal footing before the law with the Orthodox congregations.

Verein der Reformfreunde of Frankfort.

A feature of the early attempts at the introduction of reforms was the foundation of Reform societies by those who were dissatisfied with conditions in the Synagogue, that they might meet for discussion and the eventual organization of a congregation. Possibly the most noted of these societies was the Verein der Reformfreunde in Frankfort-on-the-Main. This was an association of radicals who gained much advertisement because of their extreme views. This society was organized in 1842. In Aug., 1843, it issued a program ending with a "Declaration of Principles," as follows: "(1) We recognize the possibility of unlimited development in the Mosaic religion. (2) The collection of controversies, dissertations, and prescriptions commonly designated by the name Talmud possesses for us no authority, from either the dogmatic or the practical standpoint. (3) A Messiah who is to lead back the Israelites to the land of Palestine is neither expected nor desired by us; we know no fatherland except that to which we belong by birth or citizenship." This declaration called forth severe attacks from all quarters, Orthodox and Reform; men differing as widely in their opinions as David Einhorn and Samuel Hirsch on the one hand, and Michael Sachs and Zacharias Frankel on the other, assailed the destructive tendencies of the society. Einhorn, the reformer, called its declaration of principles a "confession of unbelief"; and Frankel, the conservative, wrote: "the society can not be considered Jewish; it belongs to Judaism as little as to any other religion." Dr. M. A. Stern defended the society in a series of open letters to its critics, letters so bold, so biting, so unsparing, and so sarcastic that they constitute one of the most unique productions of that period of storm and stress in Judaism.

The Circumcision Controversy.

It is unlikely, however, that this Frankfort society would have attained such prominence had it not been for the circumcision controversy associated with it. The society at one of its meetings had declared against circumcision as a sine qua non for entrance into Judaism. Just about this time a number of cases of circumcision had resulted fatally, and the sanitary bureau of Frankfort had commanded that the circumcision of Jewish children be placed under the direct supervision of the sanitary office; the same measure ordered that "Israelitish citizens and inhabitants, in so far as they desired to have their children circumcised, should employ only persons who had been appointed especially to perform the rite of circumcision." This was interpreted by some, notably members of the Reform society, to mean that the circumcision of a child was optional with the father. Soon a number of instances occurred in which the rite was dispensed with. The aged rabbi of Frankfort, Solomon Abraham Trier, petitioned the senate of the city to declare that no child of Jewish parentage could be received into the congregation unless it had been circumcised; but the senate refused to pass such a measure. Trier also addressed a communication to eighty European rabbis asking for opinions on the Reform society and on the significance of circumcision. Responses were received from forty-one; twenty-eight were published in a volume entitled "Rabbinische Gutachten über die Beschneidung." All were strongly in favor of circumcision; Samuel Hirsch, the reformer, I. N. Mannheimer, the conservative, and Jacob Aaron Ettlinger, the ultra-Orthodox, clasped hands in agreement upon the point at issue. The result of the agitation was to leave the matter practically where it had been before.

The Reform society passed out of public notice soon after the election, in March, 1844, of Leopold Stein, a rabbi of Reform tendencies, as associate to Trier. This appointment was very distasteful to the older rabbi, who refused to acquiesce in the choice of an associate of the new school. He protested to the senate of the city against the election, and the senate referred him to the directorate of the congregation. Trier resigned as rabbi (May, 1844), and Stein began to introduce moderate reforms.

The Berlin Reform Congregation.

Among the most important incidents in the history of Reform are the rabbinical conferences held at Brunswick, Frankfort-on-the-Main, and Breslau, in 1844, 1845, and 1846 (see Conferences, Rabbinical). In the winter of 1844 Dr. Sigismund Stern delivered before the Culture Society of Berlin a course of eight lectures on the subject "The Mission of Judaism and the Jew in the Present." In these lectures he pleaded for some action that would stem the tide of indifference and bring back to the Synagogue the great number who had drifted away because its religious practises and ceremonies had ceased to satisfy them. The outcome of these lectures was the formation of the Genossenschaft für Reform im Judenthum. On April 2, 1845, the "Appeal to Our German Coreligionists" appeared, in which the signers, members of the Reform association, called upon the Jews of Germany to cooperate with them in their efforts for Reform. The significant point in the appeal lay in the closing words: "Thus our appeal goes forth to you, German coreligionists far and near, that you associate yourselves with us in name and assure us of your support and aid in word and act, in order that we may convene a synod which shall renew and establish Judaism in a form in which it will be capable and worthy of continuing as a living force for us and our children." Finding, however, that the needs of the Berlin community were such as made it impracticable to wait until a synod could be convened, the leading spirits of the new society determined to institute a Reform service on the holy days in the autumn of 1845. A committee consisting of S. Stern, A. Rebenstein, M. Simion, and L. Lesser was appointed to prepare a service for the holy days. This committee suggested a number of radical measures which were concurred in by the trustees and carried into effect: services almost entirely in the vernacular; worship with uncovered heads; abandonment of the blowing of the shofar on New-Year's Day; discontinuance of the use of the ṭallit; the pronouncing of the priestly benediction by the preacher and the choir instead of by the so-called Aaronides; the religious equality of woman with man.

The first services were held on New-Year's Day and the Day of Atonement, 1845; Dr. Ludwig Philippson of Magdeburg preached the sermons. In the following month, November, it was resolved by the association that steps be taken toward holding services regularly twice every week, on Saturday and Sunday. On April 2, 1846, the house of worship was dedicated, Dr. Samuel Holdheim preaching the dedication sermon. Holdheim was elected preacher in the following September, and a year later, on Sept. 5, 1847, was inducted into office, which he filled until his death in 1860. The Saturday services were discontinued in 1849, since which date services have been conducted on Sunday only. In April, 1895, on the occasion of the fiftieth anniversary of the congregation, the prayer-book was revised.

The stirring political events of the year 1848 so engrossed the people that little attention was paid to anything else; and during the sixth and seventh decades of the nineteenth century very little active work was done in the interest of the Reform cause in Europe. True, reforms of a moderate kind continued to be introduced in many congregations, but on the whole a reaction set in, and the conservative temper was much more pronounced than in the years preceding the revolutions of 1848. The first sign of reawakening appeared in 1868, when a rabbinical conference took place at Cassel. This conference, however, accomplished very little; it is notable only because it was in a measure preparatory to the convening of the two synods at Leipsic and Augsburg in 1869 and 1871 (see Synods, Rabbinical).

The spread of anti-Semitism during the past three decades seems to have crushed until quite recently all efforts at religious progress in Judaism in western Europe; official Judaism still recognizes the authority of the Shulḥan 'Aruk, although the life of the majority of the people is led in disregard of its provisions. There still exists the very same inconsistency between official Judaism and the life of its professors that in the first half of the nineteenth century led to the rise of the Reform movement.

Sporadic Reform Measures.

Although Reform failed to realize the expectations of its founders in Europe, it became quite dominant in the United States during the nineteenth century; but before the story of its development in the western hemisphere is recounted a few words must be devoted to a number of independent movements in Europe. In 1845 the Breslau Reform Association was formed along the lines of the Berlin society; it issued a like appeal, and engaged the sympathies of Abraham Geiger, the rabbi of Breslau. Its appeal, however, had no practical results. The congregations of Königsberg and Offenbach instituted a supplementary Sunday service in 1847. In 1848 the Reform Society of Budapest was organized by Ignatz Einhorn and a number of sympathizers; services, with sermon and prayers in the vernacular, were held on Sunday. In 1852 David Einhorn was elected rabbi; but the Orthodox party prevailed upon the government to close the temple, and after a few years of enforced seclusion Einhorn received a call to America. In 1856 the rabbis of France met at the call of M. Ullman, the grand rabbi of Paris, and recommended a number of moderate reforms in the ritual, leaving it, however, to the grand rabbi of each consistory to act upon the recommendation. In England two additional Reform congregations were organized—in Manchester and Bradford. In 1890 a service marked by certain reforms was instituted at Hampstead, near London, by the Rev. Morris Joseph; these services were conducted on Sabbath afternoon and continued for three years. The Jewish Religious Union was organized in London in 1902, with the view of holding services on Sabbath afternoons, with prayers and sermon in the vernacular; this, too, is an independent movement, launched by a number of earnest men and women animated by the same ideas as were the early reformers of Germany. Finally, attention may be called to the spirited election of representatives of the Berlin Jewish community in Nov., 1901, which hinged on the holding of a service on Sunday. Although the liberals were defeated, their vote was large enough to show that a great section of Berlin Jewry was restive under unsatisfactory religious conditions.

Reform in the United States.

Forty-seven members of the Congregation Beth Elohim of Charleston, S. C., petitioned the vestry in 1824 to reform the ritual; in their petition they urged the use of the vernacular in the prayers, the preaching of English sermons, and the shortening of the service. The petition was rejected by the vestry without discussion. A number of the petitioners resigned from the congregation and organized the Reformed Society of Israelites. The society adopted practically the Maimonidean creed, with the omission of the articles declaring belief in bodily resurrection and in the coming of the Messiah to restore the Jewish state and temple. It also reformed the traditional service. This society existed only a few years, but the spirit of Reform entered the mother congregation, which was under the guidance of the Rev. Gustav Poznanski, elected in 1836. A new synagogue was built and dedicated in 1841; an organ was placed in the building, and the observance of the second days of the holy days was discontinued.

In 1842 the Har Sinai congregation of Baltimore, and in 1845 the Emanu-El congregation of New York, were organized by advocates of Reform. Since then Reform synagogues have sprung up all over the land, and many congregations that were founded on traditional lines have adopted the reformed ritual under the leadership and influence of the great early reformers who emigrated from Europe—Isaac M. Wise, Max Lilienthal, David Einhorn, Samuel Adler, and Samuel Hirsch. Their work has been taken up and is being continued by hundreds of rabbis in all sections of the country. Isaac M. Wise organized the congregations into a union for combined work; this union, known as the Union of American Hebrew Congregations, was established in 1873. It is practically an organization of the Reform congregations of the country, although some conservative congregations are to be found on its roster. The union founded the Hebrew Union College, the Reform theological seminary, in 1875, and in 1902 it undertook the great task of organizing congregations and religious schools throughout the country in communities in which they did not already exist.

The Union Prayer-Book, prepared and published by the Central Conference of American Rabbis, has been introduced very generally, 183 congregations having adopted it (1905). The characteristic doctrines of the Reform movement which differentiate it from traditionalism find constant expression in the prayers: the belief in the coming of the Messianic era instead of a personal Messiah; the universalism of Israel's mission as the priest-people in place of the nationalism involved in the belief in the return to Palestine, the establishment of the Jewish state, and the restoration of the Aaronic priesthood; the repudiation of the belief in a bodily resurrection and the substitution of the belief in spiritual immortality. Sermons in the vernacular, a mixed choir, the organ, family pews, uncovered heads during worship, and a confirmation service for boys and girls are distinguishing features of public worship in Reform congregations in the United States. The observance of the second days of the holy days has been abolished, as well as of all minor fast- and feast-days except Hanukkah and Purim. Woman is accounted of equal importance with man in the religious life. In a number of congregations she is admitted to full membership. Geṭ and Ḥaliẓah are abolished. In accordance with a decision of the Central Conference, male proselytes may be received into the faith without circumcision. Twelve congregations have services on Sunday supplementary to those on Saturday, and one (the Sinai congregation of Chicago) conducts services on Sunday only. Membership in congregations is voluntary. The public religious life of Reform congregations is very active. All have religious schools, and many conduct Bible classes and post-confirmation classes, besides maintaining women's societies for personal service, together with clubs of various kinds for study and philanthropic work.

Reform Judaism in the United States has renounced the binding authority of the rabbinical codes; it stands for the principle of development and emphasizes the prophetic, universal aspect of the faith. Its constant effort has been to reconcile Judaism with life and to fit its eternal principles into a modern mold; it may be said that it has verified the observation of Abraham Geiger: "Judaism requires merely the liberating breath in order to become rejuvenated from within." See Conferences, Rabbinical.

REGENBOGEN, BARTHEL: German meistersinger of the latter part of the thirteenth century; lived as a smith at Mayence. He was remarkable for his intense hatred of the Jews, and endeavored to convert them by interweaving Christian dogmas in his poetry, atoning for his lack of persuasiveness by scurrility. He often expresses his desire to see all the Jews exterminated; and one of his songs ends with the words: "Ich hazze iuch, Juden, sunder maze" (I hate you, Jews, beyond all measure).

REGENSBURG. See Ratisbon.

REGGIO: 1. Italian city on the Strait of Messina; capital of the province of Reggio di Calabria. The presence of Jews in Calabria as early as 398 is attested by an edict of Emperor Honorius; but there is little further information about this community until the reign of Emperor Frederick II. The ghetto, known in the city records as the Strada Giudeca, was in the northwestern part of the city, and was without any communication with the central part: the Jews entered and departed through the Porte Anzana. The Jews of Reggio, some of whom were wealthy, followed various trades. The most common industry was that of silk-manufacturing. Many were merchants, united in an important gild, which was affiliated with gilds in other communities of Calabria. Jews were licensed to lend money at a rate of interest not exceeding 10 per cent. Frederick II. tolerated their presence and did not ill-treat them, though in 1221 he obliged them to distinguish themselves from Christians by wearing a badge. Joanna II. was very harsh toward them, and threatened them with banishment as a result of accusations of usury and of lending money to the citizens of Reggio on products and manufactures. Perceiving, however, that these accusations were greatly exaggerated, she contented herself with levying a tax upon them of one-third of a scudo per head.

Until the year 1486 civil and criminal cases among the Hebrews were tried before a magistrate specially appointed for this purpose; after that date they were tried before the ordinary judges. In 1492, after the expulsion from Spain, a large number of Spanish Jews settled in Reggio, much increasing the size and commercial importance of the community. The citizens of Reggio were accustomed to sell their silk to the Jews, who lent them money for the "feeding of the silkworms," at an interest of 4 tari on every pound of silk. The Jews thus controlled the silk-market, or fair, which was held each year at Reggio from the 15th to the 31st of August, and which was attended by dealers from all parts of the country, especially from Lucca and Genoa. These merchants, enraged at the monopoly held by the Jews, sought to have them banished from this territory; they succeeded in their efforts in the beginning of the sixteenth century. During the vice-regency of Don Raimondo di Cardona the Genoese secretly denounced the Jews to the government of Naples, which accordingly forwarded an adverse report in regard to them to the King of Spain, depicting the alleged nefarious proceedings of the Jewish gilds and urging the necessity of expelling the Jews from Calabria. On this report the king commanded the banishment of all Jews from Calabria before July 25, 1511. The unfortunate Jews were compelled to depart, and the communities of Reggio, Catanzaro, Corigliano, Belcastro, Tropea, Castrovillari, Altomonte, Rossano, Montalto, and many others, ceased to exist. The exiles went first to Messina, and later to Rome, Leghorn, and other Italian cities.

In the fifteenth century a Hebrew printing-press, the property of Abraham Garton, existed at Reggio: here was produced the first edition of Rashi, which was likewise the first dated Hebrew book ever printed. See Incunabula.

2. Italian city, capital of the province of Reggio nell' Emilia. Borso, first Duke of Ferrara, Modena, and Reggio, considered the presence of the Jews, who were residing in Reggio as early as 1445, necessary to the welfare of his state, and sought and obtained from Pope Nicholas V. permission to retain them; he secured also a promise that they should conduct unmolested their banking business and possess their synagogues in peace. These privileges granted by Borso were confirmed and extended by his successor, Ercole I. (Dec. 16, 1473). But during the latter's reign his dominions were visited by the preacher Bernardino da Feltre, a bitter enemy of the Jews. In 1498 Ercole decreed that every Jew in his territories should wear a yellow cap. Alfonso I. (June 11, 1503) and Ercole II. (Nov. 20, 1534) confirmed the rights and privileges of the Jews.

In the sixteenth century the community of Reggio joined with the other communities of Italy—Rome, Venice, Padua, Ferrara, Mantua, Modena—in the formation of a Jewish committee for the revision of Hebrew books, their purpose being to consider means of avoiding the ecclesiastical censorship. After the expulsion of the Jews from the duchy of Milan in 1597 many of the exiles fled to Reggio. In the beginning of the seventeenth century the Duke of Modena and Reggio invited a large number of Portuguese Jews to settle in his territory, promising them liberal concessions. Modena and Reggio remained under the rule of the house of Este until they were incorporated in the Cisalpine Republic. During this period there is no record of the political status of the Jews. There was a temporary change for the better in their condition during the French Revolution, and until Modena and Reggio were united to the Cisalpine Republic in 1797; in 1815 the duchy of Modena was formed, under Francesco IV., and lasted until 1860, when Modena and Reggio both became part of the united kingdom of Italy.

The most noted scholars and rabbis of Reggio were: Isaac Foa, Immanuel Sonino, Obadiah ben Israel Sforno (16th cent.), Nathan ben Reuben David Spira (d. Reggio, 1607), Menahem Azariah Fano, Baruch Abraham ben Elhanan David Foa, Hezekiah ben Isaac Foa, Isaac ben Vardama Foa, Israel Nissim Foa, Israel Solomon Longhi (17th cent.), Isaiah Mordecai ben Israel Hezekiah Bassani, Israel Benjamin ben Isaiah Bassani, Elhanan David Carmi, Benjamin ben Eliezer ha-Kohen, Joshua ben Raphael Fermi, Moses Benjamin Foa, Abram Michael Fontanella, Judah Ḥayyim Fontanella, Israel Berechiah Fontanella, Raphael Jehiel Sanguinetti (18th cent.), Isaac Samson d'Angeli, R. J. Bolognese, Hananiah Elhanan Ḥai ha-Kohen, Jacob Levi, Moses Benjamin Levi, Israel Berechiah Sanguinetti, David Jacob Maroni, Giuseppe Lattes, Alessandro da Fano, and Lazzaro Laide Tedesco (19th cent.).

S. U. C.

REGGIO, ABRAHAM (VITA) BEN AZRIEL: Italian rabbi and cabalist; born at Ferrara in 1755; died at Göritz Jan. 8, 1842. Reggio studied under Samuel Lampronti, devoting himself especially to the study of Hebrew grammar. He gave lessons in Hebrew to the children of wealthy Jews in several villages, and in his spare moments occupied himself with bookbinding. Occasionally he went to Gradisca to attend the lectures of Abraham Morpurgo, whose son-in-law he became. Later Reggio was appointed teacher in the Talmud Torah of Göritz, where he studied Talmud under Moses Ḥefez, rabbi there. After the latter's death (1798) Reggio was ordained as his successor by Judah Malavida, rabbi of Ferrara; he occupied the rabbinate of Göritz until his death.

Reggio was a recognized authority on rabbinical matters, and many rabbis, among them Mordecai Benet, appealed to him for decisions. Reggio was the author of a work entitled "Eshel Abraham" (still in MS.), a collection of treatises in thirteen parts on various subjects. He wrote also a pamphlet entitled "Tiglaḥat ha-Ma'amar" (Leghorn, 1844), a refutation of the "Ma'amar ha-Tiglaḥat" of his son, Isaac REGGIO.

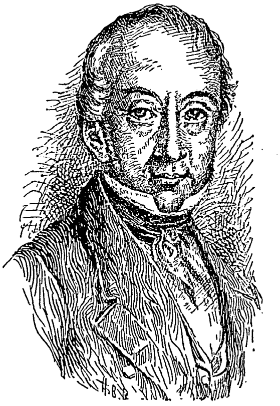
S. M. SEL.

REGGIO, ISAAC SAMUEL (YaSHaR): Austro-Italian scholar and rabbi; born at Göritz, Illyria, Aug. 15, 1784; died there Aug. 29, 1855.



Isaac Samuel Reggio.

His Acquirements.

Reggio studied Hebrew and rabbinics under his father, Abraham Vita, later rabbi of Göritz, acquiring at the same time in the gymnasium a knowledge of secular science and languages. Reggio's father, one of the liberal rabbis who supported Hartwig Wessely, paid special attention to the religious instruction of his son, who displayed unusual aptitude in Hebrew, and at the age of fourteen wrote a metrical dirge on the death of Moses Ḥefez, rabbi of Göritz. Besides Italian, his mother tongue, Reggio knew French, German, and Latin, and he studied several Semitic languages in addition to Hebrew. He possessed a phenomenally clear, if not profound, intellect, and as mathematics offered the widest field for his analytical talent, it was at first his favorite study. In 1802 he published in the "Neuwieder Zeitung" the solution of a difficult mathematical problem, which gave him reputation as a mathematician (comp. "Allg. Zeit. des Jud." 1837, p. 228). He discovered also a new demonstration of the Pythagorean theorem, which was praised by Cauchy, the well-known French mathematician.

A year later (1803) Reggio went to Triest, where for three years he was a tutor in the house of a wealthy family. There he made a friend of Mordecai Isaac de Cologna, at whose death (1824) Reggio wrote a funeral oration in Italian. He returned to Göritz in 1807, where one year later he married

Founds the Rabbinic Seminary of Padua.

the daughter of a wealthy man and settled down to a life of independent study. When the province of Illyria (1810) became a French dependency, Reggio was appointed by the French governor professor of belles-lettres, geography, and history, and chancellor of the lyceum of Göritz. But three years later Illyria became again an Austrian province, and the Austrian anti-Jewish laws compelled Reggio to resign. He then devoted himself exclusively to Jewish literature and cognate subjects; he studied even the Cabala, but the more he studied it the greater grew his aversion to its mystical and illogical doctrines. Taking Mendelssohn and Wessely as guides, he next made his name celebrated in connection with religious philosophy, and, indeed, became to the Italian Jews what Mendelssohn was to his German coreligionists. In 1822 an imperial decree having been issued that no one might be appointed rabbi who had not graduated in philosophy, Reggio published at Venice an appeal, in Italian, for the establishment of a rabbinical seminary, arguing that just as the emperor did not desire rabbis devoid of philosophical training, neither did the Jews desire rabbis who had had no rabbinical education. This appeal resulted in the establishment of a rabbinical college at Padua, for which Reggio drew up the statutes and the educational program.

Following the example of Mendelssohn, Reggio endeavored to extend the knowledge of Hebrew among the Jewish masses by translating the Bible into Italian and writing a commentary thereon. His simple but clear and attractive style made a deep impression not only on the Italian but even on the German Jews. Although he believed that in the main the text of the Bible has been well guarded against corruption, yet he admitted that involuntary scribal errors had slipped in and that it would be no sin to correct them ("Iggerot Yashar," Letter V.). The reproaches of Meïr Randegger (d. 1853) concerning his Biblical corrections Reggio answered by stating that every one was permitted to interpret the text according to his understanding, provided such interpretations were not in opposition to the principles of the Jewish religion (*ib.* Letter XXX.).

An opponent of casuistry, Reggio rejected haggadic Biblical interpretations and the pilpulistic study of the Talmud. He was persecuted by many German rabbis on account of his liberal views; even his father did not wholly approve of his methods. Nevertheless, in 1846, after his father's death, the community of Göritz insisted upon his accepting the rabbinical office; he agreed, but declined to receive the salary attached to it. After occupying the position for ten years he resigned.

His Works.

Reggio was a voluminous writer. He published: "Ma'amar Torah min ha-Shamayim" (Vienna, 1818), on the divine authority of the Jewish law, an introduction to his Italian translation of the Pentateuch; "Sefer Torat Elohim" (*ib.* 1821), the Pentateuch, with an Italian translation and a Hebrew commentary; "Ha-Torah weha-Pilusufiah" (*ib.* 1827); "Beḥinat ha-Dat 'im Perush we-He'arot" (*ib.* 1833), an edition of Elijah Delmedigo's "Beḥinat ha-Dat," with a commentary and notes; "Iggerot Yashar" (*ib.* 1834–36), a collection of exegetical, philosophical, and historical treatises in the form of letters to a friend; "Ma'amar ha-Tiglaḥat" (*ib.* 1835), a decision ("pesaḳ") permitting the shaving of the beard on semiholy days ("ḥol ha-mo'ed"; this work called forth two protests, one by Jacob Ezekiel ha-Levi, entitled "Tisporet Lulyanit," Berlin, 1839, and one by Reggio's father, entitled "Tiglaḥat ha-Ma'amar," Leghorn, 1844); "Mafteaḥ el Megillat Ester" (Vienna, 1841); "Mazkeret Yashar" (*ib.* 1849), a bibliographical sketch (presented to his friends in his sixty-fifth year) in which he enumerates 103 works; "Beḥinat ha-Ḳabbalah" (Göritz, 1852); "Yalḳuṭ Yashar" (*ib.* 1854), collectanea, including a defense by Reggio of the opinion which attributes Isa. xl.–lxvi. to an author who lived after the Captivity. He wrote also a metrical Italian translation of the Book of Isaiah (Udine, 1831), and translated into Italian prose the books of Joshua, Ruth, and Lamentations, the treatise Pirḳe Abot, and Mendelssohn's correspondence with Lavater on religion. In the notes to Delmedigo's "Beḥinat ha-Dat" Reggio often supplements or criticizes this work; he, moreover, refutes Aaron Chorin in notes 8, 15–19, and attacks the Cabala in notes 9–13. It may be noticed that thirteen years previously Moses Kunitzer printed, in his "Sefer ha-Meẓaref," Reggio's letter in defense of the Cabala.

Reggio was an indefatigable contributor to most of the Jewish journals of his time and an able apologist. He was also the editor of "Bikkure 'Ittim ha-Ḥadashim," the Hebrew part of Busch's "Jahrbücher" (Vienna, 1845), and "Meged Geresh Yeraḥim," a supplement to the "Central-Organ für Jüdische Interessen" (*ib.* 1849). It may be added that Reggio was a painter of considerable ability. There are more than two hundred drawings and paintings by him, including portraits of many Jewish celebrities, and a map drawn by him is preserved in the library of Triest. In 1812 he inscribed the whole Book of Esther on a small piece of parchment one and a half handbreadths long. He left also a great number of unpublished writings, among which are sermons and poems in Hebrew and Italian.

His Philosophy.

Reggio's most important works are "Ha-Torah weha-Pilusufiah," "Mafteaḥ el Megillat Ester," and "Beḥinat ha-Ḳabbalah." The first, a religious-philosophical essay in four sections ("ma'amarim"), was written as an answer to the rabbis of the old school who protested against the establishment of the rabbinical college at Padua. It should be explained that Reggio applies the term "philosophy" to all studies outside the Talmud and rabbinics. Reggio not only endeavors to reconcile the Jewish religion with modern science, but attempts to prove that they are indispensable to each other. One chapter, entitled "Ha-'Olam weha-Adam," was republished by Martinet in his "Tif'eret Yisrael" (Bamberg, 1837). Another chapter, in which was discussed the question as to whether the Torah is in opposition to the Cabala, was stricken out by the censor. Later this chapter was plagiarized by S. M. Rosenthal, who published it in Fürst's edition of Leon of Modena's "Ari Nohem" (pp. 92–97, Leipsic, 1840).

The "Mafteaḥ el Megillat Ester" is an introduction to the Book of Esther, and deserves special notice in consideration of its originality. Having concluded that the Persian king in that book was Darius Hystaspes, Reggio shows that the main object of the writer was to prove that Darius was the first to establish the post. Analyzing the text carefully, Reggio maintains that Mordecai was by no means such a great man as the Rabbis declare him to have been, but that, on the contrary, he was an ordinary Jew; for he not only gave no religious education to his adopted daughter Esther, but he even commanded her to deny her race and religion. His refusal to bow before Haman was unnecessary, as such an act would not have violated any Jewish religious law. Even when he was informed of the imminence of the danger to his coreligionists consequent upon his senseless refusal, he did not resort to prayer and fasting; it was Esther who did that. His inhumanity is evidenced by his command to slaughter women and children (Esth. viii. 11). Afterward, when Mordecai attained great power, he did nothing to better the lot of his brethren in Jerusalem (comp. Neh. ix. 36-37). This view of Reggio's provoked a protest from Isaac Bär Lewinsohn ("Bikkure Ribal," p. 115, Warsaw, 1889), and was violently criticized by Mendelson ("Orient, Lit." viii. 314 *et seq.*).

The "Beḥinat ha-Ḳabbalah" is an edition of Leon of Modena's two pamphlets "Ḳol Sakal" and "Sha'agat Aryeh"; these Reggio provided with a preface, and with one hundred critical notes forming the second part of the work. In the preface Reggio outlined Leon of Modena's biography. The notes are independent treatises reviewing Modena's works chapter by chapter, now supplementing, now refuting his views. Reggio's main point is that most of the Talmudic ordinances were not intended for perpetual observance; they were practised only by the rigorous Pharisees. It was not until much later, he declares, that the casuists ("poseḳim") established such ordinances as a part of the Law. Consequently, Modena was in many cases wrong in attacking the Talmudists. Reggio's theory has been refuted by Simon Stern in the preface to his German translation of Modena's works published under the title "Der Kampf des Rabbiners Gegen den Talmud im XVII. Jahrhundert."

REHFUSS, CARL: German educationist; born in 1792 at Altdorf-im-Breisgau; died in 1842 at Heidelberg. From 1809 to 1816 he occupied the position of teacher in schools at Gailingen, on the Lake of Constance, at Basel, and at Bühl, near Rastadt. In 1819 he was appointed "Israelitischer Oberlehrer und Prediger" by the Grand Duke of Baden; and in 1834 he received the degree of Ph.D. from the University of Heidelberg.

Rehfuss' works include: "Imre Emet," on the admissibility of confirmation among the Israelites (Heidelberg, 1830); "Leshon Yehudit," handbook of Judæo-German (*ib.* 1833); "Sefer ha-Ḥayyim," a book of devotions for the afflicted (*ib.* 1839).

S. S. O.

REHOBOAM.—Biblical Data: Son of Solomon by Naamah the Ammonitess (I Kings xiv. 21), and his successor on the throne in Jerusalem. Solomon's administrative policy had fostered dangerous principles. His ambition for the magnificence and fame of his capital, Jerusalem, had led him to inaugurate a system of levies and taxes that proved burdensome and galling to his subjects. His attempt to form domestic alliances with his numerous neighbors (I Kings xi. 1-4) filled his court with foreign customs and religions, and in later generations produced unfortunate results. Solomon's wisdom and power were not sufficient to prevent the rebellion of several of his border cities. Damascus under Rezon secured its independence of Solomon; and Jeroboam, a superintendent of works, his ambition stirred by the words of the prophet Ahijah (I Kings xi. 29-40), fled to Egypt. Thus before the death of Solomon the apparently unified kingdom of David began to disintegrate. With Damascus independent and a powerful man of Ephraim, the most prominent of the Ten Tribes, awaiting his opportunity, the future of Solomon's kingdom became dubious.

The assembly for the coronation of Solomon's successor, Rehoboam, was called at Shechem, the one sacredly historic city within the territory of the Ten Tribes. The fact that it met here was a recognition of the prominence of those tribes in the government of Israel. It seems that Jeroboam (I Kings

Coronation Council.

xii. 2, 3, 20) either was present at the assembly or was in close touch with the leaders. Before the coronation took place the assembly requested certain reforms in the policy followed by Rehoboam's father, Solomon. Rehoboam was forty-one years of age (I Kings xiv. 21), but he was not ready at once to modify a policy that had yielded him and his court associates such large privileges of luxury and ease. The reforms requested would materially reduce the royal exchequer and hence its power to continue the magnificence of Solomon's court. Rehoboam was advised by the old men, who had seen the evils of his father's course, to yield to the people's request; but his own companions, accustomed to the pleasures of the brilliant court of Solomon, advised him rather to increase his revenues.

Intervention of the Prophet Shemaiah.

This precipitated a rebellion. The Ten Tribes, never wholly unified with Judah since Saul's reign, and particularly that of his son (II Sam. ii. 8-10), violently withdrew and said, "Now see to thine own house, David" (I Kings xii. 16). Outraged by this action, Rehoboam resolved to enforce his rights and collect his revenues. But the collector, Adoram, was stoned to death, and the proud would-be king was compelled to flee to Jerusalem, where without ceremony he seems to have assumed the crown over Judah and the few peoples who lived adjacent to its boundaries. Israel, the Ten Tribes so called, made Jeroboam its king. Rehoboam's ambition was not yet subdued, and he collected an immense army of 180,000 men to put down the revolt. But before this body of troops could be put in motion, the prophet Shemaiah delivered a message of the Lord, commanding Rehoboam to desist from war, "for this thing is of me" (I Kings xii. 24). The haughty young ruler obeyed. The records (I Kings xiv. 22-24) declare that his people became infatuated with idolatry, and that the strange worships introduced under Solomon's policy took root in the land. Indeed, so thoroughly did the people become imbued with heathen idol-worship that "they did according to all the abominations of the nations which the Lord drove out before the children of Israel" (R. V.).

In the fifth year of Rehoboam's reign Shishak, King of Egypt, went up and pillaged Jerusalem (see Shishak). The most valuable part of the booty was the golden shields Solomon had made for the royal body-guard. Rehoboam replaced these with shields of brass. The feeling of enmity and jealousy between the two kingdoms was bitter all the days of Rehoboam. Nothing is said of any battles fought between them during Rehoboam's life, but the expression "there was war between Rehoboam and Jeroboam continually" presents the spirit of retaliation animating both kingdoms. The disruption was a fact that carried its results throughout the existence of the kingdoms of Israel, and it became a frequent theme of prophetic discourse. Judah henceforth stood practically alone.

E. G. H. I. M. P.

——**In Rabbinical Literature:** Rehoboam was the son of an Ammonite woman; and when David praised God because it was permissible to marry Ammonites and Moabites, he held the child upon his knees, giving thanks for himself as well as for Rehoboam, since this permission was of advantage to them both (Yeb. 77a). Rehoboam was stricken with a running sore as a punishment for the curse which David had invoked upon Joab (II Sam. iii. 29) when he prayed that Joab's house might forever be afflicted with leprosy and running sores (Sanh. 48b). All the treasures which Israel had brought from Egypt were kept until the Egyptian king Shishak (I Kings xiv. 25, 26) took them from Rehoboam (Pes. 119a).

W. B. J. Z. L.

REḤUMAI (I.), RAB: Babylonian amora of the fifth generation; pupil of Raba b. Joseph b. Ḥama. He addressed some questions to Abaye (Pes. 39a; Nazir 13a). He died on the eve of a Day of Atonement, and the manner of his death is told as follows: He was wont to return home on the eve of every Day of Atonement, but on the last occasion he was so engrossed in his studies that the time for departure passed and left him still at Maḥoza. His wife waited for him in vain, and at last gave expression to her disappointment in tears. As a punishment for his neglect, so runs the legend, it was decreed in heaven that he should die. Accordingly, the roof on which he was sitting fell in and he was killed (Ket. 62b).

Bibliography: Heilprin, *Seder ha-Dorot*, ii. 342; Halevy, *Dorot ha-Rishonim*, iii. 12.

W. B. J. Z. L.

REḤUMAI II.: Babylonian amora of the seventh generation; pupil of Rabina I., for whom he expounded a saying of Huna b. Taḥlifa (Zeb. 77a). After Rafram II., Reḥumai II. was the head of the Academy of Pumbedita from 443 to 456, dying during the persecutions of the Jews under Yezdegerd II. (Sherira, in Neubauer, "M. J. C." i. 34, where it is said that he was frequently called Naḥumai; Grätz, "Gesch." iv. 371: Halevy, "Dorot ha-Rishonim," iii. 12-13).

W. B. J. Z. L.

REḤUMAI III.: One of the early saboraim; died in 505, in the month of Nisan. In 'Er. 11a he is mentioned with his contemporary R. Jose; each of them gives a different explanation of an expression used by an earlier authority (Sherira, in Neubauer, "M. J. C." i. 34, 45; Halevy, "Dorot ha-Rishonim," iii. 13; Grätz, "Gesch." iv. 377).

W. B. J. Z. L.

REICH (RAJK), ALADÁR: Hungarian lawyer and deputy; born at Baja June 25, 1871; educated at the gymnasium of his native city and at the universities of Budapest, Berlin, and Paris. He was admitted to the bar at Baja, which city returned him to the Hungarian Parliament in the election of 1901, when he defeated Minister of Justice Plósz. He was reelected in 1905.

Bibliography: Sturm, in *Országgyülési Almanach*, 1901-6.

S. L. V.

REICH, IGNAZ (EIZIG): Hungarian teacher and author; born at Zsámbék 1821; died at Budapest April 18, 1887. He received his early instruction from his father, a Jewish communal notary, and then studied at the yeshibah of Grosswardein, going thence to Arad, where he came under the influence of Aaron Chorin. After graduating from the gymnasium of Arad he went to Pest in 1842 to study philosophy, devoting himself at the same time to literature.

Reich was the prototype of a patriotic Hungarian Jew, always wearing the Hungarian national costume. For forty years he was a teacher at the Jewish communal school and at the state institution for the blind. He was the first Jew to translate to his pupils the Bible into Hungarian. He was a contributor to the "Magyar Izraelita," edited by Ed. Horn; and he translated also the prayer-book and the Haggadah into Hungarian. Reich published in German: "Beth-El" (2 vols., 1856; 2d ed. 1868), biographies of eminent Hungarian Jews; and "Beth Lechem" (Budapest, 1871), an annual for the promotion of agriculture, trade, and industry among the Jews of Hungary.

REICH, MORITZ: German writer; born at Rokitnitz, Bohemia, April 20, 1831; died there March 26, 1857. The son of an indigent shoḥeṭ and ḥazzan, he attended the gymnasia at Reichenau and at Prague, and went in 1853 to Vienna, where he devoted himself to literature. His sketches were collected and published in 1858 by his faithful friend, the celebrated Austrian poet Alfred Meissner, under the title "An der Grenze. Aus dem Nachlasse des Moritz Reich."

Bibliography: Brümmer, *Lexikon Deutscher Dichter und Prosaisten*, ii. 175.
s. M. K.

REICHENBERG: City of Bohemia. No Jews were allowed to live there until after the law of Oct. 26, 1860, which repealed the restrictions against them in Austria. The first Jewish settlers numbered about thirty families. The need of a united religious service soon became evident, and on Sept. 4, 1861, on the eve of the New-Year's feast, a synagogue was opened in a rented house; the authorities of the state and of the town were present, and the acting rabbi was I. Elbogen, district rabbi of Jung-Bunzlau. The existence of the congregation was legalized on Dec. 12, 1862, and the establishment of a cemetery was permitted two years later, the dead having been buried hitherto at Turnau, thirty kilometers distant. During the same year a special registration district was formed, with its capital at Reichenberg. A ḥebra ḳaddisha was likewise founded in 1864, which, in addition to its special duties, gave financial aid to destitute sick coreligionists, and paid for the funerals of paupers. A ladies' club was established for the same purpose, and about the same time was begun the collection of funds wherewith to build a temple to accommodate the increasing community. Meanwhile the congregation, which numbered ninety families in 1869, removed from its former synagogue to larger quarters. A Talmud Torah which had been founded was later abandoned, the religious instruction being given in the public schools, while, for the protection of Jewish interests, a Jewish member was elected to the district school board. The new statutes were confirmed in 1877, although they were at first rejected by the Bohemian provincial government since they contained no mention of a ritual bath for women. The ministry, however, sustained the appeal of the community, which stated that the establishment of a separate bath for Jewish women was an antiquated institution.

The fund for the temple, from which property in the center of the town had already been purchased, amounted to 44,000 florins in 1887, and the cornerstone was laid in the autumn of that year, the building being dedicated Sept. 27, 1889. The service is moderately Reform. The first rabbi, Julius Reach of Prague, officiated until 1888, when he was succeeded by Adolf Posnanski, who was followed in 1891 by the present (1905) incumbent, Emil Hoffmann. The yearly income of the community amounts to 32,990 kronen, and its expenses to 31,289 kronen. The Jews of Reichenberg to-day (1905) number 1,395 in a total population of about 40,000.
D. A. Ki.

REICHENHEIM, LEONHARD: German manufacturer and politician; born at Bernburg May 3, 1814; died at Berlin Jan. 26, 1868. At the age of fourteen he entered his father's business, which was located first at Magdeburg and then at Berlin, and which later became very prosperous. In 1846 the firm bought from the Seehandlung the woolen-mill at Wuestegiersdorf in Silesia, which soon became one of the leading establishments in the country, employing 2,500 laborers and maintaining model institutions for the welfare of the working classes, such as a school and an orphan asylum. The firm had also a branch in England. In 1854 Reichenheim was honored with the title of commercial councilor; and in 1855 he received the Order of the Red Eagle, third class. In 1859 he was elected a member of the Prussian Diet for the district of Reichenbach-Waldenburg, and he was returned to every successive legislature until his death. The same district elected him as its representative to the first North German Reichstag in 1867. He further served as a member of the Stadtverordneten, or board of aldermen, of Berlin from 1864, and was made a municipal councilor ("Stadtrath") in 1867. He held offices also in the Jewish community, notably as director of the Jewish hospital.

In the Diet he distinguished himself as a recognized authority on questions of financial and industrial legislation, and during the whole time that he was a member of the house he served on committees dealing with such questions. His integrity and ability often won for him the applause of the conservatives in the house, although he was a strong advocate of the people's rights in the period of the "Conflict" between Bismarck and the Diet.

REICHER, EMANUEL: Austrian actor; born July 18, 1849, at Bochnia, Austria. Reicher's theatrical life is divided into two periods: the first ending with his separation from and the subsequent death of his first wife, Hedwig Reicher-Kinder-

MANN, the singer; the second beginning with his marriage to Lina Harf, who reawakened the slumbering ambition of the disheartened actor. Reicher's début took place at Tyrnau, but for a time he made little headway in his profession. His home life, a most unhappy one, prevented him from doing full justice to himself; and it was not until after his second marriage that he rose to the foremost rank of German actors. His first success was a semicaricature of *Justinian* in Sardou's "Theodora," produced at the Residenztheater, Berlin. Subsequently he was pitted against the great Italian tragedian Ernesto Rossi, playing *Iago* to his *Othello* and emerging triumphantly from the ordeal. He soon realized, however, that his forte was in the modern drama, and he devoted all his powers to expositions of rôles of this class. His specialty was and is the portrayal of Ibsen's characters, although he swerved once in his fidelity to the Norwegian dramatist in producing Goldschmidt's mystic "G Á A," a play whose production was refused elsewhere in Europe.

REICHER-KINDERMANN, HEDWIG: German prima donna; born at Munich July 15, 1853; died at Triest June 2, 1883; daughter of the baritone August Kindermann. She received her early instruction on the piano from her mother, and at the age of fifteen entered the Musikschule of Munich, where she studied voice-culture under her father. She made her début at the Hoftheater of Munich as a chorus-singer, ballet-dancer, and actress, and after a season at Carlsruhe appeared at the opera in Munich and in the operetta company at the Gärtnerplatz. She was married to the actor Emanuel Reicher in 1875, and was divorced in 1881. After acting in Bayreuth in 1876, at Hamburg in 1877 and 1878, and at Vienna, Munich, Monaco, and Paris, she was called to Leipsic in 1880, where she became known as an interpreter of Wagner's heroines, appearing in "Der Ring des Nibelungen" in Germany, Belgium, Italy, and London (1881–82) under the direction of Angelo Neumann.

REICHERSON, MOSES HA-KOHEN: Hebrew grammarian; born in Wilna Oct. 5, 1827; died in New York April 3, 1903. After studying Talmud, Hebrew, and European languages, he became teacher of Hebrew at Wilna. About 1890 he went to New York, where he became teacher in a Jewish school.

The literary activity of Reicherson was chiefly in the field of Hebrew grammar. He wrote: "Ḥelḳat ha-Nikḳud," on Hebrew punctuation (Wilna, 1864); "Ḥelḳat ha-Pe'alim weha-Millot," on Hebrew verbs and particles (*ib.* 1873); "Yad la-Nikḳud," a compendium of the rules of Hebrew punctuation for beginners (appended to the prayer-book "Ḥinnuk Tefillah"; *ib.* 1880); "Diḳduḳ Ḥaberim," catechism of the elementary rules of Hebrew grammar (appended to the same prayer-book; *ib.* 1883); "Ma'areket ha-Diḳduḳ," a compendium of Hebrew grammar (*ib.* 1883; it was translated into Yiddish by its author and published in the same year); "Ḥelḳat ha-Shem," on the Hebrew noun (*ib.* 1884); "Tiḳḳun Meshalim," a translation of the fables of the Russian writer Krylov (*ib.* 1860); "Mishle Lessing we-Sippuraw," a translation of Lessing's fables (New York, 1902).

Reicherson wrote also "He'arot we-Tiḳḳunim la-Diwan," notes on the "Diwan" of Judah ha-Levi (Lyck, 1866). He left a number of works in manuscript, including: "Dibre Ḥakamim we-Ḥidotam," on Talmudic haggadot; commentaries on the Pentateuch, on the books of Samuel, Kings, Isaiah, Ezekiel, the Twelve Prophets, Psalms, Job, and Proverbs; a prayer-book, "Tefillah le-Mosheh"; a work on Hebrew syntax; and fables, original as well as translations from Gellert.

REICHSKAMMERKNECHT. See KAMMERKNECHTSCHAFT.

REIF, ABRAHAM: Galician poet; born at Mosciska, Galicia, 1802; died in 1859. He came early under the influence of the school of the ME'ASSEFIM, but subsequently broke away from the movement. Tobias FEDER, the author of the sarcastic work "Ḳol Meḥaẓeẓim," deeply influenced his literary work. Alexander Langbank (d. 1894 at Yaroslav, Galicia) introduced Reif to the profane sciences; and after Reif's death he purchased from his widow, Jente, all his posthumous works.

Reif was much feared by the fanatics on account of his ready wit. As at first he did not display his liberalism, he was able to open a school for the study of the Bible and the Hebrew language in his native city. This school has produced prominent Hebraists. Reif was a poet of refinement and delicacy, and his language was the pure Biblical Hebrew. His chief dramas, "Ha-Nidka'im," "Shulammit," and "Yehudit," vividly portray the life of the Galician Jews. As he was too poor to publish his works, he gave manuscript copies of them to his pupils.

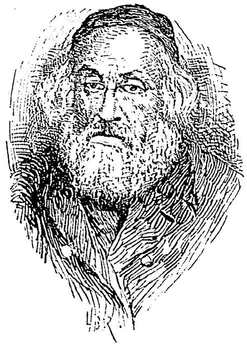
S. M. MR.

REIFMANN, JACOB: Russian author and philosopher; born April 7, 1818, at Lagow, near Opatow, Russian Poland; died at Szczebrszyn Oct. 13, 1895. Up to the age of six he received instruction in Hebrew from his father, whom circumstances had forced to become a "melammed"; after that age he studied Talmud under different rabbis of Opatow, to which town his family had removed from Lagow. The most prominent of his early teachers was R. Meïr Ḥarif, but the instruction he received was very unsystematic. Passages for discussion were selected at random from different parts of the Talmud, and during the nine years of study under these rabbis not a single volume was read by him in its entirety. When he reached the age of fifteen he commenced to study alone. At that time his logical tendencies began to assert themselves, and his studies proceeded in an orderly and well-arranged manner. He also made great efforts to follow the same logical system in his writings and speech. From Opatow Reifmann went to Szczebrzeszyn, where he married the daughter of Joseph Maimon. In his father-in-law's house he discovered a veritable treasure of books, including the "Moreh Nebukim" of Maimonides and the "Cuzari" of Judah ha-Levi. With indescribable zeal he began to read them, and before long he knew them by heart. These, together with many works of the German philosophers, which he read and studied extensively, opened a new world of ideas to him, supplied him with a broad field for investigation and study, and afforded him the means of exercising his wonderful faculties to greater advantage. Still, he did not neglect the Hebrew language, and from time to time he wrote Hebrew poems in which he displayed wonderful poetic skill and great depth of feeling. He also carried on an extensive correspondence with such scholars as Rapoport, Geiger, Jost, Luzzatto, Kirchheim, Sachs, Goldberg, and Steinheim. With the exception of his letters to Steinheim, which dealt with various philosophical problems, his correspondence was of a critical character, and either dealt with Biblical exegetical questions or contained discussions and investigations concerning archeological subjects.



Jacob Reifmann.

Of Reifmann's works the following are the most important:

Tabnit ha-Bayit, six Talmudic discussions. Zolkiev, 1843.

Pesher Dabar, twenty-two critical interpretations of Talmudic and midrashic passages. Warsaw, 1845.

Toledot Rabbenu Zeraḥya, a biography of Zerahiah ha-Levi, with a review of his works. Prague, 1853.

Ḥuṭ ha-Meshullash, consisting of three treatises: (1) on the knowledge of the Amoraim of the Hebrew, Aramaic, Arabic, Persian, Greek, and Latin languages; (2) history of the fables of Æsop among the Jews; (3) notes on the "Mibḥar ha-Peninim" (a work written by a non-Jew). Prague, 1859.

Ḳol Mebasser, an announcement in regard to the edition of "Halakot Gedolot" by Simon Ḳayyara. Prague, 1859.

Arba'ah Ḥarashim, comprising four treatises: (1) observations concerning Ben Sirach; (2) a treatise on the "Sefer Ḥasidim"; (3) six notes on the "Seder ha-Tefillah"; (4) two notes on the "She'eltot" of Aḥa of Shabḥa.

Mishloaḥ Manot, on Purim gifts—observations, conjectures, and emendations. Prague, 1860.

Mo'ade 'Ereb, notes and studies on the Bible, the Talmud, and the Midrash. Wilna, 1863.

Te'udat Yisrael, on the destiny of the Jews among the nations. Berlin, 1868.

Ḳan Ẓippor, based upon one of Æsop's fables. Berlin, 1870.

Imrot Ya'aḳob, the first of eleven books containing discussions on morality. Eydtkuhnen, 1873.

Sedeh Aram, containing a number of interpretations of the "Onḳelos." Berlin, 1876.

Or Boḳer, on the criticism of the Talmud. Berlin, 1879.

Minḥat Zikkaron, one hundred passages in the Bible critically explained. Breslau, 1881.

Ḥobat ha-Ab li-Beno, a pedagogical treatise on the training of children. St. Petersburg, 1882.

Ruaḥ Ḥadashah, treatises on the Talmudic literature. Presburg, 1884.

Ohel Yissaskar, a biography of Issachar ha-Kohen (Baermann Ashkenazi). Przemysl, 1887.

Sanhedrin, a study of the origin, significance, personnel, and power of this highest tribunal of the Jews. St. Petersburg, 1891.

Reifmann also contributed extensively to the periodicals of his time. In 1881 Sir Moses Montefiore sent Reifmann a golden loving-cup, on which was engraved a Hebrew poem.

H. R. J. Go.

REINACH: German family which emigrated to France in the first half of the nineteenth century. As its most eminent members may be mentioned:

Jacques Reinach, Baron: French financier; uncle and father-in-law of Joseph Reinach; born at Paris; died there Nov. 20, 1892. He was financially interested in the second Panama Canal Company, and was active in obtaining further concessions for the company from the House of Deputies in 1888. In Sept., 1892, Edouard Drumont, in the "Libre Parole," asked him to account for the 3,000,000 francs he had received from the company for purposes of "publicity," and which it was hinted had been used for bribery and in order to pass the supplementary law of 1888. Reinach was summoned before a committee of the House of Deputies Nov. 8, 1892; he failed to appear, and a warrant for his arrest was issued Nov. 19. The next day he was discovered dead in his bed, and was suspected of having committed suicide. His nephews, it is understood, accounted for the money in question.

Bibliography: *Journal des Débats*, Nov. 21, 1892; *La Grande Encyclopédie*, s.v. *Panama*.

S. J.

Joseph Reinach: French author and statesman; born in Paris Sept. 30, 1856; son of Hermann Joseph Reinach and Julie Büding. He was educated at the Lycée Condorcet and the Faculté de Droit. He was admitted to the bar of Paris in 1877. His first publication was a political and historical work entitled "La Serbie et le Monténégro," while his studies in foreign politics, published in the "Revue Bleue," attracted the attention of Léon Gambetta. He was a contributor to the "République Française" and the "Dix-Neuvième Siècle," and was prosecuted by the government of May 16, 1877, for his pamphlet "La République ou le Gâchis." On his return from a mission in the East he wrote "Voyage en Orient" (2 vols., Paris, 1879). For a short time in 1881–82 he was the "directeur du cabinet" of Léon Gambetta, president of the council of ministers, and, after Gambetta's death, as the political editor of the "République Française" from 1886 to 1893, he energetically opposed the Boulanger movement.

In 1889 Reinach was elected deputy for Digne, department of the Basses-Alpes, and was reelected in 1893; but five years later he lost both his seat as deputy and his rank as captain in the territorial army on account of his prominence in the Dreyfus case (1898). Until 1900, in public meetings as well as in the columns of the "Siècle," he was one of the first to advocate a revision of the trial, and consequently was constantly attacked by the opponents of Dreyfus.

Reinach was named chevalier of the Legion of Honor in 1886. He is the author of numerous articles in the "Revue des Deux Mondes," the "Grande Revue," the "Revue Britannique," and other periodicals, and has contributed to the "Nineteenth Century" and the "Athenæum."

Reinach wrote also the following works: "Du Rétablissement du Scrutin de Liste" (Paris, 1880); "Les Récidivistes" (1882); "Léon Gambetta" (1884); "Le Ministère Gambetta, Histoire et Doctrine" (1884); "Le Ministère Clémenceau" (1885); "Les Lois de la République" (1885–86); "Traduction de la Logique Parlementaire de Hamilton" (1886); "Les Petites Catilinaires," a collection of articles against Boulanger and his policy (3 vols., 1889); "Essais de Littérature et d'Histoire" (1889); "La Politique Opportuniste" (1890); "La France et l'Italie Devant l'Histoire" (1893); "Mon Compte Rendu" (a collection of his principal speeches, 1893); "Diderot" (1894); "Pages Républicaines" (1894); "L'Eloquence in Française Depuis la Révolution Française Jusqu'à Nos Jours" (1894); "Démagogues et Socialistes" (1895); "L'Education Politique, Histoire d'un Idéal" (1896); "Manuel de l'Enseignement Primaire" and "Essais de Politique et d'Histoire" (1898).

His contributions to the literature of the Dreyfus case are as follows: "Une Erreur Judiciaire sous Louis XIV.; Raphael Lévy" (1898); "Vers la Justice par la Vérité" (1898); "Le Crépuscule des Traîtres" (1899); "Tout le Crime" (1900); "Les Blés d'Hiver" (1901); and "Histoire de l'Affaire Dreyfus" (4 vols.; the fifth in preparation). He edited also "Les Discours de Gambetta" (11 vols.), "Les Discours et les Dépêches de Gambetta Pendant la Guerre Franco-Allemande" (2 vols.), and "Les Discours de Challemel-Lacour."

Solomon Reinach: French philologist and archeologist; born at St.-Germain-en-Laye Aug. 29, 1858; brother of Joseph and Théodore Reinach; educated at the Lycée Condorcet and at the Ecole Normale Supérieure (1876–79). While a member of the Ecole Française d'Athènes (1879–82) he made discoveries of much interest at Myrina, near Smyrna, in the Archipelago, and along the coast of Asia Minor. In 1886 he became a member of the staff of the Museum of National Antiquities at St.-Germain, and was deputy professor of national archeology at the Ecole du Louvre from 1890 to 1892 and assistant curator of the National Museums in the following year; he was elected titular member of the Académie des Inscriptions et Belles-Lettres three years later. He is an officer of public instruction and an officer of the Legion of Honor.

Reinach is the author of the following works: translation of Schopenhauer's "Ueber den Willen in der Natur" (Paris, 1877); "Manuel de Philologie Classique" (2 vols., 1883–84); "Traité d'Epigraphie Grecque" (1885); "Précis de Grammaire Latine" (1885); "Recherches Archéologiques en Tunisie en 1883–84" (in collaboration with E. Babelon; 1886); "La Colonne Trajane au Musée de Saint-Germain" (1886); "Terres Cuites et Autres Antiquités Trouvées dans la Nécropole de Myrina" (1886) and "La Nécropole de Myrina" (2 vols., 1887)—both in collaboration with E. Pottier; "Esquisses Archéologiques" (1888); "Description Raisonnée du Musée de Saint-Germain" (1889); "L'Histoire du Travail en Gaule à l'Exposition de 1889" (1890); "Antiquités de la Russie Méridionale" (in collaboration with Kondakov and Tolstoi; 1891–92); "Bibliothèque des Monuments Figurés" (4 vols.; 1888–95); "Chroniques d'Orient" (2 vols., 1891–96); "L'Origine des Aryens" (1892); "Les Celtes dans les Vallées du Pô et du Danube" (1894); "Répertoire de la Statuaire Grecque et Romaine" (3 vols., 1897–1904); "Répertoire des Vases Grecs et Etrusques" (1899); "Guide Illustré du Musée National de Saint-Germain" (1899); "Apollo" (a general history of art; 1904); "Cultes, Mythes et Religions" (1904). He edited also Tissot's "Exploration Scientifique de la Tunisie, Géographie et Atlas de la Province Romaine d'Afrique" (2 vols., 1888).

Reinach's active interest in Judaism is shown by the fact that he is the vice-president of the central committee of the Alliance Israélite Universelle and a shareholder and member of the committee of the Jewish Colonization Association; he has also been the president of the Société des Etudes Juives, to whose review he has contributed a number of articles on Judaism.

Théodore Reinach: French scholar; born at St.-Germain-en-Laye July 3, 1860; brother of Joseph and Solomon Reinach. He was educated at the Lycée Condorcet, the Ecole des Hautes Etudes, and the Ecole des Sciences Politiques, and has taken up, in turn, the study of law, history, and classical archeology. He was a member of the bar of Paris from 1881 to 1886. In 1890 he was sent on an archeological mission to Constantinople, and from 1894 to 1896 he delivered a course of public lectures on ancient numismatics under the auspices of the Faculté des Lettres of Paris. Since 1903 he has been professor at the Ecole des Hautes Etudes Sociales, where he lectures on the history of religion. He has been editor of the "Revue des Etudes Grecques" since 1888. His article "Judæi" in the "Dictionnaire des Antiquités Grecques et Romaines" and his "Juifs" in "La Grande Encyclopédie" deserve mention.

Reinach is the author of the following works: "De la Purge des Hypothèques Légales Non Inscrites"; "De la Vente des Immeubles du Bailli" (Paris, 1880); a translation (prose and verse) of "Hamlet" (1880); "Histoire des Israélites Depuis Leur Dispersion Jusqu'à Nos Jours" (1885; 2d ed., 1901, 3d ed., 1903); "De l'Etat de Siège et Institutions de Salut Public à Rome, en France, et dans la Législation Comparée" (1885); "Les Monnaies Juives" (1887; English transl. by Hill, 1903); "Trois Royaumes de l'Asie Mineure, Cappadoce, Bithynie, Pont" (1888); "De Archia Poeta" (1890); "Mithridate Eupator, Roi de Pont" (1890; German transl. 1894); "Recueil des Inscriptions Juridiques Grecques" (in collaboration with Dareste and Haussoullier; 1890–1904); the first French translation of Aristotle's *Πολιτεία 'Αθηναίων* (1891); a transcription of the Delphic hymn to Apollo discovered by the Ecole Française d'Athènes; "Une Nécropole Royale à Sidon" (1892–96); "Poèmes Choisis de Bacchylide" (in collaboration with E. d'Eichthal, 1898); "Textes d'Auteurs Grecs et Romains Relatifs au Judaïsme" (1895); a translation and edition (in collaboration with H. Weil) of Plutarch's "De Musica" (1900); "L'Histoire par les Monnaies" (1902); "Catalogue Général des Monnaies Grecques de l'Asie Mineure, Commencé par Waddington" (in collaboration with E. Babelon; 1st vol., 1904).

Reinach is the editor of a French translation of the complete works of Josephus, of which three volumes have appeared (1900–4). He is a member of the committee of the Jewish schools of Paris, and in 1899 was president of the Société des Etudes Juives. He is a chevalier of the Legion of Honor.

S. J. KA.

REINES, ISAAC JACOB B. SOLOMON NAPHTALI: Russian rabbi, and founder of the "Mizraḥi," or Orthodox, branch of the Zionist organization; a descendant of Saul Wahl; born in Karlin, government of Minsk, Oct. 27, 1839. His father, a native of Wilna, who lived several years in Palestine before Isaac was born, gave his son a thorough rabbinical education. Isaac made rapid progress in his Talmudical studies, and devoted part of his time to the study of Hebrew works on logic and mathematics. He read also the medieval Jewish philosophers and acquired the Russian and German languages—an uncommon accomplishment among Russian rabbis of the older generation.

In 1855 young Reines went to the yeshibah of Volozhin, where he remained about two years. After spending some time in Eisheshok he returned home (1857). In 1859 he married the daughter of Joseph Reisen, rabbi of Hordok, settled there, and continued his studies under the roof of his father-in-law; and when Reisen became rabbi of Telsh (1862) Reines removed with him to that city. In 1867 Reines became rabbi of Shukian, and in 1869 he was chosen rabbi of the more important town of Shwentsian, in the government of Wilna, where he remained for about sixteen years.

His "Ḥotem Toknit."

Reines began to attract attention when he developed in his "Ḥotem Toknit" (Mayence, 1880; vol. ii., Presburg, 1881) a new plan for a modernized, logical method of studying the Talmud. Some of the ultra-Orthodox condemned his plan as a radical innovation, and only his great learning and piety saved him from being openly charged with heresy. He was one of the rabbis and representative Jews who assembled in St. Petersburg in 1882 to consider plans for the improvement of the moral and material condition of the Jews of Russia, and there he proposed the substitution of his method for the one prevalent in the yeshibot. His proposition being rejected, he founded a new yeshibah in which his plans were to be carried out. It provided a ten years' course, during which the student was to acquire the rabbinical knowledge necessary for ordination as rabbi, and at the same time secure the secular education required in a government rabbi. But although the plan to supply Russian-speaking rabbis agreed in principle with the aims of the Russian government, there was so much Jewish opposition to his yeshibah that it was closed by the authorities after an existence of four years; all further attempts of Reines to reestablish it failed.

In 1885 Reines became rabbi of Lida, government of Wilna, of which rabbinate he is still the incumbent (1905). His next undertaking was the establishment of a system popularly known as that of the Kovno'er Perushim, for the purpose of subsidizing young married men ("perushim") studying for the rabbinate outside of yeshibot (see BLASER, ISAAC B. SOLOMON; "Oẓar ha-Sifrut," iii. 21). Later he joined the Zionist movement, and when, after the fifth Zionist congress, the Swiss and other students formed a radical faction and threatened to turn the movement in a direction which would lead away from religion, Reines founded the Mizraḥi branch, now probably the strongest branch of the Zionist organization in Russia. His personal influence helped to give the support of that powerful Orthodox body to the regular Zionist organization on the question of the East-African or Uganda project.

Besides the above-mentioned work Reines published: notes on the "'Edut bi-Yehosef" of his father-in-law (Wilna, 1866); "'Edut be-Ya'akob," on testimony (*ib.* 1872); "Sha'are Orah," on Haggadah and Midrash (*ib.* 1886); "Orim Gedolim," on Halakah (*ib.* 1887); "Nod shel Dema'ot," eulogies or funeral sermons (*ib.* 1891); "Or Shib'at ha-Yamim" (*ib.* 1896); "Orah we-Simḥah" (with a preface explaining Zionism from the Orthodox point of view; *ib.* 1898); "Or Ḥadash 'al Ẓiyyon," a refutation of the arguments which are advanced by the ultra-Orthodox against Zionism (*ib.* 1902).

REINES, MOSES: Russian scholar and author; born at Lida (where his father, R. Isaac Jacob Reines, was rabbi) in 1870; died there March 7, 1891. Moses Reines was the author of: "Ruaḥ ha-Zeman," material for the history of Jewish culture in Russia (published in "Oẓar ha-Sifrut," vol. ii.); "Neẓaḥ Yisrael," on the persistence of the Jewish people, the colonization of Palestine, etc. (Cracow, 1890); "Aksanyut shel Torah," material for a history of the yeshibot in Russia (*ib.* 1890); "Dor wa-Ḥakamaw," part i., twelve biographies of modern Jewish scholars (*ib.* 1890).

REINOWITZ, JACOB (REB YANKELE): Member of the London bet din; born at Wilkowisk, Poland, in 1818; died in London May 17, 1893. At twenty-eight years of age he was appointed rabbi in his native town, and held the office for thirty years. In 1876 he accepted the position of preacher to the Talmud Torah in London; and, attracting the attention of Chief Rabbi N. M. Adler by his learning and labors in the East End, he became a member of the London bet din.

"Reb Yankele" is believed to have been the original of "Reb Shemuel" in Israel Zangwill's "Children of the Ghetto."

REISCHER, JACOB B. JOSEPH (called also **Jacob Back**): Austrian rabbi; born at Prague; died at Metz Feb. 1733. He was the son of R. Joseph, author of "Gib'ot 'Olam," and a pupil of R. Simon Spira of Prague, who gave him in marriage the daughter of his son Benjamin Wolf. Reischer was dayyan at Prague, whence he was called to the rabbinate of Rzeszow in Galicia, deriving his name Reischer from that city, which is known as Reische among the Jews. He was subsequently called to the rabbinate of Anspach, and then occupied a similar position at Worms, from 1713 to 1719, when he went to Metz, officiating there until his death.

Reischer was the author of the following works: "Minḥat Ya'aḳob" (Prague, 1689 *et seq.*), commentary on the "Torat ha-Ḥaṭṭat" of Moses Isserles, with many refutations and amplifications; "Torat ha-Shelamim," commentary on the Yoreh De'ah, Hilkot "Niddah," and on the "Ḳontres ha-Sefeḳot" of Shabbethai ha-Kohen, with an appendix containing eighteen responsa on various subjects (printed as the second part of the "Minḥat Ya'aḳob," *ib.* 1689 *et seq.*); "Ḥoḳ Ya'aḳob," commentary on Oraḥ Ḥayyim, Hilkot "Pesaḥ," first printed with the Shulḥan 'Aruk, Oraḥ Ḥayyim (Dessau, 1696); "Solet le-Minḥah," supplements to the "Minḥat Ya'aḳob" and the "Torat ha-Shelamim," first printed with the "Ḥoḳ Ya'aḳob" (*ib.* 1696); "'Iyyun Ya'aḳob" (Wilmersdorf, 1729), commentary on the "'En Ya'aḳob"; "Shebut Ya'aḳob," responsa and decisions in three parts: part i. (Halle, 1709), with the appendix "Pe'er Ya'aḳob," containing novellæ on the treatises Berakot, Baba Ḳamma, and Giṭṭin; part ii. (Offenbach, 1719), treatises on the rules "miggo" and "sefeḳ sefeḳa"; part iii. (Metz, 1789), containing also his "Lo Hibbiṭ Awen be-Ya'aḳob," a reply to the attacks of contemporary rabbis upon his "Minḥat Ya'aḳob" and "Torat ha-Shelamim."

REITLINGER, FREDERICK: French jurist; born at Ichenhausen, Bavaria, June 18, 1836. He attended the Saint Anna College at Augsburg. After having pursued Talmudical studies under Abraham Geiger at Breslau, he studied law at the universities of Munich and Heidelberg, where he obtained his degrees. For several years Reitlinger pleaded in criminal cases, and acquired great renown in Germany.

In 1866 he went to Paris, and, having obtained an audience with the French emperor, Napoleon III., was requested by him to write a book upon cooperative societies. The book was published the same year under the title "Les Sociétés Coopératives en Allemagne et le Projet de Loi Français"; and on account of that work Napoleon granted Reitlinger what is called the "grande naturalisation," which may be obtained, after one year's residence, in consideration of some important services rendered to France. Reitlinger established himself as an attorney in Paris in 1867, and soon became celebrated for his remarkable ability. He was chosen by Jules Favre to be one of his secretaries; and he stood in high esteem with President Grévy. During the Franco-Prussian war (1870-71) the Government of National Defense sent Reitlinger as special delegate to England and Austria; and to carry out this mission he had to escape from Paris in a balloon. He wrote a picturesque narrative of his voyage in a book entitled "Une Mission Diplomatique en Octobre, 1870" (Paris, 1899).

Reitlinger was the first to make known in France Schulze-Delitzsch's system of self-help; and his above-cited book upon cooperative societies is still authoritative on that subject. Reitlinger is an officer of the Legion of Honor.

s. S. Man.

RELAND, ADRIAN: Dutch Christian Hebraist and Orientalist; born at Ryp, near Alkmaar, Holland, July 17, 1676; died at Utrecht Feb. 5, 1718. He became professor at Harderwyk in 1699, but resigned his appointment in the same year for the chair of Oriental languages at Utrecht. He studied Hebrew and rabbinics at Amsterdam.

Reland's publications were: "Analecta Rabbinica" (Utrecht, 1702); "Dissertationes Quinque de Nummis Veterum Hebræorum" (*ib.* 1709); and an introduction to Alting's Hebrew grammar, together with an edition of the Book of Ruth with a rabbinical commentary (*ib.* 1710). In his miscellaneous collection of dissertations he dealt with many topics of interest, as the Samaritans, Persian words in the Talmud, etc. His chief works of Jewish interest, however, were his "Antiquitates Sacræ Veterum Hebræorum" (*ib.* 1708), which went through no less than five editions, and his "Palæstina ex Monumentis Veteribus Illustrata," which was published in 1714 at Utrecht, with eleven maps, and at Nuremberg in 1716. Both these works were for a long time the standard authorities on their respective subjects.

RELIGIÖSE WOCHENSCHRIFT FÜR GOTTGLÄUBIGE GEMÜTHER. See PERIODICALS.

REMAINDERS AND REVERSIONS: In Anglo-American law the owner of property (especially of land) may and often does grant or devise it to one person for years or for life, and then to other persons forever, or consecutively to several persons for life. The estates or interests thus given to take effect after the first are known as "remainders"; but if the grantor or devisor does not exhaust his entire estate, the interest not disposed of remains in him and his heirs, and this is known as a "reversion." These words are unknown to the Jewish law; but the estates or interests which they designate might arise under it to a limited extent.

It has been shown in the article on ALIENATION AND ACQUISITION that "the owner of land may sell or give it for a term of years [free of rent] or he may sell or give its produce for a number of years"; and the difference between the two forms of grant has also been shown there. There seems to be no objection to a gift for life, though a sale of a life-estate might have been drawn into question, as a chance bargain. Here then is a reversion remaining in the original owner and his heirs.

Maimonides ("Yad," Mekirah, xxiii., based on a short remark [B. B. 148a] in the Talmud), shows how such an estate may be given also in one or more fruit-trees, or in a dove-cot (the grantee for years having the broods), or in a beehive, or in ewes or cows (the grantee enjoying the fleeces and the lambs or calves), notwithstanding the objection that this disposition of the unborn fledglings, the unmade honey or wax, etc., looks like the grant of things not in existence, which is contrary to Talmudic principles.

Perhaps the reversioner under some circumstances—*e.g.*, where, having given away only the produce, he retains some kind of possession—might sell his reversion; and it seems that he can always make a gift thereof "mortis causa" (which is simply what would in modern law be called a bequest by will); and in this way there might be created a remainder in fee after the particular estate for life or for years; but certainly there can be no successive life-estates, no "remainder for life," because to create this there must be the grant of something not yet in existence; and this runs counter to first principles.

W. B. L. N. D.

REMAḲ (MOSES BEN JACOB CORDOVERO): Rabbi of Safed and cabalist; born in 1522; died June 25, 1570. He belonged to a Spanish family, probably of Cordova, whence his name "Cordovero." After having studied rabbinical literature under the guidance of Joseph Caro, Cordovero at the age of twenty was initiated by his brother-in-law Solomon Alkabiẓ into the mysteries of the Cabala, in which he soon became a recognized authority. A profound thinker, and well versed in Judæo-Arabic philosophy, Cordovero devoted his activity to speculative, strictly metaphysical Cabala (קבלה עיונית), and kept aloof from the wonder-working or practical Cabala (קבלה מעשית) which was just then being propagated at Safed by Isaac Luria, in whose circle of followers he moved.

His System.

In a series of works (see below), the most important of which is that entitled "Pardes Rimmonim," Cordovero endeavored to elucidate all the tenets of the Cabala, such as the doctrines of the sefirot, emanation, the divine names, the import and significance of the alphabet, etc. Quite original is Cordovero's conception of the Deity set forth by him in his "Shi'ur Ḳomah." It is surprisingly identical with that taught later by Spinoza and there can be no doubt that the Dutch philosopher alluded to Cordovero when, in answer to the question addressed to him by his friend Oldenburg on the origin of his theory, he referred to an old Jewish philosopher ("Epistola," pp. 21, 22). In describing the relation of God to His creatures Cordovero expresses himself in the following terms:

"And the Holy One—blessed be He!—shines in the ten sefirot of the world of emanation, in the ten sefirot of the world of creation, and in the ten heavenly spheres. In investigating this subject the reader will find: that we all proceed from Him, and are comprised in Him; that our life is interwoven with His; that He is the existence of all beings; that the inferior beings, such as vegetables and animals, which serve us as nourishment, are not outside of Him; in short, he will discover that all is one revolving wheel, which ascends and descends—all is one, and nothing is separated from Him" ("Shi'ur Ḳomah," ch. xxii.).

Relation of Finite and Infinite.

But what relation can there be between the infinite, eternal, and necessary being and the corporeal, compounded world? Then, again, if nothing exists outside of God, how is the existence of the universe to be explained? Its creation at a certain definite time presupposes a change of mind on the part of God; and this is inadmissible, for it is not possible to ascribe to Him any change or alteration. These problems Cordovero endeavors to solve in the "Pardes Rimmonim." The question how could the finite and corporeal proceed from God, who is infinite and incorporeal, is explained by him by the doctrine of concentration of the divine light, through which the finite, which has no real existence of itself, appeared as existent. From the concentration of the divine light proceeded by a successive emanation the ten sefirot or the dynamic tools, through which all change takes place ("Sha'ar 'Aẓamot we-Kelim," iv.). Great development is given in the "Pardes" to the question of the divine attributes. Cordovero not only adopts the Aristotelian principle that in God thinker, thinking, and the object thought of are absolutely united, but he posits an essential difference between God's mode of thinking and that of man.

"God's knowledge," says Cordovero, "is different from that of the creature, since in the case of the latter knowledge and the thing known are distinct, thus leading to subjects which are again separate from him. This is described by the three expressions—cogitation, the cogitator, and the subject of cogitation. Now, the Creator is Himself Knowledge, the Knower, and the object known. His knowledge does not consist in the fact that He directs His thoughts to things without Him, since in comprehending and knowing Himself He comprehends and knows everything that exists. There is nothing which is not united to Him, and which He does not find in His own substance. He is the archetype of all existing things, and all things are in Him in their purest and most perfect form; so that the perfection of the creatures consists in the support whereby they are united to the primary source of His existence, and they sink down and fall from that perfect and lofty position in proportion to their separation from Him" ("Pardes Rimmonim," 55a).

The "Pardes Rimmonim" consists of thirteen gates or sections, subdivided into chapters. It was first published at Cracow in 1591. A résumé of it was published, under the title "'Asis Rimmonim," by Samuel Gallico; and commentaries on some parts of it were written by Menahem Azariah da Fano, Mordecai Prszybram, and Isaiah Horowitz. The original work was partly translated into Latin by Bartolocci ("Biblia Rabbinica," iv. 231 *et seq.*), by Joseph Ciantes (in "De Sanctissima Trinitate Contra Judæos," Rome, 1664), by Athanasius Kircher (Rome, 1652–54), and by Knorr von Rosenroth (in "Kabbala Denudata," Sulzbach, 1677).

Other works of Cordovero are: "Or Ne'erab" (Venice, 1587; Cracow, 1647; Fürth, 1710), an introduction to the Cabala; "Sefer Gerushin" (Venice, 1543), cabalistic reflections and comments on ninety-nine passages of the Bible; "Tomer Deborah" (Venice, 1588), an ethical treatise; "Zibḥe Shelamim" (Lublin, 1613), cabalistic commentary on the prayers for Rosh ha-Shanah and the "'Abodah" of the Day of Atonement; "Tiḳḳun Ḳeri'at Shema'" (Prague, 1615), on the Shema'; "Tiḳḳun Lel Shebu'ot we-Hosha'na Rabbah" (n.d.), prayers for the nights of Pentecost and Hosha'na Rabbah; "Perush ha-Tefillah" (n.d., n.p.), cabalistic commentary on the prayers.

The unpublished works of Cordovero are: "Elimah Rabba"; "Shi'ur Ḳomah" (MS. Benzion, No. 18); "Sefer Or Yaḳar"; "Perush Sefer Yeẓirah"; "Perush 'al Megillat Ekah"; "Perush 'al ha-Torah"; "Perush 'al Shir ha-Shirim"; "Be-Saba Ta'ama"; "Heneẓu ha-Rimmonim"; "Mebaḳḳesh Adonai"; and "Tefillah le-Mosheh."

REMAK, ERNST JULIUS: German physician; born at Berlin May 26, 1849; son of Robert Remak. He received his education at the universities of Breslau, Berlin, Würzburg, Strasburg, and Heidelberg, and obtained the degree of M.D. in 1870; he took part in the Franco-Prussian war of 1870–71. After serving as assistant in the department for nervous diseases at the Charité Hospital, Berlin, from 1873 to 1875 he established himself as a neuropath in the German capital, where he became privat-docent in 1877, and professor in 1893.

Remak has contributed more than fifty essays to the professional journals, and is the author of: "Grundriss der Elektrodiagnostik und Elektrotherapie für Praktische Aerzte," Vienna, 1895; "Neuritis und Polyneuritis," in Nothnagel's "Handbuch der Speziellen Pathologie und Therapie," *ib.* 1900.

Bibliography: Pagel, *Biog. Lex.*

S. F. T. H.

REMAK, ROBERT: German physician: born at Posen July 26, 1815; died at Kissingen Aug. 29, 1865. He studied medicine at the University of Berlin, graduated in 1838, and settled in the Prussian capital. From 1843 he was assistant at the pathological department of the university, and in 1847 received the "venia legendi" from his alma mater. He was the first Jewish privat-docent in Prussia. In 1859 he became assistant professor.

Remak contributed several important works to medical science, especially on the construction of nerve-tissue and on the treatment of its diseases. Among his many essays on this subject may be mentioned: "Vorläufige Mittheilung Mikroskopischer Beobachtungen über den Inneren Bau der Cerebrospinalnerven," in Müller's "Archiv," 1836; "Ueber die Zweifelhafte Flimmerbewegung an den Nerven," *ib.* 1841; "Ueber den Inhalt der Nervenprimitivröhre," *ib.* 1845; "Ueber Extracellulare Entstehung Thierischer Zellen und über die Vermehrung Derselben Durch Theilung," *ib.* 1852; "Ueber Methodische Elektrisirung Gelähmter Muskeln," Berlin, 1855; "Galvanotherapie der Nerven- und Muskelkrankheiten," *ib.* 1858 (translated into French by Morpain, 1860); "Ueber die Embryologische Grundlage der Zellenlehre," in Müller's "Archiv," 1862.

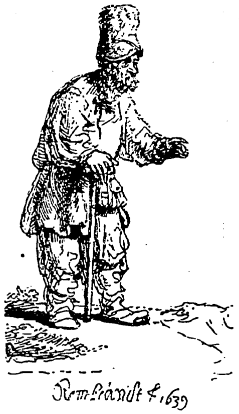
S. F. T. H.

REMBRANDT (REMBRANDT HARMENSZOON VAN RYN): Dutch painter; born at Leyden July 15, 1606 or 1607; died at Amsterdam Oct. 8, 1669. He was a contemporary of Manasseh ben Israel, with whom he was on terms of intimate friendship and whose portrait he painted in 1645 and etched in 1654. In 1655 he etched four small illustrations for Manasseh's "Piedro Gloriosa o de la Estatua de Nebuchadnezzar" (Amsterdam, 1655). The plates, which are preserved in the British Museum, represent Nebuchadnezzar's dream, the visions of Ezekiel, Jacob's dream, and the combat between David and Goliath.



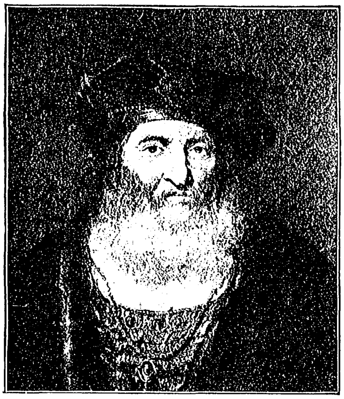
Jewish Beggar.

(From an etching by Rembrandt.)

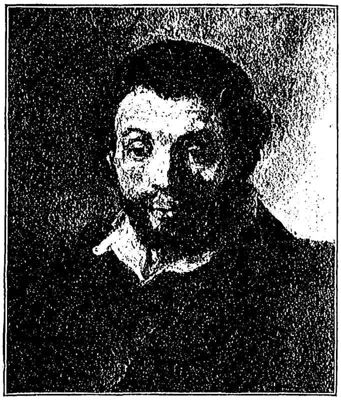
For a long time Rembrandt lived in Breedstraat in Amsterdam, near the Jewish quarter; and there he collected the types and models which he used for his paintings of Biblical subjects and of the Jewish life of his time. As the earliest existing portraits of Jews and as the work of one of the greatest portrait-painters of all time they are both artistically and anthropologically important. Following is a list of Rembrandt's works of Jewish interest, with the dates (approximate or actual) of the paintings and the galleries or collections in which they are to be found (the works are enumerated in Biblical-historical sequence):

OLD TESTAMENT AND APOCRYPHAL SUBJECTS.

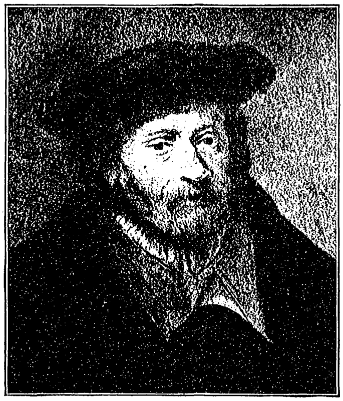
(1) Abraham Entertaining the Angels (1636), St. Petersburg, Hermitage. (2) Abraham Receiving the Angels (1638), Vienna,



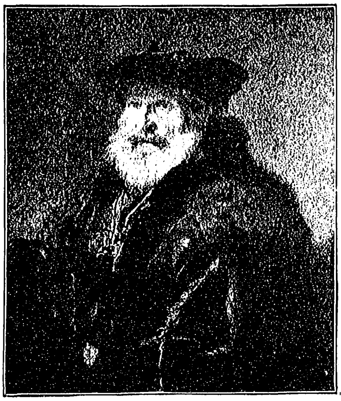
1635: Charles T. Yerkes' Collection, New York.



1646: Royal Gallery, Berlin.



1643-45: The Hermitage, St. Petersburg.



1635-36: Buckingham Palace, London.

Portraits of Seventeenth-Century Jews by Rembrandt.

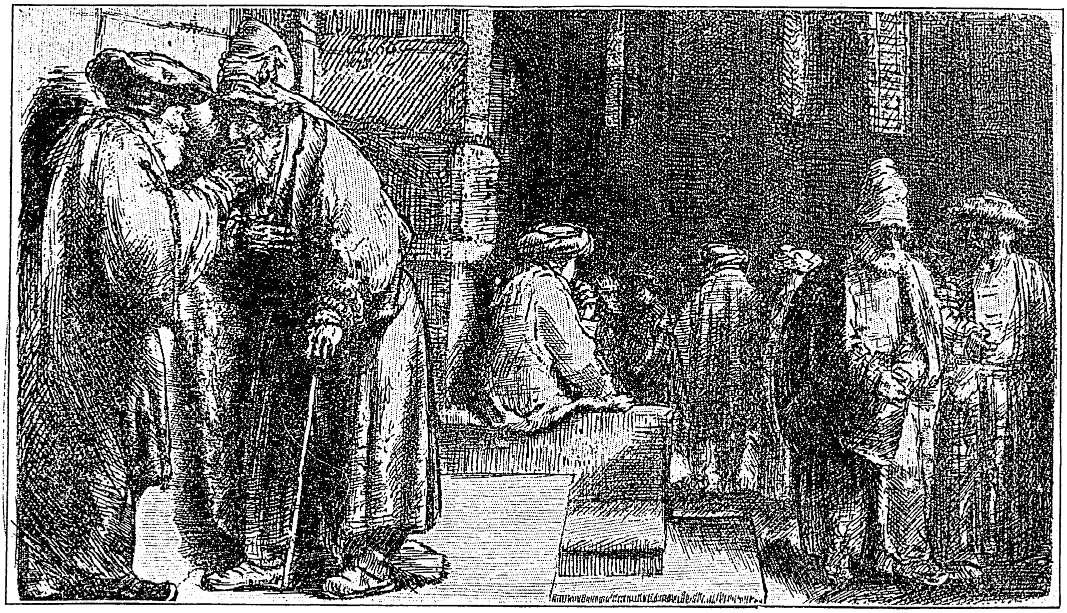
Schönborn-Buchheim Gallery. (3) The Dismissal of Hagar (1640), London, Victoria and Albert Museum. (4) The Dismissal of Hagar (1650), England, Earl of Denbigh's collection, Newnham Paddox. (5) Abraham's Sacrifice (1635), St. Petersburg, Hermitage. (6) Abraham's Sacrifice (1636), Munich, Pinacothek. (7) Rebekah and Eliezer (1634), Vienna, Schönborn-Buchheim Gallery. (8) Isaac Blessing Jacob (1636), England, Earl of Brownlow's collection, Belton House, Grantham. (9) Jacob Wrestling with the Angel (1627), Berlin, Royal Gallery. (10) Jacob Seeing Joseph's Bloody Coat (1650), London, Earl of Derby's collection. (11) Joseph's Two Brothers Showing the Bloody Coat to Jacob (1650), St. Petersburg, Hermitage. (12) Joseph's Dream (1633), Amsterdam, Six collection. (13) Joseph Accused by Potiphar's Wife (1654). (14) Joseph Accused by Potiphar's Wife (1655), St. Petersburg, Hermitage. (15) Joseph Accused by Potiphar's Wife (1655), Berlin, Royal Gallery. (16) Jacob Blessing the Sons of Joseph (1656), Cassel, Museum. (17) The Finding of Moses (1635), Philadelphia, John G. Johnson's collection. (18) Moses Breaking the Tables of the Law (1659), Berlin, Royal Gallery. (19) Samson's Wedding (1638), Dresden, Royal Gallery. (20) Samson and Delilah (1636), Cassel, Museum. (21) Samson Threatening His Father-in-Law (1630), Berlin, Royal Gallery. (22) Samson Captured by the Philistines (1628), Berlin, Emperor of Germany's collection. (23) The Blinding of Samson (1635), Vienna, Schönborn-Buchheim Gallery. (24) The Sacrifice of Manoah (1641), Dresden, Royal Gallery. (25) David Playing the Harp Before Saul (1630), Frankfort-on-the-Main, Städel Institut. (26) David Playing the Harp Before Saul (1665), The Hague, A. Bredius' collection. (27) The Reconciliation Between David and Absalom (1642), St. Petersburg, Hermitage. (28) Bath-sheba at the Bath (1654), Paris, Louvre. (29) Bath-sheba After the Bath (1643), The Hague, Baron Steengracht van Dinvenwoorde's collection. (30) Ahasuerus and Haman at Esther's Feast (1660), Moscow, Rumiantzoff Museum. (31) Haman Begging for Mercy Before Esther (1665), Bucharest, King of Rumania's collection. (32) Fall of Haman (1665), St. Petersburg, Hermitage. (33) Jeremiah Mourning the Destruction of Jerusalem (1630), St. Petersburg, Count Sergei Stroganoff's collection. (34) Feast of Belshazzar (1634), England, Earl of Derby's collection, Knowsley House. (35) Daniel's Dream (1650), Berlin, Royal Gallery. (36) Susanna at the Bath (1647), Paris, Louvre. (37) Susanna at the Bath (1637), The Hague, Royal Gallery. (38) Susanna and the Elders (1647), Berlin, Royal Gallery. (39) The Head of Susanna (1647), Paris, Léon Bonnat's collection. (40) Tobit and His Wife (1650), England, Sir Frederick Cook's collection, Richmond. (41) Tobit Discovers His Wife's Theft (1645), Berlin, Royal Gallery. (42) Tobias Restoring His Father's Sight (1636), Brussels, Duc d'Aremberg's collection. (43) The Angel Raphael and Tobias (1637), Paris, Louvre.

SUBJECTS FROM JEWISH LIFE (IN CHRONOLOGICAL SEQUENCE).

(44) Portrait of a Young Jew (1632), Vanas, Sweden, Count Wachtmeister's collection. (45) Suppliant Before a Priest (1634), France, Bonnat Museum, Bayonne. (46) Rabbi with a White Turban (1635), England, Duke of Devonshire's collection, Chatsworth. (47) Rabbi in High Turban (1635), London, Earl of Derby's collection, Derby House. (48) Rabbi in Fur Cloak (1635), London, King of England, Buckingham Palace. (49) Rabbi in a Wide Cap (1635), New York, Charles T. Yerkes' collection. (50) Rabbi with a Flat Cap (1635), England, Royal Gallery, Hampton Court Palace. (51) Rabbi in a Broad Cap (1642), Paris, John Porge's collection. (52) Rabbi at a Study-Table (1642), Budapest, National Gallery. (53) Head of Elderly Jew in Small Cap (1643), St. Petersburg, Hermitage. (54) Rabbi Seated, with Stick in Hand (1645), St. Petersburg, Hermitage. (55) Rabbi Seated, with a Gold Chain and Broad-Brimmed Cap (1645), Berlin, Royal Gallery. (56) Rabbi Seated, with Cane and Gold Chain (1645), Dresden, Royal Gallery. (57) Head of a Jew with Scanty Brown Beard and a Dark Cap (1645), London, Earl of Ellesmere's collection, Bridgewaterhouse. (58) Head of Elderly Jew in a Fur Cap (1645), Paris, Louvre. (59) Bust of a Bearded Jew (1646), England, Earl Cowper's collection, Panshanger. (60) Head of a Young Jew in Skull-Cap (1646), Berlin, Royal Gallery. (61) Jewish Doctor (Ephraim Hezekiah Bueno; see JEW. ENCYC. iii. 422). (62) Head of a Young Jew with a Red Beard (1655), Philadelphia, John G. Johnson's collection. (63) Rabbi with Black Beard (1657), London, National Gallery. (64) Blind Jew (1657), Amsterdam, Royal Gallery. (65) Young Rabbi with Black Skull-Cap (1661), Paris, Rudolf Kahn's collection.



INTERIOR OF A SYNAGOGUE AT AMSTERDAM.
(From an etching by Rembrandt.)

The following subjects painted by Rembrandt are known only in engravings:

(66) Jewish Merchant. (67) Jewish Priest, engraved by Van Bergen. (68) Rabbi, engraved by G. F. Schmidt, Reedel, and Wright. (69) Rabbi, engraved by W. Baillie. (70) Rabbi, engraved by Cooper, in the collection of the Duke of Buckingham. (71) Manasseh ben Israel at the Age of Thirty-five, painted in 1645, engraved by J. G. Hertel. (72) Jewish Merchant (a copy of that in St. Petersburg), the so-called "Manasseh ben Israel" in the Schleissheim Gallery, engraved by Kellerhoven. (73) Jew (mezzotint), engraved by J. Stolker. (74) Abraham. (75) Lot. (76) Jacob. (77 and 78) Elisha.

Well known, also, is a picture called the "Jewish

Bride," in the Rijksmuseum at Amsterdam, Holland; but this work does not show any Jewish characteristics, and has received its popular name without reason. Another picture (also called by the same title), in the Lichtenstein collection at Vienna, is generally accepted as a portrait of Rembrandt's sister (1632). A portrait of Rembrandt's father, entitled "Philo, the Jew," is in the Ferdinandeum at Innsbruck (1630).

D. F. T. H.

REMENYI, EDUARD: Hungarian violinist; born in Eged, Hungary, 1830; died at New York, May 15, 1898. He studied under Böhm at the Vienna Conservatorium from 1842 to 1845. Banished from Austria for participation in the Hungarian Revolution of 1848, he went to the United States, where for five years he led the life of an itinerant player. After his return to Europe in 1853 he sojourned for a time at Weimar, where he received the benefit of Liszt's instruction. In 1854 he became solo violinist to Queen Victoria. He obtained his amnesty in 1860 and returned to Hungary, being soon afterward appointed soloist to the emperor Francis Joseph. In 1865 he made a brilliant tour through France, Germany, Belgium, and Holland. From 1871 to 1877 he was in Paris, whence two years later he proceeded to London and then to the United States, Canada, and Mexico. A concert tour round the world was undertaken by him in 1886, in the course of which he visited Japan, China, Cochin-China, and the Cape of Good Hope.

Remenyi made numerous transcriptions of pianoforte pieces, such as Chopin's waltzes, polonaises, and mazurkas, and pieces by Bach, Schubert, and others, all of which were published under the title of "Nouvelle Ecole du Violon." His best original composition is his violin concerto.

REMNANT OF ISRAEL ("she'erit Yisrael" or "she'ar"): Concept of frequent occurrence in the utterances of the Prophets, and closely interwoven in their peculiar construction of Israel's history and destiny. The idea is indicated in the name of Isaiah's son Shear-jashub (Isa. vii. 3). Israel, steeped in sin and disloyal to Yhwh, will be severely chastised. The hostile nations, indeed, are the executioners of a deep, divine plan (comp. Isa. x. 5). Many, even the greater part, of Israel will fall or be carried away. The remnant will be saved and will return (Isa. x. 20, 21). In Isaiah's faith the impregnability of Jerusalem and the indestructibility of Israel are unshakable and fundamental elements. His doctrine of the remnant is, in the main, centered in them (Isa. x. 22, where the better reading would be אם יהוה עמך; for if, or since, "Yhwh is with thee, O Israel," as the sand by the sea will be Shear-jashub, the remnant that will repent and be saved). This remnant will no longer rely upon alliances with the surrounding nations, but upon Yhwh (Isa. x. 20).

View of Isaiah.

The process by which this remnant is separated is likened to the gathering of grapes or the shaking of an olive-tree, the result being that some of the fruit is left. But though those who survive will be few in number, they shall be "called holy" (Isa. iv. 3, xvii. 6).

Isaiah's contemporary Micah (if the passages really belong to him; they have the appearance of being the utterances of later apocalyptic seers) proclaims the same doctrine. Exiled Israel will still have a remnant free to influence, for good or evil, its surroundings, and this remnant will be gathered again (Micah ii. 12, v. 6, 7).

Zephaniah (during the reign of Josiah) apparently identifies this remnant with the "meek" of the land. It has found a refuge and means of escape on the great and terrible day of judgment, and to it is promised the rulership of the Philistine coast-districts (Zeph. ii. 3, 7). This remnant "of the house of Judah" will be visited by Yhwh, and their captivity will return. This "remnant of Yhwh's people" will also despoil discomfited Ammon and Moab. In Zeph. ii. 9 this "she'erit" interchanges with "yeter goy" in the second half. In the third chapter of Zephaniah, which, however, bears every indication of being post-exilic, the remnant of Israel, "a poor and needy people" (Hebr.), is described as not committing iniquity, as speaking only the truth, and as living in blissful pastoral peace and security.

Jeremiah makes most elaborate use of the theory. The prophet foresees that Judah is doomed to captivity; but he is equally certain that a remnant will survive. This remnant will have to endure much. It will be gleaned as thoroughly as a vine (Jer. vi. 9). It is described as "the remnant of my flock," and is promised restoration and increase (Jer. xxiii. 3). This remnant is the subject of a most fervent, but jubilant, prayer for succor (Jer. xxxi. 7). The remnant is the people of God (*ib.*). Jeremiah employs the phrase also in the sense of "those that escaped deportation" (Jer. xlii. 15, 19).

Application by Jeremiah.

Ezekiel is moved by the signs of destruction to ask whether "the remnant" of Israel will not be spared (Ezek. ix. 8, xi. 13). The context shows that for Ezekiel the phrase has the value of a technical term connoting the congregation of Israel, the exiles; and in Haggai it has the same force, denoting the common people, the congregation, as distinct from the princes and priests (Hag. i. 12, ii. 2).

This congregation, or remnant, of Israel, according to the critical school, is identical with the loyal Ḥasidim (the "meek," the "poor") so often referred to in the Psalms, the martyrs during the Maccabean rebellion, the "servants of Yhwh," who, when the Maccabean princes proved false, remained true to their God. Many of the passages attributed to Isaiah, Zephaniah, and Micah are assigned by the critics to unknown writers of post-exilic and Maccabean times (comp. Duhm, "Jesaia," 2d ed., p. 75, Göttingen, 1902).

The phrase "remnant of Israel" ("she'erit Yisrael") has come to be a favorite name for Jewish congregations, as in the case of the oldest congregation in New York.

RENAN, JOSEPH ERNEST (commonly known as **Ernest Renan**): French Semitic scholar and thinker; born at Tréguier Feb. 23, 1823; died at Paris Oct. 2, 1892. Destined for the priesthood, he felt in 1842, after the study of German philosophy and Semitic philology, that he was no longer able to continue his training for that office. His "Histoire Générale des Langues Sémitiques," published in 1855, founded his reputation as an Orientalist, and especially attracted attention by his view that the Semitic peoples have a natural bent toward monotheism. A voyage to Syria (1861), undertaken for scientific purposes, prepared the way for his "Vie de Jésus" (1863), in which, almost for the first time, a purely historical treatment was applied to the subject. This led to his suspension and final rejection from his professorship of Hebrew in the Collège de France, in which he was succeeded by S. Munk.

Renan's "Vie de Jésus" was the first volume of a history of Christianity down to the time of Marcus Aurelius, which occupied his attention up to 1878. He had in the meantime been restored (1870) by the republic to his Hebrew professorship, and he devoted himself for the rest of his life to a history of the people of Israel in five volumes, the last two, published posthumously, bringing it down to the common era and thus connecting it with his other series. In his history he adopted Ewald's views of the sources of the Pentateuch, and regarded the Prophets somewhat as sublime socialists. In addition, Renan published translations of Job (1859), Canticles (1860), and Ecclesiastes (1882). His "Mission de Phénicie" (1874) is a valuable contribution to the history of Phenician civilization; and he was practically the founder of the "Corpus Inscriptionum Semiticarum," for which he edited the first volume, on Phenician inscriptions. Further, he edited the sections on the French rabbis contributed to the "Histoire Littéraire de la France" (vols. xxviii., xxxi.) by A. Neubauer, and made use of the latter's Talmudic knowledge both in his "Vie de Jésus" and in the subsequent volumes of his history, being the first savant to do so. In 1883 Renan delivered in Paris two discourses, on "Le Judaïsme Comme Race et Comme Religion" and "Le Judaïsme et le Christianisme" respectively; he contributed also to the "Revue des Etudes Juives."

RENT; REPAIRS. See Landlord and Tenant.

REPENTANCE (Hebr. "teshubah"): The noun occurs only in post-Biblical literature, but it is derived from the vocabulary of the Bible. Maimonides' dictum, "All the prophets preach repentance" ("Yad," Teshubah, vii. 5), echoes the opinion of Talmudic authority (Ber. 34b).—**Biblical Data:** In Biblical as well as post-Biblical literature repentance is postulated as the indispensable condition on which the salvation and redemption of the people of Israel, as well as of every individual man, depend (Gen. iv. 7; Lev. iv., v.; Deut. iv. 30, xxx. 2; I Kings viii. 33, 48; Hosea xiv. 2; Jer. iii. 12, xxxi. 18, xxxvi. 3; Ezek. xviii. 30-32; Isa. liv. 22, lv. 6-10; Joel ii. 12; Jonah ii. 10).

Scope and Function.

The full meaning of repentance, according to Jewish doctrine, is clearly indicated in the term "teshubah" (lit. "return"; from the verb שוב). This implies: (1) All transgression and sin are the natural and inevitable consequence of man's straying from God and His laws (comp. Deut. xi. 26-28; Isa. i. 4; Jer. ii. 13, xvi. 11; Ezek. xviii. 30). (2) It is man's destiny, and therefore his duty, to be with God as God is with him. (3) It is within the power of every man to redeem himself from sin by resolutely breaking away from it and turning to God, whose loving-kindness is ever extended to the returning sinner. "Let the wicked forsake his way, and the unrighteous man his thoughts: and let him return unto the Lord, and he will have mercy upon him; and to our God, for he will abundantly pardon" (Isa. lv. 7; comp. Jer. iii. 12; Ezek. xviii. 32; Joel ii. 13). (4) Because "there is not a just man upon earth, that doeth good, and sinneth not" (Eccl. vii. 20; I Kings viii. 46), every mortal stands in need of this insistence on his "return" to God.

Manifestations of Repentance.

The Mosaic legislation distinguishes between offenses against God and offenses against man. In the first case the manifestation of repentance consists in: (1) Confession of one's sin before God (Lev. v. 5; Num. v. 7), the essential part of which, according to rabbinical interpretation (Yoma 87b; Maimonides, *l.c.* i. 1), is the solemn promise and firm resolve not to commit the same sin again. (2) The offering of the legally prescribed sacrifice (Lev. v. 1-20). Offenses against man require, in addition to confession and sacrifice, restitution in full of whatever has been wrongfully obtained or withheld from one's fellow man, with one-fifth of its value added thereto (Lev. v. 20-26). If the wronged man has died, restitution must be made to his heir; if he has no heir, it must be given to the priest who officiates at the sacrifice made for the remission of the sin (Num. v. 7-9).

Other manifestations of repentance mentioned in the Bible are: pouring out water (I Sam. vii. 6; according to the Targum symbolizing the pouring out of one's heart before God; comp. Yer. Ta'an. 68d; Midr. Teh. cxix.; Lam. ii. 19); prayer (II Sam. xii. 16); self-affliction, as fasting, tearing the upper garment, and wearing sackcloth; sitting and sleeping on the ground (I Kings xxi. 27; Joel ii. 13; Jonah iii. 5; Neh. ix. 1). The Prophets disparaged all such outer manifestations of repentance, insisting rather on a complete change of the sinner's mental and spiritual attitude. They demanded a regeneration of the heart, *i.e.*, a determined turning from sin

Prophetic Conception.

and returning to God by striving after righteousness. "O Israel, return unto the Lord thy God; for thou hast fallen by thine iniquity. Take with you words, and return unto the Lord: say unto him, Take away all iniquity, and accept us graciously: so will we render as bullocks the offerings of our lips" (Hos. xiv. 1–2, Hebr.). "Rend your heart, and not your garments, and turn unto the Lord your God: for he is gracious and full of compassion, slow to anger and plenteous in mercy, and repenteth him of the evil" (Joel ii. 13, R. V.). "Cast away from you all your transgressions whereby ye have transgressed; and make you a new heart and a new spirit: for why will ye die, O house of Israel?" (Ezek. xviii. 31; comp. Ps. li. and Jer. xxiv. 7).

——**Rabbinical View:** All that the Bible teaches of repentance has been greatly amplified in rabbinical literature. Repentance is of paramount importance to the existence of this world, so that it was one of the seven provisions which God made before the Creation (Pes. 54a; Ned. 39b; Gen. R. i.). "The Holy One, blessed be His name, said to Elijah, 'Behold, the precious gift which I have bestowed on my world: though a man sinneth again and again, but returneth in penitence, I will receive him'" (Yer. Sanh. 28b). "Great is repentance: it brings healing into the world"; "it reaches to the throne of God" (comp. Hos. xiv. 2, 5); "it brings redemption" (comp. Isa. lix. 20); "it prolongs man's life" (comp. Ezek. xviii. 21; Yoma 86a, b). "Repentance and works of charity are man's intercessors before God's throne" (Shab. 32a). Sincere repentance is equivalent to the rebuilding of the Temple, the restoration of the altar, and the offering of all the sacrifices (Pesiḳ., ed. Buber, xxv. 158; Lev. R. vii.; Sanh. 43b). Sincere repentance is manifested when the same temptation to sin, under the same conditions, is ever after resolutely resisted (Yoma 86b; "Yad," Teshubah, ii. 1–2). "He that confesses his sin and still clings to it is likened to a man that holds in his hand a defiling object; though he batheth in all the waters of the world he is not cleansed; but the moment he casteth the defiling object from him a single bath will cleanse him, as it is said (Prov. xxviii. 13): 'Whoso confesseth and forsaketh them [his sins] shall have mercy'" (Ta'an. 16a; "Yad," *l.c.* ii. 3).

Prerequisite of Atonement.

Repentance is the prerequisite of all atonement (Yoma viii. 8; "Yad," *l.c.* i. 1). The Day of Atonement derives its great significance only from the fact that it is the culmination of the ten penitential days with which the Jewish religious year begins; and therefore it is of no avail without repentance (Yoma viii. 8; Sifra, Emor, xiv.). Though man ought to be penitent every day (Ab. ii. 10; Shab. 153a), the first ten days of every year are the acceptable time announced by the prophet (Isa. lv. 6): "Seek ye the Lord while he may be found, call ye upon him while he is near" (R. H. 18a; "Yad," *l.c.* ii. 6). Repentance and the Day of Atonement absolve from sins against God; from sins against our fellow man they absolve only when restitution has been made and the pardon of the offended party has been obtained (Yoma 87a; "Yad," *l.c.* ii. 9).

No man need despair on account of his sins, for every penitent sinner is graciously received by his heavenly Father and forgiven. "The Holy One, blessed be His name, said to Jeremiah: 'Go, tell Israel that they return.' Jeremiah told them. Said Israel: 'With what countenance shall we come before God? Are not these hills and mountains, on which we served other gods, standing there? We are overwhelmed with shame.' Jeremiah brought back to God what they had said. Again God said to Jeremiah: 'Go, tell them, if ye return to me, do ye not return to your Father in heaven? As it is said, "For I am a father to Israel, and Ephraim is my first-born"'" (Jer. xxxi. 9; Pesiḳ., ed. Buber, xxv. 165). Nor is it ever too late, even on the day of death, to return to God with sincere repentance (Ḳid. 40b; "Yad," *l.c.* ii. 1), for "as the sea is always open for every one who wishes to cleanse himself, so are the gates of repentance always open to the sinner" (Pesiḳ., ed. Buber, xxv. 157; Deut. R. ii.; Midr. Teh. lxiii.), and the hand of God is continually stretched out to receive him (Pes. 119a; Deut. R. ii.). Nay, the repentant sinner attains a more exalted spiritual eminence than he who has never sinned (Ber. 34b; "Yad," *l.c.* vii. 4). It is therefore a grievous sin to taunt the repentant sinner by recalling his former sinful ways (B. M. 58b; "Yad," *l.c.* vii. 8).

Bibliography: Maimonides, *Yad, Teshubah*; Hamburger, *R. B. T.* i. 201, ii. 96; Bacher, *Ag.* Index, *s.v.* Busse (Rana).

K. M. Schl.

In Biblical Hebrew the idea of repentance is represented by two verbs—"shub" (to return) and "niḥam" (to feel sorrow; comp. Job xlii. 6, "I . . . repent in dust and ashes," and Joel ii. 14, "he will return and repent")—but by no substantive. The underlying idea has been adequately expressed in Greek by μετάνοια, a word which denotes "change of mind and heart." The idea, however, is peculiarly Jewish, so much so that its ethical force is lost in the Christian dogma of the atoning Christ (see the note of Franz Delitzsch quoted by Montefiore in "J. Q. R." xvi. 212). In fact, where Paulinism speaks of a "saving grace" of God through Christ (see Saul of Tarsus), Judaism emphasizes the redeeming power of teshubah, which is nothing else than man's self-redemption from the thraldom of sin. Wisdom says, "Evil pursueth sinners" (Prov. xiii. 21); Prophecy says, "The soul that sinneth, it shall die" (Ezek. xviii. 20); but the Holy One, blessed be He, says, "Let the sinner repent and he will be pardoned" (Yer. Mak. ii. 31d; Pesiḳ. 158a).

Power of Teshubah.

The entire history of mankind is accordingly viewed by the Rabbis in the light of repentance. "God waits for every sinner, be he as wicked as Pharaoh, until he repents" (Ex. R. ix. 9, xii. 1); He waits also for the heathen nations (Cant. R. v. 16; Weber's "Jüdische Theologie" [p. 67] misrepresents the facts). God waited before He destroyed the generation of the Flood, the generation of the builders of the Tower of Babel, the men of Sodom, and the Egyptians, giving them time to repent (Mek., Beshallaḥ, Shirah, 5; Gen. R. xxxii. 10, xxxviii. 13, xlix. 10–

11; Wisdom xii. 10–20). So God sent Abraham to lead the heathen world to repentance (Gen. R. xxx. 5); and the Messiah, according to one rabbi, is called "Hadrak" because he shall lead all mankind to repent of their sins before God (Cant. vii. 5, with reference to Zech. ix. 1).

Preachers of Repentance.

"All the prophets were preachers of repentance" (comp. Jer. iv. 1; Isa. lv. 6), "but Hosea was most emphatic and persuasive" (Pesiḳ. R. 44). Noah preached repentance to the generation of the Flood (Sanh. 108a), and in the Sibyllines (i. 125–281) he is especially represented as "the preacher of repentance" (*κήρυξ μετάνοιας*) to the corrupt heathen world. Possibly the Greek and the Latin versions of Ben Sira (xliv. 16) have preserved the original form. "Enoch was a teacher of repentance to the heathen" (comp. Wisdom iv. 10), although Philo ("De Abrahamo," § 3) speaks of him as "a type of repentant sinner who changed from a worse to a better mode of life" (comp. Gen. R. xxv.). A similar tradition, preserved only in Christianized and Mohammedanized forms (Vita Adæ et Evæ, ii. 15–22; Koran, surah vii. 57–76), regarded all the predecessors and successors of Noah as preachers of repentance to their generations. Moses also preached repentance, promising the people redemption upon the condition that they would repent (Philo, "De Execrationibus," §§ 8–9; Pesiḳ. R. 44, with reference to Deut. xxx. 2–3; comp. Leḳaḥ Ṭob *ad loc.*).

Great Types of Repentance.

All the great sinners in the Bible are presented in the Haggadah as types of repentance. Not Adam, who tried to cover his transgressions (Gen. iii. 12) and did not forthwith repent, but Cain, who confessed and forsook his evil way (Gen. iv. 13–16); not Saul, who tried to cover his sin (I Sam. xv. 14), but David, who confessed and forsook sin (II Sam. xii. 13), obtained mercy (Midr. Teh. c., with reference to Prov. xxviii. 13). Cain the transgressor was made "a sign" for repentant sinners (Gen. R. xxii.), and through him his father, Adam, learned of the efficient power of repentance (Midr. Teh. *l.c.*; comp. Wisdom x. 1). Thus Adam is described as a great penitent, devoting himself for weeks, together with Eve, to fasting and doing penance in the waters of Gihon, Tigris, or Jordan (Pirḳe R. El. xx.; Vita Adæ et Evæ, vii. 6–8). Ishmael likewise was repentant (B. B. 16b; Gen. R. xxx.).

Other types of repentance for the haggadist were: Reuben (Pesiḳ. 159b; Gen. R. lxxxii. 12, lxxxiv. 18; comp. Shab. 55b; Test. Patr., Reuben, 1); Achan (Josh. vii. 1–20), who showed repentants the way by confession (Lev. R., with reference to Ps. l. 23); David, who by his repentance has become a teacher and witness to all repentant sinners ('Ab. Zarah 4b–5a; Midr. Teh. xl. 2, li. 3; Tanna debe Eliyahu R. ii.). Ahab is a type of repentance (Yer. Sanh. x. 28b; Pesiḳ. 160b); Manasseh is depicted in the oldest Midrash as the typical penitent sinner. Especially significant are his words in the Prayer of Manasses: "Thou, O Lord, . . . hast promised repentance and forgiveness to them that have sinned against Thee, . . . that they may be saved"; not "to the just, as to Abraham, and Isaac, and Jacob, which have not sinned against Thee; but . . . unto me that am a sinner" (Yer. Sanh. *l.c.*; Sanh. 103a, b; Pesiḳ. 162a; see Didascalia; Manasseh). Yokaniah (Pesiḳ. 162–163; Lev. R. x. 5) and Josiah (Shab. 56b) were repentant sinners. God endeavored to persuade Jeroboam I. to repent, but he refused to do so (Sanh. 101a). However, heathen like Balaam repented (Num. R. xx. 15); Rahab the harlot became a penitent sinner (Tanna debe Eliyahu Zuṭa xxii.); and the men of Nineveh became types of repentance (Pesiḳ. 161a). God forgave the people of Israel the sin of the golden calf only that they might teach the world repentance ('Ab. Zarah 4b).

The tannaitic period also had, in Eleazar ben Durdaia, the type of a penitent sinner whose sin and repentance became an object of popular legend ('Ab. Zarah 17b). In the amoraic period such types were furnished by Resh Lakish (Pirḳe R. El. xliii.), by Abba, the father of R. Jeremiah b. Abba, and by the exilarch 'Uḳban b. Nehemiah (Shab. 55b).

Nature of Repentance.

All are encouraged by God to repent excepting him who sins with the intention of repenting afterward (Yoma viii. 9; comp. Amon), or him who persists in his wickedness (Yoma 86b; Ex. R. xi. 2–3; Midr. Teh. i., end). Repentance is especially useless for him who by his teaching and example has caused others to sin (Ab. v. 26; Sanh. 107b); hence the heavenly voice, "All ye backsliding children repent, except Aḥer" (Elisha b. Abuyah; Ḥag. 15a). Gehazi was not allowed to repent (Soṭah 47a). As long as man lives he may repent, but there is no repentance after death, only submissive acceptance of God's punitive justice (Eccl. R. i. 15, vii. 15; Pirḳe R. El. xliii.; Ruth R. i. 17; Shab. 32a; 'Er. 19a; Yalḳ., Isa. xxvi. 2). Wherefore R. Eliezer said: "Repent one day before death" (Ab. ii. 10)—that is, every day (Shab. 153a; Eccl. R. ix. 8, where the parable of the wise and foolish servants by R. Johanan b. Zakkai is given in illustration). The righteous repent for every sin they have committed (Ex. R. xxiii. 3); the disciple of the wise repents every night for his sin (Ber. 19a; Ḥag. 75a); so Israel is expected to repent in time in order to inherit the future life (Ex. R. xxiii. 11). The heathen, as a rule, do not repent (Pesiḳ. 156a, b; comp. 'Ab. Zarah 3a). "As long as the people are sin-laden they can not be God's children; only when they have repented have they in reality become His children" (Sifre, Num. 112, with reference to Deut. xxxiii. 5; comp. Sifre, Deut. 308).

The sinners who have repented are raised and placed among God's hosts (Yalḳ., Ps. xlv.). Repentance is not an outward act, as Weber ("Jüdische Theologie," p. 261) endeavors to represent it, but an inner cleansing of the heart (Pesiḳ. 161b). It must be perfectly sincere, true contrition, coupled with shame and self-reproach, and confession (Ber. 12b; Ḥag. 5a; Sanh. 43; Pesiḳ. R. 83; Yer. Ta'an. ii. 65). A striking picture of such repentance is given by Eleazar b. Durdai'a ('Ab. Zarah 17a). In the same sense repentance is described in Psalms of Solomon, ix. 6–7, and is dwelt upon in Wisdom xi. 23; xii. 10, 19; Book of Jubilees, v. 17. It is well analyzed by Philo, in "De Execrationibus," § 8, as a feeling of shame and self-reproach which leads to a frank and sincere confession and a change of heart and of conduct. "Through it Israel shall be accepted by God their Father and be gathered again from all quarters of the globe, the glory of God marching before them" (comp. Sanh. 97b; Tobit xiii. 6, xiv. 6).

In Judaic Christianity.

It is interesting to observe that the call for repentance which was manifested in Essene circles by bathing in water (see Gen. R. ii. 5; Yer. Ta'an. ii. 65d; comp. Adam's penitence, mentioned above) is voiced in the synoptic Gospels and throughout Judaic Christianity (Matt. iii. 2, iv. 17; Mark i. 15); in the fourth Gospel and throughout the Pauline writings repentance is superseded by rebirth in faith. In the Catholic Church contrition, confession, and satisfaction become parts of the sacramental act of "pœnitentia," whereas the Protestant churches follow the Pauline teachings pure and simple (see Herzog-Hauck, "Real-Encyc." *s.v.* "Busse").

Repentance occupies a very prominent position in all the ethical writings of the Middle Ages. Baḥya ibn Paḳuda devotes a special section to it in his "Ḥobot ha-Lebabot"—the "seventh gate," called "Gate of Repentance." Maimonides devotes the last section of "Sefer ha-Madda'" and the first book of his "Yad ha-Ḥazaḳah" to the "Rules of Teshubah." Isaac Aboab, in his "Menorat ha-Ma'or," has eighteen chapters concerning repentance. No less elaborate are the more mystic writers on the same subject: Eleazar of Worms, in his "Roḳeaḥ"; Isaiah Horwitz, in his "Shene Luḥot ha-Berit"; Elijah de Vidas, in his "Reshit Ḥokmah"; and others. Some of these chapters were frequently if not regularly read by the pious every year, before or during the penitential day, to prepare the heart for the great Atonement Day.

K.

REPHAIM, VALE OF (עמק רפאים): Fertile plain in Judah; the scene of David's battles with the Philistines (Isa. xvii. 5; II Sam. v. 18 *et seq.*, xxiii. 13). According to II Samuel (*l.c.*), it must have been in the vicinity of Beth-lehem. The boundary-line between Judah and Benjamin ran across a hill at its northern end (Josh. xv. 8; xviii. 16 [R. V.]; hence it must have been situated to the west or southwest of Jerusalem and in the vicinity of Baal-perazim (II Sam. v. 20). Eusebius erroneously places it north of Jerusalem ("Onomasticon," p. 288), while Josephus more correctly locates it between Jerusalem and Beth-lehem ("Ant." vii. 12, § 4). Since the sixteenth century the plain Al-Baḳ'ah, which lies southwest of Jerusalem, and the eastern part of which is crossed by the road leading from Jerusalem to Beth-lehem, has been identified, with entire probability, with the plain of Rephaim. The eastern edge of this vale, sloping toward the west, forms the watershed between the Jordan and the Mediterranean. It is drained through the Rose Valley (Wadi al-Ward). It extends southward from the valley of Hinnom to the mountain of the monastery Mar Elyas, a distance of about one hour, and is approximately half as wide. The German colony Rephaim is now settled there.

E. G. H. I. Be.

REPHIDIM: Place on the edge of the desert of Sin, where the children of Israel encamped after crossing that desert. The people suffered there from lack of water; they complained, and Moses smote water from the rock. Moses named the place "Massah and Meribah" (Ex. xvii. 1-7). In the parallel account, Num. xxi., the place where this occurred is not Rephidim, but Kadesh. At Rephidim Amalek attacked Israel from behind. Modern research (Ebers, Leprius, and others) places it in the north-western part of the Wadi Firan. According to Robinson ("Researches," i. 179), Rephidim is in the narrow gorge of Al-Waṭiyyah in the great Wady al-Shaikh.

REPLEVIN. See Alienation and Acquisition.

REPRESENTATIVE THEMES: Anticipating in some measure the modern use of the leitmotif, the cantors of the synagogues, as soon as the traditional material of their chants was fixed (by the beginning of the sixteenth century), introduced and extended the practise of turning the attention of the worshipers to a sentiment connected with another service, to a passage in the ritual of another day, or to the approach of a sacred occasion, by the quotation of a snatch of melody from the traditional music of such occasion. In the Sephardic tradition the practise has chiefly proceeded in the direction of quoting melodies from one service in the course of another. For example, in the Additional Service of the New-Year the prayer "Ha-Yom Harat 'Olam," which is chanted after the brief sounding of the Shofar has proclaimed the close of each of the three sections of the service, is sung first to the melody (see Niggun) of Shofeṭ Kol ha-Areẓ, the special hymn in the earlier part of the morning service of the day; the second time to the melody of Adonai Beḳol Shofar, which hymn precedes the sounding of the complete sequence of shofar-calls that follow the reading of the Law; and the third and last time to the melody of "Leshoni Bonanta," the Geshem hymn which is to be again heard on the eighth day of Tabernacles, at the close of the series of autumn festivals. Other examples of the Sephardic practise of melodic quotation have been noted in connection with Adon 'Olam; En Kelohenu; Ḳaddish; Odeka; Yigdal.

The use of representative themes by the cantors of the Ashkenazim is far wider and more varied. Certain melodies have come to be traditionally regarded as typical of days and seasons. Such melodies are substituted for the usual final strain of a Ḳaddish, or are chanted to the words which actually allude to a coming sacred celebration, or are substituted on the Sabbath within a festival for the airs employed during the course of the year or on other special occasions. The melodies customarily utilized by the present generation as representative themes are enumerated under Hallel and Mi-Kamokah, and their use is there explained (comp. also Geshem and Ḳaddish). How shorter extracts from a melody associated with another text are used to turn the thought to the sentiment of that text has been shown under Az Shesh Me'ot and Kol Nidre.

The Polish school of ḥazzanim has developed a further use of the leitmotif, more nearly corresponding to its function in the modern orchestra, and has employed short typical phrases, associated with the Atonement services especially, in varying combination, particularly with reference to the conclusion of a musical sentence, in order to graduate, with the progress of the fast-day itself, the shade of devotional expression between humiliation, resignation, hope, and confidence. The transcription of the shorter hymn-tunes given under Ne'ilah will afford some indication of the manner in which this object is attained. The general idea is but an application of that modal feeling underlying synagogal music since the days of the Temple, which has consistently prompted the esthetic association of some definite species of song with each peculiar occasion (see Cantillation; Music, Synagogal).

A. F. L. C.

REPTILES ("remes," "shereẓ"): In the Biblical account of creation the "creeping things" are divided into the "moving" creatures of the sea (Gen. i. 20) and "everything that creepeth upon the ground" (Gen. i. 25). As a group parallel to the "beasts" and the "fowls of the air" they are indicated by the word "remes" in Gen. vi. 7 and elsewhere.

The Talmud uses, for the amphibia and small animals, the generic terms "reḥesh" (moving things), "shereẓ" (creeping things), and "sheḳeẓ" (things which arouse disgust; Ḥul. 10a, 126b; Nid. 21a). But small mammals also, as the weasel, mouse, hedgehog, and mole, are sometimes comprised under the word "shereẓ" (comp. Shab. 107a *et seq.*). Maimonides ("Yad," Ma'akalot Asurot, ii., §§ 12 *et seq.*) makes the following distinction: "Shereẓ ha-mayim" are creatures not belonging to the fish tribe, but yet living in the water (leeches, seals, etc.); "romes 'al ha-areẓ" are the parasitic organisms which arise from the decomposition of foreign substances (intestinal worms, dung-beetles, etc.); while "shoreẓ 'al ha-areẓ" are the creatures produced by the "generatio propagativa." All reptiles are poisonous, but only the snake is deadly ('Ab. Zarah 31b). A characteristic common to all creeping things is that the white and the yolk in their eggs are not separated (Ḥul. 64a). See also Abomination; Creeping Things.

RESCISSION. See Judgment.

RESH (ר): Twentieth letter of the Hebrew alphabet, perhaps so called because the shape of the letter in the Phenician alphabet (see Alphabet) resembles the form of a head (Hebr. "rosh"; Aramaic, "resh"). In pronunciation it is a palatal liquid substantially identical with the English "r." It is allied to ל and נ, and sometimes interchanges with them (thus, in later Old Testament books "Nebuchadnezzar" is found instead of the proper form, "Nebuchadrezzar"). It is occasionally employed to form quadriliterals from triliterals; but it has no other formative use. In Aramaic it sometimes represents the resolution of a dagesh forte, as in דרמשק for דמשק. With rare exceptions it does not receive dagesh forte. As a numeral, it has, in later times, the value 200.

T. I. Br.

RESH GALUTA. See Exilarch.

RESH KALLAH: The highest officer, except the president, in the academies of Sura and Pumbedita. In each of the two schools there were seven "reshe kallah," who sat in the first row (called "daraḳamma"), facing the gaon. According to the explanation of Nathan ha-Babli, they were called "reshe kallah" because each of them was set above ten members of the Great Sanhedrin, which was modeled on that of Jerusalem. But the term is really derived from the so-called "kallah" months (Adar to Elul), since it was their duty in the first three weeks of each of these months to explain to the students the subjects which the gaon had selected for his lectures during the following half-year. On the installation of an exilarch a resh kallah read from the Bible immediately after a new resh galuta, and a resh kallah on his death was succeeded by his son, even if the latter was still a minor. In the year 935 a blind resh kallah restored peace between the exilarch David b. Zakkai and the gaon Kohen Ẓedeḳ. Bar Mar Rab Samuel and Mar Rab Amram, both relatives of Sherira, are given the title of resh kallah. The liturgical prayer "Yeḳum Purḳan," dating from that time, mentions these officials. Their names occur in the beginning of every geonic responsum, together with those of the "ḥaberim" and the "allufim." Rashi explains the word "kallah" in his commentary on Berakot 6b (comp. Kallah).

RESPONSES: The congregational answers to the utterances of the officiant. These were originally what the responses to the benedictions of those private individuals who are called to the reading of the Law still remain—mere loud acclaims. But with the introduction of the four-part choir in the early nineteenth century some set form of response became necessary. The "singer" and "bass," who had previously been employed to accompany the Ḥazzan with a vocal obligato, had usually repeated "Baruk Hu u-Baruk Shemo" (comp. Baruk She-Amar) and "Amen" to the melody a moment before chanted by the soloist, even as they echoed his song, or imitated it at other intervals, in the course of the passages which were not benedictions.

Traditional material for these particular responses was accordingly indicated; but not for others, such as those in the Ḳaddish or "Ken Yehi Raẓon" in the priestly blessing. In the former case these "meshorerim" (vocal accompanists; see Music, Synagogal) had also certainly joined in; but the melodies chanted were by no means so generally adhered to as those of the prayers which closed with a benediction, the motives of which had been anciently accepted as traditional by all the congregations following each rite. Consequently, save only in responses such as the "Yehe Shemeh Rabba" on the penitential evenings, when the melody of the preceding prayers was continued in the Ḳaddish, or on other such occasions when the congregants at large chanted along with the cantor, as is still so frequently the practise among the Sephardim, no general line for the structure and detail of the choral responses had been indicated.

It was here that great service was rendered by Sulzer, who set down such responses as tradition suggested, and first adequately provided a complete corpus of choral refrains, by composing the lacking numbers himself. The rationale of this corpus has disappeared in the Reform synagogues, where the service is no longer entirely intoned by a precentor; but it still permeates the devotions of the Conservative congregations, and its influence is felt even in the choirless synagogues of small communities. Where, however, of recent years the reaction toward the resuscitation of older and more characteristic traditional melodies for choral rendering has been evident, the new responses framed by Sulzer and his school, which perceptibly exhale the Neo-Catholic flavor of much of their music, have often been replaced by phrases built up, like the old responses to the benedictions, on the material afforded by the Ḥazzanut. In this reversion to antique color, anticipating the more recent corresponding advocacy of the older music of the Catholic Church by its ecclesiastical heads, Louis Lewandowski is a chief figure.

The great collection of responses, given in their liturgical position, in A. Baer's "Ba'al Tefillah, oder der Praktische Vorbeter" (Göteborg, 1877, and Frankfort, 1883), is exhaustive as regards the congregational tradition and its modern practise among the Ashkenazim. The harmonized choral responses of the same rite are collected in Cohen and Davis' "Voice of Prayer and Praise" (London, 1899), with almost equal fulness, in seventy-one numbers, sixty-one of which are based on the traditional intonations of the prechoral period. The responses of the Sephardim remain to be published.

A. F. L. C.

RESPONSES TO BENEDICTIONS: Any portion of the liturgy which begins with the words "Blessed be Thou, O Lord" ("Baruk attah Adonai"), or which ends with an abstract of itself introduced by these words, or which both begins and ends thus, is known as a benediction ("berakah"). When it is read aloud by a leader, for instance, at public service at which ten or more men are met, or when grace is said where three or more men have eaten together, or even where the master of the house pronounces the sanctification ("Ḳiddush") of Sabbath or of a festival before his wife and children, the congregation or company answers "Amen" at the end of each benediction. The meaning of this word is "true" or "truly"; but its use in the Greek of the New Testament indicates that at this early age it was deemed to be technical and untranslatable.

The origin of this sort of response can be traced back to the double "Amen" at the end of the first, second, and third books of Psalms; *e.g.*, "Blessed be the Lord forever, Amen and Amen." The Mishnah (Ber. viii. 8) fully recognizes an established custom when it warns the faithful that while they may boldly say "Amen," thus giving assent to any berakah pronounced by an Israelite, they must not so respond to the benediction of a Samaritan unless they have heard every word of it. A Babylonian teacher (Ber. 45a) warns those who respond not to cry out "Amen" louder than the leader has recited the benediction; for the Psalmist says (xxxiv. 4 [A. V. 3]), "Magnify the Lord with me."

After the third benediction in grace after meal, the word "Amen" is spoken by those who recite the benediction along with it (Shulḥan 'Aruk, Oraḥ Ḥayyim, 188, 1). This custom originated as a hint to working men eating at the master's table, that they might leave without staying for the less obligatory fourth benediction (see Ber. 46a). In the Temple, however, when a benediction was pronounced, the response, on the authority, it is claimed, of Neh. ix. 5, was "Blessed be the name of His glorious kingdom forever and ever," as related in Yer. Ber. ix. 5, and repeated thence in Bertinoro's commentary.

It is the present usage (though one unsupported by anything in the Talmud or the codes, or in any of the older works on the liturgy), when the leader has pronounced the words "Blessed be Thou, O Lord," for the bystanders to chime in with "Blessed be He and blessed be His name" ("Baruk hu u-baruk shemo"). Sulzer and other masters of modern synagogal music have phrased this response for their choirs. The advocates of this custom base its practise on Deut. xxxii. 3—"When I call on the name of the Lord, ascribe ye greatness to our God"; the Sifre (*ad loc.*) makes this verse the authority for other well-known responses, but not for this. The opponents of the custom point out that its origin is not only cabalistic, but that it was devised by the followers of Shabbethai Ẓebi in his honor, the letters of the words in question having the same numerical value (814) as the name of the false Messiah. See Amen.

A. L. N. D.

RESTRAINT OF PERSONS. See Duress.

RESTRAINTS ON ALIENATION: Restraints on the power to sell or encumber land are known to many systems of jurisprudence. The institution of the year of jubilee (see Sabbatical Year), as set forth in Lev. xxv. 8-28, is the most rigid restraint upon the free disposition of land. It applied to the Holy Land only, and in its full force to farming and grazing land solely; for houses within a walled city, if sold by the owner, could be redeemed only within a year. After the lapse of a year the sale became absolute. Houses in the open country or in villages were redeemable forever, and reverted in the year of jubilee to the former owner. The houses in the cities allotted to the Levites and priests were also inalienable, as they were the only heritage of the Levites.

The weighty sentence in the above-cited passage is: "The land shall not be sold in perpetuity; for the land is mine" (verse 23). However, the Talmud in one place surmises that a sale of land for a term of sixty years would have been valid even while the institution of the jubilee was still in force (B. M. 79a); but this is only a surmise, as the jubilee had not been observed at any time during the second commonwealth. Indeed, to sell for a term reaching for ever so short a time beyond the next year of jubilee is as much a violation of the letter of the law as an absolute sale.

According to the Talmud, the institution fell into disuse many years before the destruction of the First Temple, though instances of the purchase of land by the nearest agnate of the inheriting owner are certainly found as late as Jeremiah (Jer. xxxii. 6–25), in full accord with the rules laid down in Lev. xxv.

Land, either in Palestine or elsewhere, may be freely sold by the owner without any regard to the law in Leviticus; only persons less than twenty years old are not competent to sell inherited land (Giṭ. 65a) nor make a gift "mortis causa" of such lands (see Infancy). But restraints upon alienation such as are so often contrived by English and American conveyancers in wills and marriage settlements for the purpose of tying up an estate in the donor's or testator's family are wholly unknown to the Talmud jurisprudence. As has been shown under Alienation, a conveyance can restrict the title only so far as to give a life-estate to the first taker, but can not create after such life-estate either a vested or a contingent remainder. Moreover, after the life of the taker the estate must revert to the grantor and his heirs.

E. C. L. N. D.

RESURRECTION.—Biblical Data: Like all ancient peoples, the early Hebrews believed that the dead go down into the underworld and live there a colorless existence (comp. Isa. xiv. 15–19; Ezek. xxxii. 21–30). Only an occasional person, and he an especially fortunate one, like Enoch or Elijah, could escape from Sheol, and these were taken to heaven to the abode of Yhwh, where they became angels (comp. Slavonic Enoch, xxii.). In the Book of Job first the longing for a resurrection is expressed (xiv. 13–15), and then, if the Masoretic text may be trusted, a passing conviction that such a resurrection will occur (xix. 25, 26). The older Hebrew conception of life regarded the nation so entirely as a unit that no individual mortality or immortality was considered. Jeremiah (xxxi. 29) and Ezekiel (xviii.) had contended that the individual was the moral unit, and Job's hopes are based on this idea.

A different view, which made a resurrection unnecessary, was held by the authors of Ps. xlix. and lxxiii., who believed that at death only the wicked went to Sheol and that the souls of the righteous went directly to God. This, too, seems based on views analogous to those of Jeremiah and Ezekiel, and probably was not widely held. In the long run the old national point of view asserted itself in the form of Messianic hopes. These gave rise to a belief in a resurrection in order that more might share in the glory of the Messianic kingdom. This hope first finds expression in Isa. xxvi. 19, a passage which Cheyne dates about 334 B.C. The hope was cherished for faithful Israelites. In Dan. xii. 1–4 (about 165 B.C.) a resurrection of "many . . . that sleep in the dust" is looked forward to. This resurrection included both righteous and wicked, for some will awake to everlasting life, others to "shame and everlasting contempt."

——In Extra-Canonical Apocalypses: In the earliest part of the Ethiopic Book of Enoch (i.–xxxvi.) there is a great advance on the conceptions of Daniel, although the book is of earlier date. Ch. xxii. contains an elaborate description of Sheol, telling how it is divided into four parts, two of which receive two classes of righteous; the others, two classes of wicked. Of these, three classes are to experience a resurrection. One class of the wicked has been already judged and has received its punishment. In II Maccabees the belief that all Israelites will be resurrected finds expression (comp. vi. 26, vii. 9–36, and xiv. 46). In the next Enoch apocalypse (Ethiopic Enoch, lxxxiii.–xc.), composed a few years after Daniel, it was thought that only the righteous Israelites would experience a resurrection. That was to be a bodily resurrection, and the body was to be subsequently transformed. This writer realized that the earth was not a fit place for Yhwh's permanent kingdom, and so the conception of a heavenly Jerusalem appears, of which the earthly Jerusalem city is the prototype.

Against these views some of the later psalmists uttered a protest, declaring that a resurrection was impossible (comp. Ps. lxxxviii. 10, cxv. 17). In spite of this protest, however, the idea persisted. The next Enoch apocalypse (Ethiopic Enoch, xci.–civ.) looked for a resurrection of the righteous, but as spirits only, without a body (comp. ciii. 3, 4). A later Enoch apocalypse (Ethiopic Enoch, xxxvii.–lxx.) expresses the conviction that both the righteous and the wicked will be raised (comp. li. 1, 2; lxii. 15, 16), and that the spirits of the righteous will be clothed in a body of glory and light.

The author of the Slavonic Book of Enoch (Book of the Secrets of Enoch, xxii. 8–10) believed in a resurrection of spirits, without a body. He nevertheless believed in a spiritual body, for he describes the righteous as clothed in the glory of God. The authors of the Book of Jubilees and the Assumptio Mosis believed in a resurrection of the spirit only, without a body (comp. Jubilees, xxiii. 31 *et al.*, and Assumptio Mosis, x. 9).

All these believed that the soul would sleep in Sheol till the judgment, but several Alexandrian writers about the beginning of the common era held, like Ps. xlix. and lxxiii., that the spirits of the righteous entered on a blessed immortality immediately at death. This was the view of the author of the Wisdom of Solomon (iii. 1–4; iv. 7, 10, *et al.*), of Philo, and of IV Maccabees. Finally, the scope of the resurrection, which in previous writers had been limited to Israel, was extended in the Apocalypse of Baruch and in II Esdras to include all mankind (comp. Baruch, xlix.–li. 4; II Esd. vii. 32–37).

Bibliography: Charles, *A Critical History of the Doctrine of a Future Life in Israel, in Judaism, and in Christianity*, London, 1899.

E. C. G. A. B.

Resurrection is asserted in all the Apocryphal writings of Pharisaic origin (comp. II Macc. vii. 9–

36, xii. 43–44), where arguments against Sadducean Israel are presented (Book of Jubilees, xxiii. 30; Test. Patr., Judah, 25; Zebulun, 10; Benjamin, 10; Vita Adæ et Evæ, xiii.; Sibyllines, ii. 85; Enoch, li. 1–2; Apoc. Baruch, xxx. 1–5, l.–li.; II Esd. vii. 32; Psalms of Solomon, iii. 16, xiv. 13), and in the Hellenistic writings (see Wisdom iii. 1–9, iv. 7, v. 16, vi. 20; IV Macc. ix. 8; xiii. 16; xv. 2; xvii. 5, 18; xviii. 23). Immortality of the soul takes the place of bodily resurrection. Rabbinical arguments in favor of resurrection are given in Sanh. 90b–92b, from promises made to the dead (Ex. iv. 4; Deut. xi. 9 [comp. Mark xii. 18]; Num. xviii. 28; Deut. iv. 4, xxxi. 16, xxxii. 39), and from similar expressions in which the future tense is applied to the future life (Ex. xv. 1; Deut. xxxiii. 6; Josh. viii. 30; Ps. lxxxiv. 5 [A. V. 4]; Isa. lii. 8); also in Ḥul. 142a, from promised rewards (Deut. v. 16, xxii. 17), which so frequently are not fulfilled during this life (Ber. 16b; Gen. R. xx. 26). Arguments are drawn from the grain of wheat (Sanh. 90b; comp. I Cor. xv. 35–38), from historical parallels—the miracles of revival wrought by Elijah, Elisha, and Ezekiel (Lev. R. xxvii. 4)—and from a necessary conception of divine justice, body and soul not being in a position to be held to account for their doings in life unless, like the blind and the lame man in the parable, they are again brought together as they were before (Sifre, Deut. 106; Sanh. 91a, with reference to Ps. l. 4).

The Sadducees denied the resurrection (Josephus, "Ant." xviii. 1, § 4; *idem*, "B. J." ii. 8, § 14; Acts xxiii. 8; Sanh. 90b; Ab. R. N. v.). All the more emphatically did the Pharisees enunciate in the liturgy (Shemoneh 'Esreh, 2d benediction; Ber. v. 2) their belief in resurrection as one of their fundamental convictions (Sanh. x. 1; comp. Abot iv. 22; Soṭah ix. 15).

Both the Pharisees and the Essenes believed in the resurrection of the body, Josephus' philosophical construction of their belief to suit the taste of his Roman readers notwithstanding (see "B. J." ii. 8, § 11; "Ant." xviii. 1, § 5; compare these with the genuine source of Josephus, in Hippolytus' "Refutatio Hæresium," ed. Duncker Schneidewin, ix. 27, 29, where the original ἀνάστασις [= "resurrection"] casts a strange light upon Josephus' mode of handling texts). According to the Rabbis, Job and Esau denied resurrection (B. B. 16a, b). Whosoever denies resurrection will have no share in it (Sanh. 90b). The resurrection will be achieved by God, who alone holds the key to it (Ta'an. 2a; Sanh. 113a). At the same time the elect ones, among these first of all the Messiah and Elijah, but also the righteous in general, shall aid in raising the dead (Pirḳe R. El. xxxii.; Soṭah ix. 15; Shir ha-Shirim Zuṭa, vii.; Pes. 68a; comp. "Bundahis," xxx. 17).

Universal or National.

By means of the "dew of resurrection" (see Dew) the dead will be aroused from their sleep (Yer. Ber. v. 9b; Ta'an. i. 63d, with reference to Isa. xxvi. 19; Ḥag. 12b, with reference to Ps. lxviii. 10 [A. V. 9]). As to the question, Who will be raised from death? the answers given vary greatly in rabbinical literature. According to R. Simai (Sifre, Deut. 306) and R. Ḥiyya bar Abba (Gen. R. xiii. 4; comp. Lev. R. xiii. 3), resurrection awaits only the Israelites; according to R. Abbahu, only the just (Ta'an. 7a); some mention especially the martyrs (Yalḳ. ii. 431, after Tanḥuma). R. Abbahu and R. Eleazar confine resurrection to those that die in the Holy Land; others extend it to such as die outside of Palestine (Ket. 111a). According to R. Jonathan (Pirḳe R. El. xxxiv.), the resurrection will be universal, but after judgment the wicked will die a second death and forever, whereas the just will be granted life everlasting (comp. Yalḳ. ii. 428, 499). The same difference of view prevails also among the New Testament writers; at times only "the resurrection of the just" is spoken of (Luke xiv. 14, xx. 35); at other times "the resurrection of the dead" in general is mentioned (John v. 29; Acts xxiv. 15; Rev. xx. 45).

Part of the Messianic Hope.

As a matter of fact, resurrection formed part of the Messianic hope (Isa. xxiv. 19; Dan. xii. 2; Enoch, xxv. 5, li. 1, xc. 33; Jubilees, xxiii. 30). Especially were those that died as martyrs in the cause of the Law expected to share in the future glory of Israel (II Macc. vii. 6, 9, 23; Yalḳ. to Isa. xxvi. 19; Midr. Teh. xvii. 14; Sibyllines, ii. 85). The very term used to express the idea of sharing in the future life is "to inherit the land" (Ḳid. i. 10; Matt. v. 5, after Ps. xxxvii. 11; Sanh. xi. 1, with reference to Isa. lx. 21). The resurrection, therefore, was believed to take place solely in the Holy Land (Pesiḳ. R. i., after Ps. cxvi. 9 ["the land of the living," that is, "the land where the dead live again"]; or Gen. R. lxxiv.; Yer. Ket. xii. 35b, with reference to Isa. xlii. 5 ["He giveth breath to the people upon it," that is, upon the Holy Land only]). Jerusalem alone is the city of which the dead shall blossom forth like grass (Ket. 111b, after Ps. lxxii. 16). Those that are buried elsewhere will therefore be compelled to creep through cavities in the earth until they reach the Holy Land (Pesiḳ. R. *l.c.*, with reference to Ezek. xxxvii. 13; Ket. 111a).

Day of Judgment Precedes Messianic Era.

The trumpet blown to gather the tribes of Israel (Isa. xxvii. 13) will also rouse the dead (Ber. 15b; Targ. Yer. to Ex. xx. 15; II Esd. iv. 23; comp. I Cor. xv. 52; I Thess. iv. 16; see Enoch, x. 12 *et seq.*, xxv. 4 *et seq.*, xlv. 2, xc. 25, xci. 11, xcviii. 12; Test. Patr., Simeon, 61; Judah, 25; Zebulun, 10; Benjamin, 10). The nations, together with their guardian angels and stars, shall be cast into Gehenna (Enoch, xc. 24–25). According to R. Eleazar of Modi'im, to the angelic princes of the seventy-two nations who will protest because, though it has sinned like the rest, God favors Israel, God will answer, "Let each nation go through the fire together with its guardian deity"; then all the nations will be consumed in common with their deities, who can not shield them, but Israel will be saved by its God (Cant. R. ii. 1; comp. Tan., Shofeṭim, ed. Buber, end, after Isa. lxvi. 14, Ps. xxiii. 4, and Micah iv. 5). Another view is that the glare of the sun will test the heathen's loyalty to the Law they promised to observe, and they will be cast into the eternal fire ('Ab. Zarah).

The conception of God entering Hades to save Israel from Gehenna gave rise to the Christian conception of the Messiah descending into Hades to reclaim his own among those who are imprisoned there (Test. Patr., Benjamin; Sibyllines, i. 377, viii. 310; Yalḳ. ii. 359; Jellinek, "B. H." ii. 50 [comp. I Peter iii. 19]; Ascensio Isaiæ, iv. 21, with reference to Isa. ix. 16, lii.–liii.; see Epstein, "Bereshit Rabbati," 1888, p. 31). The sole end of the judgment of the heathen is, according to R. Eleazar of Modi'im (Mek., Beshallaḥ, 'Amaleḳ), the establishment of the kingdom of God. "When the Messiah appears on the roof of the Temple announcing Israel's redemption, the light emanating from him shall cause the nations to fall prostrate before him; and Satan himself will shudder, for the Messiah will cast him into Gehenna, and death and sorrow shall flee forever" (Pesiḳ. R. 36; Sibyllines, ii. 167, iii. 46-72).

Resurrection Universal.

As in the course of time the national hope with its national resurrection and final day of judgment no longer satisfied the intellect and human sentiment, the resurrection assumed a more universal and cosmic character. It was declared to be solely the act of God, who alone possesses the key that will unlock the tombs (Ber. 15b). "As all men are born and die, so will they rise again," says Eleazar ha-Ḳappar (Abot iv. 22). It was believed that resurrection would occur at the close of the Messianic era (Enoch, xcviii. 10, ciii. 8, civ. 5). This is particularly emphasized in II Esd. vii. 26-36: "Death will befall the Messiah, after his 400 years' reign, and all mankind and the world will lapse into primeval silence for seven days, after which the renewed earth will give forth its dead, and God will judge the world and assign the evildoers to the fire of hell and the righteous to paradise, which is on the opposite side." Also, according to Syriac Apoc. Baruch (xxx. 1-5; l.–lii.; cxxxv. 15), the resurrection will take place after the Messiah has "returned to heaven" and will include all men, the righteous to meet their reward, and the wicked to meet their eternal doom. This lasting doom is called "second death" (Targ. Deut. xxxiii. 6; Targ. Isa. xiv. 19; xxii. 14; lxv. 6, 15, 19; Jer. li. 39; Rev. xx. 6, 14).

Not the Heathen, but the Wicked Perish.

Nor is the wrath of the last judgment believed any longer to be brought upon the heathen solely as such. All evil-doers who have blasphemed God and His Law, or acted unrighteously, will meet with their punishment (Tos. Sanh. xiii.; Midr. Teh. vi. 1, ix. 15). It became a matter of dispute between the older school, represented by the Shammaite R. Eliezer, and the Hillelites, represented by R. Joshua, whether or not the righteous among the heathen have a share in the future world, the former interpreting the verse, "The wicked shall return to Sheol, even all the Gentiles that forget God" (Ps. ix. 18 [R.V. 17]), as condemning as wicked among the Jews and the Gentiles such as have forgotten God; the latter interpreting the verse as consigning to Sheol only such Gentiles as have actually forgotten God (Tos. Sanh. xiii. 2). The doctrine "All Israelites have a share in the world to come" (Sanh. xi. 1), based upon Isa. lx. 21 (Hebr.), "Thy people all of them righteous shall inherit the land," is therefore identical with the Pharisaic teaching as stated by Josephus ("Ant." xviii. 1, § 3; "B. J." ii. 8, § 14), that the righteous will rise to share in the eternal bliss. It is as deniers of the fundamentals of religion that heathen, Samaritans, and heretics are excluded from future salvation (Tos. Sanh. xiii.; Pirḳe R. El. xxxviii.; Midr. Teh. xi. 5). Regarding the plurality of opinions in favor of the salvation of righteous non-Jews, and the opinions of those who adhere to the national view, see Zunz, "Z. G." pp. 371-389. Related to the older, exclusive view also is the idea that the Abrahamic covenant releases the Israelites from the fire of Gehenna (Gen. R. xlviii.; Midr. Teh. vii. 1; 'Er. 19a).

At first, it seems, resurrection was regarded as a miraculous boon granted only to the righteous (see Test. Patr., Simeon, 6; Levi, 18; Judah, 25; Zebulun, 10; Vita Adæ et Evæ, 13; comp. Luke xiv. 14, xx. 36). Afterward it came to be regarded as an act of God connected with the last judgment, and therefore universal resurrection of the dead became a doctrine, as expressed in the second benediction of the Shemoneh 'Esreh (תחיית המתים; Sifre, Deut. 329; Sanh. 92b).

In Syriac Apoc. Baruch, xlix.–li. a description is given of the manner in which the righteous at the resurrection are transformed into angels shining like the stars, who behold the beauty of the heavenly "ḥayyot" beneath God's throne, whereas the wicked assume the horrible aspect of the pit of torture below. Whether or not the body at the resurrection undergoes the same process of growth as in the womb at the time of birth is a matter of dispute between the Hillelites and the Shammaites (Gen. R. xiv.; Lev. R. xiv.).

In regard to the state of the soul separated from the body by death, whether it is supposed to dwell in heaven, or in some sort of dove-cot or a columbarium (= "guf") in Hades (Syriac Apoc. Baruch, xxx. 2; II Esd. iv. 35, 41; vii. 32, 80, 101), see Immortality of the Soul.

Jewish Creed or Not?

The belief in resurrection is expressed on all occasions in the Jewish liturgy; *e.g.*, in the morning prayer Elohai Neshamah, in the Shemoneh 'Esreh, and in the funeral services. Maimonides made it the last of his thirteen articles of belief: "I firmly believe that there will take place a revival of the dead at a time which will please the Creator, blessed be His name." Saadia also, in his "Emunot we-De'ot" (following Sanh. x. 1), declared the belief in resurrection to be fundamental. Ḥasdai Crescas, on the other hand, declared it to be a specific doctrine of Judaism, but not one of the fundamental teachings, which view is taken also by Joseph Albo in his "'Iḳḳarim" (i., iv. 35-41, xxiii.). The chief difficulty, as pointed out by the latter author, is to find out what the resurrection belief actually implied or comprised, since the ancient rabbis themselves differed as to whether resurrection was to be universal, or the privilege of the Jewish people only, or of the righteous only. This again depends on the question whether it was to form part of the

Messianic redemption of Israel, or whether it was to usher in the last judgment. Saadia sees in the belief in resurrection a national hope, and endeavors to reconcile it with reason by comparing it with other miraculous events in nature and history recorded in the Bible. Maimonides and Albo in their commentary on Sanh. x. 1, Ḳimḥi in his commentary on Ps. i. 5, Isaac Aboab in his "Menorat ha-Ma'or" (iii. 4, 1), and Baḥya ben Asher in his commentary on Gen. xxiii. extend resurrection to the righteous only. On the other hand, Isaac Abravanel in his "Ma'yene Yeshu'ah" (ii. 9) concedes it to all Israel; Manasseh ben Israel, in his "Nishmat Ḥayyim" (i. 2, 8), and others, to all men. Maimonides, however (see his commentary, *l.c.*, and "Yad," Teshubah, viii.), took the resurrection figuratively, and substituted for it immortality of the soul, as he stated at length in his "Ma'amar Teḥiyyat ha-Metim"; Judah ha-Levi also, in his "Cuzari," took resurrection figuratively (i. 115, iii. 20–21).

The belief in resurrection is beautifully expressed in the old Morning Benediction, taken from Ber. 60b: "O God, the soul which Thou hast set within me is pure. Thou hast fashioned it; Thou hast breathed it into me, and Thou dost keep it within me and wilt take it from me and restore it to me in time to come. As long as it is within me I will give homage to Thee, O divine Master, Lord of all spirits, who givest back the soul to dead bodies." This benediction, for which the simpler form is given in Yer. Ber. iv. 7d, Pesiḳ. R. 40, and Midr. Teh. xvii.: "Blessed be Thou who revivest the dead"—recited after awakening from the night's sleep—throws light upon the whole conception of resurrection. Just as the soul was believed to leave the body in sleep and return at the reawakening, so was the soul, after having left the body in death, to return to "those that sleep in the dust" at the time of the great reawakening.

In modern times the belief in resurrection has been greatly shaken by natural philosophy, and the question has been raised by the Reform rabbis and in rabbinical conferences (see Geiger, "Jüd. Zeit." vii. 246) whether the old liturgical formulas expressing the belief in resurrection should not be so changed as to give clear expression to the hope of immortality of the soul instead. This was done in all the American Reform prayer-books. At the rabbinical conference held at Philadelphia it was expressly declared that the belief in resurrection of the body has no foundation in Judaism, and that the belief in the immortality of the soul should take its place in the liturgy. See CONFERENCES, RABBINICAL; PRAYER-BOOKS; REFORM JUDAISM.

RETALIATION, or **LEX TALIONIS**: In the early period of all systems of law the redress of wrongs takes precedence over the enforcement of contract rights, and a rough sense of justice demands the infliction of the same loss and pain on the aggressor as he has inflicted on his victim. Hence the prominence of the "lex talionis" in ancient law. The law of Israel is no exception: in its oldest form it included the "lex talionis," the law of "measure for measure" (this is only the literal translation of "middah ke-neged middah"); and the popular thought, as reflected in Talmudic sayings, imagined that God punishes nations and men with sufferings nearly identical with those which they have sinfully inflicted upon others (Sanh. 90a). The principle that "with what measure ye mete it shall be measured unto you" is solemnly asserted to underlie the divine law (see Soṭah i. 7, where it is applied to all the details of the ordeal of the suspected wife).

The Pentateuch does not contain the oldest system of Semitic laws, which is found in the jurisprudence of Babylon, mainly as laid down in the Code of Hammurabi. The instances given in this code of the rule of "measure for measure" go far beyond the "eye for an eye" of the Mosaic code, even when the latter is taken in its most literal sense. Thus, where a man strikes a pregnant free-born woman so as to cause her death through miscarriage (comp. the case put in Ex. xxi. 22–23), under that old Babylonian code (§ 210) the daughter of the assailant should be put to death. Again, when through the carelessness of the builder a house falls and the owner's son is struck and killed in the ruins, the builder's son should be put to death. This extravagant application of the "measure for measure" law is made impossible in Israel by Deut. xxiv. 16—"Fathers shall not be put to death for the children, neither shall the children be put to death for the fathers."

According to Ex. xxi., the owner of an ox that gores a "son" or a "daughter" (*i.e.*, a freeman or a freewoman), provided it has previously been shown to him that the ox was "wont to push with his horns in time past," should be put to death, though he may save himself by paying a ransom; this is a clear survival of the old idea of retaliation. A dim memory of the extravagances of the "lex talionis" in the old common law of the Semites seems to have long survived in the Jewish mind. Hence the rather humorous story told by an amora (Sanh. 109b) about the gross perversion of justice on the part of four wicked judges of Sodom shortly before its destruction by fire from heaven, which story Chamisso has rendered freely into German verse in his "Urtheil des Schemjaka," transplanting it from the city on the Dead Sea to the steppes of Muscovy. Under the head of ASSAULT AND BATTERY it has been shown that the meaning given by the Jewish sages (B. Ḳ. viii. 1) to the Scriptural "eye for an eye" is not necessarily a latter-day modification of the savagery of the Mosaic text; for wergild was known among all nations at a very early stage of culture, and the very prohibition of Scripture, "ye shall not take a ransom for the soul of the murderer," is a clear intimation that a payment in money was the ordinary redress for bodily injuries, and that this kind of redress was considered appropriate for all injuries not resulting in death.

It does not appear that in this matter the Sadducees adhered to the letter of the Law, for among the many disputes recorded in the Mishnah between Pharisees and Sadducees, such as that in

Yad. iv. 6, no allusion is found to such a broad difference in the form of redress allowed for bodily injuries, a matter of much importance and of frequent occurrence. There is a vague report that the followers of Boethus, a sect going beyond the Sadducees in their divergence from the traditions, taught a literal enforcement of the rule, "an eye for an eye, a tooth for a tooth," but it does not appear that this sect was ever in power and able to give effect to its theories. On the other hand, while a ransom in money in place of the "eye" or "tooth" of the assailant is quite compatible with the Scriptural law of assault and battery, taken as a whole, it is not so clear that the natural construction of this law would not demand the bodily infliction of the penalty, according to the written words, whenever the guilty party is unable or unwilling to pay the ransom. In one case the law requites "measure for measure"—not according to what has been actually done, but according to what was intended, or "plotted" (see Alibi for the law of retaliation in the case of "plotting witnesses"). The rabbinical tradition narrows very much the Scriptural law as found in Deuteronomy; but this, in its turn, falls very far short of the severity and wide scope of the Babylonian law. The latter not only visits with death as a malignant slanderer one who wilfully, though unsuccessfully, accuses another of sorcery, or of any other capital crime, but even one who claims goods as having been stolen from him without being able to produce witnesses to his ownership (Code of Hammurabi, §§ 1-3, 11).

E. C. L. N. D.

RÉTHY, MORIZ: Hungarian mathematician; born at Nagy-Körös Nov. 3, 1846; educated at Budapest and Vienna, and at the universities of Göttingen and Heidelberg. He was professor of mathematics and theoretic physics at the University of Klausenburg from 1874 to 1886, when he was called to the School of Technology in Budapest. Since 1891 he has lectured there on analytic mechanics.

In 1878 Réthy became a member of the Hungarian Academy of Sciences, which commissioned him to edit Bólyai's "Tentamen" (1897). He has also contributed a number of articles to the technical periodicals.

REUBEN.—Biblical Data: Eldest son of Jacob (Gen. xlvi. 8, xlix. 9) by Leah (*ib.* xxix. 32), to whom he once carried mandrakes which he had found in a field during the wheat harvest (*ib.* xxx. 14). He wronged his father by his conduct with the latter's concubine Bilhah (*ib.* xxxv. 22), and in punishment his rights as first-born (*ib.* xlix. 3) were transferred to the children of Joseph (I Chron. v. 1). When his other brothers planned to kill Joseph, Reuben tried to save him: secretly intending to rescue Joseph later and to restore him to his father, he advised his brothers to throw him into a pit instead of putting him to death outright. They acted on Reuben's suggestion, and the latter was therefore much distressed, when he came to the pit, to find that the boy was not there (Gen. xxxvii. 19-22, 29-30). Upon Jacob's refusal to allow Benjamin to go to Egypt with his brothers, Reuben offered two of his own four sons (*ib.* xlvi. 9; Ex. vi. 14) as a pledge, agreeing that they should be killed if he did not bring Benjamin back (Gen. xlii. 37).

E. C. J. Z. L.

——In Rabbinical and Apocryphal Literature: Reuben was born on the fourteenth day of the ninth month (Kislew) in the year 2122 after the Creation (Book of Jubilees, xxviii. 11; Midr. Tadshe viii., in Epstein, "Mi-Ḳadmoniyyot ha-Yehudim," p. xxii., Vienna, 1887). His name was interpreted to mean "behold the splendid son!" (ראו בן), since Leah referred to him with these words (Gen. R. lxxi. 4), although, according to another interpretation, she thus implied a distinction between her first-born and Esau, the eldest son of her father-in-law (Ber. 7b). The mandrakes which Reuben brought home at the time of the wheat harvest (see above) were Hefḳer; otherwise he would not have taken them (Sanh. 99b). He carried them to his mother without tasting them, because of his reverence for her (Gen. R. lxxii. 2). While some scholars interpreted the passage Gen. xxxv. 22 literally (Shab. 55b; Gen. R. xcviii. 7; comp. Test. Patr., Reuben, 3), others endeavored to explain away the wrong which Reuben committed against his father, by saying that he did not dishonor Bilhah, but that he merely espoused his mother's cause (Shab. 55b), since after Rachel's death Jacob sought to give the precedence to the handmaid Bilhah, as he had formerly preferred her mistress. Reuben, who would not countenance this, removed Bilhah's bed from the place where Jacob wished to have it (Gen. R. *l.c.*). In consequence of this sin Reuben lost both his birthright and his claims to the priesthood and the crown, since the birthright would have given his children the prospect of becoming priests and kings (Gen. R. xcviii. 5, xcix. 6). He lamented his act, however, and showed contrition immediately. Thus he was the first penitent (Gen. R. lxxxii. 12, lxxxiv. 18); and in consideration of his remorse he became the ancestor of the prophet Hosea, who exhorted Israel to turn to the Lord (Hos. xiv. 2; Gen. R. lxxxiv. 18).

Reuben did penance in secret meditation, and he chastened himself by frequent abstinence from meat and wine (Test. Patr., Reuben, end; comp. Gen. R. *l.c.*). When, however, Judah confessed his sin and justified Tamar (Gen. xxxviii. 26), Reuben publicly acknowledged his own fault (Tan., Wayesheb, ed. Buber, p. 94b), lest his other brothers might be suspected (Soṭah 7b). In reward for this penitence and voluntary confession he was granted life in the future world.

The first cities of refuge were located in the territory of Reuben's descendants, since he had taken the first steps in saving Joseph by counseling his brothers not to kill him (Mak. 10a; Gen. R. *l.c.*). Reuben was not present when his brothers took Joseph out of the pit and sold him, because he had to serve his father on that day, and could not leave the house, of which he was obliged to take charge (Gen. R. lxxxiv. 14). When his work was finished, however, he hastened to the pasture, and was very angry when he did not find Joseph; for as the eldest of the brothers he felt himself responsible for his safety (*ib.*). In Egypt Reuben was the patriarch of the brothers, this right of rulership being transferred after his death to Simon and then to Levi (Num. R. xiii. 10). He died at the age of 125 years (Midr. Tadshe *l.c.*; "Sefer ha-Yashar," section "Shemot," ed. princeps, p. 121a; Test. Patr., Reuben, 1, beginning), and his body was put into a coffin and given to his children, who carried it with them in the exodus from Egypt and interred it in Palestine ("Sefer ha-Yashar," *l.c.*; Test. Patr., Reuben, 7, end).

W. B. J. Z. L.

REUBEN, TRIBE OF: Tribe of Israel, descended from Reuben, Jacob's first-born son, through Reuben's four sons, Hanoch, Phallu or Pallu, Hezron, and Carmi (Gen. xlvi. 9 and elsewhere), fathers of the four clans of the tribe. At the time of the Exodus the tribe counted 46,500 males above twenty years of age (Num. i. 20–21, ii. 11), which number was reduced to 43,730 by the plague with which the Israelites were punished for their worship of Baal-peor (*ib.* xxvi. 7). During the wanderings of the Israelites in the wilderness, the position of the Reubenites was on the south side of the Tabernacle. The tribe, headed by its prince Elizur ben Shedeur and having on either side the tribes of Simeon and Gad, was the chief of the whole southern camp, so that the latter was called "the camp of Reuben" (*ib.* ii. 10). At the time of marching, the host of the Reubenites was required to start second, after that of the Judahites (*ib.* ii. 16). At the dedication of the altar the prince of the Reubenites brought his offering on the fourth day (*ib.* vii. 30 *et seq.*).

A noteworthy event with regard to the Reubenites was the connection of certain members of that tribe, namely, Dathan and Abiram of the family of Pallu and of On, the son of Peleth, with Korah in his rebellion against Moses (*ib.* xvi. 1 *et passim*). The Reubenites are recorded as the possessors of a large quantity of cattle, on account of which they asked Moses to station them on the east of the Jordan, where was ample pasturage. Moses granted their request after having obtained their promise that they would help the other tribes in the conquest of the land west of the Jordan (*ib.* xxxii. 1 *et seq.*).

Their Territory.

As to their territory, two main accounts are given: (1) in Num. xxxii. 37–38 it is stated that the Reubenites "built Heshbon, Elealeh, Kirjathaim, Nebo, Baal-meon, and Shibmah," the names of which cities were changed; while (2) a fuller account is given in Josh. xiii. 15 *et seq.*, according to which the border of Reuben's territory was "from Aroer that is on the bank of the River Arnon . . . and all the plain of Medeba." In this second list of cities Elealeh and Nebo are omitted, but a great number of additional cities is mentioned, among which are Dibon and Bamoth-baal. It is further stated that their territory included all the cities of the plain and all the kingdom of Sihon, king of the Amorites. On the west side, the Jordan was the boundary of their territory. There is a discrepancy between these two accounts, inasmuch as in the first (Num. xxxii. 34) Dibon is said to have been built by the Gadites. Besides, Aroer also was a Gadite city (*ib.*), which shows that the territory of the Reubenites was enclosed in that of the Gadites.

Help to Build the Great Altar.

In I Chron. v. 8 it is stated that Reubenites of the Joel family lived at Aroer in the time of Jotham, King of Judah, but in verse 12 of the same chapter a Gadite family named Joel is mentioned. The Reubenites as well as their neighbors, the children of Gad and the half-tribe of Manasseh, fulfilled their promise to help the other tribes in the conquest of the land west of the Jordan (Josh. iv. 12, xxii. 1 *et seq.*). The Reubenites participated in building the "great altar to see to" (*ib.* xxii. 10 *et seq.*). After the conquest the tribe of Reuben is generally associated with that of Gad, which was more important.

During the period of the Judges the tribe of Reuben is not represented by any judge. It is blamed by Deborah for having abstained from taking part in the war with Sisera (Judges v. 15–16). On the other hand, it is indirectly indicated as having participated in the war with the Benjamites (*ib.* xix. 29 *et seq.*). In the time of Saul the Reubenites are stated to have made war with the Hagarites, who fell by their hand (I Chron. v. 10). In verses 18 *et seq.* of the same chapter, however, the war with and the victory over the Hagarites are ascribed to Reuben and his neighbors. After the assassination of Ish-bosheth the Reubenites joined all the other tribes in proclaiming David king of all Israel. The number of the armed men sent jointly by the eastern two and one-half tribes to Hebron on this occasion is stated to have been 120,000 (*ib.* xii. 37). Afterward David appointed 2,700 Levites of the Hebron family as ecclesiastical and civil chiefs over the same tribes (*ib.* xxvi. 31–32). The prince of the Reubenites in his reign was Eliezer, son of Zikri (*ib.* xxvii. 16). Among David's mighty men was a Reubenite, Adina, son of Shiza, chief of thirty warriors (*ib.* xi. 42).

Later the Reubenites are mentioned only twice—in II Kings x. 33, where their country is said to have been ravaged by Hazael, King of Syria; and in I Chron. v. 6, 18–22, where it is recorded that they, like their neighbors, dwelt east of the Jordan till they were carried away into captivity by Tiglath-pileser, their chief at that time being Beerah, son of Baal of the Joel family.

REUBEN DAVID TEBELE BEN EZEKIEL: Polish Talmudist and printer of the sixteenth and seventeenth centuries. His name is generally followed by the word טראפא ("Troppau"?). In 1608 he edited at Lublin the "Yen ha-Reḳaḥ" of Eleazar of Worms, to which he added notes of his own. The name "Reuben" is missing in his signature. From 1626 to 1628 he worked as corrector of the Hanau edition of Joseph Caro's Shulḥan 'Aruk. He was the author of "Shib'im Temarim" (Cracow, 1626), a seventy-fold interpretation of Prov. xiv. 23.

REUBEN BEN ḤAYYIM: Provençal Talmudist; flourished about the middle of the thirteenth century; brother of the liturgical poet Abraham ben

Ḥayyim. Reuben, who lived at Narbonne, was a pupil of Isaac ha-Kohen of that city, and teacher of Menahem Me'iri. The latter praises him as a great Talmudist; and Isaac of Lattes calls him "a trained philosophical thinker." His nephew Levi of Villefranche quotes in his name some philosophical explanations of the Haggadah that are mentioned also in Azariah dei Rossi's "Me'or. 'Enayim" (Geiger, in "He-Ḥaluz," ii. 14). Reuben was the author of the "Sefer ha-Tamid."

REUBEN BEN HOSHKE. See Hoshke.

REUBEN HA-SEFARDI: Reputed author of "Kelimmat ha-Goyim," a work which attacks Christianity, probably written by Profiat Duran (Efodi) in 1349. The assumption is that the "Kelimmat ha-Goyim" is the same as the "Sefer ha-Kelimmah" mentioned by Joseph b. Shem-Ṭob, and that this is identical with the "Sefer ha-Kelimmah" by Reuben ha-Sefardi mentioned in Moses Botarel's commentary on "Sefer Yeẓirah" (end of mishnah 2, ch. i.); but there is no doubt of the correctness of Zunz's view that "Reuben ha-Sefardi" and his "Sefer ha-Kelimmah" as well as the other work ascribed to him, "Sefer ha-Shulḥan," are all fictitious names, invented like many others by Botarel.

REUBEN BEN STROBILUS: Jew of the second century C.E.; eminent both as a scholar and for the part he took in the affairs of his time. From references to the religious persecutions which he endeavored to terminate it would appear that he became prominent during the time of Hadrian, when the government had forbidden the observance of the Sabbath and of circumcision as well as the use of women's baths (Me'i. 17a). Reuben ben Strobilus apparently went to Rome and associated with the Romans, wearing his hair in their fashion that he might not be recognized as a Jew. He craftily represented that to permit the Jews to live in conformity with their own laws was the best way to reduce their numbers, since they became poor through not working on the Sabbath, weakened themselves by circumcision, and impaired their fertility by avoiding their wives at certain times. These results being desired by the authorities, the prohibitions were repealed, but when it became known that the adviser was a Jew the restrictions were reenforced (Me'i. 17a).

At another time Reuben is found in conversation with a philosopher at Tiberias on a certain Sabbath, when Reuben expressed the opinion that the most despicable man on earth is he who denies his Creator, and that the moral laws of the Decalogue are transgressed only by one who denies their Author (Tosef., Shebu. iii. 6). Another saying of his concerns the nature of sin (M. Ḳ. 18b; Ab. R. N., text B, xxxv.).

Two of the sons of Reuben ben Strobilus were pupils of R. Judah the Patriarch; they were condemned to death, perhaps at the command of the government, and R. Judah advised them to flee to the south (Yer. Kil. 32c). One of his sons may have been the Eutolemus b. Reuben who is described as being in favor with the government (Soṭah 49b; B. Ḳ. 83a).

REUBENI, DAVID: Arab adventurer; born about 1490 in central Arabia, in Khaibar, as he himself stated; died in Llerena, Spain, after 1535. He left Khaibar Dec. 8, 1522, and went to Nubia in Egypt, where he claimed to be a descendant of Mohammed, while to the Jews he spoke of large Jewish kingdoms in the East, possibly referring to the so-called "Jewish realm" at Cochin, which had just attracted attention owing to the Portuguese conquest of Goa. He traveled in Palestine in the spring of 1523, and went to Venice, by way of Alexandria, in Feb., 1524. Here he claimed to have a mission from the Jews of the East to the pope, and interested a Jewish painter named Moses, and Felice, a Jewish merchant; they provided him with means to travel to Rome, which he reached in the same month, entering the city on a white horse. He obtained an audience with Cardinal Giulio and Pope Clement VII. To the latter he told a tale of a Jewish kingdom ruled over by his brother Joseph in Arabia, where the sons of Moses dwelt near the fabled Sambation River. He brought letters from Portuguese captains confirming his statements, and the Portuguese minister, Miguel da Silva, reported to his court the possible utility of Reubeni's mission in obtaining allies in the struggle of the Portuguese against Salim I., who had seized Egypt in 1521 and diverted the spice-trade. Reubeni was provided by Benvenida Abravanel, wife of Samuel Abravanel, and the heirs of Jehiel of Pisa with means for going to Almeiria, the residence of King John III. of Portugal, which he reached Nov., 1525, who at first promised him a force of eight ships and 4,000 cannon. But the king, who was at that time engaged in persecuting the Neo-Christians, found it difficult to enter into an alliance with the Jewish king, though for a time during the negotiations he refrained from interfering with the Maranos.

Reubeni's striking appearance—a swarthy dwarf in Oriental costume—and Messianic predictions attracted the attention of Diego Pires, a Marano youth of noble birth, who took the name of Solomon Molko. Jewish ambassadors from the Barbary States visited Reubeni at the Portuguese court, and much excitement followed among the Maranos, some of whom even ventured to rise in arms near Badajoz. This appears to have opened the eyes of the Portuguese authorities to the dangers inherent in Reubeni's mission. Reubeni then went to Avignon to bring his cause before the papal court, and afterward to Milan, where he again met Molko, who had meanwhile traveled to the East and had made Messianic claims. In Milan the two adventurers quarreled, Reubeni going to Venice, where the Senate appointed a commission to inquire whether his project for obtaining assistance from the Jews in the East in its plans of conquest were practicable. He received, however, a hint to leave Venice, and, joining once more with Solomon Molko, traveled with streaming banner to Bologna and Ratisbon (Regensburg) to meet the Emperor Charles V. and to offer him the alliance of the Jews of the East against the Turks. In Ratisbon they met Josel of Rosheim, who warned them against arousing the suspicions of the emperor and raising the Jewish question in the empire. They nevertheless persisted, and were put in chains and taken by the emperor to Mantua, where both Molko and Reubeni were examined and the former was condemned to death by burning, Dec., 1532. Reubeni was carried to Spain and placed in the Inquisition at Llerena, where probably he died, as nothing more is heard of him, though "a Jew who came from India to Portugal" is reported by Herculano to have been burned at an auto da fé at Evora, 1541 (see Jew. Encyc. vi. 598b, *s.v.* Inquisition, also **Evora**). His diary still exists in the Bodleian Library, Oxford (a copy at Breslau also); parts of it have been published by Grätz in the third edition of his "Geschichte der Juden" (vol. ix.), and the whole by Neubauer, in "M. J. C." ii.

Bibliography: Grätz, *Gesch.* ix. 238, 250, 255, 533–548. J.

REUCHLIN, JOHANN VON (Grecized as **Capnio**): German humanist; born Feb. 22, 1455, at Pforzheim; died June 30, 1522, at Liebenzell, near Hirschau, Württemberg. He studied at the universities of Freiburg, Paris, and Basel (1475–78). After having served the Duke of Württemberg as companion, judge, and ambassador (1481–96) he was appointed councilor by the Duke of Baden (1496–99), and, returning to Württemberg in 1499, he again became judge at Tübingen, which position he resigned in 1513. From 1519 to 1521 he was professor of Greek and Hebrew at the University at Ingolstadt; and from 1521 till his death he held a similar chair at the University of Tübingen.

Reuchlin, who was one of the leaders of the German humanists, introduced the study of Greek and especially of Hebrew into western Europe, and was with Luther, Melanchthon, Erasmus, and Hutten among the promoters of the Reformation, although he declared himself against the movement in 1520.

Studies Hebrew.

During his second visit to Rome (1490) Reuchlin became acquainted with Pico di Mirandola at Florence, and, learning from him about the Cabala, he became interested in Hebrew; but not till 1492 could he find an opportunity to learn that language; his teacher was the emperor's physician, Jacob Loans. From that time he became an ardent student of Hebrew, having for a second teacher Obadiah of Sforno, during his third stay in Rome (1497–99). His researches into the language of the Bible led Reuchlin to study the Talmud and the Cabala also.

Dispute with Pfefferkorn.

Pfefferkorn, a baptized Jew from Cologne and a follower of the Dominican friars, had succeeded in 1509 in obtaining from the emperor Maximilian of Germany an order for the destruction of all Hebrew books found in the possession of the Jews of Cologne and Frankfort. The Jews appealed, and Reuchlin was asked in 1510 to give his opinion upon the case. Reuchlin's report was favorable to the Jews. He divided the Jewish literature into seven classes, in one of them being the Old Testament; and, judging these classes singly, he arrived at the conclusion that the Talmud, the cabalistic book the Zohar, the commentaries of Rashi, the Ḳimḥis, Ibn Ezra, Gersonides, Naḥmanides, etc., should not be burned, as they were useful for theology and science, and no heresy was contained in them; but books which contained blasphemies against Jesus, such as the "Toledot Yeshu," he considered ought to be destroyed. Furthermore, the Jews, being as such under the protection of the German empire, could not be accused of heresy against Christianity. The emperor rescinded his edict of destruction on May 23, 1510. The rescission being mainly a result of Reuchlin's report, a prolonged conflict between him and the Dominicans followed, into which the whole scientific world of Europe was drawn. The humanists were on the side of Reuchlin, while the clericals, especially the universities of Louvain, Cologne, Erfurt, Mayence, and Paris, were with the Dominicans. Pfefferkorn published in 1511 his "Handspiegel," attacking Reuchlin, who answered it with his "Augenspiegel" (Pforzheim, 1511).

The University of Cologne, under the influence of the Dominican prior Jacob van Hoogstraten, published in 1512 in Cologne "Articuli sive Propositiones de Judaico Favore." Reuchlin accepted the challenge from the university and wrote "Defensio Reuchlini Contra Calumniatores Suos Colonienses" (Tübingen, 1513); he was answered in turn by the professor of classical literature of the University of Cologne, Ortuin de Graes (Gratius), in "Prænotamenta Contra Omnem Malevolentiam" (n.d.), and replied in another work, entitled "Clarorum Virorum Epistolæ Latinæ, Græcæ et Hebraicæ Variis Temporibus Missæ ad J. Reuchlinum" (Tübingen, 1514; 2 vols., Hagenau, 1519). Following the example of the German university, the Sorbonne also condemned the "Augenspiegel." The subject was brought before the Paris university by the confessor of King Louis XII., Petit Guillaume Haguinet, the same cleric who in 1520 created at the Sorbonne a chair for Hebrew, to be held by Christian scholars.

The "Augenspiegel" Condemned.

The prior Hoogstraten ordered Reuchlin to appear before the Dominican court at Mayence in 1513 to defend himself against the accusation of heresy, based upon the "Augenspiegel"; but the hearing was suspended by order of Archbishop Uriel von Gemmingen of Cologne, who in 1509 had been appointed by Maximilian a commissioner to investigate Pfefferkorn's accusation. The controversy came, by order of the pope, before the Bishop of Speyer, who in 1514 decided in favor of Reuchlin. The Dominicans appealed to Pope Leo X., and for six years the case remained undecided. In the meantime the "Epistolæ Obscurorum Virorum ad Ortuinum Gratium" appeared anonymously in Hagenau (?) in 1515 and 1516, and in Basel 1517, Reuchlin disclaiming the authorship. The matter was brought before the Lateran Council at its session of 1516, which decided in favor of Reuchlin. But the decision was again set aside, and finally, in 1520, the matter was decided against Reuchlin by Leo X., who condemned the

"Augenspiegel." This decision was influenced by political reasons, the King of France and Emperor Charles IV. of Germany siding with the Dominicans against the spread of the Reformation in Germany.

Reuchlin was the first scholar to introduce Hebrew into the curriculum of the university. He taught it before he became professor at Ingolstadt and Tübingen. Among his pupils may be mentioned: Melanchthon, Christopher Schilling of Lucerne, John Oecolampadius, John Cellarius, and Bartholomäus Cæsar.

Reuchlin's works on subjects of specifically Jewish interest are: (1) "De Verbo Mirifico" (Basel, 1494), upon the Cabala. Baruchias, a Jewish sage; Capnion, a Christian scholar; and a Greek philosopher have a discussion, the outcome of which is a declaration of the supremacy of Jewish wisdom and of the Hebrew language. (2) "Rudimenta Hebraica" (Pforzheim, 1506). As the first Hebrew grammar written by a Christian its many faults may well be overlooked. It gives only the rudiments of Hebrew pronunciation and a very imperfect vocabulary. (3) "De Arte Cabalistica" (Hagenau, 1517). (4) "De Accentibus et Orthographia Hebræorum Libri Tres" (*ib.* 1518). This grammar is far superior to the one which appeared in 1506, and shows the result of the thorough studies of the author.

REUEL. See Jethro.

REUSS, EDUARD WILHELM: Protestant theologian; born in Strasburg July 18, 1804; died there April 15, 1891. He studied Oriental languages with Gesenius at Halle, and with Silvestre de Sacy at Paris; and became professor at his native city in 1834. He claimed that in his opening lectures on the Old Testament he put forward the hypothesis, later advocated by Graf and Wellhausen, that the Priestly Code and the second Elohist were the latest strata in the Pentateuch. He published a complete French translation of the Bible (1874–88) in sixteen volumes, with an elaborate introduction and notes (after his death published in German), and composed a "Geschichte der Heiligen Schriften des Alten Testaments" (1881), which for some time was the best work on the subject.

RÉVAI, MÓR: Hungarian deputy; born at Eperies in 1860; educated at the universities of Budapest and Leipsic. In 1880 he entered the publishing-house which his father had founded in 1869 under the firm name of Révai Brothers; and since that time he has rendered great service to popular education in Hungary. From 1880 to 1885 he edited the periodical "Regényvilág" (World of Romance); and it was largely through his efforts that "Die Oesterreichisch-Ungarische Monarchie in Wort und Bild" was published in 1885 under the patronage of the crown prince Rudolph. Révai introduced book-canvassing into Hungary, and was instrumental in securing 20,000 subscribers to the great Hungarian "Pallas Nagy Lexicon." An edition of the collected works of Moritz Jókai in 100 volumes, one of the finest products of his press, gained the "Grand Prix" at the Paris Exposition of 1900. In 1901 Révai was returned to the Hungarian Parliament by the district of Szék.

S. L. V.

REVELATION (BOOK OF): The last book in the New Testament canon, yet in fact one of the oldest; probably the only Judæo-Christian work which has survived the Paulinian transformation of the Church. The introductory verse betrays the complicated character of the whole work. It presents the book as a "Revelation which God gave . . . to show unto his servants things which must shortly come to pass," and at the same time as a revelation of Jesus Christ to "his servant John." According to recent investigations, the latter part was interpolated by the compiler, who worked the two sections of the book—the main apocalypse (ch. iv.–xxi. 6) and the letters to the "seven churches" (i.–iii. and close of xxii.)—into one so as to make the whole appear as emanating from John, the seer of the isle of Patmos in Asia Minor (see i. 9, xxii. 8), known otherwise as John the Presbyter. The anti-Paulinian character of the letters to the seven churches and the anti-Roman character of the apocalyptic section have been a source of great embarrassment, especially to Protestant theologians, ever since the days of Luther; but the apocalypse has become especially important to Jewish students since it has been discovered by Vischer (see bibliography) that the main apocalypse actually belongs to Jewish apocalyptic literature.

Jewish Origin.

The Letters to the Seven Churches: The first part (i. 4–iii. 22) contains a vision by John, who is told by Jesus to send a letter to the seven angels of the seven churches in Asia (founded by Paul and his associates), rebuking them for the libertinism that has taken hold of many "who pass as Jews, but show by their blasphemy and licentiousness that they are of the synagogue of Satan" (ii. 9, iii. 9, Greek). These seven churches were those of Ephesus, Smyrna, Pergamus, Thyatira, Sardis, Philadelphia, and Laodicea. Owing to their heathen associations many of their members had lapsed into pagan or semipagan views and practises, under the influence of heretic leaders. Of these one is singled out by the name of Nicolaites (ii. 6, 15; comp. Acts vi. 5), called also Balaam (ii. 14, בלע עם ="Nicolaos"), because, like Balaam, he seduced the people to idolatry and fornication by his false prophecies and witchcraft (Num. xxv. 1; xxxi. 8, 16). Another singled out was a woman, probably a prophetess, called Jezebel (ii. 20) on account of her idolatrous practises (I Kings xviii. 19, xxi. 25). Evidently the seed sown by Paul and his associates, who in their antinomian Gnosticism boasted of having penetrated "the deep things of God" (I Cor. ii. 10), had borne evil fruit, so that the seer of Patmos calls these heretics "false apostles and liars" (ii. 2), and their teachings "the depths of Satan" (ii. 24).

How much local cults, as that of Esculapius in Pergamos ("Satan's seat"; ii. 13), had to do with these heresies it is difficult to say; certain it is that many were "polluted" by pagan practises (ii. 13, 26; iii. 4). All the more severely does the seer condemn the Pauline teaching as "the teaching of Balaam" (comp. II Peter ii. 15; Jude 11; Sanh. 106b; Giṭ. 57a; see BALAAM). On the other hand, Jesus, through John, promises to the poor, the meek, and the patient toilers of the churches who refuse to partake of the meals of the pagans that "they shall eat of the tree of life" in paradise (ii. 2, 7); to those who are to suffer from the pagan powers that they shall, as true "athletes" of this world, be given the "crown of life" (ii. 10); to him "that overcometh" in the contest (comp. the rabbinical term, "zokeh") will be given a lot or mark ("goral") bearing the Ineffable Name, and he shall "eat of the hidden manna" (ii. 17; comp. Tan., Beshallaḥ, ed. Buber, p. 21; Ḥag. 12b; Apoc. Baruch, xxix. 8; Sibyllines, ii. 348); or, like the Messiah, he will "rule them [the heathen] with a rod of iron" and be given the crown of glory (ii. 26–28; the "morning star," taken from xxii. 16, if it is not the error of a copyist); those who "have not defiled their garments" "shall be clothed in white raiment," and their names shall be written in the book of life and proclaimed before God and His angels (iii. 4–5); while those who stand the test of Satan's trials shall be spared in the great Messianic time of trial and become pillars in the temple of the "new Jerusalem" (iii. 10–13, Greek), or shall partake of the Messianic banquet, sitting by (scarcely "in") the seat of Jesus (iii. 21).

Jewish Point of View of Writer.

Obviously, the writer of these visionary letters to the seven churches of Asia was in his own estimation a Jew, while believing in Jesus as the risen Messiah. He beheld him in his vision as "the faithful witness" (martyr) who is next to God, "who is, was, and will be" ("come" is the emendation of the late compiler), his seven angelic spirits standing "before his throne" (i. 4–5); "the Son of man" grasping seven stars in his right hand, while out of his mouth came a sharp two-edged sword (i. 13–16; ii. 1, 12 [taken from the apocalypse, xiv. 14]; iii. 1); who "holds the keys of hell and of death" (i. 18); who is "the holy and true one" that "holds the key of David" (iii. 7, with reference to Isa. xxii. 22); who is called also "the beginning of the creation of God" (iii. 14). However, the identification of "him who was dead and became alive again" with God, who is the First and the Last, the ever-living Almighty (i. 17; comp. i. 8 and ii. 8), is the work of the late compiler. The close of the visionary letters is found at xxii. 16, where Jesus is represented as saying, "I am the root and the offspring of David" (comp. Isa. xi. 1, 10), "the bright and morning star" (after Num. xxiv. 17 and [probably] Ps. cx. 3; comp. LXX.). To find in these chapters traces of a persecution of the early Christians by the Jews, as do most modern exegetes, is absurdly illogical. On the contrary, the writer condemns the anti-Jewish attitude of the Pauline churches; the document is therefore of great historical value. It is important in this connection to note the Hebraisms of the whole of this part of the book, which prove that the writer or—if he himself originally wrote Hebrew or Aramaic—the translator could neither write nor speak Greek correctly. As to the relation of this to the apocalypse which follows see below.

The Main Apocalypse: The succeeding part (iv.–xx. 8) contains several Jewish apocalypses worked into one, so altered, interpolated, and remodeled as to impress the reader as the work of the author of the letters to the seven churches. In the following the attempt is made to acquaint the reader with the contents of the two original Jewish apocalypses, as far as they can be restored, the Christian interpolations and alterations being put aside.

First Jewish Apocalypse: After the introductory verses, part of i. 1, 8 ("I am Alpha and Omega, the beginning and the ending, saith the Lord, which is, and which was and will be ["will come" is a Christian alteration], the Almighty") and part of i. 12–19, the apocalyptic seer describes (iv. 1 *et seq.*) how he was carried up by the spirit (with the angel's word, "Come down hither," compare the expression "Yorede Merkabah"), and how he saw "a throne set in heaven and One sitting on the throne," after the manner of Ezek. i. 26–28. "Round about the throne were twenty-four seats, and upon these I saw twenty-four elders sitting, clothed in white raiment, and they had golden crowns on their heads": obviously heavenly representations of the twenty-four classes of priests serving in the Temple (Ta'an. iv. 2; I Chron. xxiv. 7–18; Josephus, "Ant." vii. 14, § 7; comp., however, Gunkel, "Schöpfung und Chaos," pp. 302–308, and Isa. xxiv. 23 [Bousset]). After a description of the four "ḥayyot," taken from Ezek. i. 5–10, 18 and combined with that of the seraphim in Isa. vi. 2–3, the text continues, "They rest not day and night, saying, Holy, holy, holy, is the Lord God of hosts [παντοκράτωρ, translated "Almighty" in A. V.; comp. Amos iv. 13], who was, is, and shall be" (Greek text, "is to come"). And when the ḥayyot give glory and honor and praise to Him who sits on the throne, Him who lives forever and ever ("ḥe ha-'olamin"), the twenty-four elders prostrate themselves and, laying down their crowns, say, "Thou art worthy, O Lord, to receive glory and honor and power, for Thou hast created all things, and by Thy will they have been created."

Ch. v.: The seer then describes how he saw at the right hand of God a scroll written within and without and sealed with seven seals (it was customary for the last will to be sealed with seven seals and opened by seven witnesses; see Huschke, "Das Buch mit den Sieben Siegeln," 1860; Zahn, "Einleitung in das Neue Testament," ii. 591), which none in heaven, on earth, or beneath the earth was found worthy to open until one of the twenty-four elders pointed out that "the lion of the tribe of Judah, the root of David, had merited to open the book and loose its seven seals." Then the lion (the Christian reviser rather awkwardly substituted "the slain lamb") suddenly appeared, with seven horns and seven eyes, standing between the throne and the four ḥayyot and the twenty-four elders; and he stepped forth and took the scroll while the ḥayyot and the elders prostrated themselves before him, saying, "Thou art worthy to take the book and open the seals thereof; for . . ." The remainder has been worked over by the Christian reviser.

Ch. vi. 1–12: At the opening of the first seal by the Messiah the seer hears the thunder-call of one of the four ḥayyot, and sees a white horse appear, with a rider holding a bow (representing, probably, Pestilence); at the opening of the second seal, a red horse, with a rider armed with a great sword (representing War); at the opening of the third seal, a black horse, with a rider holding a pair of balances to weigh flour, bread having become scarce (signifying Famine); at the opening of the fourth seal, a "pale" horse, the rider thereof being Death. These four are to destroy the fourth part of the earth by the sword, famine, pestilence, and wild beasts. What plague is ushered in at the opening of the fifth seal is no longer stated; apparently it is persecution of the saints, as the text continues: "I saw under the altar the souls of them that were slain for the word of God, and for the testimony they gave" (as martyrs; see Ḳiddush ha-Shem). "And they cried with a loud voice, saying, How long, O Lord, holy and true, dost Thou not judge and avenge our blood on them that dwell on the earth." And white robes were given them, and they were told to rest for a while until the number of the martyrs was full (comp. Apocalypse of Baruch, xxx. 2; IV Esd. iv. 36).

After this the seer beholds a great multitude of people of every land and language, both Jews and proselytes, also arrayed in white robes, standing before the throne; and he is told that, "having undergone great tribulation, they have made their robes white by the blood of the martyrs" (of course, not "of the lamb," as the Christian reviser has it); and that now they serve God in the heavenly temple day and night, and the Shekinah dwells with them (vii. 9–17, which part is misplaced).

Ch. vi. 12–17: At the opening of the sixth seal "the birth-throes of the Messianic time" appear, as depicted in Joel iii. 3–4; Isa. ii. 10, xxiv., xxxiv. 4; and Hosea x. 8. Fear of the great day of God's wrath (Mal. iii. 2) and of the wrath of His anointed (Ps. ii. 12) seizes the whole world.

Opening of the Seventh Seal.

Ch. viii. 1–13: The opening of the seventh seal forms the climax. The awful catastrophe is marked by "silence in heaven about the space of half an hour." The four angels that hold the winds at the four corners of the earth are told to check the blowing of the winds on land, on sea, and on the trees until an angel has sealed upon the forehead, with the seal of the living God, the 144,000 servants of God, that is, 12,000 of each of the twelve tribes of Israel (Dan as idolater is excluded, and Levi takes his place along with the two sons of Joseph), in order to guard them against the impending destruction (vii. 1–8). The seven trumpets of the seven angels before God usher in seven great calamities: the first four involve a world conflagration ("mabbul shel esh") that burns up the third part of the land and dries up a third part of the sea and the rivers, and an eclipse of sun, moon, and stars (viii. 2–12; comp. Sibyllines, iii. 80–90, 540); the remaining three, who are announced by an angel flying through the midst of heaven (viii. 13), bring even greater woes; first the torment of locusts, described in all its fierceness in the apocalyptic chapters of Joel (i. 6, ii. 2–9), coming forth from the abyss over which the angel Abaddon (Destruction; comp. Job xxviii. 22; comp. "Ẓefoni," Joel, ii. 20; Suk. 52a) alone has power (ix. 1–12); secondly, the letting loose from the banks of the Euphrates of the four kings (מלכים; not "angels," מלאכים), with numberless hosts of wild Parthian horsemen wearing breastplates of fire and brimstone, and riding on horses that have heads of lions and tails of serpents, and out of whose mouths come fire, smoke, and brimstone (comp. Nahum ii. 4–5, iii. 3). As with the former plagues, a third part of mankind is killed; they were prepared for this task from the beginning of the world. "And yet," closes the seer, "the rest of the men which were not killed repented not, but continued to worship demons, idols of gold and silver, bronze, stone, and wood, practise witchcraft, and commit murders, fornications, and thefts" (ix. 13–21; see Sibyllines, ii. 255–262, iv. 31–34; and compare the four kings of the mighty hosts upon the banks of the Euphrates in the Midrash of Simeon ben Yoḥai, in Jellinek, "B. H." iii. 81).

The third and last wo, announced in xi. 14 (x.–xi. 13 interrupts the connection), is no longer given in what follows xi. 15a; for the Christian reviser changed the text which originally described the last judgment passed upon the non-repentant people, "the kingdoms of this world," and instead speaks of their having "become kingdoms of Christ." Only verse 18, telling of "the wrath of God that has come upon the nations that shall be destroyed as they have destroyed the land," contains traces of the former contents of the chapter; although possibly part of xiv. 1–5, referring to the 144,000 of Israel who had been saved, and the proclamation to all the nations to "fear God and worship Him who made heaven, earth, sea, and the fountains of water," "for the hour of His judgment has come" (xiv. 6–7), formed part of the original Jewish apocalypse; also xi. 16–18, the song of praise by the twenty-four elders before God and the vision of the reappearance of the Ark of the Covenant (xi. 19; comp. Yoma 53b, 54a).

In all probability this apocalypse was written before the destruction of Jerusalem, at a time of persecution, when many Jews died as martyrs, though many others yielded; hence only 12,000 of each tribe are to be selected.

The Second Jewish Apocalypse: Far more powerful, and expressive of intense hatred of Rome, the Babel-like destroyer of Judea, is the second Jewish apocalypse, or series of apocalypses, written during the siege and after the destruction of Jerusalem, and contained in ch. x. 2–xi. 13, xii. 1–xiii. 18, and xiv. 6–xxii. 6. After the manner of Ezek. ii. 8–iii. 3, the writer represents his vision as having been received in the form of a book, which he is to eat with its bitter contents. In imitation of Ezek. xl. 3 and Zech. ii. 5–6, the angel gives him a measuring-rod that he may measure the site of the Temple and the altar, which is to remain intact, while the rest of the Holy City is doomed to be trodden under foot by the Gentiles (the Roman soldiers) for forty-two months (Dan. vii. 25, viii. 14, xii. 7). He is then told that during this time there shall be two prophets, witnesses of the Lord (Moses and Elijah), who shall again manifest their power of restraining the heavens from giving rain (I Kings xvii. 1), of turning the water into blood, and of striking the land with plagues (Ex. vii.-x.); and whosoever shall attempt to hurt them will be devoured by fire from their mouths (II Kings i. 10). But they will finally fall victims to the beast that ascends out of the abyss to make war upon them. After their dead bodies have been lying for three and a half days in the streets of the Holy City, which shall have become a Sodom and Gomorrah, and the people of all tongues and of all nations have looked upon them and rejoiced at the death of the prophets that had chastised them (by their preaching of repentance), refusing to give them burial, God's spirit will again imbue them with life, and they will, to the astonishment of the people, rise and ascend to heaven; and in the same hour a great earthquake will cause the death of 7,000 people (xi. 1-13). Of this eschatological feature no trace is found in rabbinical sources, except the appearance of Moses and the Messiah during the war of Gog and Magog (Targ. Yer. Ex. xii. 42). Possibly this is the older form of the legend of the Messiah ben Ephraim or ben Joseph being slain by Gog and Magog, based on Zech. xii. 10-11 (comp. Jellinek, "B. H." iii. 80).

Moses and Elijah.

Then follows (xiii. 1, 12a, 5b, 10) the description of the beast (after Dan. vii. 4-7; comp. vii. 8, xi. 36). It bears (in "Augustus Divus") the name of blasphemy, and its mouth speaks blasphemy against God and His Shekinah on earth and in heaven (i. 5-6, misunderstood by the Christian translator). It has power over all nations and tongues, and over all those whose names are not written in the book of life (the awkward addition "of the lamb" betrays the Christian hand) from the foundation of the world, and it makes war upon the "saints" (the Jewish people, as in Daniel). For forty-two months (the three and a half years of Daniel) will its power last, trying the patience of the saints.

Vision of the Seven Plagues.

But then (xiv. 6-7) an angel in the midst of heaven announces good tidings to the people on the earth, saying, "Fear God, and give glory to Him; for the hour of His judgment is come: and worship Him that made heaven, and earth, and the sea." Here follows (xv. 5-xvi. 21) the vision of the seven angels coming out of the Temple with "seven golden vials full of the wrath of God who liveth for ever and ever." The first angel pours out his vial upon the earth and there falls an evil and grievous sore (comp. Ex. ix. 8) upon the men who bear the mark of the beast and worship his image (an allusion to the cult of the emperors and to the Roman coins). The second angel pours out his vial (comp. Ex. vii. 19) on the sea, which turns into blood, so that all living things therein die. The third pours out his vial upon the rivers, and they become blood, the angel of the waters praising the justice of God ("ẓidduḳ ha-din"), which makes those drink blood who have shed that of the saints and prophets. The fourth pours out his vial upon the sun, which becomes a fire to scorch the people who blaspheme and repent not. The fifth pours out his vial upon the seat of the beast (Rome), and its empire becomes full of darkness; yet the people repent not. The sixth pours out his vial upon the great Euphrates (comp. Sanh. 98a), and it is dried up, so as to prepare the way for the kings of the East (the Parthians) to gather in Armageddon ('Ir Magdiel, symbolic name for Rome; xvi. 13-15 is an interpolation; see Targ. Yer. to Gen. xxxvi. 43; Pirḳe R. El. xxxviii.; Gen. R. lxxxiii.). The seventh pours out his vial into the air and causes an earthquake which splits the great city (Rome) into three parts, and the cities of the nations fall, and islands and mountains are removed, and Babylon (Rome) takes from the hand of God the cup of the wine of His fierce wrath (comp. Jer. xxv. 15).

Rome the Great Harlot.

In ch. xvii.-xix., in imitation of Isaiah's and Ezekiel's vision of Tyre (Isa. xxiii. 17; Ezek. xxvii.-xxviii.), the apocalyptic writer then proceeds to dwell on the judgment held over the great harlot that sits upon the many waters, with whom the kings of the earth have committed fornication, and with the wine of whose fornication the inhabitants of the earth have been made drunk. He then sees in the wilderness "a woman sitting upon a scarlet-colored beast full of names of blasphemy [idolatry] and having [seven heads and] ten horns [comp. Dan. vii. 7], herself arrayed in purple and scarlet and decked with gold and precious stones, and holding in her hand a golden cup full of the filthiness of her fornication" (the picture is taken probably from the Syrian representations of Astarte riding on a lion with a cup of destiny in her hand). Greatly astonished at this sight, he learns from the interpreting angel (verses 5-14 and 16 are later insertions which anticipate the interpretation) that "the many waters" are the many nations given into the power of the beast, and that the woman is the great city (of Rome) which reigneth over the kings of the earth.

Then he beholds (xviii. 1-8) one of the glorious angels descending from heaven, and crying out (in the words of the ancient seers—Isa. xxi. 9, xxiv. 11-13), "Fallen, fallen is Babylon the great, and has become the habitation of demons," for all the nations have drunk of the glowing wine of her fornication, and the kings of the earth have committed fornication with her (Isa. xxiii. 17; Jer. xxv. 15, 27). "Go out of her, my people, that ye be not partakers of her sins and receive not of her plagues" (Jer. li. 6, 9); "for her sins have reached unto heaven, and God hath remembered her iniquities" (Ps. cxxxvii. 8; Jer. l. 15, 29). In rhythmic sentences, taken from the Bible, the voice is heard saying: "Fill her cup double of what she offered you, and give her as much torment and grief as she has had glory and pleasure." All that is said of Babel (Isa. xlvii. 7-9; Jer. l. 32-34) is applied to her; and Ezekiel's lamentation over the fall of Tyre (xxvi. 16-xxvii. 36) is repeated by the kings of the earth over the fall of Babylon (Rome). "Alas, alas, Babylon the great, mighty city! in one hour is thy judgment come!" is the refrain (xviii. 10, 19). The rhythmic form in which the whole is composed indicates a Hebrew author, whereas the Christian interpolations always spoil both context and rhythm.

Finally (xviii. 21-24), an angel casts a large stone into the sea (comp. Jer. li. 63-64), saying, "Thus shall Babylon be cast down forever and no longer be found"; her musicians shall no longer be heard in her (comp. Ezek. xxvi. 14); nor shall any craftsman be seen; nor shall "the sound of a millstone" or "the voice of bridegroom and bride be perceived"; nor shall "the light of a candle" shine in her (comp. Jer. xxv. 10).

The Beast, the Dragon, and the Messiah.

In order to understand the relation between the prophecy concerning the beast and Rome and the visions of the dragon and the Messiah (the Christian "lamb") which precede and follow, it is necessary to bear in mind that since the days of Pompey Rome was in the eyes of the Jewish apocalyptic writers the fourth beast in the Daniel apocalypse (see Dan. vii. 7), the last "wicked kingdom" whose end is to usher in the Messianic kingdom (Cant. R. ii. 12; Gen. R. xliv. 20; Lev. R. xiii.; Midr. Teh. Ps. lxxx. 14; see ROMULUS). Rome was found to be alluded to in Ps. lxxx. 14 (A. V. 13), in the words חזיר מיער ("the boar out of the wood"), the letter ע being written above the others so as to make the word רמי ("Rome") stand out in transposed order (comp. Enoch, lxxxix. 12, where Esau is spoken of as "the black wild boar").

The identification of Rome with Babylon is found also in the Jewish Sibyllines, v. 159, and the identification with Tyre in Ex. R. ix. 13—facts which indicate the lines of Jewish apocalyptic tradition. "The wild beast of the reeds" (Ps. lxviii. 31 [R. V. 30]) has also been identified with Rome (see Midr. Teh. Ps. lxviii. [ed. Buber, p. 15]). But in order to account for the delay of the Messiah, who was to "slay the wicked by the breath of his mouth" (Isa. xi. 4), a cosmic power in the shape of an Ahrimanic animal, the dragon, was introduced as the arch-enemy plotting the destruction of the Messiah, the ANTICHRIST who with his hosts hinders the redemption ("me'aḳkeb et ha-ge'ullah"; Sanh. 97b; Nid. 13b; comp. II Thess. ii. 6-7). To this end the author used a mythological story (xiii. 1-6), borrowed from Babylonia, as Gunkel (*l.c.* pp. 379-398) claims, from the Apollonic myth, as Dieterich ("Abraxas," 1891, pp. 117-122) thinks, or from Egypt, as Bousset suggests. He sees (xii. 1-6) Zion in the garb of "a woman clothed with the sun, the moon beneath her feet, and twelve stars on the crown of her head," while about to give birth to a child destined to "rule all nations with a rod of iron" (Ps. ii. 9), pursued by a seven-headed dragon; the child (the future Messiah) is carried up to the throne of God (that is, he is hidden), and she flees to the wilderness, where a place is prepared for her by God to be nourished in for 1,260 days (three and a half years; comp. xi. 3, xiii. 5, and Dan. vii. 8, xi. 25). Compare with this the Talmudic legend of the Messiah babe carried off by the storm (Yer. Ber. ii. 5a). Here follows a similar story from another hand (xii. 7-15), telling of a battle raging in heaven between Michael, the "Synegor" (= "pleading angel") of Israel (Midr. Teh. Ps. xx.), and Satan, the "Kategor" (= "Accuser"), which ends in the casting down of the old serpent with his hosts—a victory brought about by the merit of the Jewish martyrs, which silenced the Accuser.

It was thereafter, says the second version, that the woman (Israel) was pursued by the serpent; but she was carried by a great eagle into a safe place in the wilderness, where she was nourished for "a time, two times, and a half time" (three and a half years; comp. Dan. vii. 25); "and when the dragon cast forth a flood of water to drown her, the earth opened her mouth to swallow the water." Finally, unable to slay the woman with her Messiah babe, the dragon made war with the remnant of her seed, the pious ones "who observe the commandments of God."

Interpolations.

The prophecy concerning Rome seems to have received many interpolations and alterations at the hands of Jewish and Christian compilers. Both "the second beast, the false prophet who aids in the worship of the image of the emperor (xiii. 11-17), and the interpretation of the seven heads (xvii. 8-11) are later insertions. The number 666 (נרון קסר; xiii. 18), also, is scarcely genuine, inasmuch as the number 256 represents both the beast and the man (רומי and נרון) as stated in the apocalypse. For the second beast, called Beliar, comp. Sibyllines, ii. 167, 210; iii. 63-90.

The story of the Messiah hidden with God in heaven is continued in xiv. 6-20, a passage which has but few traces of the Christian compiler's hand. Announcement (not of "good tidings") is made to the nations: "Fear God the Creator, for the hour of His judgment is come" (xiv. 6-7). Then "the Son of man coming on the cloud" (comp. Dan. vii. 13) appears, a golden crown on his head and a sharp sickle in his hand, and a voice calling forth from within the Temple, "Thrust in thy sickle and reap, for the harvest of the earth is come"; "Tread ye the clusters of the vine of the earth, for the grapes are ripe" (comp. Joel iv. 13); and he "thrust the sickle, and gathered the clusters of the vine of the earth and cast them into the wine-press of the wrath of God" (comp. Isa. lxiii. 1-6); and as the wine-press was trodden, outside the city (comp. Zech. xiv. 4), there came blood out of the wine-press, reaching even to the bridles of the horses, for the space of 1,600 furlongs (comp. Enoch, xciv. 9, xcix. 6, c. 3).

The same scene is depicted in ch. xix. 11, 16 (also altered by the Christian compiler), where the seer beholds "upon a white horse" him who is "to judge and to make war"; his eyes are a flame of fire, and on his (triple ?) crown the Ineffable Name is written; he is clothed with a vesture dipped in blood (Isa. lxiii. 3), and his name is. . . . Heavenly hosts follow him on white horses, and out of his mouth goes a sharp sword with which he shall smite the nations. He shall rule them with a rod of iron (comp. Ps. ii. 9) and tread the wine-press of the wrath of the Lord of Hosts (Isa. lxxiii. 6); and on his vesture and thigh is written, "King of Kings and Lord of Lords." The closing scene is described in xix. 17-18, 21: A voice ("of an angel standing in the sun"—certainly not genuine) calls, in the words of Ezek. xxxix. 17-20, all the fowls and beasts together for the great sacrifice ("supper") of God, at which they are to eat "the flesh of kings, of captains, and mighty men, of horses and of those who ride on them, and the flesh of all men both free and bond, small and great, . . . and the fowls were filled with their flesh."

Then the writer dwells, in ch. xx. 1-5, on the judgment passed in heaven upon the dragon, Satan, the primeval serpent, who is, like Azazel in Enoch, bound and cast into the abyss, there to be shut up for a thousand years, the seventh millennium which the Messiah shall pass together with the elect ones. Here the original apocalypse probably told of the resurrection of the "saints who had died in the Lord" (xiv. 13), and of the triumphal song they sang at the union of the Messiah, the bridegroom, and the daughter of Zion, the bride (xv. 2-4, xix. 1-8).

Gog and Magog.

After the lapse of the seventh millennium (comp. "Bundahis," xxix. 8) the old serpent is again let loose to deceive the nations of the earth, and the numberless hosts of Gog and Magog beleaguer the Holy City. Then Satan is cast forever into Gehenna (comp. *ib.*), and "seats of judgment" (Dan. vii.) are set for all the dead who rise to be judged (xx. 7-15). Then all whose names are not written in the book of life are cast into the lake of fire. "All the cowardly and faithless ones who yield to abominable rites, murderers, whoremongers, sorcerers, idolaters, and liars, shall meet the second death" (comp. Targ. Yer. to Deut. xxxiii. 6) "and be cast into the lake which burneth with fire and brimstone" (xxi. 8). There shall be "a new heaven and a new earth" (Isa. lxv. 17); the old ones shall disappear, and God's Shekinah shall be with men: they shall be God's people, and "He shall wipe away all tears from their eyes, and there shall be no more sorrow or pain" (comp. Enoch, xc. 29; IV Esd. vii. 26; Apoc. Baruch, iv. 3, xxxii. 2; Ḥag. 12b; Ta'an. 5a).

Then (xxi. 9-27) in place of the old the seer beholds the new Jerusalem come down from heaven, prepared "as a bride adorned for her husband" (Isa. lxi. 10), in all the glory and splendor described in Isa. liv. 11-12, lxii. 6, with the twelve gates mentioned by Ezek. xlviii. 31-35, for the twelve tribes of Israel. The twelve foundation-stones (the twelve names of the Apostles merely betray the Christian reviser's hand) are to be of precious stones, corresponding to the twelve on the high priest's breastplate (comp. Ezek. xxxix. 10), the twelve gates, of twelve pearls; and the city with its streets, of pure gold, transparent as crystal (the same dreams of a golden Jerusalem with gates of pearls and precious stones are indulged in by the Rabbis; see B. B. 75a). No temple shall be there, as the Lord of Hosts will be its temple (comp. Ezek. xl. 35). The words "and the Lamb" (xxi. 22), "and the Lamb is the light thereof" (xxi. 23; comp. xxii. 5, taken from Isa. lx. 19) are Christian interpolations. Verses 24-27 are taken from Isa. lx. 2, 11; lii. 1 (comp. Ezek. xliv. 9), only so modified as to avoid the mention of "the night," while, instead of the passage concerning "the uncircumcised," it is said that "whosoever worketh abomination and falsehood may not enter; only they who are written in the book of life."

The Throne of God.

Finally, the seer beholds (xxii. 1-5) a crystal-like river of water flow forth from the throne of God (comp. Ezek. xlvii. 12 and Sanh. 100a, where the river is said to issue from the Holy of Holies). Jewish Gnostics (Ḥag. 14b) also spoke of the white marble throne and the "waters" surrounding it, exactly as "the sea of glass" near "the white throne" is described in Rev. iv. 6, xx. 11. On either side of the river he sees the tree of life (Enoch, xxv. 4-6) "bearing twelve kinds of fruit, yielding its fruit every month, and its leaves are for the healing of the nations." "There shall be no more curse" (comp. Zech. xiv. 11, חרם), for the servants of the Lord "shall see His face" (comp. Isa. xl. 5), and they shall reign for ever and ever" (comp. Dan. vii. 27).

The whole apocalypse, of which xxii. 10-15 is the conclusion, is, like the shorter one which precedes it, in every part and feature (except where altered by the Christian compiler) thoroughly Jewish in spirit and conception, as was fully recognized by Mommsen ("Römische Gesch." v. 520-523). It presents the development of the whole eschatological drama according to the Jewish view. It is Hebrew in composition and style, and bears traces of having originally been written in Hebrew, as is shown by the words σκήνη (tabernacle; xxi. 3) for שכינה; מלאכים (angels) mistaken for מלכים (Kings; ix. 14); ἐνίκησεν (has conquered) for זכה (is worthy); and others. The two apocalypses appear to have been, like that in Matt. xxiv., or like the Epistle of James and the Testament of the Twelve Patriarchs, in the possession of Essenes who joined the Judæo-Christian Church after the destruction of the Temple (comp. Rev. xxi. 22, showing that the author did not believe in the future restoration of the Temple). Hence it was easy for a member of the early Church to adapt the whole to the Christian view by substituting or inserting frequently, but not always skilfully and consistently, "the Lamb" for "the Messiah," and by occasionally changing or adding entire paragraphs (v. 9-14; vii. 9-10; xi. 82; xiv. 2-5; xvi. 15; xix. 7-10; xx. 6; xxi. 2; xxii. 7-10, 16-17, 20).

Possibly the seer of Patmos when writing the letters to the seven churches, or one of his disciples when sending them out, had these apocalypses before him and incorporated them into his work. This fact would account for the striking similarities in expression between the first three chapters and the remainder. Attention has been called also to the fact that the name "The Word of God" given to the Messiah by the Christian writer in Rev. xix. 13 corresponds exactly to the "Logos" of the Gospel of John i. 1 and "the Lamb" of John i. 29. To this may be added the conception of the Antichrist, dwelt upon alike in Revelation and in I John ii. 18, iv. 3, and II John 7. Owing to these and other similarities John the Presbyter, author of the letters to the seven churches and perhaps of the Second and Third Epistles of John (see introductory verses), was identified with John the Apostle, the assumed author of the Fourth Gospel. Under his name these books passed into the canon, notwithstanding the fact that the views held by the writer of the Book of Revelation differed widely from those expressed in the Gospel and in the Epistles. The Epistles are, like the Gospel, Pauline in spirit and written for Pauline churches; the Book of Revelation remains, under its Christian cloak, a Jewish document.

T. K.

REVELATION: Term used in two senses in Jewish theology; it either denotes (1) what in rabbinical language is called "Gilluy Shekinah," a manifestation of God by some wondrous act of His which overawes man and impresses him with what he sees, hears, or otherwise perceives of His glorious presence; or it denotes (2) a manifestation of His will through oracular words, signs, statutes, or laws.

Manifestations of God.

1. The original Biblical terms used for the former were "mar'eh" (= "sight"; see Geiger, "Urschrift," p. 340), and "maḥazeh" (Gen. xv. 1.; Num. xxiv. 4), "ḥazon," or "ḥizzayon" (= "vision"). The fact that God revealed Himself to man is given in the Bible as a simple, indisputable fact; only occasionally is the state of mind of the persons seeing or hearing Him described. He speaks with Adam and Eve in Eden (Gen. iii. 9-19); with Cain (iv. 9-15); with Noah (vi. 13, vii. 1, viii. 15) and his sons (ix. 1, 8); with Abraham (xii. 1; xvi. 4, 7, 13; xvii. 1, 3, 15), to whom He appears in company with manlike angels (xviii. 1). He appears in a dream to Abimelech, speaking to him on behalf of Abraham (xx. 3, 6); to Isaac (xxiv. 24); to Laban on account of Jacob (xxxi. 24); to Jacob (xxviii. 13, xxx. 11, xlvi. 2) "in visions of the night."

The first revelation Moses had of God at the burning bush was "a great sight"; "he was afraid to look" at Him (Ex. iii. 3, 6); so the first revelation Samuel had in a dream is called "the vision"; afterward God was frequently "seen" at Shiloh (I Sam. iii. 15, 21, Hebr.). Isaiah's first revelation was also a sight of God (Isa. vi. 1-5); Amos had his visions (Amos vii. 1, 4; viii. 1; ix. 1); and so with Jeremiah (Jer. i. 11, 13), Ezekiel (Ezek. i. 1 *et seq.*, viii. 1-3), and Zechariah (Zech. i., vi.), and, in fact, with all "seers," as they called themselves. The heathen Balaam also boasted of being one who saw "the vision of the Almighty" (Num. xxiv. 4). Most vividly does Eliphaz describe such a revelation: "In thoughts from the vision of the night, when deep sleep falleth on men, fear came upon me, and trembling . . . a spirit passed before my face; the hair of my flesh stood up. He stood still, but I could not discern his appearance; a figure was before mine eyes, a whispering voice I heard" (Job iv. 13-16, Hebr.). The Pentateuch, however, lays special stress on the fact that, while to other prophets God made Himself known in a vision, speaking to them in a dream, He spoke with Moses "mouth to mouth," "as a man would speak with his neighbor," in clear sight and not in riddles (Num. xii. 6-8; comp. Ex. xxxiii. 11; Deut. xxxiv. 10). It was owing to this close and constant communion with God (Ex. xxiv. 15-18; xxxiii. 8-11, 28-35) that Moses became for all time His "faithful servant" and mouthpiece, though once Aaron and his sons and the seventy elders also beheld God (Ex. xxiv. 10-11).

The Revelation on Sinai.

Still some more wondrous and imposing act of revelation was deemed necessary by God "to make Israel believe in Moses" for all time; therefore all the people were assembled around Mount Sinai "to hear the Ten Words spoken by Him from heaven," while at the same time His presence was manifested to them in a sight which made them tremble in awe before Him (Ex. xix. 9-xx. 22; Deut. iv. 10-v. 23, Hebr.). Through the Sinai assembly ("*ma'amad har Sinai*") the whole people became witnesses to the divine revelation, and at the same time were pledged to observe all the laws which God afterward gave them through Moses. This accounts for the prominence given in Scripture (Neh. ix. 13) and in the liturgy (Tamid v. 1, and the New-Year's musaf, "Shofarot") to the Sinai revelation.

Judah ha-Levi, accordingly, is in full accord with the spirit of Judaism when he declares the revelation on Sinai to be the great historical fact upon which the Jewish faith, as far as it is a truth revealed, rests ("Cuzari," i. 25, 87, 97; iv. 11); and this is also the rabbinical view. "The Lord appeared to the people of Israel on Sinai face to face in order to pledge them for all generations to come to remain true to Him and worship no other God." The Lord spoke with every single Israelite on Sinai, so that each heard Him say, "I am the Lord thy God"; as it is said, "the Lord spoke with you face to face in the mount out of the midst of the fire" (Deut. v. 4). He appeared to them in differing aspects ("panim" = "countenance")—now with a stern and now with a mild face, corresponding to the varying relations and attitudes of men and times (Pesiḳ. R. 20-21; Mek., Beshallaḥ, Shirah, 3). As a matter of fact and in contrast to all other descriptions of God's appearances to man, which at a later stage were taken figuratively (Mek., Yitro, 3-4) or which called for soferic alterations (Geiger, "Urschrift," pp. 337-342), or in which "the glory of God" was substituted for His presence (Ex. xl. 34; Lev. ix. 23; Num. xiv. 21), the actuality of the theophany at Sinai was always accentuated, even by Maimonides ("Moreh," ii. 33).

Nature of Revelation.

The essential feature of revelation accordingly consists, exactly as in prophecy, in the fact that it is not a merely psychological process in which the human imagination or mental faculty constitutes the main factor, but that man is but the instrument upon which a superhuman force exerts its power, and the more lucidly this superhuman force enters human consciousness as an active personality, that is, the more of itself the divine mind imparts to the susceptible human mind, the higher will be the degree of the revealed truth. As all the beginnings of religion point back to the child-age of man, when the imaginative and emotional powers predominate over reason, so revelation comes to man like a flash from a higher world, taking hold of him with an overwhelming force, so as not merely to make him the recipient of some new truth that stirs his heart to the core, but to make him, with his childlike perception, see the power that imparts the truth to him. How the finite soul can come into touch with the Infinite Mind, or, vice versa, how Deity can reach the chosen individual, remains a mystery, as in every realm of human endeavor the work of genius is a mystery for which the vestiges of Divine Providence in history offer parallels but no explanation.

At any rate, the Scriptural records and the results of the study of comparative religion alike testify to the gradual unfolding of the divine powers in man by means of revelation; yet of all nations the Jewish alone rose with the claim of having received the words of the living God and Ruler of the Universe as a revelation for all times and all generations of men. Just as there are different degrees of prophecy among individuals, the highest degree having been attained by Moses (Maimonides, "Yad," Yesode ha-Torah, vii. 2–6; *idem*, "Moreh," ii. 45), so there have been different degrees of prophetic capacities making for a divine revelation among the various races and nations. The Jewish race, which has given rise to successive generations of prophets as no other people in the world has done, has been endowed with peculiar religious powers that fitted it for the divine revelation.

With reference to Judah ha-Levi, who declares Israel to be "the heart among the nations" ("Cuzari," ii. 36), Geiger declares ("Jüd. Zeit." ii. 193) revelation to be "an illumination of the Jewish genius by the Divine Mind, which caused the whole people to come nearer to the everlasting truth than any other. Judaism is not a religion given by one man: Israel's God is not called the God of Moses, or of Isaiah, but of Abraham, Isaac, and Jacob, that is, of the fathers of the nation, who imparted the deep powers of religious intuition and inspiration to all the seers, singers, and teachers, the framers of the Jewish religion."

The Rabbis say that until the erection of the Tabernacle in the wilderness all nations had prophetic revelations from God; but from that time forward Israel alone was the privileged recipient of the divine truth; only exceptionally did heathen seers like Balaam attain prophetic powers, and at best they had only prophetic dreams (Lev. R. i. 12–13). According to R. Eliezer, each person among the Israelites, including even the least intelligent bondwoman, saw God's glory at the Red Sea in clearer form than did, afterward, prophets of the stamp of Ezekiel; wherefore they burst forth into the song, "This is my God" (Mek., *l.c.*, with reference to Ex. xv. 2). When asked by a Samaritan to explain how the words of God "Do not I fill heaven and earth?" (Jer. xxiii. 24) could be reconciled with the words spoken to Moses, "I will meet with thee, and . . . commune with thee . . . from between the two cherubims" (Ex. xxv. 22), R. Meïr made his interlocutor look into two mirrors of different shapes and sizes, saying, "Behold, your own figure appears differently because the mirrors reflect it differently; how much more must the glory of God be mirrored differently by different human minds?" (Gen. R. iv. 3). The difference between Moses' capacity of beholding God and that of other prophets is stated in the following manner: the former saw as in a clear-cut and translucent mirror; the others as in a complex mirror ("seven times reflected") or dark glass (Lev. R. i. 14; comp. Suk. 45b ["The righteous in the future world see through a translucent mirror"] and I Cor. xiii. 12; II Cor. iii. 18).

Torah as Revelation.

2. Revelation, in the sense of a manifestation of the will of the Deity, is identical with "debar Yhwh" (the word of the Lord) or "Torah" (the Law or the Teaching). This, however, denotes a psychological process of a somewhat different order, as it points back to the primitive belief in oracles, signs, and dreams (see Urim and Thummim) which waited for the interpretation of either priest or seer (comp. I Sam. xxv. 6, LXX., and II Sam. xvi. 23: "The Lord did not answer him [Saul] either by dreams or by urim and thummim"). How far this mode of ascertaining the will of God was originally identical with the "torah" of the priest (see Smend, "Lehrbuch der Alttestamentlichen Religionsgeschichte," 1893, p. 35, with especial reference to Deut. xxxiii. 8–10) can not be discussed here.

The Deuteronomic law still recognizes as legitimate the use of dreams and signs for the ascertaining of the divine will, but makes it dependent upon its monotheistic character (Deut. xiii. 2–6; comp. Jer. xxxiii. 28). In the course of time the various "torot" ("divine instructions," the ordinances given by God to Moses and those given at times also to Aaron, the latter forming parts of the so-called Priestly Code) were united in the "Book of the Law" ("Sefer ha-Torah"). From the time of Ezra both the written Law and its extensive interpretation, which, while being developed in the course of time, was, as traditional oral Law, ascribed to Moses as having been received by him from God on Mount Sinai, were regarded by the Pharisees as divine revelation ("Torat Elohim" = "the Law of God"; Neh. viii. 8; Meg. 3a). The rabbinical view that every letter of the whole Pentateuch was written by Moses at the dictation of God, and that the rules of interpretation of the Law, at least as far as it has practical (halakic) application to life, were received by him directly from God on Sinai, became a fixed dogmatic belief, upon the acceptance of which depended future life (Sanh. 99a, based upon Num. xv. 31; Sifre, Num. 112). This is expressed (Sanh. x. 1) by the rabbinical phrase "Torah min ha-shamayim" (the Torah is from heaven). Whether "Torah" has not frequently a far broader and deeper meaning in the prophetic and other inspired books—denoting rather the universal law of human conduct, the law of God as far as it is written upon the heart of man in order to render him a true son of God—is a question at issue between Orthodoxy and Reform (see Reform Judaism; Torah). Regarding the divine character of inspired writers not belonging to the house of Israel see Inspiration.

REVENGE. See Vengeance.

REVERE, GIUSEPPE: Italian dramatist and humorist; born at Triest in 1812; died Nov. 22, 1889. He was destined by his parents for a commercial career, but soon abandoned it to pursue literary and philosophical studies at Milan. He studied German, Greek, and Hebrew also. Revere wrote several historical plays, among which were "Lorenzino de' Medici" (1839); "Piagnoni e Arrabbiati"; "Sampiero di Bastelica"; and "Marchese di Bedmar." In 1848 he took part in a conspiracy of the followers of Mazzini at Venice, and in consequence was banished by the dictator Manin. Subsequently he joined the forces defending Rome, and later went to Piedmont. He formed a close friendship with many noted patriots, and took an active part in their political efforts. He contributed a number of articles, patriotic in tone, to "La Concordia." Suspected of conspiring with the republicans, he was again banished to Susa, by Azeglio, a minister who afterward became his friend. At Susa he wrote the "Bozzetti Alpini," published in the "Rivista Contemporanea." Then he went to Genoa on business, and while there wrote his work "Marine e Paesi," in prose. He was also the author of: "Narrazioni Storiche"; "Sdegni ed Affetti," poems (written 1845); "Nuovi Sonetti" (1846); "Marengo" (1847); and several other volumes of poems, as follows: "Nemesii" (1851); "In Morte di Giuseppe Lyons" (1853); "Persone ed Ombre" (1862); "Osiride" (1879); "Sgoccioli" (1881); "Trucioli" (1884). He was at one time editor of the "Bolletino Consolare" at Rome.

S. U. C.

REVERTS, ADMISSION OF: The rabbinical law takes notice of apostates ("mumarim"; the popular name "meshummadim" is of somewhat modern origin); and apostasy is treated as the sum of all iniquities. But the person guilty of apostasy does not cease to be an Israelite. He may repent and return to his former good standing; "for there is a place where the repentant sinner stands, which the perfectly righteous can not reach."

On this subject Maimonides ("Yad," Teshubah, iii.) is quite explicit. He enumerates twenty-four classes of grave sinners, among them those who deny the divine source of the Torah; those who, like Zadok (the supposed first head of the Sadducees) and Boethus, deny the oral law; those who, like the Christian and the Moslem, assert that God has abrogated the Torah and has established another religion; and finally those who act as informers against Israelites and deliver them over to the Gentiles for spoliation and death. But he concludes with the words: "Any one of all these, should he die without repentance, has no share in the world to come; but if he has turned away from his wickedness, and dies while repentant, then he is among the inheritors of the world to come; for nothing can stand before the force of repentance. Even one who has for all his days denied the fundamentals, but turns at the last, has his share in the world to come." He quotes the Scripture (Isa. lvii. 19, Hebr.): "Peace, peace to the near and to the far, saith the Lord; and I will heal him." "Hence," he says, "we should receive all the wicked, even apostates and the like, who turn back in repentance, whether openly or secretly"; quoting Jer. iii. 14, Hebr.: "Return, return, ye backsliding sons."

The question whether an apostate returning secretly to the old faith is to be received, dates back to a dispute among the early sages, those of the generation of R. Meïr ('Ab. Zarah 7a, b; Bek. 31a). Meïr would not receive them back at all; another disputant, only upon a public recantation; while two others held that even he who returns in secret should be received; and this most liberal view is approved by the amoraim who pass upon this dispute in the two Talmudic passages of the Talmud which have been cited above.

The manner of accepting the penitent back into the fold is not discussed by Maimonides, nor by the Shulḥan 'Aruk. The reason is plain: both Christians and Mohammedans, especially the former, dealt very harshly with relapse into Judaism, punishing it with death as a matter of course. Hence a secret return was generally deemed most prudent; and the reception of the "revert" could not be very formal.

REVISED VERSION. See Bible Translation.

REVISTA ISRAELITA. See Periodicals.

REVUE DES ÉTUDES JUIVES: French quarterly, founded July, 1880, at Paris by the Société des Etudes Juives, and published under the editorship of Isidore Loeb and after his death (June 3, 1892) under that of Israel Lévi. Like the "Jewish Quarterly Review," this periodical is devoted to scientific research and to the printing of unpublished texts concerning Judaism, among others documents relative to the history of the French Jews. Nearly every number contains also a special bibliographical section devoted to reviews of current works on Judaism.

The "Revue" is arranged in volumes, two of which contain the records for the year. Each of these volumes consists of two numbers. Among the contributors to the "Revue des Etudes Juives" may be mentioned: W. Bacher, Arsène and James Darmesteter, Joseph and Hartwig Derenbourg, Joseph Halévy, Israel Lévi, Isidore Loeb, Zadoc Kahn, M. Kayserling, D. Kaufmann, N. Porges, S. Poznanski, and Moïse Schwab. The most prolific contributor was Isidore Loeb himself, who, besides his bibliographical reviews, enriched this periodical with a great many articles of varied contents. Of particular interest are a series of articles by Joseph Derenbourg on Biblical studies and another series of rabbinical miscellanies, among them the glosses of Abu

Zakariya ibn Bal'am on Isaiah (Arabic text and French translation). Of no less interest are J. Halévy's "Recherches Bibliques," a series of articles on Biblical archeology containing also the Assyrian texts of the correspondence between the Asiatic rulers and the Egyptian kings Amenophis III. and Amenophis IV. Among Israel Lévi's articles special mention may be made of those on Jewish legends found in Talmudic literature, with references to non-Jewish sources. Finally, Moïse Schwab published many Hebrew inscriptions and documents relative to the history of the French Jews.

REVUE ISRAÉLITE. See PERIODICALS.

REVUE ORIENTALE: A periodical issued in Brussels at irregular intervals. It was published in the French language and was devoted to Jewish science. It was founded and edited by Eliakim CARMOLY, who was also the author of most of the articles which appeared in its three volumes (vol. i., Brussels, 1841; vol. ii., *ib.* 1842; vol. iii., *ib.* 1843-1844). A prospectus of the "Revue" is printed at the beginning of the last volume; it states that the success of the publication exceeded all expectations, and that almost all the articles that appeared in the preceding two volumes were reproduced in German, English, Dutch, and other languages, not only in journals, but also in books. Several of Carmoly's works, like his "Histoire des Médecins Juifs" and his "Vocabulaire de la Géographie Rabbinique en France," first appeared in the "Revue Orientale," where there appeared also his essays on the history of the Jews in Belgium, in Italy, and in Poland, and numerous biographies of eminent Jews.

REWBELL, JEAN FRANÇOIS: Alsatian deputy of the French National Assembly from 1789 to 1791, and its president in the latter year; born at Colmar Oct. 8, 1747; died there Nov. 23, 1807. When the question of the emancipation of the Jews was discussed (Dec. 23-24, 1789), Rewbell, although a republican of the most advanced type, opposed conjointly with Abbé Maury, Bishop La Fare of Nancy, and the Bishop of Clermont the motion in favor of emancipation offered by Clermont-Tonnerre and supported by Robespierre, Duport, Barnave, and Mirabeau. He spoke against the Jews, maintaining that it would be dangerous to grant complete rights of citizenship to those residing in Alsace, against whom there was such a deep-rooted hatred among the population. He again in vain opposed the motion made by Duport; and on Sept. 27, 1791, the Assembly declared the Jews to be citizens of France.

Rewbell's character was not above reproach, and he was once indicted for obtaining money by exactions. He remained a steadfast republican, retiring from political life after the coup d'état of 1799.

D. S. MAN.

REZIN: Last king of the Damascene dynasty; slain in 732 B.C. With Pekah, King of Israel, he planned a campaign against Ahaz, King of Judah (734; II Kings xvi. 5; Isa. vii. 1-8). The two kings feared Tiglath-pileser, King of Assyria; but before attacking him they endeavored to win Ahaz over to their side, and on his refusal to join them, they attempted to force him into the coalition. Ahaz appealed to Tiglath-pileser for aid, accompanying his appeal with rich presents (II Chron. xxviii. 16 *et seq.*; II Kings xvi. 7-9). The Assyrian king, who was then in the northern part of his kingdom, immediately marched to the assistance of Ahaz, while Rezin of Damascus and Pekah of Israel withdrew to their fortresses. Tiglath-pileser captured Damascus, conquered sixteen districts with 591 towns, and finally took the city, which became part of a Syrian province; Rezin himself was killed (II Kings xvi. 9).

According to modern investigations, the Damascene dynasty, which was in contact with Israel and Judah during the entire time of its existence, was as follows:

(1) Razon (*c.* 950 B.C.), the founder of the dynasty, son of Eliadah, and contemporary of Solomon (I Kings xi. 23); (2) Ben-hadad I. (= Bir-'idiri; 885-844), contemporary of Ahab of Israel and Asa of Judah (I Kings xx.; II Kings viii. 7-9); (3) Hazael (844-804), contemporary of Joram of Israel and Ahaziah of Judah (II Kings viii. 28); (4) Ben-hadad II. (= Mari; 804?-744?), contemporary of Joash of Israel and Amaziah of Judah (II Kings xiii. 24); (5) Tab-el? (?-743?), father of Rezin (Winckler, "Alttestamentliche Untersuchungen," pp. 74-75); (6) Rezin (743?-732), contemporary of Pekah of Israel and Ahaz of Judah (II Kings xvi. 5-6, 9).

The sons of Rezin are mentioned among the Nethinim in Ezra ii. 48 and Neh. vii. 50. See BEN-HADAD; HAZAEL.

E. G. H. S. O.

RHEINHOLD, HUGO: German sculptor; born March 26, 1853, at Oberlahnstein, Prussia; died at Berlin Oct. 2, 1900. At the age of sixteen, after having passed through the gymnasium at Coblenz, he entered upon a mercantile career. A residence of four years in San Francisco, U. S. A., qualified him to establish in Hamburg an exporting and importing business. After the death of his wife (1882) he retired to Berlin, where he devoted himself to scientific and philosophical studies at the university. In 1886 he entered the atelier of the sculptor Kruse; in 1888 he became a pupil at the Berlin Academy of Arts.

Rheinhold's first production as a sculptor, exhibited at the Berlin Art Exhibition of 1895, attracted general attention by its originality. A chimpanzee holds in one hand a human skull, which he contemplates with droll pensiveness. His other hand supports his chin, while with one of his feet he holds a compass. Many copies in bronze of this work were made. But the work which permanently established his reputation as an artist was the figure "Am Wege" (1896), representing an unfortunate young woman with a child at her breast. His next undertaking was the Alfred Nobel monument.

The feeling aroused in his mind by the venomous attacks of anti-Semitism are expressed in his "Die Kämpfer." Among his later productions are the "Schnitterin," and a bust of his mother, of Prof. B. Fränkel, of Ludwig Bamberger, and of Col. M. von Egidy.

Rheinhold was for many years one of the leading spirits of the Deutsch-Israelitischer Gemeindebund, of which he acted as treasurer.

RHINOCEROS. See Unicorn.

RHODE ISLAND: One of the original thirteen states of the American Union. The settlement of Jews in the state dates back to 1658 (see Newport). In addition to the community in Newport, the state has a growing community in **Providence,** with four congregations, an Associated Hebrew Charities (which includes twenty-six societies), a Hebrew Educational Alliance, a Young Men's Hebrew Association, and other organizations. **Woonsocket** has a congregation, founded in 1892, and various philanthropic societies, and **Pawtucket** also has a Jewish congregation. The Jewish population of Rhode Island, including Newport, is estimated at 3,500, the total population of the state being 428,556.

A.

RHODES: Turkish island in the Ægean Sea, and the largest in the Sporades group. This island has successively borne different names, finally preserving that of 'Ρόδον. The Bible knew it under the name רודן. In Gen. x. 4 the word דודנים occurs, in I Chron. i. 7 רודנים (see "Encyc. Bibl." and Hastings, "Dict. Bible," *s.v.* "Dodanim"). To-day Rhodes, its capital city, is the chief place in the vilayet of the islands of the Ottoman Archipelago. The island has a total population of 30,000, and of these there are about 4,000 Jews in the town and some in the neighboring villages.

Gedaliah ibn Yaḥya states that Rhodes was built by a king of Argolis in the time of the patriarch Jacob ("Shalshelet ha-Ḳabbalah," p. 77a). In 656 a Jew of Emesa, a Syrian city (modern Ḥoms), bought the débris of the famous Colossus of Rhodes, which had been destroyed by an earthquake in 282 B.C. He conveyed this débris to Loryma, now Marmaritza, twenty-seven miles from Rhodes.

The Jews were established in Rhodes in remotest times. They are mentioned in I Macc. x. 15, 23 as dwelling there in 140 B.C. Benjamin of Tudela relates that he found 500 of them there, and Rottiers says that the Jews who fled from Spain on account of persecution left Tarragona in 1280 and established themselves in Rhodes, which then was held by the Saracens ("Inscriptions et Monuments de Rhodes," Brussels, 1830).

At Malona, a village seven miles from the capital, there exists to-day a street named "Evriaki," which is so called from a Jewish settlement there. This settlement was established before the Knights of St. John arrived at Rhodes (1309), when the Jews occupied the same district in which they live to-day.

Under the Knights Hospitalers.

When the walls of the city were repaired by the Knights of St. John, they gave the name "Jews' Wall" to that part which encircled the Jewish quarter. Under the knights' rule the Jews were not always fortunate. According to Lacroix, D'Aubusson, the grand master of the island, ordered the Jews' houses to be razed that the material of which they had been built might be used for the reconstruction of the Jews' Wall, which later was bombarded by Messih Pasha, the Ottoman commander. Elijah Capsali, in his chronicle (ed. Lattes, Padua, 1869), says that after defeating the Turks D'Aubusson ordered the Jews to embrace Christianity. Some accepted baptism, others preferred death, while still others consented to be sold into slavery and were released only after the conquest of the island by Sulaiman. On Jan. 9, 1502, D'Aubusson decreed the expulsion of the Jews from Rhodes, under the pretext that they were corrupting the morals of the young, but owing to the death of the grand master the decree was not completely enforced; nevertheless the Jews of Cos were exiled to Nice. Under the grand master Frederic Caretto, Salim I. sent to Rhodes a Jewish physician, Libertus Cominto, to obtain a map of the island. The physician is said to have succeeded in his task, but he was caught and executed. Some historians claim that he was a convert to Christianity. Under the last grand master, Williers, of the island of Adam, the Jews were allowed to live in peace. On several occasions he visited the Jewish houses and synagogues.

According to Rottiers, some Jews who were exiled under D'Aubusson accompanied as sutlers the Turkish army which besieged the city and captured the island. According to a tradition related as fact by certain historians, especially Baudin, the Jews took part in the war against the Turks. Under the leadership of Simeon Granada, a battalion of 250 Jews was formed, and became known as the "Jewish phalanx." Bilioti, referring to the part taken by the Jews in the struggle against the Turks, says that the Jews were those that had been converted in the time of D'Aubusson and had displayed great valor in the Italian bastion. Florentin Bernard Carli, who witnessed the siege, says that under Turkish order from two to three thousand Jews filled up with sandbags the ditch before the Italian position. When the Turks occupied Rhodes the converted Jews abjured the Christian religion and returned to their ancient belief. Probably Florentin here refers to the Jewish sutlers who accompanied the Turkish army, for the Jews who were within the castle could not have held any communication with the enemy.

While some historians claim that the fall of Rhodes was due to the treachery of Libertus Cominto, others affirm that the real traitor was Knight d'Amaral, whose treason had been discovered by the Jewess Rachel, wife of Simeon Granada.

Some historians claim also that the Jews, afraid of Turkish rule, left the island and went to Italy. Others assert that they preferred to remain on the island and enjoy the bounty of the sultan. This statement may be true in so far as it concerns the Jews who had fought on the side of the Christians, whereas the former statement may refer to the Jews who accompanied the Turkish army. Benjamin Pontremoli relates that Sulaiman knew the utility of the Jews and brought a dozen families from Salonica. He granted them a firman guaranteeing freedom from taxation for twenty years, and decreeing that each family be provided with a house free of expense. Under this firman they were also permitted to mine sulfur, to traverse Mohammedan territory with their dead, to wail as they traveled along the road, and to purchase at ordinary prices food killed according to the ritual law.

From this date until 1675 there are no data of the political history of the Jews of Rhodes, but from 1675 they are repeatedly mentioned in government ordinances.

In the Nineteenth Century.

In 1837 a fearful pestilence spread over the island, and, acting on the advice of the grand rabbi, part of the inhabitants fled to the village Candilli, which thenceforward became a Jewish settlement. Among the victims of the scourge there were only ten Jews. In 1840 an accusation of ritual murder was made against the Jews of Rhodes. On the eve of Purim the governor, Yusuf Pasha, at the instigation of the Greek clergy and the European consuls, blockaded the Jewish quarter, arrested the chief rabbi, Jacob Israel, and the chief men, and imprisoned them. But on Nov. 6, owing to the efforts of Count Camondo, Crémieux, and Montefiore, a firman was obtained from the sultan which declared all accusations of ritual murder null and void. It should be mentioned that three Jews and three Christians were taken from Rhodes to Constantinople for trial, and that there the innocence of the Jews was established.

In 1851 much suffering was caused by an earthquake. The community sent Rabbi Raḥamim Franco to Egypt and to Europe to receive funds for relief, and he collected more than 40,000 francs (about $8,000). In 1855 a part of the Jewish quarter suffered damage through the explosion of gunpowder, and in 1863 a fire which destroyed the market paralyzed the trade of the Jews. In 1880, while some Jewish merchants who traded in the island of Cassos were returning to Rhodes to celebrate Passover, the vessel by which they were being conveyed was captured by pirates, and the Jews were despoiled and held as guides; but subsequently, at the instance of the governor of Rhodes, they were rescued and the pirates were seized.

The Jews of Rhodes support two large synagogues, the Great Synagogue, which was destroyed by artillery in 1440, rebuilt by permission of Pope Sixtus IV. in recognition of Jewish services during the siege of the city, destroyed again during a later siege, and rebuilt by Rabbi Samuel Amato; and Shalom Synagogue, built in 1593 by Raphael Margola. There are also two smaller synagogues—the Synagogue Camondo, so called in honor of Count Abraham de Camondo, who built it; and the Tiḳḳun Ḥaẓot—and two batte midrashot. The commerce of the island is controlled by the Jews, among whom there are also many boatmen and porters. The Jews are on good terms with their neighbors.

There are two schools, one for boys and one for girls; also several Talmud Torahs. There is a steady migration to Asia.

Among the rabbis of Rhodes may be mentioned: **Ḥayyim ben Menahem Algazi**, in the seventeenth century; **Moses Israel**, author of "Mas'at Mosheh" (Constantinople, 1734); **Ezra Malki; Moses ben Elijah Israel**, author of "Mosheh Yedabber" (Constantinople, 1827); and **Jedidiah ben Samuel Turski**, in the eighteenth century. In the nineteenth century three rabbis of the Israel family distinguished themselves as authors: **Judah b. Moses b. Elijah**, and **Jacob** and **Raḥamim Judah** (1824–91). The present rabbi (1905) is **Moses Judah Franco**. Prominent in public life is especially the Menasché family, one of whose members, Boaz Menasché Effendi, is a judge of the court of appeals.

RIBEIRO, JOÃO PINTO: Portuguese scholar; curator of the royal archives in Torre do Tombe, at Lisbon; died in that city Aug. 11, 1649. He was the author of a work defending the Maranos, entitled "Discurso si es Util, y Justo, Desterrar de los Reinos de Portugal a los Christianos-Nuevos, Convencidos do Judaismo por el Tribunal de S. Officio, y Reconciliados por el con Sus Familias, y Aquellos Contra los Quales ay Prueba Bastante para Destierro." It is still in manuscript.

J. M. K.

RIBKAS or **RIBKES** (= "son of Rebekah"), **MOSES BEN ẒEBI NAPHTALI HIRSCH SOFER:** Russian Talmudist; died at Wilna in 1671 or 1672. He was a member of a Prague family, but settled early in life at Wilna. In 1655, in consequence of the war between Poland and Russia, he was compelled to flee from the city, leaving all his property behind. He then settled at Amsterdam, and owing to his great Talmudical knowledge was befriended by Saul Morteira and Isaac Aboab. On the reestablishment of peace between Poland and Russia, Ribkas returned to Wilna, where his affairs seem to have prospered. At his death he bequeathed a great part of his fortune to charitable institutions which are still administered by his descendants.

While at Amsterdam Ribkas was charged with the revision of the proofs of a new edition of the Shulḥan 'Aruk, which was being prepared in the printing-office of Proops. This new edition (Amsterdam, 1661–67) was provided by Ribkas with marginal notes of his own, entitled "Be'er ha-Golah," in which he gives the sources of the halakot, besides short comments. In addition to this work, which has always been reprinted in the margins of the Shulḥan

'Aruk, Ribkas left in manuscript "Kelale ha-Hora'ah," giving the final decisions in regard to halakot, and "Keli ha-Golah," a commentary on the Mishnah.

RIBLAH (רבלה): Town in the country of Hamath. It is now an insignificant hamlet, known as Riblah, in the Baḳa'ah, the broad valley between the two ranges of Lebanon and Hermon, and on the eastern shore of Nahr el-'Aṣi (Orontes), thirty-five miles northeast of Baalbek. Its position on the banks of a mountain stream, in the center of a vast and fertile plain, and close to the road leading from Egypt and Palestine to Babylon, rendered it a frequent resting-place for the armies of the Egyptian and Babylonian kings. It was at Riblah that Pharaoh-necboh, after having defeated Josiah at Megiddo, put the latter's successor, Jehoahaz, in "bands" that he might not reign in Jerusalem (II Kings xxiii. 33). It was at Riblah also that Nebuchadnezzar established his headquarters when his army besieged Jerusalem (586 B.C.), and it was here that Zedekiah was brought before him for judgment (II Kings xxv. 6 *et seq.*, 20-21; Jer. xxxix. 5-6; lii. 9 *et seq.*, 26-27).

Most modern expounders (Ewald, Smend, Cornill, and others) read "Riblah" instead of the Masoretic "Diblatah" (the accusative of "Diblah") in Ezek. vi. 14. The location of Diblah is unknown. In Num. xxxiv. 11 a place named "Ha-Riblah" (with the article) is mentioned among the villages forming the borders of the Promised Land. But as this Riblah is situated on the eastern boundary it can not be identical with Riblah in Hamath. It is difficult to determine the location of the Riblah mentioned in this passage.

J. J. Z. L.

David Ricardo.

RICARDO, DAVID: English political economist and publicist; born in London April 19, 1772; died Sept. 11, 1823. The Ricardo family removed from Italy to Holland in the beginning of the eighteenth century or, perhaps, earlier, and its members appear to have become dignified and substantial members of the Jewish community of Amsterdam. Two generations later, with the drift of trade and finance from Holland to England, a branch of the family went from Amsterdam to London. Of David Ricardo's father, **Abraham Ricardo**, it is said that he went on a visit to England when young, and, preferring it to his own country, became naturalized and settled there. He entered the stock exchange, amassed a fortune, and acquired considerable influence both as a man of affairs and as a member of the Anglo-Jewish community. He married and became the father of a large family, of which David was the third child.

Early Training.

David's early education was sound and practical. His father, from the outset, designed him for a financial career. As a young boy David was sent to a school in Holland, where he remained for two years. Upon returning to England he continued to enjoy the benefit of a common-school education until the age of fourteen, when his father began to employ him in stock-exchange business. As a youth he appears to have given evidence of those mental qualities which in fruition distinguished his later intellectual life—a taste for abstract and general reasoning, an insistence upon final analysis, an independence and vigor of thought, and a firm adherence to positive opinions combined with a singular candor and openness to conviction.

Soon after the attainment of his majority young Ricardo married Priscilla Anne Wilkinson, a non-Jewess, and whether in consequence of this step or in general reaction against the rigid orthodoxy of his father's religious belief and practise, a rupture occurred between father and son extending even to business affairs. McCulloch states that young Ricardo actually seceded from the Jewish faith, but there is no evidence of any formal apostasy, and it is more reasonable to hold that virtual alienation resulted from marriage outside of the Jewish faith and that the severance of family ties followed. Ricardo must, however, as a member of Parliament, have taken the oath of allegiance on the true faith of a Christian.

Thrown in the main upon his own resources, Ricardo soon displayed exceptional capacity in practical finance. In a few years he had established himself securely, and he rose steadily thereafter no less in wealth than in the estimation of his associates and in commanding influence in financial affairs. In so far as urgent business affairs afforded leisure, Ricardo's interest seems at first to have been held by mathematics, chemistry, geology, and mineralogy. He was one of the original members of the Geological Society, and fitted up a laboratory and made a collection of minerals. But McCulloch declares that he never entered warmly into the study of these sciences, and that he abandoned them entirely as soon as his attention was directed to the more congenial study of political economy.

Although the sensational events which led up to and followed the bank restriction of 1797, as well as the ordinary transactions of his every-day life on the stock exchange, can not have failed to interest Ricardo in general financial principles, yet the determining impulse to economic speculation is said to have come from acquaintance with Adam Smith's "Wealth of Nations" in 1799. From the time when this work began to exert an influence upon him economic inquiries became the avocation of his life.

Ricardo's début as an economic writer took the modest form of an unsigned paper, on the bullion controversy, contributed to the "Morning Chronicle" in 1809 and soon thereafter expanded into a clear and forcible pamphlet. It led to intimacy with James Mill and to friendship with Malthus and Bentham, and upon the incorporation of its substance into the Bullion Report of 1810 established Ricardo as an authoritative and convincing exponent of monetary principles.

"Principles of Political Economy."

The corn-law controversies of 1813–15 brought Ricardo again conspicuously to the fore, first as a pamphleteer advocate of free-trade principles, in opposition to the protectionist leanings of Malthus, and thereafter as an exponent of a systematic theory of economic distribution and fiscal incidence. Closer intimacy with James Mill, active discussions with Malthus and Trower, and retirement from the stock exchange to the tranquil ease of a Gloucestershire country-place in 1814, all tended to broaden the range of his economic thought, and culminated logically in the publication of his "Principles of Political Economy and Taxation" in 1817. Thenceforth until his death in 1823 Ricardo remained the dominant figure in English economic circles. As early as 1821 McCulloch could declare that the Ricardian theories—"the new political economy" as Malthus termed them—were assented to by "all the best economists in the country."

In 1819 Ricardo entered the House of Commons as member for Portarlington, an Irish pocket borough, and thereafter parliamentary issues shared with economic studies the prime interests of his public life. In the House his activities, both on the floor and in committee, were important as well as characteristic. Formal parliamentary duties were supplemented by participation in current affairs, such as Robert Owen's schemes, and contemporary proposals for savings-banks and old-age pensions. In all of these Ricardo's sole concern was the public welfare. Professor Ritchie has said that perhaps no modern writer or speaker engaged in so many polemics and discussions as Ricardo, and yet so completely eliminated the element of self. Ricardo was cut off in his prime, after a short illness, on Sept. 11, 1823. He is buried by the little chapel in Hardenhuish Park, near Chippenham, in Wiltshire. An engraving from a portrait which was painted by J. Phillips was published in quarto size and is prefixed in reduced size to McCulloch's edition of Ricardo's works.

Founder of Economic Science.

However friends and critics may differ as to the validity of Ricardo's specific doctrines, there is little doubt as to his service in establishing the concept of political economy as a body of abstract uniformities dealing with the phenomena of wealth. His data may have been inadequate, his method in part defective, and his conclusions sometimes misleading; but his inestimable service was in definitively converting economic speculation from detached inquiry or specific theorization to an organically related body of general principles. So far Ricardo is to be regarded as the true founder of the science of political economy. With respect to particular principles—the theory of metallic money, the laws of fiscal incidence, the scheme of economic distribution—Ricardo's contributions were important and in many respects enduring, but it is in the larger influence of concept and purpose that the clearest explanation of his intellectual dominance is to be found.

There is no evidence in Ricardo's life of any particular interest in Jewish religious or communal affairs. He maintained cordial relations with the younger members of his family—some of whom also seceded from the Jewish faith—and when on a pleasure visit to Amsterdam in 1822 he sought out some of his Dutch kinsfolk, including the poet J. da Costa. While a member of the House of Commons he lost no occasion to speak in favor of religious toleration, and when in 1823 Isaac Lyon Goldsmid wrote thanking him for such an expression, he wrote in reply: "It appears to me a disgrace to the age we live in, that many of the inhabitants of this country are still suffering under disabilities, imposed on them in less enlightened times. The Jews have most reason to complain, for they are frequently reproached with following callings which are the natural effects of the political degradation in which they are kept. I can not help thinking that the time is approaching when these ill-founded prejudices against men on account of their religious opinions will disappear, and I should be happy if I could be an humble instrument in accelerating their fall."

Bibliography: Ricardo's principal writings were collected and edited, with a biographical sketch, by McCulloch in 1846, and have since been reprinted. The *Principles of Political Economy and Taxation* was reprinted and carefully edited by Prof. E. C. K. Gonner in 1891, with a useful bibliography. The *Letters to the Morning Chronicle on the "High Price of Gold"* were reprinted by J. H. Hollander in 1904. His *Letters to Malthus* were brought to light and edited by J. Bonar in 1887, the *Letters to McCulloch* by J. H. Hollander in 1895, and the *Letters to Hutches Trower* by J. Bonar and J. H. Hollander in 1899. The memoir in the *Annual Biography and Obituary for 1824* and the sketch prefixed to McCulloch's *Works* are the only important contemporary accounts of Ricardo's life. Leslie Stephen contributed a clear and intelligent sketch to the *Dict. Nat. Biog.* (vol. xlviii.). Professor Ritchie has a brief account in Palgrave's *Dictionary of Political Economy*, with a particularly serviceable list of Ricardo's writings. Professor Gonner contributed to the same work a lucid exposition of Ricardo's thought and influence.

J. J. H. Ho.

RICCHI (RAPHAEL), IMMANUEL ḤAY BEN ABRAHAM: Italian rabbi, cabalist, and poet; born at Ferrara 1688 (1693, according to Jellinek in "Orient, Lit." vii. 232); killed near Cento Feb. 25, 1743. About two years after Ricchi's birth his father removed to Rovigo, where he died four years later. Ricchi, thus left an orphan, was brought up by his maternal uncle Jedidiah Rabbino, and later by his cousin and brother-in-law, the son of the latter. After having studied Talmud under Nathan Pinkerle, rabbi of Alessandria della Paglia, Ricchi became tutor in the houses of several wealthy Jews. He was thus successively employed at Göritz, Fiorenzuola, Finale in Modena, and Venice; in the last-named place he opened a school. He then went to Triest, where he was ordained rabbi in 1717 by Hillel Ashkenazi, rabbi of Canea, after which he was invited to the rabbinate of Görz.

Owing to his great love for cabalistic studies and to his ascetic tendencies, Ricchi resolved to settle in Palestine. He arrived at Safed in 1718, and during his stay there of two years he occupied himself with the study of the works of Isaac Luria and Ḥayyim Vital. He was also reordained rabbi by Ḥay-

Settles in Palestine.

yim Abulafia. In 1720 an epidemic broke out in Palestine, and Ricchi was compelled to return to Europe. On the voyage he and all his fellow passengers were captured by pirates and brought to Tripolitza, whence, through the efforts of Abraham Ḥalfon, Ricchi and his family were allowed to return to Italy. He then occupied the rabbinate of Florence till 1723, in which year he removed to Leghorn, where for twelve years he engaged in business as a merchant. He spent twenty months in travel, visiting Smyrna, Salonica, Constantinople, Amsterdam, and London, and in 1735 set out again for Palestine, spending two years at Aleppo and three at Jerusalem. In 1741 he returned to Leghorn, and in 1743, while traveling in Italy for the purpose of selling his works, he was killed by robbers, who buried his body by the shore of the Reno. Six days later some Modena Jews discovered the remains and brought them to Cento for burial.

His Works.

Ricchi was the author of the following works (enumerated here in the chronological order of their composition): (1) "Ma'aseh Ḥosheb" (Venice, 1716), a treatise on the construction of the Tabernacle and its vessels, in the form of a compendium of the ancient texts on the same subject, together with his commentary. The work is followed by a Hebrew poem on the letters אהחע״ר. (2) "Hon 'Ashir" (Amsterdam, 1731), a commentary on the Mishnah, followed by a poem, set to music, on Sabbath, circumcision, and phylacteries. (3) "Ḥosheb Maḥashabot" (*ib.* 1732), haggadic novellæ on the Bible and Talmud, together with treatises on the measurements of the Miḳweh and on other geometrical subjects. (4) "Mishnat Ḥasidim" (*ib.* 1727; see below). (5) "Yosher Lebab" (*ib.* 1737), cabalistic interpretations of Biblical and Talmudic passages. (6) "Ḥazeh Ẓiyyon" (Leghorn, 1742), cabalistic commentary on the Psalms. (7) "Adderet Eliyahu" (*ib.* 1742), commentary on the difficult passages and expressions of the Mishnah and Gemara, in two parts, the second of which is entitled "Me Niddah," and deals solely with the treatise Niddah. This treatise is followed by: (*a*) twenty-four responsa; (*b*) "Sofe 'Anabim," novellæ; and (*c*) "Perpera'ot la-Ḥokmah," riddles and poems, among the latter being six religious hymns, composed for different occasions. A responsum of Ricchi's on the modulation of the priests' blessing is to be found in Nehemiah b. Baruch's "Meẓiẓ u-Meliẓ" (Venice, 1715). His "Makkat Bakkurot," strictures on Phinehas Ḥai Piatelli's "Tosefet Bikkure Ḳaẓir," is as yet unpublished.

His "Mishnat Ḥasidim."

Ricchi's most important work is the above-cited "Mishnat Ḥasidim," a cabalistic work begun in 1726 at Leghorn. Like the Mishnah, it is arranged in orders ("sedarim"), which are divided into treatises ('masseklot") and subdivided into chapters ("peraḳim"), the names of the six Mishnah orders being taken in a cabalistic sense. But the chief divisions of the work are three, termed "mafteḥot," besides the introduction entitled "'Olam Ḳaṭon" (= "microcosmos"), in which Ricchi endeavors to popularize the Cabala. The first main division is the "Mafteaḥ ha-'Olamot," in which the worlds are treated. It contains: (1) the order of Zera'im, treating of the cabalistic cosmology and of metaphysics, and divided into seven masseḳtot and eighteen chapters; (2) the order Ḳodashim, treating of the realm of emanation ("'olam ha-aẓilut"), which is styled "the holy of holies," and containing twenty masseḳtot and seventy-eight chapters; (3) the order Ṭohorot, treating of the three other realms, namely, those of creative ideas ("beri'ah"), creative formations ("yeẓirah"), and creative matter ("'asiyah"), and divided into nine masseḳtot and twenty-seven chapters; and (4) the order Neziḳin, treating of the demons and "ḳelifot," and divided into six masseḳtot and seventeen chapters. The second main division, entitled "Mafteaḥ ha-Neshamot," contains the order Nashim, treating of souls, in twelve masseḳtot and forty-eight chapters. The third main division, entitled "Mafteaḥ ha-Kawwanot," contains the order Mo'ed, divided into fifty-eight masseḳtot and 371 chapters, and treating of the Kawwanah. It will be seen that the number of masseḳtot in this work is 112, corresponding to the numerical value of the sacred name יבק; and the number of chapters 547, equal to the numerical value of Ricchi's name, עמנואל חי ריקי, plus twelve, the number of its letters. The sources for this work besides the Zohar are mostly Isaac Luria's and Ḥayyim Vital's writings, of which the "Sefer ha-Gilgulim," "Kanfe Yonah," and "Shulḥan 'Aruk" may be particularly mentioned. Ricchi drew also from other cabalists. The "'Olam Ḳaṭon" was separately edited by Eliezer b. Moses, with a commentary of his own, entitled "Derek ha-Melek" (Dyhernfurth, 1753).

E. C. M. Sel.

RICCIO, PAULO (Latin, **Paulus Ricius**): Jewish convert to Christianity in the first half of the sixteenth century. He was a native of Germany, and after his conversion became professor of philosophy in the University of Pavia; subsequently he was physician to Emperor Maximilian I. Riccio was inclined to astrology and the Cabala, and had a controversy with Johann Eck about the existence of life on the stellar bodies. Erasmus thought very highly of Riccio, who defended him and his followers against the attacks of Stephen the Presbyter. Like most converts from Judaism, Riccio attempted to convince the Jews of the truth of the Gospels. He, moreover, advised the Christian nations to unite against the Turks, who were at that time the terror of Europe.

Riccio was a prolific writer and, as Grätz says, "turned to good account the small amount of Jewish knowledge which he brought with him to Christianity." His best-known work is his "De Porta Lucis R. Josephi Gecatilia" (Augsburg, 1516), which is a free translation of a part of the cabalistic work "Sha'are Orah" by Joseph Gikatilla. Jerome Riccio (**Hieronymus Ricius**), Paulo's son, sent a copy of this work to Reuchlin, who utilized it in the composition of his "De Arte Cabbalistica."

Riccio relates that he was ordered by Emperor Maximilian to prepare a Latin translation of the Talmud. All that has come down of it are the translations of the tractates Berakot, Sanhedrin, and Makkot (Augsburg, 1519), which are the earliest Latin renderings of the Mishnah known to bibliographers. The most important of his other works is "De Cælesti Agricultura," a large religio-philosophical work in four parts, dedicated to Emperor Charles V. and to his brother Ferdinand (Augsburg, 1541; 2d ed., Basel, 1597). His "Opuscula Varia," which contains a treatise on the 613 commandments, a religio-philosophical and controversial work aiming to demonstrate to the Jews the truths of Christianity, and an introduction to the Cabala followed by a compilation of its rules and dogmas, went through four editions (Pavia, 1510; Augsburg, 1515; *ib.* 1541; and Basel, 1597). Riccio wrote besides these works about ten others, all in Latin, on various religious, philosophical, and cabalistic subjects, which appeared in Augsburg in 1546 and were reprinted in Basel in 1597.

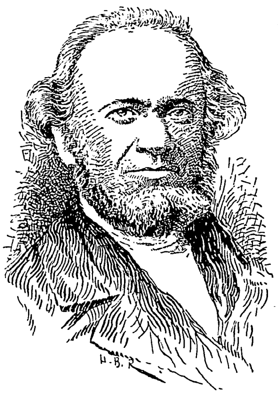
RICE, ABRAHAM: American Talmudist and rabbi; born 1800 at Gagsheim, near Würzburg, Bavaria; died in Baltimore, Md., Oct. 29, 1862. As a young student he was placed in the care of Rabbi Abraham Bing of Würzburg, by whom he was ordained rabbi; he afterward studied under Rabbi Wolf Hamburger. In 1840 he emigrated to America, and was called as the first rabbi of Congregation Nidche Israel at Baltimore. He held this position until 1849, when he resigned and became a merchant. About this time he founded a small congregation, of which he officiated gratuitously as rabbi and reader of the Torah. He lived in retirement until 1862, when he was again induced to accept the position of rabbi to the Baltimore Hebrew Congregation; but he filled the position for a short time only, his death occurring in the fall of the same year.



Abraham Rice.

Rice usually delivered his sermons in German, later occasionally in English also. He was a rabbi of the old school, known throughout the United States and Germany as a learned Talmudist, and was recognized as an authority in ritual matters. He was an uncompromising opponent of Reform.

In 1845 he established a Hebrew school, one of the earliest in the United States, and in the same year he opposed the retention of piyyuṭim in the prayers. About this time he urged "upon the Jews of the United States the great importance of selecting a spiritual chief or bet din, for the purpose of regulating all our spiritual affairs, etc.; . . . it is surely necessary to prevent the uninitiated from giving their crude decisions, which are but too well calculated to do permanent injury to our faith" (letter in "Occident," ii. 599). A few of Rice's sermons were published in the "Occident," and a large number remain in manuscript. He had a great and lasting influence on the Jewish community of Baltimore; and it was to his teaching and his life that the Baltimore Jewry owes its reputation for Orthodoxy. See Jew. Encyc. ii. 479b, *s.v.* Baltimore.

BIBLIOGRAPHY: *Occident*, xx. 142, 424; Guttmacher, *History of the Baltimore Hebrew Congregation*, p. 65.

A. H. Fr.

RICE, ISAAC LEOPOLD: American lawyer, author, and chess-player; born Feb. 22, 1850, at Wachenheim in the Rhenish Palatinate. When six years of age he was taken by his mother to the United States. Rice was educated at the Central High School in Philadelphia, and from 1866 to 1869 studied literature and music in Paris. While there he acted as correspondent for the Philadelphia "Evening Bulletin." On his return to America he settled in New York, where he acquired considerable fame as a music teacher. In 1880 he graduated (LL.B.) from the law school of Columbia College. Later, at the same college, he became lecturer in the school of political science (1882-83) and instructor in the law school (1885-86). He practised law until 1889.

From 1884 to 1893 Rice was active in railway matters, either as counsel or as director, and for a time was foreign representative in London of the Philadelphia and Reading Railroad. In 1885 he founded the "Forum" magazine, becoming the first president of the Forum Publishing Company, which position he still (1905) occupies. In 1893 he interested himself in electrical matters and became connected with the Electric Storage Battery Company, of which, in 1897, he was chosen president. Rice was also the founder of the electric-automobile and electric-boat (including the submarine boat) industries in America; and he organized on a large scale the casein business of the United States. In 1902 Bates College conferred on him the honorary degree of LL.D.

Rice is a prominent figure in the American chess world. He has been president of the Manhattan Chess Club, and has presented for competition several trophies, including the one that is competed for annually by cable by the universities of Oxford and Cambridge, representing England, and those of Harvard, Yale, Princeton, and Columbia, in the United States. In 1895 he discovered a variation of the Kieseritzky gambit, which has been named the "Rice Gambit" (see Jew. Encyc. iv. 20b, *s.v.* Chess).

The books published by Rice include: "What Is Music?" (New York, 1875), which was supplemented by "How the Geometrical Lines Have Their Counterparts in Music" (*ib.* 1880). The latter work was subsequently made part of the "Humboldt Library of Science." He has also contributed a large number of articles to the "Century," "Forum," and "North American Review."

BIBLIOGRAPHY: *Who's Who in America*, 1903-5.

A. A. P.

RICE, JOSEPH MAYER: American physician and editor; born May 27, 1857, at Philadelphia, Pa. He was educated at the public schools of Philadelphia and New York, at the College of the City of New York, and at the College of Physicians and Surgeons, New York (M.D. 1881). From 1881 to 1883 he was resident physician at Mount Sinai Hospital, New York, and from 1885 to 1886 house physician at the Montefiore Home in the same city.

In 1888 Rice abandoned the practise of medicine to devote himself to the study and working out of some practical problems in education, especially with regard to his original idea that a system of education might be based on the inductive principle. To this end he studied psychology and pedagogics in the universities of Jena and Leipsic, and on his return to the United States personally examined about 125,000 children in schools of all kinds. He is still continuing his researches. The results of his investigations appeared in the "Forum" (Dec., 1896; Jan., Feb., April, and June, 1897), of which magazine Rice has been the editor since May, 1897. He is the author of "The Public School System of the United States" (New York, 1893) and "The Rational Spelling-Book" (*ib.* 1898) as well as of many articles on educational subjects in various journals.

BIBLIOGRAPHY: *Who's Who in America*, 1902; *National Cyc. of Biography*.

A. A. P.

RICHARDSON, SIR BENJAMIN WARD: English physician and friend of the Jews; born at Somersby 1828; died in London Nov. 21, 1896. He received his degree of M.D. in 1854, and became an active member of the British Medical Association. He was knighted in 1893.

Partly by descent and partly by intellectual sympathy and early Biblical training, Richardson was connected with Jewish interests, and was imbued with Jewish ideals which found their expression in various ways. In his historical romance "The Son of a Star" (1888), based on the life of Bar Kokba, he evinced an extensive knowledge of Jewish history and literature of the second century. His admiration for Maimonides led him to base his last work on the life of the rabbi-physician. But it was chiefly as a medical author that he labored to promote Jewish ideals. In particular he recognized and advocated the sanitary value of the dietary laws. He seized every public opportunity of defending the practises and ideals of the Jews; and was a frequent lecturer before Jewish literary societies.

RICHETTI, JOSEPH SHALIṬ BEN ELIEZER: Rabbi of the second half of the seventeenth century; born in Safed, whence he removed to Italy. He was the author of "Sefer Ḥokmat ha-Mishkan," or "Iggeret Meleket ha-Mishkan," on the purposes of the Tabernacle (published with his edition of "Iggeret Mesapperet Yiḥusta de-Ẓaddiḳe de-'Ar'a de-Yisrael," on the sacred cities of Palestine; Mantua, 1676). He edited "Ḥibbur ha-Ma'asiyyot weha-Midrashot weha-Haggadot," a collection of tales and legends from the Talmud and the Midrash (Verona, 1647), and "Seder Mishmeret ha-Ḥodesh," a ritual for the day of new moon (Venice, 1661).

S. U. C.

RICHMAN, JULIA: American educator; born in New York city Oct. 12, 1855. She was educated in the public schools of New York and at the Normal College, and did postgraduate work at New York University. From 1884 to 1903 she was principal of public school No. 77, and in the latter year was appointed a district superintendent of schools, being the first woman to be chosen to such an office in New York city. She was a pioneer in many school-reform movements, particularly in regard to special training for mentally enfeebled children; and has written on educational subjects in the "Educational Review," "School Journal," "School Work," etc.

Julia Richman has held many positions in the Jewish community, having been president of the Young Ladies' Charitable Union (1876-81), first woman director of the Hebrew Free School Association (1885-1900), first president of the Young Women's Hebrew Association (1887-90), director of the Educational Alliance (since 1893), chairman of the committee on religious school-work of the Council of Jewish Women (1893-99), member of the educational council of the Jewish Chautauqua Society (1889-98), and founder and editor of "Helpful Thoughts." An article by her on the Jewish Sunday-school in the United States appeared in the "Jewish Quarterly Review" for July, 1900.

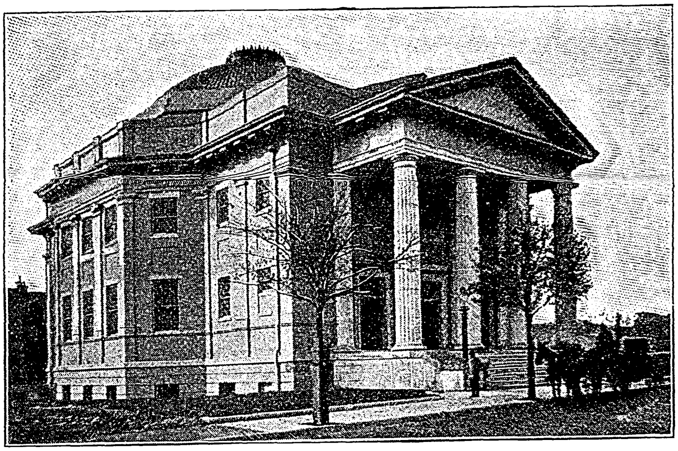
A.

RICHMOND: Capital of Virginia, and, during the Civil war, of the Confederate States of America. By 1785 it had a Jewish community of over a dozen families, of Spanish-Portuguese descent. In 1791 a Sephardic congregation was organized, called K. K. Beth Shalome. Its roster contained the names of twenty-nine heads of families, prominent among which were the Isaacs, Cohens, Mordecais, Levys, and Judahs. This congregation remained the representative Jewish organization till the outbreak of the Civil war. After the war it became weakened by deaths and removals. In 1898, after one hundred and seven years of corporate existence, its few surviving members joined the Congregation Beth Ahabah in a body, and Beth Shalome ceased to exist. The first place of worship the Congregation Beth Shalome had was a room in a house owned by one of its members, on Nineteenth street. It then built a small brick synagogue on the corner of Nineteenth and Main streets, and later a handsome structure on Mayo street, where it worshiped for over three-quarters of a century. Its pulpit had been occupied successively by Isaac H. Judah, Jacques J. Lyons, Isaac Leeser, Isaac Mendes de Sola, Henry S. Jacobs, and George Jacobs.

Beth Shalome.

Beth Ahabah.

At the very beginning of the nineteenth century German Jews began to arrive in Richmond, singly or in small groups. They affiliated for a while with K. K. Beth Shalome. But in 1839 they organized a ḥebra—the Ḥebra Ahabat Yisrael, which, two years later, was changed into the Congregation K. K. Beth Ahabah. This congregation first worshiped in a room on Marshall street, between Fifth and Sixth streets, which was consecrated May 15, 1841. The first minister, called to its pulpit in 1846, was the Rev. M. J. Michelbacher of Philadelphia. In 1848 the congregation built its first synagogue, on Eleventh street, between Marshall and Clay streets, and this was followed by a second building, on the same site, dedicated Sept., 1880. The growth of the congregation necessitating a larger synagogue, a new one was dedicated in 1904, in West Franklin street, between Lombardy and Harrison streets. The ministers of Beth Ahabah have been M. J. Michelbacher (1846-67), J. Wechsler (1867-69), A. S. Bettelheim (1869-75), A. Hoffman (1876-1878), A. Harris (1878-91), and the present (1905) incumbent, Edward N. Calisch (since 1891; born at Toledo, Ohio, June 23, 1865; B.A., University of Cincinnati; rabbinical diploma, Hebrew Union College; M.A., University of Virginia), who has published a "Child's Bible" and a "Book of Prayer," as well as some essays and poems, and has been prominently identified with the circuit-preaching work of the Union of American Hebrew Congregations.



Synagogue at Richmond, Va.

(From a photograph.)

Beth El and Keneseth Israel.

At the close of the Civil war, owing to differences arising in the readjustment of the congregation's affairs, a number of members seceded from Beth Ahabah, formed a new congregation, and called it Beth El. From 1867 to 1871 Dr. A. L. Mayer occupied its pulpit. Upon his departure the differences were adjusted, the members returned to Beth Ahabah, and Beth El ceased to exist.

In 1856 an Orthodox Polish congregation, Keneseth Israel, was organized. It built, and still worships in, a synagogue in Mayo street. It has consistently maintained its Orthodox standard, and its spiritual guides have been "ḥazzanim," and not preachers. Among them were N. Brinn, L. Jacobi, J. Berg, A. N. Coleman, H. Block, M. J. Brill, L. Harfield, J. Sapir, I. Koplowitz, E. Phillips; the present incumbent is J. Lesser.

The wave of Russian immigration, which began in 1881, reached Richmond, and in 1886 a Russian congregation was organized and called the Sir Moses Montefiore congregation. It first worshiped in a room in East Main street, but in 1887 obtained possession of the synagogue of K. K. Beth Shalome, on Mayo street, where it now worships. Among its leaders have been Rabbis Alperin, Gordon, Newel, Nutokoff, Jaeger, Grafman, and Cohen. In addition to the foregoing congregations there are a few "minyanim," which meet only during the chief holy days.

Other Organizations.

The Hebrew Home for the Aged and Infirm, chartered in 1891, has at the present time six beneficiaries, who are maintained in the homes of private families. The Ladies' Hebrew Benevolent Society was reorganized in 1866. The Ladies' Hebrew Memorial Association, organized in 1866, for the care of the graves of Jewish soldiers, holds a memorial service annually on the third Wednesday in May. The Jefferson Club (social and literary) is the result of the consolidation in 1892 of the Mercantile Club and the Jefferson Literary and Social Circle.

The first Jewish cemetery in Richmond was a plot of ground on East Franklin street, between Nineteenth and Twentieth streets, deeded by Isaiah Isaac, in 1791, to the Jews of Richmond. In 1816 Benjamin Wolfe, a member of the city council, secured from the city a grant of land known as Shockhoe Hill, on the northern edge of the city. This land was given to K. K. Beth Shalome, and was used jointly by it and Beth Ahabah. It is now the sole possession of Beth Ahabah. Some of the bodies in the old cemetery in East Franklin street were reinterred in the new one. A handsome mortuary chapel was built in the cemetery in 1898, in which all funeral services are conducted. Congregation Keneseth Israel has a section adjoining the general Oakwood Cemetery and known as Oakwood Hebrew Cemetery. It was purchased in 1866. The Sir Moses Montefiore congregation has a plot of ground four miles east of the city, on the National Road.

Jews in Public Service.

The Jews of Richmond have been prominent in public service both in war and in peace. Many of them fought in the Civil war. In civic life also they have served with credit. Benjamin Wolfe was a member of the city council in 1816; Jacob Ezekiel served in the council prior to 1860. Other members of the city council have been: M. L. Straus, Julius Straus, Joseph Wallerstein, Marx Gunst, S. L. Bloomberg (president of the council), and Clifford Weil. Marx Gunst is at present (1905) vice-president of the board of aldermen and Charles Hutzler of the School Board. Isaac Held is deputy treasurer of the city. William Lovenstein served twelve years as state senator. L. Z. Morris was one of the most efficient presidents the chamber of commerce has had.

The public-school system was established in Richmond in 1870. Before that time each congregation had its own parochial school, that of Beth Ahabah being a particularly excellent institution, attended by Christian children as well as Jewish. When the school system was about to be established, Beth Ahabah volunteered to discontinue its school and place its schoolrooms, rent free, at the disposal of the city until proper school buildings could be built. The offer was accepted, and the first public school of Richmond was conducted in the rooms of a Jewish synagogue.

In commercial life the Jews are engaged in manufacture and in the jobbing and retail trades, being especially prominent in the shoe and in the dry-goods business. The Jewish population of Richmond approximates 2,500, the total population being 85,050.

A.

RICIUS, AUGUSTINUS: Jewish convert to Christianity and astronomer of the fifteenth century. He was a disciple of Abraham Zacuto, and wrote a work on the motion of the eighth sphere, a Latin translation of which appeared at Paris in 1521. He quotes Ibn Ezra, Abraham ben Ḥiyya, and other Jewish authors, and mentions the epoch 1477.

Bibliography: Steinschneider, *Cat. Bodl.* cols. 2143-2145.

J.

RIDBAZ (WILLOWSKI), JACOB DAVID B. ZEEB (known also as the **Slutsker Rav**): Russian rabbi and commentator; born Feb. 7, 1845, in Kobrin, government of Grodno, Russia. He was successively rabbi at Izballin (1868), Bobruisk (1876), Wilna (1881), Polotsk (1883), Vilkomir (1887), and Slutsk (1890-1900). In the last-mentioned place he organized a yeshibah, in 1896, over which he took general supervision, appointing R. Isaac Zalmon Meltzer as principal. Ridbaz is the author of "Migdal Dawid," Talmudic novellæ, Babli and Yerushalmi (Wilna, 1874); "Ḥanah Dawid," novellæ on the treatise Ḥallah (*ib.* 1876); and "Teshubot ha-Ridbaz" (*ib.* 1881). But his principal work is embodied in his commentaries on the Talmud Yerushalmi, entitled "Ḥiddushe Ridbaz" and "Tosafot ha-Rid" (Piotrkow, 1899-1900). The former is a simple commentary on passages not satisfactorily explained by other commentators; the latter is more critical, and is written in the style of the Tosafot. Ridbaz freely used a copy of the Jerusalem Talmud which the Wilna Gaon had annotated. After studying the Jerusalem Talmud for thirty years and working steadily on his commentaries for seventeen years, Ridbaz began the publication of an edition of the Yerushalmi which included, besides his own, all the commentaries incorporated in former editions. The subscription fund being exhausted before the fourth section, Neziḳin, was completed, Ridbaz was persuaded to go to America (1900), where he succeeded in securing subscriptions for many sets of the work. Returning to Russia, he dedicated the section Neziḳin to his American patrons. The second time Ridbaz went to America he dropped his former name of Willowski and assumed the name of Ridbaz (= "Rabbi Jacob David ben Zeeb").

The United Orthodox Rabbis of America, at their annual meeting in Philadelphia, Aug. 16-19, 1903, elected Ridbaz as the "zeḳan ha-rabbanim" (elder rabbi), and on Sept. 8, 1903, he was elected chief rabbi of the Russian-American congregations in Chicago. He endeavored to introduce order into the religious services of his congregations, but met obstruction and opposition on the part of a former rabbi, Ẓebi Simon Album, and his followers; not being able to withstand the persistent opposition, Ridbaz resigned his position ten months later. He next published "Nimmuḳe Ridbaz," a homiletical commentary on Genesis and Exodus (Chicago, 1904). This caused Rabbi Album to rejoin with "Debar Emet" (*ib.* 1904), in rebuttal of the allegations by Ridbaz. Album was in turn attacked by P. Gewirtzman in a pamphlet entitled "Aken Noda' ha-Dabar," in defense of Ridbaz.

After resigning his rabbinate Ridbaz traveled extensively through the United States, lecturing and preaching. On returning to New York he endeavored to establish a yeshibah on the European model, but found little encouragement. In 1905 Ridbaz left America for the Holy Land, where he intends to spend the remainder of his life.

RIDDLE: Among the ancients, as witness the story of Œdipus and the Sphinx, a riddle was a more serious matter than in modern times, more in the nature of a wager than of an amusement. Samson's riddle to the Philistines (Judges xiv. 14) was of this kind, though it has been suggested that his own name is a key to the thing which brings forth sweetness out of the lion. It would appear that some of the proverbs in which sets of three and of four objects are mentioned (*e.g.*, xxx. 15 *et seq.*) were originally in the form of riddles. In Ezekiel (xvii. 1-10) there is actually a symbolic riddle, in which the King of Babylon is compared to an eagle.

Riddles appear to have been a favorite table amusement with the early Hebrew, Sirach referring to them as such. Many of them centered around the visit of the Queen of Sheba to Solomon, whose wisdom she tested chiefly by propounding riddles. Three of these are recorded in the second Targum to Esther (i. 2), and no less than nineteen are given in a Yemen manuscript published by S. Schechter in "Folklore" (i. 349-358). Most of these riddles are simply Bible questions, some not of a very edifying character. The two that are genuine riddles are: "Without movement while living, it moves when its head is cut off," and "Produced from the ground, man produces it, while its food is the fruit of the ground." The answer to the former is, "a tree, which, when its top is removed, can be made into a moving ship"; the answer to the latter is, "a wick."

Talmudic Riddles.

In the Talmud itself riddles frequently occur; take as an instance the one from Ḳinnim (end): "What animal has one voice living and seven voices dead?" The answer is, "the ibis, from whose carcass seven different musical instruments are made." The Talmud contains even a poetical riddle, the answer to which has never been definitely settled. It is as follows:

> "High from heav'n her eye looks down,
> Constant strife excites her frown;
> Winged beings shun her sight,
> She puts the youth to instant flight.
> The aged, too, her looks do scout;
> Oh! oh! the fugitive cries out.
> And by her snares whoe'er is lured
> Can never of his sin be cured" (Yer. M. Ḳ. iii. 1).

One of the stories relating to the connection of Judah the Patriarch with Marcus Aurelius is an enacted riddle. The emperor sent a messenger to ask the sage how he should fill his empty treasury. Judah simply went into his garden, uprooted the old plants, and planted young ones in their stead. The emperor understood, and dismissed his old councilors and appointed more youthful ones, who, it is to be supposed, paid him for the appointments (Gen. R. lxvii.). "Two are better than three, for the one disappears never to return" (Shab. 152a). In other words, "Two legs are better than two with a staff, for youth never returns." This is another form of the celebrated riddle of the Sphinx. It is again utilized in an enigmatic excuse made by Simeon ben Ḥalafta for not calling upon Rabbi: "Rocks become high [he was becoming old]; the near are at a distance [his eyes had grown dim]; two are turned into three [he needed a staff to walk]" (Shab. 152b).

Similarly, a request for a couple of chickens for breakfast was put in the following form: "Give the coals an orange color, let the glimmer of gold appear like an expanse of heaven, and prepare me two heralds of the darkness" ('Er. 53b).

The Medieval Poets.

In medieval times many of the poets, those of Spain in particular, wrote riddles in verse. Thus Moses ibn Ezra asked, "What is the sister of the sun, though made for the night? The fire causes her tears to fall, and when she is near dying they cut off her head." The answer is, "a taper." Abraham ibn Ezra wrote riddles on grammatical formulas, especially on the vocalic consonants, and one on the letters "mem" and "nun." Judah ha-Levi wrote several riddles, of which that of the needle may serve as an example:

> "What is it that's blind with an eye in its head,
> But the race of mankind its use can not spare;
> Spends all its life in clothing the dead,
> But always itself is naked and bare?"

Al-Ḥarizi has a most elaborate riddle on the ant and the flea, while Emanuel of Rome gives in his poem a pedantic riddle, the answer to which is "matter." The curious riddle given at the end of the Haggadah is an additional instance of the popularity of this form of amusement among Jews. It has never been determined whether this riddle was originally Jewish or German.

J.

RIEGER, PAUL: German rabbi and historian; born at Dresden July 4, 1870. He was educated at Dresden and at the universities of Breslau (Ph.D. 1894) and Berlin. At Breslau he studied also at the Jewish Theological Seminary and at Berlin at the Lehranstalt für die Wissenschaft des Judenthums. His graduating thesis, at Breslau, was entitled "Versuch einer Technologie und Terminologie der Handwerke in der Mischnah." Rieger was rabbi at Potsdam from 1896 to 1902, when he was called to the rabbinate of the Israelitische Tempelgemeinde at Hamburg. In association with H. Vogelstein he wrote "Geschichte der Juden in Rom" (2 vols., Berlin, 1895–96). He wrote also, besides contributions to various journals, a small pamphlet entitled "Hillel und Jesus" (Hamburg, 1904).

s. H. V.

RIEMANN, SOLOMON: Traveler of the nineteenth century; died at Vienna about 1873. He was for a time a rich merchant, having made large investments in Siam; but during the war of the English in that country all his property was seized by the British government, and he became financially ruined. He then traveled through Asia, Africa, and the greater part of Europe, until he finally settled in Vienna, where, receiving financial aid from Adolf Jellinek, he was enabled to devote his time to recording the experiences of his travels. He died suddenly before finishing the work. As Riemann wrote without system and in an almost unintelligible style, his manuscript was rearranged, indeed completely rewritten, by the traveler and Hebrew writer Wolf Schur, who published it with many additions of his own under the title "Mas'ot Shelomoh," Vienna, 1884.

Bibliography: Winter and Wünsche, *Die Jüdische Litteratur*, iii. 858; Schur, *Mas'ot Shelomoh*, p. 3.

s. I. War.

RIES, ELIAS ELKAN: American electrical engineer; born at Randegg, Baden, Germany, Jan. 16, 1862. When only three years of age he was taken by his parents to America. He received his education at the public schools of Baltimore and New York, attending also lectures at Johns Hopkins University, Baltimore. In 1876 he became a telegraph-operator and removed to New York, being employed by the Edison Company and other electrical concerns. Returning to Baltimore in 1884, he developed some of his own inventions in electrical signaling, and organized (1891) the Ries Electric Specialty Company. Since 1896 he has resided in New York city.

Ries has invented improvements in the telephone, the telegraph, and in other electric apparatus, such as electric lamps, track-rail welding machinery, motor-controllers, etc., for which inventions he has secured about 150 patents. He has also contributed articles to the scientific and technical journals.

A. F. T. H.

RIESSER, GABRIEL: German advocate of the emancipation of the Jews; born at Hamburg April 2, 1806; died there April 22, 1863; youngest son of Lazarus Jacob Riesser. For a few years Riesser's family lived in Lübeck, but it returned to Hamburg in 1816. Educated at the Johanneum of his native city and at the universities of Kiel and Heidelberg, where he studied law, Riesser sought to become privat-docent at the latter university, but, being a Jew, was refused the "venia legendi" by the government. He then lived in Frankfort-on-the-Main, Heidelberg, and other cities of southern Germany, and returned to Hamburg in 1830. There he was refused, as a Jew, admittance to the bar.

Riesser now became the leading advocate of the emancipation of the Jews in Germany. In 1830 appeared in Altona his "Ueber die Stellung der Bekenner des Mosaischen Glaubens in Deutschland" (2d ed., 1831). Although the same subject had been thoroughly discussed shortly before by Twesten and by Börne, Riesser's essay was well received. He did not speak of the oppression of Jews alone, but compared it with the oppression of the burghers by the nobility, of the negroes by the whites, etc., and asked for full emancipation. In his introduction to the book he declares it to be "an effort to induce important men — social and spiritual leaders—to pay more attention to this undertaking, to rouse latent forces for it, to stimulate those who should be interested in it, to stir up philanthropists of all confessions and beliefs, and finally to demonstrate the necessity for the good-will and the power of single individuals to be united for a common purpose." The Protestant theologian Paulus in Heidelberg answered him in his "Die Jüdische Nationalabsonderung nach Ursprung, Folgen oder Besserungsmitteln" (Heidelberg, 1830), and proposed that the Jews, to become good German citizens, should be baptized. Riesser defended his position in his "Vertheidigung der Bürgerlichen Gleichstellung der Juden Gegen die Einwürfe des Herrn Dr. Paulus," Altona, 1831. The pamphlet was the work of a few days, written under the direct influence of Paulus' essay, and gives in an appendix the most important answers which Napoleon had received in regard to the questions put to the Sanhedrin convoked in 1806. In his "Börne und die Juden" (Altenburg, 1832) Riesser did "not intend to defend Börne against the accusations of Dr. Eduard Meyer, but the Jews against Meyer's insinuations."

Gabriel Riesser.

His "Der Jude."

The July Revolution in France in 1830 found an echo in Germany, and Riesser established in 1832 in Altona his journal "Der Jude, Periodische Blätter für Religion und Gewissensfreiheit," in which he again fought for emancipation. The announcement said: "A time which is full of events, fuller of hopes, needs alert organs for the quickly changing contents; and such organs are found in the periodical press." Many excellent essays were written for this periodical by the leading men of the time; but the best came from the pen of its editor. Some of them were printed separately, *e.g.*, "Kritische Beleuchtung der Neuesten Ständischen Verhandlungen über die Emancipation der Juden," Altona, 1832. While Bavaria, Hanover, and Hesse had passed, or intended to pass, favorable laws relating to the Jews, Baden had refused to do so; and Riesser attacked the Landtag of Baden for this attitude. The "Denkschrift an die Hohe Badische Ständeversammlung, Eingereicht von Badischen Bürgern Israelitischer Religion zur Begründung Ihrer Petition um Völlige Bürgerliche Gleichstellung, vom 30 Juli, 1833," written by Riesser, was published in Heidelberg in 1833; and "Betrachtungen über die Verhältnisse der Jüdischen Unterthanen in der Preussischen Monarchie," a reprint from his paper, appeared at Altona in 1834.

In the same year a petition, drafted by Riesser, was presented to the Senate of Hamburg, asking for the Jews of that city the rights of citizenship; but the populace strongly opposed the proposed reform. This petition also appeared separately as "Denkschrift über die Bürgerlichen Verhältnisse der Hamburgischen Israeliten" (Hamburg, 1834). An important essay bearing on this subject was Riesser's "Die Verhandlungen des Englischen Parlaments im Jahre 1833 über die Emancipation der Juden," Altona, 1834.

The title of Riesser's journal was changed in 1835 to "Der Jude, ein Journal für Gewissensfreiheit." From this change it is evident that Riesser had given up the theological section; indeed, he says in his announcement: "The 'Israelitische Predigt- und Schulmagazin' of Dr. Ludwig Philippson and the 'Wissenschaftliche Zeitschrift für Jüdische Theologie' of Abraham Geiger have made part of my journal unnecessary. "Der Jude" appeared for only two more years.

In 1834 Riesser received from the "Israelitische Bürger Badens," in acknowledgment of the interest he had taken in emancipation, a painting, by

Oppenheim of Frankfort-on-the-Main, representing the return from the German War of Liberation of a Jewish soldier, whose face is seamed with scars, and who wears the decorations received for service. In 1836 Riesser left his native town and settled in Bockenheim, near Frankfort-on-the-Main, where he published his "Jüdische Briefe," Berlin, 1840–42. In 1843 he returned to Hamburg and was admitted to the bar there.

Member of the German Parliament.

The year 1848 brought changes in Germany, among them greater liberty for the Jews. Riesser was elected to the German Parliament ("Vor-Parlament") of Frankfort, from the district of Lauenburg. He belonged to the liberals, and was one of the vice-presidents of the assembly. On every possible occasion he spoke for his coreligionists. He was a member of the deputation sent by the Parliament to offer the crown of Germany to Frederick William IV. In 1850 he was elected to the German Parliament sitting at Erfurt, this time from Hamburg. When the body was dissolved, in 1850, Riesser returned to Hamburg. During the following years he traveled, spending much time in the United States; and he published his views and impressions of the country in the "Preussische Jahrbücher." In 1859 a new upper court was established in Hamburg, and Riesser was appointed one of its judges ("Obergerichtsrath"), which position he held until his death. From 1860 to 1862 he was vice-president of the Bürgerschaft.

s. F. T. H.

RIESSER, LAZARUS JACOB: German rabbi; born 1763 in the valley of Riess (hence the name "Riesser"); died March 7, 1828, at Hamburg; father of Gabriel Riesser. In the "Zeker Ẓaddiḳ" Riesser calls himself "Eliezer, son of Jacob Katzenellenbogen," rabbi of Öttingen-Wallerstein. Owing to his great erudition as a Talmudist and his keen intellect Riesser was chosen as son-in-law by Raphael b. Jekuthiel Süsskind ha-Kohen, the incumbent of the rabbinate of Altona-Hamburg-Wandsbeck. He resided in Altona, where he held the office of secretary to the bet din. His Hebrew style may be designated as classic.

When, owing to disagreements with the Danish government, Kohen resigned his post (1799), Riesser lost his office and went with his father-in-law to Hamburg. There he entered business life, meeting with little success. In his leisure hours he wrote the biography of his father-in-law in elegant Hebrew, under the title "Ma'alele Ish"; this, together with two sermons by Raphael Kohen, was published under the title "Zeker Ẓaddiḳ" (Altona, 1805). When, in 1813, Hamburg was blockaded by the Russians Riesser removed to Lübeck. Riesser went back to Hamburg in 1816.

Riesser's correspondence with his son Gabriel, comprising twenty letters covering the period from May 7, 1824, to Feb. 22, 1828, have been published by Isler in "Gabriel Riesser's Leben," i. 36–61. The Heimann I. Michael collection, now in the Bodleian Library, Oxford, contains some manuscripts by Riesser.

Bibliography: Isler, *Gabriel Riesser's Leben*, in vol. i. of *Gesammelte Schriften*, Leipsic and Frankfort-on-the-Main, 1867; Geiger's *Jüd. Zeit.* vii. 232; *Zeker Ẓaddiḳ*, Altona, 1805.

s. E. Schr.

RIETI: Italian family, deriving its name from the city of Rieti in the Pontifical States. Members of it are found at Rieti as early as the end of the fourteenth century; then in Rome, Sienna, Bologna, Mantua, and many other Italian cities. The oldest members known are **Isaac Rieti** or Maestro Gaio, father of Moses Rieti, and **Abraham ben Isaac Rieti** (1415; Magazin, i. 37). **Michael ben Judah di Rieti,** a physician, lived at Terni between 1469 and 1473, and **Solomon ben Moses di Rieti,** another physician, at Rome in 1510. Still another physician, a member of this family, **Asahel Raphael Rieti,** a grandson of Moses, is known to have lived in Bologna in 1556, with his three sons, **Elia, Isaac,** and Hananiah Eliakim Rieti. **Ishmael Rieti,** a relative of Jehiel of Pisa, resided in Sienna, where he extended hospitality to the false Messiah, David Reubeni, although without displaying the singular enthusiasm shown in his cause by all the other members of Jehiel's family. He refused Reubeni any considerable financial assistance, and on this account was bitterly censured in the latter's diary. He, however, was teacher of the nephews of Immanuel ben Isaac de Lattes, who held him in great veneration. At Sienna Ishmael was the host also of Johanan ben Joseph Treves. He devoted himself to works of piety, in which he was followed by his son **Moses Rieti.** On the occasion of a movement inimical to the Jews of Empoli, Tuscany, when the monks in their sermons forbade the Christians to have any intercourse with the Jews or to render them any service on their Sabbath, Moses ben Ishmael provided the necessary funds to send a delegate to Rome to obtain a papal decree in favor of his Empoli coreligionists.

Rabbi **Simon da Rieti** of Rome was one of the Hebrew deputies who attended one of the meetings of the Index Commission convened by Cardinal Della Rovere, Aug. 7, 1590, when the censorship of the Talmud was discussed. In the beginning of the seventeenth century **Joseph ben Shabbethai Elhanan Rieti,** a nephew of Ishmael, was rabbi of Sienna. He is known as the copyist of a manuscript in 1603, and as one of the indorsers of a decision of the Roman rabbi Eliezer Mazliah ben Abraham di Viterbo (1605–6). **Eliezer ben Isaac Rieti** is known as the author of two works, "Luaḥ Mamare 'En Yisrael" (Venice, 1612; Amsterdam, 1684), an alphabetical index to the "'En Yisrael" of Jacob Ḥabib, and "Kelale ha-Talmud," which remains unpublished (MS. Michael). His contemporary **Hezekiah ben Gabriel ben Samuel Rieti** published in the "Tuscan" (Italian) language a translation of Proverbs, with a Hebrew text, and a dedicatory letter addressed to Isaiah Massarani; it bears the title of "Mishle Shelomoh 'im Ha'aṭaḳat Iṭalḳit" (Venice, 1617). A certain **Isaac ben Moses Rieti** is mentioned in the "Luaḥ ha-Payyeṭanim" by S. D. Luzzatto.

Herewith is given the genealogical tree of those members of the Rieti family whose relationship may be traced according to Vogelstein and Rieger, "Gesch. der Juden in Rom," ii. 74:

Bodl.* cols. 963-964; idem, *Jewish Literature*, pp. 219-223; idem, *Hebr. Bibl.* v. 21, xix. 14; Vogelstein and Rieger, *Gesch. der Juden in Rom*, ii. 70 (note 2), 74, 135, 136, 180, 264.

Hananiah Eliakim Rieti: Italian rabbi; born at Bologna about 1560; died in Mantua before 1626. He lived some time in Mantua, and in 1604 settled at Luzzara. He wrote "Meḳiẓ Redumim" (Mantua, 1648), religious songs and poems, especially for the morning of Hosha'ana Rabbah, which were published by his son **David Naphtali Rieti,** with a preface by the author, and "Minḥat Ḥananyah," poems for all feast- and fast-days (MS. Michael, now in Oxford). Some of these poems were printed in the "Ayyelet ha-Shaḥar" of Mordecai Jare (Mantua, 1612). Other, unpublished writings of Rieti are: novellæ to some Talmudical treatises; "Sedeh Lebanon," responsa; "Sedeh Tappuḥim," miscellaneous writings; "Tefillah Ḳeẓarah," a short prayer.

Bibliography: Landshuth, *'Ammude ha-'Abodah*, p. 65; Steinschneider, *Jewish Literature*, pp. 242 *et seq.*; Vogelstein and Rieger, *Gesch. der Juden in Rom*, ii. 74; Zunz, *Z.G.*, p. 423.

Moses ben Isaac (Maestro Gaio) da Rieti: Italian rabbi, physician, and poet; born at Rieti in July, 1388. He lost his father at an early age, and later left his native place, residing successively in different cities of the Pontifical States. In 1436 he was in Perugia. Some time afterward he founded a school at Narni. During the pontificate of Eugenius IV. he removed to Rome, and was appointed chief rabbi of the Jewish community of that city. Pius II. gave him leave to practise medicine even among Christians, and appointed him his body-physician. Rieti successfully maintained a religious controversy in Rome with a Christian theologian who has been identified with both Roberto of Lecce and the Florentine Grannozzo Manetti. He is believed to have died at Rome some time after 1460. He certainly outlived his wife, who died at the age of seventy and to whom he had been married fifty-two years.

From his youth Rieti devoted himself to the study of the Talmud and of Hebrew literature in general. He was also an earnest student of medicine, natural science, and philosophy, and a connoisseur of Italian literature. The fame acquired by Dante through the "Divina Commedia" led Rieti to enrich Hebrew literature with a similar work. He conceived the idea of so doing as early as 1409; but it was not until seven years later that he began the work, to which he gave the title "Miḳdash Me'aṭ" (see Ezek. xi. 16), and which was in two parts. Part i., entitled "Ulam," is divided into five cantos, the first of which begins with an invocation to the Almighty and unfolds the plan, contents, and divisions of the work. The remainder of this part of the work is devoted to an exposition of the religious and philosophical opinions of the author, and treats of the thirteen articles of faith, of Cabala, physics, and mathematics, the written and the oral law, the individual branches of science and of their scope and usefulness, also of Aristotle and his writings, of the "Isagoge" of Porphyry, and, finally, of the "Categories" of Aristotle.

In the second part of the "Miḳdash" the author describes a symbolical journey through the realm of blessed spirits. Passing through the celestial synagogue, he arrives at the temple of prayer, and thence reaches the city of God, symbolizing the Scriptures, and the ships of the soul, the Mishnah and Talmud. He passes in review the teachers of the Talmud, the Geonim, and the later great luminaries of Hebrew learning. To this last part Rieti appends numerous historical and literary notes, which often have scientific value.

Rieti endeavors in this work to give a résumé of science and philosophy, of Judaism and all its literary history; but, lacking sufficient power and lofty inspiration, his production has little artistic merit. He frequently discusses dry and heavy points of doctrine, or loses himself in useless puerility. He seldom rises to the truly artistic conception of his design, or expresses it in a manner which can merit the term poetic. What he lacks in inspiration however, is partly compensated by his enthusiasm and love for the subject which he treats. This, together with the beauty and grace of his diction and the flowing harmony of the hendecasyllabic verse in which it is written, combined with the merit of having introduced Dante's terza-rima to replace the long and tedious single rime of Hebrew-Spanish poetry, secures to Rieti's work a permanent position in Hebrew literature.

"Miḳdash Me'aṭ" is incomplete; but it seems that only a small part of it is missing. The work exists in a large number of manuscripts, the first complete edition of which was that by Jacob Goldenthal of Vienna (1851), printed at the expense of the Vienna

Academy of Science. At first only a part was published (part ii., canto ii., "Me'on ha-Sho'alim," which has been introduced into the liturgy). Of this part the following Italian translations exist: (1) by Eliezer Mazliaḥ b. Abraham Cohen, Venice, *c.* 1585; (2) by Deborah Ascarelli, *ib.* 1601; (3) by Samuel di Castelnuovo, *ib.* 1609; (4 and 5) in Oxford MSS. 1988a and 2578, 10. There is also one Italian translation of the "Ulam" in the Munich MS. 556.

Rieti was the author also of: "Iggeret Ya'ar Lebanon," a religio-philosophical reflection, in the antique form of the "melizah," on the importance of the ornamentation and furnishings of the Temple. This work may have been written prior to the "Miḳdash Me'aṭ"; indeed, if one excepts an elegy on the death of his wife, it is safe to state that in the second half of his life he abandoned poetry and devoted himself entirely to philosophy and apologetics. In these fields he produced the following works: (1) notes to the commentary of Averroes (Ibn Roshd) on the "Isagoge ad Logicam" by Porphyry, translated by Anatoli; (2) commentary on the "Aphorisms" of Hippocrates; (3) marginal notes to the commentary of Moses Narboni on the "Kawwanot ha-Filusufim" of Al-Ghazali; (4) philosophical and physical aphorisms; (5) answers to questions pertaining to logic; (6) a religio-philosophical work, written in Italian with Hebrew characters, and partially preserved in a Leyden manuscript (Scaliger MS. 10, 1); of an apologetic tendency, it was perhaps written after the controversy which Rieti had sustained in Rome, and is in three parts: (1) popular exposition of natural philosophy, according to Aristotle; (2) of God, and how the human soul places itself at His disposition; (3) history of the Jews till the writer's own time.

RIGA: Capital of the government of Livonia, Russia; situated on the River Düna, about 6 miles from its mouth.

Jews are first mentioned in the public documents of Livonia of 1560. In the negotiations between the city and King Sigismund August of Poland in that year it was stipulated that he should provide his soldiers with abundant supplies, with the understanding, however, that in the provisioning of the troops "the malicious Jewish people" should be entirely precluded from contracting (Bienemann, "Briefe und Urkunden," iv. 123). In the negotiations of the following year concerning the annexation of Riga to Poland the wish was expressed that Jews should not be admitted into Livonia as into the other provinces under the Polish crown, "so that they may not besmirch or injure the citizens with their unchristian usury and business transactions, and that they may not establish customs duties and other burdens" (*ib.* v. 88). As a result of this expressed wish, the treaty of annexation of Nov. 28, 1561, contained a paragraph excluding Jews from trading and from leasing customs duties in Livonia. This treaty, however, did not specifically prohibit Jews from residing in Riga, so that they continued to dwell there, as elsewhere in Livonia, in considerable numbers.

The annexation of Riga to Poland was accomplished in the year 1581; and there date from this period numerous complaints made by the Christian inhabitants of Riga to the Polish crown concerning the injurious commercial activity of the Jews. An entire series of enactments was passed in the reign of Sigismund III. (1587-1632), aiming at the exclusion of the Jews, the Dutch, the Scotch, the English, etc., from the whole of Livonia. An act of May 31, 1593, states: "we also desire that our city of Riga shall, as heretofore and also for all time to come, be exempt from the sojourn or residence of Jews." On the failure of this decree to produce the desired results, further representations were made; and finally, in May, 1596, the city of Riga secured a royal decree wherein all officials, chiefs, and rural nobility were forbidden to trade with the Jews and other foreigners. This decree also proving ineffectual, the town council of Riga found itself obliged to send (Jan. 25, 1597) a special commissioner to Warsaw to make vigorous representations at court concerning the subject. A further enactment of exclusion followed, Jan. 7, 1598; but it likewise remained ineffective, and a more stringent decree was issued March 26, 1599. The war and the troublous times which now ensued distracted attention from the Jews; but when conditions became somewhat more tranquil the complaints against them were renewed, and it appears therefrom that during the war the Jews had managed better than formerly to advance their interests.

In the instructions of the city council of Riga to its delegates at Warsaw (1611), the latter were told to advocate the enactment of legislation aiming at the exclusion of Jewish and Scotch pedlers from the country districts. In 1612 the King of Poland issued an order which actually led to the arrest of some Jews and provoked the complaints of Prince Radziwill. The latter in 1611 had requested the city council of Riga to exempt the Jews of Birzhi from the poll-tax imposed on every Jewish arrival in Riga. The council replied, through its delegates at Warsaw, that the collection of this tax was an ancient practise. Notwithstanding various restrictive ordinances, the Jews were permitted to remain in the city, at least temporarily. The name of the Jewish merchant Affras Rachmaelovich (Aphraschus Rachmailowicz) occurs in the municipal records of 1595–97, where he is mentioned together with other Jews in connection with the trade in potash and other forest products.

In the treaty which was made with Sweden in 1621, Gustavus Adolphus confirmed the rights of the citizens of Riga, inserting in that document the words "and no Jews or strangers shall be allowed to sojourn in the country to the detriment of the burghers." During the Swedish period (1621–1710) the intolerant attitude of the Protestant Church held out no encouragement to Jewish settlers.

The Jewish physician and philosopher Joseph Solomon Delmedigo of Crete, on his way to Lithuania, where he was to become private physician to Prince Radziwill, remained for some time in Livonia, and wrote in 1623 to a learned friend in Troki that he was "in a country cut off from Jewish learning." Jews continued to sojourn in Livonia, descending the Düna in barks and returning when their commercial undertakings had been completed. The records covering the period of Polish domination were destroyed in the fire at Riga in 1674, and little information is accessible concerning this period. In 1645 twenty Jews were arrested on the charge of having illegally bought furs directly from Muscovite merchants, but the accusation was proved to be false, and they were released.

Jewish Inns.

In order to control the movements of the Jewish traders, the city council decided to establish for the accommodation of Jews a separate inn, the first mention of which occurs in 1645. In 1662 Jürgen Sutter petitioned for the assignment to him of a site for a Jewish inn, the old one having been pulled down in order to make room for the city walls. In 1666 an ordinance was passed by the city of Riga wherein Jews were prohibited to lodge anywhere save at the Jewish inn; and all Jewish traders were required to submit to the city officials a list of their merchandise. It was the duty of the innkeeper to see that the Jews remained in the inn at night, and to notify the burgomaster if any of them failed to do so. The price of rooms was set at 10 marks per week. The inn served also as a storage warehouse for liquors brought to the city by Jewish and Russian merchants; and excise payments were made there. This would seem to indicate that the Riga import trade in liquors was largely in the hands of the Jews. This regulation was undoubtedly a source of much annoyance to the Jewish traders. In 1667 they petitioned for permission to lodge near the city, and to remain in it overnight in case of necessity. The city council was apparently inclined to make some concessions, as it offered to remove the inn nearer to the city, and it even overlooked an occasional sojourn overnight in Riga. The Jews, however, still made complaints concerning the unsatisfactory lodging, as well as concerning the innkeeper's high-handed treatment, *e.g.*, in 1671 and 1678 against Jürgen Greve. In 1685 the inn was again removed, its site being needed for new fortifications. During the war in 1700 and 1701 the suburb in which the Jewish inn had stood was destroyed in the siege and the operations that marked the beginning of a period of more than twenty years during which the Jews were not compelled to live in a specifically Jewish inn.

In the preparation for the siege in 1709 the vice-governor ordered that "Jews and other suspicious people should be advised to leave in good time." In the middle of September of that year the government ordered that no Jew should be permitted to enter the city, still less to stay there overnight. Exception was made in favor of David Isaakovich, who was involved in an important lawsuit; yet even he was not permitted to spend the night in the city.

Under Russian Rule.

Notwithstanding the prohibitive decree of 1709 a number of Jews besides David Isaakovich are met with in Riga about this time. Thus on Sept. 12, 1710, Naphtali Hirsch Israel made an application to the city council for permission to reside in Riga with his family, in order to collect his debts, and also because of his inability to return to his birthplace, Wilna, where he would be subject to persecution by the local clergy on account of a lawsuit. The council permitted him to dwell in the city for a considerable length of time; and in 1715 a patent was granted to him by Field-Marshal Menshikov, in recognition of his services as agent of the czar, conferring on him, together with his family and dependents, the right of residence in Riga. In 1719 Naphtali Hirsch Israel acted as bondsman for a coreligionist, who was thus enabled to leave the prison for the holy days. This fact indicates that there was some sort of a religious organization among the Jews of Riga.

In 1722 the merchants of the great gild complained that the Jews, who had recently increased in number, were engaging in trade to the injury of the citizens; and, in order to be rid of them, they proposed that a special quarter should be assigned to them in the suburbs. In 1723 the butchers' gild complained of the competition of the Jews. These complaints finally led the courts to decree the reestablishment of the Jewish inn. The site of the former one had been utilized by the Russian government for a shipyard; the privilege of establishing a new inn was given to a noble named Schröder and his heirs for a term of fifty years; and on Nov. 17, 1724, on the completion of the building, the city council ordered all the Jews to take up their quarters there within four weeks from that date. This enactment involved arbitrary measures by the city authorities; for instance, Zundel, son of the abovementioned Naphtali Hirsch Israel, attempted to evade the compulsory measure, basing his claims on the special privileges which had been accorded to his deceased father. The council did not, however, accept his plea. Owing to the machinations of Schröder, even those Jews who remained in their boats or rafts were made to pay a half-gulden Albert to the "Jews' host" (ordinances of Nov. 19 and Dec. 15, 1725).

Isaac Solomon.

Only a Hamburg Jew, Isaac Marcus Solomon, was permitted to dwell outside the inn. This permission was due to his position as jeweler to the Duke of Holstein, son-in-law of the czar, and to the fact that he was a favorite of the imperial vice-chancellor Baron Ostermann. From the records of a lawsuit with other jewelers of Riga, who wished to expel him from the city, it appears that Solomon's grandfather had established the business in Riga; this shows that even under Swedish rule Jews had possessed the right to engage in the jewelry trade. Solomon succeeded in maintaining his right to remain in Riga; and Ostermann is said to have remarked that all the other jewelers of Riga together did not pay in a year as much customs duty as did this Jew. In 1729 and 1731 the jewelers of Riga made further attempts to have Solomon expelled, but without success.

The ukase of April 26, 1727, expelling the Jews from the Ukraine and various Russian cities, rendered more acute the position of the Riga Jews also. In consequence of this decree the governor of Livonia ordered all Jews residing in Riga, including Isaac Marcus Solomon of Hamburg, Zundel Hirsch Israel of Wilna, and Solomon Samson of Holland, to leave the city within a few days. The latter three, however, through powerful influences, established their right to remain in Riga. In Dec., 1728, there were only nineteen Jewish families in the city. The number was largely augmented in the months of May and June by Jews who descended the Düna in boats and on rafts.

The position of the Jews of Riga became worse in the reign of Empress Elizabeth and with the fall of their protector Ostermann; and the rigorous measures directed against them ceased only with the accession to the throne of Catherine II. Extant documents prove, however, that the Jews were granted a burial-plot in 1725, and that religious services were held in the Jewish inn. The legal status of the Jews of Riga at the beginning of Elizabeth's reign is defined in the following communication made by the council of Riga to the magistracy of Königsberg at the latter's request:

> "Jewish families are not permitted to reside in Riga permanently; and there are no regular 'protected' Jews ["Schutzjuden"]. Exception is occasionally made in the case of those in whose behalf intercession is made, *e.g.*, in that of Marcus Solomon, who, however, resides in the suburbs, and must make arrangements accordingly with the Jews' host. All Jews coming here for business must take up their abode in the 'Judenherberge,' and have not the right to reside within the city wall. The Jews may sell their goods only to citizens of Riga, and must also make their purchases from the latter. General trading is permitted to them only during fairs. The right of sojourn in Riga is limited according to conditions. In accordance with an old custom all Jews entering Riga must pay the burgomaster for safe-conduct" (see Leibzoll).

Curiously enough, after the ukase of Elizabeth of Dec. 2, 1742, was promulgated, the city council of Riga, in its session of Jan. 6, 1743, expressed the fear that if this decree were rigidly enforced the commerce of Riga with Poland would be seriously injured. It was therefore resolved to make representations in the matter to Lacy, the governor-general (see Friedrichstadt).

Importance of Jewish Trade.

It is amusing to note how, when their trade interests were imperiled, the Jew-baiters of Riga quickly found it expedient to beg for the return of the Jews. Special agents were sent to St. Petersburg with instructions to recommend that the Jews be allowed to visit Riga with their boats, since they had otherwise threatened to conduct their export trade through other channels. In fact, they had already established a new trade route by way of Borisov to Memel and Königsberg. The fear was expressed that the entire timber trade would be undermined, and that the imperial customs would be very seriously affected. The efforts of the Riga burghers, however, were not crowned with success. Their representations elicited the famous reply ascribed to Elizabeth: "I desire no material gain from the enemies of Christ."

On March 30, 1743, eighteen Jews were expelled from Dorpat, Livonia. Nevertheless, Isaac Marcus Solomon is met with in Riga in 1744, when the governor-general granted him permission to remain in the city for a further period of eight days. When, in Feb., 1744, the children and servant of the Jew David were expelled from the town, the only Jew left in Riga was Moses Meyer, who was allowed to remain because of his connection with a case before the Senate. For the following twenty years there is no record of Jews in the city.

Right of Residence Granted 1764.

In 1764 Alderman Schick was sent to St. Petersburg to apply for the abrogation of the decree prohibiting Jews from residing in Riga. He stated in his application that the trade of Riga with Poland had declined year by year, while that of the ports of Courland, Windau, and Libau and of the Prussian ports of Memel and Königsberg had increased very considerably. He therefore asked that Jews be allowed to visit Riga for trading purposes, since there was no danger of their securing permanent residence there owing to the rights granted to the city in 1593, 1597, and 1621. After an interval of twenty-four years, with the accession to the throne of Catherine II., who favored the importation of colonists, especially to South Russia, Jewish merchants were again permitted to live in Riga (see Jew. Encyc. iii. 625b, *s.v.* Catherine II.).

The privilege of erecting another inn for Jews was awarded by the city council (Dec. 15, 1764) to one Bencken, a Christian citizen; and an order was issued to the inhabitants (Jan. 14, 1765) forbidding them to allow Jews to lodge in their houses. The complaints of the Jews concerning this restriction were of no avail. Exception was made by Governor-General Browne only in favor of the privileged Jews David Bamberger, Moses Aaron, and Levi Wolf, whose respective households consisted of thirteen, six, and seventeen persons. Another Jew mentioned at this time was Benjamin Baehr, agent of the Polish-Lithuanian and Courland Jews, in whose behalf he petitioned the empress, complaining of their maltreatment by the Riga authorities. The petition was successful only to the extent that the empress ordered the abolition of the safe-conduct tax (June 3, 1765). Under the new imperial policy Jews were now permitted to visit Riga and the rest of Livonia for business purposes, and to remain for a continuous period of six weeks, so that the Riga authorities could no longer expel them at pleasure. In the summer of 1770, when the plague broke out in Podolia, the Jews were summarily expelled from Riga on three days' notice, and were not allowed to return until the following year. Exceptions were again made, however, in the case of the privileged New-Russian Jews.

It was not until 1780 that Governor-General Browne addressed a communication to the office of the governor-general of New Russia inquiring whether the New-Russian Jews Levi Wolf, David Bamberger, Moses Aaron, Zundel Hirsh, Aaron Noah, Aaron Hirsh, Levin Moses, and Jacob Gabriel were wanted there, and whether they should be sent thither, as they were without purpose in Riga, and did not pay any crown taxes." The reply, dated Aug., 1780, stated that as they did not belong to the merchant gild of New Russia, they were not wanted there. Thereupon the governor-general sent to the city council a list of forty-three Jews who were to be deported across the frontier within fourteen days. As regards the other privileged Jews, whose names did not appear on the list, he made representations in their behalf to the Senate. The privileged Jews must have remained in Riga; for there is a record of a quarrel at that time between David Levi Bamberger and Aaron Hirsh concerning their relation to the Jewish community and the synagogue.

Internal Dissensions.

In Oct., 1783, another quarrel broke out concerning the appointment of synagogal officers. The representatives of the privileged community of the protected Jews were at that time Samuel Salomon and Jacob Wolff. The New-Russian and Polish Jews doing business in Riga applied to the governor-general for the removal of these representatives because of their alleged inexperience in religious practise. The complaints against them were that they opened the synagogue too late in the day; that they had monopolized the supply of "etrogim" (paradise-apples); that they did not permit singers from other cities to sing in the synagogue; that the person charged with watching over kasher matters drank non-kasher wine; and that those charged with the maintenance of order came drunk to the synagogue, etc. The court decided (Oct. 31, 1783) that the two parties should choose one president for the entire community. The jeweler Salomon Pasakh, a privileged Jew, was accordingly elected on Nov. 20, and his election was confirmed by the district court. He, with the aid of two learned Jews, was given the right to adjudge all minor matters, more serious affairs being referred to the district court. The disputes between the two parties did not, however, cease.

By a treaty concluded between Russia and Courland May 10, 1783, the district of Schlock, with Dubbeln and Mayorenhoff, was annexed to Livonia. Catherine II., by a ukase of Feb. 4, 1785, converted the village of Schlock into a town; and to encourage commerce, permission was given to all free Russians and foreigners, without distinction of race or religion, to settle there and to register as burghers or merchants. Although the Jews were not specifically mentioned in this manifesto, it is known that Catherine wished especially to find a place for the Jews of Courland (see Russia). In consequence many Jews settled in Schlock, which was near Riga, and many of the protected Jews in Riga thus became citizens of Schlock. All other Jews were ordered to leave Riga within six months.

By an ordinance of July 5, 1788, and in accordance with a special imperial order, fifteen Jewish families were allowed to reside in Riga. Most of them were the descendants of the privileged Jews who were living in Riga in 1764. Owing to the abuse of the privilege allowing each family to employ one tutor, it was ordered that only one teacher be retained for the entire community, and that the others be expelled. Schlock Jews who had established themselves in Riga permanently were ordered to remain in the city not more than eight days at a time.

From a census made by the city council on April 25, 1811, it appears that the Jews in Riga at that time were the following: 1 privileged Jew; 35 Schlock merchants; 394 Schlock burghers; 122 Courland Jews; 145 Lithuanian Jews; 13 foreigners; 26 of unknown origin; in all, 736. From that year until 1827 there was a constant struggle on the part of the Riga Jews, especially those from Schlock, to secure more privileges for themselves, while the city council on the other hand aimed to reduce their number. When a committee of ministers, in response to an application by the city council, considered the question of the reduction, the decision was reached on the opinion of Marquis Paulucci, then governor-general of the city, that the old regulations were sufficient for the purpose.

The ordinance of April 13, 1835, changed the status of the Jews of Riga. Up to that time the Jews residing in Riga and Schlock, like those of Courland, were permitted to remain there with their families. The local administration, not being in sympathy with the new regulations, deferred the publication of them until Nov. 15, and was rebuked for the delay by the Senate. An imperial ordinance of Dec. 17, 1841, defined the status of Jews domiciled in Riga as follows:

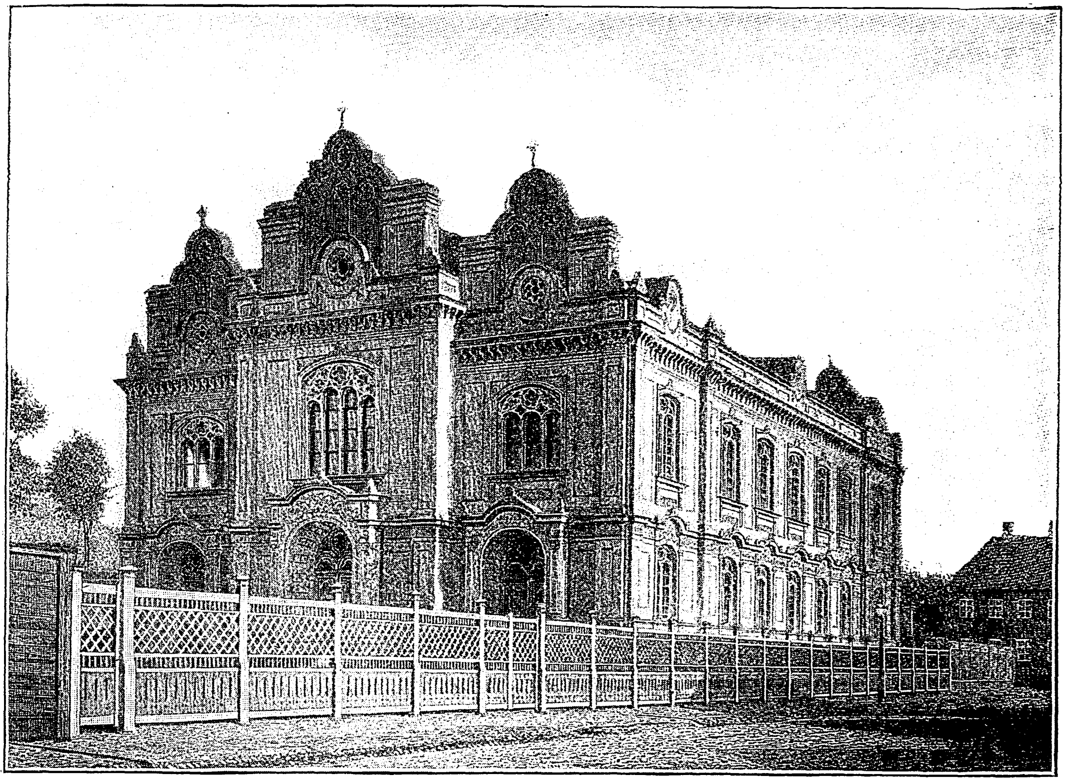
Ordinance of 1841.

1. Jews who have practically secured permanent abode in Riga are to be allowed to register in that city and to reside there, without acquiring, however, burgher rights or the right to possess real property.
2. Henceforth Jews from other governments and from the town of Schlock are prohibited from moving to Riga and residing there.
3. Jews remaining in Riga in accordance with this ordinance are to wear the German dress.
4. The question of the rights of the Jews to engage in trade is to be included in the general consideration of the commercial life of Riga.

Restricted Right of Permanent Residence.

Under the provisions of this law 517 persons (256 males and 261 females) were transferred from Schlock to Riga. They included Ezekiel Berkowitz, a merchant of the second gild, and Nathan Abraham Scheinessohn, Phoebus Ilyisch, and Elias (Eduard) Nachmann, three merchants of the third gild. The city council of Riga petitioned for the withdrawal of the privilege of residing in the city from all except the fifteen families of protected Jews and their descendants. The Senate replied (Nov. 27, 1845) that the matter had been determined by the law of Dec. 17, 1841; the right of permanent residence was to be granted to those Jews who had lived in Riga since 1834. According to the census of Schlock for 1834 there were in all 409 such Jews. By the law of 1841 the rights (1) to purchase real estate and (2) to become burghers of Riga were, as shown above, withheld from the Jews. The former was granted by a decision of the imperial council of May 12, 1858; the latter right is still denied them.

The tradition concerning the ancient discriminations against the Jews made it difficult for the Christians of Riga to reconcile themselves to the broader rights granted to the former. In various ways the Jewish arrivals continued to suffer from the almost hereditary prejudices; and they owed much in regard to the amelioration of their condition to Prince Alexander Suvorov, who was governor-general of Riga from 1848 until 1861. Notwithstanding the opposition of the burghers, the Jews with Suvorov's support succeeded, in 1850, in securing permission to build a synagogue in the part of the city called "Moscow" suburbs. The ordinance prohibiting Jews from living within the city walls became inoperative with the removal of the walls themselves in 1858. In 1868 the Jewish community laid the corner-stone of the new synagogue on Bahnhoffstrasse, and the building was dedicated in Aug., 1871.



Synagogue at Riga, Russia.

Lilienthal at Riga.

Since 1875 the Jews of Riga have come under the influences making for the Russification of the Baltic provinces; and many of them have learned to speak Russian. Throughout the latter half of the nineteenth century they made liberal provisions with regard to the education of their children. Rabbi Max Lilienthal came to the city in 1839 as principal of the newly established Jewish school, which was opened Jan. 15, 1840. On Lilienthal's removal to St. Petersburg, his position as principal was taken by Ruben Wunderbar. In 1843 Abraham Neumann succeeded Lilienthal in the rabbinate, officiating for more than twenty years, and contributing much to the spread of culture among the Jews of the city. In 1864 a Jewish school was established by Wolf ha-Kohen Kaplan, who was instrumental in securing better treatment for the Lithuanian Jews residing in Riga. In 1873 A. Pumpyanski became rabbi of Riga; and in 1876 Adolph Ehrlich was appointed principal of the Jewish school, remaining in that position until 1896.

Riga, being situated outside the Pale of Settlement, possesses special laws concerning its Jewish inhabitants. Thus, according to the Russian code of laws (Mysh, "Rukovodstvo," etc., p. 283), the Jews of Riga may own real estate in the city, although they do not enjoy the right of citizenship.

Special Legislative Position.

The older Jewish families of Riga, the so-called privileged "citizens of Schlock," who once were active in communal affairs, are now in the background. The more intelligent portion of the community is made up of Courland Jews, who began to settle in Riga in great numbers in the second half of the nineteenth century. They have been successful in commercial undertakings, and, like the German Jews, are well educated. They are the leaders in the Jewish community. A third class comprises the Lithuanian and White-Russian settlers, mostly merchants and artisans. The White-Russian Jews are for the most part Ḥasidim, and are prominent in the lumber and export trades. They live in accordance with their own Ḥasidic traditions, and have their own synagogues.

With the abolition of the Kahal (1893) the control of the affairs of the community was transferred to the city administration. The latter manages the Jewish rabbinic schools and fiscal affairs, and only in special cases are experts from among the Jews consulted. Thus the Jewish community of Riga is governed by a city council which has not a single Jew among its aldermen. Among the charitable institutions may be mentioned the society for the prevention of pauperism known as Friends of the Poor; a burial society, free kitchen, free library, etc.

Rabbis and Prominent Men.

Among the first Orthodox rabbis of the community was Aaron ben Elhanan (c. 1840). He was succeeded by his son-in-law Jacob Elias Rivlin. The present incumbent is Moses Shapiro, son-in-law of Isaac of Slonim. Besides Lilienthal, the rabbis and preachers who were recognized by the government have been Abraham Neumann (1843-63), Reichman (1869-73), A. Pumpyanski (1873-93), S. Pucher (1893-98), and the present incumbent, Dr. Michelsohn. Teachers: Max Lilienthal (1839-41), R. Wunderbar (1841-50), Lipman Hurwitz (1843-48), Wolf Kaplan (1852-88), A. Luria (1884-89), H. Mendelsohn (1856-63 and 1876-92), Adolph Ehrlich (1876-96). When Paul I. established in Riga the censorship of Hebrew books (1799) J. L. Elkan was appointed the first censor. He was followed in the office by Moses Hezekiel and E. D. Lewy.

Among the prominent members of the kahal of Riga may be mentioned: N. H. Scheinessohn (1837); Benjamin Nachman (1837); M. H. Tietzner; P. M. Berkowitz; S. B. Bloch (1865); P. Keilman (b. 1829; graduated from the University of Dorpat in 1854 and served in the military hospitals during the Crimean war, and from 1861 to 1881 as factory physician; received from the government the title of councilor of state, and was appointed adviser on Jewish affairs by the governor-general of Riga; died 1903); Moses Hirsh Brainin (1823-64; was made an honorary citizen of Riga; died in St. Petersburg 1870); his grandson S. Brainin (1889-93); and David Stern (1892).

Prominent as bankers or merchants have been Robert Hirschfeld (1842), Dr. Nachman, Phœbus Ilyisch, Joseph Mayer, I. Eliasberg, M. Kalmeyer, Itzig Birkhahn, Leon Schalit, David Schwartzbort, Wolf Luntz, and Loeb Lipschütz. Among men of letters are found Robert Ilyisch, for many years feuilletonist of the "St. Petersburger Herold"; L. Bernstamm, the sculptor; S. Freidus, of the New York Public Library; the physician Jacob Brainin, a graduate of the University of Kharkof who has practised in Riga since 1894; Sosnitz, who lived there from 1857 to 1885; and the Hebrew writer Tavyev, from 1894 to 1905, now residing at Wilna.

A branch of the Society for the Promotion of Culture Among the Jews of Russia was established in Riga in 1900. In the society's report for 1903 it is stated that the amount spent in Riga in that year for educational purposes was 66,000 rubles. Part of this sum was divided among the Jewish elementary school for boys, the night-school for artisans, the model ḥadarim, and the Sabbath reading-school for artisans. Other portions of the fund were employed to aid Jewish students at high and professional schools, and in support of the Jewish agricultural colony near Riga.

The following table gives the vital statistics of the Jewish community of Riga for 1882 and from 1892 to 1903 inclusive:

Year.	Births.				Marriages.		Deaths.			
	Jews.		Total.				Jews.		Total.	
	Males.	Females.	Males.	Females.	Jews.	Total.	Males.	Females.	Males.	Females.
1882...	498	381	3,283	2,995	142	1,429	203	158	2,676	2,313
1892...	335	306	3,054	2,661	114	1,471	181	153	2,523	2,187
1893...	323	292	3,104	2,957	91	1,672	175	128	2,829	2,511
1894...	288	265	3,066	2,981	87	1,837	140	128	2,334	2,136
1895...	276	287	3,289	3,192	114	2,144	164	126	2,710	2,503
1896...	296	256	3,798	3,714	114	2,280	200	152	3,459	3,074
1897...	362	290	4,385	4,043	174	2,588	181	131	3,404	2,964
1898...	345	310	4,736	4,379	165	2,803	162	121	3,226	2,654
1899...	393	309	5,077	4,707	192	3,109	183	132	3,882	3,248
1900...	367	314	5,215	4,924	195	3,112	168	142	3,972	3,284
1901...	374	367	5,399	5,000	180	3,134	172	173	3,953	3,613
1902...	375	372	5,368	5,060	193	3,116	168	142	3,497	2,951
1903...	365	352	5,104	5,024	161	3,044	175	125	3,659	3,256

In 1897 the Jews of Riga numbered about 30,700 in a total population of about 256,197.

RIGHT OF EMINENT DOMAIN: The inherent power of the sovereign or state to take private property, generally land, for public use, especially for a highway, with or without compensation. The Mishnah says of the king in mentioning his powers: "He leads the army in a voluntary war decreed by the Court of Seventy-one, and strikes out to make a highway for himself; and they do not hinder him; and the king's highway has no limit; and all the people take booty," etc. (Sanh. ii. 3). The reference in these last words to the incidents of war shows that only military roads were meant, not roads leading to the king's palace or garden. Maimonides ("Yad," Melakim, v. 3) adds after "no limit" the words "but according to what is needful, and he does not alter the direction of his lines to avoid this man's field, or that man's vineyard, but goes straight ahead."

As shown under Right of Way, a baraita fixes the width of highways between city and city, etc., as varying from eight to thirty-two cubits. The implication is that to obtain these highways the public has a right to condemn for the purpose strips of privately owned land. But the mode of procedure is not indicated in the Talmud; and later authorities, of course, do not discuss it, as the laying out of roads had then passed beyond the power and jurisdiction of the Jews.

It is not likely that the custom of allowing the state or a city community to condemn land for any other purpose than that of a highway ever prevailed in Israel—*e.g.*, for public buildings, for King David set the precedent against such an action when he bought by private arrangement the thrashing-floor of Aravnah the Jebusite as a building-plot for the Tabernacle; or for the palace or pleasure-grounds of the king, for Elijah's stern rebuke against King Ahab for the latter's method of acquiring Naboth's vineyard stood out too strongly in men's memory as the highest testimony to the sacredness of private property in land. In short, the right of eminent domain was very closely limited.

E. C. L. N. D.

RIGHT AND LEFT.—Biblical Data: The right side of things is recognized in many ways as better than the left. The south and north sides of the earth are distinguished as "yamin" (right) and "sem'ol" (left; Job xxiii. 9), the right being the sunnier, brighter side, and the left the bleak and dark side, ill-omened and unlucky, where evil generates. "Out of the north an evil shall break forth upon all the inhabitants of the land" (Jer. i. 14). The right side, or right limb, of a person receives special prominence; the place of honor is at his right. "Upon thy right hand did stand the queen" (Ps. xlv. 9). Solomon placed a seat of honor for his mother, the queen, on his right side (I Kings ii. 19). The right eye was the most important and most vital member of the body. Nahash the Ammonite, as a reproach upon all Israel, purposed putting out the right eye of all men in Jabesh-gilead (I Sam. xi. 2). The prophet predicted, "Wo to the idol shepherd that leaveth the flock! . . . his right eye shall be utterly darkened" (Zech. xi. 17). The priest in purifying the leper put some of the blood of the sacrifice on the tip of his right ear, the thumb of his right hand, and the great toe of his right foot; he also used his right finger to sprinkle the oil before the altar (Lev. xiv. 14, 16), and received as his share of the peace-offering the right shoulder (Lev. vii. 32).

In Jacob's Blessing.

Jacob showed the significance of using the right hand in blessing by placing it on the head of Ephraim, whose tribe was thereby destined to become the greater nation, though Manasseh was older in years (Gen. xlviii. 17-19). "Right" is a synonym for "goodness" and "brightness," and "left" for "badness," "awkwardness," and "clumsiness." "A wise man's heart is at his right hand; but a fool's heart at his left" (Eccl. x. 2). The right hand is associated with the idea of majesty: "Thy right hand, O Lord, is become glorious in power" (Ex. xv. 6). Numerous other Biblical passages may be cited in illustration of this idea. The right hand was raised when an oath was administered or taken (Isa. lxii. 8), and sometimes both right and left hands (Dan. xii. 7). The signet was worn on the right hand (Jer. xxii. 24). Ezekiel, to expiate the sins of Israel, lay on his left side 390 days, and at the expiration of that term he lay forty days on his right side in penance for the sins of Judah; each day representing one year of their wickedness (Ezek. iv. 4-6). Rashi explains that Israel, or the Ten Tribes, were situated to the left of Judah, their capital city being Samaria: "Thine elder sister is Samaria, she and her daughters that dwell at thy left hand" (Ezek. xvi. 46).

The warrior held the bow in his left hand and the arrows in his right (Ezek. xxxix. 3). Ehud, the Benjamite judge, used his left hand to thrust the dagger into the body of Eglon, King of Moab, thereby avoiding suspicion and rendering parrying difficult (Judges iii. 16-21). The Benjamites were all excellent marksmen—"left-handed; every one could sling stones at an hair's breadth and not miss." The name "Ben Yamin" (= "son of the right hand") is probably a euphemism. Targum Jonathan, however, translates "iṭṭer yad yemin" (left-handed) as "open-handed," that is, ambidextrous, as it is evident that the Benjamites were armed with bows and could use both the right hand and the left hand in shooting arrows from a bow (I Chron. xii. 2). Cant. ii. 6 refers to the lover: "His left hand is under my head, and his right hand doth embrace me."

"Yad" means the right hand and "zeroa'" the left hand when both terms occur in the same sentence in the Bible (Naz. 3b, and see Rashi *ad loc.*).

——**In Rabbinical Literature:** In performing the Temple ceremonies the general rule is that "every turn must be made to the right of the way" (Yoma 15b). One of the priestly disqualifications is left-handedness (Maimonides, "Yad," Bi'at ha-Miḳdash, ix. 5). The officiating priest who is required to take a handful of flour in connection with the meal-offering or frankincense does it with his right hand (Zeb. i. 2). The table was put on the north side of the Tabernacle, or the Temple, and the candlestick on the south side, opposite the table, the table being thus to the right and the menorah to the left of the Shekinah, which rested on the west side; just as people usually place the lamp at the left to give free play to the right hand (Cant. R. ii. 17, with reference to Ex. xxvi. 35).

In Ceremonial.

Ḥaliẓah is performed with the right hand on the right foot (Yeb. xii. 2), while some authorities in the case of a left-footed person require a separate ḥaliẓah for the left foot (Shulḥan 'Aruk, Eben ha-'Ezer, 169, 25). The test of left-footedness is made by commanding the person to walk straight ahead and noting which foot he starts with ("Ginnat Weradim," responsum No. 9). The phylactery is placed on the left arm so that the right hand may wind the leather straps ("reẓu'ah"). R. Ashi says that in Ex. xiii. 16, the word "yadekah" (thy hand), with the superfluous "he," means "yad kehah" (the weak [*i.e.*, left] hand; Men. 37a). According to the cabalists, the reason for placing the phylacteries on the left arm is that it is nearer to the heart, which is bound to the service of God. A person who is left-handed may wear the phylactery on his right arm; but if ambidextrous, he must place it on the left (*ib.*).

The Lulab is held in the right hand and the Etrog in the left. A curious error appears to have been made regarding the supposed reference in the Midrash to the custom of holding the lulab in the right hand. Citing Ps. xvi. 11, "At thy right hand there are pleasures forevermore" ("neẓaḥ" = "triumph," "victory"), R. Abbahu explains that the lulab is referred to (Yalḳ., Ps. 670; comp. Ex. R. xviii. 5; Kohut, "Aruch Completum," i. 242, ii. 57). Nevertheless the custom might be explained by supposing that the lulab is held in the right hand because it is more important than the etrog.

Commenting on the passage "I saw the Lord sitting on his throne, and all the host of heaven standing by him on his right hand and on his left" (I Kings xxii. 19), the Midrash asks, "Is there a right and left above?" and answers, "But there were defenders on the right and accusers on the left" (Tan., Ex. xvii.).

In Angelology.

The angel Michael, on the right, is more in favor of Israel than Gabriel, who is on the left. Samael (from "sem'ol" = "left") is on the left, outside, as the antagonist of Israel (see Kohut, "Ueber die Jüdische Angelologie," pp. 30, 57). The "yeẓer-ṭob" (angel whose influence is toward the good) is on the right side, and the "yeẓer ha-ra'" (angel whose influence is toward wickedness) is on the left of every person.

Etiquette commands that the most prominent person sit or walk in the center, the next in rank at his right hand, and the third in rank on the left ('Er. 54b). The bride is placed on the right side of the groom, under the canopy. In the lavatory the left hand is used to keep the right free from uncleanness (Ber. 49a).

In the Cabala right and left fill important symbolic rôles, as the "siṭra di-yemina" (right side) and "siṭra di-sem'ala" (left side). According to the Zohar, Eve represented the left side of Adam and she was bound up in the flame of the Law (see Fire). The Torah is the right and the oral law the left (Zohar, Bereshit, p. 48b). This world is the right, and the world to come the left. It is curious that in Cabala the left side represents a higher and more developed state. It is said that Alexander the Great found a country where all the inhabitants were left-handed, and that they endeavored to convince him that greater honor is due to the left hand because it is nearer the heart; hence in greeting they shook hands with the left hand ("Erke ha-Kinnuyim," *s.v.* שמאל).

Isaac Baer Levinsohn translated into classical Hebrew Benjamin Franklin's "A Petition from the Left Hand," complaining of discrimination on the part of the teachers and claiming equal rights with his sister, the right hand ("Shorashe Lebanon," pp. 257-258, Wilna, 1841).

J. J. D. E.

RIGHT AND RIGHTEOUSNESS: Renderings given in the English versions of the Hebrew root "ẓadaḳ" and its derivatives "ẓaddiḳ," "ẓedeḳ," "ẓedaḳah." The use of "righteous" as a translation for "yashar" (= "upright") is less frequent. "Just," "justice," "justify" also occur as equivalents for these Hebrew terms.

Original Signification.

The original implications of the root "ẓadaḳ" are involved in doubt. To be "hard," "even," and "straight" (said of roads, for instance) has been suggested as the primitive physical idea. More acceptable is the explanation that the root-notion conveyed is that a thing, man, or even God, is what it, or he, should be, that is, "normal," "fit." That conception may, without much difficulty, be recovered from some of the applications of the terms in the Bible. Weights and measures are called "ẓedeḳ" ("just" or "right"; Deut. xxv. 15; Lev. xix. 36; Job xxxi. 6; Ezek. xlv. 10). Paths are "ẓedeḳ," that is, as they should be, easy to travel (Ps. xxiii. 3). So with offerings, when brought in the proper manner and at the right time (Deut. xxxiii. 19; Ps. iv. 6 [A. V. 5], li. 21 [A. V. 19]). When a king or judge is as he should be he is "just" (Lev. xix. 15; Deut. i. 16; Prov. xxxi. 9). When speech is as it should be it is "truthful" (comp. Ps. lii.). The outcome of the battle being favorable, it is called "ẓedaḳah" (= "victory"; Judges v. 11). To justify oneself, or another, is also expressed by the root, as it really means to prove oneself, or another, to be innocent of a charge, or in the right (that is, as one should be; Job ix. 15, 20; xi. 2; xiii. 18; Isa. xliii. 9; Ps. cxliii. 2). In many of the passages in which the root has this physical implication an ethical element may be discovered. "Right" weights may be also "righteous" weights. The battle may be looked upon as a sort of divine ordeal, and hence the issue may be said to be "righteous" (= "ẓedaḳah"; see Schwally, "Der Heilige Krieg im Alten Israel," p. 8). In the Song of Deborah—one of the oldest literary compositions—this implication is not absent from the word, employed in the plural in connection with Yhwh (Judges v. 11). So in its earliest use, among Hebrews, the term "righteousness" seems to have had a moral intention.

In the collection of legal decisions ("mishpaṭim") constituting the Book of the Covenant, "ẓaddiḳ" appears as a juridical, technical term (= "the party [to a suit] that is in the right"; Ex. xxiii. 7). It is noteworthy that the feminine of "ẓaddiḳ" is not found, the verb being used to express the idea in the case of the woman being in the right (Gen. xxxviii. 26); the "hif'il" is used to declare one "not guilty," or as having substantiated his claim (Ex. xxiii. 7; II Sam. xv. 4). The man who makes such a rightful plea is "ẓaddiḳ" (Isa. v. 23; Prov. xvii. 15; *et al.*). In this use, too, a clear ethical note may be detected. To declare him "right" who is in the right is certainly a moral act; the judge who decides in favor of the right is righteous. Even the religious element underlies this use. God is the judge. To have a suit is to seek out ("darash") Yhwh (*i.e.*, to inquire of Yhwh). The judgment is an ordeal. The winner of the suit, the man found innocent, is by the verdict proved to be righteous in the sight of Yhwh.

Use by the Prophets.

But it is in the early prophecies that the ethical aspect of righteousness is forcibly accentuated. Used by Amos in the forensic sense, "righteousness" and "justice" are urged as higher and nobler and more pleasing in the sight of Yhwh than ritual religiousness (ii. 6; v. 12, 23). "Social righteousness" alone will save Israel. The fate of the personally guilty and the personally innocent alike is involved in that of the whole people. This social righteousness, then, may be said to be in the eyes of this prophet a religious service.

Hosea marks another step in the evolution of the concept of righteousness. He would have righteousness potentialized by "ḥesed" (love, or mercy). Social justice as a matter merely of outward conduct, and manifest only in public adjustments of institutions and conditions, will not bring about the rejuvenescence of the nation. Inner repentance, spiritual consideration of one's neighbor and brother, yielding love, not mechanical justice alone, are the components of righteousness (vi. 1-4, x. 12).

Isaiah proceeds along the lines indicated by his predecessors. "Justice," or "righteousness," is solicitude for the weak and helpless (i. 16 *et seq.*, 27; x. 2). This righteousness is true religion; Israel is expected to be devoted to it. The moral order of the world is founded in such righteousness, which metes out strict justice (v. 7, xxviii. 17, xxix. 13). This justice, inherent in God's supreme providence, will bring about the salvation of the Remnant of Israel (vii. 9). Isaiah looks forward to the coming of a time when Jerusalem, no longer enslaved to mere ritual piety while steeped in injustice, will be called "the fortress of righteousness" (i. 26, Hebr.).

"Righteous" Synonymous with "Moral."

Jeremiah's understanding of righteousness is virtually the same as Isaiah's (see Jer. xxii. 3, which seems to embody his ideas of what it embraces, though the term is not used). He looks forward to the reestablishing of the Davidic kingdom under "a righteous branch," a ruler who will do justice and who will deserve the name "Yhwh our Righteousness" (xxiii. 5 *et seq.*, Hebr.). Jeremiah's faith in the righteous character of God's government was sorely put to the test both by his own personal experience and by the conditions prevailing in his own day. Yet he acknowledges that Yhwh is in the right ("ẓaddiḳ"), though he can not forego asking why the wicked prosper (xii. 1). Yhwh is a "righteous judge," probing the motives of human conduct (xi. 20). In Deut. xvi. 20 the pursuit of righteousness is solemnly inculcated. "Righteous" in these prophetic passages is synonymous with "moral." He deserves the designation who not only refrains from wrong-doing but is strenuous in his efforts to establish right. To suffer wrong to be done to another is almost equivalent to doing it. Hence the righteous endeavor to see that the weak, the poor, the orphaned, and the widowed secure their rights. The conception that the righteousness of God also involves positive activity in behalf of right, not mere abstinence from wrong-doing, is accentuated. The moral law is so administered that justice will be done.

In the lives of the "righteous" whose names and characters both have been preserved in the national history these qualities were dominant. Noah was "a righteous" man in his generation. He was spared while the wicked perished (Gen. vi. 9, vii. 1). If there had been righteous ones in Sodom they would not have shared the fate of the city. Abraham was warned of the impending catastrophe because it was certain that he would teach his descendants "to do judgment and righteousness" (Gen. xviii. 19, 23-25). Abraham's trust in Yhwh is reckoned unto him "for righteousness" (Gen. xv. 6; a statement which, however obscure, certainly does not bear out the construction put on it by Christian theologians, from St. Paul to the present, as little as does Hab. ii. 4—"the righteous shall live by his faith" [Hebr.]).

In Habakkuk "the righteous" has taken on an entirely new meaning. It stands for Israel as represented by the "pious," the "meek," the "poor," the "remnant." Israel will not be disturbed by the seeming falsification of its trust and confidence involved in the actual conditions of the day. For the moment Babylon, the "unrighteous," may be victorious; but ultimately the righteousness of God's government will be manifest in the victory of the "righteous." This application of "righteous" is common in exilic and post-exilic writings (comp. Isa. xxvi. 10). In (Deutero) Isa. xlii. 6 the "servant of Yhwh" (Hebr.) is this righteous one; indeed, the "righteousness" of God is manifested in the advent of Cyrus (Isa. xliv. 28). God supports His messengers "with the right hand" of His "righteousness" (Isa. xli. 10)—that is, He will insure their triumph. This "righteousness," which is the victorious purpose of God's providence, is not conditioned or expressed by ritual practises. The contrary is the case. The people who believe that they have done right (Isa. lviii. 2) are told that fasting is inoperative, that justice and love are the contents of righteousness. Righteousness in this sense is the recurring refrain of the second Isaiah's preaching. The remnant of Israel, having suffered, has been purified and purged of its sins. Its triumph, therefore, will establish God's righteousness, for the triumph of the wicked (*i.e.*, Babylon) is unthinkable in view of the moral order of things (Isa. xlvii. 6, li. 1-7, lii. 3-5).

Individualization of Righteousness After the Exile.

With the Exile the individualization of righteousness begins to be recognizable in Hebrew thought. The accountability of man for his conduct is phrased most strongly by writers of this period (Jer. xxxi. 29-30; Ezek. xviii. 2-4). In Ezekiel, a few instances excepted (xvi. 52, xxiii. 45, xlv. 9-10), "righteous" and "righteousness" express the religious relation of individuals to God (xiii. 22, xiv. 14, xviii. 5 *et seq.*). The plural of "ẓedaḳah" (if the text is correct) connotes good deeds proceeding from one's religious character (iii. 20, xviii. 24, xxxiii. 13). The content of this righteousness is preponderatingly ethical, not ritual. The Book of Job approaches the problem of God's righteousness from a new point of view. The suffering of the righteous is its theme as it is that of other Biblical passages (Mal. iii. 15-18; Ps. xxxvii., xxxix., xlix., lxxiii.). That sin and suffering are corresponding terms of one equation is the thesis defended by Job's friends; but Job will not accept it; conscious of his rectitude, he rebels against it. He challenges the Almighty to meet him in a regular judicial proceeding. The book states the problem, but furnishes no answer (see Job, Book of; Optimism and Pessimism). It must, however, be noted that the terms for righteousness are often used in the Book of Job in a technical, juridical sense, namely, for "being right" (in reference to a pleader). In the other Wisdom books (Proverbs and Ecclesiastes) the "righteous," contrasted with the "wicked," are ethically normal individuals. Righteousness is the supreme moral category. On the whole, the contention of these books is that the righteous are sure to reap rewards while the wicked are as certain to be punished, though Ecclesiastes is not consistent in the exposition of the doctrine of retribution.

In the Book of Psalms "the righteous" more frequently represents a party than individuals—"the meek," "the lowly"; that is, the faithful who, in spite of persecution, cling to God's law. In the Maccabean age these became the "Assidaioi" (the Ḥasidim). Their triumphs are sung and their virtues and faith are extolled. Their righteousness is both social and personal (comp. Ps. vii., xviii., xxv., xxxii., xxxiii., xxxvii., xli., lxiv., xcvii., cvi., cix.; see GODLINESS).

But as the Pharisaic synagogue grew in influence, and legalism struck deeper roots, the righteous came to be identified not with the ideal citizen of Zion pictured in Ps. xv., but with him whose "delight is in the law," described in the prologue to the book—Ps. i. The Law and its observance became an integral part of Jewish righteousness, though by no means to the degree and in the soulless manner assumed by non-Jewish writers, who delight to describe how ritualism and literalism first outweighed mere moral considerations and then ignored them altogether. See NOMISM.

In the Apocrypha.

In the Apocrypha righteousness is ascribed to God as a quality of His judgments and as manifesting itself in the course of human history (II Macc. i. 24–25). As the Righteous Judge He grants victory to the faithful and courageous, whose faith in God's righteousness, in fact, inspires their courage (II Macc. viii. 13). God, as the Righteous Judge, metes out condign punishment to evil-doers (Azariah's prayer, add. to Dan. i.). As evidences of human righteousness the virtues of loyalty to truth and one's oath are adduced (I Macc. vii. 18). The Patriarchs, as sinless, are held to have been perfectly righteous (see Prayer of Manasses). Idolatry and righteousness are represented as incompatible (Ep. Jer. verse 72). In the Wisdom of Solomon (ii.) the skeptics are unmasked as the "unrighteous"; and unrighteousness leads to death (i. 16), while righteousness leads to life. In Ecclus. (Sirach) xxxi. 8 the rich man who has resisted the temptations which beset the getting of wealth is characterized as righteous. It is plain that the man whom Sirach regards as deserving to be called "righteous" is one whose morality is above reproach, whatever may be his loyalty to ritual observances (see *ib.* vi., vii.); and as for the self-righteousness which is imputed to Judaism it is sufficient to refer to vii. 5 of the same book, where the Hebrew text preserves the technical word "hiẓtaddeḳ" (to brazenly proclaim oneself as a righteous man).

In the Psalms of Solomon righteousness designates fidelity to the Law (xiv. 2). But this Law demands obedience to the fundamental principles of morality as strenuously as compliance with ritual precepts. The Sadducees are inveighed against as unrighteous. From the vehemence of the denunciations the conclusion has been drawn that in the minds of the Pharisaic authors laxity in ritual piety constituted the essence of wickedness; but the Sadducees' antinational concessions to Rome were much more provocative than their indifference to the ritual. Moreover, it must be remembered that the Psalms of Solomon, like the Gospels, are partizan pamphlets, in which the shortcomings of opponents are exaggerated. Righteousness as interpreted by the Pharisaic synagogue embraced moral considerations as well as ritualistic.

Rabbinical View.

This appears also from the rabbinical sources. Rabbinical theology is never systematic. This must be kept in mind, as well as the fact that many of the rabbinical conclusions are mere homiletic applications of texts, illustrating the exegetical dexterity of their authors rather than a fixed dogma of the Synagogue. This is true of the rabbinical observation that at any given period never less than thirty righteous are found in the world, for whose sake the world escapes destruction (Tan., Wayera, 13, where this conclusion is derived from the gematria of יהיה [= 30]). Another passage has it that one righteous man insures the preservation of the world (Yoma 38b). The righteous are regarded as being inspired by the "holy spirit" (Tan., Wayeḥi, 14, where the context clearly shows that the statement is not dogmatic, but homiletic). The Shekinah rests upon them (Gen. R. lxxxvi.). In fact, before sin entered into the world the Shekinah was permanently dwelling on earth. When Adam lapsed it rose, and it continued to rise to ever greater distances, proportionate always to the increase of sin among men. But it was gradually brought back to earth by the righteousness of Abraham, Isaac, Jacob, Levi, Kehath, Amram, and Moses (Cant. R. iii. 11). The Patriarchs and the great heroes of Bible days are considered to have been perfectly righteous (Sifre 72b; Yalḳ. i. 94; Gen. R. lxiii., xc.; Meg. 13b; Sanh. 107a; Shab. 56a; *et al.*).

Righteousness is dependent upon man's free choice. All its future conditions are predetermined by God at the very conception of the child, its character alone excepted (Tan., Peḳude). The conquest of the "yeẓer ha-ra'" (*i.e.*, of the inclination toward immorality) marks the righteous (Eccl. R. iv. 15; Gen. R. lxvii.; comp. Yoma 39a). In this contention the ethical implications of the rabbinical interpretation of righteousness are patent. The righteous man is godlike (see GODLINESS); that is, he is desirous of reflecting the attributes of God (Soṭah 14a; Pesiḳ. 57a). The state of sin is not inherited. Men might live in perfect righteousness without "tasting sin" (Eccl. R. i. 8; Shab. 55b). Children are born sinless (Eccl. R. iii. 2; Lev. R. vii.). Abraham, Isaac, and Jacob (Yalḳ. i. 36, 106), and Elijah (Lev. R. xxvii.), among others, are mentioned as having gone through life without yielding to the yeẓer ha-ra'.

Three Classes of Men.

Still, most men are not so strong. Hence the race is divided into three categories: (1) "ẓaddiḳim" (the righteous); (2) "benunim" (the indifferent); and (3) "resha'im" (evil-doers). The first and third groups again are divided into "perfect" and "ordinary" righteous and evil-doers ("ẓaddiḳim gemurim," "resha'im gemurim," and mere "ẓaddiḳim" or "resha'im"; Ber. 61b). The first are under the dominion of the "yeẓer ha-ṭob" (the inclination to do good), the third under that of the yeẓer ha-ra'. Class two is now in the first group and anon in the third group. But finally only the first and the third condition are recognized. After death men are judged either as "ẓaddiḳim" or as "resha'im." The ungodly are not buried with the righteous (Sanh. 47a). The benunim are respited from Rosh ha-Shanah to Yom ha-Kippurim. If they do a good deed in the meantime, they are ranged with the righteous; if they commit an evil deed, they are ranked as ungodly (R. H. 16a). They are like trees that bear no fruit (Tan., Emor, 17).

The "ẓaddiḳ gamur" is he who, like Abraham, Isaac, Jacob, Moses, Samuel, fulfils the whole Torah from alef to taw (Shab. 55a; comp. Alpha and Omega). Of this order were Michael, Azariah, and Hananiah (Ta'an. 18b). It is not necessarily to be assumed that such truly righteous ones were altogether without blame. They may have committed minor transgressions ("'aberot ḳallot"; Sifre 133a). These are written in the Book of Life on Rosh ha-Shanah (R. H. 16b). They behold the Shekinah in a clear mirror (Suk. 45b). They do not change, while the ordinary ẓaddiḳim are exposed to lapses.

The Unrighteous.

The utterly unrighteous, or the "heavily" unrighteous ("rasha' ḥamur"), are distinct from the "slightly" unrighteous ("rasha' ḳal"; Sanh. 47a). The former receive recompense at once for whatever slight good they may do, but are destined to everlasting perdition. Esau is an example (Gen. R. lxxxii.), as are Balaam (Tan., Balaḳ, 10), those symbolized by the bad figs in Jeremiah's basket (Jer. xxiv.; 'Er. 21b), and others. Yet even a rasha' gamur may repent and appear before his death as a ẓaddiḳ gamur (Ezek. xxxiii. 12; Num. R. x.; Ex. R. xv.).

Man is judged according to the dominant character of his intentions and deeds (Ḳid. 40b). If the majority of them are righteous he is accounted a ẓaddiḳ; but if they are otherwise, or if even a few partake of the nature of gross crimes and immoralities, he is adjudged a rasha' (see Sifre 51b). Far from encouraging self-righteousness, rabbinical theology warns each to regard himself as part good and part bad, and then to determine his own rank by adding to his good deeds (Ḳid. 40a). Intention and the underlying motive are decisive for the quality of an act in a good man, while a good deed done by an ungodly man is reckoned in his favor, whatever may have been its motive (Ḳid. 39b). Yet it is certainly unwarrantable to twist these largely exegetical fancies of the Rabbis into proofs of rigid dogmatic positions. The good act is considered a "miẓwah," a divine command; but still the spiritual element of righteousness is not ignored. Calculations of reward and penalty are declared to be contrary to God's intentions (Deut. R. vi.). The Rabbis assume that reward will be a necessary consequence of a good deed, and punishment that of an evil deed. Yet this causal relation is apprehended as being involved in God's grace (Tan., Ethannen, 3); even Abraham could not do without God's grace (Gen. R. lx.).

Idea of "Zekut."

This thought underlies also the Talmudic-rabbinical concept of "zekut." "Zakai," a term designating the innocent, or guiltless, the contrary of "ḥayyab," the guilty party in a suit, gradually assumed the meaning of "ẓaddiḳ." The zekut, therefore, primarily, is one's righteousness. But the "righteousness of the fathers" ("zekut abot"), or of a "righteous man," is credited with the effect of helping others and their descendants, though those so benefited have no claim, through their own merit, to the benefit. In strict justice, each should be judged according to his merits. But God's mercy permits man to be judged by the sum total of all the goodness which exists in the world in an age, in a family. As, owing to the righteous, the sum of goodness is sufficient, the less good is granted more than his due. The technical term used in this connection is "ma'aleh 'al" (hif'il of "'alah"), meaning "to tax in favor of" (see Weber, "Jüdische Theologie," pp. 290 *et seq.*; Weber, however, misapprehends the whole matter and twists it into a theological system with a strong note of Pauline dogmatics). The solidarity of the race is basic to the notion, not the idea of God's justice as exacting, measuring, calculating; for God's grace and mercy are involved in the conception ("middat ha-raḥamim").

Identified with Charity.

As human righteousness is a reflection of God's, it includes necessarily love for others. This consideration has so strongly influenced the Jewish mind that the word "ẓedaḳah" (righteousness) has assumed the meaning of "alms," "charity." "Gemilut ḥasadim" (philanthropy in its widest sense) is another expression of the righteous man's inner life (Tan., Mishpaṭim, 9; Lev. R. xxvii.; Tan., Emor, 5 [illustrated by Moses]; Tan., Ki Tabo, 1; comp. Eccl. R. vi. 6; Tan., Wayaḳhel, 1).

Why the righteous suffer is one of the problems the Rabbis attempt to solve. The perfectly righteous do not suffer; the less perfect do (Ber. 7a). Under the law of solidarity the latter often suffer for the sins of others, and therefore save others from suffering (Ex. R. xliii.; Pesiḳ. 154a). Where the nature of suffering is individual, it is assumed to be a punishment for some slight transgression with a view to insure to the righteous a fuller reward in the world to come (Pesiḳ. 161a; Hor. 10b). Or it may be probationary, and as such a signal manifestation of divine favor (Sanh. 101b; Shab. 53b; Ta'an. 11a; Gen. R. xxxiii.). The death of the righteous works atonement for their people (Tan., Aḥare Mot, 7; M. Ḳ. 28a). God allows the righteous man time to repent and to attain his full measure of good deeds before He sends death (Eccl. R. v. 11). The most truly righteous either escape death altogether (*e.g.*, Elijah; Enoch), or it meets them as a kiss imprinted on their lips by God, as with Abraham, Isaac, Jacob, Moses, Aaron, Miriam (B. B. 17a; Yalḳ. i. 42). Death for the righteous is also a release from the struggle with the inclination to do wrong (Gen. R. ix.). Dead, they still live (Ber. 18a). They are like pearls, which retain their preciousness wherever they are (Meg. 15a).

The coming of the righteous into the world is a boon to it; their departure therefrom a loss (Sanh. 113a). The ungodly are sentenced to stay in Gehenna twelve months; then they are released at the intercession of the righteous (Yalḳ. Shim'oni, to Mal. 593). In Gan 'Eden, God will dance with

Fate of the Righteous.

the righteous (Ta'an. 31a); there they will sing God's praise (Ex. R. vii.). Resurrection is reserved for the righteous alone (Gen. R. xiii.; Ta'an. 7a). In "the world to be" the righteous sit with crowns on their heads and delight in the radiancy of the Shekinah (Ber. 17a). They partake of LEVIATHAN (Pesiḳ. 188b; B. B. 74b). Their crowns are those that were worn at Sinai (Sanh. 111b; Shab. 88a). The שְׂבַע שמחות of Ps. xvi. 11 is read שֶׁבַע שמחות ("seven"), and is taken to refer to the seven classes of righteous that enjoy God's glory (Sifre 67a).

The "righteous" are often identified with Israel, and the "ungodly" with the heathen, non-Israelites (Tan., Bemidbar, 19; Lev. R. xiii. 1). But this should not be taken as a general rule. The non-Israelites of whom the Rabbis had knowledge were Romans, whose cruelty and profligacy made "non-Israelite" and "ungodly" exchangeable terms. Still, righteous ones are found among "the nations" (*e.g.*, Noah, Jethro; see PROSELYTE), and these righteous will have a share in the kingdom to come (Tos. Sanh. xiii.).

Thus righteousness was not a privilege of the Jew; it was rather an obligation. As Judaism does not teach original sin its views on righteousness have no relation to the doctrine of justification (see ATONEMENT). The Jewish prayer-book, the depository of the faith of Israel, contains as a part of the morning liturgy: "Lord of all the worlds, not in reliance upon our righteous deeds do we lay our supplications before Thee, but trusting in Thy manifold mercies." This summarizes the doctrine of the Synagogue upon the subject. Righteousness is a duty which brings no privileges. Self-righteousness is not the key-note of Israel's confession. Simply as descendants of Abraham is it incumbent upon Israel to proclaim the Shema'. The modern Jewish connotation of righteousness carries an ethical (both personal and social), not a liturgical emphasis.

E. G. H.

RIGHT OF WAY: The law in general distinguishes between the right of private way (that is, A's right to pass over a certain strip of B's land) and that of public way (the right of everybody to pass over a strip of land which may or may not be private property otherwise); and the Hebrew law recognizes a third and broader right of way, that referring to the king's highway or to the way to the grave.

Under SALE OF LAND cases are stated in which the sale of part of the vendor's land does or does not confer on the purchaser a right of way over the residue. But the law recognizes generally the "right of way from necessity"; that is, where one man's property is surrounded by that of another, the former is entitled to means of access and egress. Assuming this principle, the Mishnah (B. B. vi. 5, 6) says:

> "He who owns a cistern inside of another man's house, should go in and come out at the usual hour when men come and go; he can not bring his beasts in and water them at the cistern, but he must draw the water and give them drink outside the house; and each of the two owners must make for himself a key [to the cistern]. He who has a garden within that of another should go in and come out at the usual hour when men come and go; he has no right to bring produce-buyers inside, nor to pass over into another field [but only to the highway]. The outside owner may sow the path [so as to have marks of ownership]. If the outside owner has by agreement given [to the insider] a path on the side, the inside owner may pass in and out when he chooses, and may take merchants in to buy: yet he may not pass from his garden to another field; and neither party may put seed in the path."

In the absence of an agreement to the contrary the width of a private way is four cubits (*ib.* 7), this width being deemed sufficient for an ass with his load (B. B. 100a).

Public Way.

A public way is acquired by usage. Mere walking forward and backward across the strip is not enough: there must be some occupancy by "the many" ("ha-rabbim"), such as treading the soil down into a hard road, or artificially leveling it. No particular length of time is mentioned for maturing the public right. Where the owner of vineyards leaves a vacant strip between fences, he gives an implied permission to walk on it, and as soon as the public begins to do so the strip stands dedicated as a highway. When a highway is once acquired by the public, the owner can not resume exclusive rights; hence should he, with the intention of retaking a public way running over the middle of his field, dedicate a strip on one side of it, the public will have a right to the use of both ways.

According to the Mishnah (*l.c.*), a public way should be sixteen cubits in width; but a baraita distinguishes thus: a way from one city to another should be eight cubits in width; a way for the many (probably, one on which people from several cities meet, a trunk-road) should have a width of sixteen cubits; and the road running to the cities of refuge thirty-two cubits (see Deut. xix. 3). The streets of a city are public highways and as such a part of the public domain (see DOMAIN, PUBLIC).

The king's highway, that is, the way which he has the right to lay out for the use of his army, is not limited in width ("has no measure"; B. B. vi. 7; Sanh. ii. 4), and he may, to open the road, tear down fences and other obstructions.

The way to the grave also "has no measure" (B. B. vi. 7); that is, those who carry or follow the bier may, when they find it necessary, go to the right or left, so as to reach the place for burial without needless delay. But while they have not, like the commander of troops in the field, the right to tear down fences (they must climb over them), they may tread on fields and meadows.

Miscellaneous Corollaries.

No one should throw stones from his private land into the highway, nor should any one tunnel or dig cisterns or cellars under it; but one may, for the benefit of the public, dig a cistern in the highway. One whose house or other building abuts on the highway may not erect over it balconies or projecting stories, unless they be high enough to allow a camel with its rider to pass below; nor of such a size as to darken the highway. Where one buys a court of which the balconies or projecting stories are by prescription ("ḥazaḳah") over the public way, he may rebuild them when they fall down. Where a tree leans over the highway the owner must trim it, to leave room for a camel and rider to pass under its branches.

It is unlawful to leave wetted clay for any length of time on the highway, or to make bricks on it; but mortar for building a house may be left by the side of it. Where one prepares stones for a building, he may not let them lie on the highway for an indefinite time, but should use them at once. Whoever acts against these rules is liable for the full damage arising from his act (the words rendered "highway" are "reshut ha-rabbim," *i.e.*, "public domain"). See B. Ḳ. 50b; B. B. ii. 13; iii. 8, 60a; also Shulḥan 'Aruk, Ḥoshen Mishpaṭ, § 417.

The Talmud does not indicate any procedure by which the commonwealth may expropriate the owners of land in order to acquire public highways; nor does it prescribe any form of dedication for roads and streets.

E. C. L. N. D.

RIGOTZ, MOSES. See CONCORDANCE, TALMUDICAL.

RIME: The early Hebrews have been credited with the knowledge and use of rime. Judah Provençal, according to Azariah dei Rossi ("Me'or 'Enayim," v.), considered Hebrew poetry the mother of all other poetries, so that in adopting the poetic forms of other peoples the Jews received back from them what they had given long before. Samuel Archevolti ("'Arugat ha-Bosem," xxxii. 112, Venice, 1602) argues that rime and meter existed in the Old Testament, but were not fully developed; while Moses ibn Ḥabib assumes their use in extra-Biblical Hebrew poetry contemporaneous with the Bible, basing this view upon the rimed epitaph of the alleged general of King Amaziah, for which see JEW. ENCYC. i. 487b. Of modern writers who attribute an important part to rime in the composition of the Old Testament may be mentioned E. Reuss ("Die Gesch. der Heiligen Schriften des Alten Testaments," § 125, Brunswick, 1881; comp. also Herzog-Plitt, "Real-Encyc." v. 678; and E. Kautzsch, "Die Poesie und Poetischen Bücher des Alten Testaments," p. 8, Tübingen and Leipsic, 1902).

In the Old Testament.

It is, however, generally agreed that rime, *i.e.*, the correspondence in sound of word-endings, did not attain in the Old Testament the importance of a formal principle of poetry, or of a device of style in general. The agreement in terminal sounds of parallel lines (as in Gen. iv. 23; Ex. xv. 2; Deut. xxxii. 2, 6; Judges xiv. 18, xvi. 24; I Sam. xviii. 7; Isa. xxvi. 21; Ps. ii. 3, vi. 2, viii. 5; Prov. v. 15; Job x. 10, 17) can not be considered as an organic element of composition, as it is the result of grammatical congruence and, besides, through any lengthy poem the assonances are not introduced with consistency (not even in Lam. v.). Cases in which the rime extends to stem-syllables (as Gen. i. 2; Josh. viii. 12; II Sam. xxii. 8; Isa. xxiv. 4) are few and far between and, with rare exceptions (Ps. lv. 8; Prov. iv. 6, xxii. 10; Job xxviii. 16), do not stand at the end of corresponding lines.

But those rimes that are found in the Old Testament show the adaptability of Hebrew to this device; and the parallelism of clauses in Old Testament elevated diction must have suggested the use of parallelism of sound, or rime, when once had been awakened through contact with other literatures the sense of the beauty and necessity of externally marking off thought-complexes into symmetrical groups.

In Talmudic and Post-Talmudic Times.

What has been said of the Old Testament is in substance applicable to the compositions of the Talmudic period also. The few rimed rules, proverbial phrases, and incantations scattered through the Talmud (Ber. 44b, 61a, 62a; Ket. 62b; Pes. 114a; etc.) do not justify the supposition of intentional use of the rime (H. Brody, in his edition of Immanuel Francis' "Meteḳ Sefatayim," p. 33, Cracow, 1892). None of the portions of the liturgy quoted or indicated in the Talmud (Ber. 4b, 11b, 28b, 29a, 59b; R. H. 32a; Yoma 87b; Pes. 116a, b; etc.), nor any of the few lyric pieces preserved in it (Suk. 51b, 53a; M. Ḳ. 25b; Ta'an. 31a; Ket. 104a), has even the flectional rime.

The sphere in which rime first appears as an essential element is that of the liturgical productions of the geonic period. As inaugurators of it are generally considered Yannai and especially his disciple Eleazar ha-Ḳalir (comp. S. D. Luzzatto in his "Mobe le-Maḥzor ke-Minhag Bene Roma," p. 8, Leghorn, 1856; Graetz, "Hist. of the Jews," iii. 116, Philadelphia, 1902). In Babylonia the first to employ rime were Saadia Gaon (892–942), in his poem on the letters of the Torah, and his AZHAROT and agenda, and Hai Gaon (939–1038), in his "Musar Haskel." In Italy the new form of poetry was first adopted by Shabbethai ben Abraham Donnolo (913–982) in the prologue to his "Taḥkemoni," and by Nathan ben Jehiel, author of the "'Aruk" (11th cent.). Of the Africans may be mentioned Dunash b. Labraṭ (10th cent.) and Rabbenu Nissim (11th cent.). In Spain Samuel ha-Nagid (993–1055) introduced rime into non-liturgical poetry also, as in his "Ben Mishle." In the Franco-German school Gershon, the "Light of the Captivity" (960–1040), and Rashi (1040–1104) sanctioned it by use. Owing to the influence of Arabic poetry and the weight of Ḳalir's example, and facilitated by the identity of the suffixes in Hebrew, the use of rime spread rapidly, extending even to titles and prefaces of books; and it has remained the dominant form of Hebrew poetry to the present day. Rime-lexicons were compiled for the benefit of verse-makers, examples of which are: "Sharshot Gablut" by Solomon di Oliveira (Amsterdam, 1665); "Sefer Yad Ḥaruzim" by Gerson Ḥefeẓ (Venice, 1705); "Imre No'ash" by Solomon b. Meshullam Dafisa; and "Clavis Poeseos Sacræ," etc., by Hieronymus Avianus (Leipsic, 1627).

Prosody of the Rime.

The Hebrew term for rime is "ḥaruz" (properly, "string" of pearls [Cant. i. 10] or of other things [Ḥul. 95b]; in a transferred sense, Yer. Ḥag. ii. 8; Lev. R. xvi. 4; etc.). It is first used in this sense by Gabirol (1021–58). Abraham ibn Ezra (1093–1167) applies it to the entire verse (comp. D. Rosin, "Reime und Gedichte des Abraham ibn Esra," i. 12, Breslau, 1887–89), and Dunash (in his "Le-Doresh ha-Ḥokmot") to poetry as opposed to prose. As the rime is rather for the ear than for the eye, —ָ rimes with —ַ, —ֵ with —ֶ, וּ with —ֻ; and so also of consonants, ס with שׂ; the former letter, however, does not rime with צ or שׁ, nor does כ with ח and כּ, or כ with ק, etc. Ibn Ezra, in his commentary on Eccl. v. 1, censures Ḳalir among other reasons for riming א with ע, ב with ו, "'osher" with "'asser," etc. (comp. also "Bikkure ha-'Ittim," pp. 97, 105, 119, Vienna, 1829).

The rime is called: (1) "'Ober," that is, "passable," "admissible," when only the vowels and final letters of the riming words are identical: בָּדָד with נֶחְמָד; חֲמוֹר with שׁוֹר. This, as also the flectional rime, is found in proverbs and rules, in prayers, and in other rimed prose. Thus Ibn Ezra has the epigram:

אַל תַּחֲרוּ בַּחֲמוֹר וְשׁוֹר
כִּי אִם תָּשִׂים אֶת החמור בְּהַר הַמּוֹר
ואת השור בְּאֶרֶץ הַמִּישׁוֹר.

Classification.

(2) "Ra'uy" = "correct," "perfect," when the initial consonants also of the last syllables are identical: אָמַר with שָׁמַר. This is the most usual form of rime, especially in the piyyuṭim. (3) "Meshubbaḥ," when the initial consonants of the penult also are identical: גְּבָרִים with שְׁבָרִים. Judah al-Ḥarizi sometimes has a perfect assonance of the riming words: *e.g.*, לְמַרְבִּין with וְתַשְׁבִּין, etc. The rime is faulty where one of the riming words has the accent on the last syllable ("mi-lera'"), the other on the penult ("mi-le'el"): מַיִם with חַיִּים. If both words are accented on the penult the rime must extend to both of the last vowels.

The repetition of the whole word was admissible only at the end of strophes, chiefly in Biblical phrases. It is also found in the piyyuṭim of the Franco-German school, which was in general far behind the Spanish in the use of rime. So in the piyyuṭ "Melek ba-Mishpaṭ" for Rosh ha-Shanah, "Aḳashtah Kesel" for Shemini Aẓeret, "Az Rob Nissim," ascribed to Yannai, in the Seder, etc.

A poem is called "ḳashur" = "bound," when the rime occurs only at the close of the verse-lines (the "soger"); "ḥaẓuy" = "halved," when also the hemistichs rime; and "meḥullaḳ" = "divided," "cut up," when each line rimes in itself and with its parallel line, as in the following example from Gabirol:

יְדִידַי קוֹשְׁרִים, וְרֵעַי שׁוֹקְרִים, וְרַבִּים אוֹמְרִים, לְנַפְשִׁי אֵין יָדִיד
רְדִידַי הוֹבְשִׁים, וְלַחְמִי דוֹרְשִׁים, וְעָלַי הוֹרְשִׁים, לְאַבֵּד דָּרְדִיד.

Cognate to this latter inner rime is the so-called echo rime, in which the terminal rimes reecho, as it were, the preceding word (a kind of epanastrophe). It was favored in the elegy, *e.g.*, in that of Joseph b. Solomon ibn Yaḥya on Solomon b. Adret (beginning of the 14th cent.):

קָרְחָה לְהַרְחִיב כִּנְשָׁרִים שָׁרִים
חוּשׁוּ וְהַחַת שִׁיר אֲמָרִים מָרִים, etc.

It was also affected by the great Palestinian payyeṭan Samuel Nagara (16th cent.).

Play upon Words.

The employment of a play upon words is found in the homonymous poems, called by the Arabic name "tajnis," in Hebrew "shir nizmad" (Al-Ḥarizi, "Taḥkemoni," 33), or, more appropriately, "shir shittufe ha-millot." The lines close with words identical in sound, but of different, sometimes opposite, meaning. Moses ibn Ezra (1070–1138) especially developed this device in his "Sefer 'Anaḳ," or "Tarshish" (comp. Tobias Lewenstein, "Prolegomena zu Moses ibn Esra's 'Buch des Tajnis,'" Halle, 1893):

אִם קוֹל הַתּוֹר אָחִי נִשְׁמָע אָז הִגִּיעַ עֵת הַזָּמִיר
עֶזְבָה דִּבְרֵי מָדוֹן וּשְׁתֵה וּקְרָא עַל כָּל-עָרִיץ זָמִיר

"When the voice of the turtle, O friend, is heard then the vintage season is arrived.
Leave off quarreling! Drink and cry, 'Down with every tyrant!'"
—Lewenstein, *ib.* p. 71.

The correspondence of the rimes within the strophe is as varied in Hebrew as in other languages. The scheme "aa," "bb," etc. ("ḥaruzim meḥubbarim"), is the simplest one. In the liturgical poems the rime usually changes after four lines. But sometimes one and the same rime runs through a whole poem, as in some of the "hosha'not," "ḳinot," etc. In the azharot a single rime is carried on through hundreds of lines. Thus the azharot of the Karaite Judah b. Elijah (16th cent.) consists of 612 lines, all ending in "-rim," and Judah Gibbor's poem "Minḥat Yehudah" (16th cent.) is composed of 1,612 verses with the same termination. In the non-liturgical poetry such rime is illustrated in the diwans of Al-Ḥarizi and Immanuel the Roman (1270–1330; comp. also "J. Q. R." x. 431). Alternate rimes ("ḥaruzim meshullabim"), "abab," etc., unknown in the European literatures before the twelfth century, were used in Hebrew poetry as early as the ninth. Rime enclosed within another ("ḥaruzim nifradim"), "abba," and many other arrangements are employed by one and the same poet.

What may be termed a poem with composite strophes is one in which the first three lines of each strophe have a common rime, while the fourth lines, consisting usually of Biblical phrases, have a different rime; this is exemplified in the poem of twelve strophes by Abraham ibn Ezra, of which the first two are as follows:

אֵל חַי בְּרָאַנִי
וְאָמַר חַי אָנִי
כִּי לֹא יִרְאַנִי
הָאָדָם וָחָי.

בָּרָא כֹל בְּחָכְמָה
בְּעֵצָה וּבִמְזִמָּה
עַד מְאֹד נֶעְלָמָה
מֵעֵינֵי כָל-חָי.

RIMINI: Italian town situated on the Adriatic, about 28 miles east-southeast of Forli. It is noted as the place where Gershon Soncino produced a number of works in the period 1521 to 1526. Here he printed the third and rarest edition of the "Siddur Romagna" (1521), Joseph Albo's "'Iḳḳarim" (1522), Baḥya' on the Pentateuch (1524–26), and Rashi's commentary (1526) as well as the "Agur" of Jacob b. Judah Landau (for a complete list see SONCINO).

J.

RIMMON (רמון = "pomegranate"): **1.** Town of the tribe of Zebulun, on the northeast frontier (Josh. xix. 13, R. V.); the Septuagint renders it, more correctly, "Rimonah." Probably it is identical with the Levite city of Rimmon (R. V. "Rimmono"; I Chron. vi. 77), which was given to the children of Merari, and which, misspelled "Dimnah," is probably referred to in Josh. xxi. 35. It would, in the latter case, correspond to the present Al-Rummanah, on the southern edge of the plain of Al-Baṭṭof, about 10 kilometers north of Nazareth, where traces of old buildings are found.

2. Sela' ha-Rimmon: Place, in the desert east of the territory of Benjamin, where 600 defeated Benjamites found refuge ("the rock Rimmon"; Judges xx. 47, xxi. 13). It corresponds, perhaps, to the present village of Rimman, mentioned by Eusebius, and lying 18 kilometers northeast of Jerusalem.

3. En-rimmon: City of Judah, referred to in Neh. xi. 29. It is mentioned also in Josh. xv. 32, xix. 7 (R. V.), and I Chron. iv. 32, as is shown by the Septuagint readings "Eromoth" and "Eremmon" and by the "Erembon" of the "Onomasticon" of Eusebius, although in these passages the Hebrew text mentions Ain and Rimmon separately. According to Josh. xv. 32, the city was included in the territory of Judah, although Josh. xix. 7 places it in that of Simeon. In Zech. xiv. 10 it is designated, under the name of "Rimmon," as the southern limit of the mountain district. According to Eusebius, the city lay sixteen Roman miles south of Eleutheropolis (Baet Jibrin); it is represented, therefore, by the modern Al-Ramamin, 27 kilometers southeast of Baet Jibrin.

4. Rimmon-parez: One of the encampments of the Israelites during the journey in the desert (Num. xxxiii. 19 *et seq.*).

E. G. H. I. BE.

RIMOS (REMOS), MOSES: Physician, poet, and martyr; born at Palma, Majorca, about 1406; died at Palermo 1430. He was a relative of the Moses Rimos who was known by the name "El Pergaminero" = "the parchment manufacturer," and who, in 1391, was baptized in Palma, assuming the name "Raimund Bartholomeu." According to Zunz, Moses Rimos was also a grandson of the Moses Rimos who, as is authoritatively known, was at Rome in 1371, where he purchased manuscripts from the Ẓarfati family and others. It can not be accurately determined whether the grandfather or the grandson wrote the undated letter and laudatory poem sent to Benjamin ben Mordecai in Rome, in which the author, who was living at Terracina as a private tutor, with a salary of sixty ducats a year, at great length displayed his knowledge of philosophy and expressed his longing for home.

The Moses Rimos of the present article was familiar with philosophical writings, and mastered several languages. He left his home while still young; went to Italy, where, presumably for the sake of his education, he lived at Rome; and finally settled in Palermo, where he practised medicine. Accused of having poisoned a Christian patient, he was imprisoned and sentenced to death. He preferred to die at the hand of the hangman rather than submit to baptism, which had been offered him as a means of saving his life. He was buried by the city walls of Palermo. Shortly before his death he wrote a metrical poem which shows great similarity to the laudatory poem written to Benjamin ben Mordecai. In it he enumerates all his attainments, literary and otherwise. He wrote also an epithalamium and a liturgical poem.

S. M. K.

RINDFLEISCH: German nobleman of Röttingen, Franconia; persecutor of the Jews in the thirteenth century. During the civil war waged between Adolph of Nassau and Albrecht of Austria, claimants for the imperial crown of Germany, bloody persecutions of the Jews broke out. A report was spread that the Jewish inhabitants of the little town of Röttingen had desecrated a host. Rindfleisch, a nobleman of that place, pretending to have received a mission from heaven to avenge this desecration and to exterminate "the accursed race of the Jews," gathered a mob around him and burned the Jews of Röttingen at the stake (April 20, 1298). Under his leadership the mob went from town to town, killing all the Jews that fell into their power, save those who accepted Christianity. The great community of Würzburg was entirely annihilated (July 24).

The Jews of Nuremberg sought refuge in the fortress. Being attacked, they defended themselves, but, although assisted by humane Christian citizens, they were overpowered and butchered (Aug. 1). Among the victims was Mordecai ben Hillel, a pupil of Jehiel ben Asher, with his wife and children. In Bavaria the congregations of Ratisbon and Augsburg—and they alone—escaped the slaughter, owing to the protection granted them by the magistrates.

The persecutions spread from Franconia and Bavaria to Austria, and within six months about 120 congregations, numbering 100,000 Jews, were swept away. The end of the civil war, following the death of Adolph of Nassau, terminated these persecutions and delivered the Jews from further fear.

D. S. MAN.

RING, MAX: German novelist, lyric poet, and dramatist; born Aug. 4, 1817, at Zauditz, Silesia; died March 28, 1901, at Berlin. He first attended the Jewish parochial school at Gleiwitz, and at the age of eight revealed his superior poetic gifts in the poem entitled "Der Judenkirchhof."

Ring next attended the gymnasium at Oppeln, Silesia, and later the universities of Breslau and Berlin. Graduating as M.D. in 1840, he began the practise of medicine at Gleiwitz. Upon the outbreak of an epidemic of typhoid in Upper Silesia, Ring found an opportunity not only to exercise his skill as a physician, but also to describe effectively in verse the unspeakable suffering and misery prevailing at that time among the people of the province. Although most of his writings were suppressed by the censor, the poem addressed to the king in behalf of the sufferers was afterward published.

In 1848 Ring removed to Breslau, and thenceforth devoted himself assiduously to literature also. At the request of the publisher J. U. Kern, he wrote his first novel, "Breslau und Berlin," which became the inspiration of Gutzkow's masterpiece, "Die Ritter vom Geiste," and brought the author into contact with such literary celebrities as Berthold Auerbach, Robert Giseke, and Theodor Mundt.

Ring achieved his first success as a dramatist in the comedy "Unsere Freunde," and his second, in the drama "Ein Deutsches Königshaus." He was also a very active contributor to the "Gartenlaube," and, from 1863 to 1865, when that publication was prohibited in Prussia, he conducted a separate edition of it in Berlin, under the title "Der Volksgarten." In 1856 he married Elvira Heymann, daughter of the publisher Karl Heymann, and in 1862 discontinued his medical practise in order to devote himself to literature exclusively.

The following are a few of the principal novels and romances written by Ring in the course of a literary activity extending over fifty years: "Die Kinder Gottes," Breslau, 1852; "Der Grosse Kurfürst und der Schöppenmeister," *ib.* 1852; "Verirrt und Erlöst," 2 vols., Gotha, 1855; "Rosenkreuzer und Illuminaten," 4 vols., Berlin, 1861; "Das Haus Hillel," 1879; "Berliner Kinder," 3 vols., Berlin, 1883. In addition to these he wrote many miscellaneous works, including: "John Milton und Seine Zeit," Frankfort-on-the-Main, 1857; "Berliner Leben, Kulturstudien," Leipsic, 1882; "Die Deutsche Kaiserstadt Berlin," 2 vols., Leipsic, 1882–84; "Das Buch der Hohenzollern," *ib.* 1888; besides a book of poems, some of which are on Jewish subjects.

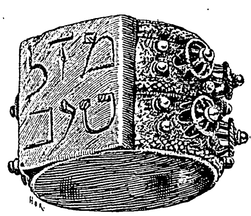
S. J. So.

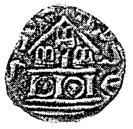
RINGS: Finger-rings, like rings for the ears and the nose, were used as ornaments by the Jews as early as the Biblical period (Ex. xxxv. 22, etc.), while seal-rings (Gen. xxxviii. 18, 25, etc.) and rings as signs of the highest dignity were likewise known at that time (*ib.* xli. 42, etc.). Neither the Bible nor the Talmud, however, speaks of the ring as symbolic of marriage. In the Talmudic period the formalities of betrothal, which ceremony was regarded as the beginning of marriage, resembled those of the first part of the modern engagement, the bridegroom giving the bride money, some article of value, or a document, saying at the time: "Be thou hallowed unto me through. . . ." About the seventh or eighth century, however, when two of the three mishnaic methods of obtaining a wife had become obsolete, the use of a ring as a symbol of marriage began to be frequent, probably earlier in Palestine than in Babylonia on account of the Roman influence exerted in the former. The betrothal was then differentiated from the wedding; and the ceremonies constituting marriage, which had hitherto been performed at two different times, were now celebrated on the wedding-day, some time after the betrothal. The chief ceremony of marriage was the placing by the bridegroom of a ring on the middle finger of the right hand of the bride, the accompanying invocation being "Be thou hallowed [betrothed] to me through this ring, according to the laws of Moses and Israel." The fact that the Jews (like the Romans) did not exchange rings, and that one was given only by the bridegroom to the bride, is explained by the circumstance that the ring was used as a symbol for the marriage by purchase, which was doubtless once customary among all races.



Old Betrothal Ring.

Ring as Symbol of Marriage by Purchase.

The wedding-ring, according to R. Tam, was a simple golden circlet without stones, although rings of silver or of cheaper metal were permissible if the bride was informed of the fact. In sporadic instances, however, mention is made of a wedding-ring of gold with pearls and even of one with false stones (Vogelstein and Rieger, "Gesch. der Juden in Rom," ii. 304 *et seq.*). Jewish women were not in the habit of wearing their wedding-rings, most of which were of an enormous size, while a few were unusually small (see fig. 1); in either case the size, as well as the ornamentation, which was usually very prominent, prevented them from being worn. The rings even served occasionally as bouquet-holders, myrtle-branches being inserted in them at weddings.



So-Called Coin of Solomon.

Examples of Wedding-Rings.

A large number of such wedding-rings have been preserved ("Cat. Anglo-Jew. Hist. Exh." Nos. 1822–1831, 1949–1963), although only a very few are older than the sixteenth century, and not one can be assigned to a date earlier than the thirteenth century. In the earliest examples the hoop is frequently formed of two cherubim and is crowned by a model of the Temple at Jerusalem, resembling that on the forged coin of Solomon (see fig. above). In other cases this representation assumes rather the shape of a synagogue with a small tower (see figs. 6, 9, 14, 19), on which sometimes is perched a weathercock. Others, again, display only a hoop more or less richly decorated with rosettes, lion-heads, and the like (see

Jewish Rings.

1, 5, 10–13, 15–18, 20–25, 28, in the Victoria and Albert Museum, London. 2–4, 6–9, 26, 27, in the collection of Albert Wolf, Dresden. 14, from Rücklin, "Schmuckbuch." 19, from Luthmer, "Gold und Silber."

figs. 1, 8, 12, 22), occasionally, however, bearing a small shield at the top. Especially costly specimens show a party-colored enamel decoration. The rings bear, almost without exception, an inscription, either engraved or in relief, around the hoop (see fig. 24), reading בטוב גדא (see fig. 6) on the earliest specimens, but on the later ones מזל טוב or מ"ט, an expression of felicitation which did not come into use until the fifteenth century (Berliner, "Aus dem Leben der Deutschen Juden im Mittelalter," p. 49). Most of these wedding-rings were made at Venice (Rücklin, "Schmuckbuch") and hence were probably produced by Jews, since, according to Lecky ("Rationalism in Europe," ii. 237, note 2), many of the Venetian goldsmiths who practised the art of carving were of that race.

Although Jewish women might not adorn themselves with their wedding-rings, they were recompensed on the Purim following the marriage, when their friends presented them with rings, clothes, and money; and, according to Leon of Modena, it occasionally happened that later in the marriage ceremony itself the bridegroom put a ring on the bride's finger, while he pronounced a formula of betrothal. The bridegroom frequently received gifts also; and in Germany it was customary for the prospective father-in-law to present him with a ring shortly before the wedding.

Other Rings.

Other specifically Jewish rings are those intended for seals, which represent the seven-branched candlestick engraved in stone and which bear the inscription להדליק כר של שבת. These rings, which were to remind the women of one of their chief duties, the lighting of the Sabbath lamps, were in use early in the Middle Ages, as is shown by the fact that such a ring was found in Mecklenburg together with Anglo-Saxon coins and Arabic dirhems (Donath, "Gesch. der Juden in Mecklenburg," p. 78). In Poland, where the Christian inhabitants laid great stress on the wearing of rings, it was not until the reign of Sigismund Augustus (1506–48) that the Jews, after long debates in the Reichstag, were allowed to wear such adornments. These had to be inscribed with the words "Sabbation" or "Jerusalem," which, according to Lelewel, was intended to remind the Jews of the wrath of God and of the punishment for their sins (Sternberg, "Gesch. der Juden in Polen," p. 146).

At a later period rings bearing the name of God were used as amulets. When a fondness for wearing rings became too pronounced, the rabbis or congregations interfered. Thus, for example, the rabbinical convention at Bologna in 1416 decreed that no man might wear more than one and no woman more than three rings (Vogelstein and Rieger, *l.c.* i. 337), while the Frankfort sumptuary regulation of 1715 enacted that "young girls may wear no rings whatever" (Schudt, "Jüdische Merckwürdigkeiten," iv. 3, 99).

A. A. W.

RINTEL, MOSES: Australian rabbi; born in Edinburgh 1823; died at Melbourne, Victoria, 1880; son of Myer Rintel, Hebraist and Talmudical scholar. For some years Moses Rintel acted as reader to the Brighton synagogue; in 1844 he went to Sydney; and in 1849 he was elected minister of the East Melbourne Congregation. In Sydney he established the Sydney Hebrew Academy, founded in 1856 the United Jewish Friends' Benefit Society, and helped to establish a duly constituted bet din. In 1857 Rintel resigned his office in Melbourne, and another place of worship was established under the title of "Mikveh Israel Melbourne Synagogue." This synagogue was opened in 1860; and Rintel officiated at the new place of worship for some time without remuneration. He acted also, on the nomination of Chief Rabbi N. M. Adler, as chief of the bet din. He was a steadfast upholder of Orthodox Judaism and was widely esteemed in the Australian colonies. He published two sermons, one on Yom Kippur (Melbourne, 1859), which are among the earliest Jewish publications in the Australian colonies.

J. G. L.

RIPARIAN OWNERS: There being but little river navigation in the Holy Land, the Mishnah says nothing as to the rights and duties of landowners along the river-bank, except in reference to irrigation. It teaches (Giṭ. v. 8) that for the sake of peace the upper riparian owners are allowed to draw water from such canals before those who have their lands lower down. The principle is formulated again in a slightly different form in the Babylonian Gemara (B. M. 108a) in connection with rules governing the dwellers on the Euphrates and its tributaries. In that country there was much river navigation; the boats being generally drawn by men walking along the shore and dragging the craft by means of long ropes (B. M. 107b, 108a). A law was laid down by the Rabbis for the Jews along the river, most probably in conformity with the Persian law of the Sassanid dynasty, to this effect: On both banks of the river, in the interest of navigation, all trees were to be cut down, with or without the owner's consent, and if needs be without notice to him, over a strip sufficiently wide to make room for the "shoulders" of the boatmen who dragged at the ropes. No mention is made of draft-animals, though such may have been employed at times.

E. C. L. N. D.

RIQUETTI, JOSEPH SHALLIṬ BEN ELIEZER: Scholar of the seventeenth century. He spent his youth at Safed, and subsequently settled at Verona. There in 1646 he published Gerondi's book "Yiḥus ha-Ẓaddiḳim." He then published at Amsterdam a map of Palestine under the title "Ḥokmat ha-Mishkan" or "Iggeret Meleket ha-Mishkan." In 1676 he went to Mantua, where he was busy with a second edition of his "Yiḥus," which was subsequently published in that city.

S. S. O.

RISHONIM (lit. "the first," or "the elders"): Name applied to the authorities who lived before the one who quotes them. The designation is found in the Talmud, where it is generally used in the sense of "predecessor," or "ancestor" (Shab. 112b; Ber. 20a; Tamid 28a). In later rabbinical literature the name is applied only to the rabbinical authorities preceding the Shulḥan 'Aruk, while all the authorities since and including the Shulḥan 'Aruk are called "aḥaronim" (later ones). See Aḥaronim.

RITTANGEL, JOHANN STEPHANUS: German controversial writer; born at Forscheim, near Bamberg; died at Königsberg 1652. It is stated that he was born a Jew, became converted to Roman Catholicism, then became a Calvinist, and lastly joined the Lutheran Church. He became professor of Oriental languages at Königsberg, and issued a number of translations of Hebrew works: one of the "Sefer Yeẓirah," 1642; one of the Passover Haggadah, 1644, published also in his "Libra Veritatis" (Franeker, 1698); and one of the earliest translations of Jewish prayers, under the title "Hochfeyerliche Sollennitaeten, Gebethe und Collecten Anstatt der Opfer, Nebst Andern Ceremonien so von der Jüdischen Kirchen am Ersten Neuen-Jahrs-Tag Gebetet und Abgehandelt Werden Müssen," Königsberg, 1652. His posthumous work "Bilibra Veritatis" was written to substantiate the claim that the Targums prove the doctrine of the Trinity. This is also the subject of his "Veritas Religionis Christianæ" (Franeker, 1699).

T. J.

RITTER, IMMANUEL HEINRICH: German rabbi; born March 13, 1825, in Ratibor, Prussian Silesia; died July 9, 1890, in Johannisbad, Bohemia. While studying at the gymnasium of his native town he received his Talmudic instruction under Rabbi Loewe. At the University of Breslau classical philology and history formed his special studies (Ph.D. 1849). During an audience with the Cultusminister von Raumer in 1851, the latter gave the young candidate to understand that only baptism could entitle him to an appointment as professor at a college. Ritter thereupon accepted a position as teacher of religion and reader at the Berlin Reform congregation, becoming later assistant to the senior preacher of the temple, Samuel Holdheim. His first ten sermons were published as "Kanzelvorträge aus dem Gotteshause der Jüdischen Reformgemeinde" (Berlin, 1856), which placed him at once among the foremost Jewish preachers of his time. In 1859 his "Beleuchtung der Wagner'schen Schrift," published against "Das Judenthum und der Staat" by Wagner, member of the Prussian Diet, created a stir. Ritter's principal work was his "Geschichte der Jüdischen Reform," in four parts (Berlin, 1858-1902): I. "Mendelssohn und Lessing." II. "David Friedländer." III. "Samuel Holdheim." IV. "Die Jüdische Reformgemeinde in Berlin" (edited by S. Samuel, rabbi in Essen). In the first part Ritter demonstrates that Moses Mendelssohn's lack of understanding of historical criticism concerning Judaism was one of the main reasons why his own children and many of his friends became apostates from the religion of their fathers. He further shows that Lessing had a better conception of Judaism than Mendelssohn. Mendelssohn's false view of revelation, a view which identifies Judaism with legalism, makes him a representative of conservatism and even of retrogression.

In 1858 a rupture between Ritter and the administration of the congregation occurred, when he and his colleague Dr. Gustav Gottheil sent in their resignations, because the officers of the congregation interfered with the freedom of the pulpit. But the storm passed away, and after Holdheim's death (1860) Ritter was chosen his successor.

Ritter's collection of "Weihe-Reden und Predigten" (Berlin, 1875) is chiefly devoted to the Jewish festivals. He also edited a volume of Holdheim's posthumous sermons, "Fest- und Gelegenheitsreden" (Berlin, 1869), and translated for Kirchman's historical-political library Thomas Buckle's "History of Civilization in England" (Berlin) and Lecky's "History of Rationalism in Europe" (2d ed., Heidelberg, 1885) into German. Ritter was one of the leading spirits in the Society for the Freedom of the School, which was formed in 1869.

RITTER, JULIUS: German physician and author; born in Berlin Oct. 4, 1862; son of Immanuel H. Ritter. He received his degree of M.D. from the University of Berlin in 1887, and is at present (1905) chief physician at the Institute for Invalid Children and at the Bacteriological Laboratory in that city. In 1892 Ritter announced his discovery of the bacillus of whooping-cough, and in 1893 and 1896 published the results of his continued investigations and the detailed confirmation of his original discovery. His second important group of articles dealt with diphtheria and the therapeutics of the curative serum, and was preceded in 1893 by the extensive work "Aetiologie und Behandlung der Diphtherie." Finally he published articles on scrofula and the treatment of scrofulous children, and an address before the Congress for Internal Medicine, held at Berlin in June, 1897. S.

RITUAL MURDER. See Blood Accusation.

RIVA DI TRENTO: Small town on the Lake of Guarda, under the jurisdiction of the Bishop of Trent. Christoforo Madruz, Cardinal of Trent and Archbishop of Brixen, granted in 1558 the privilege of printing Hebrew books to Joseph Ottolengo, a German rabbi and school-director, then living at Cremona. The actual printer was Jacob Marcaria, a local physician. After his death in 1562 the activity of the press of Riva di Trento ceased. Altogether thirty-four works were published in the period 1558 to 1562, most of them bearing the coat of arms of Cardinal Madruz. The first Hebrew book printed at Riva was the "Halakot" of Alfasi in three folio volumes; and the general tendency of the press was to produce halakic works, as the "Mordekai," the novellæ of Rabbi Nissim, and two editions of the Mishnah. Besides these, two editions of the Pentateuch were issued, one with the Five Megillot and the other with the Targum and Rashi. The print was of an exceptionally clear type; and the fact that all the books were produced under the patronage of a cardinal of the Church is very significant.

J.

RIVERA: Spanish Jewish family that appears in American history at an early date. The family seems to have come from Seville, Spain, though some members of it have been traced to Portugal; many were settled in Mexico before the middle of the seventeenth century. In connection with the trial of Gabriel de Granada by the Inquisition in Mexico (1642–45) there appear, as "accomplices" in the observance of the law of Moses and as Judaizing heretics, Dona Maria, Dona Catalina, Clara, Margarita, Isabel, and Dona Blanca de Rivera, all of whom seem to have been natives of Seville. Another person mentioned in the same connection is Diego Lopez Rivera, a native of Portugal. The name is frequently written "Ribera."

Abraham Rodrigues de Rivera: The first bearer of the name "Rivera" in that region of North America now known as the United States; born in Spain; died in Newport, R. I., 1765. His family, even while still resident in Europe, was closely related to the Lopez family, afterward intimately associated with the history of Newport. In fact, he was a brother-in-law of Diego Jose Lopez of Lisbon, the father of Aaron Lopez; and Moses Lopez, a son of Diego, married Abraham's daughter Rebecca. Abraham Rivera was twice married in Europe; by his first wife he had a son, by the second a son and a daughter. With his family he went to America early in the eighteenth century, settling at New York. According to Marano custom, a remarriage took place in that city, and the first names of the entire family were changed. The original names are unknown, but those assumed were Abraham (by the father), Isaac and Jacob (by the sons), and Rebecca (by the daughter).

As early as 1726 Abraham Rodrigues was enrolled as a freeman of the city of New York, being designated as a merchant. He took an interest also in the congregation of that city, his name appearing in the minutes of 1729. He was naturalized in 1740. After the death of his second wife he married a lady named Lucena. After her death he and his entire family removed from New York to Newport.

Jacob Rodrigues Rivera: Merchant; born about 1717; died at Newport Feb. 18, 1789; son of Abraham Rodrigues. He accompanied his father to New York when a mere child. Entering upon a mercantile career, he went to Curaçao, where he married into the Pimentel family. With his wife he returned to New York, where was born his daughter Sarah, who subsequently married Aaron Lopez. Rivera was naturalized in New York in 1746, removing to Newport about 1748, where he soon became one of the leading merchants. He introduced the sperm-oil industry in America, which soon became one of the principal sources of Newport's prosperity. Jacob owned extensive spermaceti factories, and was a large importer of manufactured goods. He was a public-spirited citizen, and his name figures in connection with the Redwood Library as early as 1758; he appears as one of the organizers of a Hebrew club at Newport in 1761. An observant Jew, he was one of the three who, in 1759, purchased the land upon which the Newport synagogue was erected.

Owing to reverses, he was obliged to compromise with his creditors so as to obtain a release from his debts. Later on, however, he again prospered, and a story is told of his inviting his creditors to dine with him, when each creditor found under his plate the amount of his claim, with interest. In 1773 he was named one of the trustees of the Jewish cemetery at Savannah, Ga. Both he and his wife appear in the diary of Ezra Stiles. When the Revolution broke out, Rivera espoused the Colonial cause, and was among those who, in 1777, removed to Leicester, Mass., where he remained until 1782. His stay there is referred to by Emory Washburn in his history of the place. He finally returned to Newport, where his integrity and benevolence were universally esteemed. Jacob's fortune at the time of his death exceeded $100,000. The monument over his grave in the old cemetery at Newport may still be seen. His son **Abraham** died in New York, leaving an only son, named **Aaron Rivera,** who settled in Wilmington.

RIVKIN, MIRON DAVIDOVICH: Russian writer; born in Vitebsk in 1869. His father, who was employed as clerk in the police department, was a Talmudist of no mean ability. Rivkin obtained his early education in the ḥeder, where he showed marked ability in acquiring a knowledge of the Old Testament and of the Talmud. In 1881 he entered the government Jewish school in Vilija, and in 1884 the Jewish Teachers' Institute in Wilna. In the institute he led a studious life and became familiar with Russian history and literature. Graduating in 1889, he was appointed instructor in the government Jewish school at Volozhin, and was transferred in 1891 to Molodejno and in 1895 to Minsk. In 1897 he left the government service and accepted the position of instructor in the Jewish schools of St. Petersburg.

Rivkin's first literary efforts date from his student days in Wilna. While in the institute he wrote a long poem entitled "Dorothea Mendelssohn," and also a historical play in verse entitled "John Hyrcanus." His sketches, "Poslyedniye Gody Volozhinskavo Yeshibota," appeared in the "Voskhod" in 1895, and

RIZPAH: Daughter of Aiah and concubine of Saul. After Saul's death Rizpah, with the other women of his harem (comp. II Sam. iii. 13), remained with his son and successor, Ish-bosheth, but Abner, the general of Saul, took possession of Rizpah, thus indicating his intention of seizing the throne (comp. II Sam. xii. 11, xvi. 22; I Kings ii. 22). The account as given in II Sam. iii. 7 *et seq.* implies the same purpose on the part of Abner by assigning his conduct as the reason for his breach with Ish-bosheth, while his act was construed by David as overt rebellion. Rizpah is again mentioned in the account of the revenge taken by the Gibeonites on Saul. David had delivered to them Armoni and Mephibosheth, the two sons whom Rizpah had borne to Saul, together with five of Saul's grandsons, all of whom the Gibeonites killed and left unburied as a prey to the wild beasts. Rizpah thereupon spread sackcloth upon a rock, and kept watch over the bodies, keeping away the birds and beasts of prey. David was so touched by this display of maternal love that he had their remains buried together in the family sepulcher (II Sam. xxi. 8-14).

ROADS: In primitive times the chief use of roads in Palestine was to afford communication with markets. Later on roads were used for military purposes, for the movement of troops and commissariat. Of the three great trading countries of the Biblical world—Egypt, Babylonia, and Arabia—Palestine had on the whole least relations with Arabia, though its frankincense was doubtless brought to the central shrines from time to time by the great caravan route, which still passes from Damascus to the holy places of Arabia, and which is known in modern times as the "Pilgrim Road." Owing, however, to the Arabian desert, which could be traversed only by this route, Palestine was a necessary link between the two great powers of the Biblical world—Egypt and Assyria—but because of the unsettled state of the country and the more fortunate location of Damascus, this city, rather than Jerusalem or Samaria, was the central mart toward which traffic tended. In the world of the Old Testament it may fairly have been said, "All roads lead to Damascus." The four chief roads to Damascus which led through the Holy Land were:

(1) The coast route, known as "the way of the land of the Philistines" (Ex. xiii. 17), running through Gaza, Ashdod, Dor, Accho, and Tyre. At the last-named city this road took a sharp curve inland to Dan and thence ran to Damascus.

(2) The route which branched off from the first at Ashdod and, skirting the foot of the Shefelah, went to Antipatris and Accho, while a branch line from Cæsarea crossed it and ran to Cana, Tiberias, and thence to Damascus.

(3) The route from Beersheba to Damascus. This route went through Hebron, Jerusalem, Beth-el, and Shechem, and, crossing the Jordan at Bethshean, followed the river to the Sea of Galilee, thence running northeastward to Damascus.

(4) Finally, the route from Arabia, which touched Kir Moab, Ataroth, Heshbon, and Rabbath Ammon, and afterward traversed the plain of Gilead until it joined the Shechem-Bethshean route (see No. 3).

Of these four great roads of the Palestine of the Bible, the one most used was that along the seashore, by which Sargon marched to attack Egypt and Sennacherib to attack Judea.

These roads were connected by crossroads, running mostly east and west. First there was the Gaza-Sheba-Kir Moab road, skirting the southern shore of the Dead Sea. Gaza was connected with Jerusalem through Eleutheropolis, from which a branch led through Hebron to En-gedi. At Jerusalem there was a junction of several roads. The chief road to the seashore was through Emmaus, Modin, Lydda, and Joppa. From Joppa a cross-country route led through Lydda, Modin, Beth-el, and Jericho to Heshbon, while a similar road much farther north went from Accho to Sepphoris, crossing the Jordan near Gadara, and connecting two eastern highways (beyond Palestine) that led to Damascus. Similarly, a road from Shechem led through Samaria into the second road north.

These are the main highways and crossroads of Palestine, though there are innumerable paths. How far these were made roads and how far they were merely natural paths, resorted to for their comparative easiness of access, it is somewhat difficult to say. The regular Hebrew name for road, "derek," implies merely a trodden path through suitable passes in the hills or along level valleys. Yet Mesha, the King of Moab, speaks of making roads. Mention is made of leveling and of removing stones from the road (Isa. xliii. 19), filling holes, and reducing declivities (Isa. lvii. 10, lxii. 10). No bridges are mentioned, the rapid and narrow streams of the Holy Land being easily fordable. Josephus declares that Solomon paid attention to road-making ("Ant." iii. 7, § 3). There may be some truth in this, as he was the first to introduce chariots, which could not use the ordinary roads. Reference is made to a tax for keeping roads in repair in Persian times (Ezra iv. 13-20, vii. 24). The value of roads was early recognized; they were an evidence of civilization (Ps. cvii. 4-7; Jer. ii. 6). The "road" or "way" or "path of life" was a common simile among Israel's teachers, and the great catechism of later Judaism was called the "Two Paths" (see Didache).

ROBBERY (**גזל** or **גזלה**)**:** In law the taking of the movable property of another under constraint of force or fear; in the Bible the word is sometimes applied to the forcible taking of land or of slaves. From the penalty for robbery (at least under certain conditions), as prescribed in Lev. v. 20, 26 (A. V. vi. 1-7), the punishment of stripes is excluded. In this passage, as interpreted by the sages, an oath is imposed

upon one charged with that of robbery or certain other offenses against property, and a penalty for perjury is added to that for robbery if he afterward confesses. Yet the penalty seems wholly inadequate: the guilty party shall restore that which he took by robbery, and add the fifth part to it; moreover, he shall bring his guilt-offering of a ram without blemish; and then he shall be forgiven. Oppression ("'oshek") is both here and in Lev. xix. 13 named together with robbery; this is committed where one who has lawfully come into possession of his neighbor's goods withholds them unlawfully from the rightful owner.

In the Talmud.

The Mishnah and the Gemara deal with the robber even less severely than Scripture, the reason probably being that, when speaking of the robber, the sages had not in mind the avowed bandit, but rather the publican or some other tool of the Romans, who by abusing his power stripped his fellow Israelites of their goods. It was the policy of the sages not to drive such men, when they happened to submit to their judgment, into open hostility, nor to discourage their return to a more patriotic course of life (B. Ḳ. 94a). Among robbers was reckoned (at least in so far as he was compelled to restore possession before he could enforce his claims) one who without judicial sanction seized the goods of a debtor (Shebu. vii. 2); also one who cut fruits or plants from land which was unlawfully in his possession (Suk. 30a). Leniency toward the robber was especially marked in the days of Judah the Patriarch, it being declared: "When a robber repents and voluntarily offers to pay for the things that he has taken, and which he can not restore in kind, it is better not to accept the money from him" (B. Ḳ. *l.c.*). However, some of the medieval standards regard this practise as only temporary, not as an institution (see Joseph Caro, Commentary on Maimonides' "Yad," Gezelah, i. 13; *idem*, Shulḥan 'Aruk, Ḥoshen Mishpaṭ). It is curious how Maimonides himself (*l.c.* v. 9) couples tribute-takers and bandits (לסטים) as men who are presumed to have acquired all their means by robbery, that is, by taking things unlawfully.

The sages introduced into the question of robbery an element which greatly modifies the rights and duties of those claiming goods taken, namely, the despair ("yi'ush") of the owner; *i.e.*, his giving up the hope of recovering his own. What constitutes such despair or abandonment is rather vaguely defined; at any rate the burden of proof is on him who alleges such "yi'ush." Another element is change in the form of the article taken so that it loses its name or identity (B. Ḳ. ix. 1), as in the case of wood made into implements, or wool into garments.

In the Codes.

The laws of robbery are set forth (aside from those already mentioned) by Maimonides (*l.c.* i.-v.) substantially as follows: Robbery, that is, taking by force, is forbidden by the Torah, no matter what the value of the object, and whether it belongs to an Israelite or to an idolater. The robber is bound to return the object itself (Lev. v. 23). When it is changed or lost, he pays the price, whether he confesses or is condemned upon the evidence of witnesses. Where one has taken a beam and built it into a house, he should, according to the letter of the Torah, tear down the whole structure, if necessary; but the sages have ordained that, to avoid such a great loss, he may pay the price of the beam. If, however, the beam has been made part of a "sukkah" (booth for the Feast of Sukkot), it should be returned after the feast; and so in like cases. Though to take a thing worth less than a peruṭah (¼ cent) is sinful, the law of restoration can not be applied in such a case. Where one has taken a thing by force in a settled country, he may not, unless with the consent of the owner, return it in the desert; it remains at the robber's risk till he brings it to a settled region. Where one has taken money, but has repaid it in his account with the person robbed, or has put it into the latter's purse (containing other money) even without the latter's knowledge, he has cleared himself of guilt.

When an object forcibly taken has not been changed in form, though the owner may have despaired of its return, after the robber's death his sons must return it. But if changed, though the owner has not despaired, it is acquired by the robber, and the latter pays the amount at which it was valued at the time of the robbery; for the text says "he shall return the thing which he has robbed," which means "the thing in the state in which it was when taken." The sages, to encourage repentance, have ordained that if the thing taken increases in value after being despaired of by the owner, the robber is entitled to the increase, which must be paid to him when he returns the object. This refers to a sheep covered with a new fleece of wool, or to a cow becoming big with calf, or the like, but not to an increase in the market price. But if the cow has calved, or the sheep has been shorn before the owner despaired, then, according to the prevailing opinion (B. Ḳ. 95), the calf or fleece, though it was an accretion after the robbery, must be restored to the owner, or its value paid to him. On the other hand, where the increase in value arises through the work and outlay of the robber, *e.g.*, where he has fattened an animal, the robbed party, on restoration, must reimburse him for the increase in value.

According to some authorities, the despair of the owner, or the sale or gift by the robber to a third party, confers ownership on the last-named, and the owner can then demand only compensation in money from the robber; but this ruling is disputed.

Change in the Object Taken.

What constitutes a change? When one takes a bar of metal and coins it no change is involved; for the coin may be melted into a bar again. But if coins or vessels are taken and melted into bars, this is a change; for if the bars are minted or wrought again into coins or vessels, such coins or vessels would be new ones. If boards are taken and framed into a box, which can be reduced to boards by withdrawing the nails or screws, there is no change; but if a tree or logs be cut up into planks or boards, there is a change. So also a change results from the sawing of a plank into boards, or from taking wool and dyeing or carding and bleaching it, or from taking cloth and cutting it up and sewing it into garments; for in each case the object is known by a new name.

Where forcible possession is taken of a piece of land the disseizor can give no better title than he has himself; and though the land has been sold "a thousand times" it goes back to the true owner without outlay on his part even for improvements (B. Ḳ. *l.c.*), the last holder having no recourse except on the warranty of his vendor.

According to Maimonides, one who buys stolen goods from a man known to be a thief is bound to restore them to the true owner in like manner as land. When a lamb grows into a ram, or a calf into an ox, the robber pays only its value at the time of taking, and this though the owner had not abandoned the hope of recovery. Where an implement is broken while with the robber, he should pay the value of the implement at the time when he took it; but the owner may, if he chooses, claim the broken pieces and the difference in money.

Value Returnable.

As a rule, in all cases in which the article can not be returned the robber pays the value which it bore at the time of the robbery (B. Ḳ. ix. 1). If, however, the market value of the article has risen, and the robber wilfully destroys or consumes or sells it, he must pay the increased value, as, save for his new wrongful act, he might have restored it; this is not the case, however, if the object was lost or destroyed by accident. If the article has diminished in market value, the robber must pay the first and higher price, whether it was lost through his fault or not.

Where a number of small articles have been taken, only the price at which the whole lot might be bought need be paid as compensation, not the retail price obtainable by selling each article by itself; and this rule applies as against all damage-feasors.

Where a work-animal in the hands of the robber becomes worthless through age or through an incurable disease, or where wine has turned into vinegar, or fruits have altogether rotted, he must pay the original value, as for a broken vessel; but when animals are affected with a curable disease, or fruits are only slightly touched by rot, or coins are declared not current in one country but are still good elsewhere, the robber may return them as they are.

If a man has wrongfully taken hold of a work-animal, and has ridden or put a burden on it, or has plowed or thrashed with it, and then returns it without damage to the owner, though his act is sinful and forbidden, he is not bound to pay anything. If, however, a man makes a habit of thus obtaining the use of other men's beasts, he is mulcted, even outside the Holy Land, and made to pay the injured party for the benefit he has derived or for the hire of the beast. Where one takes hold of his neighbor's bondman and employs him, but without preventing him from doing all of his master's work, he is not liable for compensation. Where one takes possession of another's boat and uses it on a trip, the wear and tear, if the boat is not kept for hire, is assessed against him who takes it; but if it is kept for hire the owner has the option between the regular hire and the charge for wear and tear. Where one takes up his abode in the court of his neighbor without the latter's consent he can not be charged with rent if the court is not kept for renting; but if it is, he must pay rent. The discussion of such wrongdoings in connection with robbery recalls the "furtum usus" of the Roman law.

Robbery by Kings.

Maimonides takes advantage of the law of robbery to make some nice distinctions between the lawful and the arbitrary acts of a king. Living in Mohammedan countries, he knew no king whose lawmaking power was circumscribed by the necessary consent of a parliament; yet he distinguishes between acts done under the general laws by which the king (meaning a Gentile ruler) imposes taxes, or threatens confiscation, and edicts by which he takes the property of one man or of a number of men at his mere whim or pleasure. A forcible taking under the law and in conformity with it changes the title to land; and the Jewish court must respect the new ownership. But a taking under a tyrannical command is no better than robbery; and so, a fortiori, is the taking without the king's authority by a royal officer. But the same author makes one allowance in favor of absolutism: when the king disgraces a courtier ("servant") and takes his property from him, even without any pretense at legality, the act is binding; for such, he says, is the custom of all kings.

When the robber dies, and the object of the robbery is not available, either because he has given it to his sons for consumption after abandonment (if before they would be liable for consuming it), or because he has lost or sold it, the sons are liable only as for a debt of the father; that is, under the old law, if the father has left assets in land, and, under the later law, if he has left either real or personal assets.

The Biblical provision that when a robber has under oath denied taking an object, and afterward repents and confesses, he must return to the owner the thing taken with one-fifth in value added before he can receive divine forgiveness, may, as later interpreted, become a serious, though only a self-imposed, punishment for an act of robbery; for this return must, as the Mishnah declares, be made to the owner in person, no matter at what distance—"even though the thing be only worth a peruṭah, and the owner be in Media" (B. Ḳ. ix. 5). But in an ordinary case, where the court adjudges a return, a delivery to the proper officer of the court is sufficient.

According to the maxim, well known to the common law, "Omnia præsumuntur contra spoliatorem," the Talmudic law gives certain advantages, mainly in the admission to the decisory oath, to the original owner as opposed to any party against whom witnesses are found to testify that he has seized goods without the owner's consent, or that he has entered the latter's house without his knowledge in order to make a seizure. The rules as to this point are stated concisely in Procedure in Civil Causes.

ROBERT, RAHEL. See Levin, Rahel.

ROBLES, ANTONIO RODRIQUES DA: English Marano merchant and shipper; born at Fundão, Portugal, about 1620. It is probable that he was one of the Neo-Christians who attempted to reestablish the Spanish dominion in 1641 (Kayserling, "Geschichte der Juden in Portugal," p. 307). He settled in London and was connected with the West-Indian trade. In 1656, during the war between England and Spain, two of his ships, "The Two Brothers" and "The Tobias," were seized and he himself was arrested on the ground that he was a Spaniard. On the advice of his coreligionists in London, Robles boldly claimed indemnity on the plea that he was not of the Spanish but of "the Jewish nation," and that he had come to England to shelter himself from the tyranny of Spain. He, however, admitted having attended mass in London; and the commissioners, on inquiring into the case, were doubtful as to his nation or religion, but declared that the balance of testimony was in favor of the fact that he was a Jew born in Portugal. The Privy Council ordered his release; and thenceforth there was no reason for any Jew in England to deny his race or religion.

ROCAMORA, ISAAC (VICENTE) DE: Spanish monk, physician, and poet; born about 1600 of Marano parents at Valencia; died April 8, 1684, at Amsterdam. Educated for the Church, he became a Dominican monk (assuming the name "Vicente de Rocamora") and confessor to the Infanta Maria of Spain, subsequently Empress of Austria, who honored him greatly. In 1643 he openly adopted Judaism, taking the name of Isaac. He studied medicine, and then settled in Amsterdam, where he engaged in the active practise of his profession. He became physician to and director of several philanthropic societies in that city, among them the Maskil el Dal and Abi Yetomim.

Rocamora was one of the judges of the academy of poetry, Los Sitibundos, founded by Manuel de Belmonte; but none of his poetical works, either in Spanish or in Latin, has been preserved. His son **Solomon de Rocamora** also was a physician in Amsterdam.

S. M. K.

ROCHESTER: Capital of Monroe county, and the third city in size in the state of New York. According to the latest census (1900) it has 162,608 inhabitants, among whom, it is estimated, the Jews number about 5,000.

Although a few Jews lived in Rochester as early as 1840, the history of the Jewish community does not begin until 1848. In that year twelve young men, all natives of Germany, most of them still unmarried, united to hold services on the high festivals, and for this purpose met at the residence of one of them, at the corner of Clinton street and Clinton place. Their names were Joseph Wile, Samuel Marks, Joseph Katz, Gabriel Wile, Meyer Rothschild, Henry Levi, Jacob Altman, Joseph Altman, A. Adler, Elias Wolff, Abram Weinberg, and Jacob Gans. On Oct. 8, 1848, the day after the Day of Atonement, they met at the same place and formed the Congregation Berith Kodesh. For six months services were held at the same residence, until in April, 1849, a hall was rented for the purpose of divine worship. This hall was situated on the third floor of 2 Front street, corner of Main street. In the year 1856 a building formerly a Baptist church was purchased on St. Paul street. This building was adapted to the needs of the congregation and used until the year 1894. In the meantime the congregation had grown very rapidly, and had long felt the want of a more spacious edifice. Accordingly in 1893 the present magnificent temple was erected, and was dedicated June 1, 1894; it was designed by Leon Stern, a member of the congregation, and built on the corner of Gibbs and Grove streets, at a cost of $130,000. It is one of the finest of the buildings devoted to public worship in the city.

Rabbis.

The first rabbi of Berith Kodesh congregation was Marcus Tuska. He was succeeded by Dr. Isaac Mayer (from 1856 to 1859). Dr. Aaron Ginsburg served from 1863 to 1868. After an intermission of two years and six months the present rabbi, Dr. Max Landsberg, was elected on Dec. 26, 1870. He entered upon his functions in March, 1871, and has filled the position ever since.

Until 1881 Berith Kodesh was the only Jewish congregation in Rochester, with the exception of Ez Raanon, founded in 1870 by a few members who had seceded from the older congregation on account of its introduction of family pews. But they all returned, and Ez Raanon was dissolved in 1883 and its building on Hyde Park sold for the erection of residences. Since then a number of Russian congregations have been organized under the names of Bet Yisrael, Bet ha-Keneset he-Ḥadash, Bene Dawid, Wa'ad ha-Kolel, and the Congregation of Tailors.

Philanthropic Institutions.

The Men's Benevolent Society, connected with Congregation Berith Kodesh, was formed in 1850, and the Jewish Women's Aid Society in 1865. In 1882, in consequence of the influx of Russian Jews driven by persecution from their native land, the relief societies were combined into the United Jewish Charities, which are conducted on modern scientific principles.

The Jewish Orphan Asylum Society of Rochester was founded in 1877, and in the year 1879, together with similar societies in Buffalo and Syracuse, organized the Jewish Orphan Asylum Association of Western New York. This association, which numbers 560 members, maintains an orphan asylum for the three cities; it is located on St. Paul street, Rochester. The building and grounds are valued at $15,000, and the sinking-fund of the association amounts to about $60,000. At present (1905) there are twenty-four children in the asylum.

A Social Settlement was founded in Rochester in 1900, and it owns a building on Baden street. While it is almost entirely maintained by the Jewish residents, its work for the neighborhood is entirely nonsectarian, and its benefits are appreciated by all, irrespective of creed or race.

The orders of B'nai B'rith, Free Sons of Israel, Kesher shel Barzel, and Sons of Israel have one lodge each, and the order of B'rith Abraham has two lodges.

The Jews of Rochester have filled many public positions of trust. Among them Simon Hays has been president of the Common Council, and Marcus Michaels and Isaac Wile have served as school commissioners.

A. M. Lan.

RÖDELHEIM: Prussian town near Frankfort-on-the-Main. A Jewish community existed there probably as early as the middle of the thirteenth century, for it appears from the municipal archives that the legal status of the Jews was determined as early as the year 1290. The town is especially noteworthy for its Jewish printing-presses. Carl Reich owned a press in the middle of the eighteenth century, publishing among other works Y. Zamosc's "Ḥedwat Ya'aḳob" (1751), Samuel Friedberg's "Birkat ha-Ḥodesh" (1753), and Meïr Levi of Zolkiev's "Miksheh Zahab" (1757). Moses b. Jacob Levi was a typesetter there. At the beginning of the nineteenth century the city became still more noteworthy through the Orientalische und Occidentalische Buchdruckerei established by Wolf Heidenheim and Baruch Bashwitz. The most important works printed by them were: "Sefer ha-Ḳerobot" (1800); "Mebo ha-Lashon" (1806); "Mishpeṭe ha-Tamim" (1808); five editions of the Pentateuch (1818–21); and "Seder Tish'ah be-Ab, Yeme ha-Purim," together with the Haggadah (1822–26).

The town has a total population of 6,492, of whom 130 are Jews (1905). The Jewish institutions include the May'sche Hospital, for all confessions, and a hospital for Jews who are bachelors or widowers.

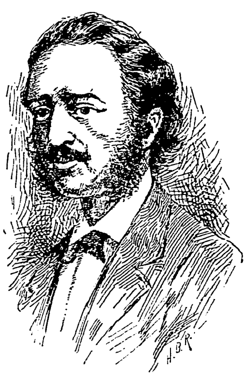
J. S. O.

RODENBERG, JULIUS: German poet and author; born at Rodenberg, Hesse, June 26, 1831. He studied law at the universities of Heidelberg, Göttingen, Berlin, and Marburg, but soon abandoned jurisprudence for literature. In 1851 appeared in Bremen his first poem, "Dornröschen," which was soon followed by many others. From 1855 to 1862 he traveled, visiting Great Britain, Belgium, Holland, Denmark, Italy, and Switzerland. In 1859 he settled in Berlin, where he still (1905) resides.

From 1867 to 1874 he was coeditor with Dohm of the "Salon für Litteratur, Kunst und Gesellschaft"; and in the latter year he founded the "Deutsche Rundschau." In 1897 he received the title "Professor." Rodenberg is a prolific writer. Of his works may be mentioned: "Lieder," Hanover, 1854; "Pariser Bilderbuch," Brunswick, 1856; "Kleine Wanderchronik," Hanover, 1858; "Ein Herbst in Wales," *ib.* 1857; "Die Insel der Seligen," Berlin, 1860; "Alltagsleben in London," *ib.* 1860; "Die Harfe von Erin," *ib.* 1861; "Tag und Nacht in London," *ib.* 1862; "Lieder und Gedichte," *ib.* 1863 (6th ed., 1901); "Studienreisen in England," Leipsic, 1872; "Belgien und die Belgier," Berlin, 1881; "Bilder aus dem Berliner Leben," *ib.* 1885 (3d ed., 1891); "Unter den Linden," *ib.* 1888; "Franz Dingelstedt," *ib.* 1891; and "Erinnerungen aus der Jugendzeit," *ib.* 1899.



Julius Rodenberg.

His novels include: "Die Strassensängerin von London," Berlin, 1863; "Die Neue Sündflut," *ib.* 1865; "Von Gottes Gnaden," *ib.* 1870; "Die Grandidiers," Stuttgart, 1879 (2d ed., 1881), a story of the Franco-Prussian war; "Herrn Schellbogens Abenteuer," Berlin, 1890; "Klostermanns Grundstück," *ib.* 1890 (2d ed., 1892).

RODER, ANTON. See Rado, Anton.

RÖDER, MARTIN: German composer and conductor; born in Berlin April 7, 1851; died at Boston, Mass., June 7, 1895; studied at the Königliche Hochschule für Musik in his native city. From 1873 to 1880 Röder was chorus-master at the Teatro dal Verme, Milan, and in 1875 founded the Società del Quartetto Corale. He also conducted opera at various places, as Bologna and Turin, and even in the Azores. From 1880 to 1887 he taught singing in Berlin, for a part of the time at the Scharwenka Conservatorium; for the next five years he was professor at the Royal Academy of Music in Dublin; and in 1892 he went to America to take charge of the vocal department in the New England Conservatory at Boston.

Röder was a very scholarly musician, and his compositions evidence both versatility and marked ability. Among them are: three operas, one of which, entitled "Vera," was performed at the Hamburg Stadttheater in 1881; two symphonic poems, "Azorenfahrt" and "Leonore"; the overture "Attila"; and a trio in F minor. His writings include: "Ueber den Stand der Oeffentlichen Musikpflege in Italien" (in "Sammlung Musikalischer Vorträge"), Leipsic, 1881; "Studi Critici Raccolti," Milan, 1881;

and "Dal Taccuino di un Direttore di Orchestra," 1881 (German ed., "Aus dem Tagebuch eines Wandernden Kapellmeisters," Leipsic, 1882). Röder also contributed articles to the "Gazzetta Musicale" under the pseudonym "Raro Miedtner."

Bibliography: Riemann, *Musik-Lexikon*, 1900; Baker, *Biog. Dict. of Musicians*.

RODKINSON, MICHAEL LEVI. See Frumkin, Israel Dob (Bär).

RODOSTO (Turkish, **Tekfur-Dag**; formerly called **Bisanthe** and **Rhœdestus**): Port of Turkey in Europe on the Sea of Marmora, 78 miles west of Constantinople. The city had a Jewish community as early as the twelfth century; for in 1173 Benjamin of Tudela found 400 Jews there, among whom were the noted rabbis Moses, Abijah, and Jacob. The community has remained undisturbed for centuries, but it has not attained any great importance. In the seventeenth century Rodosto possessed a celebrated thaumaturge, R. Isaac ben Sahl, author of a curious manuscript in Judæo-Spanish entitled "Sefer Segullot," which treats of divination, chiromancy, suggestion, and similar topics; and another native of Rodosto, Judah Graziani (1838–93), carried on the work of his predecessor, the belief in demons and malevolent spirits still being a characteristic of the people. Epitaphs in the local cemetery mark the tombs of the chief rabbis Nissim Moses Finzi (1736) and Ẓebi Nathan, while in the same cemetery are the graves of the chief rabbis of the nineteenth century, Raḥamim Graziani, Ḥayyim Elijah Finzi, and Jacob Finzi.

The Jews of Rodosto to-day (1905) number about 2,800 in a total population of 35,000. They possess a synagogue (rabbi, Yom-Ṭob Cordova), an oratory, a school for boys with an attendance of 150, and an apprenticeship committee supported by the Alliance Israélite Universelle. The community is badly organized, however, and is considerably in debt as compared with the other Jewish settlements in Turkey.

RODRIGO DE CASTEL-BRANCO, JUAN. See Juan Rodrigo de Castel-Branca.

RODRIGUES, HIPPOLYTE: French banker and writer; born at Bordeaux in 1812; died at Paris 1898. He was a son of **Isaac Rodrigues-Henriques,** head of a great banking-house in Bordeaux. In his "Papiers de Famille," published in 1893, Rodrigues relates the following family tradition: The families of Gradis and Rodrigues emigrated from Palestine at the time of the insurrection of Bar Kokba, settled in Portugal, and later in Spain, under the dominion of the Moors. After being driven from their homes by the Inquisition they took refuge in Bordeaux. Members of the Gradis family performed such signal services in the navy under Louis XV. and XVI. that the patent of nobility was offered to them by Louis XVI. This, however, was refused, as they declined to take an oath upon the Gospel as the statutes prescribed.

Rodrigues was educated in Paris, and early showed a marked taste for literature. At the age of eighteen he began writing a romance entitled "Christiern," the subject of which embraces the entire history of the French Revolution. In 1840 he became a stock-broker on the Paris Bourse, but after a brilliant career retired in 1855, and gave his undivided attention to study and literary work. He was a member of the Société des Gens de Lettres and of the Société des Compositeurs.

Rodrigues was a prolific writer. The following is a partial list of his works: "Les Trois Filles de la Bible" (1865–67); "Les Origines du Sermon de la Montagne" (1867); "La Justice de Dieu" (1868); "Histoire des Premiers Chrétiens: Le Roi des Juifs" (1869); "Saint-Pierre" (1871); "David Rizzio" (grand opera, words and music, 1873–77); "Histoire des Seconds Chrétiens: Saint-Paul" (1875); "Apologues du Talmud" (in verse, 1879–83); "Romances sans Paroles" (for the piano, 1889); "Papiers de Famille" (1893); "Histoire du Péché Originel" (1896); "Les Origines du Péché Originel" (1897).

Bibliography: Hippolyte Rodrigues, *Papiers de Famille*, 1893.

RODRIGUES, OLINDE: French economist and reformer; born at Bordeaux Oct. 16, 1794; died at Paris Dec. 26, 1850. He was a pupil of the Ecole Normale Supérieure, where he made a specialty of mathematical studies; later he became assistant professor at the Ecole Polytechnique. In 1823 he made the acquaintance of Saint-Simon, who converted him to his doctrines. On the day of his leader's funeral Rodrigues assembled the former's disciples to consider the project of founding a journal to be based on Saint-Simon's principles. The publication was launched under the title "Le Producteur," and Rodrigues was its editor during 1825–26. In 1829 he succeeded, with the assistance of his brother Eugène, in turning the followers of Saint-Simon's principles into a sect, but in the same year he surrendered the leadership to Bazard and Enfantin. About the close of 1831 Rodrigues had a rupture with Enfantin, on account of certain theories held by the latter on the propriety of the family having published two volumes of the works of Saint-Simon. In 1832 Rodrigues engaged in banking and brokerage. He was also concerned in the building of the Saint-Germain and Orléans Railroad, the first railroad put in active operation in France.

In 1841 he published the "Poésies Sociales des Ouvriers," to show the middle classes the liberality of ideas of the proletariat. In 1848 he supported the republic, and strongly advocated the rights of the working men. His later years were occupied in consolidating the mutual-aid societies, and in preparing the material for a biography of Saint-Simon, which was edited and published by Hubbard in 1857. A pamphlet entitled "Maria Stella," directed against Louis Philippe, has been attributed to Rodrigues, but without foundation. He was the author of "Opinions Littéraires, Philosophiques, et Politiques de Saint-Simon" (1825). He published also, as "Paroles d'un Mort," a parable by Saint-Simon.

Bibliography: Georges Weill, *L'Ecole Saint-Simonienne*, 1896.

RODRIGUEZ: In the seventeenth and eighteenth centuries many persons bearing the surname Rodriguez were condemned by the Inquisition to death at the stake or to lifelong imprisonment on the ground that they were "Judaizantes" or secret confessors of Judaism. **Miguel Rodriguez** and his wife, **Isabel Nuñez Alvarez,** the owners of a synagogue situated in the Calle de los Infantes, Madrid, in which the secret Jews held their services, together with **Leonor Rodriguez** and her husband, **Hernan Baëz (Vaëz),** were publicly burned in Madrid July 4, 1632. At the great auto da fé held in Madrid June 30, 1680, **Catalina Rodriguez,** called "la Paquina," who had died in the prison of the Inquisition at S. Jago de Compostella at the age of seventy, was burned in effigy; and on Nov. 30, 1721, **Maria Rodriguez,** ninety years old, and her daughter, both of Granada, were led to the stake in that city. In Cuenca a whole family named Rodriguez, husband, wife, and several sons and daughters, were condemned to lifelong imprisonment, June 29, 1722. The same fate befell the following: a **Julian Rodriguez** in Cuenca on Nov. 22, 1722; another Julian Rodriguez, likewise of Cuenca, who was a book-dealer of Madrid, on Feb. 20, 1724, in Madrid; **Gabriel Rodriguez** and his wife, also of Cuenca, on March 12, 1724, in Valladolid; **Juan** or **Samuel Rodriguez** of Bordeaux, aged fifty-one, who was a writing-teacher in Hornachos, Estremadura, imprisoned in 1723; **Juan Rodriguez** of Bayonne, resident in Antequera, in 1725; and the business woman **Isabel Rodriguez** of Constantine, in 1726; and many others.

Bibliography: Inquisition documents; Kayserling, *Sephardim*, pp. 202 *et seq.*; idem, *Ein Feiertag in Madrid*, p. 34.

Abraham Ḥayyim Rodriguez: Rabbi in Leghorn about 1750. He was the teacher of Malachi ha-Kohen, and was highly praised by Azulai and honored as a cabalist by J. Pacifico in an elegy. Rodriguez left many legal decisions, forty-seven of which, dealing with subjects of the four ritual codes, were published after his death by his daughter (the widow of the learned Ḥayyim Hezekiah Fernandez Africano) under the title "Oraḥ la-Ẓaddiḳ" (Leghorn, 1780). The first decision, entitled "Oraḥ Mishor," based upon the ritual codex Yoreh De'ah, called forth the "Sifte Dal" of an anonymous writer, in response to which Rodriguez wrote fifty-eight counter-observations entitled "Teshubot Ḥen Ḥen." These are printed together with the above-mentioned "Oraḥ la-Ẓaddiḳ."

Bibliography: Nepi-Ghirondi, *Toledot Gedole Yisrael*, p. 19; Roest, *Cat. Rosenthal. Bibl.* Supplement, p. 375, No. 1922; Fürst, *Bibl. Jud.* iii. 162.

Alonso Rodriguez: Spanish physician of the fifteenth century; born in Seville. He lived at Saragossa, where, together with Alonso de Rivera of Cordova, also a physician in Saragossa, he was burned at the stake March 12, 1488.

Bibliography: Rios, *Hist.* iii. 616.

David Cohen Rodriguez: Ḥakam in Amsterdam; author of a sermon in Spanish, "Sermon Moral, Pregado Neste K. K. de Talmud Torah 27 Menahem, 5480" (= Sept. 1, 1720), Amsterdam, 1720.

Bibliography: *R. E. J.* xxvii. 121.

Henrico Rodriguez: Portuguese physician and Marano; friend of Rodrigo de Castro. He settled in Hamburg before 1594, and left it a few years later on account of the plague.

Bibliography: Kayserling, *Gesch. der Juden in Portugal*, p. 279; Grunwald, *Portugiesengräber*, p. 121.

Manuel Rodriguez: Marano and poet. At first he was an Augustinian monk, and later he became a tutor at Antwerp. He was the author of the drama "Herodes Saeviens" (Antwerp, 1626) and of a Latin ode on the physician Emanuel Gomez in Antwerp (*ib.* 1643).

Bibliography: Barbosa Machado, *Bibliotheca Lusitana*, iii. 355; Kayserling, *Sephardim*, p. 209.

Raphael Rodriguez: Ḥakam in Amsterdam; son of Judah Rodriguez. He was the author of a funeral dissertation, "Sermão Funeral as Deploraveis Memorias de Benjamin Levi de Vittoria" (Amsterdam, 1719).

Bibliography: Kayserling, *Bibl. Esp.-Port.-Jud.* p. 94.

Samuel Levi Rodriguez: Spanish poet in Leghorn; died 1683. Daniel Levi de Barrios gives some of his poems and bemoans his death.

Bibliography: D. L. de Barrios, *Torah Or*, p. 47; idem, *Aumento de Israel*, p. 20; Kayserling, *Sephardim*, p. 263.

J. M. K.

ROE: Rendering in the Authorized Version of the Hebrew צבי, which is sometimes translated also "roebuck" and "wild roe," and occasionally in the Revised Version "gazel." The roe is mentioned as an animal permitted as food (Deut. xiv. 5); and it was furnished for Solomon's table (I Kings iv. 23). Its swiftness, gentleness, and grace are often alluded to (II Sam. ii. 18; Prov. vi. 5; Cant. ii. 9, v. 17). The feminine form "ẓibyah" (Aramaic, "tabita") was used as a proper name (II Kings xii. 2, "Zibiah"; Acts xi. 36, "Tabitha"). The Authorized Version renders "ya'alah" (Prov. v. 19) also by "roe," and "'ofer" (Cant. iv. 5, vii. 3) by "young roe." Of the *Cervidæ* the *Gazella dorcas* is the most abundant of all large game in Palestine.

In the Talmud the Hebrew "ẓebi" and "ayyal" are the generic terms for all species of *Cervidæ*, so that it is impossible to determine which is meant in each case. In some passages, however, the roe seems specifically intended: *e.g.*, Ḥul. 132a, where reference is made to the mating of the goat with the ẓebi; *ib.* 59b, a reference to the ẓebi with unbranched horns, the roe having as a rule only one branch on its antler, and sometimes none at all; Kil. i. 6, where the similarities between the goat and the ẓebi are enumerated. In the same passage the "ya'el" is said to resemble the hart. The *Antilope dorcas* is perhaps mentioned under the name עיזא כרכום = "goat of Kerkus" (Ḥul. 59b). See Goat; Hart; Unicorn.

ROEBUCK. See Hart; Roe.

ROEDELSHEIM, ELEAZAR SUSSMANN B. ISAAC: Dutch scholar, probably of German descent; lived in the first half of the eighteenth century. He was the author of the following works: "Mohar Yisrael," comprising a Hebrew grammar and a Dutch-Hebrew and Hebrew-Dutch dictionary, with an Aramaic-Dutch dictionary as an appendix, Amsterdam, 1741, 1744; "Maggishe Minḥah" (1728–1729), a German translation of the Bible; "Miḳra Meforash" (1749), a German translation of the Pentateuch. He edited "Niẓẓaḥon," a Hebrew translation of "Der Jüdische Theriak" of Solomon Ẓebi Hirsch of Aufhausen (a polemical tract directed against the anti-Jewish convert Brenz).

Bibliography: Steinschneider, *Cat. Bodl.* col. 958; Benjacob, *Oẓar ha-Sefarim*, pp. 305, 368; Fuenn, *Keneset Yisrael*, s.v.; Fürst, *Bibl. Jud.* iii. 46.

T. S. O.

ROEST, MEYER (MARCUS): Dutch bibliographer; born at Amsterdam 1821; died there 1890. Becoming connected with a firm of booksellers, he acquired a taste for bibliographical studies, and as a result published in 1857 "Catalogue de Livres Orientaux." Roest's best-known work is the "Catalog der Hebraica und Judaica aus der L. Rosenthal'schen Bibliothek" (2 vols., Amsterdam, 1875). After Baron Rosenthal presented his collection to the Amsterdam Library, Roest was appointed custodian of it. He contributed to various Jewish periodicals, such as the Dutch "Spectator" and the "Taalkindig Magazin," and edited the "Israelitische Letterbode" for several years.

Bibliography: *Jew. Chron.* Jan. 3, 1891, p. 14.

S.

ROFE, DANIEL B. SAMUEL B. DANIEL HA-DAYYAN: Italian physician of the fourteenth and fifteenth centuries; lived at Pisa and Perugia. He devoted much time to the study of the Arabic writers on medicine, especially Ibn Sina. His "Eben Pinnah" (Paris MSS. No. 307) was copied for him by Abraham ibn Karshef, who refers at the end to the merits of Daniel Rofe and his father.

Bibliography: Carmoly, *Hist. des Médecins Juifs*, p. 133, Brussels, 1844; Mortara, *Indice*, p. 19; Mosè, *Antologia Israelitica*, iii. 24; Fuenn, *Keneset Yisrael*, p. 265.

S. S. O.

ROFE, DANIEL B. SOLOMON: Italian physician and scholar of the fifteenth century; born at Fano. References to him occur under date of 1430, 1448, and 1470. He was the author of: a supercommentary on Ibn Ezra, which work was formerly in the possession of S. D. Luzzatto; marginal glosses on Ḳimḥi's commentaries on Amos, Micah, and Isaiah, formerly in the possession of De Rossi; a supplement to Solomon b. Moses' "Apology"; a synopsis of Ibn Ezra's commentary on Genesis, with notes, under the title "Ha-Gersa ha-Aḥeret"; and an account of his journey to Crete in 1473.

Bibliography: Luzzatto, in *Kerem Ḥemed*, iii. 174, iv. 132; Carmoly, *Hist. des Médecins Juifs*, pp. 132–133, Brussels, 1844; Zunz, *G. S.* i. 176, § 61; Fuenn, *Keneset Yisrael*, p. 265.

S. S. O.

ROHLING, AUGUST: Catholic theologian and anti-Semitic author; born in 1839 at Neuenkirchen, province of Hanover, Prussia. He studied at Münster and Paris, and became professor successively at Münster, Milwaukee (Wis.), and Prague, retiring in 1901. He is still (1905) canon of the Cathedral of Prague. Not prominent as a scholar in his specialty, which is Hebrew archeology, he has distinguished himself in an unenviable way by his polemics against Protestantism and Judaism. Of his anti-Jewish works "Der Talmudjude" (Münster, 1871, and often reprinted) has become a standard work for anti-Semitic authors and journalists, although it is merely an abstract of the "Entdecktes Judenthum" of Eisenmenger, and even as such very faulty. The book first appeared, at the time when Bismarck inaugurated his anti-Catholic legislation, as a retort to the attacks made by the liberal journals on the dogma of infallibility and on the Jesuitic text-books of morals, it being usual for the anti-liberals to pretend that all liberal newspapers were controlled by Jews. The book was very extensively quoted by the Catholic press and created quite a literature, but it did not become a political force until the appearance of anti-Semitism, and especially until the Tisza-Eszlár trial in 1883, when Franz Delitzsch defended Judaism against the attacks of Rohling. At the same time Josef S. Bloch wrote articles in which he accused Rohling of ignorance and of forgery of the texts. Rohling sued Bloch for libel, but withdrew the suit at the last moment. Later on he greeted the appearance of Zionism as the solution of the Jewish question, and lately he has written a pamphlet against Güdemann's "Das Judenthum in Seinen Grundzügen," etc.

Those of Rohling's works which concern the Jews are, in addition to "Der Talmudjude": "Katechismus des 19. Jahrhunderts für Juden und Protestanten," Mayence, 1878; "Franz Delitzsch und die Judenfrage," Prague, 1881; "Fünf Briefe über den Talmudismus und das Blutritual der Juden," *ib.* 1881; "Die Polemik und das Menschenopfer des Rabbinismus," Paderborn, 1883; "Die Ehre Israels: Neue Briefe an die Juden," Prague, 1889; "Auf nach Zion," *ib.* 1901; and "Das Judenthum nach Neurabbinischer Darstellung der Hochfinanz Israels," Munich, 1903.

Of the very large polemical literature against Rohling the oldest work is Kroner's "Entstelltes, Unwahres und Erfundenes in dem Talmudjuden Professor Dr. August Rohling's," Münster, 1871. Distinguished by sound scholarship and by a dignified tone are the two pamphlets of Delitzsch, "Rohling's Talmudjude Beleuchtet" (Leipsic, 1881) and "Schachmatt den Blutlügnern Rohling und Justus" (2d ed., Erlangen, 1883).

Bibliography: *Ottův Slovník Naučný*, xxi. 895, Prague, 1904; *Oesterreichische Wochenschrift*, passim; *Mittheilungen des Vereins zur Bekämpfung des Antisemitismus*, passim. The origin of *Der Talmudjude* is narrated in *Allg. Zeit. des Jud.* 1871, p. 674; and valuable material on the lawsuits in which Rohling became involved by his polemical writings is found in Joseph Kopp, *Zur Judenfrage nach den Akten des Prozesses Rohling-Bloch*, Leipsic, 1886, and in the *Jüdische Presse*, 1902, No. 46.

S. D.

RO'IM. See Pastoureaux.

ROMAN, JACOB BEN ISAAC IBN BAKODA: Bibliographer and writer, of Spanish descent; born at Constantinople about 1570; died at Jerusalem in 1650. He was possessed of great knowledge; according to Conforte he knew the whole of the Mishnah by heart, and he was well acquainted with the rest of Jewish literature; he furthermore could speak Arabic, and understood Turkish and Latin. The anonymous author of "Ḥorbot Yerushalayim" (Venice, 1636) reports (p. 5b) that Roman when on his way to Jerusalem in

1625 was made prisoner, together with other Jews, by Mohammed ibn Farukh and was subsequently ransomed; but it is not certain that he was on his way to Jerusalem at that date.

Through his friend the physician Leon Aryeh Judah Siaa, Roman became acquainted with Anton Leger (who was born in Piedmont, and was for some time chaplain of the Dutch embassy at Constantinople, and afterward professor of Oriental languages at Geneva) and by him was recommended to Johannes Buxtorf the younger in Basel. Buxtorf made use of Roman's bibliographical knowledge and owed to him the whole appendix to his father's "Bibliotheca Rabbinica," which he edited. He entered into correspondence with Roman, which, however, soon came to an end; the two letters of Roman which have been preserved were published in full in the "Revue des Etudes Juives" (viii. 87–94).

For several decades the need of a Hebrew printing-press had been felt in the Orient. At Constantinople, in the last years of the sixteenth century, there was no Jewish press; nor was there one in Salonica in the first half of the seventeenth century. Roman, as he wrote to Buxtorf on June 20, 1634, conceived the plan of reestablishing a Hebrew press in Constantinople. He wished then to print Maimonides' "Moreh Nebukim" in three languages, the Arabic text with Hebrew letters—the Turks would not allow Arabic type to be used—and the Hebrew and Latin translations, all arranged in three columns. He intended also to publish the "Cuzari" and Baḥya's "Ḥobot ha-Lebabot," with a Latin translation by his friend Leon Siaa. The project of the Hebrew printing-press was never realized; nor did Roman publish any of the mentioned works; even the translation of Buxtorf's "Tiberias," which he began, and of which he had already sent a specimen to Buxtorf, was not printed, if, indeed, it was ever finished.

Roman composed a Hebrew prosody, entitled "Mozene Mishḳal," in which he tried to give examples of 1,348 meters; also an Arabic-Turkish and an Arabic-Hebrew dictionary, the latter of which was finished Oct. 11, 1629 (the autograph copy is in the Bibliothèque Nationale at Paris). He translated various works of Jonah ibn Janaḥ from Arabic into Hebrew. None of his works appeared in print. Roman owned many manuscripts which were bought by Buxtorf for the agent of Cardinal Richelieu. Most of the manuscripts which Roman mentioned in his letters to the professor at Basel are now in the Bibliothèque Nationale, Paris. On several of them it is expressly stated that they were in the possession of Jacob Roman.

D. M. K.

ROMANELLI, SAMUEL AARON: Neo-Hebrew poet; born at Mantua Sept. 19, 1757; died at Casale Monferrato Oct. 17, 1814. A man of great gifts but unsteady in his habits, Romanelli began to travel early in life. He went first to Morocco, where he spent four years. He has described his experiences there in a work which has become very popular (see below). Returning to Europe, he lived successively in Berlin (1791), Vienna (1793), London (1799), and Lille (France), going back to his native country about 1800. The last years of his life were spent in Casale, where he died suddenly of apoplexy.

Romanelli supported himself by teaching and by writing Hebrew and Italian poems for weddings, patriotic feasts, and similar occasions; but, being erratic and a scoffer of religion, he made very many enemies, and always lived in great poverty. Besides his Hebrew poems, he wrote translations, especially of the prayer-book, from Hebrew into Italian and from Italian into Hebrew. Notable among his translations from Italian are those of Metastasio's melodrama "Themistocles" and Maffei's tragedy "Merope"; the latter has been edited by Weikert, a Benedictine monk (Rome, 1903, 2d ed. 1904), while the former is still in manuscript. For the names in the original Romanelli gives Hebrew substitutes, as *Merab* for *Merope, Palti* for *Polifonte*, etc. The Hebrew version, while not literally following the original, is not only poetical, but also a faithful rendering.

Of Romanelli's works may be mentioned: "Ha-Ḳolot Yeḥdalun" or "Mishpaṭ Shalom" (Berlin, 1791), a Hebrew melodrama in honor of a wedding; "Massa' ba-'Arab" (*ib.* 1792), a description of his travels in the Barbary States, several times reprinted, and translated into English by Schiller-Szinessy (Cambridge, 1887); "Ruaḥ Nakon" (Berlin, 1792), a philosophic poem; "'Alot ha-Minḥah" or "Ḥeber ha-Me'ushshar" (Vienna, 1793), a poem in honor of the wedding of L. Hertz and Charlotte Arnstein, in Italian and Hebrew; "Grammatica Ragionata Italiana ed Ebraica," Triest, 1799; an Italian translation of parts of the Sephardic ritual (n.p., 1802); "Zimrat 'Ariẓim" (Mantua, 1807), hymns in honor of Napoleon; "Maḥazeh Shaddai" (*ib.* 1808), Hebrew and Italian poems; a poetical translation of that part of the Yom Kippur service which describes the office of the high priest on the Day of Atonement (Alessandria, 1808); "Tappuaḥ Zahab" (Vienna, *c.* 1810), an epos from Greek mythology; a Hebrew hymn on Emperor Francis of Austria and his brother Archduke Carl (n.d., n.p.). A great number of poems, a Hebrew grammar, a text-book on "sheḥiṭah," and translations from the English and other languages are still in manuscript. Ludwig Geiger believes Romanelli to be the Italian Jew highly spoken of as a translator of German classics into Italian and recommended by F. L. W. Meyer to Wieland; but this is not at all probable ("Allg. Zeit. des Jud." 1903, pp. 9–11, 132).

S. D.

ROMANER, BENJAMIN ZEEB WOLF BEN SAMUEL: Rabbi and preacher in the seventeenth and eighteenth centuries. He officiated as darshan in Semigrod, and later in Dessau, and in his old age lived at Metz.

Romaner was the author of "'Ir Binyamin," a work in two parts on the haggadot of the two Talmudim (part i., Frankfort-on-the-Oder, 1698; part ii., Fürth, 1722).

Bibliography: Steinschneider, *Cat. Bodl.* col. 793; Azulai, *Shem ha-Gedolim*, s.v.; Michael, *Or ha-Hayyim*, No. 278; Benjacob, *Ozar ha-Sefarim*, p. 440, Nos. 346-347.

ROMANIN, SAMUEL: Italian historian; born at Triest in 1808; died at Venice Sept. 9, 1861. Having at an early age lost his parents, who died in poor circumstances, Romanin found himself head of the family, with which in 1821 he removed to Venice, where he secured a position as tutor of French and German in a private family. His first literary attempt was a translation into Italian of the well-known historical works of Joseph von Hammer-Purgstall, under the titles "Impero Osmano" and "Dell' Origine, Potenza e Caduta degli Assassini"; the latter was published in 1828. This was soon followed by a rendering into prose of the German poem "Tunisiade" by Archbishop Ladislaus Pyrker (formerly Patriarch of Venice).

From 1842 to 1844 Romanin's first great original work was published in three volumes under the title of "La Storia dei Popoli Europei dopo la Decadenza dell' Impero Romano." In 1847 Romanin, who meanwhile had become professor of history in one of the colleges of Venice, began his history of Venice, of which the first volume appeared in 1853. At the time of his death the whole work was completed in manuscript; the third part of the ninth volume brings the history down to the year 1789.

Romanin was a thorough master of the German and French languages and literatures. He was also an accomplished Hebrew and Aramaic scholar, and many Talmudic legends were translated by him into the Italian.

ROMANO ELIANO, SALOMO. See Baptista, Giovanni Salomo Romano Eliano.

ROMANO, LEONE (JUDAH B. MOSES B. DANIEL B. MOSES B. JEKUTHIEL or R. YEHUDAH HA-FILOSOF): Italian scholar; born at Rome 1292; died there after 1350. Romano was a friend of the naturalist Benjamin b. Judah, together with whom he was the center of learning of the Roman community. He was a gifted thinker, a fine Latinist, and well versed in scholastic philosophy. By his writings and his translations of philosophical works he sought to make Christian scientific literature accessible to the Jews; he was also an energetic teacher. "He had many pupils: he drained the sea of ignorance, and illuminated the darkness of exile," says his cousin Immanuel b. Solomon, who, although many years older, had become his assiduous pupil.

Romano set himself to translate the more important philosophical works of medieval literature. By 1328 he had completed the "Liber de Causis," ascribed to Aristotle, and Thomas Aquinas' "Treatise on Ideas." He then translated Averroes' commentary on Aristotle, and works by Albertus Magnus, Ægidius of Colonna, and Angelo da Camerino. He apparently translated passages that appealed to him, and from these compiled a book, with notes. He wrote also a Hebrew-Italian glossary of philosophical terms, with philosophical comments, explaining in this way the most important prayers, and passages from the Bible, especially the story of the Creation. He wrote, besides, a commentary on Maimonides' "Sefer ha-Madda'," under the title "Ben Porat," and a work on the theory of prophecy. Romano's works were frequently transcribed, and many copies are still extant.

He was highly esteemed by Christians, and is quoted by them as "Leone de Sere Daniel." King Robert of Naples called him to his court, and himself studied under the Italian scholar.

Bibliography: Steinschneider, *Giuda Romano*, Rome, 1870; idem, *Hebr. Uebers.* §§ 300 *et seq.*; Vogelstein and Rieger, *Gesch. der Juden in Rom*, i. 440; Güdemann, *Gesch.* ii. 128.

G. I. E.

ROMBERG, MORITZ HEINRICH: German physician; born at Meiningen, Saxony, Nov. 11, 1795; died in Berlin June 16, 1873. He graduated as doctor of medicine from the University of Berlin in 1817, and after a short stay in Vienna settled in the German capital in the following year. In 1820 he was appointed physician to the poor, and in 1830 was admitted to the university as privat-docent in medicine, lecturing on special pathology and therapeutics. During the cholera epidemics of 1831 and 1837 he was in charge of one of the hospitals in Berlin. The subjects of his lectures included, after 1834, examinations of the heart and lungs. In 1838 he became assistant professor, and in 1840 took charge of the university dispensary. In 1845 he was elected professor, and resigned his position as physician to the poor. In 1851 he received the title "Geheime Medizinalrath"; and in 1867, after celebrating his jubilee as doctor, he retired into private life.

Romberg published many essays, especially in Caspar's "Wochenschrift" (of which journal he was one of the editors from 1833), in Rust's "Handbuch der Chirurgie," in Schmidt's "Jahrbuch für Praktische Medizin," in Horn's "Archiv," etc.

He was the translator of Bell's work on physiology under the title "Physiologische und Pathologische Untersuchungen des Nervensystems," Berlin, 1832 (2d ed., *ib.* 1836), and author of "Lehrbuch der Nervenkrankheiten," *ib.* 1840-46 (3d ed. 1853-55; of the 4th edition only vol. i. was published, in 1857). In 1820 he translated Marshal's "The Morbid Anatomy of the Brain," and in 1828 Albertini's "Opuscula."

Romberg's specialty was neuropathy. In this field he did much to advance the knowledge of diseases and their treatment. His "Lehrbuch der Nervenkrankheiten" gave for the first time a systematic review of nervous maladies.

ROME: Capital in ancient times of the Roman republic and empire; in modern times, of the papal dominions and of the kingdom of Italy. Jews have lived in Rome for over 2,000 years, longer than in any other European city. They originally went there from Alexandria, drawn by the lively commercial intercourse between those two cities. They may even have established a community there as early as the second pre-Christian century, for in the year 139 B.C. the pretor Hispanus issued a decree expelling all Jews who were not Italian citizens. During the last decades of the second century B.C., after the war between the Hasmonean brothers on one side and Cæsar and Pompey on the other, the Jewish community in Rome grew very rapidly. The Jews who were taken to Rome as prisoners were either ransomed by their coreligionists or set free by their Roman masters, who found their peculiar custom obnoxious. They settled as traders on the right bank of the Tiber, and thus originated the Jewish quarter in Rome.

Early Settlement in Rome.

The Jews identified themselves with Roman politics and exerted at times some influence at public meetings (Cicero, "Pro Flacco," ch. lxvi.). They maintained constant commercial relations with Palestine and paid the Temple tax in Jerusalem; for this reason they were greatly interested in the proceedings of Flaccus (see DIASPORA; FISCUS JUDAICUS). Cæsar, on account of the assistance which the Jews had rendered him in his war with Pompey, showed his gratitude toward the Roman Jews by permitting them to hold public devotional exercises, otherwise not allowed in the city. Synagogues existed in Rome as early as the time of Augustus, as is evidenced by an enactment declaring their inviolability. The Jews were further favored in connection with the distribution of grain, for when the apportionment occurred on the Sabbath their share was reserved for them until the day following.

Expelled Under Tiberius.

The Jewish deputation which petitioned for the deposition of the royal house of the Idumeans was joined by 8,000 Jewish residents of Rome. Several Romans adopted Jewish customs, and some, as the rhetor Cilicius of Kalakte, a friend of Dionysius of Halicarnassus, even embraced Judaism (Müller, "Fragmenta Historicorum Græcorum," iii. 331). The reign of Tiberius (until the removal of his minister Sejanus) was fraught with misfortune for the Jews. When the cult of Isis was driven out of Rome (19 C.E.) the Jews also were expelled, because a Roman lady who inclined toward Judaism had been deceived by Jewish swindlers. The synagogues were closed, the vessels burned, and 4,000 Jewish youths were sent upon military service to Sardinia. After the death of Sejanus (31) the emperor allowed the Jews to return.

The emperor Claudius was not unfavorably disposed toward the Roman Jews in the beginning of his reign, but in 49-50, in consequence of dissensions among them regarding the advent of the Messiah, they were forbidden to hold religious services. The leaders in the controversy, and many others of the Jewish citizens, left the city. A considerable number of Roman Jews who had become Christians received the apostle Paul in Puteoli (61) and Rome with due formalities (with regard, however, to Peter's sojourn in Rome, compare Jellinek, "B. H." iii. 60 *et seq.*, and Güdemann, "Gesch." ii. 44 *et seq.*). Under Nero the Jews of Rome had a comparatively peaceful time, owing to the favorable attitude of the empress Poppæa Sabina; but this was followed by the terrible wars and the conquest of Judea under the emperors Vespasian and Titus. Judaism at Rome was now put on the footing of a privileged religion, instead of its adherents being treated as a separate nation, and the fiscus Judaicus was now levied for the benefit of the temple of Jupiter Capitolinus. A "procurator ad capitularia Judæorum" was empowered to collect this tax, and only those who had abandoned Judaism were exempt from paying it.

Prominent Families.

After the war the Jewish community in Rome increased rapidly; among the prominent Jews resident there at that time, besides Josephus, King Agrippa, and his sister Berenice, are said to have been members of the four families from which the De Rossi, the Degli Adolescentoli, the De Pomis, and the Degli Piatelli families are descended. The pressure of taxation rendered the condition of the Jews very unfavorable under Vespasian and Titus; and it grew worse through the increasing number of those who abandoned, or professed to abandon, Judaism to escape the payment of taxes. These defections at last became so numerous that the emperor Domitian, in the beginning of the tenth decade, found it necessary to adopt stringent measures. Every suspect was examined individually, and if the suspicions entertained were confirmed he was severely punished (Dio Cassius, lxxvii. 2). Among those sentenced to death or banishment for various reasons were the emperor's nephew Flavius Clemens and his wife Domitilla. Rabbis Gamaliel, Joshua, Eleazar, and Akiba preached in the synagogues in Rome during their brief stay, and engaged in disputes with the Judæo-Christians.

The Jews do not appear to have been affected by the severe decrees issued by Hadrian after the Jewish uprising. At this time there lived in Rome Theudas, who assisted in maintaining the teachers in Palestine and reintroduced the preparation of the paschal lamb among the Jewish communities of Rome. During a diplomatic visit which R. Simeon ben Yoḥai and R. Eleazar b. Jose made to Rome in the second century they preached in the synagogues upon halakic subjects, and they maintained intimate relations with R. Mattithiah ben Heresh, the founder of the Jewish seminary in Rome, himself from Palestine. Until the death of the last of the Antoninus, Commodus, the Jews suffered as much from the misfortunes that befell Rome as formerly they had benefited by its growth; especially severe in their effects upon the Jews were the famine, the flood, and the conflagration under Antoninus Pius and Marcus Aurelius. Under Commodus they suffered the consequences of a fire caused by an earthquake.

In 204 Septimius Severus issued an order against conversion either to Judaism or to Christianity. On the other hand, the edicts of Severus and Caracalla confirmed all native-born Jews in their rights; they might even fill government offices while adhering to their faith. Judaism became a privileged religion ("religio licita"). The condition of the Jews remained much the same under Elagabalus; Alexander Severus treated them so favorably that he was called derisively "archisynagogus."

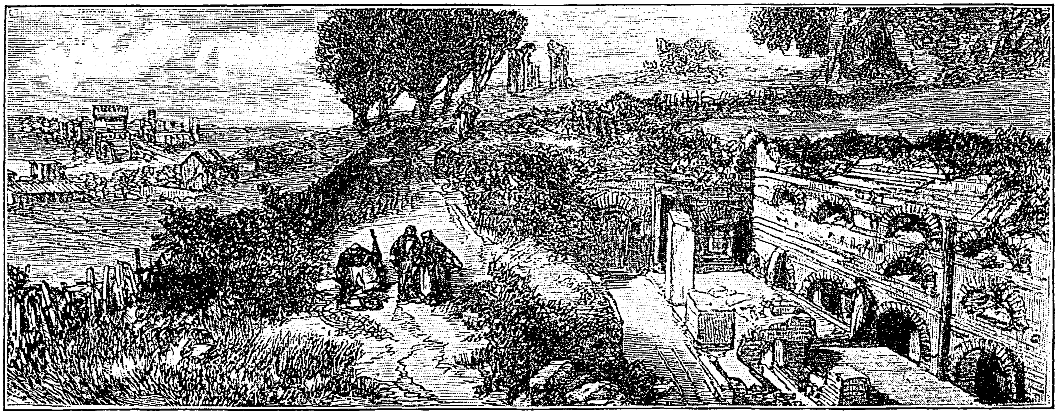
A new era began with the reign of Constantine (312). This emperor, as soon as he had defeated his adversary Maxentius, openly embraced Christianity. The institutions of the Roman Jews were not molested, but they were thenceforth regarded as citizens of the second class, as were the pagans. Of greater importance, however, was the prohibition against circumcising slaves. Constantine issued a decree forbidding marriage between Jews and Christians and making the violation of this order punishable with death. In the edicts issued by him the Jews are for the first time referred to as a "shameful" or "bestial" sect, "contemptible and perverse" ("secta nefaria" or "feralia"; "turpes"; "perversi"). Another turning-point in the history of the Roman Jewry came when the emperor Julian (the Apostate) ascended the throne. Though not inclining toward Judaism, he regarded it as superior to Christianity, and one of his first acts was to abolish the fiscus Judaicus, which had then existed for 300 years, thereby placing the Jews on an equal footing with other citizens. Julian's successor, Valentinian, freed the synagogues from the obligation of quartering soldiers; this, however, resulted in Bishop Philaster visiting Rome during his annual tour of inspection (middle of 4th cent.), when he preached in public and won several converts to the Christian faith. Emperor Gratian revoked (382) the decree releasing the Jews from filling the office of decurion (see DIASPORA).

Under the Christian Emperors.

During the reign of Maximus (383–88), who courted the favor of the Christians, a tumult broke out against the Jews, one of their synagogues being totally destroyed (387). Maximus ordered the synagogue rebuilt at the expense of the state, but he was defeated and slain by Theodosius before his order could be carried out. The rule of Theodosius was not an unfavorable one for the Jews, inasmuch as they were placed under the protection of the civil law, and the poorer ones among them were exempted from service among the "navicularii," a body on which devolved the provisioning of the capital. On the other hand, two laws were enacted by Honorius which made it compulsory for the Jews to fill communal offices. In civil cases in which the Jewish disputants failed to reach an agreement they were obliged to submit their case to a Roman court; and Jews were not allowed to enter the state church merely to escape material liabilities. On April 22, 404, Honorius issued an edict in which he declared Jews and Samaritans unfit for military service; at the same time, at the request of the Roman Jews, he revoked the order forbidding the collection of money for the support of the patriarchal house.

The bishops in Rome in the meanwhile betrayed little anti-Jewish feeling. In the fifth century Pope Gelasius especially evinced a very unprejudiced spirit toward the Jews; among his immediate associates was Telesinus, the first Jew mentioned in a papal document, who, together with his family, was greatly favored by the bishop.

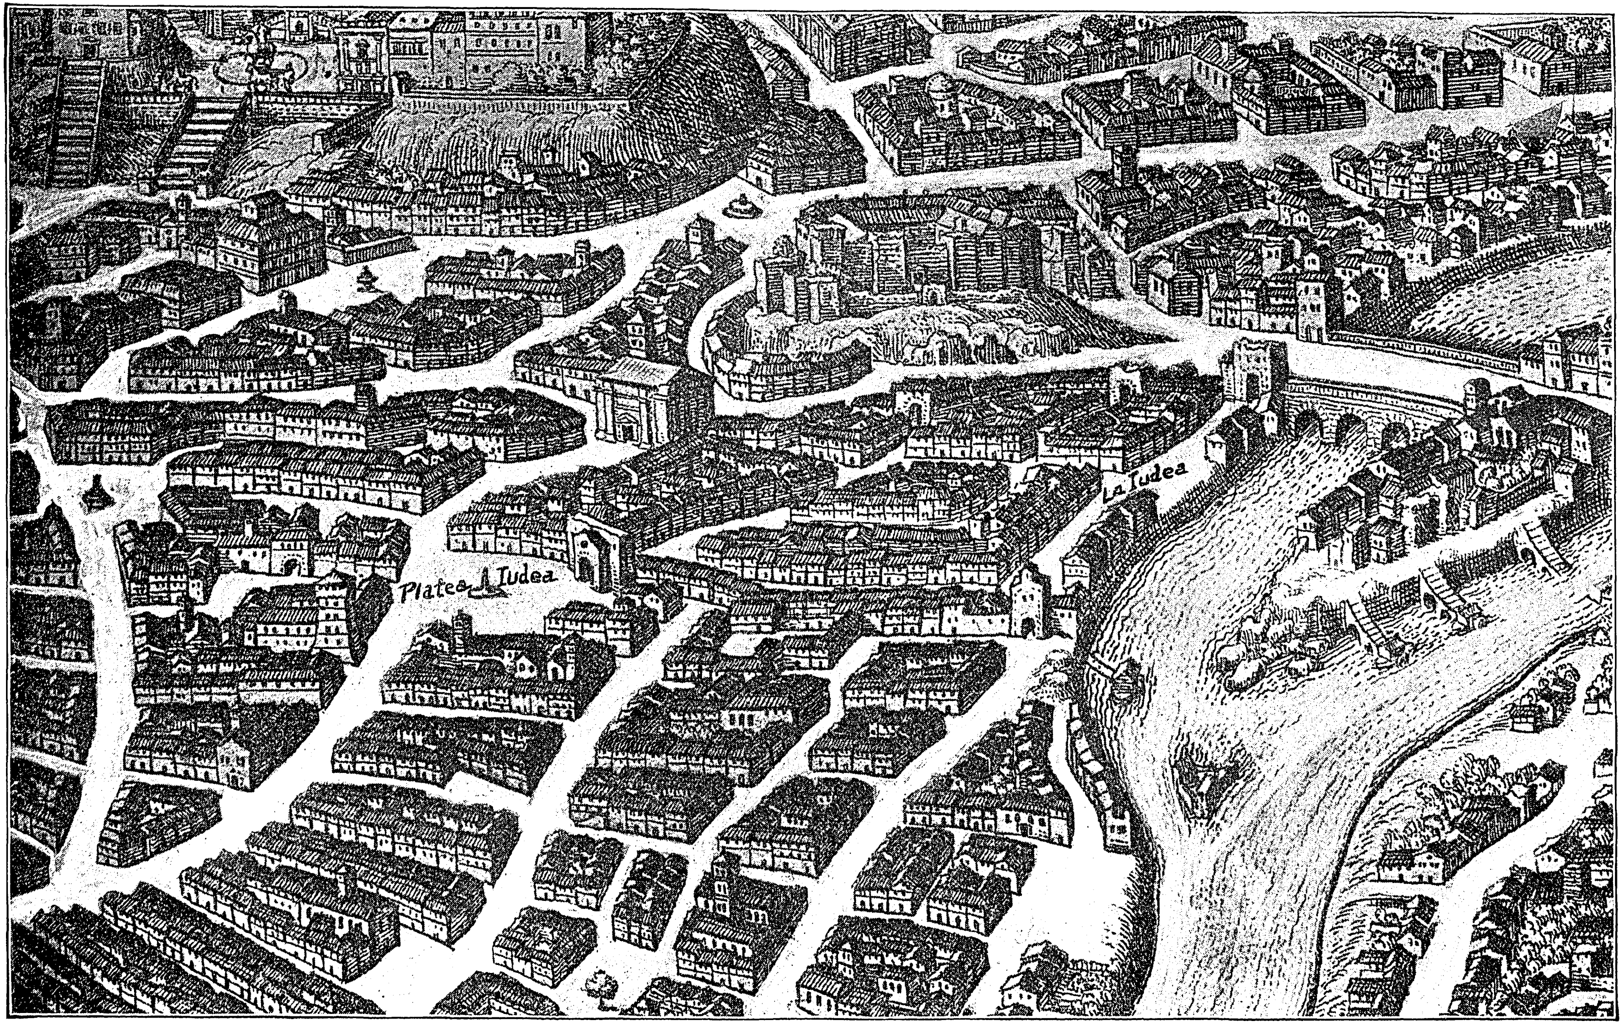
Theodoric the Great (493–526) showed himself very just toward the Jews. It is true that the former edicts against them remained in force and that they were not allowed to build any new synagogues in Rome; yet he held to the principle that no man ought to be forced to accept another religion against his conviction. In the same spirit he granted to the Jews certain privileges which placed them on an equal footing with the Romans and the Goths. During Theodoric's reign a terrible uprising took place in Rome, when some slaves who had murdered their Jewish masters, and who had been punished by the authorities, gained the sympathy of the mob, which attacked the Jews and set fire to a synagogue. The leaders of the disturbance were severely punished at the order of the emperor. There are also reports about a dissension between the Samaritans and the Christians, the former claiming a house which belonged to the latter. After the death of Theodoric war broke out anew in which the Jews sided with the Goths, who, however, were defeated.



ENTRANCE TO ANCIENT JEWISH CATACOMBS AT ROME.
(From an old drawing.)

Under the Early Popes.

From the latter part of the sixth century the popes were the real lords of Rome, and the Jews in the city, as well as in the whole country, were dependent on their attitude. Gregory I. (590–604) showed himself very just and mild toward them; he forbade the enactment of any unjust laws against them and decidedly opposed compulsory baptism. The following words appear for the



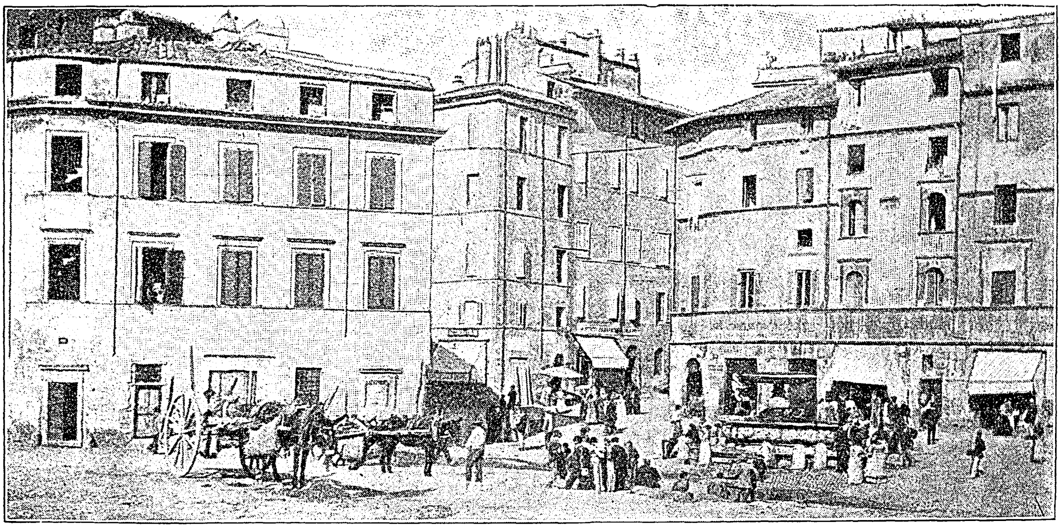
Platea Iudea
La Iudea

Plan of the Ghetto at Rome, 1640.

(From Zeiler, "Itineraria Italiæ.")

first time in a letter written by him: "Just as the Jews in their communities may not be allowed any liberties beyond the measure allotted them by law, so must they, on the other hand, suffer no violation of their rights" ("S. Gregorii Epistula," viii. 25, ed. Migne). These words afterward became the Magna Charta of the Jews (see POPES). In spite of the severity with which the pope proceeded against the slave-trade of the Jews—he even ordered that the slaves be taken from them by force—he was unable to abolish it. This was due to the fact that several of the Roman Jews who trafficked in slaves managed to evade the edicts by bribes and pretended baptism. During the reign of this pope the Roman Jews especially did much to assist their coreligionists in southern France and in Greece.

The centuries immediately following were dark and troublous ones for the Jews of Rome. The emperor Ludwig II. (855–75) is said to have issued an edict in 855 ordering all Italian Jews to leave the country before the 1st of October in that year. This order, however, was not carried into effect. A decade later the Bishop of Orta attempted to introduce a special Jewish dress, which, however, was forbidden by Pope Nicholas I. As to the reign of Pope John XII., sometimes called Octavian (955–964), and the coronation of Otto the Great see "Yosippon," ed. Breithaupt, vi. 30.



THE PLATEA JUDÆA OF THE OLD GHETTO AT ROME.
(From a photograph.)

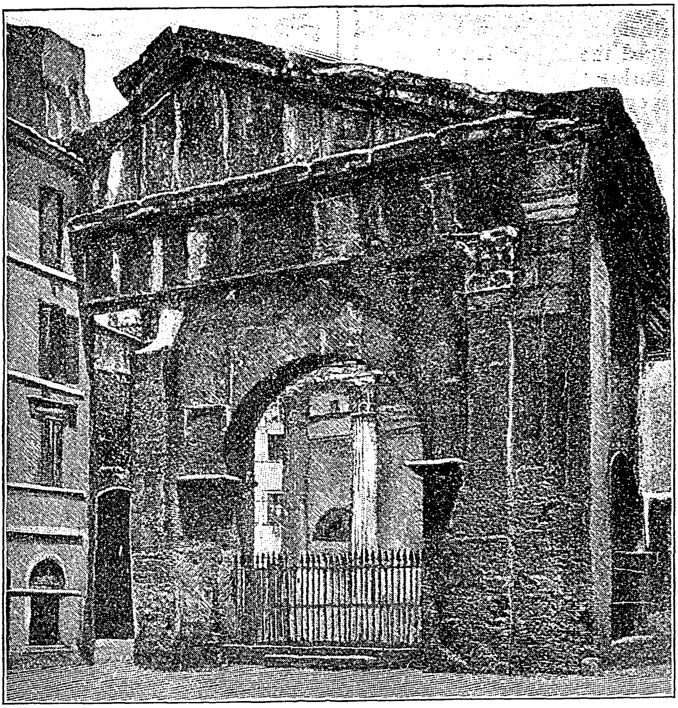
During the following three hundred years the prosperity of the Roman Jews greatly increased, and is especially conspicuous when compared with the experiences of their coreligionists throughout the world during the same period. From the Crescentians and Tusculans on the throne of St. Peter they suffered comparatively little. In 1007 Jacob ben Jekuthiel went to Rome from Lorraine; he mentions a "bet din" which he found there, the president of which bore the title of "nasi." About fifteen years later (1021) a Jewish persecution took place in Rome. A violent earthquake had occurred, which some Greeks maintained was caused by a desecration of a picture of Jesus by the Jews in their synagogue. For that reason Benedict VIII. sentenced to death some Jews who had been pointed out as the chief offenders.

The Pierleoni Family.

At this time the Pierleoni family, the founder of which was a Jew, began to come into prominence; in the war between pope and emperor it sided with the former, and for a short time a member of the family held the papal office. Of the popes of the eleventh century special mention should be made of Nicholas II., who condemned the persecutions of the Jews, and who on several occasions expressed himself against compulsory baptism. According to a ceremonial instituted by Otto III., Jews and Christians were obliged to attend the entry into the city of a pope or an emperor, singing laudatory hymns; it is known that Pope Paschal II., Emperor Henry V., and Calixtus II. were thus received in Rome by them. The last-named issued a bull promising protection for the Jews, and this bull began with the introductory words of the edict issued by Gregory I., "Sicut Judæis non."

Internal Affairs; Visit of Abraham ibn Ezra.

Of the rabbis and teachers of the Roman community there exists only an incomplete list. Among the latter the most famous was Nathan ben Jehiel, who in 1088 established a ritual bath in Rome, and who, with his brother Abraham, erected a synagogue, which was completed in 1101. As the importance of the popes in the Christian world had increased with the growth of German influence, the Roman congregation had come to occupy an honored position in the Jewish world, and questions were addressed to it even from Paris (Luzzatto, "Bet ha-Oẓar," i. 57 *et seq.*). After the death of Honorius II., Cardinal Pierleoni ascended the papal throne as Anacletus II. In the struggle which ensued between him and his rival Innocent II., the Jews of Rome sided with Anacletus. Bernard of Clairvaux urged against Pierleoni his Jewish descent; the pope was accused also of having been assisted by the Jews in robbing the Church and in realizing the value of the stolen goods. His successor, Innocent II., did not renew the protective bull of Calixtus II., nor did he curtail the rights of the Jews. It was during his reign and during the reigns of his immediate successors that Abraham ibn Ezra sojourned in Rome (until 1144); his presence in the city gave a new impetus to study, and the foremost men of the city, as Joab ben Solomon and Menahem ben Moses, attached themselves to him, the group thus formed being termed by contemporary scholars "the wise men of Rome" ("Sefer ha-Yashar," p. 549; "Or Zarua‘," ii. 52; Zunz, "Literaturgesch." p. 163).



Arch of Octavian, the Entrance to the Old Ghetto at Rome. Church of St. Angelo, Where Jews Were Compelled to Attend Baptismal Sermons (in background).

(From a photograph.)

Alexander III. occupied a peculiar position toward the Jews. When pressed for money he was very favorably disposed toward them, and Benjamin of Tudela tells how contented the Jews were under him. He had even a Jewish financial agent (a descendant of Jacob Jehiel), who filled his office very satisfactorily; to him was probably due the fact that the protective bull was renewed. But the pope showed himself in a different light at the Third Lateran Council, in 1179. He denounced especially, though in vain, the employment by Jews of Christian servants, and he prescribed severe sentences for nurses who entered the service of Jews. It was not allowed to repair the synagogues as long as they were not actually in danger of collapsing. Converts to Christianity might not be disinherited. To the most prominent representatives of the Roman Jewry at this period belonged, besides Jehiel, his cousins Daniel Joab and Menahem ben Judah; with the latter the Frenchman Joseph ben Pilat maintained a correspondence. At the head of the community stood Judah ben Moses.

Innocent III. and Gregory IX.

Innocent III., at the Fourth Lateran Council, in 1215, enacted that Jews and Mohammedans should wear Badges, that they should not be permitted to hold public offices, and that they should sign a quitclaim for the interest on the loans furnished the Crusaders. Innocent's successor, Honorius III. (1216–1227), tore down the new synagogues in Rome. The pontificate of Gregory IX. greatly affected the Jewish community. His early decisions gave evidence of a deep hatred of the Jews; but he was reminded by a Jewish ambassador from France that there were Christians in heathen countries, and it was this consideration, perhaps, that led him to issue (April 4, 1233) a bull protecting the Jews. It seems that about this time a fast-day was instituted in Rome, for which occasion Bejamin ben Abraham Anam and Moses ben Abraham wrote some elegies ("Ḳobeẓ ‘al Yad," iv. 6, 17).

A Jewish source ("Codex Angelinus," p. 7) relates that in the reign of Innocent IV. the Jews, in consequence of a drought which affected the whole district of Rome, were compelled to use imported tomatoes on Sukkot. During the reign of Alexander IV. (1254-61) Jewish names again appear in official documents, after an interval of 750 years. On Feb. 1, 1255, a papal order was issued granting certain commercial privileges to a Jewish merchant named Sabbatinus Museus Salaman, who is mentioned as the business associate of several Romans, and who stood in commercial relations with the Vatican; the privileges pertained to trading in the Papal States and in Sicily. The period following the death of Frederick II., when Germany was without an emperor, saw the rise of the Flagellants, whose activity was not without its influence on Judaism, especially upon the community of Rome, which thought that the Messianic time was at hand ("Monatsschrift," xxxix. 239). These ideas gathered strength during the disturbances which attended the senatorial elections in Rome, in consequence of which Pope Alexander III. had been forced to leave the city forever.

A fire that broke out in the Jewish quarter, the Trastevere, on Sept. 26, 1268, destroyed one of the oldest synagogues and twenty-one Torah scrolls.

Jewish Visitors to Rome.

On account of the large sums of money the Jews had loaned him, Charles of Anjou felt himself under obligation to protect the Jews from the injustice done them by Urban IV., Alexander's successor, who had issued (July 26, 1267) a bull, "Turbato Corde," extending the powers of the Inquisition. About this time, it appears, a tumult occurred in Rome which resulted in the destruction of the entire Jewish cemetery, and which has been recorded by Benjamin ben Abraham in his elegy אויה לי כי גרתי משך ("Ḳobeẓ 'al Yad," iv. 24). In 1272 Gregory X. confirmed the bull granting protection to the Jews, to which was added the clause that Christians should not be allowed to give testimony in Jewish lawsuits. It also insisted on the absurdity of the blood accusation. Pope Nicholas III., in a bull issued May 7, 1278, encouraged the Inquisition to proceed against converts. During the reign of this pope, Bonjudah (Bongoda or Biongoda) of Montpellier stayed for some time at Rome as special ambassador (Zunz, "Z. G." pp. 461, 465, 519; Neubauer, in "R. E. J." ix. 56); singularly enough, the date of his death, Aug. 22, 1280, is mentioned in the Zohar (Jellinek, "B. H." iii. 27 *et seq.*). The presence of the impostor Abraham ben Samuel Abulafia, whom the pope endeavored to convert, had no influence upon the Roman Jews. A decision with regard to a ritual question, the only one made in Rome in this early period and handed down, was rendered during the reign of this pope (Berliner, "Peleṭat Soferim," p. 9).

The pontificate of Nicholas IV. was of great importance to the Jews of Rome. When he found, through his physician Isaac ben Mordecai (Maestro Gajo), that the clergy of Rome treated the Jews with cruelty, violated their rights, and deprived them of their property, he interfered. The position which this physician occupied secured him great respect within his own community, and he used his influence to introduce the study of Maimonides in Rome. When the Maimonidean controversy broke out in France, the Roman community took such a lively interest in it that they sent R. Simḥah to France to procure a copy of Maimonides' commentary on the Mishnah. When Maimonides' grandson died, in 1299, the community sent a letter of condolence to Maimonides' son Abraham.

Boniface VIII.

In the meantime Boniface VIII. had been elected pope (1294); and at the very outset of his pontificate he showed the scorn with which he regarded the Jews. When the latter appeared to do him homage they presented him with a scroll of the Torah as a mark of honor; but the pope immediately handed it back to them with expressions of aversion to the Jewish religion. This was the first sign of a reign of terror. Informers were encouraged, and great numbers of Jews were denounced to the Inquisition by unknown accusers. In one instance the rabbi of the community was burned at the stake under an accusation which would have involved the whole community had he not taken it entirely upon himself. Two elegies by unknown authors commemorate this martyr ("Ḳobeẓ 'al Yad," iv. 30 *et seq.*). During the pontificate of Boniface VIII. the Jews were placed under the jurisdiction of the merchant gilds. Boniface was succeeded by Benedict XI. (1303) and Clement V. (1305); the last-named transferred his residence to France.

The Roman Ghetto.

The bulls issued in 1309, 1345, and 1402 (April 15) indicate in which parts of the city the Jews lived at these dates. Their quarter extended from the Piazza Giudea to the Piazza dei Savelli, and included the entire Vuga Judæorum (Jews' street) and the Platea Judæorum (Jews' square) as far as the Platea in Templo Judæorum (Jewish Temple Place), from which their street ran as far as the palace of Lucretius Cecchus de lo Mastro. Some resided in that part of Rome known as the Regio Ripa, but the greater number lived in the district of Trastevere, with the Porta Judæorum. The whole district inhabited by them was called the "Convicinum." The principal synagogue was situated in the neighborhood of the Church of St. Thomas, while most of the Jewish physicians lived in the Trastevere district, where the public medical and grammar schools were situated. On Feb. 8, 1310, the Senate granted the Jews a special privilege, whose provisions, however, are not known.

Receive the Emperor Henry VII.

About two years later, on May 7, 1312, the emperor Henry VII., *hailed by all as the deliverer of Italy*, made his entry into Rome. Illustrations depicting his reception by the Jews are preserved in the "Codex Balduini Trevirensis" (published by the Königliche Preussische Staatsarchiv, with text by Irmer, pp. 80 *et seq.*, Berlin, 1881). On Henry's return from his coronation in the Lateran Basilica, on June 29, he was presented with a scroll of the Law by a delegation of Jews which had gone to meet him. Before his departure the emperor imposed a "coronation-tax" upon the whole city, but it was paid only by the Jews. The Jews of Rome were so wealthy that the financiers Beniamino Diodati and Abraham and Allencio Moyse, with their associates, were able to furnish 15,000 florins to the town of Montefiascone, which had to pay this sum to the city of Orvieto. In consideration of this, Orvieto admitted the Jews as full citizens and as representatives of the professions and the arts.

The important events of the years 1320-21 are narrated in three Jewish sources (see "Shebeṭ Yehudah," xiv. 37; Steinschneider, "Hebr. Bibl." vii. 115; Neubauer, "Cat. Bodl. Hebr. MSS." 448, 1 [Todros ben Isaac's novellæ on Nazir]). According to all three sources a persecution took place in the summer of 1321, during the pontificate of John XXII., who ruled in Avignon. According to the first source it was instigated by Sanga, the pope's sister; she may, however, be identical with Sanctia, the wife of Robert of Naples. On June 18, 1321, the Jews sent a delegation to the pope, and on the same day a general fast was ordered. In Avignon the head of the delegation (possibly a descendant of the Bet-El family, and probably identical with the poet Joab) denied the charges that were made; yet the pope ordered the burning of the Talmud in Rome. The most influential and wealthy members of the community endeavored to prevent the execution of this order, but without avail; the Talmud was publicly burned on the Feast of Shabu‘ot, 1322. Not satisfied with this, the mob began a riot, during which R. Samuel (the father-in-law of the poet Immanuel of Rome) and others were murdered; the scenes enacted have been recorded by Immanuel in one of his poems (see "Monatsschrift," 1872, pp. 376 *et seq.*).

The entry into Rome on Jan. 7, 1328, of Louis the Bavarian preceded a levy on the city of a contribution of 30,000 gold florins, one-third of which was paid by the Jews.

In the fourteenth and the first half of the fifteenth century poetry and philosophy flourished in the community. Intercourse between Jewish and Christian scholars was, as a rule, unrestricted, and the Jews were generally protected throughout Roman territory. This, however, did not prevent bitter religious disputations from taking place, which tended to excite mutual animosity. A Jewish source relates that an earthquake and a famine occurred in 1328 ("Codex Breslauer Seminar," lxvii. 390b). In 1345 the principal Jewish quarter was visited by a disastrous flood.

(From a photograph.)

Connection with Cola Rienzi.

The Jews had hitherto taken little part in governmental affairs, but with the appearance of Cola Rienzi their attitude changed. Rienzi, the son of the mistress of an inn, had been born in the part of the city behind the synagogue near the Church of St. Thomas, and had succeeded in raising himself to the dignity of senator. When he found that he could no longer withstand the attacks of Colonna, he confiscated the property of the wealthy Romans, as well as that of the Jews. On this account, and because the Jews were left out of consideration when civic rights were granted to the Italians, part of his Jewish adherents left him. When Rienzi was hard pressed by his adversary Count Pipino, it was a Jew who rang the alarm-bell to summon aid for him. The Jews played no part in Rienzi's subsequent reelection as senator and tribune, nor did they have anything to do with his death; they were, however, compelled publicly to burn his corpse.

At the time of the Black Death in 1349, the Jews of Rome were spared the ravages of the plague. About this time city statutes were established which regulated the Jewish taxes as well as prescribed the costume which the Jews might wear; protection was granted them against extortions on the part of city officials and the heads of the gilds. During the brief pontificate of Gregory XI., who made Rome again the seat of papal administration, the city was visited by a plague, which formed the subject of a piyyuṭ by R. Solomon ("Codex Breslauer Seminar," lxvii. 386b). Boniface IX., who was elected in 1389, appointed two Jews, Angelo and Salomone de Sabalduchio, as his body-physicians. On April 15, 1402, he issued a bull which reduced to a minimum the power of the Inquisition. The favors thus shown the Roman community tempted thither many of the Jews exiled from France in 1394. The will of Menahem ben Nathan of Rimini, who left five old Bologna reals for the improvement of the coast at Rimini and for the restoration of the walls of Rome, evidences the attachment of the Jews of Rome to their city (Berliner, "Ha-Medabber," 1881, p. 47). When the succeeding pope, Innocent VII., on his entry into Rome, was given a scroll of the Law by a Jewish deputation he returned it over his left shoulder as a formal expression of scorn; and this custom, derived perhaps from Boniface, became thenceforth part of the ceremony of homage. Innocent VII. confirmed the physician Elijah Sabbati, however, in his rights of Roman citizenship, granting him and his relatives exemption from all taxation and releasing them from the obligation of wearing the badge.

Return of the Scroll at the Pope's Reception.

During the stay of Ladislaus, King of Naples (1375-1414), in Rome, after the death of Gregory XII., a Jewish physician named Moses was murdered. Another Jewish physician by the name of Helia was accused of the murder, and convicted and punished. The subsequent floods and famines resulted in a meeting at Bologna of the most prominent Jewish leaders of Italy, who there resolved to collect money as an insurance against further disasters and in order to send a delegation to the new pope, Martin V. Among the signatures to this resolution appear the names of

Menahem ben Meshullam Rofe and Benjamin ben Moses, the leaders of the Jewish community in Rome.

Soon after his accession Martin V. confirmed the Roman Jews in all the privileges and liberties given by the charter of Calixtus II., "Sicut Judæis non," taking the Jews under his own fatherly protection. He also abolished compulsory baptism and forbade the desecration of synagogues. Personally, he was on friendly terms with the Jews, and he allowed the scholar Aaron ben Gershon Abulrabi to lecture in the Vatican on the cherubim. Another scholar, Eliah Giudea, was appointed physician to the pope, remaining in that position until the latter's death. The Roman Jews in this reign sent Rabbi Elijah, accompanied by the young scholar Elhanan, to Jerusalem to secure further information of a reported rising of the Ten Tribes ("J. Q. R." iv. 505). Especially noteworthy is the bull of Feb. 14, 1429, by which Pope Martin placed the Jews under the jurisdiction of the civil law, allowed them to frequent the public schools, and exempted Jewish tradesmen from wearing the badge.

Bull of Eugenius IV., 1442.

Martin's successor, Eugenius IV. (1431-47), had a different influence on the history of the Roman Jews. His first bull, issued Feb. 8, 1433, forbids the beating of the Jews on their holy days, levying of special taxes, disinterment of Jewish corpses, resort to violence at the collecting of taxes, and unauthorized killing of Jews; but his bull of the latter part of 1442, which probably he was led to issue by the Council of Basel, stands in strong contrast to this. In the bull of 1442, which comprises forty-two articles, he forbids the Jews to study civil law or to engage in handicrafts; he also orders the abolition of the Jewish courts. This bull was enforced with such rigor that several Jews left the Roman territory and settled in Mantua, by permission of Francisco Gonzaga. However, the leaders of several Roman congregations met in Tivoli and in Ravenna, and by the speedy collection of enormous sums of money they succeeded in having this bull withdrawn, though the clause which taxed the Roman community to the amount of 1,000 scudi remained in force. But the community was so impoverished that, at the instance of Moses ben Isaac, later physician to Pius II., petitions for monetary assistance were sent to other Italian communities. The stringent measures adopted by this pope would have been modified by his successor, Nicholas V., whose disposition was milder, had it not been for the inciting speeches of John Capistrano, which created such a state of unrest in Rome that the Jews were compelled to barricade themselves in their houses. A disputation between John Capistrano and one Gamaliel (probably identical with Gamaliel ben Moses, who sold books in Rome in 1433) led to the baptizing of the latter with forty other Jews. When in 1452 a money crisis occurred in Rome, old, forgotten lawsuits were resurrected, and the Jews were obliged to appeal for assistance to the pope, who canceled all proceedings.

The Carnival Races.

The anti-Jewish bulls of Calixtus IV. and the generosity of Pius II. failed to affect the Jews to any great extent, because both these popes were too completely preoccupied in watching the progress of the Turks. For the amusement of the people Paul II. introduced foot-races during the carnival week, with costly mantles as prizes; on one day the Jews were compelled to join in the sport, arrayed in their red cloaks. They appear to have enjoyed taking part in the games, although they had to pay a "race-tax" of 1,100 florins; the sports, however, were probably abolished shortly after, for in 1468 a plague that carried off fifty victims a day raged in Rome, and two years later a flood brought new disaster upon the city. Sixtus IV. did not altogether support the Inquisition, which a neophyte, Guillelmus Siculus of Rome, had stirred to action against the Jews because the latter were said to maintain constant and intimate communication with the Maranos. When the pope had ordered the collection of the so-called "twentieths," a tax which had been laid upon the Jews, he permitted the latter to continue the lending of money at the usual rate of interest. During the reign of this pope the city was again visited by a flood, which was followed by an epidemic of a disease for which a Jew of Regno discovered a remedy.

The Jews had hitherto paid homage to the popes at Monte Giordano, but on the accession of Innocent VIII. a new place was selected for them near Engelsburg, because the Roman populace had come to regard the occasion as an opportunity to insult and deride the Jews. Innocent VIII. issued (July, 1487) a severe bull against the Maranos, not only against those in Spain, but also, and especially, against those who had removed to Rome; and shortly after the issuance of this bull eight Maranos were imprisoned in Rome by the pope. The manner of the Roman Jews toward the Maranos was reserved; the latter considered themselves superior to the Roman Jews, who, on their part, resented the competition of the newcomers; in addition, the papal bull had filled the Roman Jews with apprehensions. The death of this pope is connected with the legend that a Jewish physician (the quack in Lenau's "Savanarola") had drawn blood from three ten-year-old children for injection into the veins of the pope; the bleeding was said to have caused the death of the children, but failed to save the pope's life (Infessura [Eccard II. 2005, Tommasini, pp. 275 *et seq.*]).

Action Against Maranos.

The expulsion of the Jews from Spain took place during the pontificate of Alexander VI., and was the indirect cause of a change in the old Jewish community in Rome. The Roman Jews appealed to the pope with a gift of 1,000 ducats, requesting him to refuse the fugitives admission into Roman territory. This so incensed the pope that he fined them 200 ducats. The inflow of fugitives increased until it became necessary to erect a new synagogue (the fourth), which, after a short time, became the leading synagogue in Roman Jewry. Its first rabbi was an exile from Provence, the physician Bonet de Lattes (Jacob ben Immanuel Provençal). The treatment of the Maranos by Pope Alexander was highly praiseworthy; although a Spanish delegation requested their expulsion, and in spite of the fact that they suffered from an infectious disease, he permitted them to live peacefully outside the Porta Oppia; and when a delegation of Portuguese Maranos arrived at Rome to complain of the Portuguese government, although the pope ordered 280 Maranos to be imprisoned, he did not proceed against them with much severity.

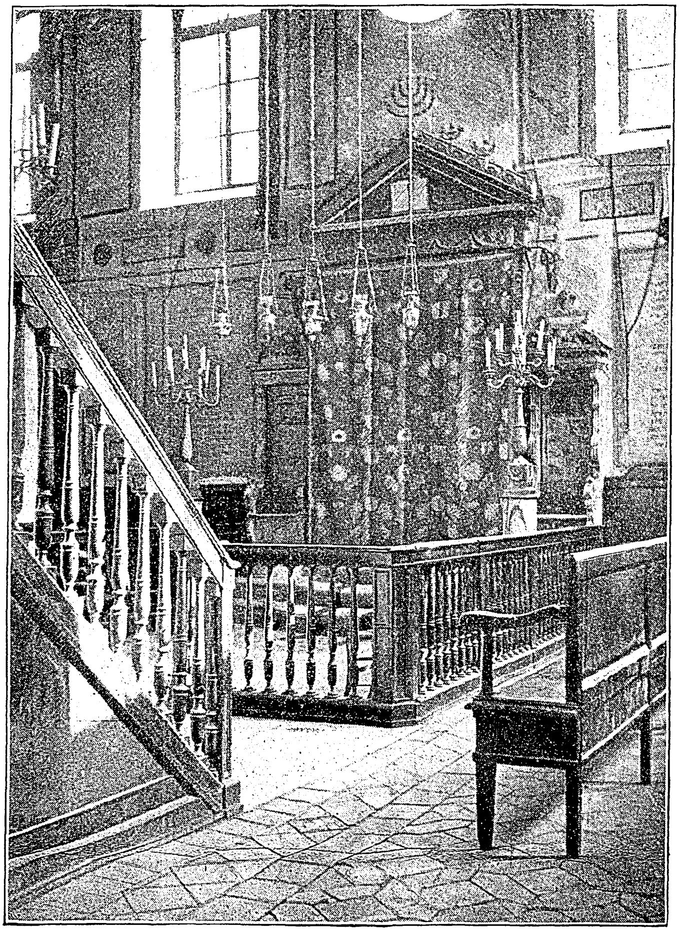
Three floods about this time, following one another in close succession, brought great suffering upon the community; this was augmented by the entry into Rome of Charles VIII., whose soldiers committed such terrible excesses in the Jewish quarter that Charles at length found it necessary as a warning to erect a gallows in the Platea Judæorum. By order of Charles the Jews wore for their protection white crosses sewed on the shoulders of their mantles. The games introduced by Paul II. were re-instituted under Alexander VI. Another, not unimportant addition to the Roman community was caused by the inflow of exiles from Naples and of ransomed Jewish prisoners from the Barbary States, who had obtained permission from Julius II. (1503–1513) to settle in Rome. Several of these took part in the foot-races held in Rome a few days before the death of Julius. A description of these games is given in a poem by Jacob de Pomis.

During the reign of Julius II.'s successor, Leo X. (1513–22), the Roman Jews enjoyed uninterrupted quiet, so much so that they inquired in Jerusalem if the advent of the Messiah were not drawing near. Especially noteworthy is the fact that Leo gave the Jews permission to establish a printing-office. It was opened in the house of Joan Giacomo Fagiot de Montecchio, but it existed only three months. Leo also requested the Jews to furnish him with a copy of the Talmud. During the next pontificate, that of Hadrian VI. (1522–23), the city was visited by a pestilence which carried off 28,000 victims; an anti-Jewish riot also occurred during his reign, four Jews being murdered on the Piazza Giudea.

Clement VII. (1523–34), whom Joseph ben David Yeḥaf, in his commentary on the Five Megillot (p. 41b, Bologna, 1538), calls "the favorer of Israel," displayed particular interest in the internal affairs of the Jewish community, which had been divided into contending parties. Within the community there existed no authority that could settle these quarrels, and an invitation to go to Rome was therefore issued to Daniel ben Isaac of Pisa, who was highly esteemed by the pope. With twenty of the wealthiest members of the community, Daniel ben Isaac began the work of reform. A new Jewish organization was established, governed by a board of sixty directors (this organization existed up to the nineteenth century). In a document dated Dec. 12, 1524, the pope signified his approval of this arrangement. The old law governing the slaughtering of animals for food had been revived in 1523; according to it the Jews were allowed to sell only live cattle, they were not permitted to slaughter in the Christian abattoirs or in the presence of Christians, nor were Christians permitted to purchase slaughtered cattle from Jews. When David Reubeni and his follower Solomon Molko came to Rome, Clement VII. not only offered them protection, but provided them with letters of recommendation. While in Rome Reubeni lived in the houses of Cardinal Ægidius, R. Joseph Ashkenazi and R. Raphael, Joseph Ẓarfati, the physician Moses Abudarham, and Isaac Abudarham. After his successful audience with the pope the Jewish community hailed him with great enthusiasm, and Yom-Ṭob ha-Levi assigned him a new residence. Reubeni, however, aroused some suspicion among various members of the community, resulting in the formation of two parties which remained at variance with each other until David left the city, in March, 1525; at his departure he was escorted by thirty of the most prominent Jews in Rome.

The Community Organized 1524.

This era of prosperity was broken by severe trials. In 1527 the Spanish-German army of Charles IV. advanced against Rome, and on May 6 entered the city. Then began a butchery which lasted for three weeks, when it was succeeded by a pestilence which in the course of two or three months removed 100,000 people. During the pillage Elijah ben Asher Levita, "the German," and Cardinal Ægidio de Viterbo lost their libraries, the books being used by the soldiery as fuel. Although the Jews were accused of having purchased at ridiculously low prices the costliest plunder, they were obliged to borrow money at the next levy of taxes. In the course of the following years some members of the Jewish community of Rome became prominent in connection with the wrangles which Henry VIII. of England had with Rome about his divorce from Catherine of Aragon. Among these were Rabbi and "Magister artium et medicinæ" Helias (Halfon), the convert Dom Marco Raphael, and Jacob Mantino, who had been influential in crushing Solomon Molko. The attitude of Clement toward the last-named, as well as toward the other Maranos, was very friendly, and it was due to his mildness that the Jewish community of Rome only four years later had almost quite recovered from the effects of the disaster.



Ark of the Law in the Synagoga dos Templos at Rome.

(From a photograph.)

Still more favored were the Jews by Paul III. (1534–50), who for that reason had to endure such opprobrious epithets as "Sadolet" and "Lelio secundo Curio," applied to him by Alexander Farnese. Paul permitted all the Jews who had been banished from Naples, as well as those coming from Palestine and Africa, to settle in Rome. He abolished the passion-plays in the Colosseum, at which Jews had often been murdered, and he granted permission (1545) to Antonio Bladao, Isaac ben Immanuel de Lattes, and Benjamin ben Joseph Arignano to establish a Hebrew printing-press in Rome. On the other hand, the pope was compelled to sanction (1543) the establishment by Johannes Calvus of the monte di pietà, which, the papal bull declared, was instituted in order to make the Jewish usurers take up handicrafts. This event marked the beginning of an era of reaction for the Roman Jews, which set in under the papacy of Julius III. (1550–1555), who, however, imposed a tax of no more than ten gold ducats on each of the 115 synagogues in the Papal States. This tax was to be applied toward the maintenance of the Casa dei Neofiti in Rome.

During Julius' reign the monk Cornelio of Montalcino, who had become a convert to Judaism, was burned at the stake (Sept. 4, 1550). Three years later a quarrel broke out between the two Hebrew printing-houses in Venice, those of Bragadini and Giustiniani; the wrangle went so far that both parties complained to the pope and denounced the Talmud. The Sacred College declared against the Talmud, and as a result it was publicly burned by papal edict of Aug. 12, 1553; the burning took place on the day of the Jewish New-Year festival, in the month following, on the Campo di Fiore. Shortly afterward other Hebrew books were condemned, but were saved by the intercession of R. Michael ben Isaac, Joseph ben Obadiah di Arignano and R. Joseph de Arli. On June 21, 1554, fourteen rabbis met in Ferrara and adopted resolutions concerning the printing of books and on other matters.

The reign of the succeeding pope, Marcellus II. (1555), although of only twenty days' duration, is of importance for the history of the Jews of Rome. A Spaniard, Sulim, had murdered his ward so that he might inherit the child's fortune, nailed the corpse to a cross, and left it in the Campo Santo. Suspicion at once fell upon the Jews, and the Pope and people were enraged. Cardinal Alexander Farnese then spread the report that the child had been canonized, whereupon the people flocked to see it, and a physician recognized it. The result was that Sulim was convicted and hanged. In spite of this the convert Hananeel di Foligno incited the mob against the Jews; he was, however, challenged to a disputation with the rabbis and defeated (Joseph ha-Kohen, "'Emeḳ ha-Baka," ed. Letteris, pp. 114 *et seq.*; "R. E. J." iv. 88). With the accession of Paul IV. (1555–59) to the papal throne, favorable conditions for the Roman Jews came to an end. Pope Paul provided their ghetto with entrance and exit, ordered them to wear the yellow cap and hood, forbade trading in rags, and prohibited also the employment by Christians of Jewish physicians. During his rigorous reign, David Ascoli, the author of a Latin apology, was imprisoned, and the Jews' offer of 40,000 scudi for the revocation of this order was rejected. This pope finally abolished the custom of the Jews paying homage to the popes. On July 26, 1555, all the Jews were herded into one street; and two months later this street was enclosed by walls, for which the Jews were compelled to pay 100 scudi (Oct. 3). All synagogues, except two, were condemned, and the Jews were forced to sell all their property that was situated outside the walls. In spite of the low prices paid, this sale brought 500,000 crowns. On March 23, 1556 the pope issued an edict according to which the Jews were required to pay taxes for the synagogues that had been closed. Some relief came, however, when the Jews (Aug. 22, 1556) were permitted to engage in all handicrafts, with the exception of those connected with the fine arts.

Paul IV.

Soon a great calamity befell the city, when Duke Alva of Spain, at the head of a powerful army, marched against the Papal States. No one was permitted to leave the city, and the Jews were put to work on the fortifications. To this were added the inflammatory speeches of the apostate Vittorio Elliano, Joseph Moro and the Jew Josue dei Cantori, which resulted in the confiscation, on May 1, 1557, of all Hebrew books. The apostate Andrea del Monte found in the Ashkenazic synagogue a commentary by Ibn Ezra, whereupon the synagogue was closed and the congregation sentenced to pay a fine of 1,000 scudi. The synagogue remained closed for nine months, and this proved the death-blow of the German congregations. On Sept. 15, 1557, a flood placed the entire ghetto under water. Paul IV. was exceedingly harsh in his treatment of the Maranos, whom he, on April 30, 1556, ordered to be burned at the stake in Ancona. As soon as Paul was dead his monument was torn down, the palace attacked, the officials maltreated, and the gates of the ghetto battered down; a Jew, to the delight of the populace, placed his own yellow cap on the top of the shattered monument. Jewish history likens this pope to Haman (טיאטינו = המן; Joseph ha-Kohen, *l.c.* p. 117).

Paul's successor, Pius IV. (1559–66), was the very antithesis of him. His first act was to see to it that the waters of the Tiber were diverted; for this the Jews were especially thankful, as the ghetto was most exposed to floods. In a bull issued Aug. 8, 1561, he revoked almost all his predecessor's enactments; the dwellings of the Jews were restricted to the ghetto, but not their places of business, which they might establish in any part of the city. They were allowed also to associate with Christians. According to the decision of the consistory of Treves, of March 24, 1564, the Talmud might again be printed, although under a different name. Pope Pius V. (1566–72) not only renewed the bulls of Pius IV., but expelled the Jews from the Papal States, with the exception of those of Rome and Ancona. In spite of his hatred of the Jews he allowed them to engage in the jeweler's trade; he also enlarged the ghetto by tearing down two churches, but in order that they might not be profaned by their Jewish surroundings.

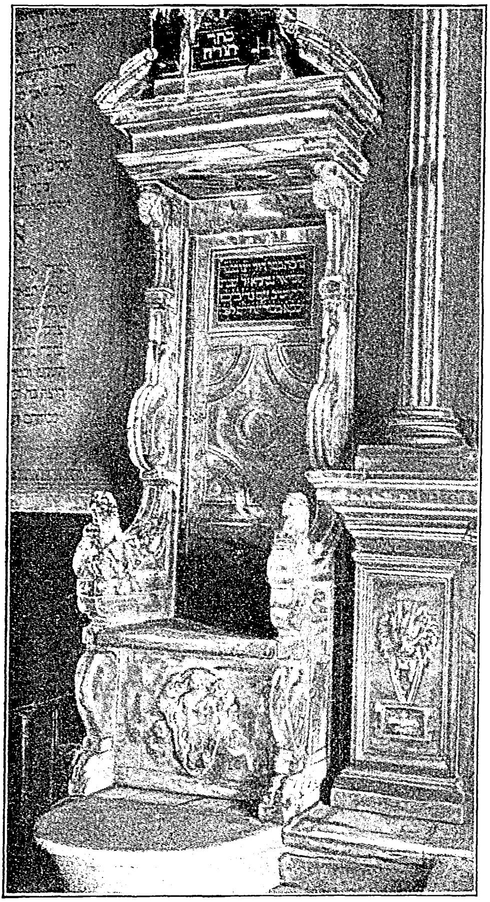
Pius V.

The accession of Gregory XIII. (1572–85) was celebrated in a poem by Judah Saltemos; Gregory proved himself more friendly toward the Jews. The whole of the year 1572 was spent in the mustering of troops. The ghetto was attacked during the Passover festival by the troops assembled in Rome, who, however, were repulsed by the Jews. The pope therefore ordered the soldiers to leave the city. In spite of this the Jews found it necessary to establish a patrol (Sept. 21, 1573) to guard the ghetto against the mob. The hatred of the mob is shown by the fact that during the carnival, when Jews were compelled to run naked for a prize, they were bespattered with mud. On Jan. 10, 1577, the pope approved the organization established by Clement VII., and the community was taxed according to the incomes of its members ("per aes et libram"). On Sept. 1, 1577, the pope issued a decree that on every Sabbath the Jews should attend conversionist sermons. The first preacher was Josephus Florentia; the second, and more important, was the apostate Joseph Ẓarfati of Fez, whose sermons were made famous by his thorough knowledge of rabbinical literature (see Ẓarfati). A second bull, Sept. 1, 1584, ordered that these sermons should be attended by at least 100 men and 50 women. The result of these sermons was that several Jews submitted to baptism, among them being a wealthy Jew named Samuel Corcos. The sermons of Domenico Gerosolomitano, who succeeded Joseph Ẓarfati, are extant in Hebrew and Italian.

Sixtus V.

The first bull which actually affected the inner affairs of the ghetto was issued June 1, 1581; it granted to the Inquisition the right to proceed against the Jews in cases of blasphemy, demon-worship, and heresy; and as a result Joseph Sanalbo, a convert to Judaism, was burned at the stake in 1583 (27th of Shebat). Abtalion ben Mordecai of Modena held, in 1581, at Rome, a disputation in Latin in the presence of the pope, the result of which was that the law regarding the confiscation of the Talmud was repealed. Under the next pope, Sixtus V. (1585-90), the Jews enjoyed comparative immunity from injustice. The order was given that they were in no way to be molested, and on several occasions the pope ordered the whipping of Christians who had insulted the Jews during the carnival. In this pontificate the Severus arch-candlesticks were discovered. The bull of Dec. 18, 1585, had for

Rome the especial provision that the tax of a twentieth vigesima should be abolished, and a poll-tax of twelve giuli be levied instead. The objectionable customs of the carnival were also done away with. In 1587, under the leadership of the treasurer Isaac ben Solomon Corcos, walls were erected about the Jewish cemetery. At this time the business of the ghetto prospered as it had never done before, especially after the silk industry was introduced into the Papal States by the advice of Magino di Gabriele of Venice, to whom the pope for this reason granted several privileges. The ghetto itself was enlarged in 1588 in consequence of the steady influx of Jews; and on Sept. 4, 1589, separate prisons for Jews and priests were erected.



Rabbi's Chair in the Synagoga dos Templos at Rome.
(From a photograph.)

In order to enable the Jews to pay their communal debt, which had increased to 18,000 scudi, Clement VIII. (1592–1605) granted them 214 shares of 100 scudi each in the monte di pietà; in return the Jews made the pope a present of 3,075 scudi. In his bull of Feb. 28, 1592, Clement was especially strict in prohibiting the Jews from associating or doing business with Christians and converts. Another bull of Feb. 25, 1593, ordered the expulsion of the Jews from the entire papal territory, with the exception of Rome, Ancona, and Avignon; and on March 3 following all Talmudic works were given over to the Inquisition to be burned; the destruction took place on the Piazza San Pietro Jan. 14, 1601. On Dec. 18, 1599, the pope issued a brief admonishing the chamberlain to take measures against any increase in the size of the Jewish community. When, in the jubilee year 1600, the Jews were ordered to give up their beds for the use of the pilgrims, it was found that there were only eighty blankets in the ghetto; consequently the Jews had to pay 317 scudi instead.

Of special importance to the community was the ghetto regulation of June 18, 1603, which gave precise instructions as to when the gates of the ghetto might be opened and how long they might be kept open. Exceptions were, however, made to meet extraordinary and unforeseen circumstances. An order of Jan. 4, 1604, prescribed that the Jews should pay a yearly tax of 800 scudi for those who had been expelled. Among the many oppressive acts of the Inquisition was the seizure of R. Joshua Ascaredi, his wife, and four children; the children were baptized, and the rabbi and his wife were set free after having been imprisoned for forty-three days.

Paul V.

Pope Paul V. renewed all the anti-Jewish bulls issued by his predecessors. He dealt a death-blow to Jewish civil jurisdiction by ordering that henceforth Jewish lawsuits might be brought only before the governor. Paul established a well on the Piazza del Tempio and permitted the Jews to lead water from this well into the ghetto. On Aug. 13, 1620, the Jews, through R. Hezekiah Manoah Corcos, petitioned the pope to issue an order that Jews who had been imprisoned for debt by Christians should be cared for at the expense of the latter. On Jan. 11, 1621, the rota issued a proclamation, consisting of thirty-nine articles, favorable to the Jews.

The condition of the Jews improved neither under Gregory XV. nor under Urban VIII. The latter ordered the community to pay to Leonardo Masserano, a convert to Christianity who had written a book against Judaism, annually for five years, until 1634, the sum of 1,200 scudi. When Odvardo of Parma, on Oct. 13, 1641, invaded the Papal States, the Jewish taxes were increased to 150,000 scudi, and this sum was never refunded to the community. Compulsory baptisms also became more frequent; thus the pope had the two children of the Jew Fullo Serotino seized and baptized; on account of this a revolt broke out in the ghetto, and precautionary measures had to be taken (May 28, 1639).

The pontificate of Innocent X. (1644–55) would have been more tolerable had it not been for a terrible famine, which lasted for years and made it necessary for the Jews to borrow 160,000 scudi from the monte di pietà, for which they paid 4½ per cent interest. An account of the pestilence during the reign of Alexander VII. (1655–67) has been given by the Roman author Jacob Zaḥalon, in his "Oẓar ha-Ḥayyim" (Venice, 1683). The spread of the disease through Jewish pedlers was generally feared, for which reason the ghetto was closed. Nevertheless, the first case within the ghetto occurred three months after the first appearance of the plague, in the latter part of October, 1656, and it ended there earlier than elsewhere (Aug. 28, 1657). Within the ghetto the pestilence claimed 800 victims. Two cardinals visited the ghetto twice daily to see to the needs of the community and to the isolation of the sick. Lazarettos were established; they were divided into three departments, in charge of the physicians Hananiah de Modigliano, Gabriel Lariccia, and Isaac Zahalon. The last-named, as well as other rabbis, preached every Sabbath from an open window, because the prayer-houses were closed. Thirty of the sixty communal leaders were selected to keep up communication with the outer world. These thirty survived the plague, and a yearly service was held in the synagogue on the Ḥanukkah festival to commemorate their good fortune. The expenditures of the community during the plague amounted to 40,000 scudi, and therefore the pope lowered to 4 per cent the rate of interest on the Jewish loan from the monte di pietà. The sufferings caused by the plague, and by the famine which raged from 1656 to 1657, have been narrated by Elijah Recanati (Zunz, "S. P." p. 440). On account of an overflow of the Tiber, on Nov. 5, 1660, by which part of the ghetto was destroyed, the pope permitted the erection of an additional gate opposite the Cluci Palace. In the same year the sixty leaders drafted a set of regulations in regard to the passion for finery, and published them on the gates of the ghetto. The same body issued, in May, 1667, an edict regulating the property assessment of the individual members of the community.

Conversionist Sermons.

The compulsory participation of the Jews in the foot-races was abolished by Clement IX. (May, 1668), but the Jews were required to pay an annual tax of 300 scudi instead. In addition, the leader of the Jewish community, on the day of the carnival, gave the commander of the Caporiones a present. The Shabbethaian Nathan Ghazali, who arrived in Rome in 1608, was expelled at the request of the community. During the reign of Innocent XI. an official armed with a staff attended the conversionist sermons to compel the audience to listen. Clement forbade the establishment in Rome of Jewish banking-houses. Compulsory baptisms took place under Innocent XI. (1676–89), notwithstanding his emphatically expressed belief that "one might lead, but not drag, a man into the house of God." Under Innocent's successors the Jewish community again attained to some degree of prosperity, especially under Innocent XII. (1691–1700) and Clement XI. (1700–20). Nevertheless, many compulsory baptisms took place under the last-named pope, and a blood accusation was made. The accusation was disproved by R. Tranguiko Vita Corcos in a book written in Italian and translated into Judæo-German; the translation appeared in Fürth in 1706 (Roest, "Cat. Rosenthal. Bibl." i. 55). Clement put an end to the carnival processions, a feature of which had been the presence of 100 Jews mounted on donkeys, with the rabbi at the head of the procession and facing tailward.

Under Innocent XIII. (1720–24) and Benedict XIII. (1724–30), who renewed all the anti-Jewish bulls issued by Paul IV. and Pius V., the Jews were assisted by the Inquisition, which did not permit any interference in their business affairs. Of the many interdictions which were issued by Clement XII. (1730–40) special mention should be made of the repetition of an order forbidding Jews to inscribe any epitaphs on their tombs. This order had originated as early as the time of Pius V. On May 28, 1731, all Hebrew books found in the Papal States were confiscated. On Oct. 24, 1736, the death penalty was inflicted on two Jews who had been caught breaking into houses in the ghetto. Baptisms of Jews took place in Rome Jan. 18, 1732; Oct. 19, 1737; and Oct. 25, 1737.

(From a photograph.)

In the Eighteenth Century.

A period of comparative peace for the community began under Benedict XIV. (1740–58), who issued three bulls regulating the question of compulsory baptism. When the rumor was spread that prohibited books were being smuggled into Rome hidden in bundles of cloth the pope ordered (April, 1753) a confiscation of books, which was carried out. During the reign of this pope a delegate from the Jewish community in Poland, Eliakim ben Asher Selig, journeyed to Rome in order to refute a blood accusation; the decision of the pope was in favor of the Jews.

As soon as Ganganelli had ascended the papal throne as Clement XIV. he dissolved the order of the Jesuits and freed the Jewish community from external jurisdiction and from the control of the Inquisition. He, as well as his successor Pius VI. (1775–1800), endeavored to promote Jewish trade and industry, until a reaction set in when the rest of the world adopted a policy of liberalism. The Jews were again forbidden to leave their ghetto, and were even prohibited from erecting monuments on their graves. In 1784 three Jews were murdered in the public streets, and two Jewish children were forcibly baptized. The Roman community therefore found it necessary to confer with the other European communities regarding methods of preventing such forcible conversions.

(From a photograph.)

Toward the end of the eighteenth century the Italian and Roman rabbis were accused of having made various religious changes, whereupon R. Judah Leon of Rome, in the names of his brother rabbis, published an apology entitled "Miktebe ha-Rabbanim Asher be-'Are Iṭalya"(Carmoly, in "Revue Orientale," iii. 171). The condition of the Roman Jews changed suddenly when General Berthier entered Rome on Feb. 15, 1798. Five days later the pope left Rome, and the Jews were declared free citizens; they at once laid aside the Jewish garb, and, to the accompaniment of music, planted a "tree of liberty" in front of the synagogue. Several articles taken from the Vatican were purchased by the Jews, but were at once destroyed. When the National Guard was established (March 14) the Jews were at first prevented from joining it; but shortly afterward the Jew Baraffael was appointed a major and several other Jews were enrolled in the ranks. On one occasion the Jews had to pay, at a few hours' notice, 150,000 scudi in coin, and 150,000 in banknotes, besides delivering great quantities of various articles. On July 16, in the same year, the Jew Ezekiel Morpurgo was appointed a senator. When the Neapolitans invaded Rome, they put an end to the French government, and imposed new taxes on the Jews.

Entry of the French.

The mantle of the pontificate fell next upon Pius VII. (1800–23), who in every possible way endeavored to improve the reduced financial condition of the Jews. On June 10, 1809, the pope was compelled to leave Rome for five years; the Jews were again proclaimed Roman citizens, and the ghetto was allowed to remain open. On June 4, 1811, the first Roman consistory was constituted under the régime of Napoleon; its leaders were R. Leone di Leone, Giuseppe Samuel Benigno, and the citizens Vitale de Tivoli, Abram Vita Modiglani, and Sabbato Alatri. Shortly afterward, however, with the fall of Napoleon, the Castle of Saint Angelo was returned to the pope, and the gates of the ghetto were closed. The Inquisition was reintroduced, Jewish trading privileges were limited to the ghetto, and the Jews' franchise was revoked. Conditions became still worse under Leo XII. (1823–29) and Pius VIII. (1829–31), when all the medieval edicts and bulls were renewed. After the death of Leo XII. the Jews, mad with rage, tore down the ghetto gates; this, however, did not tend to improve their condition; they were even compelled to listen again to conversionist sermons.

In the Nineteenth Century.

Although Gregory XVI. (1831–46) was greatly indebted to the Jewish house of Rothschild, and in spite of the intercession of the Austrian government, the ghetto gates were reerected during his reign. This pope demanded also of the community a copy of the Torah in evidence of allegiance; the community gave him instead a different scroll written in Hebrew and ornamented with costly pictures, for which they had paid 10,000 francs.

The epidemic of cholera which raged in Rome in 1837 inflicted comparatively little loss upon the Jews. In 1839 the pope, at the request of Baron James de Rothschild, presented the community with a building to be used as a trade-school for boys. The election of Pius IX. to the papal throne in 1846 was an auspicious event for the Jews. Upon his accession he distributed 300 scudi among the poor of the ghetto, and he showed his humane feelings during the Tiber floods of Dec. 10 and 12, 1846, when he sent relief to the Jewish quarter first of all. On Oct. 1, 1847, the carnival festival was finally abolished, and in May of the same year the Jews were granted permission to live outside the ghetto. The conversionist sermons were discontinued.

A complete reconciliation between the general populace and the Jews was, however, first effected on July 15, 1847, through the eloquence of Ciceruacchio. On April 17, 1848, the work of removing the ghetto walls began, by the order of the pope.

Shortly after a mob again rose against the Jews, who, however, successfully defended themselves. The revolution of 1848 progressed so rapidly that by the end of that year the pope was compelled to leave Rome. On Feb. 9, 1849, the "Assemblea" proclaimed the full civic equality of the Jews. The new government did not endure very long, however, for on June 30 the city was retaken; and the pope had hardly reached Rome before the old régime was restored. In Oct., 1849, the houses of all Roman Jews were searched because their owners were suspected of having Church property in their possession. Ornaments which bore no satisfactory marks of ownership, including even such as belonged to the synagogue, were not returned to them. Compulsory baptisms took place, as in Sinigaglia and Ancona. The Mortara Case aroused attention in 1859. The financial difficulties of the Roman community became so desperate that it had to apply for aid to other European communities ("Allg. Zeit. des Jud." 1860, 1870; Wertheimer, "Jahrbuch," 1860–1861). Even in the sixties coercive baptisms occurred in large numbers. In 1866 the final revolution broke out; Garibaldi was soon defeated, but in 1870 the victorious Victor Emanuel entered Rome, and the definitive overthrow of the secular power of the papacy was effected.

The Jewish Quarter and Synagogues.

Until the first century C.E. the Jewish settlement in Rome occupied the Trastevere section of the city; and the part before the Porta Portese was known up to the seventeenth century as the "Jews' field." During the reign of Domitian a new Jewish quarter was established on the Via Appia, outside the Porta Capena, and this soon became the most densely inhabited Jewish district in Rome; a reasonable estimate of the number of Jews in Rome during the empire would give at least 40,000. This large population rendered several synagogues necessary which were called *προσευχή*. Ten of these old congregations are known as those respectively of Augustus, Agrippa, Campus Martius, the Subura, the Carcaresians, the Hebrews, the Rhodians, the Elæanians, Volumnius, and Severus. The two first-named date from the reign of Augustus. The management of the separate congregations was in the hands of archons, whose duty it was to see to all the details of administration. The "gerusiarch" presided over the college of archons; independent of this college stood the archisynagogue, who was the highest official, and one of whose chief duties was to preach in the synagogue on Sabbaths. A subordinate office was that of the *ὑπηρέτης* (חזן הכנסת), who had charge of juridical affairs. In time these minor offices became hereditary, thereby assuming an aristocratic tendency. Higher positions within the community were occupied by the *ῥαββινός* (possibly identical with רבנו), the *μαθητὴς σοφῶν* (= תלמיד חכם), and the *γραμματεύς* (= סופר). The exact locations of only three synagogues are known: the oldest synagogue, situated in the Trastevere quarter, near the present Church of St. Cecilia; the synagogue of the Subura, situated in the neighborhood of the Esquiline, outside the Pomerium; and a synagogue outside the Porta Capena, near the sacred grove of Egeria. A seminary also existed as early as the first pre-Christian century (Philo, "De Virtutibus et Legatio ad Caium," ed. Mangey, ii. 568).

Jewish Catacombs.

There were at that time a Jewish court of justice, a ritual bath, and catacombs. One of these catacombs was discovered by Bosio in 1602, but all knowledge of this has been since lost. Up to the present time, however, four others have been discovered, all of which are situated on the Via Appia. These catacombs each contain two cubicula, decorated with artistic paintings. The oldest inscription met with in the catacombs is of the second pre-Christian century. Besides individual tombs there were family vaults, and the great age of these may be surmised from the family names which appear on them, as Julii, Claudii, Flavii. To a certain extent the inscriptions reveal the callings which the Jews pursued. The greater part were engaged in business; several were money-brokers; the handicrafts were well represented, and there appear to have been many artists and mechanics among them. There were also Jewish actors, of whom Antyros, during the reign of Nero, and Faustina, in the time of Marcus Aurelius, are known, as well as several contemporaries of Martial. The number of Jewish slaves was very considerable. The Jews distinguished themselves by their devotion to their homes and families, their industry, and their frugality. An exception to this is furnished by the sons of Herod and their descendants, who are known to have been spendthrifts. The women occupied a very honorable position; young girls were married between thirteen and fifteen years of age. Religious ceremonials, the Sabbaths, the feasts and fast-days, and the dietary laws were strictly observed.

The only custom which was in opposition to ancient Jewish ideas was the use on tombstones of animal and human figures. The language in ordinary use was at first Greek and later Latin, these languages being used also in the Sabbath services. Whether the Jews really were zealous in making proselytes can not be ascertained, but it is known that many Romans, often large numbers together, embraced Judaism, which generally resulted in persecutions. Those who embraced Judaism were either semi-converts (גרי השער = *θεοσεβεῖς* or *σεβόμενοι*) or proselytes (גרי הצדק). Not even the downfall of the Jewish state diminished the number of conversions that were made; still only the names of a few converts have been preserved. These include Fulvia, the wife of Saturninus, senator during the reign of Tiberius; Poppæa, Nero's wife, who was a *θεοσεβή*; Pomponia Græcina, who was accused (58) of practising religious ceremonies unauthorized by the state; Beturia Paulina, converted at the age of seventy (perhaps identical with the Talmudic Bekurit or Berusia; Grätz, "Gesch." iv. 102); and Chrysis (3d cent.). Among the male converts the most noteworthy were Agrippa, son of Fuscus of Phenon, and Æmilius Valensius.

The Christians at this time constituted merely a sect of Judaism, and the complete separation of the two creeds occurred at a much later period. Not until the second century did the Christians visit the synagogue with the purpose of holding disputa-

Notice by Pagan Authors.

tions with the Jews after service. Otherwise, Jewish customs and ceremonies were unknown to the Romans, and not a single one among their most famous authors has given even an approximately correct representation of Judaism. Of fantastic accounts the following may be mentioned: Justinus ("Epitoma," xxxvi. 2), Tacitus ("Hist." v. 2-5), Plutarch ("De Iside," xxxi.), Strabo ("Geographia," xvi. 235 *et seq.*), Cicero ("De Provinciis," v. 10; "Pro Flacco," lx. *et seq.*). See Classical Writers. Jewish hatred of Rome dates from the destruction of Jerusalem. Rome was regarded as "the fourth beast" in Daniel's vision, and was given the name of "Ḥazir" (the swine; Zunz, "G. S." iii. 221; Bacher, in "Monatsschrift," 1871, p. 226). The "unicorns" of Isa. xxxiv. 7) are referred to the Romans (ראמים = רומיים), and the "Dumah" of Isa. xxi. 11 is applied to Rome (משא דומה = משא רומא; cp. Yer. Ta'an. lxiv. 10a). Mention must also be made of the legend concerning Titus.

A Nook in the Old Ghetto at Rome.
(From Lanciani, "New Tales of Ancient Rome.")

With the downfall of paganism and the growth of the Christian religion the status of the Roman Jews underwent a change. They began to leave the Trastevere quarter and to settle on the left bank of the Tiber, and the Pons Fabricius at last came to be known as the Pons Judæorum. The Jewish population decreased in the same proportion as the general population. The organization of the community changed but little. At its head stood the ראש הגלות, to whom were inferior in rank the ראשי הכנסת, the latter being known also as "patriarchs" and "presbyters" (זקנים). These officiated also as "didascali" (רבנים). In the Justinian novellæ they are called also רישי פרקא, while the seminary is called בית הועד. On account of the general lack of knowledge of Hebrew the office of prayer-leader (חזן הכנסה) gradually increased in importance. The רישי כלה or ראשי ישיבה rendered decisions in all religious matters.

Justinian Constitution.

The Jews were no longer citizens, but constituted, in common with Saxons, Franks, and Friesians, a "schola peregrinorum" or "society of foreigners." They enjoyed full religious liberty, in return for which they assumed all a citizen's duties toward the state; minor offices also were open to them. Only the synagogues were exempt from the duty of quartering soldiers. The trade in slaves constituted the main source of livelihood for the Roman Jews, and decrees against this traffic were issued in 335, 336, 339, 384, 415, 417, 423, 438, and 743.

Education was mainly religious in character, most stress being laid upon a knowledge of the Bible. The liturgy underwent practically no changes. In case of a death in the community the mourners' first meal consisted of lentils; at such religious ceremonies as circumcision and betrothal, ten witnesses were required. The term סונדיקנום = σύντεκνος, meaning "godfather," originated probably in Rome, and the idea associating the life beyond with a heavenly feast, in which all the virtuous share, found its origin there also (see Jellinek, "B. H." v. 45 *et seq.*). The same may be said concerning the legend of the Messianic war.

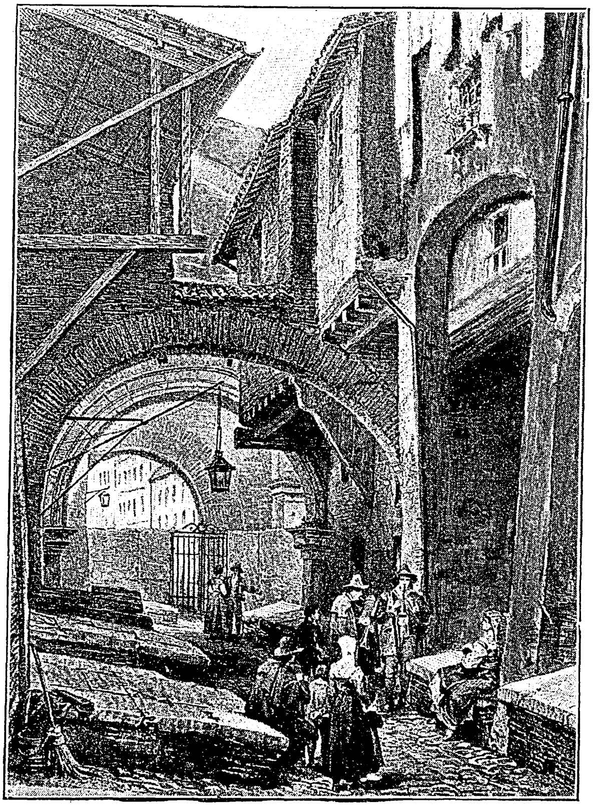
The Roman Jews were scorned and insulted by both pagans and Christians, and Claudius Rutilius Numantius calls them "a people which performs shameful operations on new-born children." Christianity strictly forbade compulsory baptisms, but it inflicted the severest punishments upon those who fell away from the Church after they had been baptized. In spite of this the relations between Christians and Jews in Rome seems to have been intimate, and until the latter part of the eighth century many of the former observed the Jewish Sabbath. Gradually, Christianity began to assail Judaism; this tendency became especially manifest in disputations. The first of these disputations is said to have been held in Rome between Pope Sylvester (314–336) and the Jew Noah; another is known to have taken place between Theophilus and a Jew named Simon. The famous legend concerning Peter, which attributes to him the authorship of the Sabbath-prayer ("Nishmat") and of the prayer for the Day of Atonement ("Etan Tehillah"), originated in Rome.

RUA VIA, ROME. (THE LARGE DOOR TO THE RIGHT LED TO THE OLD TALMUD TORAH.)
(From a photograph.)

From the eleventh century till into the fourteenth, the sources for the internal history of the Jews of Rome become more abundant. Business and industry were zealously pursued, and the prosperity of the community increased apace, but its members numbered only one thousand. The Jews still inhabited in part the Trastevere quarter, a fire which destroyed twenty-one Torah scrolls being reported as having taken place in the synagogue there in 1268. Another group of Jews lived in the northeastern part of the city, where a "Mons Judæorum" still existed in the thirteenth century. Besides the old synagogue in the Trastevere there were several others: that in the Riolle della Regola; that erected in 1101 by Nathan ben Jehiel and his brother Abraham; the Bozecchi Synagogue, which was built in the thirteenth century; the synagogue of R. Joab, built in the fourteenth century; and the Gallican synagogue, probably built by French Jews.

Very little is known concerning the organization of the community at this period. At the head of jurisprudence stood the "judex" (דיין); another official was the "strator," who possibly was identical with the פרנס. The prayer-leader was called חזן. The Jews were free from taxation, but whenever the pope entered the city they were required to do him homage and present him with two pounds of cinnamon and one pound of pepper. The antagonism between Jews and Christians was not very deep, and although few intermarriages occurred, the popes often complained of sexual intercourse between them. Disputations were often held, but these led to no definite results; and they were generally brought about by the Jews themselves. A comparison between polemical writings of this period—as, for example, between those of Solomon ben Moses and those of the Dominicans—at once shows the superiority of the Jewish disputants.

The educational system of this period was highly developed; the knowledge of Talmud, Bible, and religious practise had attained a high degree of excellence; grammar, however, appears to have been somewhat neglected. Mathematics and philosophy were assiduously cultivated, and the study of medicine was greatly favored. A more frequent interchange of correspondence took place between the scholars of Rome and of other European cities. It appears that the Jews were well represented in mercantile and financial circles also. Their export trade was very considerable, while the clothing and dyeing industries were equally flourishing; a number of Jews were engaged also in agricultural pursuits. The wealthiest among the Jews imitated the Italian nobility, not merely with regard to their mode of living, but also by adopting the rôles of Mæcenates, thereby stimulating scientific pursuits among Jews.



An Entrance to the Ghetto at Rome, About 1850.
(From a drawing by L. Haghe.)

Among the prominent Jewish physicians of the thirteenth and fourteenth centuries the following may be mentioned: Benjamin and Abraham ben Jehiel Anaw and their descendants, who bore the additional name Ha-Rofe; Maestro Gajo; Zerahiah ben Isaac; Moses ben Benjamin; Menahem Anaw; Nathan of Cento, his son Selome, and his nephew Samuel; Immanuel ben Solomon; Judah ben Benjamin.

Among the foremost writers of this period were: Kalonymus ben Jekuthiel ben Levi Ẓarfati (1230); Judah ben Benjamin Anaw (1247); Benjamin ben Abraham Anaw (1260); Jehiel ben Daniel (1265); Solomon Jedidiah ben Moses (1273); Jehiel ben Jekuthiel ben Benjamin Rofe (1284); Abraham ben Joab and Benjamin ben Joab (1284); Sabbai ben Mattithiah (1285); Solomon ben Zedekiah (1288); Yom-Ṭob ha-Kohen (1290); Solomon ben Jehiel ben Abraham (1292); Moses ha-Rofe ben Benjamin (1292); Jonathan ben Abiezer (1294); Mishael (1299); Moses ben Joseph (1302); Moses ben Ḥayyim (1304); and Paola, the daughter of Abraham ben Joab (1288).

It was considered fashionable to write verses, and the art of poetry, therefore, found followers also among the Roman Jews ("Maḥberet," xiii. 101a). The Jews' mode of living was in keeping with the prosperity of their affairs, and their city dwellings were comfortable and roomy. The attire of the men consisted of knee-pantaloons (מכנסים), stockings reaching to the knee (בתי שוקיים), a laced girdle (אבנט with פתילים), a tunic-like coat (סודר) thrown over the shoulders, shoes of leather or cloth (אנפיליות), and a broad-brimmed hat (שפה. כובע); in cold weather gloves were worn (גוואנטי). The color of the dress was either gray or yellow. The women wore as an outer garment the כתונת, made from cloth of variegated colors, provided with a long train, and held together with a girdle; on the street they wore a veil. The wealthy wore diamonds in the hair.

The popular games or amusements included: "even and uneven," ninepins, ball, marbles, dice, and chess. The Purim festival was celebrated by the burning of an effigy representing Haman. The Rejoicing of the Law was observed with festivities, and the bridegroom of the Law expended large sums of money for social purposes. Weddings and circumcisions took place in the synagogue, the former even on Sabbaths. The dead were arrayed in linen garments and buried on the day of death; the tombstones were inscribed only with the name of the deceased and the date of death.

Religious life centered in the synagogue; the ḥazzan was the prayer-leader and was highly respected. German prayer-leaders often officiated in Roman synagogues and were known as משורר. Regarding the sermons preached in the synagogue nothing further is known than that those on the Sabbath before Easter were protracted for hours, sometimes lasting until late in the afternoon. On the Ninth of Ab the Torah was not placed upon the table, but was taken to the farthest corner of the synagogue by one who held it in his hands and read aloud from it standing. The liturgy had not reached its final form at this period, and disputes often took place within the community concerning the admission of various prayers.

Legends and Traditions.

The legends that originated at this period had reference not only to ancient places and palaces, but also to the Jewish pope; several of these are extant in various versions, and all are indicative of the longing of the Jews for full liberty, and of their sorrow over their sad condition. Many families trace their genealogy back to these early times. The most prominent of these are: Degli Mansi, Piatelli, or Umani (ענוים); Faucirelli (נערים); De Rossi (אדומים); De Pomis (מן התפוחים); De Ceprano (צמרונים); De Buscchio (בוציקי); De Cento (חמאתי). Mention should be made also of that branch of the Anaw family called מן הכנסת or בית אל.

Authors of the Fourteenth Century.

The history of the fourteenth and fifteenth centuries gives evidence of a still more progressive civilization. With regard to the educational system, the child, as soon as it left the elementary school, devoted its time either to learning a trade or to the study of science. The latter study embraced four branches: natural science, medicine, philosophy, and poetry. The study of the sciences was, however, overshadowed by the rise of mysticism in the fourteenth century. Nevertheless, the "songs of the scholars of Rome" are often mentioned. The chief industries of the Jews were the manufacture of silk and clothing; but their most important occupation was the management of financial transactions. The ever-increasing percentage of usury charged for loans tended still further to estrange the Jews from the Christians. The former were, however, generally protected, and even foreign Jews who went to Rome on business were given safe-conducts. Mention should also be made of the butcher's calling. The Jewish shambles were at that time situated on the Piazza Macello. Roman Jews, when traveling abroad, were granted ten days' exemption from the wearing of the Jewish dress, and Jewish physicians were likewise exempted. Of famous authors who flourished at Rome in this period the following are worthy of special mention: Moses ben Ḥayyim; Judah; Menahem Ẓemaḥ ben Abraham Rofe; Jehiel ben Solomon ben Joab; Joseph ben David of Rome; and several members of the Bethel family.

The dress worn by the Roman Jews resembled that worn by the Germans of the same period. As a distinguishing feature all male Jews were obliged to wear a red domino, and all women the so-called "quaruelli." In spite of this, a tendency to luxury in dress, as well as extravagance at entertainments and religious ceremonies, developed in Rome to such an extent that a rabbinical conference in Bologna found it necessary to adopt stringent measures against it; these measures have special reference to bridal processions. Besides the games already mentioned the צחוק עם טבלאות, a kind of backgammon, and card-playing were known in Rome at this time; the last-named, however, was permitted only when visiting the sick. Music was not cultivated at all, and Christian musicians were employed; even at mourning festivals it was necessary to hire Christian female mourners. The language in common use was Italian; fragments of Hebrew-Italian dictionaries of this period have been found not only of the Bible and the Prophets, but even of the "Moreh Nebukim."

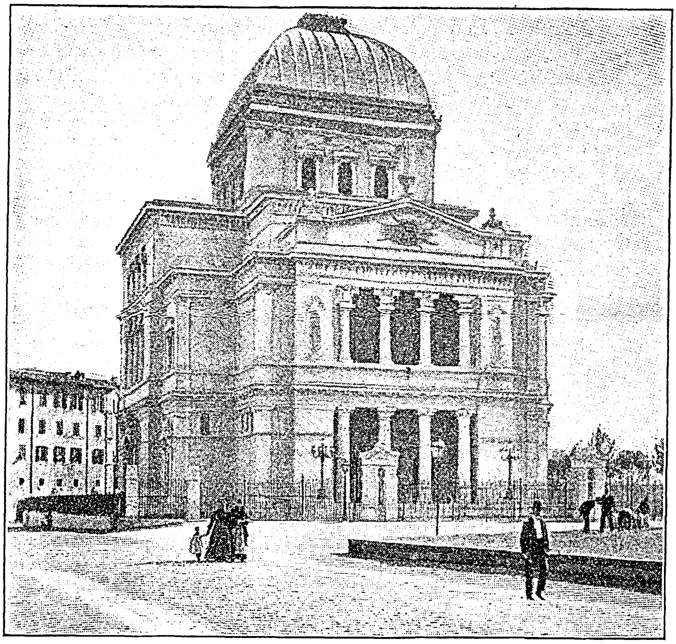
The enjoyment of comparative peace and the study of philosophy and the natural sciences resulted in some neglect in visiting the synagogue. At the same time there was a decided increase of superstition. Transgressions of the laws were of daily occurrence; in order to check these, ממונים were appointed, with authority to inflict severe punishment on any law-breaker whom they seized. At the head of the community stood a committee (בכורים), consisting of ten members. There were, besides, certain Jewish police officers, possibly identical with the above-mentioned ממונים. These officers were entrusted with the task of collecting the taxes of the Roman Church. All administrative officials were exempted from wearing the Jewish mantle. The two main synagogues were known by the names כנסת יראת ה" and כנסת ההיכל. The official taxes were as follows: (1) 1,130 gulden as a contribution to the games; (2) 10 gulden (gold) to the "consul mercatorum"; (3) the "decima" (tithes) tribute levied by the pope—1½ ducats per thousand for incomes larger than 1,000 ducats; 1 ducat per thousand for incomes between 500 and 100 ducats; and ½ ducat per thousand on incomes below 100 ducats.

The Jews of Rome were full citizens and were under the jurisdiction of the Capitoline Curia. Officials were severely punished for insulting the Jews or for bringing suits against them on Sabbaths or festivals. Severe punishment was also prescribed for any one who molested the Jews on public highways or waterways. But how far the laws were carried out it is difficult to say.

Physicians of the Fifteenth and Sixteenth Centuries.

The fifteenth and sixteenth centuries were the period of decline in Jewish learning. Only philosophy and medicine were diligently studied. The following Jewish physicians of this period are known: Jacob Mantino (who was docent at the medical college); R. Judah di Ascola (1524); Elijah ben Abraham (1536); Judah ben Jehiel and Solomon ben Jehiel (1539); Zeraḥin ben Mattithiah and Moses ha-Levi ibn Abi שבת (1538); Joseph ben Abraham; Samuel ben Abraham; Jekuthiel ben Isaac and Moses ben Isaac (1539); Joseph ben Abraham (1540–50); Eliezer and Menahem ben Shabbethai de Nola, and Moses ben Obadiah (1543); Mordecai ben Michael (1544); Maestro David (1545); Baruch ben Judah and Meshullam ben Abraham (1549); Judah ben Isaac; Moses; Jehiel ben Solomon; Moses bar Joseph de Monte Porzio; Meshullam ben Abraham and Joseph ben Abraham (1550).

The famous writers of this period include: Moses Rieti; Elijah Levita; the physician Judah ben Benjamin; Astruc Crescas Kalonymus; Daniel ben Abraham de Castro; Moses ben Eliakim; Menahem ben Mordecai; Ẓemaḥ ben David; Abraham bar Mordecai; Ḥayyim ben Samuel; and Joseph ben Elijah Ḥakim. The converts Franciscus Parnas, Paulus Evulius, and Fabius Ramugi attained fame in this period as copyists of Hebrew manuscripts. Later, Rome, in common with other Italian cities, had its own Hebrew printing establishments, but none of these enjoyed any very long existence. A Hebrew printing-press was established in 1518 by the sons of Abigdor ha-Levi Leniatori (הקצב), but neither this nor one established in 1545 by Antonio Bladao and Isaac ben Immanuel de Lattes existed for any length of time. A third one was founded later (1578) by Francesco Zanetti. The business of money-lending increased during this period; Rome had thirty Jewish bankers. Not until the establishment of the monte di pietà were they confronted with any competition. The tailoring trade employed a very large number of Jews, who were especially famous for making the so-called "Romanesque" garments. The trade in drugs likewise was increasing among them.



New Synagogue at Rome, Erected on the Site of the Old Ghetto.

(From a photograph.)

In this period Jewish musicians appeared, for the first time in Roman history; Juan Maria and Jacomo Sansecondo were especially famous. The singer Abramo dell 'Arpa and the dancing-master Guglielmo Ebreo Pesarese also established reputations in Rome as artists of merit. In spite of the many papal decrees and edicts, relations between Jews and Christians remained friendly, and the social position of the Jewish community was made easier by the appointment of a cardinal-vicar as supervisor of communal affairs in place of a clerical magistrate. Every male Jew over five had to wear a yellow badge on his breast, and every Jewess, two blue stripes in her veil. Pope Alexander VI. substituted for the yellow badge a disk made of cord, and Leo X. introduced a badge made from red cloth. In addition to his red mantle, every Jew had to wear a straw-colored biretta. Besides the "decima"-tax and the contribution to the games, a "vigesima"-tax of 1,000 scudi annually was levied; in 1533 it was, however, reduced to 300 scudi. Of the income of 2,100 scudi which the Jews derived from their slaughter-house they were required to pay the sum of 700 scudi into the papal treasury.

Taxation.

With regard to the internal affairs of the community, the Roman Jews were divided into Italians and Ultramontanes; and of the sixty members of the "Congrega," or representative body of the community thirty-five were Italians and twenty-five Ultramontanes. The authority of these representatives within the community was most extensive, and their decisions, when approved by the cardinal-vicar, had the force of law. At their head stood the two camerlingi (גזברים), one an Italian and the other an Ultramontane, and under these were the two collectors of alms (פרנסים), one Italian and one Ultramontane. To see that decrees were properly obeyed, five "difensori dei capitoli" were appointed, three of whom were Italians and two Ultramontanes. The protocols of the proceedings were kept by the second rabbi and signed by the communal secretary (סופר מתא). The oldest extant records of this kind date from the year 1536. The number of synagogues at this period was eleven, of which only ten are known by name: (1) Keneset Yir'at Adonai; (2) Keneset ha-Hekal; (3) Keneset Arba'ah Rashim; (4) Keneset ha-Sha'ar; (5) Keneset Katalani; (6) Keneset Kastiliani; (7) Keneset Aragonim; (8) Keneset Ẓiẓiliani; (9) Keneset Zarfatiyim; (10) Keneset Ashkenazim. Divine services in Rome were held according to four different rituals—Spanish, Italian, French, and German. The sermons were preached from the tribune (בימה) in Italian, which language was used also for the prayers. Of tombstones dating from this period, only one (of 1543) has been preserved. Jewish religious ceremonies were not strictly observed, and the moral standard was low. Thus, during Alexander's reign fifty Jewesses were burned at the stake for leading immoral lives.

With the walling-in of the ghetto under Paul IV., in the sixteenth century, the status of the Jewish community underwent a sad change. The original name of the ghetto was Serraglio delli Hebrei; this in 1562 was changed to Ghectus. At first it had five gates, to which three more were added later. The number of houses in the ghetto in the seventeenth century was 130, divided between two large and six small streets. Opposite the main gate was erected a tall cross bearing in Hebrew characters the inscription: "I have spread out my hands all the day unto a rebellious people" (Isa. lxv. 2). As the ghetto covered a space of only one square kilometer and was inhabited by at least 10,000 people, its atmosphere was always unwholesome. The community looked after the cleaning of the streets and often levied high taxes for that purpose, but frequent overflowings of the Tiber would deposit the river's filth in the streets and prevent their being kept clean. Of the original eleven synagogues only five remained. In addition to the old cemetery in the Trastevere the community had two others on the northern slope of Mons Aventinus. On account of frequent violations of the tombstones, it became customary to keep them in the dwellings.

Inner Life in the Sixteenth and Seventeenth Centuries.

During this period but little attention was paid to educational matters. When five years of age the child was sent to the elementary school, and thereafter it frequented the Talmud Torah, where extracts from Maimonides' "Mishneh Torah" constituted the best educational material. As regards social matters, strict rules were laid down as to the gifts that might be exchanged at festivals, and as to those that might be presented to a bride by the bridegroom, by friends, and by relatives. At a festival the music had to be provided by Jews, and only biscuits, bread, and wine might be served as refreshments. No one might give his daughter in marriage to a stranger without the express permission of the rabbi and the congregation. The custom of taking a second wife in addition to the first when the latter was childless was permitted up to the eighteenth century. In spite of the prohibitions of the congregation the luxury displayed in dress was very great; the women even wore rings on all their fingers. Coffee, tea, and tobacco were soon introduced into the ghetto, and it was even found necessary to discuss whether grace should be said over any of these articles (N. Segre, in "Paḥad Yiẓḥaḳ," p. 62a). There were also strict rules with reference to funeral ceremonies, and the coffin of a prominent man was decorated differently from that of an ordinary person. Religious superstition increased, and so did the literature of the ritual; "ma'amadot" and "ashmorot ha-boḳer" were composed and were recited daily before sunrise in the synagogues, where they were listened to with great devoutness. A sermon was preached either every Sabbath or every second Sabbath. Each sermon consisted of a Biblical text and its exposition; otherwise it was generally shallow and related chiefly to morals. The Sabbath was celebrated in a strict and austere manner.

The administration of the affairs of the community was in the hands of the "fattori del ghetto"; their office was a very ungrateful one, as its holders were liable to be called to account and punished severely for acts which they had no authority to prevent. Seventy-five of these officials who held office between 1551 and 1605 are enumerated by Vogelstein and Rieger ("Gesch. der Juden in Rom," ii. 312-313). In addition to other duties the fattori were required to revise and print the "Capitoli-Ordini" every five years. All elections for offices of honor within the community were held on the 17th of Tammuz, and persons who were elected were installed in office on the Sabbath following the Ninth of Ab.

The more the community suffered under papal oppression the more its tendency to charity increased, and in the sixteenth and seventeenth centuries there were in Rome forty-four charitable societies (see Vogelstein and Rieger, *ib.* ii. 315-318, where they are enumerated). Jewish converts were made, as a rule, not among the members of the congregations, but rather among the rabble which at all times infests the capital of the world. The conversionist sermons, which were held first in the Church of S. Trinita degli Pelligrini, and later in that of S. Sabina, on the whole produced no results.

The main Jewish industries at this period were tailoring, retail trading, the goldsmith industry, saddlery, carpentering, and fishing. The trade in second-hand clothing was particularly active, while the money-lending business died out completely, and the community became greatly impoverished. The study of medicine also decreased, although the names of sixteen Jewish physicians and surgeons of this period are known (Vogelstein and Rieger, *ib.* ii. 326). The Jews were under the jurisdiction of the cardinal-vicar: in civil cases, under the court of the vicarate; in criminal cases, under the Sacra Consulta; and in commercial cases, under the mercantile court. Unjust taxation contributed more than anything else to the stagnation and impoverishment of the community; new taxes were added almost daily, and they grew to such an extent that in 1682 the total debt of the community amounted to 261,036.72 scudi.

Following are lists of the known rabbis, scholars, and poets of Rome:

Rabbis: Moses Nasi, Abraham ben Shabbethai, Shabbethai ben Moses (11th cent.).

Solomon ben Abraham, Ezra ben Mattithiah, Menahem ben Judah (12th cent.).

Leonte (Judah) ben Moses, Abraham ben Jehiel Anaw, Shabbethai ben Solomon, Meïr ben Moses, Judah ben Benjamin יעלה, Benjamin ben Abraham Anaw, Zedekiah ben Abraham Anaw (13th cent.).

Azriel ben Ḥayyim Trabotta, Pethahiah Jare ben Baruch, Joseph ha-Levi, Solomon de Treves Ẓarfati (15th cent.).

Israel ben Jehiel Ashkenazi, Shabbethai ben Mordecai, Maẓliaḥ ben Joseph, Michael ben Shabbethai, Abraham ben Aaron de Scazzoccho, Solomon ben David Corcos, Isaac ben Immanuel de Lattes, Solomon ben Shemaiah, David Falkon, Shabbethai ben Joseph Calabrese, Isaac ben Solomon, Shabbethai ben Joseph, Michael ben Isaac, Joseph ben Obadiah, Elijah ben Joseph di Nola, Baruch ben Joab di Fes Fiori, Isaac ha-Kohen ben Abraham, Eliezer Maẓliaḥ ha-Kohen, Isaac ben Judah, Moses ben Immanuel Lattes, Isaac ha-Kohen ben Abraham Ashkenazi, Ḥamul Eliezer Maẓliaḥ ben Abraham (16th cent.).

Samuel ben Moses de Castel Nuovo, Hananeel Sforno, Abraham de Cammeo, Raphael Hezekiah Manoah Corcos, Shabbethai b. Mordecai Panzieri, Judah ben Isaac Menaghen, Vito (Ḥayyim) Menaghen, Raphael de Lattes (17th cent.)

Jacob Jeshurun Lopez, Shabbethai ben David de Segni, Abraham ben Jacob Anaw, Maẓliaḥ di Castro, Mahallaiel Modigliano (18th cent.).

Judah Leon di Leone, Jacob Fasani, Israel Moses ben Eliezer Hazan, Samuel Toscano (M.D.), Laudadio Coën, Abramo Toscano (M.D.), Sabatino Scazzochio (19th cent.).

Vittore Castiglione (20th cent.).

Scholars: Cæcilius of Calacte (1st cent. B.C.).

Flavius Josephus (1st cent. C.E.).

Theudas, Pelation, Matthias ben Heresh (2d cent.).

Ḥiyya bar Abba (3d cent.).

Abba bar Zemena (4th cent.).

Yiram of Magdiel (9th cent.).

Jehiel ben Abraham, Joab Anaw (11th cent.).

Nathan ben Jehiel, Moses ben Menahem, Benjamin ben Joab (12th cent.).

Solomon ben Shabbethai, Benjamin ben Moses, Mordecai ben Benjamin, Daniel (father of Jehiel Sofer), Joab (grandfather of Paola), Isaac of Camerino, Nathan ben Menahem, Mattathiah ben Shabbethai, Benjamin ben Solomon, Jehiel ben Benjamin Anaw, Zedekiah ben Benjamin Anaw, Lewi, Simḥah, David, Moses ben David, Moses ben Abraham, Benjamin ben Judah, Benjamin ben Joab Naḳdan, Joab ben Solomon, Jekuthiel ben Jehiel Rofe, Moses ben Ḥayyim, Moses Rofe ben Benjamin, Benjamin ben Judah, Judah Leone Romano, Nathan ben Eliezer (1279-83), Zerahiah ben Isaac Gracian, Solomon ben Moses de Rossi (13th cent.).

Moses ben Judah de Fanciulle, Moses ben Shabbethai, Moses ben Jekuthiel (14th cent.).

Moses ben Isaac de Rieti, Flavius (Raimundus) Mithridates (15th cent.).

Obadiah ben Jacob Sforni, Mordecai ben Moses Galante, Elijah ben Asher ha-Levi, Isaac ha-Kohen ben Ḥayyim, Jacob Mantino of Tortosa, Amatus Lusitanus, David de Pomis, Jehiel ha-Kohen ben Moses (16th cent.).

Tranquillo Vita Corcos, Shabbethai Ambron (17th cent.).

Poets: Rome was for a time a "nest of singing birds"; among the best known were: Solomon ben Judah (9th cent.).

Shabbethai ben Moses, Moses ben Shabbethai, Kalonymus ben Shabbethai (11th cent.).

Daniel ben Jehiel, Abraham ben Jehiel, Judah ben Menahem, Leonte ben Abraham, Benjamin ben Abraham, Nathan ben Zedekiah (12th cent.).

Moses ha-Sofer ben Benjamin, Moses ben Abraham Anaw, Jehiel ben Jekuthiel, Moses ben Joseph, Solomon ben Moses Jedidiah, Solomon ben Moses ben Joseph, Abraham ben Joab, Solomon ben Moses (13th cent.).

Immanuel ben Solomon, Judah Siciliano, Solomon (14th cent.).

Joab ben Nathan, Daniel ben Judah (15th cent.).

Deborah Ascarelli (16th cent.).

Recent Condition.

A new era dawned for the Jews of Rome when Victor Immanuel ascended the throne of Italy, and the secular power of the papacy came to an end. At the close of the seventies the ghetto began to fall, but the poorer among its inhabitants left it reluctantly, because the rents were too high in other parts of the city. To ameliorate this poverty the Società di Fratellana per il Progresso degli Israeliti Poveri was formed; its first president was M. Rava (1876-79), who was succeeded by M. Alatri. The latter held the office until 1883, when he was succeeded by Tranquillo Ascarelli. In 1881 the community was reorganized, although it took two years before the statutes were enacted and duly sanctioned by the king. Two years later the ghetto was altogether in ruins. The Talmud Torah also was reorganized, Dr. Ehrenreich being appointed its principal. After his death (1890) Angelo Fornari became his successor. Vittore Castiglione, formerly of Triest, has been chief rabbi since 1904. Castiglione is a prolific writer both in Italian and in Hebrew; he has recently begun to publish an Italian translation of the Mishnah.

Besides the five old congregations, which are united under one roof, and in which both the Italian and the Spanish rituals are followed, the community has a magnificent temple on the Esquiline (built in 1889), and the "New Temple," erected in 1901. Rome has (1905) a total population of 463,000, of whom more than 7,000 are Jews.

——**Typography**: A number of Incunabula, Nos. 12-22 and 24, not dated, but probably printed before 1480, have never had their locality determined; but, considering that Rome was the first place in Italy where any printing was done, it has been conjectured that these works were all published at Rome and that possibly they may be earlier than the Rashi, the first dated Hebrew print. One of the printers' names was Benjamin of Rome, which seems to confirm this suggestion. Among the books thus printed was the 'Aruk, the greatest Hebrew work produced at Rome.

The earliest prints with the locality Rome actually determined are of 1518, when Elijah Levita's "Sefer ha-Baḥur" and "Sefer ha-Harkabah" were published by Faccioti de Montetchio, the Hebrew printing being done by three brothers, Isaac, Yom-Ṭob, and Jacob ben Abigdor. Six years later a Hebrew book was printed by one Antonio Bladao, who later, in the forties of the same century, printed three rabbinical works. In 1578 Francesco Zanetti, of the Venetian family of that name, printed various parts of the Bible at Rome. Lastly, the Congregation de Propaganda Fide published at Rome in 1683 the "Derek Emunah" of Julio Morossini, a conversionist work.

J.

ROMI, DANIEL B. JEHIEL: Scholar and poet of the tenth and eleventh centuries; probably a brother of R. Nathan, author of the "'Aruk." He wrote a commentary on the treatise Zera'im and a "yoẓer" in twenty-two verses for the Sabbath Ḥanukkah, in which he recounts the Antiochus story (MS. De Rossi No. 959). The forms he uses are those of the old payyeṭanim. See Ḥanukkah.

S. S. O.

ROMI, JOSEPH: Name by which Joseph b. Judah Ḥamiẓ, a pupil of Leon of Modena, is erroneously known. He was the author of "Belil Ḥamiẓ" (see Isa. xxx. 24), for which Modena claims he wrote an introduction; the work is not otherwise known. Perhaps he was the author also of "Yode'e Binah," a work which Azulai mentions having seen in a partly burned and illegible condition. Romi wrote a commentary to Zohar Genesis, which was continued by Moses Zacuto. In 1663 he edited at Venice the Zohar Ḥadash.

Bibliography: Steinschneider, *Cat. Bodl.* cols. 1451-52; Reggio, *Beḥinat ha-Ḳabbalah*, p. xii., Göritz, 1852; Vogelstein-Rieger, *Gesch. der Juden in Rom*, ii. 266.

D. I. E.

ROMM: Family of printers and publishers of Hebrew books in Wilna. The family formerly lived in Grodno, where the book-dealer **Baruch b. Joseph Romm** established a printing-office in 1789. The Romm Hebrew printing-office was the first in Lithuania, and its authorization by King Stanislaus August was considered an important event. In 1799 Baruch removed to Wilna, where he died April 29, 1803. The business was inherited by his son **Menahem Man Romm**, who in 1835 began, in partnership with Simḥah Zimel of Grodno, the crowning effort of a Jewish printer's career—the publication of a new edition of the Talmud. The first volumes of that edition bear the imprint "Wilna and Grodno"; the later volumes have that of Wilna only; but the work was really done in Ozar, near Grodno.

Menahem Romm died Oct. 13, 1841, and was succeeded by his only son, **Joseph Reuben Romm**, under whom the printing-house was formally established in Wilna in 1847, although the report of a conflagration ("Allg. Zeit. des Jud." 1840, No. 20) proves that it had even previously been of considerable size and importance. He died Feb. 28, 1858, and left three sons, **David**, **Ḥayyim Jacob** (d. Aug. 30, 1869), and **Menahem Gabriel**. David, who was the head of the firm, died suddenly March 9, 1860, while on his way from St. Petersburg, where he had obtained a practical monopoly of the Hebrew printing and publishing business in Russia. After his death the monopoly was broken, and numerous printing establishments sprang up in various parts of the empire. In 1863 the present firm name, "Witwe und Brüder Romm," was adopted; and the house has maintained its position as the foremost Jewish publishing concern in Russia, if not in the world. **Deborah Romm**, David's widow, took an active interest in the firm's affairs until her death on Dec. 3, 1903. Three of her sons reside in New York.

The Russian Hebraist Mordecai (Marcus) Plungian was corrector in Romm's printing-office from 1869 to 1873.

Bibliography: Steinschneider, *Hebr. Bibl.* ii. 58; iii. 22; iv. 50, 126, 153 (Benjacob's list); *Aḥarit Dabar*, note at the end of the treatise *Niddah* of the latest edition of the Babylonian *Talmud*, Wilna, 1897.

J. P. Wi.

RÓNA, JOSEPH: Hungarian sculptor; born at Lovas Berény Feb. 1, 1861. He was destined by his parents for a mercantile career, and studied at Kecskemét and Budapest; but he soon became a pupil in the studio of a sculptor, where he was obliged to do the most menial work, although he was able to spend his nights copying sculptures. Receiving a state scholarship, Róna went to Vienna, where he studied for three years with Prof. Helmer; and in 1882 he entered the school of Zumbusch as royal stipendiary. In 1885 he gained the Roman prize at Berlin with his "St. Sebastian" and "Olympic Victory." After working for a time in Rome he went to Paris, and in 1886 he settled in Budapest.

Róna's most noteworthy works are: the statue commemorative of the War of Independence, at Ofen; the busts on the Lustspieltheater, Budapest; the mausoleum of Gen. Klapka; the equestrian statue of Prince Eugene of Savoy, in front of the castle of Ofen; and the statues of Louis Kossuth at Miskolcz, and Nikolaus Zrinyi at Budapest.

Bibliography: *Pallas Lex.*

S. L. V.

RÓNA, SAMUEL: Hungarian dermatologist; born at Halas April 1, 1857; educated at Budapest. He was appointed assistant to Prof. Kaposi at Vienna in 1881, and was assistant at the Rukós Hospital, Budapest, from 1882 to 1885. In the following year he with several associates founded a public dispensary for the sick, reserving for himself the section for syphilitic diseases. He then traveled through Europe, studying at the principal clinics, and in 1889 was appointed lecturer and in 1893 departmental physician at the city hospital of Budapest, being made professor six years later.

Róna's principal works are: "Adat a Korpázó Hörglob Tanához" (1883), on pityriasis rubra; "Dermatitis Exfoliativa" (1886); "Lichen Planus" (1888); "Lichen Scrophulosorum Infantum" (1888); "A Prurigo Lényege és Gyógyitása" (1892), on the nature and cure of prurigo.

RONSBURG, BEZALEL B. JOEL: Bohemian Talmudist and rabbi; born 1760; died Sept. 25, 1820, in Prague, where he was dayyan and head of the yeshibah. Zacharias Frankel was one of his pupils.

Ronsburg was the author of "Horah Gaber" (Prague, 1802), commentary on the treatise Horayot, and "Ma'aseh Rab" (*ib.* 1823), marginal notes on the Talmud, reprinted in the Prague (1830-32) edition of the Talmud and in several later ones. Under the title "Sedeh Ẓofim," in the Prague (1839-46) edition of the Talmud, are printed Ronsburg's notes to the "Halakot" of Asher b. Jehiel; and the same are reprinted in Romm's Wilna edition. The following works by Ronsburg remain in manuscript: "Pitḥe Niddah," novellæ, and "Siḥat Ḥullin."

At the official naming of the Jews, Ronsburg (the name is derived from Ronsperg, a city in Bohemia, and is pronounced "Ronshborg") took the name **Daniel Bezaleel Rosenbaum,** the initials "ר"ב" standing for both surnames; he continued to be known, however, as Ronsburg.

E. C. L. G.

ROOT: The fundamental or elementary part of a word. So far as is known no Hebrew equivalent of the term "root" was used with a philological application by the teachers of the Talmud. It is true that they disputed about the radical meaning of "shaḥaṭ," dividing it into the elements "shaḥ" and "ḥaṭ," and that they even played upon the word "'iḳḳer" (Gen. xlix. 6; see Ḥul. 27a; and comp. A. Berliner, "Beiträge zur Hebräischen Grammatik in Talmud," etc., 1879, p. 31, and especially Ẓemaḥ Rabbiner, "Beiträge zur Hebräischen Synonymik in Talmud," 1899, pp. ix. *et seq.*); but a clear conception of "'iḳḳar," the Aramaic synonym of "shoresh" (root), as denoting the fundamental element of other linguistic forms, was by no means shown. Menahem ben Saruḳ, however, spoke of "letters which belong to the fundamental form ["yesod"]," and Ḥayyuj had a conception of root-letters when he argued against Menahem's opinion that the "aṣl" of the form "wa-tofehu" (I Sam. xxviii. 24) is the letter פ (see M. Jastrow, Jr.'s, ed. of Ḥayyuj's Arabic treatise "The Weak and Germinative Verbs in Hebrew . . . by Hayyug," p. 2, Leyden, 1897).

More important is the question in what the oldest scholars considered the Hebrew roots to consist. Menahem found them in those letters of a verb which are preserved in all its modifications; but Ḥayyuj opposed to this the important theory that no Hebrew verb consists of less than three letters (B. Drachman, "Die Stellung und Bedeutung des Jehuda Chajjug in der Geschichte der Hebräischen Grammatik," p. 44, Breslau, 1885), and this triliteral form was called "root" until modern times.

Biliteral Roots.

Investigation did not end here, however. For various reasons it began to be recognized that triliteralism did not represent the original state of the Hebrew language. For example, forms were found like "galgal" (to roll, revolve; Jer. li. 25; comp. Ed. König, "Comparativ-Historisches Lehrgebäude der Hebräischen Sprache," i. 350, 372, 378), showing that the biliteral גל was an adequate substitute in the language for the triliteral גלל. The same is the case with טלטל (= "hurl"; Isa. xxii. 17), which is related to טול (see König, *l.c.* i. 500). Furthermore the relationship in meaning among many triliteral verbs could not long remain unnoticed. Traces of the consciousness of this relationship possibly occur even in the Old Testament itself, as is shown by the fact that the name "Noah," which comes from the root נוח, is explained by "yenaḥamenu," a form of the root נחם (Gen. v. 29). This is so remarkable that it was commented upon even in Bereshit Rabbah, *ad loc.* (A. Berliner, *l.c.* p. 32). The same consciousness lay behind the connection of words related in meaning, like "yadush," "adosh," etc. (Isa. xxviii. 28; comp. Jer. viii. 13, xlviii. 9a; Zeph. i. 2), or "te'or" and "'eryah" (Hab. iii. 9). That such relationship exists in the case of many triliteral verbs can be plainly seen in a comparison of the following groups of examples: חמם and יחם (Gen. xxx. 39, 41; xxxi. 10; Ps. li. 7), both denoting originally "to be warm"; עזז and ועז (comp. נועז, Isa. xxxiii. 19), "to be strong"; אשש (Isa. xlvi. 8), אשי (Jer. l. 15), and ישי, or originally ושי, "support," as is shown by the words "yesh" and "tushiyyah"; נשא and the Ethiopic "wasé'a," "to lift up"; יסד (originally וסד) and

סוד, whose fundamental meaning is "to sit" (comp. ירש and רוש); נהם, "to groan," and המה, "to roar"; רוף (from which is derived "terufah," denoting "healing") and רפא. The natural conclusion from a comparison of such groups of roots is that their logical relationship rests upon the two consonants which are common to all.

But verbs in which no weak letter occurs also show that two of their consonants are fundamental ones; and a proof of this is the variable position of the third consonant, as is seen from a comparison of גזר (Arabic, "jazar") and גרז (Arabic, "jaraz"), whose radical meaning is "to cut." The Arabic "ḳaṭṭ" = "cut" and the Assyrian "ḳiṭṭi" find their common elements in קט (Ezek. xvi. 47) = "section, small quantity," in the accusative, "for a small thing." קט is found also in קטב = "cut down, root out," in קטף = "pluck off," in קטל = "cut down, kill," and in קטן, in which last the meaning "cut off, shortened" has been developed into the conception "small." These proofs have been developed by Hebrew grammarians with varying degrees of distinctness, Gesenius having expressed them with exceptional clearness in his "Lehrgebäude," 1817, pp. 183-185.

The linguistic forms, then, which, as the first expressions of conceptions, contain the rudiments of the more developed forms, are called "roots"; and it is not too great an assumption to say that such roots form the basis of all real words in the Hebrew language. One can neither speak with Friedrich Delitzsch of triliteral roots in the Semitic languages, nor doubt with Kautzsch ("Grammatik," 27th ed., 1902, § 30g) that all Hebrew verbs can be traced back to the biliteral form, *i.e.*, roots.

Triliteral Roots.

That biliteral verbs, however, were ever really in use is not probable, assuredly not certain. The above-mentioned fact that גל, for example, was reduplicated to form גלגל does not prove that the biliteral גל was ever actually in use, as Philippi believed ("Morgenländische Forschungen," etc., p. 96). The two consonants ג and ל were, it is true, sufficient to express the idea of "to roll" when they formed part of a certain combination; but it does not follow that they expressed such an idea when they stood alone. Moreover, it is found that all the verbal and nominal forms of the Hebrew language are built up on a triliteral foundation. This triliteral basis is shown, for example, even in such forms as סַבּוּ (= "they surrounded"); for if the ב of this form were not doubled in pronunciation the preceding "a" would have been lengthened. Furthermore, nouns like אב ("father") show in their inflection, as in the status constructus אבי, that they correspond to a triliteral verb. That the expression of verbal concepts by three consonants was a very old characteristic of Semitic languages has been recently affirmed by the Egyptologist Erman in the following words: "Triliteralism was already well developed when the Egyptian separated from the Semitic languages" ("Sitzungsberichte der Berliner Academie," 1900, pp. 323, 350).

The triliteral embodiment of a verbal concept is called "stem" or, more exactly, "basal stem," to distinguish it from other verb-stems (as "niph'al," etc.) which are built upon it. Moreover, David Ḳimḥi at the beginning of his "Miklol" designated the three consonants of the verbal stem "ḳal" as "the fundamental letters."

The third consonant, which lengthens the biliteral form into the basal stem, may best be called "root-determinative," in imitation of a term used in Indo-Germanic grammar. It may be either a repetition of the second consonant (*e.g.*, in סבב), or one of the sounds articulated in an adjoining part of the vocal cavity (*e.g.*, in "naḥan" and "laḳaḥ"), or a sound which is half vowel and half consonant (*e.g.*, in ישב = ושב; קום; גלי = גלו), or an unstable spiritus lenis (*e.g.*, in מצא), or, finally, a sound which is weak only in comparison with the other two consonants, as is seen in the above-mentioned verbs קטב, קטף, etc. As to the position of the root-determinative, it may stand in the first, second, or third place, as the examples already given show. Nevertheless its position is not wholly independent of certain laws. The first or second consonant of the stem may not be a repetition of one of the two root sounds. Exceptions, as in ששאתי (Ezek. xxxix. 2), etc., are secondary formations; the form cited, for example, has come from שאשא (all the examples may be found in König, *l.c.* ii. 463). Identity of the first and third consonants of the stem, however, has not been so carefully avoided (comp. נגן, שלש; König, *l.c.*), because this indirect recurrence of the same sound was less difficult for the articulatory organs. Moreover, the three stem consonants show an interesting mutual relation in respect to quality. When, for example, קטט, כתת, and גדד are considered it is seen that the three sounds in each stem agree in degree of strength: all three are either emphatic, surd, or sonant. All sounds which can stand together in the root-stem of a Semitic verb are called compatible.

Quadriliteral Roots.

Quadriliteral stems originate in the following ways: (*a*) The ordinary doubling of the middle consonant to express a greater degree of intensity in the action in question (comp. "ḳiṭṭel," etc.) is often replaced by the insertion of a vowel (comp. סובב) or of a liquid consonant (יכרסם, Ps. lxxx. 14; מכרבל, I Chron. xv. 27; etc.). (*b*) For a similar purpose the following consonants of the stem may be repeated: the third (comp. קומם; רענן), the first and third (גלגל, קוקו, etc), the second and third (צאצאים = "descendants," derived from יצא; etc.), or the first after the second (זרזיף, etc.; see the list of rarer intensive stems in König, *l.c.* i. 683; ii. 379, 399 *et seq.*). (*c*) Other quadriliteral stems, to express the cause of an action, were formed by prefixing one of the following four related sounds: ת (תרגלתי, Hos. xi. 3); ס (סלעם, Lev. xi. 22); the spiritus asper (הקטיל, etc.); or the spiritus lenis (אשכים, Jer. xxv. 3; comp. König, *l.c.* ii. 380, 401 *et seq.*). (*d*) Quadriliteral stems formed by prefixing a נ or ת (comp. נקטל and התקטל) have a reflexive meaning, the נ probably being connected with the "n" of "anokî," etc., thus expressing the reflex effect of the action on the subject. The same object was gained in other forms by prefixing ת, which recalls the ת of אתה,

etc. (König, *l.c.* ii. 383). It is, moreover, an interesting fact that the Semitic languages vary in regard to the number of their pluriliterals and that the formation of such stems has increased in the younger branches of the family. The old Hebrew shows comparatively few pluriliterals, while the post-Biblical Hebrew presents a large number of newly created examples (Hillel, "Die Nominalbildung in der Mischna-Sprache," 1891, p. 36). Old Syriac has a considerable number; but modern Syriac far surpasses it in this regard (Nöldeke, "Grammatik der Neusyrischen Sprache," pp. 100 *et seq.*, 256 *et seq.*).

T. E. K.

ROQUEMARTINE, DAVID: French scholar; a native of Roquemartine; flourished in the fourteenth century. He was the author of "Zekut Adam," giving an allegorical interpretation of the Biblical narrative of the sin of Adam, which, according to the author, is not to be understood literally. A part of this work, which is still extant in manuscript (Neubauer, "Cat. Bodl. Hebr. MSS." No. 2232, 2c, Günzburg collection), was published in "Yen Lebanon" (Paris, 1866) by Jehiel Brill, with notes by Senior Sachs, who shows that the "Zekut Adam" was used by Isaac Abravanel in his commentary. Roquemartine was the author of two other works which also are extant in manuscript: (1) a commentary on Isa. liii., and (2) a commentary on Hag. ii. (Neubauer, *l.c.* No. 2232, 2a, b).

E. C. I. Br.

ROSALES, JACOB HEBRÆUS (IMMANUEL BOCARRO FRANCES Y ROSALES): Physician, mathematician, astrologer, and poet; born in 1588 or, according to some, in 1593, at Lisbon; died either at Florence or at Leghorn in 1662 or 1668; son of the Marano physician Fernando Bocarro. On completing his medical and mathematical studies at the University of Montpellier, he returned to his native country, where he soon acquired a reputation as a physician, among his patients being the Duke of Bragança and the Archbishop of Braga. In 1625 he went to Rome, where he devoted himself to mathematics and astrology, and entered into friendly relations with Galileo Galilei, who encouraged the "learned astrologer," as he styled Rosales, to undertake a work on astrology. Rosales then lived for some time at Amsterdam, where he openly avowed Judaism, taking the name of Jacob. Some time before 1632 he went to Hamburg. In July, 1647, he was appointed "Comes Palatinus" by Emperor Ferdinand III. He then returned to Amsterdam, and subsequently went to Italy, where he died.

Rosales published the following works: "Tratado das Cometas Que Apparecerão em Novembro pas. de 1618" (Lisbon, 1619); "Status Astrologicus sive Anacephalæosis da Monarchia Lusitana," a Portuguese poem in 131 (133) octaves, dedicated to King Philip III. of Spain and other princes (*ib.* 1624; 2d ed., with Latin translation, Hamburg, 1644); "Luz Pequena Lunar: Explicação de Primeiro Anacephalæosis, Impr. em Lisboa 1624" (Rome, 1626); "Poculum Poeticum," in praise of his friend Zacuto, printed in the latter's "De Medicorum Principum Historia" (Amsterdam, 1629 *et seq.*); "Brindis Nupcial é Egloga Panegyrica Representada dos Senhores Isach e Sara Abas" (Hamburg, 1632); "Regnum Astrorum Reformatum" (*ib.* 1644), on astronomy; "Foetus Astrologici Libri Tres" (*ib.* 1644), Latin poem in 170 hexameters, appended to the "Status Astrologicus"; "Armatura Medica, sive Modus Addiscendi Medicinam," in vol. ii. of Zacuto's collected works (Lyons, 1644). Rosales wrote also "Επος Νοητικον sive Carmen Intellectuale," in Latin in nine sections, and "Panegyricus in Laudem Eximii . . . Viri Menasseh ben Israel" (Amsterdam, 1639), in honor of Manasseh b. Israel's "De Termino Vitæ"; and an ode and epigram (Hamburg, 1633) in Portuguese in praise of Moses Abudiente's grammar. A work by Rosales entitled "Verdadera Composicion del Mundo Mathematico e Philosophico" is said to be extant in manuscript.

J. M. K.

ROSANES: Family, originally from Rosas, a Spanish seaport. Members of it emigrated to Portugal at the end of the fifteenth century, and others settled later in Turkey, Austria, and Russia. It may be that "Rosales," the name of a family of which Immanuel Frances y Rosales (see ROSALES, JACOB) was a member, is merely a corruption of "Rosanes." The family has produced prominent rabbis; and the best-known members are the following:

Abraham Rosanes I. (called also **Abraham the Elder**): Turkish Talmudist; lived at Constantinople in the seventeenth century. He had a literary controversy with Moses b. Nissim Benveniste; and some of his responsa are to be found in Samuel Primo's "Kehunnat 'Olam." Acording to Azulai, he wrote strictures on Abraham Picco's "Giddule Terumah."

Abraham Rosanes II.: Chief rabbi of Constantinople about the middle of the eighteenth century; died at Jerusalem at an advanced age. A responsum of his is to be found in Isaac Rapoport's "Batte Kehunnah" (i.), and he wrote also prefaces to several rabbinical works.

Abraham Abele ben Ẓebi Hirsch Rosanes: Preacher of Minsk, Russia; died there Dec. 23, 1827. He was a preacher of great oratorical talent, and was the author of "Zikron Abraham," a commentary on the Pesaḥ Haggadah (published with the text, Wilna, 1859), and of "Maḥazeh Abraham" (*ib.* 1862), a work on ethics. According to the preface to the former work, Abraham Abele left five other works. None of these has been published.

Abraham ben Israel Rosanes: Bulgarian scholar; born at Rustchuk 1838; died there 1879. In 1867 he made a voyage to Palestine; and his account of that country, written in Judæo-Spanish, was translated into Hebrew by Menahem Farḥi and published in "Ha-Maggid" (xi., No. 38–xii., No. 34) under the title "Mas'ot ha-Abbir." Rosanes was the founder of a Jewish school in his native place, which he endowed with a valuable library.

Judah Rosanes: Rabbi of Constantinople; died there at an advanced age April 13, 1727; son-in-law of Abraham Rosanes I. His teachers in Talmud and rabbinics were Samuel ha-Levi and Joseph di Trani. On account of his knowledge of Arabic and Turkish he was appointed by the government, chief rabbi ("ḥakam bashi") of the Ottoman empire.

Judah took a very active part in condemning and denouncing the Shabbethaians; and he was one of the signers of an appeal to the German communities to oppose the movement (comp. Jacob Emden, "Torat ha-Ḳena'ot," Lemberg, 1870). He wrote: (1) "Parashat Derakim" (Constantinople, 1727), a work containing twenty-six homiletic treatises on various subjects. It is followed by a pamphlet entitled (2) "Derek Miẓwoteka," a treatise on the 613 commandments, based on the treatises on the same subject by Maimonides and others. (3) "Mishneh la-Melek" (*ib.* 1731), glosses and comments on Maimonides' "Yad ha-Ḥazaḳah"; later it was printed together with the "Yad" (Jessnitz, 1739–40). Several works bear approbations ("haskamot") by Judah Rosanes, among others Joseph Almosnino's "'Edut bi-Yehosef."

Ẓebi Hirsch Rosanes ben Issachar Berush: Galician rabbi; born in 1733; died at Lemberg Nov. 9, 1804; grandson of Jacob Joshua, author of "Pene Yehoshua'." Ẓebi Hirsch was first rabbi at Bolchow, a small town near Lemberg; and in 1787 he was appointed chief rabbi of the latter place, where his wife, Judith, managed a printing establishment. He wrote "Tesha' Shiṭṭot" (Lemberg, 1800), novellæ and dissertations on nine Talmudic subjects, together with some novellæ by his father. Some of his own novellæ are to be found also in the marginal notes to the Talmud entitled "Pilpula Ḥarifta." He gave approbations for a great number of rabbinical works.

S. M. SEL.

ROSANES, JACOB: German mathematician; born Aug. 16, 1842, at Brody, Galicia. He received a common-school education in his native town and became a clerk in a mercantile house in Breslau, whither he had removed in 1858. Preparing himself for the university, he commenced the study of chemistry in 1860, and mathematics and physics in 1862. After receiving his Ph.D. degree from Breslau University in 1865, he continued his studies in Berlin, and returned to Breslau, where he became privat-docent in mathematics in 1870, assistant professor in 1873, and professor in 1876. In 1897 he received the title "Geheime Regierungsrat," and in 1903 was elected "rector magnificus" of his alma mater.

Among Rosanes' many essays may be mentioned: "Das einem Kegelschnitt Umschriebene und einem Andern Eingeschriebene Polygon," in Crelle's "Journal für die Reine und Angewandte Mathematik" (Berlin), lxiv.; "Dreiecke in Perspectiver Lage," in "Mathematische Annalen," ii.; "System von Kegelschnitten," *ib.* vi.; "Ein Princip der Zuordnung Algebräischer Formen," in Crelle's "Journal," lxxvi.; "Linearabhängige Punktsysteme," *ib.* lxxxviii.; "Abhängige Punktsysteme und Reciproke Verwandtschaften Zweier Ebenen," *ib.* xcv. He is, besides, the author of "Die Neuesten Untersuchungen in Betreff Unserer Anschauungen vom Raume," Breslau, 1871.

S. F. T. H.

ROSE: This flower is not mentioned in the Bible, and the earliest reference to it occurs in Ecclus. (Sirach) xxiv. 14. It is mentioned in the Mishnah and the later Apocrypha, while in the Targum and with many subsequent exegetes it takes the place of the LILY in Canticles. The rose is apparently mentioned also in Ecclus. (Sirach) xxxix. 13 and l. 8, although the presumptive Hebrew read probably שושן (lily) in both passages. In Wisdom ii. 8, on the other hand, there is an unmistakable allusion to roses; and in III Macc. vii. 17 the Egyptian city of Ptolemais is described as "rose-bearing," while the phrase "red as the rose" occurs in Enoch, lxxxii. 16; cvi. 2, 10; and the Christian passage II Esd. ii. 19 mentions the rose and the lily together.

The rose grows wild in Palestine and Syria, its principal varieties being *Rosa phœnicia*, Boiss.; *Rosa canina*, Linn. (throughout the mountains), and its variety *Rosa collina*, Boiss.; *Rosa glutinosa*, S. and Sm., *Rosa dumetorum*, Thuill., *Rosa Thureti*, Burnat and Gremli (these in Lebanon and the last-named also in Hermon); *Rosa lutea*, Mill. (Amanus); *Rosa dumetorum*, var. *Schergiana*, Boiss. (Antilebanon); and *Rosa arabica*, Crep. (Sinai); while the chief cultivated variety is *Rosa sulphurea*, Ait. (Post, "Flora of Syria, Palestine, and Sinai," p. 308; Bornmüller, "Zur Kenntnis der Flora von Syrien und Palästina," 1898, p. 46).

According to an old mishnaic tradition, there was at Jerusalem, where no other garden is said to have been allowed, a rose-bed dating from the time of the ancient prophets (Ma'as. ii. 5; Neg. vi. 625, 15; B. Ḳ. 82b), but it is significant that the rose is not mentioned among the perfumes which were imported from India at a very early time. The rose, like the myrtle, however, formed part of the bridegroom's garland (Yer. Soṭah xv. 322, 5). The Mishnah contains, furthermore, halakic regulations concerning the rose (Sheb. vii. 6; Yer. 37b) and the oil which was extracted from the preserved flower (Sheb. vii. 7). The oil was used by the upper classes instead of common oil (Shab. xiv. 4), and was no rarity at Sura (Shab. 111b). It is mentioned in a haggadah, which says that as asses' fat in oil of roses receives perfume but loses it again, so Hagar and Ishmael became renegades after they left the presence of Abraham ("Agadat Bereshit," ed. Buber, p. 74). The Talmudic "mishḥah kebishah" consisted, according to a geonic tradition, of roses and violets preserved in sesame-oil; and a number of other cosmetic and medicinal preparations and confections of roses are mentioned, including rose-water, the favorite perfume of the East, and comfits of roses and honey or sugar.

There was no special eulogy for the rose; and it became a moot question whether it should be considered a perfumed wood or a perfumed fruit. Hai Gaon, Maimonides, and others inclined to the former view, while many of the casuists held the latter.

In Rabbinical Literature.

In post-Biblical Hebrew poetry and in the Haggadah the rose is scarcely mentioned, although there is a haggadic reminiscence in the Syriac statement that roses had no thorns before the fall of man ("Book of the Bee," xviii. 8). Proverbs mentioning this flower also are comparatively rare; but it is said that "youth is a garland of roses, but age a crown of thorns" (Dukes, "Rabbinische Blumenlese," No. 323), while an erroneous variant of a well-known apothegm declares that "Poverty becomes Israel as a red rose does a white horse" (Ḥag. 9b). In a figurative sense "rose" is used in the Talmud of the membrane of the lungs or their medial lobes.

Medicinal powers were long ascribed to this flower. Maimonides frequently used rose-water and other rose preparations in his dietetics; and similar use of the rose was made by Meïr Aldabi and Menahem ibn Zeraḥ in the fourteenth century. Tobias Cohen includes in his pharmacopœia (148c, 153b) red, white, and yellow roses, and the dog-rose.

Symbolically the rose is associated with paradise; for the dawn is the reflection of the roses of heaven, as the sunset glow reflects the flames of hell (B. B. 84a). Eight hundred of these flowers adorn the tent of each pious man in heaven ("Gan 'Eden," p. 25, in "B. H." v. 42). A Persian satrap to whom Raba brought a gift sat up to his neck in roses (or, according to Rashi, in a bath of rose-water), attended by odalisks, and asked, "Have ye aught like this in paradise?" ('Ab. Zarah 65a). According to a medieval legend, finally, R. Löw, a famous cabalist of Prague and a favorite of the emperor Rudolph II., died of the perfume of a rose, which form Death had assumed, since he could not gain access to the sage in any other way.

The "rose of Jericho" is not a rose, but the crucifer *Anastatica Hierochuntina*, Linn., or the composite *Odontospermum pygmæum* (DC.), Benth. and Hook. (*Asteriscus pygmæus*, Coss. and Dur).

J. I. Lö.

ROSÉ, ARNOLD JOSEF: Rumanian violinist; born at Jassy Oct. 24, 1863. He began his musical studies at the age of seven, and at ten entered the first class in violin at the Vienna Conservatorium, receiving instruction from Karl Heissler. In 1881 he made his first appearance, at a concert of the Vienna Philharmonic Society, in Goldmark's violin concerto, and shortly thereafter received an engagement as solo violinist and leader of the orchestra at the Hoftheater. In the following year he founded the now famous Rosé Quartet, which has played in nearly every important city of Austria and Germany. In 1888 Rosé made successful tours through Rumania and Germany, and in the same year was appointed concert-master at the Bayreuth festivals.

S. J. So.

ROSEBERY, HANNAH, COUNTESS OF: English social leader and philanthropist; born in London July 27, 1851; died at Dalmeny Park, Scotland, Nov. 19, 1890; only daughter and heiress of Baron Meyer de Rothschild. Like her mother, Baroness Juliana de Rothschild, she was very active in philanthropic undertakings. In 1878 she married the Earl of Rosebery, but, notwithstanding this union, remained a Jewess, was a member of the Central Synagogue, London, and took a deep interest in the concerns of the community. She made Lansdowne House the focus of social Liberalism, and was an important element in the organization of the Liberal party.

Lady Rosebery was especially attached to the Institution for the Oral Instruction of the Deaf and Dumb, and also associated herself with the movement for promoting a better system of nursing. She was appointed by the queen president for Scotland of the Queen Victoria Jubilee Institute for Nurses, and was also resident of the Scottish Home Industries Association. She took much interest in the condition of working girls and founded the Club for Jewish Working Girls in Whitechapel. She left two sons and two daughters; she was buried in the Willesden Jewish Cemetery.

J. G. L.

ROSELLO (RUSCELLI), MORDECAI RAPHAEL BEN JACOB: Scholar and liturgical poet of the first half of the sixteenth century; born in Barcelona, where his family occupied a prominent position. In the course of his travels he reached Naples, and when in 1541 the Jews were expelled from that city, he went to Avignon. He subsequently stayed for some years in Rome, where in 1549 he finished a work, still extant in manuscript, entitled "Sha'are Ḥayyim," treating of the Ten Sefirot. In 1550 he was at Ferrara. He wrote an elegy ("ḳinah") on the martyrdom of the priest Eleazar in the days of the Maccabees; the elegy has been included in the ritual of Carpentras.

ROSEN, JOSEPH B. ISAAC: Ab bet din and, subsequently, rabbi in Russia; born in the first half of the nineteenth century at Horodok, near Pinsk; died Jan. 12, 1885 (Ṭebet 25). His father destined him for a commercial career, but the youth preferred to study, and, although obliged to pursue his researches by himself, he made such rapid progress that at an early age he was appointed ab bet din in his native city. This office he continued to fill down to 1864. He was acting rabbi at Telz from 1864 to 1873, when he was called to the rabbinate of Slonim, where he remained till his death. He published two large works, "'Edut bi-Yehosef," novellæ on the Shulḥan 'Aruk, Yoreh De'ah (Wilna), and "Porat Yosef," sermons for the Sabbath (*ib.*).

Bibliography: *Ha-Asif*, 1885, ii. 761; Walden, *Shem ha-Gedolim he-Ḥadash*, ii. 58a.

E. C. S. O.

ROSEN, MATHIAS: Polish banker and member of the council of state; born at Warsaw 1804; died there 1865. In 1846 he succeeded to his father's banking business. On account of his eminent services to the community, he was elected in 1862 member of the council of state of Warsaw, and was entrusted in the following year by Grand Duke Constantine with a commission to study the moral, industrial, and agricultural conditions of the Alsatian Jews.

H. R. A. S. W.

ROSENAU, MILTON JOSEPH: American physician; born at Philadelphia Jan. 1, 1869; educated at the University of Pennsylvania (M.D. 1889). For more than a year he acted as intern at Blockley Hospital, and then entered the Marine Hospital Service. In 1892 he attended courses at Berlin and Vienna, and in 1893 was made, on account of a cholera epidemic in Europe, sanitary attaché to the United States consulates at Hamburg and Antwerp. Returning to the United States, he served as quarantine officer at the port of San Francisco from 1895 to 1898, and in 1899 established upon original lines quarantine regulations for the island of Cuba. In 1900 he was appointed director of the hygienic laboratory of the Marine Hospital Service at Washington, D. C., in which capacity he is still (1905) serving. In 1900 he was a delegate to the Thirteenth International Congress of Medicine and Surgery at Paris, and in the same year he attended courses in that city and in Vienna. In 1901 he was appointed sanitary expert to the Second Pan-American Congress, held in the City of Mexico; and in the same year he became professor of bacteriology at the Washington Postgraduate Medical School.

Rosenau has written, among other works, the following: "Formalin Disinfection of Baggage Without Apparatus," Washington, D. C., 1900; "Vitability of the Bacillus Pestis," *ib.* 1901; "Course in Pathology and Bacteriology," *ib.* 1902; "Disinfections and Disinfectants," Philadelphia, 1903; (with E. Francis) "Experimental Studies in Yellow Fever and Malaria," Washington, 1904.

A. F. T. H.

ROSENAU, WILLIAM: American rabbi; born at Wollstein, Germany, May 30, 1865. He attended successively the gymnasium of Hirschberg (Silesia), the public schools of Philadelphia, the University of Cincinnati (B.A. 1888), Hebrew Union College (rabbinical diploma, 1889), and Johns Hopkins University (Ph.D. 1900). Rosenau was rabbi of Temple Israel, Omaha, Neb., from 1889 to 1892, when he became rabbi of Congregation Oheb Shalom, Baltimore, Md. In 1896 and 1897 he was second vice-president of the Central Conference of American Rabbis; and since 1903 he has been corresponding secretary of that body. Rosenau has been attached to the faculty of Johns Hopkins University as instructor in rabbinica (1898-1903); as fellow in the department of Semitics (1900-3), and (since 1903) as associate in rabbinica. From 1900 to 1903 he was a member of the Baltimore board of education.

Rosenau has contributed to the American Jewish press, and was for four years associate editor of "The Jewish Comment." He is the author of: "Semitic Studies in Colleges" (1896); "Hebraisms in the Authorized Version of the Bible" (1903); and "Jewish Ceremonial Institutions and Customs" (Baltimore, 1903).

Bibliography: *American Jewish Year Book*, 1904.

A. I. G. D.

ROSENBACH, HYMAN POLLOCK: American journalist; born at Philadelphia Sept. 16, 1858; died there March 4, 1892. He was connected with the "Public Ledger" and other papers. In 1883 he published a work entitled "The Jews of Philadelphia Prior to 1800," one of the earliest contributions to American Jewish history (H. S. Morais, "The Jews of Philadelphia," pp. 342-343). A.

ROSENBACH, OTTOMAR ERNST FELIX: German physician; born Jan. 4, 1851, at Krappitz, Silesia, where his father, Samuel Rosenbach, practised medicine. He received his education at the universities of Berlin and Breslau (M.D. 1874). His studies were interrupted by the Franco-Prussian war, in which he took an active part as a volunteer. From 1874 to 1877 he was assistant at the medical hospital and dispensary of the University of Jena; in 1878 he was appointed assistant at the Allerheiligen-Hospital at Breslau, and became privatdocent at the university of that city; in 1887 he became chief of the medical department of the hospital, which position he resigned in 1893; and in 1888 he was appointed assistant professor. In 1896 he resigned his professorship and removed to Berlin, where he has since practised.

Rosenbach has written many essays for the medical journals, and is one of the collaborators on Eulenburg's "Realencyclopädie der Gesammten Heilkunde" (all three editions) and on Nothnagel's "Spezielle Pathologie und Therapie." Of his works may be mentioned: "Studien über den Nervus Vagus," Berlin, 1877; "Grundlagen, Aufgaben und Grenzen der Therapie," Vienna, 1891; "Die Entstehung und Hygienische Behandlung der Bleichsucht," Leipsic, 1893; "Die Grundlagen der Lehre vom Kreislauf," Vienna, 1894; "Die Seekrankheit als Typus der Kinetosen," *ib.* 1896; "Die Krankheiten des Herzens und Ihre Behandlung," Berlin and Leipsic, 1897; "Grundriss der Pathologie und Therapie der Herzkrankheiten," Berlin, 1899; and "Arzt Contra Bacteriologe," Vienna, 1902 (translated into English by Achille Rose, New York, 1904).

ROSENBACHER, ARNOLD: Austrian lawyer and communal worker; born in Prague April 4, 1840; educated at the gymnasium and the university of his native city (LL.D., July, 1863). While at the university he continued his study of the Bible and rabbinical literature. Since 1873 he has been active in the administration of the Jewish community of Prague, being made a trustee in that year, vice-president in 1885, and president in 1887. In 1897 he was made president of the Union of Bohemian Jewish Congregations, and in 1898 vice-president of the Union of Austrian Jews. In 1861 he began a contest for the degree of doctor of canon law, which then was denied to Jews in Austria. While not successful in his own case, his efforts led to the removal of the restrictions in 1870. In 1863 he entered the law department of the treasury as "Finanz-Procuratur," being the first Jew in Austria to hold a position in that department. He resigned in 1869 to devote himself to the practise of the law, in which he is still (1905) engaged. Rosenbacher is likewise a Hebrew scholar.

S. D.

ROSENBAUM, DANIEL BEZALEL. See Ronsburg, Bezalel b. Joel.

ROSENBERG, ABRAHAM HAYYIM: Russian-American writer; born at Pinsk, Russia, Oct. 17, 1838; a descendant of the Jaffe family. Educated at home and at the rabbinical seminary of Jitomir, Russia, he became in 1872 chief rabbi of the district of Pinsk, and was called in 1888 to fill a similar position in the district of Nikolaief. At the same time he taught Jewish history and religion to the Jewish pupils at the gymnasium of Nikolaief. In 1891 he emigrated to the United States and settled in the city of New York.

Rosenberg is the author of: "Ge Ḥizzayon," in "Ha-Meliẓ," 1867–68, and the translator of "Tridenski Evrei," a novel by O. Derry which appeared in the "Evreiskiya Zapiski," 1881; "Ḥatan Damim," in "Ha-'Ibri," New York, 1892, a novel of Russian Jewish life; and a cyclopedia of the Bible, of which two volumes have appeared under the title "Oẓar ha-Shemot."

Bibliography: *Hakme Yisrael be-Amerika*, 1903; *American Jewish Year Book*, 5665.

A. F. T. H.

ROSENBERG, ALBERT: German physician; born Sept. 17, 1856, at Schloppe, West Prussia; educated at the University of Berlin (M.D. 1880). Of his essays may be mentioned: "Die Behandlung der Kehlkopftuberkulose"; "Die Intubation des Kehlkopfes"; "Ueber Verengerungen des Kehlkopfes und der Luftröhre"; "Die Geschwülste des Zungengrundes"; "Ueber Mandelsteine"; "Der Wert der X Strahlen für die Laryngologie"; and "Ueber Nasenbluten." He has summed up most of the results of his practise in his manual "Die Krankheiten der Mundhöhle, des Rachens, und des Kehlkopfes," Berlin, 1893 (2d ed., 1899). S.

ROSENBERG, JULIUS: Hungarian deputy; born at Kis-Czell Sept. 12, 1856; educated at Steinamanger and Raab, later studying law at Budapest (LL.D. 1877), where he was admitted to the bar in 1880. Recognized, even before his graduation, as an authority on maritime law, he was elected a member of the board of directors of the Adria Steamship Company, contributing much in this position to the industrial development of the country. In 1892 he was returned by the district of Német-Ujvár to the Hungarian Parliament, where, both as a member and as secretary of the committee on political economy, he took an active part in framing the laws which were drafted by that committee, besides reporting on commercial treaties with foreign nations.

Rosenberg fought a duel with Count Stephan Batthyanyi in 1885 and killed his opponent. His wife is a daughter of Consul Don Teixeira de Mattos.

Bibliography: Sturm, *Országgyülési Almanach*, 1897.

ROSENBERG, MORITZ. See Rott, Moritz.

ROSENBLATT, JOSEF MICHEL: Austrian barrister; born March 20, 1853, at Cracow, Galicia, in which city he received his education, graduating from the university in 1876. After having passed his state examination in 1880, he settled in his native city as a counselor at law. In 1877 he became lecturer in jurisprudence at the university; in 1884, assistant professor of that subject; and in 1893, professor. He is also a member of the board of examiners in jurisprudence.

Rosenblatt has taken an active part in Jewish affairs, having been president of the Cracow community and of the Austrian branch of the Alliance Israélite Universelle, and a member of the Baron Hirsch Fund for Galicia. He is also an alderman of the city of Cracow.

He is the author of: "O Udziale w Przestepstwie," Warsaw, 1874; "Ueber Strafenconcurrenz," Teschen, 1877; "Ueber Hexenprocesse in Polen," Warsaw, 1882; "Wyklad Procesu Karnego," Cracow, 1883, a handbook of procedure in criminal cases; and "Ueber die Revision im Strafprocesse," Cracow, 1903.

S. F. T. H.

ROSENBLATT, MORDECAI BEN MENAHEM (known also as **Der Butener Ẓaddiḳ**): Russian rabbi; born at Autopoli, government of Grodno, on the 3d of Iyyar, 1837. After having studied under Isaac Hirsch, rabbi of Semyatich, he married, at the age of fourteen, a girl from his native town. In 1856 Rosenblatt went to Pinsk, where he studied rabbinics, and four years later he returned to his native town. There he was appointed assistant to Phinehas Michael, and both of them devoted themselves to the study of Cabala and to practical Ḥasidism. In 1870 Rosenblatt became rabbi of Buten, government of Grodno, where, by his ascetic life, he acquired renown as a ẓaddiḳ and miracle-worker. People flocked to him from near and from far—Jews and even Christian noblemen—to ask his advice and secure his blessing. In 1887 he was invited to the rabbinate of Korelitz, government of Minsk, and four years later to that of Oshmyani, government of Wilna. Since 1904 he has officiated as rabbi of Slonim. Rosenblatt is the author of "Hadrat Mordekai" (Wilna, 1899), a work containing responsa, pilpulim, and homilies. Some of his responsa are to be found in Joseph Rosen's "Porat Yosef," and many of his works are still unpublished.

S. B. Ei.

ROSENDALE, SIMON W.: American lawyer; born at Albany, N. Y., June 23, 1842; graduated from Barre Academy, Vermont. He was admitted to the bar in 1863, and shortly thereafter became assistant district attorney of Albany county. In 1868 he was elected recorder of Albany, which judicial position he held for four years. In 1881 he entered into partnership with Rufus W. Peckham (later associate justice of the United States Supreme Court), and when the latter was elected to the state bench, Rosendale continued his law practise with Albert Hessberg. For several terms Rosendale was corporation counsel of Albany; and in 1892 he was elected attorney-general of New York state. Theodore Roosevelt, when governor of that state, appointed him (1899) a state commissioner of charities, in which honorary position he has since served, devoting much time to its duties.

Rosendale has always manifested a keen interest in Jewish matters, not only in the community in which he has lived, but throughout the country. He was active for a long time in the affairs of the Order of B'nai B'rith, and for ten years was president of its court of appeals. He was for a number of years a member of the executive board of the Union of American Hebrew Congregations, and frequently attended its conventions as a delegate. He has likewise been a trustee of the Albany congregation. He acted as chairman of the convention called in Philadelphia in 1888, at which the Jewish Publication Society of America was organized, and has served as a vice-president of the latter and of the American Jewish Historical Society. He is, besides, president of the board of trustees of Union University, president of the Albany Medical College, a director of the National Commercial Bank of Albany, a trustee of the National Savings Bank (of which institution he has been president), and a director of the Commerce Fire Insurance Company. He has been governor of the Albany City Hospital, and is connected with many other charitable and business organizations.

Rosendale is the author of "The Involution of Wampum as Currency."

A. G. H. C.

ROSENFELD, JACOB: Russian journalist and publisher; born in Austria 1839; died in Minsk, Russia, 1885. His parents emigrated to Russia, where he received his education at the gymnasium, and he afterward attended the law department of the University of Kiev, from which he was graduated as attorney at law. He practised in St. Petersburg, and wrote articles for the "St. Petersburgskiya Vyedomosti" and for other Russian papers. The excesses against Jews in South Russia in 1881 made a strong impression upon Rosenfeld, as upon many other educated Russian Jews. From that time he was an ardent nationalist. In the same year he purchased the "Razsvyet," a Jewish periodical in the Russian language, of which he had been coeditor together with G. I. Bogrow. This paper then became the organ of nationalism and of the Palestinian movement; but it could not exist long, for in 1883 Rosenfeld was compelled by material difficulties to stop the publishing of his paper. He settled in Minsk, where he returned to the practise of law.

H. R. S. Hu.

ROSENFELD, LEOPOLD: Danish composer; born in Copenhagen July 21, 1849. He was originally destined for a mercantile career, and spent six years in a counting-house; but his love for music manifested itself so markedly that his father allowed him to follow his natural bent. He studied at the Copenhagen Conservatory of Music for three years (1872 to 1875), where he devoted himself especially to composition. In 1881 he obtained a scholarship which enabled him to travel abroad; and in 1889 he received the title of professor.

Rosenfeld has composed many pieces for the piano, and more than thirty booklets of songs with Danish and German texts. Of his compositions for orchestra "Henrik og Else" (Copenhagen, 1885) was received with great favor. He has written an aid to instruction in singing, entitled "Om Textsang" (*ib.* 1887), and has contributed a number of articles to Danish, German, and English musical journals.

S. F. C.

ROSENFELD, MORDECAI JONAH: Galician author of Hebrew books; born at Dynow, near Przemysl, Galicia, Oct. 21, 1797; died at Sosnica June 5, 1885. When but seven years old he went to Przemysl and thence to Brody, where he studied the Talmud and Hebrew and German. About the year 1830 he became shoḥeṭ at Sosnica, and remained there for the rest of his life. Rosenfeld was the author of: "'En Boḥen" (Przemysl, 1872), a commentary on "Beḥinat 'Olam"; "Or Ḳarob" (*ib.* 1873), a commentary on "Or ha-Ḥayyim" by J. Yabez, with an appendix on the origin of the Cabala; "Job," with commentary ("Kenaf Renanim") and philological notes ("Hokaḥ Millim"; Lemberg, 1875). In addition to these works he contributed articles to such periodicals as "Ha-Maggid" and "Ha-'Ibri." The most important of these was "Netinah la-Kohen," strictures on "Netinah la-Ger" by N. Adler.

BIBLIOGRAPHY: *Oẓar ha-Sifrut*, i. 121 *et seq.*; Zeitlin, *Bibl. Hebr.* p. 314; Lippe, *Asaf ha-Mazkir*, i. 406, Vienna, 1881.

H. R. A. S. W.

ROSENFELD, MORRIS: Yiddish poet; born at Boksha, government of Suwalki, Russian Poland, Dec. 28, 1862; educated at Boksha, Suwalki, and Warsaw. He worked as a tailor in New York and London and as a diamond-cutter in Amsterdam, and settled in New York in 1886, since which year he has been connected with the editorial staffs of several leading Jewish papers. At present (1905) he is editor of the "New Yorker Morgenblatt." In 1904 he published a weekly entitled "Der Ashmedai." He was also the publisher and editor of a quarterly journal of literature (printed in Yiddish) entitled "Jewish Annals." He was a delegate to the Fourth Zionist Congress at London in 1900, and gave readings at Harvard University in 1898, Chicago University in 1900, and Wellesley and Radcliffe colleges in 1902.

Rosenfeld is the author of "Die Glocke" (New York, 1888), poems of a revolutionary character; later the author bought and destroyed all obtainable copies of this book. He wrote also "Die Blumenkette" (*ib.* 1890) and "Das Lieder Buch" (*ib.* 1897;

English transl. by Leo Wiener, "Songs from the Ghetto," Boston, 1899; German transl. by Berthold Feivel, Berlin, and by E. A. Fishin, Milwaukee, Wis., 1899; Rumanian transl. by M. Rusu, Jassy, 1899; Polish transl. by J. Feldman, Vienna, 1903; Hungarian transl. by A. Kiss, Budapest; Bohemian transl. by J. Dehlicky, Prague). His poems were published, under the title "Gesammelte Lieder," in New York in 1904.

BIBLIOGRAPHY: *American Jewish Year Book*, 1904-5.

ROSENFELD, SAMSON WOLF: German rabbi; born at Markt Uhlfeld, Bavaria, Jan. 4, 1780; died at Bamberg May 12, 1862. At the age of thirteen he entered the yeshibah at Fürth, and for six years he studied rabbinics there. In 1808 he was elected rabbi of Uhlfeld. He accepted no salary or emoluments. For many years he held also the post of president of the congregation. He introduced reforms in house and synagogue, and established a school in which he shared the labor of the teachers. In 1819 a beautiful synagogue was dedicated concerning which he published a pamphlet, "Die Israelitische Tempelhalle, oder die Neue Synagoge in Uhlfeld, Ihre Entstehung, Einrichtung und Einweihung, Nebst den Drei Dabei Gehaltenen Reden." He preached in German at a time when other Bavarian rabbis could neither read nor write the vernacular.

In consequence of the law of June 10, 1813, which made the "Schutzjuden" citizens of Bavaria, and which demanded that the rabbi should have a university training, Rosenfeld submitted to a new examination. In 1826 he was elected rabbi of Bamberg, which post he held until his death. He took an active part in the work for the emancipation of the Bavarian Jews, and wrote a number of pamphlets on this subject (see JEW. ENCYC. ii. 604b).

Rosenfeld edited "Stunden der Andacht für Israeliten" (4 vols., Dinkelsbühl, 1834; 2d ed., 3 vols., *ib.* 1838). Selections therefrom in Hebrew by M. Bendelsohn of Grodno appeared at Wilna in 1854 under the title "Hegyon ha-'Ittim." In 1835 and 1836 Rosenfeld published the weekly "Das Füllhorn."

BIBLIOGRAPHY: I. Klein, in *Monatsschrift*, 1863, pp. 201-214; S. Krämer, in *Achawa*, 1866, pp. 15-33; Fürst, *Bibl. Jud.* iii. 169.

S. S. MAN.

ROSENFELD, SYDNEY: American dramatist; born in Richmond, Va., Oct. 26, 1855; educated in the public schools of Richmond and New York.

When the publication of "Puck" was decided on, Rosenfeld was appointed its editor, but he eventually turned his attention to dramatic work. Among the plays he has produced the following deserve mention: "A Possible Case"; "Imagination"; "The Club Friend"; "The Politician"; "A Man of Ideas"; "A House of Cards." Rosenfeld was joint author of "The Senator." He has also created several operettas and musical extravaganzas, of which the following are the most noteworthy: "The Lady or the Tiger"; "The Mocking-Bird"; "The Passing Show"; "The Giddy Throng"; "The King's Carnival"; and "The Hall of Fame."

As an adapter Rosenfeld has produced a number of plays, the chief among them being "The White Horse Tavern," "The Black Hussar," "The Two Escutcheons," "Prince Methusalem," and "Nanon."

As secretary of the National Art Theatre Society, Rosenfeld was one of the leaders in an effort to secure an American national theater. In this work he was ably assisted by his wife (née Genie Holtzmeyer Johnson), who organized and presided over the Woman's Auxiliary, which was one of the most important factors of the National Art Theatre Society. At present (1905) Rosenfeld is president and managing director of the Century Theatre Company.

A. F. H. V.

ROSENHAIN, GEORGE: German mathematician; born June 10, 1816, at Königsberg, Prussia; died there May 14, 1887. He was privat-docent at the University of Breslau from 1844 to 1848, and then at that of Vienna, where he began to lecture in 1851; and in 1857 he was appointed associate professor at Königsberg. He won fame for himself by his work "Sur les Fonctions de Deux Variables et à Quatre Periodes, Qui Sont les Inverses des Intégrales Ultraélliptiques de la Première Classe," which was awarded the chief prize for mathematics at the Paris Academy in 1846 ("Mémoires des Savants," etc., 1851, ix.). He proved the existence of the Abel functions defined by Jacobi (Göpel succeeding independently in the same operation). This step from the Jacobi functions of one variable to those of two variables was most important for the development of mathematics.

S. S. G.

ROSENHAIN, JAKOB (JACQUES): German pianist; born at Mannheim Dec. 27, 1813; died at Baden-Baden March 21, 1894. A one-act piece of his entitled "Der Besuch im Irrenhauses" was very successfully produced at Frankfort-on-the-Main, Dec. 29, 1834, and was frequently repeated, notably at Weimar under the leadership of Hummel. His second opera, "Liswenna," was less fortunate. In 1837 Rosenhain went to London. On his return he settled in Paris, where, in conjunction with J. B. Cramer, he established a school of pianoforte-playing. Upon the completion of his third opera, "Volage et Jaloux," which was produced at Baden, Aug. 3, 1863, Rosenhain permanently retired from the operatic stage in order to devote himself more exclusively to instrumental music.

Among his principal compositions in this field may be mentioned: symphony in G minor; symphony in F minor; symphony, "Im Frühling." His brother **Eduard** (German pianist and teacher; born at Mannheim Nov. 18, 1818; died at Frankfort-on-the-Main Sept. 6, 1861) published a serenade for cello and piano.

S. J. SO.

ROSENHAUPT, MORITZ: German cantor; born at Offenbach on the Glan, Rhenish Prussia, March 14, 1841, where his father was rabbi and teacher; died at Nuremberg Nov. 16, 1900. Rosenhaupt commenced his studies under Cantor Löwe at Strasburg, and continued them under Salomon Sulzer in Vienna. He then became cantor and teacher at Kochem on the Mosel, and in 1864 was called to a similar position at Speyer, where two well-known musicians became his teachers—Professor Wiss and the choir-leader Benz, who taught him theory and counterpoint. In 1881 he succeeded Josef Singer (who had been called to Vienna) as cantor at Nuremberg.

Rosenhaupt is the author of "Shire Ohel Ya'aḳob," synagogal songs (part i., Speyer; parts ii. and iii., Nuremberg). He set the Forty-second Psalm to music as a concerto, wrote a number of Hebrew songs, and composed various secular pieces, overtures, serenades for orchestra, etc.

S. J. F.

ROSENMÜLLER, ERNST FRIEDRICH KARL: Christian Orientalist and theologian; born Dec. 10, 1768, at Hesselberg; died at Leipsic Sept. 17, 1835. He studied at Erlangen, Giessen, and Leipsic under his father, and became assistant professor of Arabic at the university of the last-named city in 1796. He devoted a large part of his life to his "Scholia in Vetus Testamentum," in twenty-four parts (Leipsic, 1788–1835), which formed the basis of most of the exegetical work on the Old Testament in the nineteenth century. He published in five parts an abridgment of this colossal collection (*ib.* 1835). Besides this his "Bibliographisches Handbuch," in four parts (Göttingen, 1800), was one of the earliest introductions to the Old Testament; and his "Handbuch der Biblischen Alterthumskunde" (Leipsic, 1831) was a systematic summary of the material contained in his "Scholia." Further, he published editions of Bochart's "Hierozoicon" (1796), with notes by himself, and of Lowth's "Prælectiones" (Leipsic, 1815), and brought out a pocket edition of the Hebrew Bible (Halle, 1822), besides writing a preface to Hahn's edition of 1830.

ROSENROTH, BARON VON (CHRISTIAN KNORR): Christian Hebraist; born at Alt-Randen, in Silesia, July 15, 1631. After having completed his studies in the universities of Wittenberg and Leipsic, he traveled through Holland, France, and England. On his return he settled at Sulzbach and devoted himself to the study of Oriental languages, especially Hebrew, the rudiments of which he had acquired while abroad. Later he became a diligent student of the Cabala, in which he believed to find proofs of the doctrines of Christianity. In his opinion the "Adam Ḳadmon" of the cabalists is Jesus, and the three highest sefirot represent the Trinity. Rosenroth intended to make a Latin translation of the Zohar and the "Tiḳḳunim," and he published as preliminary studies the first two volumes of his "Kabbala Denudata, sive Doctrina Hebræorum Transcendentalis et Metaphysica Atque Theologia" (Sulzbach, 1677–78). They contain a cabalistic nomenclature, the "Idra Rabbah" and "Idra Zuṭa" and the "Sifra di-Ẓeni'uta," cabalistic essays of Naphtali Herz and Jacob Elhanan, etc. Rosenroth published two other volumes under the title "Kabbala Denudata" (Frankfort-on-the-Main, 1684), containing the "Sha'ar ha-Shamayim" of Abraham Cohen de Herrera and several of the writings of Isaac Luria.

Bibliography: Wolf, *Bibl. Hebr.* iii. 979; Fürst, *Bibl. Jud.* ii. 170; Grätz, *Gesch.* x. 267.

D. I. Br.

ROSENSOHN, MOSES: Russian Hebraist; born in the first quarter of the nineteenth century at Wilna, where he lived all his life in affluent circumstances. He died there in 1896. Rosensohn wrote a number of works, of which the following may be mentioned: "'Eẓah we-Tushiyah," suggestions for reforms in Judaism (Wilna, 1870); "Shelom Aḥim," cosmopolitanism and universalism of the Mosaic religion (Wilna, 1870); "Dibre Shalom," a defense of the Cabala (in three volumes; Wilna, 1880, 1882, 1883). Rosensohn was suspected of strong leanings toward Christianity, and was therefore shunned by the Orthodox Russian Jews.

ROSENSTEIN, SAMUEL SIEGMUND: German physician; born at Berlin Feb. 20, 1832; son of Rabbi Elhanan Rosenstein, and grandson of Rabbi Rosenstein of Bonn. He studied philosophy, and, later, medicine at the University of Berlin, graduating as M.D. in 1854. From 1856 to 1858 he was assistant at the general hospital at Danzig. He established himself as a physician in Berlin in 1858, and received from the university there the "venia legendi" in 1864. In 1866 he was elected professor of medicine at the University of Gröningen, and in 1873 at that of Leyden, which latter position he still (1905) holds. In 1898 he received the degree of LL.D. from the University of Edinburgh.

Rosenstein is the author of "Die Pathologie und Therapie der Nierenkrankheiten," Berlin, 1863 (4th ed. 1894), and has contributed to Ziemssen's "Handbuch der Allgemeinen Therapie" the section on diseases of the heart.

Bibliography: Hirsch, *Biog. Lex.*; Pagel, *Biog. Lex.*

ROSENTHAL: One of several families of that name flourishing in Russia. The ancestor of this particular family was Solomon of Wirballen (a town on the Prussian frontier), who came from Skud and was surnamed "Skudski." He was prominent as a financier, and he is recorded to have been one of the court Jews of Frederick the Great of Prussia. His son David of Yashinovka married a sister of Leiser (Eliezer) Rosenthal of Yashinovka, and, in accordance with the practise common at the time, assumed her family name. Their issue was: Moses, the father of Leon, Schemariah, Solomon, Wolf, and Yote; Loeb, the father of Solomon (d. Krementchug, 1885), Marcus (d. there 1896), Anna, wife of Herman Rosenthal, and Fanny, wife of L. Jacobovich; Abraham of Pinsk; and Gedaliah of Grodno (d. 1893). One of Schemariah Rosenthal's daughters married Albert Soloweitschik, formerly director of the Siberian Bank of St. Petersburg; the other daughter is married to Dr. S. Brainin of New York.

Leiser Rosenthal was the father of Simeon Rosenthal, who died in Berlin, and of Nissen Rosenthal, who was a prominent citizen of Wilna in the first half of the nineteenth century (see Lilienthal, "My Travels in Russia," in "The Israelite," vol. ii., No. 17, p. 138).

H. R. P. Wi.

ROSENTHAL, DAVID: Polish physician; born 1808 at Tarnogrod, Lublin; died 1889. His father was district physician of Zamoisk and on the staff of the Polish army. David studied medicine at Vienna, and in 1831 was sent to Hungary and Transylvania, where the cholera was raging. In 1834 he received the degree of M.D., and in 1836 became physician in ordinary at the Jewish hospital, Warsaw, where he afterward held the post of chief physician (1844–79). Simultaneously (1849–62) he was the students' physician at the Institution of Agriculture and Forestry in Marymont, a suburb of Warsaw, and from 1859 professor of hygiene at the same institution.

Rosenthal published a description of the species of typhus which prevailed in 1847 and which was later known as "recurrent fever"; he wrote also "O Nosaciznie u Ludzi" (on glanders), Warsaw, 1849.

H. R. M. R.

ROSENTHAL, DAVID AUGUSTUS: German physician and author; born at Neisse, in Silesia, in the year 1812; died at Breslau March 29, 1875. He was educated at the University of Breslau, whence he was graduated M.D. In 1851 he embraced Roman Catholicism, and set about to improve the tone of the Catholic press and the condition of the Catholics of Silesia. Rosenthal distinguished himself also as an author. He began his literary career in 1862 by editing the poetical works of the Catholic mystic "Angelus Silesius," better known as Johann Scheffler. Between the years 1869 and 1872 he published his "Convertitenbilder aus dem Neunzehnten Jahrhundert" (4 vols., Schaffhausen), or biographical sketches of Jews and Protestants who had embraced the Roman Catholic faith during the nineteenth century. This work was arranged according to countries. A supplement of the entire work is found in the last volume. The "Convertitenbilder," which went through several editions, is a very important contribution to the history of the Church in the nineteenth century, and supplements De le Roi's work, "Geschichte der Evangelischen Juden-Mission," which treats only of the Jews who joined the Protestant Church.

ROSENTHAL, EDUARD: German jurist; born Sept. 6, 1853, at Würzburg. He studied at Würzburg, Heidelberg, and Berlin (LL.D., Würzburg, 1878). In 1880 he established himself as privat-docent at the University of Jena, where he was appointed assistant professor in 1883, and full professor of public law and the history of German law in 1896. His works include: "Die Rechtsfolgen des Ehebruchs nach Canonischem und Deutschem Recht," 1880; "Beiträge zur Deutschen Stadtrechtsgeschichte," 1883, Nos. i., ii.; "Die Behördenorganisation Kaiser Ferdinands I." 1887; "Geschichte des Gerichtswesens und der Verwaltungsorganisation Baierns," 1889, vol. i.; "Internationales Eisenbahnfrachtrecht," 1894. He has also contributed various articles to Conrad's "Handwörterbuch der Staatswissenschaften."

S.

ROSENTHAL, ELIEZER (LAZAR): German bibliographer and owner of a famous collection of books at Hanover; born April 13, 1794, at Nasielsk, in the government of Plock, Russia; died Aug. 7, 1868, at Hanover. His library became known in Germany as early as the first half of the nineteenth century, and was considered to be the largest Hebrew library in that country. He composed a bibliographical work, entitled "Yodea' Sefer," which comprises 2,530 numbers, and deals with works which appeared not later than 1857. M. Roest, who took the library to Amsterdam, was commissioned by Rosenthal's son to catalogue the Hebrew part. This catalogue appeared in two volumes (Amsterdam, 1875); in the second volume Rosenthal's work mentioned above is printed complete as an appendix. The library now forms a part of the Amsterdam University Library.

BIBLIOGRAPHY: M. Roest, in the preface to *Cat. Rosenthal. Bibl.*; Zunz, *Z. G.* p. 244.

S. S. O.

ROSENTHAL, FERDINAND: German rabbi; born at Kenese, Hungary, Nov. 10, 1839; educated at several Talmud Torahs, the gymnasium at Vienna, and the universities of Leipsic and Berlin (Ph.D. and Rabbi 1866). In 1867 he became rabbi at Beuthen, Upper Silesia, whence he was called to Breslau in 1887, where he is still (1905) officiating.

Rosenthal, besides contributing to the periodical press, is the author of: "Das Erste Makkabäerbuch," Leipsic, 1867; "Die Erlässe Cæsars und die Senatusconsulte in Josephus," etc., Breslau, 1879; "Vier Apokryphische Bücher aus der Zeit und Schule R. Akiba's," Leipsic, 1885.

S. F. T. H.

ROSENTHAL, HARRY LOUIS: English exegete; born about 1860 at Vladislavov (Neustadt-Schirwindt), Poland. In 1869 he accompanied his mother and sisters to Manchester, England, where he was educated. Returning to Vladislavov in 1878, he studied Hebrew, and then entered upon a business career. He is the author of "Sod Kedoshim," commentary on the prophecies of Daniel (Manchester, 1895). J.

ROSENTHAL, HERMAN: American author, editor, and librarian; born at Friedrichstadt, province of Courland, Russia, Oct. 6, 1843; educated at Bauske and Jacobstadt, graduating in 1859. In this year he translated into German several of Nekrassov's poems. In 1869 he engaged in the printing trade at Krementchug, and in 1870 he published a collection of poems, "Gedichte." In the Russo-Turkish war he served in the Russian Red Cross Society and received the society's medal for distinguished service (1877–78). Returning to his craft as master-printer, he pursued it in Smyela, government of Kiev, and in the city of Kiev until 1881. He produced a humorous story, "Die Wunderliche Kur," in 1872, and later assisted in the founding of "Zarya" (Dawn), a daily paper, the first number of which appeared at Kiev in 1878. At this time Rosenthal was elected corresponding member of the St. Petersburg Society for the Promotion of Culture Among the Russian Jews.

Interested in the condition of his oppressed coreligionists, Rosenthal sailed for the United States in 1881 for the purpose of founding there agricultural colonies to be settled by Russian Jewish immigrants. During 1881–82 he succeeded in establishing colonies in Louisiana and South Dakota. He also took a prominent part in the administration of the Woodbine (N. J.) colony in 1891. During 1887 and 1888 Rosenthal engaged in the book-trade, but gave up this occupation on being appointed chief statistician of the Edison General Electric Company, a post that he held for three years. In 1892 he went to the Far East, whither he was sent by the Great Northern Railroad Company to investigate the economic conditions and trade of China, Korea, and Japan, on which he published a report (St. Paul, 1893). On his return he was elected secretary of the German-American Reform Union, New York city, and a member of the press bureau of the Committee of Seventy. In 1894 he was appointed chief of the discharging department of the Immigration Bureau, Ellis Island, New York, an office he occupied two years; and in 1898 he accepted the post of chief of the Slavonic department, New York Public Library (Astor branch), a position he still (1905) retains. He joined the editorial board of THE JEWISH ENCYCLOPEDIA as chief of the Russian department in Dec., 1900.

Rosenthal has been prominently connected with Hebrew literature and with the development of the Haskalah movement in Russia. He contributed (1859–67) to "Ha-Meliẓ" and other Hebrew periodicals, and corresponded with Reifmann, Leon Gordon, Zweifel, Zederbaum, Fuenn, and other Hebrew scholars. In the United States he edited and published, together with A. Rosenberg, the Hebrew monthly "Ha-Modia' le-Ḥodashim" (1901). In 1894 Rosenthal founded the society "Ohole Shem," of which he is still president.

Rosenthal translated into German verse "Ecclesiastes" ("Worte des Sammlers"), New York, 1885, 2d ed. 1893, and the "Song of Songs" ("Lied der Lieder"), 1893, and, into English, a work by Hugo Ganz, "The Land of Riddles," New York, 1905.

His eldest son, **Max Rosenthal,** born at Krementchug, government of Poltava, Russia, June 6, 1865, was educated for the medical profession at the universities of Bern, Berlin, and Leipsic (M.D. 1887). In 1888 he became house surgeon at St. Mark's Hospital, New York city, and for two years he was senior resident physician at the Montefiore Home. At present (1905) he is gynecologist at the German Dispensary and attending gynecologist at the Sydenham Hospital. His other son, **George D. Rosenthal,** born 1869, is manager of the Edison General Electric Company, at St. Louis.

A. F. H. V.

ROSENTHAL, ISIDOR: German physiologist; born at Labischin, near Bromberg, Posen, July 16, 1836; died in 1904. Graduating as M.D. from the University of Berlin in 1859, he became assistant in the physiological institute and received the "venia legendi" in 1862. In 1867 he was appointed assistant professor, and in 1872 was elected professor, of physiology in the University of Erlangen.

Rosenthal wrote many essays, and was the author of: "Die Athembewegungen und Ihre Beziehungen zum Nervus Vagus," Berlin, 1862; "Elektricitätslehre für Mediciner," *ib.* 1862 (3d ed., with Bernhardt, 1882); "Zur Kenntniss der Wärmeregulirung bei den Warmblütigen Thieren," Erlangen, 1872; "Allgemeine Physiologie der Muskeln und Nerven," Leipsic, 1878 (2d ed. 1898); "Bier und Branntwein in Ihren Beziehungen zur Volksgesundheitspflege," Berlin, 1881 (2d ed. 1893); and "Vorlesungen über Oeffentliche und Private Gesundheitspflege," Erlangen, 1887 (2d ed. 1890). He was a collaborator on Hermann's "Lehrbuch der Physiologie," for the subjects treating of innervation and motion, of respiration, and of animal heat, and was editor of the "Biologisches Centralblatt."

S. F. T. H.

ROSENTHAL, JACOB: Polish physician; born at Warsaw; son of David Rosenthal; studied medicine at Berlin and Warsaw. In 1870 he became physician in ordinary to the Jewish Hospital, Warsaw, devoting himself to gynecology. Owing to his efforts a section for the diseases of women was established in 1894; and this department has been directed by him up to the present time (1905). In "Historyi Szpitali w Krel Polskiem," a history of the hospitals in the kingdom of Poland, edited by Girsztow in 1870, Rosenthal published a description of the Warsaw Jewish hospital. Further, he translated Bock's "Buch vom Gesunden und Kranken Menschen" (1872), and published a medical handbook for women, entitled "Paradnik Lekarski dla Kobiet" (1874). Since 1895 he has published in the periodicals several reviews of Polish medical literature.

H. R. M. R.

ROSENTHAL, JOSEPH: Russo-Jewish scholar; born at Suwalki, in the government of the same name in Russian Poland, Feb. 14, 1844. He began the study of the Talmud and commentaries at an early age without the aid of a teacher, and at the same time devoted himself to the study of different languages and sciences. In the nineties he settled at Warsaw, where he is now practising law.

Rosenthal began his literary career in 1866 by contributing philological articles to "Ha-Maggid." Since then he has written for such Hebrew periodicals as "Ha-Lebanon," "Ha-Karmel," "Ha-Meliẓ," and others, writing on topics of the day as well as on Jewish science. The most important of his contributions are an article on the religious system of the "Sefer Yeẓirah," in "Keneset Yisrael" (1887), and some articles in "Ha-Eshkol," a Hebrew encyclopedia (1887–88). He wrote also some responsa, one of which was published in "Dibre Mosheh" by R. Moses of Namoset; and "Derek Emunah," four essays on religious philosophy (Warsaw, 1894). Rosenthal is noted as a chess-player, and won the first prize at the Druzgenik tournament in 1885.

H. R. A. S. W.

ROSENTHAL, JULIUS: American lawyer; born in Liedolsheim, grand duchy of Baden, Germany, Sept. 17, 1828. He was educated at the lyceum at Rastadt and the universities of Heidelberg and Freiburg. In 1854 he emigrated to the United States and settled in Chicago. There he found employment in the bank of R. K. Swift until 1858; but, having studied law, he was admitted to the bar in 1860, and gave special attention to probate and real-estate practise.

Rosenthal served as public administrator of Cook county, 1859–84; was director of the first Public Library Board, 1872–75; librarian of the Chicago Law Institute twenty-five years, and president of the same, 1878–80; secretary of the first State Board of Law-Examiners, 1897–99; member of the Chicago, State, and American Bar associations; and secretary of the first Fremont Club, 1856.

Rosenthal has been a director of the Chicago Relief and Aid Society, German Relief Society, United Hebrew Relief Association, Jewish Training School, and German Altenheim, and was one of the founders of Sinai congregation. He has also been a generous contributor to the Hebrew Union College library.

Married in 1856 to Jette Wolf, he has as issue two sons, **James** and **Lessing**, both of whom are lawyers in Chicago.

A. J. STO.

ROSENTHAL, LEON (JUDAH LÖB B. MOSES HA-LEVI): Russian financier, philanthropist, and communal worker; born in Wilna Nov. 16, 1817; died in Locarno, Switzerland, June 19, 1887. His father was a progressive, scholarly merchant whose house was one of the rallying-points of the HASKALAH movement early in the nineteenth century. Young Rosenthal received a liberal education; married very early, according to the custom of those times in Lithuania; and lived several years with his father-in-law, Samuel Joel Neumark, in Brest-Litovsk. He then entered the service of the Günzburg family, and, after becoming their business associate, settled in St. Petersburg about 1850. He later engaged in extensive enterprises on his own account and became one of the leading bankers and financiers in the Russian capital.

Rosenthal remained throughout his busy life an ardent admirer of Hebrew literature and an active worker for the spread of secular knowledge among the Jews of Russia. He corresponded with many of the best-known MASKILIM and assisted a large number of authors and students. The extent of his benefactions, both public and private, was very great; but the crowning glory of his work in behalf of the Jews was the foundation, in 1863, of the Ḥebrat Marbe Haskalah, a society for the promotion of knowledge among the Jews in Russia, of which he was the treasurer and the ruling spirit from the time of its establishment until his death. His "Toledot Ḥebrat Marbe Haskalah be-Yisrael be-Ereẓ Russia" (vol. i., St. Petersburg, 1885; vol. ii., *ib.* 1890) contains the records and correspondence of the society. At the beginning of the second volume, which was printed posthumously, is an excellent biographical sketch of the author written by J. L. Kantor.

ROSENTHAL, MARKUS. See RÓZSAVÖLGYI (ROSENTHAL), MARKUS.

ROSENTHAL, MAX: American painter and engraver; born at Turek, near Kalisz, Russian Poland, Nov. 23, 1833. He studied at Berlin under Karl Harnisch, and at Paris under Martin Thurwanger, whom he accompanied to the United States in 1849. Settling in Philadelphia, he studied at the Pennsylvania Academy of Fine Arts and introduced the use of chromolithography. When the Civil war broke out he followed the Army of the Potomac as official illustrator for the United States Military Commission. In 1872 he invented the sand-blast process of engraving patterns on glass. Rosenthal has received many prizes and diplomas. He has etched more than five hundred portraits, a collection of which is preserved in the Smithsonian Institution at Washington. He illustrated Longfellow's "Building of the Ship," "Legend of Rabbi ben Levi," etc. His latest painting is "Jesus at Prayer." His son **Albert Rosenthal**, also an artist, born in Philadelphia Jan. 30, 1863, was educated at Philadelphia and Paris, and settled in the former city.

A. F. T. H.

ROSENTHAL, MORITZ: Austrian physician; born at Grosswardein, Hungary, 1833; died in Vienna Dec. 30, 1889. Educated at the University of Vienna (M.D. 1858), he became in 1863 privat-docent and in 1875 assistant professor of neurology.

Besides about seventy essays, he wrote several works, of which may be mentioned: "Ueber Stottern," 1861; "Ueber Hirntumoren," 1863 (2d ed. 1870); "Ueber Scheintodt," 1872; "Handbuch der Elektrotherapie," 1873; "Klinik der Nervenkrankheiten," 1875 (translated into French, English, Italian, and Russian); "Cervicale Paraplegie," 1876; "Rindencentren des Menschenhirns," 1878; "Myelitis und Tabes nach Lues," 1881; "Diagnose und Therapie der Magenkrankheiten," 1882.

BIBLIOGRAPHY: Pagel, *Biog. Lex.*

S. F. T. H.

ROSENTHAL, MORITZ: Austrian pianist; born at Lemberg 1862; studied successively under Galath, Mikuli, and Raphael Joseffy. In 1875 the family removed to Vienna, where at the age of fourteen Rosenthal gave his first public concert, the program embracing selections from Beethoven, Chopin (concerto in F minor), Mendelssohn, and Liszt ("Au Bord d'une Source" and "Campanella").

This concert was so successful that Rosenthal decided to undertake a series of concert tours, the first of which led him to Bucharest, where he was appointed Rumanian court pianist.

From 1876 to 1878 Rosenthal studied under Liszt, and during the following six years devoted himself to scientific studies as well as music, attending the University of Vienna. In 1882 he reappeared in public. In 1887 and in 1896 he visited America.

In collaboration with L. Schytte, Rosenthal has published a work entitled "Technical Studies for the Highest Degree of Development."

S. J. So.

ROSENTHAL, SAMUEL: Chess-master; born 1838 in Suwalki, Russian Poland; died in Paris Sept. 25, 1902. After the last Polish revolution he fled to Paris (1864), where he devoted himself to a study of the game, and became so rapidly proficient in it that after the lapse of a year he won the first prize in a tournament held at the Café de la Régence, Paris. In the Tournier du Prix de l'Empéreur, held in the same city in 1867, he won 18 games and lost 6, and at the International Masters' Tournament at Baden in 1870 he won 13 and lost 7. In 1873 he won fourth prize in the Vienna International Tournament. In a memorable match with Zuckertort at the St. George's Chess Club, London, in 1880, he lost 7, won 1, and drew 11 games. At the London Tournament of 1883 he was awarded the brilliancy prize for a game with Steinitz.

In Paris Rosenthal founded the Cercle des Echecs, at which he gave exhibitions of blindfold play. He contributed chess articles to "La Revue des Jeux et des Arts" and "La Stratégie," and edited a volume on the Paris Tournament of 1900.

H. R. A. P.

ROSENTHAL, SOLOMON: Hungarian scholar; born in Moór, Hungary, June 13, 1764; died at Pesth April 8, 1845. His father, Naphtali Rosenthal, was a personal friend of Moses Mendelssohn in his youth. Rosenthal's teachers were Mordecai Benet, later chief rabbi of Moravia, and Meïr Barby, head of the Presburg yeshibah. For a time Rosenthal engaged in commerce in his native place, devoting himself in his leisure to Jewish literature. He contributed to "Ha-Meassef," "Orient," and "Zion," besides maintaining a literary correspondence with Hartwig Wessely and Isaac Euchel. In 1819 he removed to Pesth.

Rosenthal was the author of "Bet Awen" (Ofen, 1839), in which he attacked Creizenach, Luzzatto, and Reggio; and he published the "Ari Nohem" of Leo da Modena, for which he wrote a preface and notes. He left in manuscript a fragmentary Hebrew translation of Mendelssohn's "Phädon."

BIBLIOGRAPHY: Ignatz Reich, *Beth El*, ii. 334; Alexander Büchler, *Das Centenarium S. J. L. Rapoport's*. in Bloch's *Oesterreichische Wochenschrift*, 1890; idem, *History of the Jews in Budapest* (in Hungarian).

S. A. BÜ.

ROSENTHAL, TOBY EDWARD: American artist; born at New Haven, Conn., March 15, 1848. He received a public-school education at San Francisco, whither his family had removed in 1855, and studied art under Fortunato Arviola in the same city in 1864. In 1865 he went to Munich, where he studied under Piloty at the Royal Academy until 1876, when he returned to San Francisco.

Rosenthal has received medals from the expositions at Munich (1870 and 1883) and Philadelphia (1876). Of his pictures the following, most of which have been exhibited in Europe, deserve mention: "Love's Last Offering"; "Spring, Joy, and Sorrow," 1868; "Morning Prayers in Bach's Family," 1870 (now in the museum at Leipsic); "Out of the Frying-Pan into the Fire"; "The Dancing Lesson," 1871; "Elaine," 1874; "Young Monk in Refectory," 1875; "Forbidden Longings"; "Who Laughs Last Laughs Best"; "Girls' Boarding-School Alarmed," 1877; "A Mother's Prayer," 1881; "Empty Place," 1882; "Trial of Constance de Beverley," 1883; "Departure from the Family," 1885.

A. F. T. H.

ROSENTHAL-BONIN, HUGO: German author; born at Berlin Oct. 14, 1840; died at Stuttgart April 7, 1897. After having studied natural science at the universities of Berlin and Paris, he traveled through the south of Europe, the United States of America, and Japan. He went to Switzerland in 1871, but removed in the following year to Stuttgart and collaborated on "Ueber Land und Meer." In 1889 he was appointed editor of "Vom Fels zum Meer," and retired in 1894.

Rosenthal-Bonin was a prolific writer. Of his works may be mentioned: "Der Heiratsdamm und Anderes," Stuttgart, 1876; and "Unterirdisch Feuer," Leipsic, 1879 (both of these collections of short stories have been translated into many European languages); "Der Bernsteinsucher," Leipsic, 1880; "Der Diamant-Schleifer," Stuttgart, 1881; "Das Gold des Orion," *ib.* 1882; "Die Tierbändigerin," *ib.* 1884; "Das Haus mit den Zwei Eingängen," *ib.* 1886; "Die Tochter des Kapitäns," *ib.* 1888; "Der Student von Salamanca," *ib.* 1891; "Erzählungen des Schiffsarztes," *ib.* 1892.

S. F. T. H.

ROSENZWEIG, ADOLF: German rabbi; born Oct. 20, 1850, at Turdossin, Hungary. He studied at the gymnasium at Budapest and at the rabbinical seminary of Presburg. After graduation he went to Berlin, where he studied philosophy and Oriental languages and literatures at the university, and theology at the Hochschule für die Wissenschaft des Judentums. On Oct. 20, 1874, he entered upon the rabbinate of Pasewalk, whence he was called to Birnbaum, Posen. In 1879 he went to Teplitz, Bohemia, and in 1887 he accepted a rabbinate at Berlin.

Rosenzweig has published the following works: "Zur Einleitung in die Bücher Esra und Nehemia" (Berlin, 1875); "Zum Hundertsten Geburtstage des Nathan der Weise" (Posen, 1878); "Das Jahrhundert nach dem Babylonischen Exile mit Besonderer Rücksicht auf die Religiöse Entwicklung des Judentums" (Berlin, 1885); "Künstler und Jugendbilder" (Neuhaus, 1886); "Der Politische und Religiöse Character des Josephus Flavius" (Berlin, 1889); "Jerusalem und Cæsarea" (*ib.* 1890); "Das Auge in

Bibel und Talmud" (*ib.* 1892); "Geselligkeit und Geselligkeitsfreuden in Bibel und Talmud" (*ib.* 1895); "Kleidung und Schmuck im Biblischen und Talmudischen Schrifttum" (*ib.* 1905). S.

ROSENZWEIG, GERSON: Russian-American editor, author, and poet; born at Byelostok, Russia, April, 1861. He received his education in the Jewish schools of Berlin, Cracow, and in Byelostok and other cities of Russia, and conducted a Hebrew school in Suwalki, Russia. In 1888 he emigrated to the United States, and, settling in New York city, became joint editor of the "Jewish Daily News," "Jewish Gazette," and "Jewish World," which position he held until 1905. He has contributed to the leading Hebrew papers of the world, his writings being mainly in classical Hebrew. He edited and published "Ha-'Ibri" (The Hebrew), a weekly, from 1891 to 1898, and "Ḳadimah" (Forward), a monthly, from 1898 to 1902, both in New York city.

Rosenzweig is the author of "Masseket Amerika" (1891), a satire which became and is still very popular, portions thereof having been translated and printed in the "Sun" and other leading New York papers. It is written in the style of the Talmud, and is considered a masterpiece of satire and humor. He has published also "Shirim u-Meshalim" (New York, 1893), a volume of poetry; "Ḥamishshah we-Alef" (*ib.* 1903; now being reprinted in Russia): 1,005 original epigrams and poems in Hebrew; and "Mi-Zimrat ha-Areẓ," American national songs translated into Hebrew and set to the original music.

A. F. T. H.

ROSEWALD, JULIE EICHBERG: American prima donna; fourth daughter of Moritz Eichberg, cantor in Stuttgart; born in that city March 7, 1847. After finishing the course of instruction at the Stuttgart Conservatorium, Julie joined her sister, Mrs. Weiller, in Baltimore, in 1864, and two years later she was married to Jacob Rosewald, violinist and conductor. She returned to Europe in 1870, and continued her vocal studies under Marongelli, Mara, and Viardot-Garcia. Her career as prima donna began, in 1875, with the Kellogg Opera Company. Going to Europe a second time, in 1877, she filled engagements at Nuremberg, Mayence, Stuttgart, Cologne, Amsterdam, Berlin, and Dresden. In 1880 the Abbott Company engaged Mrs. Rosewald as prima donna, and her husband as conductor. This engagement lasted until 1884, when she took up her residence permanently in San Francisco, and became a popular teacher of singing, her success in preparing pupils for church choirs, the concert hall, and the operatic stage being largely due to her thorough knowledge of the anatomy and physiology of the throat; she has often been called the Marchesi of the West. For ten years, while living in San Francisco, she was a member of the choir of Temple Emanu-El, singing and reciting, in place of a cantor, the parts of the service usually sung and recited by that functionary—the only instance known in which a woman has led the services in a synagogue. From 1894 to 1902 she was professor of singing at Mills College Conservatory of Music. Her memory for music is almost prodigious. She is known to have memorized a leading rôle in one night, and her repertoire includes one hundred and twenty-five operas, in thirty of which she appeared, on one occasion, during seven consecutive weeks. Mrs. Rosewald has won fame for pure and brilliant vocalization, versatility, cultivated method, and no less for piquant and artistic acting. Impaired health compelled her, in 1902, to retire from professional life.

ROSEWATER, ANDREW: American engineer; born in Bohemia Oct. 31, 1848. When very young he removed with his family to the United States, settling in Cleveland, where he was educated at the public schools. In 1864 he joined the engineer corps of the Union Pacific Railway; in 1868 he settled in Omaha, where he was for the following two years assistant city engineer, being appointed city engineer in 1870. In 1876 he became manager and editor of "The Omaha Bee," and from 1878 to 1880 he was engineer in charge of the construction of the Omaha and Northwestern Railway. In 1880 and 1881 he was engineer of the Omaha Water-Works Company, and then became for the second time city engineer of Omaha, holding this position until 1887. In 1891 he was appointed president of the electrical subway commission of Washington, serving as such until 1892. Since 1897 he has held (for the third time) the position of city engineer of Omaha; he has also been president of the board of public works in the same city, and has held positions as consulting and designing engineer for sewerage for twenty-five cities.

A. F. T. H.

ROSEWATER, EDWARD: American editor and newspaper proprietor; born at Bukovan, in Bohemia, in 1841. He was educated at the high school of Prague, where he remained until he attained his thirteenth year, when he emigrated to the United States and there studied telegraphy. In 1858 he obtained his first position as a telegraph operator and held this position until the outbreak of the Civil war, when he enlisted, and joined the United States Military Telegraph Corps, being in active service during 1862–63. In the latter year he resigned and went to Omaha as manager of the Pacific Telegraph Company. During his sojourn in that city he took part in politics and was elected member of the legislature of Nebraska in 1871. In the same year he founded "The Omaha Bee," a newspaper which he has edited from its first appearance. In 1892 Rosewater was chosen to represent his state as member of the Republican National Committee, and in 1896 became member of the advisory board of the National Committee, being reelected to that office in 1900 and 1904. Rosewater was appointed a member of the United States Mint Commission in 1896 and representative of the United States at the Universal Postal Congress held at Washington in 1897. In the latter year he was elected vice-president of that congress. Awake to the interests of his adopted city, Rosewater was the projector of the Trans-Mississippi Exposition held at Omaha in 1898, and was elected member of the executive committee in charge of publicity and promotion. In 1901 he was a candidate for the United States senate. He died Aug 31, 1906.

A. F. H. V.

ROSEWATER, VICTOR: American editor and economist; born in Omaha, Neb., 1871; son of Edward Rosewater; educated in Columbia University, New York (A.M. 1892; Ph.D. 1893). Rosewater was fellow in political science at Columbia University during the year 1892–93. He entered journalism by joining the staff of "The Omaha Bee" in 1893, becoming managing editor of that paper two years later. In 1896 he was appointed regent of the Nebraska State University. In 1893 he produced "Special Assessments: A Study in Municipal Finance," and subsequently contributed to "Palgrave's Dictionary of Political Economy," to "Historic Towns of the Western States," and to the "New Encyclopædia Britannica" (1903). Rosewater is a member of several national associations and societies, and of the Republican state and executive committees of Nebraska.

ROSH HA-SHANAH: Eighth treatise of the order Mo'ed; it contains (1) the most important rules concerning the calendar year together with a description of the inauguration of the months by the nasi and ab bet din; (2) laws on the form and use of the shofar and on the service during the Rosh ha-Shanah feast.

Contents.

The old numerical Mishnah commences with an account of the four beginnings of the religious and the civil year (i. 1); it speaks of the four judgment-days of the pilgrim festivals and Rosh ha-Shanah (i. 2); of the six months in which the messengers of the Sanhedrin announce the month (i. 3); of the two months the beginnings of which witnesses announce to the Sanhedrin even on the Sabbath (i. 4), and even if the moon is visible to every one (i. 5); Gamaliel even sent on the Sabbath for forty pairs of witnesses from a distance (i. 6); when father and son (who as relatives may otherwise not witness together) behold the new moon they must set out for the bet din (i. 7), since they do not absolutely belong to those that are legally unfit for this purpose (i. 8). The weak and sick are borne on litters, and are protected against the attacks of the Sadducees; they must be provided with food, for witnesses are bound to journey even on the Sabbath (i. 9). Others went along to identify the unknown (ii. 1). In olden times bonfire-signals on the mountains announced to all as far as Babylon that the month had been sanctified. The custom of having witnesses and messengers was introduced after the Sadducees had attempted to practise deception (ii. 2, 3, 4).

The large court called "Bet Ya'azek" was the assembly-place for the witnesses (ii. 5); bountiful repasts awaited them, and dispensations from the Law were granted to them (ii. 6); the first pair of witnesses was questioned separately concerning the appearance of the moon, and other witnesses cursorily (ii. 7). Then the ab bet din called out to a large assembly, "Sanctified!" all the people crying out aloud after him (ii. 8). Gamaliel II. had representations of the moon which he showed to the witnesses. Once there arose a dispute between him and Joshua regarding the Tishri moon; the latter, in obedience to the nasi, came on foot to Jamnia on the day which he had calculated to be the Day of Atonement, and the two scholars made peace (iii.). There were various obstacles to the sanctification of the months, as when time was lacking for the ceremony, or when there were no witnesses present before the bet din. In the first case the following day became the new moon; in the second case the bet din alone performed the sanctification.

The Shofar.

The Mishnah treats also of the shofar (iii. 2); the horn of the cow may not be used (iii. 3); the form of the trumpet for Rosh ha-Shanah, the fast-day, and Yobel is determined (iii. 5); injuries to the shofar and the remedies are indicated (iii. 6); in times of danger the people that pray assemble in pits and caves (iii. 7); they pass the house of worship only on the outside while the trumpets sound (iii. 8); they are exhorted to be firm by being reminded of Moses' uplifted hands in the war with the Amalekites. In such times the deaf-mutes, insane, and children are legally unfit for blowing the trumpets.

Even if the festival fell on the Sabbath, Johanan ben Zakkai had the trumpets blown at Jamnia, while at one time this was done only in the Temple and the surrounding places (iv. 1); he also fixed the lulab outside of the Temple for seven days, and forbade the eating of new grain on the second day of Passover (iv. 2); he extended the time for examining witnesses until the evening, and had them come to Jamnia even in the absence of the ab bet din (iv. 3). The Mishnah then treats of the order of the prayers (iv. 4), of the succession of the Malkuyot, Zikronot, and Shoferot, of the Bible sentences concerning the kingdom of God, Providence, and the trumpet-call of the future (iv. 5), and of the leader in prayer and his relation to the teki'ah (iv. 6); descriptions of the festival are given in reference to the shofar (iv. 7); then follows the order of the traditional trumpet-sounds (iv. 8); and remarks on the duties of the leader in prayer and of the congregation close the treatise (iv. 9).

The Tosefta.

Curious as is the order of subjects followed in this treatise, in which several mishnaic sources have been combined, the Tosefta follows it, adding comments that form the basis of the Gemara in both Talmuds. The contents of the Mishnah with the corresponding sections of the Tosefta are as follows: General calendar for the year, i. 1–4 = Tosef. i. 1–13. Regulations concerning the months' witnesses, i. 5–ii. 1 (connecting with i. 4) = Tosef. i. 15–ii. 1 (abbreviated). Historical matter regarding fire-signals and messengers and their reception on the Sabbath, ii. 2–6 = Tosef. ii. 2 (abbreviated). The continuation of the laws of ii. 1 concerning witnesses (ii. 7, 8), and the questioning of witnesses, and the sanctification of the months are entirely lacking in the Tosefta. Historical data concerning Gamaliel and the dispute with Joshua, ii. 8-9 = Tosef. ii. 3 (a mere final sentence). Continuation of the laws of ii. 7 concerning witnesses, iii. 1 = Tosef. iii. 1, 2. Regulations regarding the shofar and its use, iii. 2-5 = Tosef. iii. 3-6a. Haggadic sentence on devotion = Tosef. iii. 6b. Final remarks on the shofar and on its obligations, iii. 6-end = Tosef. iv. 1. Ordinances of Johanan ben Zakkai concerning Rosh ha-Shanah and the Sabbath, and other matters = Tosef. iv. 2. Order of worship, iv. 5-end = Tosef. iv. 4-end. Mishnah ii. 7 seems to have been transposed according to Tosef. iv. 3, but it belongs there according to its contents.

In quoting many of Gamaliel's ordinances the Mishnah emphasizes the authority of the patriarchal house by recounting the dispute between the patriarch and his deputy Joshua and showing how the latter was forced to yield. The Tosefta omits the ordinances of Gamaliel and of Johanan ben Zakkai, and the dispute of the two leaders of the schoolhouse, nor does it mention anything of the power of any tannaitic dignitary; the Tosefta is here a product of the time of the Amoraim. The dignity of the nasi is not emphasized, because acumen and scholarship prevailed in the schoolhouse, and there was no desire to let old precedences (see 'EDUYOT) come to the fore again. Even the Mishnah contains some additions from the time of the Amoraim (see, for example, iv. 2, where a gap must be filled from the Tosefta).

ROSH YESHIBAH. See YESHIBAH.

ROSIN, DAVID: German theologian; born at Rosenberg, Silesia, May 27, 1823; died at Breslau Dec. 31, 1894. Having received his early instruction from his father, who was a teacher in his native town, he attended the yeshibah of Kempen, of Myslowitz (under David Deutsch), and of Prague (under Rapoport); but, wishing to receive a regular school education, he went to Breslau, where he entered the gymnasium, and graduated in 1846. He continued his studies at the universities of Berlin and Halle (Ph.D. 1851) and passed his examination as teacher for the gymnasium. Returning to Berlin, he taught in various private schools, until Michael Sachs, with whom he was always on terms of intimate friendship, appointed him principal of the religious school which had been opened in that city in 1854. At the same time Rosin gave religious instruction to the students of the Jewish normal school. In 1866 he was appointed M. Joël's successor as professor of homiletics, exegetical literature, and Midrash at the rabbinical seminary in Breslau, which position he held till his death.

Rosin was the author of: "Abschiedswort: Berichte über die Jüdische Religionsschule," Berlin, 1866; "Ein Compendium der Jüdischen Gesetzeskunde aus dem 14. Jahrhundert," Breslau, 1871 (on the "Sefer ha-Ḥinnuk"); "Ethik des Maimonides," *ib.* 1876; "Samuel ben Meïr als Schrifterklärer," *ib.* 1880; "Reime und Gedichte des Abraham ibn Esra," in 5 parts, *ib.* 1885-94 (Ibn Ezra's poems with vocalized text and German transl. in rime). He edited Michael Sachs' sermons (2 vols., Berlin, 1867), and Samuel ben Meïr's commentary on the Pentateuch, with a Hebrew introduction, Breslau, 1881. An essay of Rosin's on the philosophy of Abraham ibn Ezra was edited after his death by his devoted pupil David Kaufmann and published in the "Monatsschrift" (vols. xlii.-xliii.), to which magazine Rosin occasionally contributed.

While not a voluminous writer and original thinker, Rosin did his literary work with an exemplary accuracy of detail and in perfect sympathy with his subject. To his numerous disciples he was a kind friend and adviser. In his religious attitude he was strictly conservative, a true disciple of Michael Sachs (whose admirer he was); and he was at the same time broad-minded and tolerant of the opinions of others. His only son, Heinrich ROSIN, is professor of medicine at the University of Berlin. Another Heinrich ROSIN, professor in the law department of the University of Freiburg-im-Breisgau, is his nephew.

Zeit. des Jud.* June 2, 1893, and Jan. 11, 1895; *Jahresbericht des Jüdisch-Theologischen Seminars Fränkelscher Stiftung*, Breslau, 1895; Brann, *Gesch. des Jüdischen Theologischen Seminars in Breslau*, pp. 98–99, 115, Breslau, 1904.

S. D.

ROSIN, HEINRICH: German jurist; born at Breslau Sept. 14, 1855. In 1880 he established himself as privat-docent in the law department of the Breslau University, but, receiving a call from the University of Freiburg as assistant professor three years later, he accepted it, and subsequently was promoted to a full professorship in the same institution.

Among the works of Rosin are the following: "Der Begriff der Schwertmagen in den Rechtsbüchern des Mittelalters" (Breslau, 1877); "Die Formvorschriften für die Veräusserungsgeschäfte der Frauen nach Langobardischem Recht" (1880); "Das Polizeiverordnungsrecht in Preussen" (1882); "Das Recht der Oeffentlichen Genossenschaft" (Freiburg, 1886); "Das Recht der Arbeitsversicherung" (Berlin, 1892-93); "Minoritätenvertretung und Proportionalwahlen" (1892); "Grundzüge einer Allgemeinen Staatslehre nach den Politischen Reden and Schriftstücken des Fürsten Bismarck" (Munich, 1898).

BIBLIOGRAPHY: *Meyers Konversations-Lexikon* (new edition).

S. J. Go.

ROSIN, HEINRICH: German physician; born at Berlin Aug. 28, 1863; son of David ROSIN. He studied at Breslau and Freiburg (M.D. 1887), and in 1888 became assistant to Rosenbach at the Allerheiligen Hospital. In 1892 he went to Berlin as assistant to Senator at the general dispensary, and in 1896 was admitted to the medical faculty of the Berlin University as privat-docent. He received the title of professor in 1902; and in the same year he opened a private dispensary.

Rosin is a prolific writer. He has contributed about 100 essays, especially on clinical medicine, chemical medicine, and microscopy, to the professional journals. He is a collaborator on Eulenburg's "Realencyclopädie der Gesammten

Heilkunde," "Encyclopädische Jahrbücher der Gesammten Heilkunde," Drasche's "Bibliothek Medicinischer Wissenschaften," Liebreich's "Encyclopädie der Therapie," etc. He has published, with Ehrlich, Weigert, Krause, and Mosse, the "Encyclopädie der Mikroscopischen Technik."

Rosin is a member of the Verein für Jüdische Geschichte und Literatur, and has evinced an active interest in the Jewish affairs of the German capital.

S. F. T. H.

ROSNOSKY, ISAAC: American merchant and communal worker; born at Wollstein, Prussia, Nov. 6, 1846; son of Henry and Zelda Rosnosky. He went to Boston, Mass., as a boy and engaged in business. He was elected to the Boston common council as a Democrat in 1878, and as an Independent in 1879. He served in the Massachusetts House of Representatives in 1880 and from 1891 to 1894, being the first Jew to be elected to either branch of the legislature. Twice he was a delegate to national Democratic conventions; and he served as a commissioner to the World's Fair. It was largely through his efforts that the Carney (Catholic) Hospital fund of $10,000 was raised.

Rosnosky has been for the last twenty-three years (since 1882) president of Temple Ohabei Shalom, the oldest Hebrew congregation in Boston. He is a member of the Association of Past Presidents of the I. O. B. B.

A. J. LEB.

ROSSI, AZARIAH BEN MOSES DEI: Italian physician and scholar; born at Mantua in 1513 or 1514; died in 1578. He was descended from an old Jewish family which, according to a tradition, was brought by Titus from Jerusalem. Combining an insatiable desire for learning with remarkable mental power, Dei Rossi early in life became exceptionally proficient in Hebrew, Latin, and Italian literature. He studied simultaneously medicine, archeology, history, Greek and Roman antiquities, and Christian ecclesiastical history. When about the age of thirty he married and settled for a time at Ferrara. Later he is found at Ancona, Bologna, Sabbionetta, and again at Ferrara. In 1571 a terrible earthquake visited the last-named city and caused the death of about 200 persons. The house in which Dei Rossi lived was partly destroyed; but it happened that at the moment he and his wife were in their daughter's room, which remained uninjured. During the disturbances consequent upon the earthquake Dei Rossi lived in an outlying village, where he was thrown into association with a Christian scholar, who asked him if there existed a Hebrew translation of the "Letter of Aristeas." Dei Rossi answered in the negative, but in twenty days he prepared the desired translation, which he entitled "Hadrat Zeḳenim." His account of the earthquake, written shortly after, is entitled "Ḳol Elohim"; he regarded the earthquake as a visitation of God, and not merely as a natural phenomenon.

Earthquake at Ferrara, 1571.

His "Me'or 'Enayim."

Dei Rossi's great work, "Me'or 'Enayim" (Mantua, 1573-75; Berlin, 1794; Vienna, 1829; Wilna, 1863-66), includes the two works already mentioned and a third entitled "Imre Binah." The latter is divided into four parts; the first part contains a survey of the Jewish race at the time of the Second Temple, narrates the origin of the Septuagint, points out the contradictions between some of the beliefs of the Talmudists and the proved results of scientific research, records the origin of the Jewish colonies in Alexandria and Cyrene, chronicles the wars of Bar Kokba against the Romans, etc. Dei Rossi quotes from the writings of Philo, whose orthodoxy he questions. He criticizes him for having allegorized Biblical narratives of facts, and points out that the Alexandrian philosopher never gives the traditional interpretation of the Biblical text.

In the second part Dei Rossi criticizes a number of the assertions of the Talmudists (many of his criticisms being repeated by later commentators), and gives explanations of various haggadic passages which can not be taken literally (as, for instance, the haggadah which attributes the death of Titus to a gnat which entered his brain while he was returning to Rome). The third part is devoted to a study of Jewish chronology and translations from the writings of Philo, Josephus, and others, with commentaries. The fourth part deals with Jewish archeology, describing the shapes of the priestly garments and the glory of the Second Temple, and giving the history of Queen Helen and her two sons.

Attitude of His Contemporaries.

It is greatly to Dei Rossi's credit that he followed scientific methods of inquiry in his work and did not rely upon tradition. But this way of dealing with subjects which the multitude reverenced as sacred called forth many criticisms on the part of his contemporaries. Prominent among his critics were Moses Provençal of Mantua (to whom Dei Rossi had submitted his work in manuscript), Isaac Finzi of Pesaro, and David Provençal, who endeavored to defend Philo. Dei Rossi appended to some copies of the "Me'or 'Enayim" an answer to the criticisms of Moses Provençal, and a dissertation entitled "Ẓedeḳ 'Olamim," in which latter he refuted the arguments of Isaac Finzi. Later he wrote a special work entitled "Maẓref ha-Kesef" (published by Filipowski at Edinburgh, 1854, and included by Zunz in the Wilna edition of the "Me'or"), in which he defended his "Yeme 'Olam" against its critics. Dei Rossi, however, had to contend not only with impartial critics, but with the attacks of fanatics who considered his "Me'or 'Enayim" as a heretical work. Joseph Caro commissioned Elisha Gallico to draw up a decree to be distributed among all Jews, ordering that the "Me'or 'Enayim" be burned. But, Joseph Caro dying before it was ready for him to sign, the decree was not promulgated, and the rabbis of Mantua contented themselves with forbidding the reading of the work by Jews under twenty-five years of age.

The "Me'or 'Enayim" attracted the attention of many Christian Hebraists, who translated parts of it into Latin: Bartolocci translated ch. ix. and xxii., in his "Bibliotheca Magna Rabbinica"; Bochart, ch. xvi. and xxi., in his "Hierozoicon" (Leyden, 1712); Buxtorf, ch. ix., xlii., and lix., in his "Tractatus de Antiquitate Punctorum" (Basel, 1648); *idem*, ch. l. and lx., in his translation of the "Cuzari" (*ib.* 1660); *idem*, ch. lvi. and lviii., in his "Dissertatio de Letteris Hebraicis" (*ib.* 1662); Hottinger, ch. lvi., in his "Cippi Hebræi" (Heidelberg, 1662); Meyer, ch. viii., xiv., and xix., in his version of the "Seder 'Olam" (Amsterdam, 1699); Morin, ch. iii., v., vii., viii., ix., xix., xx., and xlviii., in his "Exercitationes Biblica" (Paris, 1638); Van Dale, ch. ix., in his "Dissertatio Super Aristeam" (Amsterdam, 1708); Voisin, ch. ii., viii., xv., xvi., xxii., xlv., li., lvi., lvii., and lix., in his edition of Raymund Martin's "Pugio Fidei" (Paris, 1651); Voorst, ch. xxiii., xxv., xxxiii., and xxxv., in his translation of the "Ẓemaḥ Dawid" (Leyden, 1644). Ch. xvi. has been translated into English by Raphall ("Hebrew Review and Magazine," ii. 170), and ch. lx. by Bishop Lowth, in the introduction to his translation of Isaiah (London, 1835).

Dei Rossi was the author of a collection of poems (Venice, n.d.), among which are several of a liturgical character.

J. I. Br.

ROSSI, GIOVANNI BERNARDO DE: Italian Christian Hebraist; born Oct. 25, 1742, in Castelnuovo; died in Parma March, 1831. He studied in Ivrea and Turin. In Oct., 1769, he was appointed professor of Oriental languages at the University of Parma, where he spent the rest of his life. His inaugural lecture on the causes of the neglect of Hebrew study was published in 1769 at Turin. De Rossi devoted himself to three chief lines of investigation—typographical, bibliographical, and text-critical. Influenced by the example of Kennicott, he determined on the collection of the variant readings of the Old Testament, and for that purpose collected a large number of manuscripts and old prints. In order to determine their bibliographical position he undertook a critical study of the annals of Hebrew typography, beginning with a special preliminary disquisition in 1776, and dealing with the presses of Ferrara (Parma, 1780), Sabbionetta (Erlangen, 1783), and, later, Cremona (Parma, 1808), as preparatory to his two great works, "Annales Hebræo-Typographici" (Parma, 1795, sec. xv.) and "Annales Hebræo-Typographici ab 1501 ad 1540" (Parma, 1799). This formed the foundation of his serious study of the early history of Hebrew printing (see Incunabula). In connection with this work he drew up a "Dizionario Storico degli Autori Ebrei e delle Loro Opere" (Parma, 1802; German translation by Hamberger, Leipsic, 1839), in which he summed up in alphabetical order the bibliographical notices contained in Wolf, and, among other things, fixed the year of Rashi's birth; and he also published a catalogue of his own manuscripts (1803) and books (1812). All these studies were in a measure preparatory and subsidiary to his "Variæ Lectiones Veteris Testamenti" (Parma, 1784-88), still the most complete collection of variants of the Hebrew text of the Old Testament. In order to compile it he visited all the chief libraries of Italy, and through its compilation he obtained the knighthood of St. George at the court of Parma and seductive offers from Pavia, Madrid, and Rome. As examples of the use of his work he issued a specimen of the Targum on Esther (Rome, 1782; 2d ed., revised, Tübingen, 1783). He was also interested in the polemics of Judaism and Christianity, and wrote on this subject his "Della Vana Aspettazione degli Ebrei del Loro Re Messia" (Parma, 1773), which he defended in a pamphlet two years later; and he further published a list of antichristian writers, "Bibliotheca Judaica Antichristiana" (Parma, 1800). A select Hebrew lexicon, in which he utilized Parḥon's work (Parma, 1805), and an introduction to Hebrew (*ib.* 1815) conclude the list of those of his works which are of special Jewish interest.

T. J.

ROSSI, MOSES BEN JEKUTHIEL DE: Roman rabbi of the fourteenth century. Between 1373 and 1390 he wrote a compendium of Jewish rites, entitled "Sefer ha-Tadir," which he intended to serve as a manual both for daily use and for the synagogue. This work lacks depth of thought and originality, and has therefore had little influence on or consideration from the Posḳim. It is full of the prejudices and superstitions of the age, treating of astrology, prophecies, the interpretation of dreams, and similar subjects. Its chief importance lies in the fact that the author does not confine himself to the mere ritual laws, but introduces also maxims of morality, homilies, philosophical questions, and hygienic precepts. The second portion is a collection of treatises and responsa of the author and of other scholars. In addition to the "Sefer ha-Tadir," Moses ben Jekuthiel is the author of a hymn for the use of synagogues, commencing "Meshok na El Ḥasdeka."

S. U. C.

ROSSI, SOLOMON: Rabbi and composer; lived in Mantua during the latter part of the sixteenth and the beginning of the seventeenth century. He came from an old Mantua family in which the traditional belief had been preserved that its ancestors had been taken as prisoners to Rome under Titus and Vespasian. In 1587 Rossi was engaged as musician and singer at the ducal court of Vincenze I. of Mantua, where his sister Europa was employed as a singer. That Rossi stood in high favor at this court is evidenced by the fact that he was allowed to appear in public without the yellow badge which other Mantua Jews were at that time obliged to wear.

Rossi was a skilled contrapuntist, and he worked assiduously to compose synagogal music with which the old sacred melodies of Zion might be harmoniously combined. His "Ha-Shirim Asher li-Shelomoh" (Venice, 1622) gives evidence of the success he attained; and it has been said that Leon of Mo-

DENA and other Italian rabbis were influenced by Rossi when they issued their letter (1605) authorizing the introduction into the synagogue of mensurate and polyphonic music.

Rossi's other compositions comprised chiefly religious poems, hymns, and madrigals; he wrote also a musical drama entitled "Maddalena." Several of his poems were dedicated to persons of princely rank. It is likely that Rossi in 1612 was the leader of a Jewish band of singers, and likewise of a theatrical company.

D. F. C.

ROSSIENA (ROSSIENY): District city in the government of Kovno, Russia. It had a prosperous Jewish community in the first half of the nineteenth century, and was a center of HASKALAH, or progressive ideas, when Abraham MAPU lived there (1837–44). He lovingly recalls the time when he met kindred spirits like Senior Sachs, Shapiro, Emanuel Soloweitschik, and Marcus Wolpert in the house of Abraham Wolfsohn (letter appended to vol. ii. of "'Ayiṭ Ẓabua'," partly translated by Rebecca Altman in "The First Hebrew Novel," in "The New Era Illustrated Magazine," Dec., 1904). But most of the men who were animated by progressive ideas left Rossiena for more promising fields of activity in larger cities, and a fire which almost totally destroyed the city in 1865 and the hard times which followed the brief period of revival in the first part of the reign of Alexander II. contributed to the city's decline. In 1866 Rossiena possessed 10,579 inhabitants, of whom 8,290 were Jews. A visitor to the city in 1875 ("Ha-Shaḥar," vi. 79) found there but little of its former prosperity and culture. By 1897 the entire population had dwindled to 7,455, "mostly Jews." The chief articles of commerce are wood and grain for export; but the grain-export business of Russia has been almost totally ruined by the latest commercial treaties between Russia and Germany, and the condition of the Jewish grain-dealers is now worse than ever.

The following have held the rabbinate of Rossiena: Nathan Nate Rabinowitz (*c.* 1775); Nathan's son Dob Bär Rabinowitz; Moses Zeitlin (*c.* 1845); Abraham Abele Jaffe ("of Rossiena and district"; 1872); Alexander Moses Lapidoth (b. Feb. 27, 1819; a pupil of Israel Lipkin [Salanter] and formerly rabbi of Yanova; has held office since about 1880). The best known of the modern Hebrew scholars who were brought up in Rossiena is probably Aryeh Löb Gordon (born in Kelmy 1844; now a resident of Wilna), author of "Mishpeṭe ha-Lashon 'Ibrit" (Wilna, 1874), on Hebrew grammar, and several minor works.

The district of Rossiena, exclusive of the city, had in 1897 a total population of 221,731, of whom 17,000 were Jews.

ROSTOCK. See MECKLENBURG.

ROSTOF: Russian fortified commercial and manufacturing town on the Don; formerly in the government of Yekaterinoslaf; since 1888 included in the district of the Don Cossacks. Jews settled there about 1827, and their number grew with the city's increasing importance as a commercial center. A large synagogue and a bet ha-midrash were erected in 1842; the foundations of a new bet ha-midrash were laid in 1863; and the synagogue Po'ale Ẓedeḳ was founded in 1886. In the days of the liberal ALEXANDER II. the Jews had several of their own representatives in the city council, and eleven Jews were included in the commission which Mayor Baikov appointed in 1863 to investigate the needs of the city and propose the necessary improvements. In 1866 the Jews numbered 2,342 in a total population of about 39,000. In the following twenty years the city's population increased to more than 100,000, and the Jews, who helped to develop its enormous export trade in grain, increased to nearly 14,000. These prosperous conditions, however, did not continue through the reign of ALEXANDER III. An anti-Jewish riot broke out there May 10 (22), 1883, in which three Jews were injured and property valued at 70,000 rubles was destroyed. Nearly two years passed before twenty-seven of the rioters were brought to trial, and then all were acquitted (see "Ha-Meliẓ," 1885, No. 84).

When the towns of Rostof and Taganrog (the latter had about 200 Jewish families) were to be ceded to the district of the Don Cossacks, to which even Jews who were privileged to reside in all other parts of the Russian empire were not admitted, a commission which was appointed by the minister of war decided to expel the Jews from both towns. The Jewish inhabitants were panic-stricken, and it was rumored that a large number of them applied for baptism (see "Jüdisches Volksblatt," pp. 466, 483, St. Petersburg, 1886). But Jacob Poliakov of Taganrog, on the advice of the hetman Sviatopolk-Mirski of the Don Cossacks (uncle of a later minister of the interior), induced representative Christian residents to inform the government that the towns would suffer irreparable loss by the expulsion of the Jews. It was finally decided that those Jews who lived there might remain, but that no more might be permitted to settle in either town. The material condition of Rostof was not improved by the change, for, although the population continued to increase (it was 119,889 in 1897), its trade and the importance of its great annual fair diminished. A large part of the population of Rostof consists of Armenians, who live on friendly terms with the Jews and frequently enter into business partnerships with them.

Shrage Feiwel Gniesin, a graduate of the rabbinical school of Wilna, became the government rabbi of Rostof in 1863 and remained such until 1889, when he was succeeded by Dr. Jampolsky, who later was succeeded by Lifshitz. R. Zlotkin was for a long time the Orthodox rabbi. Wolkenstein was president of the Jewish community for several decades, and held also the office of Danish consul. Jacob Ter, the Yiddish playwright, who finally removed to New York, was secretary of the community from 1880 to 1890. Ẓebi ha-Kohen Schereschewsky (b. Pinsk, 1840) lives in Rostof (1905) as a bookseller, and is the only well-known Maskil and Hebrew scholar of the town. A Rostover Handwerker Unterstützungsverein, composed of former residents of Rostof, exists in New York.

ROTA. See Badge.

ROTH, MORITZ: Swiss physician; born at Basel Dec. 25, 1839; educated at the universities of Würzburg, Göttingen, Berlin, and Basel (M.D. 1864). In 1866 he became privat-docent at the University of Basel, and in 1868 at that of Greifswald. In 1872 he was appointed assistant professor at Basel, and in 1874 professor of pathology and pathological anatomy, which position he resigned in 1898.

Roth has contributed many essays to the medical journals of Switzerland and Germany, and is the author of "Andreas Vesalius Bruxellensis," Berlin, 1892.

Bibliography: Pagel, *Biog. Lex.*

S. F. T. H.

ROTH, PHILIPP: German violoncellist; born at Tarnowitz, Upper Silesia, Oct. 25, 1853; died at Berlin June 9, 1898. He studied under Wilhelm Müller, and from 1876 to 1878 under Robert Hausmann at the Königliche Hochschule für Musik, Berlin. He published a violoncello method and a work entitled "Führer Durch die Violoncell-Litteratur." In 1890 he established the Freie Musikalische Vereinigung in Berlin, and assumed the directorship of its publication, the "Berliner Signale."

Bibliography: Riemann, *Musik-Lexikon*.

S. J. So.

ROTH, WILHELM: Austrian rhinologist; born at Kluckno, Hungary, Oct. 10, 1848. He received his education at the gymnasium at Eperies, Hungary, and at the University of Vienna (M.D. 1873). Establishing himself in Vienna, he became in 1885 privat-docent at the university of that city.

Roth has invented a drop-syringe for the larynx and several instruments for the nose, *e.g.*, a mirror, an inhalation apparatus, and an electrical lamp, as well as a medicine-carrier. Besides many articles in the medical journals he is the author of: "Die Chronische Rachenentzündung," Vienna, 1883. He has also collaborated on the "Therapeutisches Lexicon" and the "Diagnostisches Lexicon."

S. F. T. H.

ROTHENBURG: Town of Middle Franconia, Bavaria, situated on the Tauber, 41 miles west of Nuremberg. Jews must have been settled there as early as the beginning of the twelfth century, since a Jew of Rothenburg is mentioned in a Würzburg document of 1119 (Aronius, "Regesten," p. 100). There are also isolated notices concerning Jews in Rothenburg and dating from the end of the twelfth and from the thirteenth century. Thus, in the year 1180 the Jew Samuel Biscoph of Rothenburg bought from Count Eckard a place adjoining the foundation of St. Killian, for which he was to pay to the church 8 pounds of wax annually on St. Killian's day (July 8; Aronius, *l.c.* pp. 133-135); and in 1251 King Conrad IV., for 3,000 marks in silver, mortgaged the town of Rothenburg, with the Jews in it ("Rothenburgum et Judæos"), to Gottfried of Hohenlohe, to cover the many expenses which the latter had incurred by being in the king's service (H. Bresslau, in "Hebr. Bibl." x. 129; Wiener, "Regesten," p. 8, No. 41).

Early Mention.

Under the Bishops.

In the middle of the fourteenth century Rothenburg again became the possession of a stranger, when the emperor Charles IV. bestowed the whole town, together with the Jewish school, cemetery, and houses, on Bishop Albrecht of Hohenlohe, at Würzburg, and at the same time released the magistrates of the city from any oaths or obligations which bound them to protect the Jews. But the town, which at that time was in a condition of growing prosperity, due in part to the Jews, was not disposed to permit the latter to be systematically oppressed by the bishop and taken before the ecclesiastical courts. Consequently complaint was made to Charles IV., who invited the bishop, with both Christian and Jewish representatives of Rothenburg, to a council at Nuremberg. Before that took place, however, the city released itself from its connection with the bishop; on Sept. 30, 1353, the Jews came again under the jurisdiction of the town council, and from that time on were not claimed by the emperor. Nevertheless they were required to pay certain taxes directly to the king; and Opferpfennig receipts for the years 1393, 1394, and 1395 have been preserved, given to Rothenburg Jews in the time of the emperor Wenzel by the latter's favorite Borziwoy of Swynar. The Jews appear to have paid other taxes besides this, for two of the receipts designate the sums received as "Jew taxes." The opferpfennig from Rothenburg alone amounted to 75 gulden in 1409, under the emperor Rupert. It was still collected in Rothenburg under Sigismund, but when Emperor Maximilian I. also demanded it (Sept. 17, 1504) the Jews refused to pay it, in which refusal they were upheld by the city. After this the payment of the opferpfennig by the Jews of Rothenburg is no longer mentioned.

At the time of the Black Death there originated in Rothenburg the so-called Shepherd Brotherhood's day, which was celebrated annually with great pomp on Aug. 27, in memory of the escape of the town from poisoning by the Jews. The story runs that an "otherwise simple" shepherd stated before the magistrates that he had seen the well Hertrech, at the upper Galgenthürlein, poisoned, and that he had overheard a conversation on the subject carried on by Jews in Hebrew, and wished to save the town. On the strength of this charge the burghers were warned not to draw water from the well in question, and the Jews of the town and vicinity who had not already fled were thrown into prison and tortured.

If a Jew desired to be admitted to the city, he had first to make out an application bearing his signature in Hebrew, and present it to the council, in return for which he received from the latter a permit with the municipal seal affixed. These permits were for permanent settlement as well as for temporary residence. In especially difficult cases the council gave aid to its Jewish burghers. Thus, in the dispute which Master Mendel of Pappenheim, for unknown reasons, had with the Nuremberg Jewish burghers Isaac and Feyfelin, Mendel having put the burghers under the ban (1383), it was decided that each of the parties concerned should advance 1,000 gulden, and that the victor in the dispute should take the whole sum.

According to Bensen ("Beschreibung und Gesch. der Stadt Rothenburg," p. 521) and Merz ("Rothenburg in Alter und Neuer Zeit," p. 93), the Jews were banished from Rothenburg in 1397 and were denied admission to the town until 1404. At the time of banishment the council sold the synagogue and Jewish dance-hall for 2,000 gulden to the burgher Peter Creglinger, who built on the site of the synagogue a chapel to the Virgin.

Exactions in 1414.

In 1414 the knight Erkinger of Sausheim was entrusted with the collection of certain money (comp. Keller, "Zur Gesch. der Besteuerung der Juden Durch Kaiser Sigismund und König Albrecht II." in Geiger's "Zeitschrift für Gesch. der Juden in Deutschland," iii. pp. 301–336). On his arrival the council arrested all Jews in the town, including among them strangers temporarily in Rothenburg on business. Archbishop John of Mayence interposed in vain on their behalf; they were all kept under arrest until they had paid the required sum of 2,000 gulden, for which Sigismund himself signed the receipt (Oct. 8, 1414). In order to raise the money they borrowed from the town council, binding themselves to pay it back in weekly instalments.

The Jews of Rothenburg were especially oppressed by the small princes. Thus on May 2, 1422, Bishop John of Würzburg issued an order to the pastor of Rothenburg which made the following demands upon the council: (1) the Jews were to be prohibited from practising usury; (2) they were to wear on the breast a cloth badge, of red or other color, one span long and one wide, so that they might be distinguished from Christians; (3) a Christian might neither rent nor sell a house to a Jew; (4) a Christian might not serve a Jew for hire; (5) debts due from Christians to Jews were to be paid to the bishop; (6) other moneys and treasures were to fall to the council. The council demanding an extension of the time allowed before the order should come into force, the bishop granted until July 7, 1422. In the meantime the king came to Nuremberg, and since at that time he was himself planning to tax the Jews the decree of the bishop was revoked. Nevertheless, the regulation in regard to wearing distinctive signs appears to have been enforced, for in 1511 the Jews asked the council how the new badges should be made.

Another extraordinary imperial tax was imposed in 1433, when the Rothenburg Jews had to pay Sigismund a coronation-tax of 200 gulden, in return for which, on April 14, 1434, they received an imperial privilege releasing them from all taxes for ten years.

Privilege of 1517.

Maximilian was the first emperor to interfere in Jewish affairs, the occasion being the general assembly summoned by the Frankfort Jews, on Nov. 6, 1509, in order to secure harmony in decisions. The assembly met with little success, principally through the ostentatious reserve of the Rothenburg delegates, who at the request of the Augsburg Jews were urged even by the emperor to act in concert with their fellows, but with no effect. About eight years later the Rothenburg Jews themselves had occasion to appeal to the emperor, when (1517) a demand was made upon the council of Rothenburg by the robber-knight Klaus Wolgemuth that the Jews should be compelled to pay him a certain sum of money. Thereupon the Jews received a privilege from the emperor (July 7, 1517) permitting them to refuse to submit to such extortions. But in spite of privileges they could not prevent the council from voting, on Nov. 7, 1519, a decree of banishment. It is remarkable, however, that according to the records they were banished at their own request, repeated by the "Schulklopfer" Michel only a few days before the passing of the decree. When the emperor asked the reason for the request the council answered that the preachers, especially Dr. Teutschlin, had stirred up the people against the Jews, that the council could not protect them, and that when stones were thrown at the Jews the latter had asked to be formally banished.

Expulsion of 1520.

The truth of this, however, does not appear to be proved, for from another record it is learned that the Jews complained of Teutschlin's activity and petitioned the council not to listen to his invectives and not to banish them. When the decree of banishment was issued they received the right to collect any money due them, without interest. But the people, not satisfied with this, went to the jurist Dr. Steinmetz for advice, who, although very reserved, allowed interest already paid to the Jews to be deducted from the principal. Before the time set for their departure the synagogue was plundered of all its treasures. On Jan. 8, 1520, there were only six families left in the town; these left Feb. 2, following. Up to 1526 individual Jews endeavored to gain admittance to the town, but without success, and it was not until the nineteenth century that Jews were again found in Rothenburg. The synagogue, the school, and the cemetery were confiscated by the city. The synagogue was transformed into a chapel, but was destroyed in 1525 by the Reformers. The place where the cemetery was situated is still known as the Jewish burying-ground.

Loan-Making.

As elsewhere in Germany, the occupation of the Rothenburg Jews was usury. There was a "Willkürbuch" in Rothenburg dating back as early as the thirteenth century. The following paragraphs from it are especially noteworthy: "Loans may be made not only upon pledges but also upon given surety, if the burgher first pledges himself to pay." "The rate of interest is not expressly regulated." "If a Jew has not renewed his claim for a debt in the official register within two years, the debt shall be considered canceled under all circumstances." The activity of the money-lending business is indicated by the records of the end of the fifteenth century, when six Rothenburg Jews alone had 6,281 gulden and 70 pounds outstanding.

Among the names of persons of especial note in connection with the history of Rothenburg are those of the physician Joseph Oeringer, Meïr of Roth-

ENBURG, the already-mentioned Master Mendel of Pappenheim, Master Israel of Nuremberg (settled in Rothenburg in 1406), and R. Jacob (who in 1457 was appointed rabbinical overseer in Würzburg at the command of Bishop Conrad).

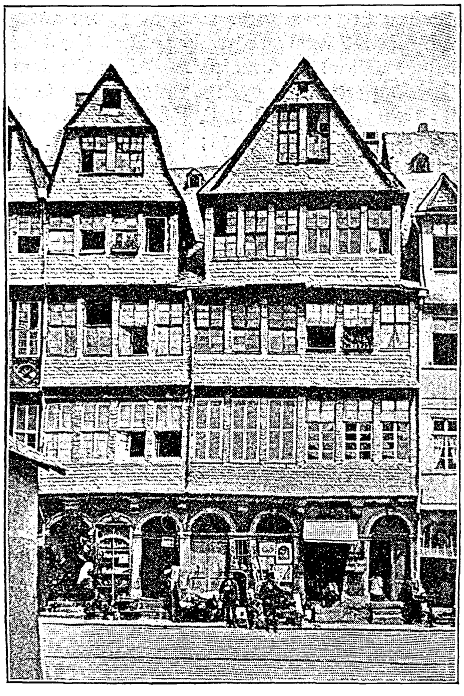
ROTHSCHILD: Celebrated family of financiers, the Fuggers of the nineteenth century, deriving its name from the sign of a red shield borne by the house No. 148 in the Judengasse of Frankfort-on-the-Main. This house is mentioned in the "Judenstädtigkeit" of 1619, at which date its number was 69. Curiously enough, it at first bore the sign of a green shield ("Zum Grünen Schild"). It was restored in 1886, and, though not in its original location, it still remains in possession of the Rothschilds as a kind of family museum and memorial.



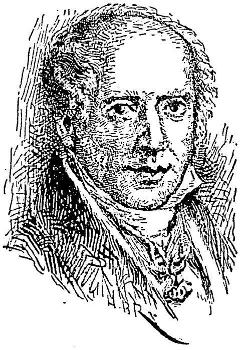
The Rothschild "Stammhaus," Frankfort-on-the-Main.
(From a photograph.)

The earliest notice of a member of the family, given in the burial records of Frankfort, is that of Moses Rothschild (b. *c.* 1550), whose daughter Esther died in 1608. Members of the same family are mentioned at Worms in the seventeenth century as rabbis (Lewysohn, "Sechzig Epitaphien zu Worms"). One of these, Mendel Rothschild, was for several years preacher in Prague, then rabbi of Bamberg, and finally rabbi of Worms for fourteen years.

The first Rothschild of any prominence was one **Amschel Moses Rothschild,** a small merchant and money-changer at Frankfort-on-the-Main; but the founder of the house was his son **Mayer Amschel Rothschild,** born in that city about 1743.

Mayer Amschel Rothschild.

When a boy Mayer used to be sent to exchange money for use in his father's banking business; and he thereby developed an interest in coins which was both practical and scientific. He was at one time destined for the rabbinate, and studied for that purpose in Fürth. He soon changed his career, however, and took a post in the Oppenheim banking-house in Hanover. About 1760 he started in business for himself in his native city, in the house of his father, who was then dead. He married, Aug. 29, 1770, Güttele Schnapper, who lived to see her sons at the head of European finance. Mayer was a general agent and banker, and traded also in works of art and curios. In the latter connection he became an agent of William IX., Landgrave of Hesse-Cassel, who on his father's death in 1785 had inherited the largest private fortune in Europe, derived mainly from the hire of troops to the British government for the putting down of the Revolution in the United States.



Mayer Amschel Rothschild.

Mayer Amschel Rothschild had become acquainted with the crown prince in 1775, but does not seem to have done much business with him till toward the end of the next decade. He changed some English gold for him in 1789, and in 1794 took as much as £150,000 worth, but not alone, having associated with him no less than six other bullion-brokers of Frankfort. It was only toward the end of 1798 that he had sufficient credit with the prince to undertake single-handed any large quantity of gold brokerage. From 1800 to 1806 the landgrave placed with Rothschild 1,750,000 thaler, mostly at 4 per cent, part of it to be invested in Frankfort town loans, part in Danish loans. In 1801 he became the landgrave's court agent.

Meanwhile his third son, **Nathan Mayer Rothschild** (born at Frankfort Sept. 16, 1777), had settled

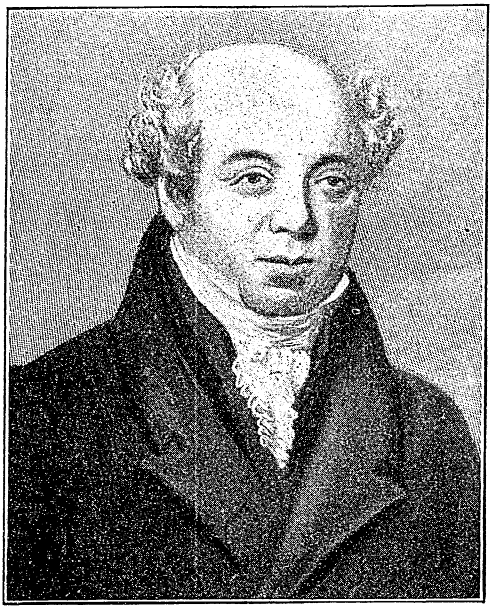
J.

in England under somewhat remarkable circumstances, as related by himself to Sir Thomas Buxton. The firm dealt in Manchester goods, and, having been treated somewhat cavalierly by a commercial traveler, Nathan at a moment's notice settled in Manchester (1798) with a credit of £20,000, upon which he earned no less than £40,000 during the following seven years by buying raw material and dyes, having the goods made up to his own order, and selling them abroad, thus making a triple profit. He became naturalized as a British subject June 12, 1804, and in 1805 went to London, establishing himself at first in St. Helen's place and afterward in New Court, St. Swithin's lane, still the office of the firm. He married shortly afterward a sister-in-law of Moses Montefiore, thus coming into association with the heads of the Sephardic community, then ruling the financial world of London through their connection with Amsterdam. Owing to Napoleon's seizure of Holland in 1803, the leaders of the anti-Napoleonic league chose Frankfort as a financial center wherefrom to obtain the sinews of war. After the battle of Jena in 1806 the Landgrave of Hesse-Cassel fled to Denmark, where he had already deposited much of his wealth through the agency of Mayer Amschel Rothschild, leaving in the hands of the latter specie and works of art of the value of £600,000. According to legend, these were hidden away in wine-casks, and, escaping the search of Napoleon's soldiers when they entered Frankfort, were restored intact in the same casks in 1814, when the elector returned to his electorate (see Marbot, "Memoirs," 1891, i. 310-311).

Nathan Mayer Rothschild.

The facts are somewhat less romantic, and more businesslike. Rothschild, so far from being in danger, was on such good terms with Napoleon's nominee, Prince Dalberg, that he had been made in 1810 a member of the Electoral College of Darmstadt. The elector's money had been sent to Nathan in London, who in 1808 utilized it to purchase £800,000 worth of gold from the East India Company, knowing that it would be needed for Wellington's Peninsular campaign. He made no less than four profits on this: (1) on the sale of Wellington's paper, (2) on the sale of the gold to Wellington, (3) on its repurchase, and (4) on forwarding it to Portugal. This was the beginning of the great fortunes of the house, and its early transactions may be divided into three stages, in each of which Nathan was the guiding spirit; namely, (1) from 1808 to 1815, mainly the transmission of bullion from England to the Continent for the use of the British armies and for subventions to the allies; (2) from 1816 to 1818, "bearing" operations on the stock exchange on the loans needed for the reconstruction of Europe after Napoleon's downfall; and (3) from 1818 to 1848, the undertaking of loans and of refunding operations, which were henceforth to be the chief enterprises of the house.



Nathan Mayer Rothschild.

(1) As regards the first stage, the deaths in 1810 of both Sir Francis Baring and Abraham Goldsmid left Nathan Mayer Rothschild without a formidable competitor in the London bullion market; and it has been calculated that England forwarded to the Continent through him in the three years 1813 to 1815 no less than £15,000,000 sterling, while in the latter year up to the battle of Waterloo he forwarded in a similar manner £1,000,000 per month. He had a pigeon-post between England and the Continent which brought him early information of all important events. While the battle of Waterloo was in progress his agent Rowerth awaited the result at Ostend, and was the first to bring the news to London. This was on the morning of June 20, two days after the battle, when Rothschild immediately transmitted the intelligence to the government; this shows that the tradition that he gained largely by keeping the news secret is entirely mythical. In many instances Rothschild found it unnecessary to transmit English money to the Continent, as the foreign governments frequently preferred to have their loans reinvested for them in English consols. It was mainly in connection with this movement in bullion that the remarkable plan was adopted of having one of the Rothschild brothers in each of the chief capitals; but it is a mistake to believe that this arrangement was due to the foresight of Mayer Amschel.

Dispersion of the Brothers.

James, the youngest of the brothers, was not established in Paris till 1812, the year of Mayer Amschel's death, and then secretly for the purpose of collecting French coin to forward to Wellington for his advance through southern France; the firm of Rothschild Frères was not founded in Paris till 1817; Karl did not go to Naples till 1821; and Salomon went to Berlin in 1815 to arrange for payments through London to Berlin to the Englishman Herries. It was evidently Nathan who made these arrangements.

(2) The great sums needed by France and the allies after the Waterloo period were at first not supplied by the Rothschilds at all, though undoubtedly the large movements of bullion which were

required for these loans were negotiated through them, as it is reckoned that from 1814 to 1822 no less than £18,000,000 sterling was transferred by them to the Continent, and it was for this reason that the brothers were raised to the Austrian nobility (Sept. 29, 1822; Nathan never assumed the title, though he acted as Austrian consul-general). But the loans themselves were made by the banking-house of Baring, which was connected with the firm of Hope in Amsterdam and with that of Ouvrard in Paris, for a long time the chief rival in Paris of the Rothschilds. The profits on these issues were enormous. The French loan of 1816 of 350,000,000 francs yielded 10 per cent; and the Austrian loan of 50,000,000 gulden in 1815 yielded 9 per cent.

Foreign Loans.

(3) As early as Feb. 5, 1817, the Rothschilds had taken up a Prussian loan of 1,500,000 gulden at 5 per cent; and by the end of the following year the brothers in their collective capacity were reported to be the richest firm in Europe, though they had not conducted any of the great loans of the preceding three years. Ehrenberg, therefore, thinks that they must have gained their fortune by speculating in the loans issued under the auspices of the Barings, probably by "bearing" operations which were so successful that they forced the governments concerned to allow the Rothschilds to participate in any future loans.

Year.	Country.	Amount.
1817	Prussia	1,500,000 gulden.
1818	"	£5,000,000
1819	Great Britain	£12,000,000
1820	Austria (Lottery Loan)	48,000,000 gulden.
1820	"	20,800,000 "
1821	"	37,500,000 "
1821	Naples	16,000,000 ducats.
1821	Sicily	4,500,000 "
1822	Prussia	£3,500,000
1822	Russia	£3,500,000
1822	"	£6,500,000
1822	Naples	20,000,000 ducats.
1823	Austria	£2,500,000
1823		25,000,000 gulden.
1823	France	23,000,000 francs.
1824	Brazil	£3,200,000
1824	Naples	£2,500,000
1825	Grand Duchy of Hesse	6,500,000 gulden.
1825	Brazil	£2,000,000
1829	"	£800,000
1829	"	25,000,000 gulden.
1829	Hesse-Homburg	1,750,000 "
1829	Hohenzollern-Hechingen	260,000 "
1830	Prussia	£4,500,000
1831	Belgium	50,000,000 francs.
1831	Papal States	16,000,000 "
1832	Belgium	£2,000,000
1834	Austria	25,000,000 gulden.
1834	Greece	66,000,000 francs.
1834	Grand Duchy of Hesse	2,500,000 gulden.
1835	Great Britain	£15,000,000
1837	Duchy of Nassau	2,600,000 gulden.
1839	Austria	30,000,000 "
1840	Duchy of Lucca	1,050,000 "
1840	Baden	5,000,000 "
1842	Austria	40,000,000 "
1843	Duchy of Lucca	1,120,000 "
1845	Papal States	2,160,000 francs.
1845	Baden	14,000,000 gulden.
1847	Irish Famine Loan	£10,000,000
1847	France	250,000,000 francs.
1847	Hanover	3,600,000 thaler.
1848	Baden	2,500,000 gulden.
1848	Bavaria	22,000,000 "
1848-51	Hesse (four loans)	6,500,000 "

The above is a list of the loans issued by the Rothschilds during the years 1817 to 1848, as far as these can be definitely ascertained: they make a total of $654,847,200 (£130,969,440).

The profits on these loans were at first very great. Salomon Rothschild in 1820 declared that the brothers in that year made 6,000,000 gulden, probably on the two Austrian loans, *i.e.*, about 10 per cent. But others were by no means so remunerative. No less than £500,000 was lost in attempting to support Lord Bexley's refunding schemes; and the French refunding operation of 1823 from 5's to 3's, though originally suggested by Nathan, was equally unremunerative, causing a loss, it is said, of 3,000,000 francs. Nor were the Rothschilds always successful in obtaining the issue of loans. In 1834, despite their competition, a syndicate of the Foulds, Oppenheims, and others obtained the Sardinian loan; but the Rothschilds adopted their usual "bearing" policy, with the result that the next papal loan was financed by them. The Pereires were equally inimical to the Rothschilds, and successfully competed with them for Russian railway contracts.

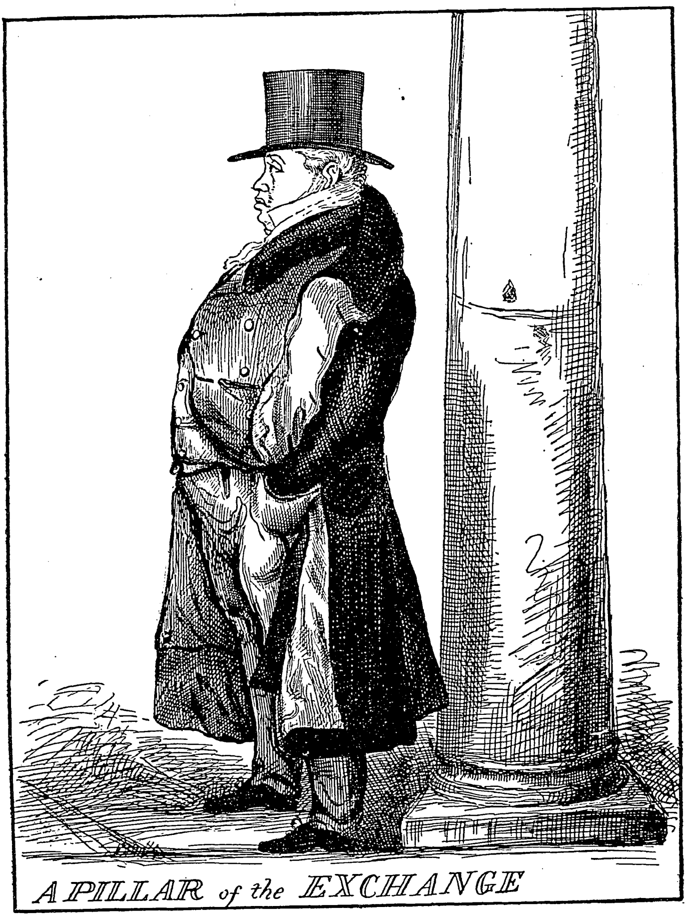
Baron James.

While the early history of the firm was dominated by the influence of Nathan, after the year 1830 the youngest brother, James, came to the front, and the Paris house gained that predominance in French finance which it still retains, whereas throughout the nineteenth century there was concealed but very effective rivalry between the Barings and the Rothschilds in London. Baron James had befriended and assisted Louis Philippe before he came to the throne in 1830, and was the medium through which that astute monarch conducted his stock-exchange operations till his overthrow in 1848. In return Baron James obtained in 1846 the concession for the Great Northern Railway Company of France, having 300,000 shares, each of the value of 300 francs. His position in the social world of Paris is described by Balzac under the guise of "Baron Nucingen." In the year 1848 the Paris house was reckoned to be worth 600,000,000 francs as against 362,000,000 francs held by all the other Paris bankers. Meanwhile the Vienna branch obtained a similar concession for the Austrian Northern Railway (Nordbahn). Baron Salomon had also acquired from the Austrian government the Idra quicksilver-mine; and in 1832 the Almaden mines in Spain also came under the control of the Rothschilds, who thus obtained a monopoly of that metal. The Austrian firm later owned, in conjunction with the brothers Wilhelm and David von Gutmann, mines and iron-works at Witkowitz, Moravia. In the early stages of its existence the Austrian house did a large money-lending business with the mediatized and impoverished nobility of the Austrian empire, loans to the amount of no less than 24,521,000 gulden being on record.

There is little to be said about the Naples house, established in 1821 and discontinued in 1861 at the fall of the Bourbon dynasty.

Apart from railroads and mines the Rothschilds have rarely been interested in industrial developments, though the London house is still rated as "N. M. Rothschild and Sons, merchants." At one time they took up general insurance, and founded in 1824, with Sir Moses Montefiore, the Alliance Insurance Company as a sort of rival to Lloyd's. Only recently has the firm again turned its attention to mines, under the influence of Lord Rothschild, the interests of the London house in the Rio Tinto copper-mines and the De Beers diamond-mines being considerable. Similarly the firm has large interests in the oil-wells of Baku, Russia, thus becoming the chief competitor of the Standard Oil Company.

With the fall of Louis Philippe (1848) the hegemony of the various Rothschild firms again reverted to London. Baron Lionel, though his attention was diverted considerably from finance to politics by the struggle for the emancipation of the Jews, gained considerable prestige by his repeated election as representative of the city of London; and the London firm was instrumental during his leadership of it in financing no less than eighteen government loans, including the Irish Famine Loan, one of £15,000,000 to the English government in 1856, the £5,000,000 Turkish loan of 1858, several refunding operations for the United States, and national loans to the Russian government. He declined, however, to take up the Russian loan of 1861, owing to his disapproval of the action of the Russian government toward Poland.



A PILLAR of the EXCHANGE

Nathan Mayer Rothschild.
(From an old print.)

After Mayer Amschel's death the Frankfort firm, which for many years, especially between 1850 and 1870, was of great importance, was until about 1855 under the guidance of Baron Amschel Mayer von Rothschild, and upon his death came under the joint management of the brothers Baron Mayer Karl and Baron Wilhelm (universally known in Germany as "Baron Willy"). The former was a man of high culture and great ability, a lover of art and literature, but somewhat of a misanthrope, owing, it is said, partly to the fact that seven daughters were born to him but no son. Baron Mayer Karl became a member of the Prussian Herrenhaus (House of Peers) in 1870, and thereafter paid little attention to business affairs, leaving these to his brother Baron Wilhelm. The latter was a very religious man, of rather narrow views, under whom the importance of the Frankfort firm rapidly declined. It was liquidated after his death in 1901.

The Rothschilds were not, however, without competitors in the issue of public loans. Other Jewish families—the Lazards, Sterns, Speyers, and Seligmans—adopted the Rothschild plan of establishing local branches in European capitals, each headed by a brother, and after 1848 the governments of Europe adopted the plan of throwing loans open to the public instead of resorting to one or two banking firms like the Rothschilds. In this way the Sterns secured the chief Portuguese loans, while a number of smaller Jewish firms began to combine their resources and form limited liability companies like the Crédit Mobilier, the Dresdener Bank, and the Deutsche Reichsbank of Berlin.

The relative importance of the Rothschilds diminished considerably in the second half of the nineteenth century. Having been ill advised as to their American policy, they invested largely in Confederate bonds and lost heavily. This appears to have disgusted them with American finance, which they left severely alone for many years, thus losing the opportunities afforded by the great financial expansion of the United States in the last decades of the nineteenth century. With the Franco-Prussian war (1870–71) the Rothschilds again came into financial prominence. They arranged with Bleichröder for the payment to Germany of the indemnity of five milliard francs; in 1875 the London house advanced the British government £4,080,000 for Suez Canal shares, upon which the Rothschilds were reported to have made

£100,000; and in 1884 they loaned the Egyptian government £1,000,000.

The Union Générale.

Meanwhile the Nationalist and Reactionary parties in France desired to counterbalance the "Semitic" influence of the Rothschilds by establishing a banking concern which should be essentially Catholic. Accordingly in 1876 the Union Générale was founded with a capital of 4,000,000 francs, increased to 25,000,000 francs in 1878 under the direction of a certain Bontoux. After various vicissitudes, graphically described by Zola in his novel "L'Argent," the Union failed, and brought many of the Catholic nobility of France to ruin, leaving the Rothschilds still more absolutely the undisputed leaders of French finance, but leaving also a legacy of hatred which had much influence on the growth of the anti-Semitic movement in France. Something analogous occurred in England when the century-long competition of the Barings and the Rothschilds culminated in the failure of the former in 1893; but in this case the Rothschilds came to the rescue of their rivals and prevented a universal financial catastrophe. It is a somewhat curious sequel to the attempt to set up a Catholic competitor to the Rothschilds that at the present time the latter are the guardians of the papal treasure.

Of recent years the Rothschilds have consistently refused to have anything to do with loans to Russia, owing to the anti-Jewish legislation of that empire, though on one occasion the members of the Paris house joined in a loan to demonstrate their patriotism as Frenchmen.

The remarkable success of the Rothschilds, which has now lasted exactly a century, has been due in the first place to the financial genius of Nathan Mayer Rothschild, and secondly in large measure to the settlement of the five brothers in the European capitals, which enabled them to issue loans simultaneously. In the early and later stages the London house was the base of operations; but during the reign of Louis Philippe the Paris house appears to have directed undertakings. The business principles on which the Rothschilds acted were the unified policy of the five, later four, and finally three firms; their determination never to deal with unsuccessful persons; their use of the surest information and the most reliable instruments; and prompt action after obtaining such information. They did not aim at excessive profits, nor did they put "all their eggs in one basket"; they drew back in time if an enterprise was not promising, selling quickly, if necessary even at a loss, on the principle that the first loss is the best; and they were almost the first to make use of journalistic methods to arouse the interest of the public in their loans. They have, however, consistently kept the secret of their own operations. The original five brothers were shrewd business men, but all were equally uncultured (Karl Mayer writes of a "kondract" he had made). Their descendants, however, have been among the great patrons of art throughout western Europe, the collections of Barons Amschel, James, and Ferdinand being especially noteworthy. They have created quite a school of Jewish dealers in art, whose chief customers they have been (Duveen, C. Davis, Spitzer, and Wertheimer).

As Philanthropists and Art Patrons.

The services of the Rothschilds in the cause of philanthropy have been equally marked. Special hospitals have been founded by them for all creeds at Jerusalem, Vienna, Paris, and London; the Jews' Free School of the last-named city is supported almost entirely by Lord Rothschild at an estimated annual cost of £15,000. In London and Paris they have established workmen's dwellings on a large scale and on an economic and commercial basis; and their private charities are very large. The founder of the house, Mayer Amschel Rothschild, held the curious theory that if a beggar thanked him, the charitable transaction was concluded, whereas if he received no thanks, Heaven owed him some recompense for his charity. Consequently, it was his custom to thrust a coin into the hand of a beggar, and to hurry away before the latter could express his gratitude.

In addition, some of the members of the family have evinced an interest in Jewish literature. Baron James in Paris was the founder of the Société des Etudes Juives; Baron Wilhelm of Frankfort was a zealous collector of Hebrew incunabula, which are now in the Frankfort town library; and almost all great Jewish literary undertakings have been subventioned by one or other branch of the firm.

Hitherto the pedigree of the Rothschild family has been traced only as far as Amschel, the father of Mayer Amschel Rothschild; but, owing to the recent publication of the tombstone inscriptions of Frankfort-on-the-Main by Horovitz ("Inschriften von Frankfort"), it is now possible to trace it back with a high degree of probability four generations further, as far as Moses Rothschild, who was born about the middle of the sixteenth century. There is little doubt that all the Rothschilds form one family, as is shown by the similarity of first names; this would account for the somewhat unusual name of Kalman (brother of Mayer Amschel), and would give some hint as to the use of "Jacob" as the name of Mayer Amschel's youngest son, since the younger son of the uncle after whom he was named was also called Jacob. It is also seen that the rabbinic part of the family left Frankfort early in the seventeenth century, and is not related in a direct line with the more worldly portion.

The number of marriages between cousins in the later history of the family is remarkable, especially in the second and third generations after the five brothers had gone to five different capitals. Altogether of fifty-eight marriages contracted by the descendants of Mayer Amschel Rothschild to date (1905), no less than twenty-nine, or exactly one-half, have been between first cousins. It is noteworthy that these marriages as a rule have been fertile, which is what is anticipated by biological science; but several of the unions have resulted in daughters only, which is also anthropologically significant.

In the first names adopted there has been a restriction in choice in the early generations, causing a considerable amount of confusion between the many Charlottes, Louises, Karls, and Nathans. As a rule, the son has adopted the father's name as a second name, which has enabled a distinction to be made;

and the same plan has with less suitability been followed in the case of the daughters. The family tree is found on pages 491–493.

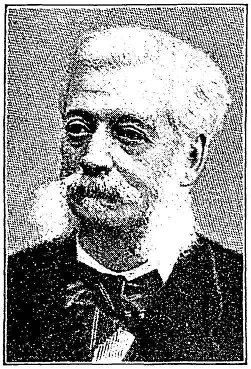
J.

The following notices of members of the family are arranged in alphabetical order:

Albert (Anselm) Salomon von Rothschild, Freiherr: Head of the Austrian branch of S. M. v. Rothschild und Söhne; born at Vienna Oct. 29, 1844; youngest son of Anselm von Rothschild. He was educated at the gymnasium of Vienna and the University of Bonn; entered the banking-house of Behrend at Hamburg; and then traveled extensively. He succeeded his father as head of the Vienna branch in 1874. In 1876 he married Karoline Bettina, daughter of Baron Alphonse Rothschild (b. at Paris Feb. 15, 1858; d. at Vienna March 24, 1892), in memory of whom he erected the Bettina Frauenspital. He takes especial interest in the orphan asylum and foundations for Jewish artists and musicians in Vienna.

s. F. T. H.

Alphonse, Baron de Rothschild: Second son of Baron James Mayer de Rothschild; born at Paris Feb. 1, 1827. The son of Austrian parents, he became naturalized in France in 1848. He received a careful education and was employed at an early age by his father in the management of the Chemin de Fer du Nord. In 1854 he became head of the French house, and in the same year was made one of the governors of the Bank of France. In 1869 he became president of the board of directors of the Chemin de Fer du Nord, also president of the Central Consistory of the Israelites of France, to which he had belonged as early as 1851 as delegate of the Jewish community of Bordeaux.



Baron Alphonse de Rothschild.

When the Franco-Prussian war ended disastrously for the French republic, Baron Alphonse became the head of the syndicate of French bankers which guaranteed the payment of the indemnity of five milliard francs by France to Germany. It was especially through his ability that France was enabled to pay the indemnity within a very short time.

He further directed the important work of establishing a fund, chiefly in German bonds, to avoid the expense of converting bills into German currency when remitting them to the German government, thus saving a great amount to the French government.

As to Baron Alphonse's connection with the Suez Canal transactions, opinions differ. He and Charles de Lesseps were commissioned to effect a harmonization of the French and the English interests. It is a fact that the management of the canal changed hands in 1883, and that England is now actually in possession.

At present the baron is especially interested in important electric and petroleum undertakings. He has presented over 600 pictures to the Museum of Paris; and in 1895 he succeeded Emile Perrin as honorary member of the Paris Academy of Fine Arts. The Château of Ferrières-en-Brie (department of Seine-et-Marne) is his property. The German staff was installed there at the commencement of the siege of Paris. There also Jules Favre, on behalf of the French government, conducted the unsuccessful peace negotiations with Prince Bismarck.

The charitable and benevolent institutions of all creeds have been enriched by gifts from the firm of Rothschild Brothers. Each year as winter approaches, Barons Alphonse, Gustave, and Edmond donate 100,000 francs for distribution among the poor of the twenty arrondissements of Paris. They are the founders of sixty annual stipends for the benefit of young persons wishing to enter the higher commercial schools. On June 27, 1904, the three Barons Rothschild notified Troullot, minister of commerce, of their intention to donate the sum of 10,000,000 francs, to be employed in the erection of inexpensive dwelling-houses, and for the general furtherance of plans for ameliorating the condition of the working classes.

In 1857 Alphonse married Leonora, daughter of Baron Lionel de Rothschild of London. His only son, **Edouard** (b. Feb. 24, 1868), fought a duel during the excitement caused by the revision of the Dreyfus case.

s. F. T. H.—J. Ka.

Amschel Mayer von Rothschild, Freiherr: Eldest son of Mayer Amschel Rothschild and, after the death of his father, senior member of the family and head of the Frankfort branch; born at Frankfort-on-the-Main June 12, 1773; died there Dec. 6, 1855. The Emperor of Austria knighted him in 1815 and made him a "Freiherr" in 1822. In 1820 he was appointed Bavarian consul in Frankfort with the title of court banker.

Amschel Mayer was very Orthodox and actively supported the Conservative party in Judaism. He took great interest in the history of his race, and when in 1840 many cloisters were sequestered in Spain, he directed his agent to secure all documents of interest to the Jews. He was besides a collector of paintings, coins, and metal-work.

Amschel Mayer left no children, but was succeeded in business by two sons of his brother **Karl**, the founder of the Naples branch.

Bibliography: (Anonymous) *Das Haus Rothschild*, i. 173–205, Prague and Leipsic, 1857.

Anselm von Rothschild, Freiherr: Austrian banker; born at Frankfort-on-the-Main Jan. 29, 1803; died at Ober-Döbling, near Vienna, July 27, 1874; only son of Salomon Mayer von Rothschild. While his father and uncles had received their education and training in the paternal home, he was sent, in 1820, to the University of Berlin. Two years later he entered the Paris house of the Rothschilds, spending some time there as well as at Berlin, Copenhagen, Brussels, and The Hague. From 1848 he assisted his uncle Amschel Mayer in Frankfort, and after the death of his father, removed to Vienna (1855), where he continued to conduct the Austrian house of the Rothschilds till his death.

In 1861 Anselm was appointed a life member of the Austrian House of Lords. In 1869 he founded a Jewish hospital in Vienna. He was an enthusiastic collector of paintings and other objects of art.

In 1826 Anselm married his niece Charlotte Nathan Rothschild, daughter of Nathan Mayer Rothschild of London. He left three sons, **Nathan**, Ferdinand, and Albert Salomon. Nathan (b. Oct. 26, 1836) is a sportsman, traveling much, especially on the Mediterranean; he has not taken any active interest in the Rothschild business. He has published "Skizzen aus dem Süden." Anselm had also three daughters: **Julie**, married Adolf Karl von Rothschild; **Mathilde**, married Wilhelm Karl von Rothschild (both of the Naples branch); and **Luise**, who became the wife of Baron Franchetti.

Anthony de Rothschild, Sir: Born at New Court, London, 1810; died at Woolston, near Southampton, Jan. 3, 1876; second son of Nathan Mayer Rothschild. Entering his father's banking business, he became a prominent member of the firm. He lived the life of a country gentleman, which did not, however, prevent him becoming the main representative of the family in the London Jewish community. As president of the Jews' Free School he was unwearied in his efforts to promote the good management of that institution. He assisted at the establishment of the United Synagogue, and became its president. For a short time he was president also of the Jews' Hospital. In 1846 he was created a baronet of the United Kingdom, with special remainder, failing his own male issue, to the sons of his elder brother, Baron Lionel de Rothschild. He was also a baron of the Austrian empire, and was made Austrian consul-general in London in 1858.

Sir Anthony was prominently connected with numerous mercantile bodies, notably the Alliance Life and Fire Assurance Company, of which he was a director. In 1840 Sir Anthony married Louisa, daughter of Abraham Montefiore; he had two daughters, who survived him.

Charlotte de Rothschild, Baroness: Born at Naples 1819; died at Gunnesbury Park, Acton, near London, March 13, 1884; daughter of Baron Karl von Rothschild. In 1836 she married her cousin Baron Lionel de Rothschild. She took the deepest interest in politics and was of the greatest service to her husband in his parliamentary career.

In 1859 the baroness established an Invalids' Kitchen at Bishopsgate, London, and in Nov., 1859, founded the Home for Aged Incurables, both of which institutions as well as several other charities were entirely supported by her. In 1867 she became president of the Ladies' Benevolent Loan and Visiting Society. She founded also the Emigration Society. Her labors in connection with the Jews' Free School were far-reaching; she even composed as readings for the school "Addresses to Young Children." In memory of her daughter, she established "Evelina Prizes" at all the Jewish elementary schools and at Jews' College.

Constance de Rothschild (Lady Battersea): Authoress and communal worker; eldest daughter of Sir Anthony de Rothschild; born in London 1847. In 1877 she married Cyril Flower, who was created first Baron Battersea in 1892. In conjunction with her sister **Annie** (the Honorable Mrs. Eliot Yorke) she published, in 1870, "The History and Literature of the Israelites According to the Old Testament and the Apocrypha," an adaptation, for the young, of the Biblical narrative. The work was republished in 1872, in an abridged form, for the use of schools. Lady Battersea has since contributed occasionally to magazines, dealing descriptively with the ceremonial and ritual she witnessed in her father's house. She has taken a great interest in the Jewish Association for the Protection of Girls and Women, of which she is vice-president and secretary; and she has been intimately associated with other departments of Jewish social work in London.

Bibliography: *Jewish Year Book*, 5665 (1904–5).

J. J. de H.

Edmond de Rothschild, Baron: Born at Paris Aug. 19, 1845. He is associated with his brothers Alphonse and Gustave in the French house of the Rothschilds. He is known in the Jewish world as the founder of the Agricultural Colonies in Palestine, at present under the administration of the Jewish Colonization Association. In 1877 he married Adelaïde, daughter of Wilhelm Karl Rothschild of Frankfort-on-the-Main, by whom he has three children: **James Edmond Armand** (b. Dec. 18, 1878; M.A., Cambridge), **Maurice** (b. May 19, 1881), and **Myriam**.

Baron Edmond is a great lover of the arts and a collector of paintings. His wife is president of the patronage committee of the Comité de Bienfaisance, and foundress and vice-president of the Home and the same plan has with less suitability been followed in the case of the daughters. The family tree is found on pages 491–493.

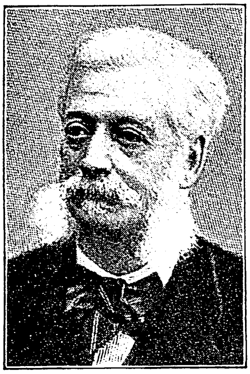
The following notices of members of the family are arranged in alphabetical order:

Albert (Anselm) Salomon von Rothschild, Freiherr: Head of the Austrian branch of S. M. v. Rothschild und Söhne; born at Vienna Oct. 29, 1844; youngest son of Anselm von Rothschild. He was educated at the gymnasium of Vienna and the University of Bonn; entered the banking-house of Behrend at Hamburg; and then traveled extensively. He succeeded his father as head of the Vienna branch in 1874. In 1876 he married Karoline Bettina, daughter of Baron Alphonse Rothschild (b. at Paris Feb. 15, 1858; d. at Vienna March 24, 1892), in memory of whom he erected the Bettina Frauenspital. He takes especial interest in the orphan asylum and foundations for Jewish artists and musicians in Vienna.

s. F. T. H.

Alphonse, Baron de Rothschild: Second son of Baron James Mayer de Rothschild; born at Paris Feb. 1, 1827. The son of Austrian parents, he became naturalized in France in 1848. He received a careful education and was employed at an early age by his father in the management of the Chemin de Fer du Nord. In 1854 he became head of the French house, and in the same year was made one of the governors of the Bank of France. In 1869 he became president of the board of directors of the Chemin de Fer du Nord, also president of the Central Consistory of the Israelites of France, to which he had belonged as early as 1851 as delegate of the Jewish community of Bordeaux.



Baron Alphonse de Rothschild.

When the Franco-Prussian war ended disastrously for the French republic, Baron Alphonse became the head of the syndicate of French bankers which guaranteed the payment of the indemnity of five milliard francs by France to Germany. It was especially through his ability that France was enabled to pay the indemnity within a very short time.

He further directed the important work of establishing a fund, chiefly in German bonds, to avoid the expense of converting bills into German currency when remitting them to the German government, thus saving a great amount to the French government.

As to Baron Alphonse's connection with the Suez Canal transactions, opinions differ. He and Charles de Lesseps were commissioned to effect a harmonization of the French and the English interests. It is a fact that the management of the canal changed hands in 1883, and that England is now actually in possession.

At present the baron is especially interested in important electric and petroleum undertakings. He has presented over 600 pictures to the Museum of Paris; and in 1895 he succeeded Emile Perrin as honorary member of the Paris Academy of Fine Arts. The Château of Ferrières-en-Brie (department of Seine-et-Marne) is his property. The German staff was installed there at the commencement of the siege of Paris. There also Jules Favre, on behalf of the French government, conducted the unsuccessful peace negotiations with Prince Bismarck.

The charitable and benevolent institutions of all creeds have been enriched by gifts from the firm of Rothschild Brothers. Each year as winter approaches, Barons Alphonse, Gustave, and Edmond donate 100,000 francs for distribution among the poor of the twenty arrondissements of Paris. They are the founders of sixty annual stipends for the benefit of young persons wishing to enter the higher commercial schools. On June 27, 1904, the three Barons Rothschild notified Troullot, minister of commerce, of their intention to donate the sum of 10,000,000 francs, to be employed in the erection of inexpensive dwelling-houses, and for the general furtherance of plans for ameliorating the condition of the working classes.

In 1857 Alphonse married Leonora, daughter of Baron Lionel de Rothschild of London. His only son, **Edouard** (b. Feb. 24, 1868), fought a duel during the excitement caused by the revision of the Dreyfus case.

Amschel Mayer von Rothschild, Freiherr: Eldest son of Mayer Amschel Rothschild and, after the death of his father, senior member of the family and head of the Frankfort branch; born at Frankfort-on-the-Main June 12, 1773; died there Dec. 6, 1855. The Emperor of Austria knighted him in 1815 and made him a "Freiherr" in 1822. In 1820 he was appointed Bavarian consul in Frankfort with the title of court banker.

Amschel Mayer was very Orthodox and actively supported the Conservative party in Judaism. He took great interest in the history of his race, and when in 1840 many cloisters were sequestered in Spain, he directed his agent to secure all documents of interest to the Jews. He was besides a collector of paintings, coins, and metal-work.

Amschel Mayer left no children, but was succeeded in business by two sons of his brother **Karl,** the founder of the Naples branch.

Edmond de Rothschild, Baron: Born at Paris Aug. 19, 1845. He is associated with his brothers Alphonse and Gustave in the French house of the Rothschilds. He is known in the Jewish world as the founder of the Agricultural Colonies in Palestine, at present under the administration of the Jewish Colonization Association. In 1877 he married Adeláide, daughter of Wilhelm Karl Rothschild of Frankfort-on-the-Main, by whom he has three children: **James Edmond Armand** (b. Dec. 18, 1878; M.A., Cambridge), **Maurice** (b. May 19, 1881), and **Myriam**.

Baron Edmond is a great lover of the arts and a collector of paintings. His wife is president of the patronage committee of the Comité de Bienfaisance, and foundress and vice-president of the Home

Israélite Français, which assists young Jewish girls to find situations in the trades, the industrial arts, as teachers, etc.

s. J. Ka.

Ferdinand de Rothschild, Baron: English politician and art connoisseur; born in Paris 1839; died at Wallesdon Manor, England, Dec. 17, 1898; second son of Freiherr Anselm von Rothschild. He was educated in Vienna, and settled in England in 1860. In 1865 he married his cousin Evelina de Rothschild, sister of Lord Rothschild. She died in the following year, and in her memory he built and largely supported the Evelina Hospital for Sick Children.

Baron Ferdinand was fond of country life and had the ordinary tastes of a country gentleman. He hunted, and bred fat stock; he made Wallesdon a model village; and he was fond of yachting. In 1883 he held the office of high sheriff of Buckinghamshire, and was also justice of the peace and deputy lieutenant for the county. In 1885, when Lord Rothschild was created a peer, Baron Ferdinand succeeded as a Liberal to his seat for Aylesbury; but in the following November the borough was disfranchised, and he was returned for the newly created division of Aylesbury, which constituency he continued to represent as a Liberal Unionist until his death. At Wallesdon the baron had the honor of entertaining the Queen of England on May 14, 1890; and the emperor Frederick of Germany and the Shah of Persia were likewise reckoned among his guests. The baron was a freemason, and in 1892 was one of the founders of the Ferdinand de Rothschild Lodge, of which he was installed master.

As a collector of works of art, Baron Ferdinand held one of the first places in his generation. The Manor itself was one of the most celebrated homes in England, its staircases, copied from those of the Château Chenonceaux, being specially noteworthy.

Baron Ferdinand rendered valuable services in various capacities to the Jewish community. From 1868 to 1875 he was treasurer of the Board of Guardians; in 1868 he laid the foundation-stone of the North London Synagogue; in 1870 he became warden of the Central Synagogue; and at the Stepney Jewish Schools he founded a "Baron Ferdinand de Rothschild Technical Scholarship." He was a man of wide culture and strong literary sympathies. The result of some of his studies he gave to the public in the form of lectures to working men, in articles in the "Nineteenth Century," and in a work (London, 1896) entitled "Personal Characters from French History." At his death he bequeathed to the British Museum some of the rare art treasures of Wallesdon Manor, a gift amounting in value to about £100,000.

J. G. L.

Gustave de Rothschild, Baron: Born Feb. 17, 1829; consul-general for Austria-Hungary, director of the Chemin de Fer du Nord and the Paris-Lyons and Mediterranean Railway; member of the board of directors of the Rothschild Hospital and Hospice; president of the Jewish Consistory of Paris (of which he has been a member since 1856), and also of the committee of consistorial schools; chevalier of the Legion of Honor.

In 1866 he founded a Hebrew primary school known as "The Gustave de Rothschild School." On the anniversary of the death of his daughter, Baroness Emanuel Leonina, in 1898, he established twenty annuities of 600 francs each, to be distributed among aged Jews of either sex.

In 1859 Baron Gustave married Cecilie Anspach. Issue, five children: **Robert** (b. Jan. 19, 1880), civil and mining engineer; **Lucie,** wife of Baron Lambert, president of the Central Hebrew Consistory of Belgium, and representative of the firm of Rothschild Brothers at Brussels; **Aline,** wife of Sir Edward Sassoon, M.P., of London; and **Juliette,** wife of Baron Emanuel Leonina, civil engineer.

The Baroness Gustave de Rothschild is president of the ladies' committee of inspection of the Hebrew schools of Paris. In 1877 she established a clothing club, for the distribution of garments, medicines, etc., among the Jewish children attending the consistorial and parochial schools.

Hannah Rothschild. See Rosebery, Hannah, Countess of.

Henri de Rothschild, Baron: French physician; born at Paris July 26, 1872; son of James Edward Rothschild of London. After a careful education he traveled extensively and then, returning to Paris, studied medicine, graduating as M.D. in 1898. Establishing himself as a physician in his native city, he founded a dispensary for the treatment of diseases of children.

Rothschild is the author of several books on his travels ("Notes Scandinaves," "Notes Africaines," "Souvenirs d'Espagne," etc.), and of the following medical works: "Quelques Observations sur l'Alimentation du Nouveau-Né et de l'Emploi Raisonné du Lait Stérilisé," Paris, 1897; "Notes sur l'Hygiène et la Protection de l'Enfance dans les Principales Capitales de l'Europe," *ib.* 1897; "L'Allaitement Mixte et l'Allaitement Artificiel," *ib.* 1898. He has also collaborated on several professional journals, besides editing unpublished letters of Jean Jacques Rousseau, with a preface and notes: "Lettres Inédites de Jean-Jacques Rousseau."

Bibliography: Curinier, *Dict. Nat.* i. 178.

James Edouard de Rothschild, Baron: Born at Paris Oct. 28, 1844; died there Oct. 25, 1881. He was one of the founders and the first president of the Société des Etudes Juives and the founder of the Société des Anciens Textes Français. He is the author of "Introduction au Mystère du Vieil Testament."

Baron James' widow is directress of the Hospital of Berck-sur-Mer; and his daughter **Jane,** wife of Baron Leonino, is the foundress of the Orphanage of Boulogne-sur-Seine.

Bibliography: Zadoc Kahn, *Souvenirs et Regrets*, 1898.

James Mayer de Rothschild, Baron: Born at Frankfort-on-the-Main May 15, 1792; died at Paris Nov. 15, 1868. He founded in 1812 the Paris banking-house known under the firm name of Rothschild Frères. In 1822 he was appointed consul-general to Austria-Hungary. He negotiated the French loans of 1830 and 1834, and in return for his services was created by Louis Philippe grand officer of the Legion of Honor, of which he had been a chevalier since 1823. He took a very important part in the building of the Saint-Germain Railroad, one of the most important roads in the north of France.

The baron was ever active in the interests of his coreligionists. By his fearless intervention he frequently averted cruel persecutions of the Jews, and caused the repeal of unjust and burdensome laws directed against them. On April 7, 1852, he made over to the Central Consistory of Paris a hospital in the Rue Picpus, Paris, built on a site having an area of about 16,000 square meters, on condition that the establishment should be reserved in perpetuity as a refuge for sick and aged Jews. He was besides a noted patron of Hebrew letters.

Baron James Mayer de Rothschild.

The baron's wife, **Betty** (d. in Paris Sept., 1886), was foundress of the Hospital for Incurables, which she endowed with an annual revenue of 800 francs for each of its seventy beds. The Salomon and Caroline de Rothschild Orphanage, in Paris (opened June 3, 1874), wholly devoted to the care of Jewish orphans of either sex, is another testimony to her charity. She, moreover, left 600,000 francs to the public charities, for the assistance of poor laborers in paying their rents.

Karl Mayer von Rothschild, Freiherr: Born at Frankfort-on-the-Main April 24, 1788; died at Naples March 10, 1855; fourth son of Mayer Amschel Rothschild and head of the Italian branch. From 1821 he lived in Naples and Frankfort and became banker to the kingdoms of Sicily, Sardinia, and Naples, of the Papal States, and of the duchies of Parma and Tuscany. He was made a "Freiherr" by the crown of Austria in 1822 and consul-general of Sicily at Frankfort in 1829. His wife, **Adelheid Herz,** was a society leader and a well-known philanthropist.

Karl Mayer left four sons—Mayer Karl, **Adolf Karl,** Wilhelm Karl, and **Alexander**—and one daughter, all of whom married members of the Rothschild family. Adolf Karl (b. at Frankfort May 21, 1823) succeeded his father.

Leopold de Rothschild: Anglo-Jewish communal worker and sportsman; born Nov. 22, 1845; third son of Baron Lionel de Rothschild, and brother of Lord Rothschild. He was educated at Trinity College, Cambridge, England, and is a deputy lieutenant, a justice of the peace, and commander of the Royal Victorian Order (1905).

Rothschild is an active worker in the Anglo-Jewish community, being vice-president of the Anglo-Jewish Association, a member of the council of the United Synagogue and of the Jewish Board of Deputies, chairman of the Jewish Emigration Society, one of the treasurers of the London Jewish Board of Guardians, and a member of the board of management of the Central Synagogue, London.

Rothschild is a sportsman, and an intimate friend of the King of England. His horse St. Amant in 1904 won the English Derby.

Bibliography: *Jewish Year Book*, London, 1904; *Who's Who*, London, 1904.

J. I. L. B.

Lionel Nathan de Rothschild, Baron: Born at London Nov. 22, 1806; died there June 3, 1879; eldest son of Baron Nathan Mayer de Rothschild. After passing some time as a student at Göttingen he was initiated into the business transactions of the firm under his father's direction. In 1836 he succeeded the latter in the direction of the English house of Rothschild, the management of most of the operations and negotiations of the firm being entrusted to him. He had three brothers, but they deferred implicitly to him. His was the guiding mind; and while he lived the center of the finance of the world may be said to have been his office in New Court. In 1847 he negotiated the Irish Famine Loan; in 1854 he raised £16,000,000 for the English government to meet the expenses of the Crimean war; and for twenty years he acted as the agent of the Russian government. He had a large share in the successful funding of the United States national debt; provided the funds for the immediate purchase of the Suez Canal shares; and managed the business of the group of bankers who guaranteed to the German empire the permanence of the exchanges, thus facilitating the payment of the French indemnity at the close of the Franco-Prussian war. He was a director of the Alliance Insurance Company, and of the Lombardo Venetian Railway, in which he held a large interest; and the Chemin de Fer du Nord of France owed its construction chiefly to his foresight and activity. He actively cooperated with the Vienna branch of his firm in directing the finances of the Austrian empire; and the Egyptian loan of £8,500,000 was contracted by his house.

Financial Career.

Baron Lionel Nathan de Rothschild.

As a Communal Worker.

Baron Lionel was the leader of the Jewish community in England for upward of thirty years. He was a member of the Board of Deputies, of which he had been elected president in April, 1855, but declined to serve; he was for a long period president of the Great Synagogue; he laid the foundation-stone of the Central Synagogue (1869), and was for some time on the council of the United Synagogue. In 1843 he cooperated with Sir Moses Montefiore in the latter's efforts to ameliorate the condition of the Russian and Polish Jews; and an appeal from him on behalf of the Rumanian Jews was read at the Berlin Congress of 1878.

Baron Lionel's political career was chiefly memorable for the conspicuous part he took in the struggle for Jewish emancipation. At the general election in July, 1847, he was elected member of Parliament in the Liberal interest for the city of London, with Lord John Russell and two other members. Parliament that year met early, and Lord John Russell, then prime minister, brought in a bill, which was passed by a large majority in the House of Commons, affirming the eligibility of Jews to all functions and offices to which Roman Catholics were admitted by law. The bill was repeatedly rejected in the House of Lords. Gladstone and Disraeli were among those who voted with the Whigs, the latter appealing to the House to discard the superstitions of the Dark Ages, and to perform a great act of national justice.

Becomes First Jewish Member of Parliament.

In the meantime Baron Lionel was elected to Parliament again and again. In 1849 he had been a member for two sessions without having taken the oath, when he accepted the Chiltern Hundreds and a new writ was issued for the city of London. He was again returned, and continued to be a member without taking the oath "on the true faith of a Christian"; but being again returned in succeeding parliaments, he accepted the Chiltern Hundreds a second time, in 1857. On July 23 a writ was again issued for the city of London, and he was returned for the fifth time. At length, in 1858, the Jews' Disabilities Bill passed, and its principle was extended by a further act, passed two years later. Baron Lionel was the first Jew who took the amended form of oath (July 26, 1858). In commemoration of the event several scholarships were founded at schools and colleges by subscription and otherwise. Baron Lionel continued to sit for the city of London, with the exception of a short interval, till 1874, when he shared in the general Liberal defeat.

Baron Lionel was the friend and counselor of the prince consort, and held intimate relations with Disraeli, the prime minister, whose *Sidonia* in "Coningsby" is an idealized portrait of him.

In his philanthropic endeavors the baron was greatly assisted by Baroness de Rothschild, who was his almoner, especially in the organization of the Jews' Free School, which was raised by their joint efforts from squalor to a condition of comparative refinement. It was said of the baron that more than a tithe of his great income was applied in charitable works.

Baron Lionel married in 1836 Charlotte, daughter of Baron Karl von Rothschild of Naples, who survived him. He was succeeded by NATHAN MEYER ROTHSCHILD, M.P., his eldest son, and left two other sons, **Alfred de Rothschild** and **Leopold de Rothschild**, and a daughter, **Leonora** (m. 1857 Baron Alphonse de Rothschild of Paris). The death in 1866 of his daughter **Evelina** (m. Baron Ferdinand de Rothschild) was a blow from which Baron Lionel never entirely recovered.

Lionel Walter Rothschild: Naturalist, communal worker, and politician; born in London Feb. 8, 1868; eldest son of Lord Rothschild. He was educated at Bonn and later at Magdalen College, Cambridge. In 1899 he was returned to Parliament for the Aylesbury division of Buckinghamshire, the seat previously held by his uncle, Baron Ferdinand de Rothschild. For this constituency he was again returned in the Conservative interest in Oct., 1900. He is greatly interested in natural history, and has built in Tring Park a museum containing many rare specimens, to replenish which he has sent expeditions to the remotest corners of the earth.

Rothschild is member of the council of the United Synagogue, of the Board of Deputies, of the Jewish Board of Guardians, and of the committee of the Jews' Free School, and treasurer of the Jewish Industrial School. He has published "Avifauna of Laysan," and is editor of "Novitates Zoologicæ," issued at the Zoological Museum, Tring.

Mayer Amschel Rothschild. See p. 490.

Mayer Karl von Rothschild, Freiherr: German banker; born at Frankfort-on-the-Main Aug. 5, 1820; died there Oct. 16, 1886; eldest son of Karl Mayer von Rothschild of Naples. He lived with his parents until 1837. During the following two years he studied at the University of Göttingen, and in 1839 at that of Berlin. In 1840 he returned to Naples, and joined in 1842 the Frankfort house, of which he became the head in 1855, when his cousin Anselm succeeded his father in Vienna. Until Mayer Karl's death he presided over the Frankfort establishment. In 1867 he was elected a member of the North German Reichstag, which position he held until 1870, when he was appointed a life member of the Prussian House of Lords. He was philanthropic and a collector of works of art.

In 1842 Mayer Karl married Louise, daughter of Nathan Mayer von Rothschild of London, and left as issue five daughters.

S. F. T. H.

Mayer Nathan de Rothschild, Baron: English financier and sportsman; born in London June 29, 1818; died there Feb. 6, 1874; fourth son of Nathan Mayer Rothschild. He was educated at Trinity College, Cambridge, and became a member of the firm of N. M. Rothschild & Sons, in which house he at one time took an active interest. He held a seat in Parliament, being elected member for Hythe on several successive occasions, and was a steady adherent of the Liberal party.

In 1857 Rothschild acquired land in Buckinghamshire and commenced building his mansion of Mentmore, which was soon celebrated alike for its hospitality and works of art. In the neighboring hamlet of Crafton he set up his stud-farm, where he bred many famous horses. He was a popular member of the Jockey Club. He thrice won the One Thousand Guineas stakes and twice the Goodwood Cup. In 1871 he won the Derby, the One Thousand Guineas, the Oaks, the St. Leger, and the Cesarewitch; and that year was called "the Baron's year."

Rothschild married in 1850 his first cousin Juliana, eldest daughter of Isaac Cohen, and left as issue one daughter, who married Lord Rosebery.

J. G. L.

Nathan Mayer Rothschild. See p. 490.

Nathan (Nathaniel) Meyer Rothschild, Lord: Son of Baron Lionel Nathan de Rothschild; the present (1905) head of the English house of Rothschild; born in London Nov. 8, 1840. He was educated at Trinity College, Cambridge, where as a student he was one of the associates of the present King of England, with whom he has since remained on terms of intimacy. Politically a Liberal (now a Liberal Unionist), he sat in Parliament from 1865 to 1885 as the member for Aylesbury. He had inherited his English baronetcy from his uncle in 1876 and the Austrian barony from his father in 1879; in 1885 he was raised to the peerage, and, as Baron Rothschild, was the first Jew to take his seat in the House of Lords, an event which was regarded as completing the emancipation of the English Jews. Lord Rothschild has been continuously reappointed lord-lieutenant of the county of Buckingham. In 1902 he was made a privy councilor, and in the same year the knight grand cross of the Royal Victorian Order was conferred upon him.

Nathan, Lord Rothschild.

In 1889 he became a member of a parliamentary commission appointed to report on the congestion in the population of London. He urged the London Jewish community to unite on what was known as the "East End Scheme," a plan for improving the spiritual and social life of Jewish East London. Though Lord Rothschild offered £20,000 toward the expenses, the plan was vigorously opposed by Sir Samuel Montagu and others, and nothing came of it except the annual free services for the Jewish masses held on New-Year's Day and the Day of Atonement, which Lord Rothschild regularly attends.

Lord Rothschild is a governor of the Bank of England and a presiding officer of many great corporations. In 1902 he was appointed a member of the Royal Commission on Alien Immigration, an office that brought him in touch with the late Theodor Herzl, whose East-African project he indorsed. He offered positive and outspoken resistance to the bills proposed in Parliament for the restriction of alien immigration. He has always been a liberal contributor to funds for the relief of the persecuted in Russia and elsewhere; he is a supporter and an officer of most of the communal charities, and a dispenser of private charity on a large scale, and is especially interested in the Jews' Free School, of which he is president and which owes its position to his benefactions. He holds the communal offices of president of the United Synagogue and warden of the Great Synagogue (the most typically Orthodox English synagogue in London), and is regarded as the lay head of the Jewish community of England. As a social worker his most notable success has been as a founder of the Four Per Cent Industrial Dwellings Co.

J. J. de H.

Salomon Mayer von Rothschild, Freiherr: Austrian banker; born at Frankfort-on-the-Main Sept. 9, 1774; died at Paris July 28, 1855; second son of Mayer Amschel Rothschild, head of the Vienna branch of the Rothschild house. Salomon spent most of his time in his native city until 1816, when he removed to Vienna, becoming interested in all the great financial undertakings of the Austrian empire. He became the financial originator of the Kaiser Ferdinands Nordbahn, which was inaugurated in 1836. Among the other enterprises in which he was interested may be mentioned: the Austrian state loans of 1823, 1829, and 1842; the coal-mines of Witkowitz; and the asphalt lake of Dalmatia.

Salomon Mayer received the honorary freedom of the cities of Vienna and Brünn; he was knighted in 1815 by the crown of Austria; and in 1822 he was created a "Freiherr." He acquired for his family extensive landed properties, among them Oderberg, Hultschin, and Schillersdorf.

Salomon Mayer died while on a visit to Paris; he left two children: Betty, who married her uncle Baron James de Rothschild of Paris, and a son, Anselm, who succeeded him in business.

Bibliography: Letteris, *Lebensbild des Verewigten Freiherrn Salomon v. Rothschild* (in Hebrew, with German title), Vienna, 1855; Reeves, *The Rothschilds*, pp. 272 *et seq.*, London, 1887; Von Scherb, *Gesch. des Hauses Rothschild*, Berlin, 1892.

Wilhelm Karl von Rothschild, Freiherr: German banker; born at Frankfort-on-the-Main May 16, 1828; died there Jan. 25, 1901; son of Karl Mayer von Rothschild of Naples. With his brother Mayer Karl he became joint head of the Frankfort house in 1855, and he was sole head from the time of his brother's decease (1886). He married Mathilde, daughter of Anselm Rothschild of Vienna, and left two daughters.

As neither Wilhelm Karl nor his brother Mayer left a male heir, the Frankfort branch of the house of Rothschild was discontinued (July 1, 1901).

ROTHSCHILD, DAVID: German rabbi and author; born at Hamm, Westphalia, Nov. 16, 1816; died at Aachen Jan. 28, 1892. After completing his studies he became preacher in his native town. In 1850 he was called as rabbi to Aachen, and in 1862 to Alzey, Hesse. Rothschild was a follower of Reform Judaism. He wrote: "Der Eid der Juden: Eine Kritische Beleuchtung vom Jüdisch-Theologischen Standpunkt," Brilon, 1847; "Die Psalmen in Uebersetzungen, Betrachtungen und Gebet," Bonn, 1850; "Gebetbuch nach dem Ritus der Israelitischen Gemeinde zu Aachen," Aachen, 1853; "Der Synagogale Cultus in Historisch-Kritischer Entwicklung, Populär Dargestellt," Alzey, 1870; "Spinoza: Zur Rechtfertigung Seiner Philosophie und Zeit," Leipsic, 1877.

S. M. K.

ROTHSCHILD, MENAHEM MENDEL (BACHARACH, ASHKENAZI): German rabbi; born in Frankfort-on-the-Main about 1650; died in Worms Oct., 1731. He was the grandson of Isaac, head of the Frankfort community and progenitor of the Rothschild family, and the son of Solomon, "Landesrabbiner" of Würzburg and Friedberg, to whose name he adds sometimes the surname Rothschild and sometimes that of Bacharach. Menahem was for several years a preacher in Prague. In 1686 he was chosen "Landesrabbiner" of Bamberg, in succession to Mordecai Lipschitz, and was at the same time made rabbi of Bayreuth and of Baiersdorf. He remained in Bamberg until 1718, when he accepted a similar position in Hesse. After a short stay there, he became rabbi of the old community of Worms, where he remained until his death. Like many rabbis of his time, he appears to have been a man of considerable wealth. He is known to have had two daughters, one of whom died in Bamberg. He was succeeded in that city by Moses Broda (d. 1741), who later became also his successor in Worms.

√ **ROTT (ROSENBERG), MORITZ:** Austrian actor, nephew of the composer Ignaz Moscheles; born at Prague Sept. 17, 1797; died in Berlin 1860. He was the leading actor of his time, and was the favorite of the Prussian public and the king. He was destined by his parents for a commercial life, but forsook it for the stage, making his début in Vienna in 1817 as *Karl Moor* in Schiller's "Die Räuber." His success was instantaneous and was repeated in Kaschau, Eperies, Batfeld, Lemberg, Olmütz, and Linz. In 1821 he became the leading actor at the Theater-an-der-Wien, Vienna, remaining there until 1829, when he went to the Hoftheater, Leipsic, as stage-manager. While connected with the latter theater he starred at Budapest, Brünn, Gratz, Prague, Breslau, Presburg, Lemberg, Vienna (Hoftheater), and Hanover. In 1832 he began a life engagement at the Hoftheater, Berlin. In 1840 he held a special engagement at the Hofburgtheater, Vienna, and, seven years later, in Prague.

Rott's best rôles were: *Faust*, *Brutus*, *Kreon*, *Jason*, *Hamlet*, *Vasa*, *Wallenstein*, *Götz von Berlichingen*, *Franz* and *Karl Moor*, *Shylock*, *Hugo* (in "Schuld"), *Roderich* (Calderon's "Leben ein Traum"), *Jaromir* (Grillparzer's "Ahnfrau"), and *Meinau* ("Menschenhass und Reue").

ROUELLE. See BADGE.

ROUEN (Hebrew, רואן, ריאני, רוטמאגנסי, and more rarely רדום): Ancient capital of Normandy, and now the administrative center of the department of Seine-Inférieure; situated on the right bank of the Seine. The settlement of Jews in the city dates in all probability from the Roman period. The first document, however, concerning the community contains an account in Hebrew of a terrible persecution which the Jews of Rouen and of other localities experienced at the beginning of the eleventh century. Therein it is said that Robert the Pious having concerted with his vassals to destroy all the Jews on their lands who would not accept baptism, many were put to death or killed themselves. Among the martyrs was the learned Rabbi Senior. An influential and highly esteemed man in Rouen, Jacob ben Jekuthiel, went to Rome to invoke for his coreligionists the protection of the pope; and the pontiff sent a high dignitary to put a stop to the persecution (Berliner's "Magazin," iii.; "Oẓar Ṭob," pp. 46-48).

In 1066 numerous Jews of Rouen emigrated to England, having been induced to settle there by William the Conqueror, who, while still in Normandy, had always protected them. His son, William Rufus, showed himself no less favorably inclined toward them. On a complaint of the Jews of Rouen to the effect that many of their coreligionists had been forced to embrace Christianity, William Rufus not only allowed the converted to return to their old faith, but himself actually persuaded some of them to do so.

In 1096 the Rouen community was totally destroyed by the Crusaders. It seems, however, that it was reestablished shortly after, although there is no official document showing the further presence of Jews at Rouen before 1204. In that year a Rouen Jew named Brunius, son of Bonentia, was authorized to live at the Châtelet in Paris. In 1217 Philip Augustus imposed upon the Jews of Normandy a heavy tax, to which the community of Rouen contributed 595 livres. This relatively small sum shows that at that time the Rouen Jews were neither numerous nor rich; while, according to an official document of 1299, the personal taxes of only one Jew of Rouen, a certain Samuel Viole, amounted to 1,200 livres yearly. A certain Calot of Rouen figures in the registers of the Jewish imposts for the years 1296 to 1300 as the financial intermediary between his coreligionists and Philip the Fair. In an official document of 1297 Calot is said to have been chosen umpire in a dispute between Philip and his brother Charles, Count of Valois, concerning the property of some Jews. On the banishment of the Jews from

France, in 1306, Philip presented the Jewish quarter to the municipality, which established there a vegetable market. This quarter, in which Maranos settled in great numbers, still bears the name "Rue des Juifs." After the Revolution Jews began to settle at Rouen; and a community was gradually formed which became in 1876 a rabbinate. The sole incumbent of the office has been Benjamin Cahen.

S. I. Br.

ROUSSILLON (רושליון): Province of ancient France, now forming the department of Pyrénées-Orientales. Jews settled there in the early part of the thirteenth century, and formed congregations at Perpignan, Collioure, Céret, Millas, Ille, Puigcerda, Elne, Thuir, Toreilles, Clayra, Salses, Le Boulou, and Villefranche-de-Confluent. In the last-named city, about 1250, was born Levi ben Abraham ben Ḥayyim, known for his part in the struggle between the partizans of philosophical studies and the adherents of Orthodox Judaism (1303–6). In 1228 King James I. forbade the Jews to hold any public office, or to employ Christian servants in their houses, while they were likewise prohibited from taking as monthly interest more than four deniers per livre of silver, or in a year more than one-sixth of the sum loaned.

In 1270 James of Aragon confirmed the franchise granted by the king, his father, to "all Jews dwelling at Perpignan, Confluent, and Cerdagne, and all others dependent on their collection," or contribution, and in 1323 his son Sancho exempted them from wearing the wheel while traveling. According to the "Cérémonieux," Pedro IV. authorized the Jews of Perpignan to enter France for commercial purposes in 1372; and in 1377 he gave letters of safe-conduct to foreign Jews who asked permission to visit Roussillon and Cerdagne. Don Martin, Duke of Montblanc, who succeeded his brother John I. in 1396, took severe measures against Christians who maltreated Jews, and frequently disavowed the actions of priests and monks who preached against them. In 1398 he commanded the governor of the two counties, under penalty of a fine of 1,000 gold florins, to establish at Perpignan a "carteria," or depot of standard weights and measures, so that every Jew might be enabled to verify the value of his goods and protect himself against fraud. In 1415 Ferdinand I. of Aragon forbade the Jews to receive in pawn any object belonging to the Church, or to practise medicine, surgery, or pharmacy among Christians, who in their turn were prohibited from receiving bread, meat, or any other kind of food from Jews. In case of violation of this law, a Jew was to be flogged in the public streets and squares, while a Christian was to be fined 50 sous for each infraction. In 1417 Alfonso IV. withdrew the Jews from the jurisdiction of their governors, the bailiff of Perpignan and the provost of Roussillon, and placed them under a royal procurator, who was charged with the administration of the province. Nor was the king less energetic in his measures against the Inquisitors, who had brought terror into the communities of the two counties, and who were prohibited by him from interference with the Jews except in certain special cases; while two years later he forbade his officials to enforce the wearing of the wheel, under pain of a fine of 1,000 florins.

In 1492 a number of Jews, driven from Spain by Ferdinand and Isabella, sought refuge in Roussillon and Cerdagne, but in the following year they were expelled with all their coreligionists, and were forbidden ever to return, under penalty of death and confiscation of their property.

G. S. K.

ROWE, LEO S.: American economist; born in McGregor, Iowa, Sept. 17, 1871. He entered the Arts Department of the University of Pennsylvania in 1887, but later transferred to the Department of Finance and Economy (Wharton School), and received the degree of Ph.B. in 1890. Then as a fellow of the Wharton School with the privilege of foreign study, he spent two years in Germany, and took the doctor's degree at the University of Halle in 1892. After this he spent one year in France and one year in Italy and England. In 1894 he was appointed lecturer in public law at the University of Pennsylvania, in 1895 was made instructor, in 1897 assistant professor, and in May, 1904, was advanced to a full professorship of political science. In June, 1900, he was appointed by President McKinley a member of the Commission to Revise and Compile the Laws of Porto Rico. At the expiration of the term of this commission Professor Rowe was appointed chairman of the Insular Code Commission. In 1902 he was elected president of the American Academy of Political and Social Science.

Professor Rowe has published the following volumes: "Report of the United States Commission to Revise the Laws of Porto Rico," with Judge Daly and the Hon. Juan Hermandez-Lopez (2 vols., Washington, 1901); "Report of the Insular Code Commission," with Hon. J. M. Keedy and Hon. Juan Hermandez-Lopez (4 vols., Porto Rico, 1902); "The United States and Porto Rico" (New York, 1904). He has also contributed many essays and papers on economics, political science, and public law to the leading periodicals of the United States.

A. J. H. Ho.

RÓZSAVÖLGYI (ROSENTHAL), MARKUS: Hungarian composer; born at Balassa-Gyarmath 1787; died at Pesth Jan. 23, 1848. Having a native love for music, he went at the age of eleven to Vienna to study, and thence to Presburg and Prague. Attracted by the beauty of the Magyar songs, he composed works based on the national music, and became the most popular violinist in the first decade of the nineteenth century. In 1812 he was appointed conductor of the orchestra at the German Theater in Pesth, and in 1824 was made a regular salaried member of the Philharmonic Society of the county of Veszprim, the name "Rosenthal" being publicly Magyarized to "Rózsavölgyi" on the occasion of his election. He gave several official concerts during the coronation ceremonies at

Presburg in 1825; and in 1835 he appeared at the Court Opera House in Vienna. Two years later, at the opening of the new National Theater of Pesth, the Hungarian Orchestra of that city played a work composed by him for the occasion, and he subsequently became a regular member of that orchestra.

The famous Gipsy musicians Patikárus, Sárközi, Farkas, and others were pupils of Rózsavölgyi. After his death the poet Petöfi sang his praises in a long poem, reproaching the Hungarian people for permitting the last years of the artist to be clouded by financial difficulties.

S. L. V.

RÓZSAY, JOSEPH: Hungarian physician; born at Lackenbach March 15, 1815; died at Budapest May 19, 1885. Educated at Nagy-Kanizsa, Szombathely, Pesth, and Vienna (M.D.), he began in 1843 to practise medicine at Pesth; and five years later the Hungarian government appointed him head physician of a military hospital, making him chief physician of the house of detention and poorhouse of Pesth in the following year. He was decorated with the gold medal for art and science in 1858, and received the cross of the Order of Francis Joseph in 1866, having been elected a member of the Hungarian Academy of Sciences two years previously. He was elevated to the Hungarian nobility with the name "Muraközi."

Rózsay's works, all written in Hungarian, are as follows: "On the Mur-Island from the Point of View of Medical Topography and Natural History" (1840); "On Education, with Special Reference to the Jews of Hungary" (1848); "On the Effect of Sulfuric Ether"; "On Apoplexy and Pneumonia in Old Age"; "On Intestinal Diseases"; "On the Heat of Marienbad" (1860); "On Jewish Physicians in the Middle Ages" (1862); "On Physiological Changes of the Organs of Respiration" (1863); "On Senility" (1865); and "On Etiology of Typhus" (1866). In 1848 he published the first Hungarian Jewish annual, with a calendar.

Rózsay contributed much to the emancipation of the Jews in Hungary, founding for this purpose the society Magyarító Egylet and the society Izraelita Magyar Egylet, becoming president of the latter in 1861. In 1862 he reorganized the Jewish Hospital, Budapest, and placed it in the foremost rank of such institutions.

RUBIN, MARCUS: Danish statistician and author; born in Copenhagen March 5, 1854. He studied at the university of his native city (B.A. 1871), and then took up the study of national economy. In 1874 he passed the requisite examination and was appointed secretary to a committee on commerce; and as a result of his labors a statistical bureau was established in Copenhagen, whose chief he became in 1883. Together with H. Westergaard he compiled the two statistical works "Undersögelser over Landbobefolkningen's Dödelighed" and "Ægteskabsstatistik" (1886–90), the latter of which was translated into German (Berlin, 1893). In 1892 Rubin published "1807–14. Studier over Kjöbenhavn's og Danmark's Historie," which work was supplemented in 1895 by a second volume, entitled "Frederik VI.'s Tid"; for this comprehensive work he was awarded the prize founded by L. N. Hvidt (one of the city fathers of Copenhagen) for the best work on the history of Copenhagen during the first half of the nineteenth century. Rubin did more than any of his predecessors to place the statistical bureau of Denmark on a level with the foremost institutions of the kind in other countries. Since 1902 he has been "Generaltolddirektor."

S. F. C.

RUBIN, SOLOMON: Galician Neo-Hebrew author; born in Dolina, Galicia, April 3, 1823. He was educated for the rabbinate, but, being attracted by HASKALAH and modern learning, he entered upon a business career which lasted about five years. This proving unsuccessful, he went to Lemberg, where he studied bookkeeping at a technical institute, and also acquired a knowledge of German, French, and Italian. After serving two years in the Austrian army he attempted to establish himself in Lemberg as a teacher; but persecution due to his liberal views made his position untenable, and he went to Rumania, at that time a very favorable field for active and enterprising Galician Jews. He secured a good position in a commercial establishment in Galatz, which enabled him to devote his evenings to his favorite studies.

In 1859 Rubin returned to Galicia and became principal of a school for Jewish boys in Bolechow. He went to Russia in 1863, where he was engaged as a private tutor in a wealthy Jewish family of Ostrog, Volhynia, with which he went to Vienna in 1865. In the Austrian capital he became acquainted with Peter Smolenskin, who was then in despair owing to the difficulty of continuing the publication of "Ha-Shaḥar." Rubin promised him to write a complete work for that publication every year; and he kept his promise even after his personal relations with Smolenskin had become somewhat strained. The years 1870 and 1871 were spent by Rubin as a private tutor in Naples, Italy, and from 1873 to 1878 he lived in the same capacity in the household of Jacob Poliakov in Taganrog, Russia. He then returned to Vienna, whence in 1895 he removed to Cracow, where he still (1905) resides.

Rubin is one of the most prolific of Neo-Hebrew writers and one of the most enthusiastic and persistent champions of haskalah. Most of his literary labors are directed against superstitious customs and beliefs: but his method is unique among writers of his class; for he neither ridicules such customs and beliefs, nor does he preach against them, but proceeds in a quasi-scientific manner to adduce proof that similar superstitions prevailed or are still prevailing among those who have attained to only a very low plane of culture. He objectively describes, or rather compiles descriptions of, superstitious practises among savages and barbarians, and sometimes only alludes, as if incidentally (mostly in footnotes), to the equivalent follies among fanatical Jews. He has published about twenty-five works with this object in view, two of which, the "Ma'ase

Ta'atuyim" (Vienna, 1887) and the "Yesod Mistere ha-'Akkum we-Sod Ḥokmat ha-Ḳabbalah" (*ib.* 1888), have appeared in German translations also, the first as "Geschichte des Aberglaubens" (transl. by I. Stern, Leipsic, 1888) and the second as "Heidenthum und Kabbala" (Vienna, 1892). A bibliography of his works and of the more important of his many articles in periodicals will be found in Zeitlin, "Bibl. Post-Mendels." *s.v.*

Rubin is an ardent admirer of the system and personality of Spinoza; and he has written much to prove the close relation between Spinozism and Judaism. Among his earliest literary productions are a compendium of Spinoza's writings, entitled "Moreh Nebukim he-Ḥadash" (Vienna, 1856-57), and "Teshubah Niẓẓaḥat" (Lemberg, 1859), a refutation of S. D. Luzzatto's attacks on Spinoza. Rubin's essay in German, "Spinoza und Maimonides, ein Psychologisch-Philosophisches Antitheton," won for the author the title of doctor of philosophy from the University of Göttingen. Later in life Rubin returned to his favorite philosopher and brought out "Ḥeḳer Eloah 'im Torat ha-Adam," a Hebrew translation of Spinoza's "Ethics," with notes and an introduction. This is Rubin's most important contribution to Neo-Hebrew literature. Among his latest works are "Yalḳuṭ Shelomoh" (Cracow, 1896), consisting of ten essays, and "Segulot ha-Ẓemaḥim we-Ototam" (German title, "Symbolik der Pflanzen"; *ib.* 1898).

Anton Grigoryevich Rubinstein.

RUBINSTEIN, ANTON GRIGORYEVICH: Russian pianist and composer; born Nov. 16 (28), 1829, in the village of Wechwotynetz (Vikhvatinetz), near Jassy, Bessarabia; died at Peterhof, near St. Petersburg, Nov. 20, 1894; brother of Nikolai (Nicholas) Rubinstein. His parents were Jews who embraced the Greek-Orthodox religion, probably a few years after Anton's birth; the entire family removed to Moscow in 1834, where his father established a pencil-factory. Anton, the fourth of six children, received a good education from his mother (Katherina Khristoforovna, née Löwenstein), and from her he also took his first piano-lessons. At the age of seven he commenced to study under A. I. Villoing, the leading piano-teacher in Moscow. The latter taught him gratuitously from his eighth to his thirteenth year. In his reminiscences Rubinstein refers gratefully to Villoing.

His Early Début.

In 1839 Rubinstein gave his first public concert, in the Petrovski Park at Moscow, and in 1841 he gave, under Villoing's personal direction, a series of concerts in Germany, Holland, Scandinavia, and France. While in Paris he visited Chopin, who left a deep impression on Rubinstein. Somewhat later he met Liszt, then the musical idol of Europe. The latter was so carried away by the boy's playing that he took him in his arms and declared that he would make him his heir in art. Rubinstein visited London also (1842), where he won the admiration of Moscheles, and met Mendelssohn at a private concert given before Queen Victoria.

On his return to Russia in 1843 Rubinstein was invited to the Winter Palace, where he was presented to the imperial family. Emperor Nicholas I. treated him kindly, and, embracing him, jokingly addressed him as "your Excellency." Rubinstein's public concerts in the Russian capital met with signal success; and the income from them went to meet the needs of his parents, who were then in pecuniary difficulties.

In 1844 he accompanied his mother and his brother Nikolai to Berlin, where, on the advice of Mendelssohn and Meyerbeer, he studied composition under Dehn, and also studied under Marks.

His Friendship with Liszt.

His mother was compelled in 1846 to return to Moscow, his father having died and left his business affairs in a confused state. In order to preserve her husband's good name Katherina Khristoforovna paid all his debts. She was thus left penniless and was compelled to become a music-teacher in a private school in Moscow. She died in Odessa in 1891. Left to his own resources, young Rubinstein went to Vienna (1846), hoping to secure Liszt's support in his work. Liszt received him cordially, but refused him monetary aid, since, as he said, every able man should accomplish his aims without help. Undaunted by the difficulties confronting him, Rubinstein began to compose, supporting himself meanwhile by giving lessons. For about a year and a half he was even in want, until Liszt, remembering his young colleague, visited him in his poor lodgings and took steps toward procuring for him a permanent source of income. The two remained warm friends until Liszt's death. In

1847 Rubinstein went back to Berlin, and at the outbreak of the Revolution of 1848 he returned, on Dehn's advice, to St. Petersburg.

At St. Petersburg, Rubinstein received the patronage of the grand duchess Helena Pavlovna, and his musical reputation was thereby established. His opera "Dmitri Donskoi" appeared on the imperial stage in 1852, and his "Sibirskije Ochotnikie" in 1853.

Director of the Russian Musical Society.

In 1854 Rubinstein made another concert-tour through Europe; in 1858 he was appointed court pianist; and in 1859 he was made director of the Imperial Russian Musical Society, which he had been instrumental in founding. The conservatories of St. Petersburg and Moscow had their origin in this society; and under the instruction of Anton and Nikolai Rubinstein there graduated many talented musicians, among them Tchaikowsky and Madame Essipic. The great services rendered by Rubinstein in the advancement of music in Russia were recognized by the czar, who decorated him with the Vladimir Order. In 1865 Rubinstein married Vera de Tschikouanov, a maid of honor at the Russian court, who bore him three children. He toured Europe in 1867–70; and in 1876 he resigned the directorship of the Conservatorium.

In 1872 and 1873 Rubinstein, accompanied by Henri Veniavski, professor of the violin at the Conservatorium of Brussels, made a professional tour of America; and in 1885 and 1886 he gave a series of concerts in Europe, which were arranged to bring out the historical development of musical literature and marked an important epoch in the history of music. These concerts were given in the cities of St. Petersburg, Moscow, Vienna, Berlin, London, Paris, and Leipsic. He resumed the directorship of the Conservatorium from 1887 till 1890, and then lived successively in Berlin and Dresden. Rubinstein's professional jubilee was celebrated in 1889.

His Compositions.

Rubinstein won his laurels as a pianist rather than as a composer. His technique was above criticism, and his interpretation of familiar selections highly original and sympathetic; but his compositions, while lyrical in feeling, lacked dramatic effect. His works embraced every form of composition—songs, chamber-music, operas, etc.—but few of them have attained to the popularity of his "Persian Songs" and "Ocean Symphony." He wrote in all 119 compositions exclusive of operas and of a considerable number of minor pieces for the piano. Among his more prominent works should be mentioned: "Ivan the Terrible," "Don Quixote," and "Faust," "character pictures" for orchestra; "Antony and Cleopatra"; "Rossiya" (written for the Moscow Exposition of 1882); "Paradise Lost," "The Tower of Babel," "Moses," and "Christ," sacred operas; "Sulamith"; 13 operas, viz., "Dmitri Donskoi," "Khadzhi Abrek," "The Siberian Hunters," "Tomka the Fool," "Demon," "Feramors," "Merchant Kalashnikov," "The Children of the Steppes," "The Maccabeans," "Nero," "The Parrot," "With the Outlaws," "Goryusha"; and the ballet "The Grapevine."

H. R. J. G. L.

RUBINSTEIN, ISAAC: Austrian deputy; born at Czernowitz in 1805; died at Ischl Sept. 1, 1878. He was a member of the town council and vice-president of the Czernowitz chamber of commerce and industry, which he represented in the Austrian Reichsrath from 1873 to 1878. He was actively interested in philanthropic work and held many honorary offices in his community.

S. E. J.

RUBINSTEIN, JOSEF: Russian pianist and composer; born at Staro-Constantinov Feb. 8, 1847; died by his own hand at Lucerne Sept. 15, 1884. He was a pupil of Hellmesberger, Dachs, and Liszt, and a friend and ardent admirer of Wagner, from whose drama "Ring des Nibelungen" he made excellent pianoforte transcriptions. In 1869 the grand duchess Helena of Russia appointed Rubinstein "Kammerpianist." Three years later he visited Wagner at Triebschen, and went with him to Bayreuth, where he attended the piano rehearsals of the "Ring des Nibelungen." In 1880 he gave in Berlin a series of lectures on the "Wohltemperierte Klavier" which gained him considerable renown. Rubinstein was the author of several song- and piano-compositions, and a number of articles appeared in the "Bayreuther Blätter" over his signature, in which Schumann and Brahms were attacked in a very offensive and vindictive manner. These articles, which are believed by some to have emanated from a more famous pen, obtained for Rubinstein a rather unenviable notoriety.

H. R. F. C.

RUBINSTEIN, NIKOLAI (NICHOLAS): Russian pianist; born in Moscow June 2, 1835; died in Paris March 23, 1881; brother of Anton Rubinstein. He received his early instruction from his mother, by whom he and his brother were taken to Berlin in 1844. There he studied pianoforte under Kullak and composition under Dehn until 1846, when his father's illness necessitated his mother's return to Moscow; she took Nikolai with her.

In 1859 Rubinstein founded the Moscow Musical Society, under the auspices of which the Moscow Conservatorium was established in 1864. Of the latter institution he was the director till his death. In 1861 Rubinstein visited England, and in 1878 Paris, where he conducted four orchestral concerts consisting entirely of Russian music. These concerts took place at the exposition then being held at the French capital. Subsequently he returned to St. Petersburg and gave annual concerts there.

Rubinstein's powers as a virtuoso were remarkable, but his fame was overshadowed by that of his brother Anton. The latter, however, frequently declared that he considered Nikolai to be a better pianist than himself.

Among the more important of Rubinstein's compositions were: mazurkas 1 and 2 (op. 11); bolero (op. 13); tarantelle (op. 14); and polonaise, "Scène de Bal" (op. 17).

RUBINSTEIN, SUSANNA: Austrian psychologist; born at Czernowitz, Bukowina, Sept. 20, 1847. She was the daughter of an Austrian deputy. In 1870 she entered the University of Prague, and subsequently studied at Leipsic, Vienna, and Bern (Ph.D. 1874). Her works are as follows: "Psychologisch-Aesthetische Essays," Heidelberg, 1878–84; "Aus der Innenwelt," Leipsic, 1888, psychological studies; "Zur Natur der Bewegungen," *ib.* 1890; "Auf Dunklem Grunde," *ib.* 1892; "Ein Individualistischer Pessimist," *ib.* 1894; "Eine Trias von Willensmetaphysikern," *ib.* 1896; "Psychologisch-Aesthetische Fragmente," *ib.* 1902.

S. R. N.

RUBO, ERNST TRAUGOTT: German jurist; born at Berlin July 8, 1834; died there March, 1895. Educated at the University of Heidelberg (LL.D. 1857), he was admitted to the bar in 1859. In 1861 he was appointed judge in Berlin, and in 1862 became privat-docent, and later professor, at the university of that city.

Of Rubo's works may be mentioned "Zur Lehre von der Verläumdung," Berlin, 1861, and "Ueber den Sogenannten Zeugnisszwang," *ib.* 1878.

Rubo assisted in drafting the military law-code of the German empire, and he contributed several essays to the "Gerichtssaal," Goldammer's "Archiv für Strafrecht," and Gruchot's "Beiträge."

Bibliography: Stier-Somlo, in *Allg. Zeit. des Jud.* 1895, p. 146.

S. F. T. H.

RUBO, JULIUS: German jurist; born at Halberstadt June 9, 1794; died at Berlin March 13, 1866. He attended the gymnasium in Halberstadt, and, after serving as a volunteer in the war with Napoleon, he studied jurisprudence at the universities of Göttingen and Berlin, obtaining his degree in 1817. A war of pamphlets which raged about that time affords evidence of the fact that he had won repute as a legal scholar. One Th. Grupp maintained that none but Christian jurists should be honored with the degree of doctor of jurisprudence; in a reply in Kamptz's "Jahrbücher" (xv. 486) Grupp was asked whether he seriously proposed to withhold the right to compete for this dignity from the coreligionists of Rubo, who had recently won it with so much credit. But his academic reputation availed Rubo little when he strove to establish a practise successively in Hamburg, Holstein, and Brunswick; and, seeing that the practise of law was closed to him on account of his religion, he settled at Halle as privat-docent.

The legislation of 1822, however, declaring Jews ineligible for academic positions, deprived Rubo of his office, and he went to Berlin to seek a livelihood in literary work. His first production was "Versuch einer Erklärung der Fragmente Lex II, III, IV, LXXXV, Digest de Verborum Obligationibus (45, 1), über die Theilbarkeit und Untheilbarkeit der Obligationen nach der Grundsätzen des Römischen Rechts" (Berlin, 1822). In 1824 he was appointed "Syndikus" of the Jewish congregation in Berlin, which position he held for twenty-five years. It was during his tenure of this position that he wrote "Die Rechtsverhältnisse der Jüdischen Gemeinden in Denjenigen Landestheilen des Preussischen Staates, in Welchen das Edict vom 11 März, 1812, zur Anwendung Kommt. Eine Beantwortung von 11 Fragen, mit Besonderer Rücksicht auf die Jüdische Gemeinde in Berlin" (*ib.* 1844). In 1849 a newly elected board of directors suddenly removed him from office. He immediately began legal proceedings, which, after a number of years, ended in his reinstatement.

Rubo contributed to Zunz's "Zeitschrift" a review of Lips' "Staatsbürgerrecht der Juden." He cooperated actively in the founding of the Wissenschaftliche Institut established by the Verein für Cultur und Wissenschaft der Juden.

Bibliography: L. Geiger, *Gesch. der Juden in Berlin*, p. 296; Lebrecht, in *Vossische Zeitung*, May 5, 1866.

S. M. Co.

RUEFF, JULES: French merchant and shipowner; born at Paris Feb. 16, 1854. At an early age he turned his attention to colonial affairs and navigation. In 1872 he went to Indo-China, and became one of the pioneers of French influence in that country. Later, he became president of the "Société Franco-Africaine," which established the first commercial counting-houses in Abyssinia, among others that at Jibuti. He is the originator of the plan for the railroad of Saigon-Mytho, in Cochin-China, and the founder and present (1905) general director of the "Messageries Fluviales de Cochin-chine," which greatly facilitated the spread of French trade in Indo-China by the route of Mekong. One of the company's vessels took part in the military expedition that forced the pass of Meinam. Jules Rueff was also of great assistance to the French government in organizing its various colonial expositions. Since 1900 he has been administrator of dockyards at Saint-Nazaire, the greatest of their kind in France. He was made commander of the Legion of Honor in 1900.

Bibliography: Curinier, *Dictionnaire National des Contemporains*, 1901.

S. J. Ka.

RUFINA: Smyrna Jewess; lived about the third century of the common era. Her name has been perpetuated in a Smyrniot Greek inscription which is unusually important for a knowledge of the Jewish culture of the period. Translated, the text in question reads as follows:

> "The Jewess Rufina, ruler of the synagogue, built this tomb for her freedmen and her slaves. None other has the right to bury a body here. If, however, any one shall have the hardihood to do so, he must pay 1,500 denarii into the holy treasury and 1,000 denarii to the Jewish people. A copy of this inscription has been deposited in the archives."

This is the only instance, so far as is known, in which the office of ruler of the synagogue was held by a woman; and it is evident that Rufina was very wealthy, since she was able to provide so handsomely for slaves and household dependents. The act itself and the penalty for violation of the tomb are wholly in keeping with the customs of the time, and differ in no way from similar cases in the life of the pagan Greeks.

s. S. Kr.

RUFUS: Roman general in the first century of the common era. In the battles after Herod's death the Romans were assisted against the Jews by the 3,000 "men of Sebaste," the flower of the royal army and a troop which afterward became famous. The cavalry in this body was led by Rufus (Josephus, "B. J." ii. 3, § 4), while the infantry was under the command of Gratus. Rufus and Gratus maintained their resistance until the legate Varus appeared in Jerusalem with reenforcements (*ib.* 5, § 2; comp. *idem,* "Ant." xvii. 10, § 3).

s. S. Kr.

RUFUS ANNIUS. See Annius Rufus.

RUFUS, TINEIUS (written also **Tinnius**): Governor of Judea in the first century of the common era. Jerome, on Zech. viii. 16, has "T. Annius Rufus," and the editor, Vallarsi, conjectures that the full prænomen is "Tyrannius," a name which would correspond to the רופוס טורנוס of Jewish tradition. Rufus was governor at the time of the outbreak of the Bar Kokba war (Eusebius, "Hist. Eccl." iv. 6, § 1; *idem,* "Chronicon," ed. Schoene, ii. 166). The course of this struggle is described under Bar Kokba; it is, therefore, only necessary to mention here the fact that Rufus took a prominent part in the conflict, as appears from the works of Eusebius. He was unable, however, to withstand the vigorous onslaught of the Jews, so that Publicius Marcellus, the governor of Syria, and later Julius Severus, the most prominent Roman general of the time, had to be sent against them.

Rufus is not mentioned again until the suppression of the insurrection, when it is said (Eusebius, "Hist. Eccl." iv. 6, § 1) that on the plea of martial law he cleared the land of the Jews of its inhabitants. An insult to Judaism which left a deep impression on the minds of the survivors was the plowing up of the Temple mount, which is expressly designated as the deed of Rufus (Ta'an. iv. 6; comp. Baraita Ta'an. 29a; Jerome on Zech. viii. 19: "aratum templum in ignominiam gentis oppressæ a T. Annio Rufo").

The severe religious persecutions by Hadrian are for the most part to be laid to the charge of Rufus, including the cruel decree that the bodies of those who fell in battle might not be buried for a long time (Yer. Ta'an. 69a), and the bitter pursuit and merciless execution of Jewish teachers of the Law, of which tradition speaks. Jewish literature portrays Rufus as one of the bitterest enemies of the race, and often means Rufus when it names his master Hadrian; for it was not the emperor far away in Rome, but the governor in Palestine, who was guilty of these acts of cruelty.

Legend tells of religious conversations between Rabbi Akiba and Rufus. The wife of Rufus also came within the charmed circle of that great son of Israel, and tradition relates that she became a convert to Judaism (Rashi on Ned. 50b).

Bibliography: Grätz, *Gesch.* 3d ed., iv. 139, 154. Concerning Rufus' wife: Grätz, in *Monatsschrift,* 1884, xxxiii. 36; Schürer, *Gesch.* 3d ed., i. 647, 687-689; *Prosopographia Imperii Romani,* iii. 321, No. 168. Rabbinical sources are given in Krauss, *Lehnwörter,* ii. 259.

s. S. Kr.

RÜHS, CHRISTIAN FRIEDRICH: German historian and anti-Jewish writer; born at Greifswald March 1, 1781; died at Florence Feb. 1, 1820. As professor of history at the universities of Greifswald, Göttingen (1801-9), and Berlin (1810-1820), and as historiographer of the Prussian state, he wrote a number of works, especially on the history and literature of the northern countries of Europe.

When, after the downfall of Napoleon I., the question of the emancipation of the Jews was agitated in Germany, Rühs took his stand among those who opposed the granting to them of political and civil rights, and wrote in the "Zeitschrift für die Neueste Geschichte, Völker- und Staatenkunde" for 1815 an article entitled "Ueber die Ansprüche der Juden an das Deutsche Bürgerrecht" (printed as a separate pamphlet, Berlin, 1816). In this article he argues that the Jews, being a scattered nation forming a separate state administered by an aristocracy (the Rabbis), are not qualified for citizenship, which requires unity of sentiment, of language, and of faith. Forcible means should not be used against the Jews; but their growth should be checked, and they should be won for Christianity. He repeats all the reproaches heaped upon the Jews during the Middle Ages, and asserts that by their own faults they provoked the persecutions of the dark ages. In an appendix treating of the history of the Jews in Spain he demonstrates that the privileges which they obtained in that country caused their sufferings and final expulsion.

This article, followed by his "Rechte des Christenthums und des Deutschen Volks Gegen die Ansprüche der Juden und Ihrer Verfechter" (Berlin, 1816), exercised a great influence in Germany, and called forth similar writings by Jakob F. Fries and others. Against them August Krämer of Ratisbon and Johann Ludwig Ewald of Carlsruhe pleaded in defense of the Jews.

RULE, GOLDEN. See Golden Rule.

RULES OF ELIEZER B. JOSE HA-GELILI, THE THIRTY-TWO: Rules laid down by R. Eliezer b. Jose ha-Gelili for haggadic exegesis, many of them being applied also to halakic interpretation.

1. **Ribbuy** (extension): The particles "et," "gam," and "af," which are superfluous, indicate that something which is not explicitly stated must be regarded as included in the passage under consideration, or that some teaching is implied thereby.

2. **Mi'uṭ** (limitation): The particles "ak," "raḳ," and "min" indicate that something implied by the concept under consideration must be excluded in a specific case.

3. **Ribbuy aḥar ribbuy** (extension after extension): When one extension follows another it indicates that more must be regarded as implied.

4. **Mi'uṭ aḥar mi'uṭ** (limitation after limitation): A double limitation indicates that more is to be omitted.

5. **Ḳal wa-ḥomer meforash**: "Argumentum a minori ad majus," or vice versa, and expressly so characterized in the text.

6. **Ḳal wa-ḥomer satum**: "Argumentum a minori ad majus," or vice versa, but only implied, not explicitly declared to be one in the text. This and the preceding rule are contained in the Rules of Hillel, No. 1. Rules 7 and 8 are identical with Rules 2 and 3 of Hillel.

9. **Derek ḳeẓarah**: Abbreviation is sometimes used in the text when the subject of discussion is self-explanatory.

10. **Dabar shehu shanuy** (repeated expression): Repetition implies a special meaning.

11. **Siddur she-neḥlaḳ**: Where in the text a clause or sentence not logically divisible is divided by the punctuation, the proper order and the division of the verses must be restored according to the logical connection.

12. Anything introduced as a comparison to illustrate and explain something else, itself receives in this way a better explanation and elucidation.

13. When the general is followed by the particular, the latter is specific to the former and merely defines it more exactly (comp. Rules of Hillel, No. 5).

14. Something important is compared with something unimportant to elucidate it and render it more readily intelligible.

15. Same as Rule 13 of R. Ishmael.

16. **Dabar meyuḥad bi-meḳomo**: An expression which occurs in only one passage can be explained only by the context. This must have been the original meaning of the rule, although another explanation is given in the examples cited in the baraita.

17. A point which is not clearly explained in the main passage may be better elucidated in another passage.

18. A statement with regard to a part may imply the whole.

19. A statement concerning one thing may hold good with regard to another as well.

20. A statement concerning one thing may apply only to something else.

21. If one object is compared to two other objects, the best part of both the latter forms the tertium quid of comparison.

22. A passage may be supplemented and explained by a parallel passage.

23. A passage serves to elucidate and supplement its parallel passage.

24. When the specific implied in the general is especially excepted from the general, it serves to emphasize some property characterizing the specific.

25. The specific implied in the general is frequently excepted from the general to elucidate some other specific property, and to develop some special teaching concerning it.

26. **Mashal** (parable).

27. **Mi-ma'al**: Interpretation through the preceding.

28. **Mi-neged**: Interpretation through the opposite.

29. **Gemaṭria**: Interpretation according to the numerical value of the letters. See Gemaṭria.

30. **Notariḳon**: Interpretation by dividing a word into two or more parts. See Notariḳon.

31. Postposition of the precedent. Many phrases which follow must be regarded as properly preceding, and must be interpreted accordingly in exegesis.

32. Many portions of the Bible refer to an earlier period than do the sections which precede them, and vice versa.

These thirty-two rules are united in the so-called Baraita of R. Eliezer b. Jose ha-Gelili (see Baraita of the Thirty-Two Rules). In the introduction to the Midrash ha-Gadol (ed. Schechter, Cambridge, 1902), where this baraita is given, it contains thirty-three rules, Rule 29 being divided into three, and Rule 27 ("Mi-ma'al") being omitted. With regard to these rules see also Talmud—Hermeneutics.

W. B. J. Z. L.

RULES OF HILLEL, THE SEVEN: Rules given to the sons of Bathyra by Hillel I. as the chief guides for the interpretation of the Scriptures and for the deduction of laws from them (Tosef., Sanh. vii.; the introduction to the Sifra, ed. Weiss, p. 3a, end; Ab. R. N. xxxvii.).

They are as follows:

1. **Ḳal (ḳol) wa-ḥomer**: "Argumentum a minori ad majus" or "a majori ad minus"; corresponding to the scholastic proof a fortiori.

2. **Gezerah shawah**: Argument from analogy. Biblical passages containing synonyms or homonyms are subject, however much they differ in other respects, to identical definitions and applications.

3. **Binyan ab mi-katub eḥad**: Application of a provision found in one passage only to passages which are related to the first in content but do not contain the provision in question.

4. **Binyan ab mi-shene ketubim**: The same as the preceding, except that the provision is generalized from two Biblical passages.

5. **Kelal u-Peraṭ** and **Peraṭ u-kelal**: Definition of the general by the particular, and of the particular by the general.

6. **Ka-yoẓe bo mi-maḳom aḥer**: Similarity in content to another Scriptural passage.

7. **Dabar ha-lamed me-'inyano**: Interpretation deduced from the context.

Concerning the origin and development of these rules, as well as their susceptibility of logical proof, see Talmud—Hermeneutics.

W. B. J. Z. L.

RULES OF R. ISHMAEL, THE THIRTEEN: Thirteen rules compiled by Rabbi Ishmael b. Elisha for the elucidation of the Torah and for making halakic deductions from it. They are, strictly speaking, mere amplifications of the seven Rules of Hillel, and are collected in the Baraita of R. Ishmael, forming the introduction to the Sifra and reading as follows:

1. **Ḳal wa-ḥomer**: Identical with the first rule of Hillel.

2. **Gezerah shawah**: Identical with the second rule of Hillel.

3. **Binyan ab:** Rules deduced from a single passage of Scripture and rules deduced from two passages. This rule is a combination of the third and fourth rules of Hillel.

4. **Kelal u-Peraṭ:** The general and the particular.

5. **u-Peraṭ u-kelal:** The particular and the general.

6. **Kelal u-Peraṭ u-kelal:** The general, the particular, and the general.

7. The general which requires elucidation by the particular, and the particular which requires elucidation by the general.

8. The particular implied in the general and excepted from it for pedagogic purposes elucidates the general as well as the particular.

9. The particular implied in the general and excepted from it on account of the special regulation which corresponds in concept to the general, is thus isolated to decrease rather than to increase the rigidity of its application.

10. The particular implied in the general and excepted from it on account of some other special regulation which does not correspond in concept to the general, is thus isolated either to decrease or to increase the rigidity of its application.

11. The particular implied in the general and excepted from it on account of a new and reversed decision can be referred to the general only in case the passage under consideration makes an explicit reference to it.

12. Deduction from the context.

13. When two Biblical passages contradict each other the contradiction in question must be solved by reference to a third passage.

Rules seven to eleven are formed by a subdivision of the fifth rule of Hillel; rule twelve corresponds to the seventh rule of Hillel, but is amplified in certain particulars; rule thirteen does not occur in Hillel, while, on the other hand, the sixth rule of Hillel is omitted by Ishmael. With regard to the rules and their application in general see also TALMUD—HERMENEUTICS.

BIBLIOGRAPHY: In addition to the works on Talmudic methodology, see *Œuvres Complètes de Saadia*, ix. 73-83 (commentary of Saadia on the thirteen rules), xxiii.-xxxiii., Paris, 1897.

W. B. J. Z. L.

RÜLF, ISAAC: German rabbi and author; born Feb. 10, 1834, in Holzhausen, near Marburg in Hessen; died at Bonn Sept. 19, 1902. He was educated at the universities of Marburg and Rostock (Ph.D. 1865). When thirty-one years old he accepted a call as rabbi from the community of the district synagogue of Memel. While in this office he took great interest in the condition of his oppressed brethren in Russia, and thus created for himself a wide sphere of activity. In 1898, after thirty-three years of service, he resigned and retired as professor emeritus to Bonn. Rülf was the author of: "Meine Reise nach Kowno" (1869); "Der Einheitsgedanke als Fundamentalbegriff," etc. (1880); "Drei Tage in Jüdisch-Russland" (1882); "Aruchas Bas-Ammi" (1883); "Wissenschaft des Weltgedankens" and "Wissenschaft der Gedankenwelt, System einer Neuen Metaphysik" (2 vols., 1888); "Wissenschaft der Krafteinheit" (1893); "Das Erbrecht als Erbübel" (1893); "Wissenschaft der Geisteseinheit" (1898); "Wissenschaft der Gotteseinheit" (1903). From 1872 until his departure from Memel, Rülf was editor-in-chief of the "Memeler Dampfboot," a daily political journal. He wrote also for various Jewish papers.

S.

RUMANIA: Kingdom of southern Europe. If the assertions of Rumanian historians are to be accepted, Jews lived in Rumania for a considerable time before the advent of the hordes of Roman convicts brought by Emperor Trajan for the purpose of populating the fertile country of the Dacians, which he had desolated after his bloody conquest. Decebalus, King of the Dacians, accorded to the Jews of Talmaci special privileges which they did not enjoy in other places of Dacia, although they had the right of residence everywhere. A decree of the Roman emperor (397) granted protection to the Dacian Jews and their synagogues ("Cod. Theod. de Jud." xvi. 8). At the Roman invasion Jews followed the army of occupation as purveyors and interpreters. In the eighth century it is said that an armed force of Jews from southern Russia, presumably the Chazars, entered both Moldavia and Wallachia and united with the Jews who were already living there; and "for a number of years the Jewish religion reigned supreme in the country."

Invasion of the Chazars.

After about 400 years, during which nothing is heard of Jews in Rumania, it is related that when the principality of Berlad was established, which included Little Halitz (Galatz) and Tecuci, Jews lived there and were actively engaged in commerce. When Radu Negru crossed the Carpathian Mountains (1290) in search of a new country he was followed by a number of Jews, who assisted him in the establishment of his rule over Rumania, and who settled in various towns in which Jewish communities were already in existence. In 1349, when the Moldavian principality was founded, the ruling prince invited traders from Poland to settle in his domains, offering them special privileges; and many Jews responded to the invitation. When Roman I. (1391–94) founded the city to which he gave his name Jews were among the first settlers; and their houses were the finest in the new capital. Roman exempted the Jews from military service, in lieu of which they had to pay three löwenthaler for each person.

In Wallachia, under Vlad Tzepesh (1456–62), the Jews were the greatest sufferers from the cruelty of that tyrant. In Moldavia, Stephen Voda (1457–1504) was a more humane ruler, and the Jews were treated by him with consideration. Isaac ben Benjamin Shor of Jassy was appointed steward by this prince, being subsequently advanced to the rank of "logofet" (chancellor); and he continued to hold this honorable position under Bogdan Voda (1504–1517), the son and successor of Stephen.

At this time both principalities came under the suzerainty of Turkey, and a number of Spanish Jews living in Constantinople migrated to Wallachia, while Jews from Poland and Germany settled in Moldavia. Although the Jews took an important

2346/365

Under Turkish Suzerainty.

part in the Turkish government, the Rumanian princes did not much heed this fact and continued to harass them in their respective principalities. Stephen the Younger (1522) deprived the Jewish merchants of almost all the rights given to them by his two predecessors; and despite the fact that Peter Raresh was assisted in the recovery of his throne, and was afforded pecuniary aid, by a Jewess, the confidante of the sultan's mother, his first step when he took up the reins of government (1541) was to rob the Jewish traders in a most dastardly manner. Alexander Lapushneanu (1552–61) cruelly treated the Jews until he was dethroned by Jacob Heraclides, a Greek, who was lenient to his Jewish subjects. When Lapushneanu returned to his throne, however, he did not renew his persecutions.

During the first short reign of Peter the Lame (1574–79) the Jews of Moldavia suffered under heavy taxation and were otherwise ill-treated until he was dethroned. In 1582 he succeeded in regaining his rule over the country with the help of the Jewish physician Benveniste, who was a friend of the influential Solomon Ashkenazi; and the last-named then exerted his influence with the prince in favor of his coreligionists. In Wallachia, Prince Alexander Mircea (1567–77) engaged as his private secretary and counselor the talented Isaiah ben Joseph, who used his great influence in behalf of the Jews. In 1573 Isaiah was dismissed, owing to the intrigues of jealous courtiers; but otherwise he was unmolested. He went to Moldavia, where he entered the service of Prince Ivan the Terrible. Through the efforts of Solomon Ashkenazi, Emanuel Aaron was placed on the throne of Moldavia. Although of Hebrew descent, he was very cruel to the Jews. The entire Jewish community of Bucharest was exterminated; and by Aaron's orders nineteen Jews of Jassy were brought before him and, without any process of law, decapitated. Almost all the Jews had to leave Wallachia; and those that remained in Moldavia were delivered from the inhuman oppression of Aaron only when he was deposed and replaced by Jeremiah Movila.

It was late in the seventeenth century before Jews could once more enter Wallachia and reside there in security. In Moldavia, Vasili Lupul (1634–53) treated the Jews with consideration until the appearance of the Cossacks (1648), who marched against the Poles and who, while crossing Rumania, killed many Jews. Another massacre by the Cossacks occurred in 1652, when they came to Jassy to claim Vasili Lupul's daughter for Timush, the son of Chmielnicki.

The first blood accusation in Rumania was made April 5, 1710. The Jews of Neamtz, Moldavia, were charged with having killed a Christian child for ritual purposes. The instigator was a baptized Jew who had helped to carry the body of a child, murdered by Christians, into the courtyard of the synagogue. On the next day five Jews were killed, many were maimed, and every Jewish house was pillaged, while the representatives of the community were imprisoned and tortured. Meanwhile some influential Jews appealed to the prince at Jassy, who ordered an investigation, the result being that the prisoners were liberated, and the guilty persons discovered and severely dealt with.

This was the first time that the Rumanian clergy participated in Jew-baiting, and they were the only persons who declared that they were not convinced of the innocence of the Jews as regards the accusation of ritual murder. It was due to the clergy's continued manifestations of animosity against the Jews that in 1714 a similar charge was brought against the Jews of the city of Roman. There a Christian girl, a servant in a Jewish family, had been abducted by some Roman Catholics and strangled. The crime was immediately laid at the door of the Jews. Every Jewish house was plundered; two prominent Jews were hanged; and probably every Jew in the city would have been killed had not the real criminals been opportunely discovered.

The Wallachian prince Stephen Cantacuzene (1714–16) mulcted the Jews at every possible opportunity and ill-treated them outrageously. This state of affairs lasted until his successor, Nicholas Mavrocordatos (1716–30), came into power. He invited Jewish bankers and merchants into the country, and accorded to the entire Jewish community many valuable privileges.

Under John Mavrocordatos.

The most baneful influence on the condition of the Jewish inhabitants of Moldavia was exercised during the reign of John Mavrocordatos (1744–47). He was a profligate character who sacrificed many Jewish women to his evil desires. A Jewish farmer in the district of Suchava, in whose house he had indulged in the most unnatural orgies, preferred charges against the prince before the sultan, whereupon John Mavrocordatos had his accuser hanged. This act at last aroused the sultan's Mohammedan representative in Moldavia; and the prince paid the penalty with the loss of his throne.

Under the subsequent Moldavian and Wallachian princes, the Jews of both principalities enjoyed many liberties until the arrival of Ephraim, patriarch of Jerusalem. The last-named at once commenced a bitter arraignment of the Jews, which ended in riots and the demolition of the newly erected synagogue at Bucharest.

During the Russo-Turkish War, 1769-1774.

During the Russo-Turkish war (1769–74) the Jews of Rumania had to endure great hardships. They were massacred and robbed in almost every town and village in the country. When peace was at last restored both princes, Alexander Mavrocordatos of Moldavia and Nicholas Mavrogheni of Wallachia, pledged their special protection to the Jews, whose condition remained favorable until 1787, when the Janizaries on one side and the Russians on the other invaded Rumania and vied with each other in butchering the Jews.

Freed from these foreign foes, the Rumanians themselves embittered the lives of the Jews. Jewish children were seized and forcibly baptized. The ritual-murder accusation became epidemic. One made at Galatz in 1797 led to exceptionally severe results. The Jews were attacked by a large mob, driven from their homes, robbed, and waylaid on the streets; many were killed outright; some were forced into the Danube and drowned; others who took refuge in the synagogue were burned to death in the building; and only a few escaped, to whom an old priest gave protection in his church.

In 1806 war was renewed between Russia and Turkey. The invasion of the Russians into Rumania was, as usual, attended by massacres of the Jews. The Kalmucks, a horde of irregular Turkish soldiers, who appeared at Bucharest in 1812, became a terror to the unfortunate Jews. They passed daily through the streets inhabited by the latter, spitted children on their lances, and, in the presence of their parents, roasted them alive and devoured them. Before the Revolution of 1848, which swept over Rumania also, many restrictive laws against the Jews had been enacted; but although they entailed considerable suffering, they were never strictly enforced. During the time of the revolutionary upheaval the Jews participated in the movement in various ways. Daniel Rosenthal, the painter, distinguished himself in the cause of liberty, and paid for his activity with his life.

After the close of the Crimean war the struggle for the union of the two principalities began. The Jews were sought after by both parties, Unionists and anti-Unionists, each of which promised them full equality; and proclamations to this effect were issued (1857–58).

Negotiations with Alexander Cuza.

From the beginning of the reign of Alexander Cuza (1859–66), the first ruler of the united principalities, the Jews became a prominent factor in the politics of the country. In 1864 the prince, owing to difficulties between his government and the general assembly, dissolved the latter and, in order to gain popularity with the masses, decided to submit a draft of a constitution granting universal suffrage. He purposed creating two chambers (of senators and deputies respectively), to extend the franchise to all citizens, and to emancipate the peasants from forced labor, expecting thus to nullify the influence of the boyars, whose enmity he had already incurred beyond hope of reconciliation, and at the same time to win financial support from both the Jews and the Armenians. It appears that after all the prince was very modest in his demands; for his aids, when they met the representatives of the Jews and the Armenians, asked for only 40,000 galbeni (about $90,000) from the two groups. The Armenians discussed the matter with the Jews, but they were not able to come to a satisfactory agreement in the matter.

Meanwhile the prince was pressing in his demands. It is claimed that one rich Armenian decided to advance the necessary amount of money, while the Jews quarrelled about the method of assessment. The rich Jews, for some reason or other, refused to advance the money; and the middle classes maintained that it would be simply money thrown away, since they could see no benefits in political rights. The more devout even insisted that such rights would only interfere with the exercise of their religion. Cuza, on being informed that the Jews hesitated to pay their share, inserted in his draft of a constitution a clause excluding from the right of suffrage all who did not profess Christianity.

When Charles von Hohenzollern succeeded Cuza (1866), the first spectacle that confronted him in the capital was a riot against the Jews. A draft of a constitution was then submitted by the government, Article 6 of which declared that "religion is no obstacle to citizenship"; but, "with regard to the Jews, a special law will have to be framed in order to regulate their admission to naturalization and also to civil rights." On June 30, 1866, the great synagogue at Bucharest was desecrated and demolished. Many Jews were beaten, maimed, and robbed. As a result, Article 6 was withdrawn and Article 7 was added, which latter read that "only such aliens as are of the Christian faith may obtain citizenship."

Persecution by Bratianu.

John Bratianu, nominally Liberal, the first anti-Semite of the modern type in Rumania, was then called to the premiership. Charles was very timid, and dared not interfere in national affairs. Bratianu thus gained absolute power; and his first step was to ransack the archives of the country for ancient decrees against the Jews and to apply them with merciless rigor. The Jews were then driven from the rural communities, and many of those who were dwellers in towns were declared vagrants and, under the provisions of certain old decrees, were expelled from the country. A number of such Jews who proved their Rumanian birth were forced across the Danube, and, when Turkey refused to receive them, were thrown into the river and drowned. Almost every country in Europe was shocked at these barbarities. The Rumanian government was warned by the powers; and Bratianu was subsequently dismissed from office.

However, when the Conservatives came into power they treated the Jews no less harshly. After some time the Liberals again secured the ascendency, and Bratianu resumed the leadership. He was an unscrupulous diplomat, and understood how to allay the wrath of the other European countries. Meanwhile the situation in the Balkans became threatening. The Turks in Bulgaria attacked the Christians, and the Russo-Turkish war was approaching. This war was concluded by the treaty of Berlin (1878), which stipulated (Article 44) that the Jews of Rumania should receive full citizenship. After many exciting scenes at home and diplomatic negotiations abroad, the Rumanian government at last agreed to abrogate Article 7 of its constitution; but instead thereof, it declared that "the naturalization of aliens not under foreign protection should in every individual case be decided by Parliament."

A show of compliance with the treaty of Berlin being necessary, 883 Jews, participants in the war of 1877 against Turkey, were naturalized in a body by a vote of both chambers. Fifty-seven persons voted upon as individuals were naturalized in 1880; 6, in 1881; 2, in 1882; 2, in 1883; and 18, from 1886 to 1900; in all, 85 Jews in twenty-one years, 27 of whom in the meantime died. Besides this evasion of her treaty obligations, Rumania, after the

Berlin treaty, began a systematic persecution of the Jews, which was relaxed only when the government was in need of Jewish money. As soon as a loan from Jewish bankers in other countries had been obtained, the Jews were once more driven from the rural communities and small towns. Various laws were passed until the pursuit of all vocations followed by the Jews was made dependent on the possession of political rights, which only Rumanians might exercise. Even against the Jewish working men laws were enacted which forced more than 40 per cent of them into idleness.

Excluded from Education.

Similar laws were passed in regard to the liberal professions, affecting Jewish lawyers, physicians, pharmacists, veterinarians, etc. The most malicious law was one enacted in 1893, which deprived Jewish children of the right to be educated in the public schools. This law provided that the children of foreigners might be received only after those of citizens had been provided for, and that they should, moreover, pay exorbitant tuition-fees. In 1898 another law was passed, excluding the Jews from the secondary schools and the universities.

Meanwhile the government was very active in expelling Jews from the country. This was in accordance with the law of 1881, which permitted the "expulsion of objectionable aliens." The authorities commenced with the expulsion of Dr. M. Gaster, Dr. E. Schwarzfeld, and other Jews of note who had dared to protest against the cruel treatment accorded by the government to their coreligionists; then journalists, rabbis, merchants, artisans, and even common laborers fell victims to such proscriptions. The Oath More Judaico in its most disgraceful form was exacted by the courts, and was only abolished (in 1904) in consequence of unfavorable comments in the French press. In 1892, when the United States addressed a note to the signatory powers of the Berlin treaty, it was bitterly assailed by the Rumanian press. The government, however, was somewhat frightened; and after some time a ministerial council was called and the question discussed. As a result the Rumanian government issued some pamphlets in French, reiterating its accusations against the Jews and mantaining that whatever persecution they had endured they had fully deserved in consequence of their exploitation of the rural population.

The emigration of Rumanian Jews on a larger scale commenced soon after 1878; and it has continued to the present day (1905). It is admitted that at least 70 per cent would leave the country at any time if the necessary traveling expenses were furnished. There are no official statistics of emigration; but it is safe to place the minimum number of Jewish emigrants from 1898 to 1904 at 70,000.

Statistics.

According to the official statistics of 1878, there were then 218,304 Jews in Rumania. The excess of births over deaths from 1878 to 1894 being 70,408, the number of Jews at the end of 1894 ought to have been 288,712. But the census of December in that year showed only 243,225, or 45,487 less than the number expected. In 1904 it was estimated that the number of Jews who were living in Rumania did not exceed 250,000.

The administration of Jewish communal affairs in Rumania differs very little from that in southern Russia; and it has remained in almost the same state from time immemorial. There is the "gabella" (meat-tax), from which the rabbis and synagogues are supported, as well as the Jewish hospitals, Hebrew free schools, etc. In religious life Ḥasidism has the greatest number of followers; indeed, it is claimed that the cradle of Ḥasidism rested on Rumanian soil. There Ba'al Shem-Ṭob, the founder of the sect, expounded his doctrines; and his descendants are now represented by the Friedmann family, various members of which have taken up their abode in the townlet of Buhush.

Rabbis and Savants.

In the old graveyards of Jassy, Botushani, and other towns of Moldavia, tombstones indicate the resting-places of well-known rabbinical authors. Nathan (Nata) Hannover, rabbi at Fokshani at the beginning of the seventeenth century, was the author of "Yewen Meẓulah," a valuable account of the persecutions of the Jews during his lifetime. Julius Barasch is probably the most interesting Jew in the history of Rumanian literature. He was the first to introduce Western thought into that literature; and it is justly claimed that he taught the Rumanians how to employ in their own language a graceful style previously unknown to them. Hillel Kahane of Botushani wrote a laborious work in Hebrew on physical geography. Wolf Zbarzer and M. T. Rabener distinguished themselves in Hebrew poetry by their easy and elegant style. Baron Waldberg and D. Wexler contributed largely to modern Hebrew literature; and M. Brauenstein is a fluent and prolific Hebrew publicist.

M. Gaster, haham of the Portuguese Jewish community of London, is the author of a standard work, in the Rumanian vernacular, on Rumanian literature; M. Schwarzfeld, a prolific writer on the history of the Jews in Rumania; Lazar Shaineanu, a Rumanian philologist whose works have won prizes offered by the Rumanian Academy; and Heimann Tiktin, the most celebrated Rumanian grammarian. The last two have recently become converted to Christianity.

Ronetti Roman is undoubtedly the greatest of all Rumanian poets; his poem "Radu" is the highest poetic achievement in Rumanian literature, and of equal merit is his drama "Manasse," on the problem of Jewish apostasy, which evoked admiration and praise from the critics generally. A German poet who was born in Rumania is Marco Brociner. Solomon Schechter, discoverer of the Hebrew Ben Sira, and now president of the Jewish Theological Seminary of America, was born at Fokshani, and received his early instruction at the bet ha-midrash there.

Among communal workers deserving of especial mention are Adolf Stern of Bucharest and Karpel Lippe of Jassy. The latter is also an author of works on Jewish subjects.

See B'nai B'rith; Jewish Colonization Association; Peixotto, Benjamin Franklin; United

States. For Jewish Rumanian periodicals see Jewish Encyclopedia, ix. 608b, *s. v.* Periodicals, and the list given at end of that article.

The history of Rumanian legislation against the Jews during the nineteenth century is one of the most remarkable in all the annals of Jewish persecution. It culminated in the Artisan Bill of March 16, 1902, which was intended to prevent Jews earning their livelihood by any form of handicraft or trade, and against which Secretary Hay protested in a ministerial note to the Rumanian government (Aug. 11, 1902), pointing out the tendency of such legislation to produce an abnormal stream of emigration to the United States. The following resumé of enactments includes most of the measures adopted during the century:

1803. Alexander Monize of Moldavia forbids Jews to rent farms ("American Jewish Year Book," 1901, p. 48).

1804, May 18. Alexander Moronzi of Moldavia forbids Jews to buy farm products (Loeb, "La Situation des Israélites en Turquie, en Serbie et en Roumanie," p. 212, Paris, 1877 [hereafter cited as "Loeb"]).

1817. "Code Calmachi," section 1430, forbids Jews of Rumania to acquire real property (Loeb, p. 213).

By 1818. Code of John Caradja of Wallachia repeats the Church laws against allowing Jews to be witnesses against Christians ("Am. Jew. Year Book," 1901, p. 50).

By 1819. Code of Kallimachor of Moldavia gives civil rights to Jews, who, however, may not own land ("Am. Jew. Year Book," 1901, p. 50).

1831. Fundamental law of Moldavia, ch. iii., section 94, orders all Jews and their occupations to be registered; Jews not of proved usefulness are to be expelled; others of same class shall not be allowed to enter (Loeb, p. 214).

1839, March 11. Tax of 60 piasters per annum placed on Jews of Moldavia (Loeb, p. 215).

1850, Dec. 12. No Jew allowed to enter Rumania unless possessed of 5,000 piasters and of known occupation (Loeb, p. 216).

1851, May 5. Appointment of commission of vagabondage at Jassy to determine right of entry of foreign Jews (Loeb, p. 216).

1861, June 17. Circular of Rumanian ministry, preventing Jews from being innkeepers in rural districts (Loeb, p. 217).

1864, April 12. Communal law of Rumania permits only those Jews to be naturalized who (1) have reached the grade of non-commissioned officers in the army, (2) or have passed through college, (3) or have a recognized foreign degree, (4) or have founded a factory (Loeb, pp. 107–108).

1864, Dec. 4. Jews excluded from being advocates (Loeb, p. 124).

1864, Dec. 7. Elementary education of all children between the ages of eight and twelve (Sincerus, "Les Juifs en Roumanie" [hereafter cited as "Sincerus"]).

1866, April 14. Ghika, Rumanian minister of interior, permits Jews already settled in rural districts to keep farms till leases run out, but they must not renew them (Loeb, p. 218).

1868, March. Law submitted to chamber preventing Jews from holding land, settling in the country, selling food, keeping inns, holding public office, trading without special permits. Jews already settled in rural districts were to be driven therefrom. This was withdrawn April 5, in fear of the intervention of the powers (Loeb, pp. 169, 311–312).

1868, June 23. All Rumanians forced to serve in army, "but not strangers" (Loeb, p. 109); therefore Jews who served were for this purpose regarded as Rumanians.

1868, Dec. 27. Jews excluded from medical profession in Rumania (Loeb, p. 124). Clause omitted in decree of June, 1871.

1869, Jan. 15. Jews not allowed to be tax-farmers in rural communes (Loeb, p. 112).

1869, July. Note of M. Cogalniceano to French consul at Bucharest refuses to consider Jews as Rumanians (Loeb, p. 102).

1869, Oct. Extra tax put on kasher meat at Roman and Focsan (Loeb, p. 127).

1869, Oct. 25. Jews prevented from being apothecaries in Rumania, except where there are no Rumanian apothecaries (Loeb, p. 125; Sincerus, p. 102).

1870, Nov. 10. Servian Jews obliged to serve in army (Loeb, p. 57).

1872, Feb. 15. All dealers in tobacco in Rumania must be "Rumanians" (Loeb, p. 120).

1873, April 1. Law forbidding Jews to sell spirituous liquors in rural districts (Loeb, p. 188). A license may be given only to an elector (Sincerus, p. 19).

1873, Aug. 4 and Sept. 5. Chief physicians of sanitary districts must be "Rumanians" (Sincerus, p. 102).

1874, June 8–20. Sanitary code restricts office of chief physician of districts and hospitals to Rumanians. No pharmacy may be opened without special permit of minister of interior. Directors of pharmacies may be "strangers" up to 1878; after that, only in case there is no Rumanian pharmacy. New pharmacies may be opened only by Rumanians (Sincerus, p. 103).

1876. Revised military law of Rumania declares "strangers" liable to military service unless they can prove themselves to be of another nationality (Loeb, p. 109).

1879, Oct. 21. Rumanian Senate passes law stating that distinctions of religion shall not be a bar to civil or political rights, but that "strangers" may obtain naturalization only by special law on individual demand and after ten years' residence (Act VII. of Constitution; Sincerus, pp. 3–4).

1880, June 6. The directors and auditors of the National Bank of Rumania must be Rumanians (Sincerus, p. 77).

1881, March 18. Law of expulsion passed, authorizing minister of interior to expel, or order from place to place, without giving reason, any stranger likely to disturb public tranquillity (Sincerus, p. 146). (Originally intended against Nihilists after murder of czar, but afterward applied to Jews.)

1881, July 16. Law promulgated declaring that all "agents de change" or "courtiers de merchandise" must be Rumanians or naturalized, except in the ports (where there are Christian "strangers") (Sincerus, p. 45).

1881, Oct. 21. Ministerial council extends the law excluding Jews from sale of liquors in rural districts, to cities and towns included in such districts (Sincerus, pp. 22–23).

1881, Nov. 11. All "strangers" in Rumania required to obtain a permit of residence before they may pass from place to place (Sincerus, p. 163).

1882, Feb. 26. Jews forbidden to be custom-house officers (Sincerus, p. 53).

1882, Nov. 3. Rumanian Senate passes law declaring all "inhabitants" liable to military service, except subjects of alien states (Sincerus, p. 35). See above, June 23, 1868.

1884, Jan. 31. Rumanian Senate decides that "strangers" have no right of petition to Parliament (Sincerus, p. 197).

1884, March 19. Law passed prohibiting hawkers from trading in rural districts (Sincerus, p. 65).

1885, April 15. Pharmacy law permits minister of interior to close any pharmacy not under direction of a recognized person; pharmacies may be acquired only by Rumanians or by naturalized citizens; permission to employ "strangers" extended to 1886 (Sincerus, p. 104).

1886, March 13. Electors of chambers of commerce must be persons having political rights (Sincerus, p. 75).

1886, June 16. Druggists must be Rumanians or naturalized citizens (Sincerus, p. 84).

1886, Dec. 7. Account-books must be kept in Rumanian or in a modern European language (Sincerus, p. 81). (The object was to keep out Yiddish.)

1887, Feb. 28. All employees of the "regie" must be Rumanians or naturalized (Sincerus, p. 29).

1887, April 28. Farmers of taxes in Rumania must be persons capable of being public officers (Sincerus, p. 89).

1887, May 22. Majority of administrators of private companies must be Rumanians (Sincerus, p. 78).

1887, May 24. Five years after the foundation of a factory two-thirds of its workmen must be Rumanians (Sincerus, p. 94).

1887, Aug. 4. Ministerial circular orders preference to be given to children of Rumanians in the order of admission to public schools (Sincerus, p. 123).

1889. Of 1,307 permits issued to hawkers only 126 went to Jews; of these only 6 were held in Wallachia (Sincerus, p. 70).

1892, Aug. 31. Retired Jewish soldiers are not allowed to serve as rural gendarmes (Sincerus, p. 40).

1893, April 21. Professional education permitted to "strangers" only when places are available and on payment of fees. The number of "strangers" on the roll of such an educational institution must not exceed one-fifth of the total roll, and these may not compete for scholarships. "Strangers" are not admitted at all to schools of agriculture (Sincerus, p. 138).

1893, May 20. Rumanian Senate passes law giving preference to children of Rumanians in elementary public schools, and placing a tax on children of "strangers" admitted (Sincerus, p. 129). This tax amounted to 15 francs for rural, and 30 for urban, schools (*ib.* 127).

1893, June 26. Royal decree declaring all functionaries in the sanitary service must be Rumanians, except in rural districts. "Stranger" invalids may be admitted to free public hospitals only on payment of fees, and they may not in any case occupy more than 10 per cent of the beds. A "stranger" may be taken as an apprentice by an apothecary only where there is a Rumanian apprentice (Sincerus, pp. 106, 110, 115).

1894, Jan. 26. Farmers may be represented in law-courts by their stewards, if the latter be Rumanians, not Jews (Sincerus, p. 44).

1895, May 22. Students in the military hospitals, and army doctors must be either Rumanians or naturalized citizens (Sincerus, p. 117).

1896, April 13. Jews may not act as intermediaries at the customs in Rumania (Sincerus, p. 54).

1896, June. A ministerial order declares that letters on school business (excuses for absence, etc.) need not be stamped, except in the case of "strangers"; only children of "strangers" are required to pay entrance-fees at examinations (Sincerus, p. 130).

1896, June 26. Ministerial order instructs rural council that permission to remain in a rural district may be revoked at any moment (Sincerus, p. 185).

1898, April 4. Law permitting secondary instruction of children of "strangers" only where places are available and on payment of fees, though to Rumanians tuition is free (Sincerus, p. 133).

1898, Oct. Admission to public schools in Rumania refused to 11,200 Jewish children (Sincerus).

1899, Feb. 18. Only Rumanians henceforth admitted as employees on state railways (Sincerus, p. 97).

1899, Oct. 21. Ministerial order closes private Jewish schools in Rumania on Sundays (Sincerus, p. 141).

1900. Number of Jewish children in elementary public schools in Rumania reduced to 5½ per cent; in secondary schools from 10½ per cent (in 1895) to 7½ per cent (Sincerus, p. 133).

1900, Feb. 27. Ministerial circular orders pupils to receive instruction in Jewish private schools with heads uncovered (Sincerus, p. 143).

1900, March 28. On private railways, 60 per cent of the employees must be Rumanians (Sincerus, p. 99).

1900, April 17. Ministerial circular orders Jewish private schools to be open on Saturdays (Sincerus, p. 142).

1902, March 16. Artisans' bill requires special authorization from the authorities to carry on any trade, only to be obtained by "strangers," *i.e.*, Jews, on production of foreign passports, and proof that in their "respective countries" reciprocal rights are accorded to Rumanians ("Am. Jew. Year Book," 1902-3, p. 30).

J.

RUMSCH, ISAAC MOSES: Russian teacher and Hebrew author; born in the village of Zezemer, government of Wilna, April 6, 1822; died in 1894. At the age of nine he went to Wilna, where he studied the Talmud in the yeshibah of his brother Joseph Rumsch, and then in that of R. Mordecai Melzer. Subsequently he studied the Bible and Hebrew grammar secretly and acquired a knowledge of German and other secular subjects; but his plan of going to Germany to obtain a scientific education was frustrated by the persecutions to which he was subjected by his relatives because of his love for study. When in 1853 the Russian government opened public schools for Jewish children in the government of Wilna, he, together with his friend Judah Löb Gordon, was appointed a teacher in the school of Ponevyezh.

Rumsch was the author of the following works: "Kur 'Oni" (Wilna, 1861; printed at the expense of the Russian government), a free Hebrew translation of "Robinson Crusoe" from the German of Rauch; "Ḳin'at Sifre Ḳodesh" (*ib.* 1873), critical glosses on L. Mandelstamm's Russian translation of the Psalms, together with notes on some of them; "Shillumat Resha'im," a story of Jewish life, and "Ḥatikat Bad" a Hebrew novel (*ib.* 1875); "Megillat Ester ha-Sheniyah" (*ib.* 1883), a historical novel of Esther or Esterka, the favorite of the Polish king Casimir the Great, in Hebrew based on the German; and "Bat Ḥayil," a historical novel of Jewish life in Spain in the fourteenth century, freely translated from Philippson and published in "Ha-Asif," 1889, v. 1–47. He contributed also many articles to "Ha-Karmel" and "Ha-Meliẓ," and left in manuscript some Hebrew stories and notes on the Bible.

RUNKEL, SOLOMON ZALMAN: Rabbi of Mayence and afterward of Worms; died before 1426. Runkel was a cabalist, as is shown by his work "Ḥatan Damim" (Prague, 1605), which contains a cabalistic commentary on the Pentateuch according to gemaṭria and noṭariḳon, besides collectanea of ritual laws for circumcision, wedding ceremonies, etc. Runkel did not finish the commentary, which was completed by Isaac ha-Kohen, son-in-law of R. Liwa of Prague.

RUSSELL, HENRY: English composer and singer; born at Sheerness Dec. 24, 1812; died in London Dec. 7, 1900. He appeared in infancy in Christmas pantomimes, and later learned singing from Bellini in Italy in 1825, and counterpoint from Donizetti. He settled in Rochester, N. Y., in 1843 as teacher of the pianoforte, having appeared as *Elvino* in "La Sonnambula" in Philadelphia in 1839. For years he traveled in America, giving monologue entertainments of his own compositions. He was also engaged for the concerts of oratorio and philharmonic societies.

On his return to Europe Russel appeared in entertainments in many cities in Great Britain and Ireland and repeated his American success. Finally he retired from the concert-room and settled in London as an opulent money-lender and bill-broker. Eight hundred songs have come from his prolific pen, of which no less than 760 have been published. Although the 800 together brought to the author only £400, Russell made a fortune by singing his songs. In three seasons in America he realized from this source $50,000, which was, however, entirely lost through the failure of a New York bank.

His songs include: "Ivy Green," "Cheer, Boys, Cheer," "A Life on the Ocean Wave," "I'm Afloat," "Some Love to Roam," and "To the West, to the West, to the Land of the Free" (said to have largely influenced emigration to the United States).

Russell was twice married. His first wife, who was not of the Jewish faith, was a daughter of Lloyd, the banker; his second was Miss DeLara, of a Jewish family. He was buried according to the rites of the Christian Church.

RUSSIA.—History: [Much of the history of the Jews of Russia having already appeared under the headings Alexander, Armenia, Caucasus, Cossacks, etc., the present article has been framed so as to include only those facts which are necessary to supplement the data given in those articles.] In some of the territory included within the limits of the present Russian empire Jewish inhabitants were to be found in the very remote past; Armenian and Georgian historians record that after the destruction of the First Temple (587 B.C.) Nebuchadnezzar deported numbers of Jewish captives to Armenia and to the Caucasus. These exiles were joined later by coreligionists from Media and Judea. Some members of these early colonies, notably the Bagratuni, became prominent in local political life. The Bagratuni family stood high in the councils of the Armenian government until the fourth century of the present era; but religious pressure finally compelled its members to adopt Christianity. According to tradition, another influential Jewish family, the Amatuni, came to Armenia in the reign of Artashes (85–127 C.E.). At the end of the fourth century there were Armenian cities possessing Jewish populations ranging from 10,000 to 30,000. The Jews were subjected to great suffering when the Persians invaded Armenia, most of the cities being destroyed, and many of the Jews being led into captivity (360–370).

Jews had lived in Georgia also since the destruction of the First Temple. The ruler of Mzchet assigned them a place for settlement on the River Zanav. This locality was subsequently named "Kerk," meaning "tribute," on account of the taxes imposed upon the Jews. After the capture of Jerusalem by Vespasian (70 C.E.) other Jewish exiles joined their coreligionists at Mzchet (see Jew. Encyc. ii. 117b, *s.v.* Armenia, and *ib.* iii. 628, *s.v.* Caucasus).

Monuments consisting of marble slabs bearing Greek inscriptions, and preserved in the Hermitage, St. Petersburg, and in the museum at Feodosia (Kaffa), show that Jews lived in the Crimea and along the entire eastern coast of the Black Sea at the beginning of the common era, and that they possessed well-organized communities with synagogues. They were then already Hellenized, bearing such Greek names as Hermis, Dionisiodorus, and Heracles. In the reign of Julius the Isaurian (175–210) the name "Volamiros" was common among the Jews of the Crimea. This was the origin of the Russian name "Vladimir." Most of the Greek inscriptions relate to the liberation of slaves who in obedience to religious vows had been dedicated to the Synagogue. The entire Jewish community thus became the guardian of these liberated slaves.

Early Period.

The presence of well-organized Jewish communities in that region serves to prove that Jews lived there a long time before the common era, and supports the statement of Strabo (b. in Pontus 63 B.C.) that it is not easy to find in the inhabited world a place without Jewish inhabitants. Philo Judæus also remarks that the Jews populated numerous cities on the continent and the islands of Europe and Asia. Beginning with the second half of the second century the Crimean inscriptions are exclusively in Hebrew, instead of in Greek as they formerly were, which goes to show that the first Jewish settlers in the Crimea were not from western Europe, but were Bosporian and Asiatic Jews. Of such inscriptions about 120 are unquestionably genuine; and these cover the period 157 to 1773 (see Jew. Encyc. iii. 329b, *s.v.* Bosporus; also Crimea; Kaffa; Kertch).

Jews from the Crimea moved eastward and northward and became the founders of Jewish communities along the shores of the Caspian Sea and of the lower Volga (see Atel), carrying with them a civilization more advanced than that of the native tribes among which they settled. Under their influence Bulan, the "chaghan" of the Chazars, and the ruling classes of Chazaria adopted Judaism in 731 or 740. The spread of Judaism among the Chazars rendered the entire region of the lower Don, the Volga, and the Dnieper especially attractive to Jewish settlers (see Jew. Encyc. iv. 1, *s.v.* Chazars). After the overthrow of the Chazarian kingdom by Swyatoslaw (969), Jews in large numbers fled to the Crimea, the Caucasus, and the Russian principality of Kiev, formerly a part of the Chazar territory. There is even a tradition (unsupported, however, by sufficient documentary evidence) that the city of Kiev was founded by the Chazars. Mention is made, in Russian chronicles of the year 987, of Chazarian Jews who came to Prince Vladimir desiring to convert him to Judaism. In the eleventh and twelfth centuries the Jews occupied in Kiev a separate quarter, called the Jewish town ("Zhidy"), the gates leading to which were known as the Jewish gates ("Zhidovskiye vorota"). At this time Jews are found also in northeastern Russia, in the domains of Prince Andrei Bogolyubski (1169–1174).

From the writings of Ilarion, Metropolitan of Kiev in the first half of the eleventh century, it appears that the local Jewish community possessed very considerable influence. It is also evident that that author's familiarity with Jewish matters was gained by personal contact with Jews, and that he found it necessary to combat the spread of Judaism. In 1321 Kiev, Volhynia, and Podolia were conquered by the Lithuanian grand duke Gedimin, who granted the Jewish inhabitants of these territories the same rights that were enjoyed by his Jewish subjects in Lithuania. These rights were subsequently amplified by the well-known charter of Witold in 1388, under which the Jews of Kiev and of other Russian principalities were accorded full citizenship, not a few of them serving in the body-guards of the Russian princes.

Jews lived in Lithuania and Poland as early as the tenth century, having come from South Russia, from Germany, and from other west-European countries. See Russia: Poland.

Muscovite Russia.

Documentary evidence as to the presence of Jews in Muscovite Russia is first found in the chronicles of 1471. The Grand Duke of Moscow, Ivan III. (1462–1505) was the first Muscovite prince to abolish the feudal organization and to establish a centralized government. The independent towns of Novgorod and Pskov alone remained unannexed to Russia. Novgorod, which was a member of the Hanseatic League, was frequently visited by foreign merchants, who thus helped to introduce Western ideas among the Russian people. The grand duke Ivan was eagerly watching events in Novgorod, where opposing political parties struggled for supremacy. One of these parties strongly favored annexation to the spiritual center of Greek-Orthodoxy, while the other, disapproving the growing religious formalism and ceremonial, attempted to lead the Russians toward the more progressive forms of western Europe. This political and religious unrest prepared a favorable soil for religious heresy. In 1470 the people of Novgorod invoked the aid of Prince Michael Olelkovich, brother of the viceroy of Kiev, in their struggle with Moscow. He brought with him the learned Jew Skhariyah, who converted the priest Dionis to Judaism (see Aleksei; Ivan III., Vassilivich; Judaizing Heresy).

The Judaizing sect rapidly gained adherents and spread to Moscow, where it won the support of influential men standing near to the grand duke. Ivan himself was favorably disposed toward the new religious movement, and for political reasons made no attempt to suppress it. It was with evident reluctance that he yielded to the appeal of the Bishop of Novgorod and the Metropolitan of Moscow to punish the offenders and to check the spread of the heresy. Very probably Ivan attempted to strengthen his influence in Lithuania with the aid of Michael Olelkovich and Skhariyah (see Lithuania). There may have been some connection between the expulsion of the Jews from Lithuania by Alexander in 1495 and Ivan's attitude toward the Judaizing heresy. It is known that, although the Jews were readmitted in 1503, stern measures against the Judaizers were not taken until 1504. At any rate it is evident from many sources that Ivan attempted to further his schemes of conquest in Lithuania as well as in the Crimea by gaining the support of the Jews. Panov comes to the conclusion ("Yeres Zhidovstvuyushchikh," in "Zhurnal Ministerstva Narodnavo Prosvyescheniya," 1876) that Skhariyah (Zacharias) of Kiev and Zacharias Guizolfi were one and the same person—a deduction which has very little justification, as may be seen from the facts set forth in the article Guizolfi.

Ivan's dealings with the Jews were not limited, however, to the two Zachariases. There is documentary evidence that the grand duke corresponded with the Jew Khozei Kokos. He instructed the ambassador Beklemishev in 1474 to convey his greetings to Kokos, and in a message to the latter requested him to use his influence with the Crimean khan Mengli-Girei to induce that ruler to send not merely his assertions of friendship, but a formal treaty with Ivan. The grand duke also asked Kokos to assist his agents as theretofore, for which aid he promised due compensation; and he explained that the presents then forwarded to Kokos were of less value than they might have been "because the ambassador was unable to carry much baggage." The grand duke further requested Kokos to abstain from the use of Hebrew script in his correspondence, and to employ instead Russian or Tatar characters. The last request shows that on previous occasions letters in Hebrew had been received and translated at the Muscovite court. Other documents show that Kokos conducted negotiations relating to the marriage of the heir to the Muscovite throne with the daughter of the Prince of Mangup; and in 1486 the Russian ambassador was instructed to inform Kokos that, should his services prove as acceptable as theretofore, he would be rewarded by the grand duke "with palaces, amethysts, and fine pearls."

The grand duke's invitation to Zacharias Guizolfi to reside in Moscow indicates that no restrictions existed with regard to the residence in that city of wealthy and influential Jews. The execution of the Jewish court physician Leo (or Leon) did not affect Ivan's attitude toward the Jews; for in his subsequent correspondence (up to 1500) he still urged Guizolfi to settle in Moscow.

It is known that in the reign of Vasili Ivanovich IV. (1505–33) the Jews were held in ill repute mainly on account of the Judaizing heresy. While there is proof that Lithuanian Jewish merchants carried on trade with and visited Moscow and Smolensk, their transactions were made possible only by the lax enforcement of the restrictive regulations concerning the Jews; the grand duke's special ambassador to Rome, Dmitri Gerasimov, whose mission it was to establish a union between the Greek-Orthodox and the Roman Catholic churches (1526), remarked to the historian Paolo Giovio, "We abhor the Jews and do not allow them to enter Russia."

Muscovite treatment of the Jews became harsher in the reign of Ivan IV., the Terrible (1533–84). Apart from the savage instincts of the czar, from which all of his subjects suffered, he vented upon the Jews his religious fanaticism and hatred, which were strengthened by the hostile attitude of the Catholic Church toward the Jews of western Europe. In his conquest of Polotsk, Ivan IV. ordered that all Jews who should decline to adopt Christianity should be drowned in the Düna. In the period of thirty years which intervened between the death of Ivan IV. and the accession of the first Romanof, Jews were connected more or less intimately with political events in the history of the Muscovite kingdom. Thus mention is made of Jews among the followers of the usurper Grishka Otrepyev. There is even a tradition that he himself was of Jewish origin.

The Russian chronicler who describes the times of the first pseudo-Demetrius (see "Regesty," i. 338) states that the Muscovite kingdom was overrun with foreign heretics, Lithuanians, Poles, and Jews to such an extent that there were scarcely any native Russians to be seen (1605).

In the reign of the first Romanof, Michael Feodoro-

The Romanofs.

vich (1613–45), certain enactments placed the Jews on an equality with the Lithuanians, Germans, Tatars, and Circassians, all nationalities being treated in a spirit of tolerance. In a message of Oct. 9, 1634, to the governor of Great Perm, the czar ordered the release of certain Lithuanian prisoners (Germans, Jews, Tatars, and Circassians), who were to be permitted to return to their fatherlands or to remain in Russia, as they might decide.

Four years later (1638) the czar in his congratulatory message to the King of Poland displayed a changed attitude toward the Jews. He instructed his representatives at the Polish court to propose that Polish merchants should be prohibited from bringing into Russia certain merchandise, "and that Jews be forbidden to enter Russia at all" (see Aaron Markovich of Wilna). This attitude was undoubtedly inspired by purely religious motives; and the czar's message indicates that, notwithstanding the persecution of the Jews in Russia, they still entered the country for purposes of trade. On the whole, it is quite certain that there was no fixed policy in the treatment of the Jews by Michael's government, and that orders and decrees were frequently issued as special occasions required.

In the code of 1649, under Michael's successor, Alexis (Aleksei) Mikhailovich (1645–76) the attitude of the government toward the Jews was more clearly defined. This code contains no general direct limitations of the rights of the Jews then living in Russia, and where in exceptional cases such limitations are made they concern religious matters and foreign Jews only. The document furnishes strong proof that the former restrictions upon the Jews were inspired by religious intolerance, and that the expression of such intolerance was officially avoided in the written code. It may be inferred from the decrees issued subsequently to the code that the Jews had access to all the towns of Russia, including Moscow. By the first of these decrees, the ukase of July 30, 1654, the establishment of turnpikes was ordered so that all persons going to Moscow might be examined: "and such persons as shall prove to be from Mstislavl and other frontier cities, Lithuanians, Catholics, nonconformists, Jews, Tatars, and various unchristian people, all shall be admitted to Moscow." This enactment, later incorporated into the legal code, shows that the Jews were not singled out from the other peoples, and that they were subject to the general laws. On special occasions, however, decrees unfavorable to them were issued, as, for instance, in the case of the expulsion of the Jews from Moghilef in 1654.

The ukase of March 7, 1655, ordering the transfer of "Lithuanians and Jews" from Kaluga to Nijni-Novgorod, provided for their proper protection and for the payment to them of a liberal allowance for traveling expenses. Moreover, article ii. of the treaty of Andrusov (1667), agreeing upon an armistice between Russia and Poland for a period of thirteen years and six months, provided that all Jews who so desired and who had not become converts to Christianity should be allowed by the czar to return to Polish territory, taking with them their wives, children, and possessions, and that those preferring to remain in Russia should be accorded the requisite permission.

The Ukrainian writer Joanniki Golyatovski, in his work "Messia Pravdivy" (1676), attacked the Jews with the intention of prejudicing the czar against them. Kostomarov, in commenting on this fact, states that, notwithstanding the disinclination of the Great Russians to admit the Jews to their country, the latter found their way to Moscow, usually concealing their racial and religious affiliations. It is worthy of note here that there were at that time in Moscow a considerable number of baptized Jews in the monasteries, especially in the Voskresenski monastery, concerning whom Archbishop Nikkon wrote to Alexis complaining that they "had again begun to practise their old Jewish religion, and to demoralize the young monks." It may be seen from the facts presented here and in the articles Alexis Mikhailovich and Gaden that in this reign the Jews of Moscow had increased both in numbers and in influence. Alexis' son and successor, Feodor Alekseyevich (1676–82), stipulated in his treaty (1678) with King John Sobieski of Poland that all Polish merchants, excepting those of the Jewish faith, should be allowed to visit Moscow ("Polnoye Sobraniye Zakonov," i. 148).

Under Peter the Great.

The Russian documents thus far accessible do not permit a definite conclusion as to the attitude of Peter the Great (1682–1725) toward his Jewish subjects. The Russian historian Solovyev, who was himself not without prejudice toward the Jews, points out ("Istoriya Rossii," vol. xv.) that when Peter invited talented foreigners to Russia, he invariably excepted Jews. No documentary evidence in proof of this assertion is, however, furnished. Peter's edict of April 16, 1702, which Solevyev cites, contains no reference to the Jews; and the historian's assertion is evidently based on Nartov's anecdote concerning Peter's sojourn in Holland (1698). When petitioned by the Jews of Amsterdam, through his old friend Burgomaster Witsen, for the admission of their coreligionists to Russia, Peter is reported to have replied, "The time has not yet come for a union of the Jews and the Russians." Nartov also cites Peter as having stated that he would rather call to Russia Mohammedans or heathen than Jews, who are "tricksters and cheats." Nartov adds that Peter remarked to the Jewish delegation petitioning for the right to trade in Great Russia: "You imagine that the Jews are so shrewd as to be able to gain advantage over the Christian merchants; but I assure you that my people are more cunning even than the Jews, and will not permit themselves to be deceived."

On the other hand, the selection of Baron Shafirov, a baptized Jew, as chancellor of the empire, and the confidence shown in him, as well as the advancement by Peter of Dewier, supposedly the son of a Portuguese Jewish barber, indicate that the czar personally had no race prejudices, and that he discouraged superstition in the Greek-Orthodox Church. Nevertheless he found it expedient to leave unchanged the religious legislation framed by his father, Aleksei, which contained many restrictions of the rights of non-Christian subjects of the empire. In a document of the pinkes of Mstislavl, government of Moghilef, it is stated:

> ". . . Our children still to be born should tell the coming generations that our first deliverer never forsook us. And if all men were to write, they could not record all the miracles that were vouchsafed to us [until now]. For even now, on Thursday, the 28th of Elul, 5468, there came the Cæsar, called the Czar of Moscow, named Peter Alekseyevich—may his fame grow great!—with all his forces, a great and numerous army; and robbers and assassins from among his people attacked us without his knowledge, and blood came near being spilled. And if God our Master had not inspired the czar to come personally to our synagogue, blood would surely have flowed. It was only through the help of God that the czar saved us and revenged us, and ordered that thirteen of those men be immediately hanged, and there was peace again."

This incident does not necessarily show, however, that Peter was a steadfast friend of the Jews (Dubnow, in "Voskhod," 1889, pp. 1-2, 177).

Active measures against the Jews, especially those living in the Ukraine, were inaugurated by Peter's successor, Catherine I. (1725-27). On March 25, 1727, the empress issued a ukase prohibiting the leasing of inns and customs duties to Jews in Smolensk, and ordering the deportation beyond the frontier of Baruch Leibov and those associated with him. On May 7 of the same year another edict was promulgated ordering the expulsion of the Jews from Russia:

> "The Jews, both male and female, who are living in Ukraine and other Russian towns are to be immediately deported beyond the frontier, and must not henceforth be allowed to enter Russia under any circumstances. The requisite measures to prevent this must be taken in all places. In removing the said Jews care should be taken to prevent their carrying out of Russia gold ducats or any similar Russian coins. If such should be found in their possession, they should be exchanged for copper."

In signing this decree Catherine was apparently prompted by purely religious motives. She was strongly influenced by her religious advisers, notably by Feofan Prokopovich, elder of the Holy Synod. Prokopovich also secured the cooperation of Menshikov, who may have been provoked against the Jews by his quarrel with Shafirov. It was Menshikov who prohibited the election of Jews as general or military elders in Little Russia. The Ukrainians soon found that the removal of the Jewish merchants from among them resulted in great economic injury to the country, and their hetman, Apostol, petitioned the Senate for a revocation of this drastic law (1728).

Under Peter II. (1727-30) and Anna Ivanovna (1730-40) the strict measures against the Jews were at first somewhat relaxed. Toward the end of Anna's rule Jewish religious influences became more manifest. It was in her reign that the above-mentioned Baruch Leibov and the naval captain Voznitzyn were burned at the stake (July 15, 1738), the former for proselytizing, the latter for apostasy. By a decree of July 22, 1739, Anna ordered the expulsion of the Jews from Little Russia; and on Aug. 29 of the same year she issued another decree forbidding Jews to own or lease inns or other property in that territory. It was also in her reign and in the subsequent reign of Elizabeth Petrovna that the Jews of Lithuania and Ukraine suffered from the excesses of the Haidamacks.

Elizabeth (1741-62), the daughter of Peter the Great, was especially harsh in enforcing anti-Jewish legislation. In her edict expelling the Jews from Little Russia she stated that "no other fruit may be expected from the haters of Christ the Savior's name than extreme injury to our faithful subjects." When the Senate, urged by the Little-Russian Cossacks and the merchants of Riga, decided to recommend to the empress a more liberal treatment of the Jews, in view of the great losses that would otherwise result to the two countries and to the imperial treasury, Elizabeth wrote on the margin of the report: "I will not derive any profit from the enemies of Christ" (1742). Having discovered that her court physician Sanchez was an adherent of the Jewish religion, Elizabeth, notwithstanding the esteem in which he was held, summarily ordered him to resign from the Academy of Sciences and to give up his court practise (1748). The mathematician Leonhard Euler, who was also a member of the Academy of Sciences, wrote from Berlin: "I doubt much whether such strange procedures can add to the glory of the Academy of Sciences." It should be added, however, that the fanatical empress persecuted the Mohammedans as well. In 1743 she destroyed 418 of the 536 mosques in the government of Kazan.

Catherine II.

A broader conception of the rights of the Jews obtained under Catherine II. (1762-96). For while the empress, though talented and liberal in her personal views, was careful not to antagonize the prejudices of the Greek-Orthodox clergy, and still found it inexpedient to abolish entirely the time-honored discriminations against the Jews that had become a part of the imperial policy of the Romanofs, she nevertheless found it necessary to concede something to the spirit of the times. For this reason, and recognizing also the useful services that the Jewish merchants might render to the commerce of the empire, she encouraged a less stringent application of the existing laws. Thus, in spite of the protests of the merchants of Riga, she directed Governor-General Browne of Livonia to allow the temporary sojourn in Riga of a party of Jews, who ostensibly had the intention of settling in the new Russian provinces (1765); and in 1769 Jews were permitted to settle in these provinces on equal terms with the other foreigners who had been invited to develop that uninhabited region. About this time occurred the first partition of Poland, resulting in the annexation to Russia of the White-Russian territory (1772), with its vast Jewish population.

The edict of Catherine, as promulgated by Governor-General Chernyshov, contained the following passage relating to the Jews:

> "Religious liberty and inviolability of property are hereby granted to all subjects of Russia, and certainly to the Jews also; for the humanitarian principles of her Majesty do not permit the exclusion of the Jews alone from the favors shown to all, so long as they, like faithful subjects, continue to employ themselves as hitherto in commerce and handicrafts, each according to his vocation."

Notwithstanding the promise of Chernyshov (1772) that the White-Russian Jews would be allowed to enjoy all the rights and privileges thitherto granted to them, they continued to suffer from the oppression of the local administrations. In 1784 the Jews of White Russia petitioned the empress for the

Petition of the White-Russian Jews.

amelioration of their condition. They pointed out that, having lived for generations in villages on the estates of the landlords, they had established distilleries, breweries, etc., at great cost, and that the landlords had been pleased to lease various revenues to them. The governor-general had now prohibited the landlords from making any leases to them, so that they were in danger of becoming impoverished. By an imperial order the White-Russian Jews were eligible for election to municipal offices, but they had never been elected in practise, and were thus deprived of legal safeguards. They were at a further disadvantage because of their ignorance of the Russian language. They therefore asked for representation in the courts, particularly in cases between Jews and Christians, and that purely Jewish and religious affairs should be tried in Jewish courts according to Jewish law. They petitioned further for proper protection in the observance of their religion in accordance with the promises made to them. In some towns and villages Jews had built houses under a special arrangement with the landlords concerning the ground-rents; now the landlords had in some instances raised the rents without warning, and the Jews had in consequence been compelled to abandon their houses. They therefore asked that the rents be maintained as theretofore, or that at least a few years of grace be given them to enable them to make the necessary arrangements for removing to other places. In some towns, to make room for squares and to facilitate the more modern arrangement of the city streets, dwellings and other buildings had been torn down without compensation to the Jewish owners. Jews belonging to villages and townlets had been compelled by the authorities to build houses in the cities, and were thus brought to the verge of ruin.

After due consideration of this petition by the Senate, a ukase was issued (May 7, 1786) allowing landlords again to lease their distilleries and inns to Jews, and permitting the election of Jews to the courts, the merchant gilds, the magistracy, and the city councils. The request for special Jewish courts was not granted, though religious matters were placed under the jurisdiction of the rabbis and the kahals. Questions as to alleged extortionate rent-charges and damages sustained by the removal of buildings owned by Jews were left for adjustment to the local authorities. The petition of the Jews for protection in the exercise of their religion was granted.

Soon after the issue of this ukase White-Russian Jews came in larger numbers to Moscow, thus arousing the opposition of the merchants of that city. The latter applied to the military commander of Moscow (Feb., 1790) for the exclusion of the Jews, who, it was claimed, were undermining the prosperity of the merchants by selling goods below the standard price. Other stereotyped accusations were likewise made. From this application (preserved in Vorontzov's "Archives") it is evident that the Moscow merchants, whose usual business motto was "He who does not deceive makes no sales," were alarmed at the competition of the Jews; and, knowing that the tolerant empress would not countenance discrimination on religious grounds, they stated that they were free from religious prejudice and merely sought to protect their business interests. That they succeeded in their efforts is evident from the decision of the imperial council of Oct. 7, 1790, and from the ukase of the empress of Dec. 23, 1791, by which Jews were forbidden to register in the Moscow merchant gild.

Notwithstanding Catherine's liberal ideas, the perplexing Jewish question in Russia originated at the time of the first partition of Poland. H. R.

Paul I.

The tragic events in the life of Paul I. (1796–1801), as, for instance, the dethroning and the death by violence of his father, Peter III., and the subsequent attempts of his mother, Catherine II., to deprive him of the right of succession, made a serious impression upon him; and his reign was one of the darkest periods in the history of Russia. Nevertheless, his stormy reign was a propitious period for the Jews, toward whom Paul's attitude was one of tolerance and kindly regard. This is partly evidenced by the contemporary legislation, which consisted of only a few enactments. On the advice of his confidant, Baron Heiking, he granted the privilege of citizenship to the Jews of COURLAND, and gave them also municipal rights—a very important concession, as until then the Jews of Courland had been denied such privileges. But of even more importance is the fact that Paul I. opposed the expulsion of the Jews from the towns. Thus he prohibited their expulsion from Kamenetz-Podolsk and from Kiev. About this time (1796) the Senate without the emperor's knowledge enacted a law calling for a double payment for the gild license by the Jewish merchants. As to the decree of 1797 included in the legal code and imposing double taxation on the Jews, it is erroneously ascribed to Paul I. Such a decree was issued under Catherine II. in 1794, and although, in virtue thereof, the Jews continued to pay double taxes under Paul, he did not reenact it.

Paul's attitude toward the Jews and the part played by him in their historical life were of greater significance than may appear from his legislative measures. This is shown by contemporary official regulations not incorporated in the legal code.

In 1799 Senator Derzhavin, a Russian poet, was sent to White Russia commissioned to investigate the complaints of the Jewish inhabitants of Shklov against its owner, General Zorich. At about the same time one of the White-Russian courts was investigating a blood accusation against the Jews; and Derzhavin, who hated them as "the enemies of Christ" and wished also to help Zorich, proposed to Paul I. that the testimony of Jewish witnesses should not be accepted until the Jews proved that they were innocent of the accusation brought against them. This proposal, had it been accepted, would have been disastrous to the Russian Jews, for they would have been denied the right to testify at every trial of this nature, and the general effect would have been to deprive the Jewish population of the right of citizenship. Paul I., however, notified Derzhavin that when a case was once before a court it was not necessary to confuse it with questions concerning Jewish witnesses.

The Hasidim.

Still more important was the solution of the question involving the attitude of the government toward the Jewish schism that concerned the Jews of Russia and led to the formation of the sect of Ḥasidim. Under Paul the antagonism of the Ḥasidim toward their opponents became violent. The two parties began to make false accusations against each other to the government. The honored representative of the Ḥasidim, Zalman Borukhovich, was arrested and taken to St. Petersburg. According to the statement of his opponents, he has been guilty of active participation in an attempt to injure the government. Zalman succeeded, however, in proving his innocence, and at the same time in placing the Ḥasidim in a favorable light. He was released, and orders were issued directing that Ḥasidism be tolerated and that its adherents be left unmolested. Subsequently Zalman's enemies again succeeded in bringing about his imprisonment, but on the accession to the throne of Alexander I. he was liberated, and the sect was again declared deserving of toleration. These incidents resulted in again confining the religious controversy to the Jews themselves, and in lessening somewhat the aggressiveness of the antagonism.

Paul I. opposed the attempts of the Christian communities to expel, under the authority of old Polish privileges, the Jews from the cities. By his order the dispute between the Christians and Jews of Kovno, which had continued for many decades, was settled. He decreed that the Jews be allowed to remain in the city, and that no obstacles be placed in their way while in the pursuit of their trades or handicrafts. Consequent upon this there followed other decrees prohibiting the expulsion of the Jews from Kiev and Kamenetz-Podolsk. After the death of Paul I. the Christians of Kovno again petitioned for the expulsion of the Jews, but in view of Paul's decree their petition was not granted. During his reign, and apparently at his instance, the Senate began to collect material for comprehensive legislation concerning the Jews. His untimely death, however, prevented the immediate realization of his project, which was only completed under Alexander I.

In addition to the general censorship restrictions to which Russian literature was subjected in the reign of Paul, there was established a censorship for Jewish books. It had its center in Riga. Leon Elkan was appointed senior censor and was given two assistants, all being placed under the general Russian censorship committee in Riga. Paul I. was constantly informed of the reports of the censors on the books condemned, and thereby was able to take measures to strengthen the laws relating to objectionable books.

H. R. *

Alexander I.

The early years of the reign of Alexander I. (1801–1825) were marked by the prevalence of liberal ideas and by attempts at liberal legislation. As the pupil of Laharpe and the admirer of Rousseau, the young monarch was at first inclined to apply their teachings to practical government. The broader spirit in Russian legislation for the empire at large affected favorably the condition of its Jewish subjects also.

After the publication of the senatorial decree of Dec. 9, 1802, concerning the eligibility of Jews to municipal offices to the extent of one-third of the total number of such offices, the representatives of the Christian inhabitants of the city of Wilna applied (Feb. 1, 1803) to the chancellor of the empire, Count Vorontzov, for the repeal of this enactment, on the ground of its conflict with their ancient Lithuanian privileges. A similar spirit was manifested in many other towns of Russia.

Despite the hostility of the Christian merchants, the commencement of the political emancipation of the Jews may be said to have begun with the enactment of 1804. The administrative departments, however, either deliberately or unconsciously overlooked the true purpose of this law, and made no sincere attempt to further the solution of the Jewish question by ameliorating the economic condition of the Jews themselves. It was the purpose of the enactment to encourage in the first place the spread of modern education among the Jewish masses, to hasten their Russification, and to lead them to agricultural pursuits. Unfortunately those entrusted with the enforcement of these measures were not guided merely by motives of humanity and justice; and they endeavored to spread forcible baptism among the Jews. In consequence of this attitude the Jewish masses became suspicious of the government and its measures; and the latter could not therefore be carried out successfully (see Alexander I., Pavlovich; Israelite-Christians).

H. R.

Nicholas I.

The reign of Nicholas I., Pavlovich (born 1796; reigned 1825 to 1855), whose oppressive rule fell as a pall on the Russian people, was one of constant affliction for his Jewish subjects also. Of the legal enactments concerning the Jews framed in Russia from 1649 until 1881, no less than six hundred, or one-half, belong to the period embraced by the reign of Nicholas I. These laws were drafted almost entirely under the immediate supervision of the emperor. His attitude toward the Jews was marked, on the one hand, by a hatred of their faith and by persistent attempts to convert them to Christianity; on the other hand, by mistrust of them, which originated in the conviction that they, or at least the bulk of them, formed a fanatical, criminal association, which found in religion a support for its evil deeds. There is no doubt that the Jews then concentrated in the Pale of Settlement, and separated from the Christians by a series of legal restrictions and subject to the Kahal administration sanctioned by the government, lived a religious national life, narrow and marked by ignorance and fanaticism. Added to this was the extreme poverty of those within the Pale, which to some extent demoralized the outlawed Jewish population. But this unfortunate condition was not due to the exactions of their faith, and was only made worse by the measures now adopted. The system of limitations relating to the Jews which had developed in preceding reigns, and which considered them, because they were non-Christians, as the natural exploiters of

Christians, assumed under Nicholas I. peculiarly pronounced characteristics. In fact, the legislation of Nicholas I. relating to the Jews treated the following problems: First, according to the sense of one official document, "to diminish the number of Jews in the empire," which meant to convert as many of them to Christianity as possible. Secondly, to reeducate the Jews in such a manner as to deprive them of their individuality; that is, of their specific, religious, and national character. Thirdly, to render the Jewish population harmless to the Christians both economically and morally. The last two problems proved impossible of solution by the government mainly because it resorted to violent measures. In order to weaken the economic influence of the Jews, and to remove them from their religious and national isolation, it would have been necessary to scatter them by giving them an opportunity of settling in a vast region sparsely inhabited. Fearing, however, that even small groups of Jews would prove economically stronger than the ignorant, stolid people, most of whom were still serfs; and fearing also that the Jews would exert an ethical or even a religious influence on the Russians, the government refrained from encouraging more intimate relations between Jews and Christians, and reconcentrated the former, thus strengthening their isolation. Only by sudden and violent measures did the government ever remove a part of the Jewish population from its surroundings.

Anti-Jewish Policy.

In order to encourage conversion to Christianity the government resorted to various measures, the most important among them being the endowing of baptized Jews with all the rights accorded to Christians of the same rank. There were also other auxiliary measures. For instance, baptized Jews were exempted from the payment of taxes for three years; murderers and other criminals who adopted Christianity were shown comparatively greater leniency than they otherwise would have received. But measures were also taken for compulsory conversion to Christianity. There is no doubt that it was in virtue of this consideration that the Jews, who until 1827 had paid a specified sum for relief from conscription, as was done also by the Russian merchant class, were called upon in that year to appear for personal service in the army. This regulation was framed ostensibly for the more equitable distribution of military burdens among all the citizens, but, as a matter of fact, the government was actuated by a desire to detach from Jewish society, by the aid of military service, a large number of Jews, and to transplant them elsewhere on Russian soil so as to deprive them of their Jewish traits, and, where practicable, also to baptize them. The conditions of the service under Nicholas were such that transfers of this kind could be made with impunity. Conscription, notwithstanding the fact that exemption had been purchased, continued for twenty-five years, the ages of the recruits ranging from twelve to twenty-five. (For its effect on children see the article CANTONISTS.) Special oppressive conditions of conscription were devised for the Jews in order to increase the number of Jewish soldiers. The Jews were compelled to furnish ten conscripts per thousand of their population, while the Christians had to furnish only seven recruits; moreover, the Jews were obliged to furnish conscripts for every conscription term, while the Christians were exempted at certain intervals. The Jews were furthermore made to furnish conscripts for arrears in the payment of taxes, one conscript for every one thousand rubles. Subsequently these extra recruits were taken as a mere fine for arrears without discharging the indebtedness thereby. This led to terrible suffering. For lack of able-bodied men (many fled, fearing the miseries of war and compulsory baptism) the Jewish communities, represented by the kahals, were unable to furnish such an excessive number of recruits; and yet for every conscript that was not furnished at the proper time two new conscripts were demanded. Thus it became necessary to recruit cripples, invalids, and old men, who were placed in the auxiliary companies; at times even members of the kahal were impressed into service, notwithstanding their advanced years. The sole supporters of families were also taken, and, finally, boys only eight years old. In spite of all these measures, however, the conscription arrears were on the increase. In order to remedy the shortage, the Jewish communities were permitted in 1853 to seize within their own district all the Jews who had no passports and belonged to other Jewish communities, and to enroll them in their own quota of recruits. The heads of families, whatever their standing, had the right to seize such Jews and to deliver them to the authorities as substitutes for themselves or for members of their families. Among other objects the government thereby intended to rid itself of those Jews whom the kahals refused to supply with passports in order to avoid the increase of tax and conscription arrears.

Conversionist Measures.

Conscription Measures.

This measure was followed by the wide-spread persecution and capture of Jews who had no passports and who were known as "poimaniki." Furthermore, in localities where recruits were needed, the so-called "lovchiki" (catchers) began to seize even Jews possessing passports. Passports were stolen and destroyed, and the "poimaniki" were impressed into service without being able to secure redress. It was no longer safe for any man to leave his house. From motives of selfishness the local authorities encouraged this traffic in human beings. Children were made the special object of raids. They were torn by force or taken by cunning from the arms of their mothers in open daylight, and sold as having no passports. Nicholas I. himself was eager to increase the number of Jewish "cantonists." It happened, at times, that he permitted Jews to remain in localities from which they had been ordered to depart, on condition that they made cantonists of their sons, born or to be born.

The "Poimaniki."

The school reforms initiated by Nicholas I. were in their fundamental tendency similar to his military reforms. The education of Jewish children and youth at that time had a distinct religious and national character. This was caused largely by the con-

Educational Policy.

ditions of contemporary civic life, which discouraged intimate relations between Jews and Christians. The way to general enlightenment could have been paved most easily by the curtailment of the Jews' disabilities and by the improvement of their social condition. But Nicholas I. was, on the whole, not a friend of enlightenment or of civic tolerance, and his final consent to the initiation of school reforms was prompted, there is reason to believe, by a secret hope of the conversion of the Jews. Be this as it may, the school reform was directed under his influence with the view of forcing the reeducation of the growing generation of Jews in religious affairs. The reforms were outlined by the minister of public instruction, Uvarov, who was, apparently, a real friend of the Jews, and who found an able assistant in a German Jew, Max Lilienthal. The government established the so-called "government schools" of the first and second class, and for this purpose use was made of special Jewish funds and not of the general funds, notwithstanding the fact that the Jews paid their share of all the general taxes. According to a program previously worked out, instruction in the Talmud was to be included, but was to be nominal only, and was to be ultimately discontinued, as, in the opinion of the government, it tended to foster various evils. In Wilna and Jitomir two rabbinical schools for the training of teachers and rabbis were established. The schools were placed in charge of Christian principals, who were in most cases coarse and uneducated, and who were instructed to inculcate in the students a spirit contrary to the teachings of the Jewish faith. About the same time the persecution of the Jewish popular teachers ("melammedim"), who had been in charge of Jewish education for generations, was initiated. While it is true that the government schools had served the useful purpose of imparting to the Jewish masses a general education, yet they had failed to achieve the success that had been expected of them. The harsh methods, referred to above, created distrust and anxiety in the minds of the Jewish people, who were never made aware of the government's intentions. Moreover, certain laws were enacted simultaneously with the opening of the schools, and also later, that likewise awakened fear among the Jews. They ruthlessly forbade the observance of habits and customs made sacred by antiquity, but which were unimportant in themselves, and in the course of time would perhaps naturally have fallen into disuse. For the legislation on Jewish garments see the article Costume.

As an educational measure, the government of Nicholas I. attempted to direct the Jews into agricultural pursuits. This wise undertaking had its origin in the preceding reign, but assumed considerable practical importance under Nicholas I. Farmers were granted various privileges in the payment of taxes, and they and their descendants were freed from military service for a period of fifty years. Unfortunately, the severity subsequently displayed considerably reduced the number of would-be agriculturists. The enforcement of regulations for the proper management of the farms was entrusted to discharged non-commissioned officers, persons not at all fitted for the supervision of Jewish colonies. Besides, the Jews were forbidden to hire Christians to work for them. In 1844, however, these oppressive measures were repealed, and in 1852 new and broader provisions were enacted for inducing the Jews to take up agriculture on a larger scale.

Expulsions and Special Taxation.

Although the government made efforts to "reeducate" the Jews, placing a number of them in Russian environments, and although it introduced Russian influence among the young generation of Jews, also by forcible means, yet, fearing them, it provided likewise for the separation of the Jews from the Christians, unmindful of the fact that this segregation counteracted all its other enactments. To isolate the Jews, numbers of them were expelled, under various pretexts, from villages, towns, and entire provinces, though at intervals the measures of expulsion were relaxed. In 1843 the Jews were ordered from the 50-verst boundary-zone abutting Prussia and Austria, ostensibly because they were suspected of engaging in contraband trade (see below, *s.v.* Rural Communities). The enforcement of these measures gave ample opportunity for abuse and oppression, and led to a gradual economic ruin of the Jews, the great bulk of whom were already greatly impoverished. Apart from general causes, their economic condition had steadily been growing worse because they had been compelled to pay double taxes from 1794 to 1817, and when these double taxes were abolished they were replaced by special Jewish taxes. To be sure, the law stated that these taxes were imposed for the maintenance of good order and for the strengthening of the charitable work within the Jewish communities; nevertheless, the government did not turn over to the Jews for their own needs all of the moneys collected, a considerable part remaining in the hands of the government.

Abolition of the Ḳahal.

The abolition of the ḳahal (1844) may perhaps be considered as the most advantageous and most useful measure of the reign of Nicholas I. This popular elective institution had served in its time a useful purpose in Poland, where it protected the Jews from the surrounding hostile and turbulent classes. Also in Russia the ḳahal repeatedly fought in the defense of Jewish interests, but the religious dissensions which broke out within Russian Jewry transformed the ḳahal into an arena of party strife and internal conflict. The ḳahals utilized the tax assessments and other prerogatives as instruments by which they might persecute their enemies. These abuses paralyzed the beneficent activities of the ḳahal, transformed it into a bugbear for the populace, and deprived it of all semblance of authority in the eyes of the government. In the days of Nicholas I. it had already lost the character of a representative body, and had degenerated into an institution concerned merely with the contribution of the Jewish taxes to the imperial treasury. The government strengthened the power of the ḳahal in order to secure a more uniform collection of taxes and a more uniform conscription among the Jews. The increased power brought with it new abuses. To its old weapons the ḳahal added a new one—conscription. This period coincided with that of the awakened desire among the Jews for western-European education, particularly for the study of German. The fanatical leaders of the ḳahal persecuted those imbued with the new ideas, and thus retarded considerably the new culture movement.

But the abolition of the ḳahal had also its negative side. When in the following reigns the condition of the Jews was improved, they no longer possessed the representative institution which might have served them a useful purpose in securing certain reforms. With the abolition of the ḳahal there was also lost that bond of union among the Jews that was indispensable to them in the defense of their common interests as a distinct portion of the city population. Most of the Jews lived in the cities, and almost all of them belonged to the burgher or merchant class; but while at that time city gilds and merchant and artisan gilds enjoyed a certain degree of self-government in administrative, economic, and judicial matters, the rights of the Jews in so far as this was concerned had been limited even before the accession of Nicholas I., and he imposed still greater restrictions. There was a rule that even in places where the Jewish population was quantitatively greater than the Christian, the Jews could participate in local self-government only to the extent of one-third of the total number of votes. Moreover, the holding of certain positions was not open to them. Thus, being without proper representation, they could not protect their interests, and hence municipal and general duties were imposed on them in undue proportion. They were entirely excluded from participation in jury service, even in the commercial courts. In some towns in which the merchant class was entirely composed of Jews, Christian blacksmiths were selected as members of the court, and they decided the commercial disputes of the Jews. All this naturally lowered the Jews in the esteem of their neighbors and estranged them from the Christians.

Notwithstanding his enmity toward the Jews Nicholas I. assumed the rôle of protector when the Blood Accusation was brought against those of Velizh. Believing at first in the truth of the accusation, he treated the accused with great severity; but when it became clear to him that the accusation was false he condemned the irregular proceedings of the investigating commission, and it thus became possible to vindicate all the accused. Many of the decrees of limitation promulgated under Nicholas I. are still (1905) in force.

H. R. *

Alexander II. Favors the Jews.

A new era of hope and of partial realization came to the Jews of Russia with the accession to the throne of Alexander II., Nikolaievich (1855–81). The disastrous results of the Crimean war had demonstrated the unfitness of the government machine and of the existing legislation to cope with the needs of the day. Reforms became necessary, and some were introduced. Nevertheless, limited as was the application of these reforms, the effect was remarkable. Aside from the laws themselves, Russian society manifested a more tolerant attitude toward the Jews, contributing thereby to their rapid Russification and to the spread of secular learning among them. Unfortunately this movement was soon crossed by two opposing currents in Russian life—Nihilism and Panslavism. These resulted in bringing about a less tolerant sentiment toward the Jews, but this was through no fault of Alexander II., whom Lord Beaconsfield designated as "the most benevolent prince that ever ruled in Russia" (see Alexander II., Nikolaievich).

Reactionary Attitude of Alexander III.

The reign of Alexander III. (1881–94) marks an era not only of reaction, but of return to medieval methods (see Alexander III., Alexandrovich). During this reign a commission, under the chairmanship of Count Pahlen, was entrusted with the investigation of the Jewish question; and its findings were rather favorable to the Jews. One of the members of the commission, Demidov, Prince of San-Donato, even advocated the abolition of the Pale of Settlement and the granting of equal rights to the Jews. However, the May Laws, introduced by Ignatiev in 1882 as a temporary measure until the completion of the investigations by the Pahlen commission, had disastrous consequences. Alexander III. continued to be guided in his attitude toward the Jews by the procurator of the Holy Synod, Pobiedonostzev, who was appointed procurator-general in 1880, and who is reported to have stated that one-third of the Jews in Russia would be forced to emigrate, another third would be compelled to accept baptism, and the remainder would be brought to the verge of starvation. Pobiedonostzev's program maintained that absolutism and Greek-Orthodoxy were the mainstays of the empire, since they were sanctioned by God and founded on historical antecedents. He thus secured the approval of Alexander III. in the enforcement of despotic measures not against the Jews only, but also against Catholics, Lutherans, and Armenians.

Restrictions limiting the number of Jewish students in high schools and universities (1887), the exclusion of Jews from appointment or election as members of city councils or boards of aldermen, and the discharge of Jewish employees from railroads and steamship lines, and even from certain institutions, as hospitals (although partly supported by Jews), were among the civil disabilities; and obstacles were raised also to the exercise of the Jewish religion. The violence of minor officials increased, and the situation was rendered more critical by the conversion of many towns and townlets into villages, and by the expulsion of the Jews therefrom. The districts of Rostov and Taganrog, which had formed a part of the Pale, were included in the military district of the Don, their Jewish inhabitants being summarily expelled (1889). A large number of Jewish mechanics was expelled from St. Petersburg between 1888 and 1890. Early in 1891, with the appointment of Grand Duke Sergius (assassinated 1905) as governor-general of Moscow, the banishment of the Jews from that city was determined upon. The intention of the administration was kept secret until the first and second days of Passover, a time deemed convenient by the police for entrapping a great number of Jews. It is estimated that by June 14, 1892, 14,000 Jewish artisans had been banished from Moscow. Being unable to find purchasers for their household effects, the exiles frequently left them behind; and many debts remained uncollected. The inhumanity and brutality with which this banishment was carried out find an analogy only in the dark history of Spain (see Jew. Encyc. ix. 41a, *s.v.* Moscow). Similar expulsions occurred in Tula, Novgorod, Kaluga, Ryazan, Riga, etc. Foreign Jews in great numbers were expelled from the country, and especially from South Russia. Many families were ordered to leave Riga and Libau in 1893; and in the same year all the Jewish residents of Yalta were directed to leave that city.

Bad as were the economic conditions within the Pale before these expulsions, they became indescribably worse after its population had been augmented by thousands of impoverished refugees from the interior of Russia. The struggle for mere existence became so fierce that the poor often worked for fifteen, eighteen, or even twenty hours a day and were able to afford no better food than bread and water. A large portion of the proletariat lived in a condition of semistarvation. In an article in the "Journal du Nord" for 1892 (Errera, "Les Juifs Russes," pp. 120-121) it was stated: "There are in Russia only 10,000 to 15,000 Jews who possess any certain means of existence. As to the masses, they possess nothing; and they are far poorer than the Christian populace, who at any rate own some land." The prevailing ignorance in foreign countries concerning these terrible conditions was due largely to the suppression by the censorship of any mention in the Russian newspapers of the brutal acts of the police. But isolated notices which found their way into the foreign press created a wave of indignation throughout Europe, and forced even Pobiedonostzev to make apologetic explanations. In an interview with Arnold White he declared that "everybody was sorry for the brutality of the chief of police in Moscow." It is well known, however, that the latter official merely carried out the instructions of Grand Duke Sergius, who himself applied in practise Pobiedonostzev's teachings. Speaking of these, the historian Mommsen said (Nov. 1, 1903): "Is it not possible to arrest the decay of a greatly vaunted civilization, the suicide of Russia? . . . But we may still hope that the statesmen of a great empire and the sovereign arbiter of Europe may no longer be dominated by the blind action of a resuscitated Torquemada."

As a result of this medieval policy the various factions in the Russian Jewry united for the purposes of national self-defense. Committees were organized throughout Russia and in other countries for the relief of the oppressed Jews. Considerable numbers of the more enterprising of the latter sought relief in emigration, with the result that during the last two decades of the nineteenth century more than 1,000,000 Jews left Russia, the greater part of whom went to the United States of America, while smaller numbers emigrated to Palestine, South America, and South Africa. Another movement directly traceable to the repressive legislation in Russia was the growth of nationalism among the Russian Jews, resulting in agricultural colonization in Palestine, and in the organization of Zionist societies (see Agricultural Colonies; Alexander III., Alexandrovich; Ignatiev; May Laws; Moscow).

Nicholas II.

The hopes which the Jews of Russia reposed in Nicholas II., the pusillanimous heir of Alexander III., were not justified by the events subsequent to his accession (Nov. 1, 1894). The oppressive treatment of the Jews by Alexander III. at least left no room for misunderstanding as to his real intentions. The policy of Nicholas II., while no less oppressive, was more evasive. Where the legal discriminations against the Jews were somewhat relaxed, as in the discontinuance of expulsion from the interior provinces, or in the more liberal application of the 50-verst boundary law, such relaxation was due to utilitarian motives rather than to those of justice. Some influence in this direction was undoubtedly exerted by the petitions of many Christian merchants and farmers of Astrakhan, Tambov, Borisoglyebsk, Tzaritzyn, etc., who saw economic ruin in the removal of the Jews. On the other hand, additional heavy burdens were imposed by Nicholas' government on the Jews of Russia. The establishment of the government liquor monopoly (1896) deprived thousands of Jewish families of a livelihood. For ethical reasons the leading Jews of Russia were pleased to see their coreligionists eliminated from the retail liquor-trade; yet it was felt that in the execution of the law a more equitable treatment should have been accorded to the Jewish tavern-keepers. In the same year further restrictive measures were introduced concerning the right of residence of Jewish students at the University of Moscow, and an order was issued prohibiting the employment of Jews in the construction of the Siberian Railroad. The number of Jewish women eligible for admission to the medical school of St. Petersburg was limited to three per cent of the total number of students; and to the newly established school for engineers at Moscow no Jews were admitted. An ordinance was likewise issued prohibiting the employment of the Hebrew language or the Yiddish dialect by Jewish merchants in their business accounts; and in 1899 new restrictions were imposed on those Jewish merchants of Moscow who by law had hitherto been exempt from certain disabilities as members of the first merchant gild.

A blood accusation with its usual sequence—an anti-Jewish riot—was brought against the Jews of Irkutsk in 1896. In Feb., 1897, an anti-Jewish riot occurred in Shpola, government of Kiev, resulting in the destruction of much Jewish property. An anti-Jewish riot occurred also in Kantakuzov, government of Kherson, and a blood accusation in the government of Vladimir; in 1899 a number of anti-Jewish riots occurred in Nikolaief and elsewhere in South Russia, and in the following year the Jews suffered from additional riots and blood accusations. As a result the Jewish masses were ruined, and their pitiable condition was intensified by famine which spread in Bessarabia and in Kherson.

The economic crisis that culminated in 1899 brought great distress upon many Jewish communities in South Russia, but the Jewish Colonization Association took energetic measures to send timely help to the needy. It is to the credit of the wealthier of the Russian Jews that they responded immediately to appeals for aid, and in this manner greatly alleviated the misery. Jewish charity manifested itself also in that year in the establishment of loan associations, model schools, and cheap lodging-houses for the poor. Furthermore, commercial and technical schools were founded in many cities of the Pale.

Riots at Kishinef and Homel.

In 1899 seventy Jewish families which had lived in Nijni-Novgorod under temporary permits were expelled, as were also sixty-five pavers from the city of Kiev on the ground that they were not pursuing their calling. The admission of Jews to universities and to other educational institutions was made increasingly difficult. In 1903 notorious expulsions occurred in Kiev, the Caucasus, and Moscow. A destructive anti-Jewish riot was allowed to take place in Kishinef through the connivance of the local authorities, who were encouraged by Minister of the Interior von Plehve (assassinated 1904); and in September of the same year a similar riot occurred at Homel. In that year also an ordinance was issued prohibiting the holding of Zionist meetings. All these measures of oppression were carried out by the government (as was admitted by Von Plehve to the Zionist leader, Dr. Herzl) because of the participation of Jewish youth in the socialistic movement.

The riots at Kishinef and Homel and the general economic depression gave an impetus to Jewish emigration from Russia, which was almost doubled within a year. Matters were made still worse by the outbreak of the Russo-Japanese war in Feb., 1904, when about 30,000 Jews were included in the regiments sent to the Far East. Especially great was the number of Jewish physicians ordered to the front, a number largely disproportionate to the Jewish population. The general discontent caused by the organization of the military reserves found expression in outbreaks against the government, and in anti-Jewish riots which, added to the grave economic crisis, brought thousands of Jewish families to the verge of starvation.

A ray of hope appeared to the Russian Jews on the appointment of the liberal minister, Prince Svyatopolk-Mirski, to succeed Von Plehve. In his promise of general reforms they saw the amelioration of their sad condition; but their hopes, with those of all Russia, were shattered by the stern events of Jan. 22, 1905, when hundreds of workmen were killed or wounded in St. Petersburg. In the struggle for a more liberal form of government now in progress (1905) the Jews naturally are on the side of the Liberals.

Conditions in 1905.

The intelligent portion of Russian society, formerly more or less influenced by the anti-Semitic crusade of the "Novoye Vremya," "Svyet," etc., has come to recognize that the Jews are not to blame for the economic plight of Russia, and that the Russians themselves, more than others, have been the victims of a corrupt bureaucratic régime. Prominent writers like Count Leo Tolstoi, Maxim Gorki, and Korolenko have protested against the organized anti-Semitic movement as a menace not only to the Jews, but to civilization itself. On the other hand, there is a portion of the uneducated Russian people among which the systematic preaching against the Jews has taken a firm hold. Thus the stock exchange of Kursk resolved to exclude Jews from membership, as did the Bessarabian horticultural society, although the minister of agriculture had accorded his praise to the model viticulture practised by the Jews of Bessarabia. A similar resolution of exclusion was passed by the Odessa shoemakers' association. Jewish pupils of the Libau commercial school who were brought by the director on a scientific excursion to Moscow were not permitted to enter the city. This and various other particularly cruel discriminations against the Jews in Moscow were largely due to the attitude which was taken by the governor-general, Grand Duke Sergius. Minor officials interpreted the law to suit their own convenience, and continued in their course even after the Senate had reversed many of their decisions. The legal proceedings in the cases arising out of the Homel riots were a travesty of justice, and were marked by vain attempts on the part of the judiciary to justify the course of the administration and to throw the blame for existing conditions on the Jews. The lawyers engaged to defend the Jews were so disgusted by the insults and restrictions to which they were subjected by the court that they withdrew in a body, leaving the accused without counsel.

The great evils of the reactionary régime of Alexander III., and of the rule of Nicholas II., inflicting, as they have done, untold suffering on the Jews of Russia, have not been without some compensation. On the one hand, the avowed intention of the reactionary officials to make the Jew the scapegoat for all the governmental corruption and economic backwardness of Russia has led to anti-Jewish demonstrations and endless extortion, to the almost complete destruction of respect for the law, to the impoverishment of thousands of Jewish and non-Jewish families, to extensive baptism, practically compulsory, and to wide-spread emigration. On the other hand, the government measures have driven a great number of Jews to seek employment in the handicrafts and as agricultural laborers on farms, have compelled Jewish manufacturers to establish and develop new industries on a scale unprecedented within the Pale, and have created among the Jews of Russia an awakening national consciousness which finds expression in broader self-education, in the establishment of literary societies and reading-circles, in the growth of Zionism, and in the determination to carry on an organized propaganda for the moral, mental, and physical uplifting of the Jewish masses.

H. R.

——**Census Statistics:** The first Russian census that is based on reliable sources is that of 1897. The Jewish population took a great interest in the taking of this census, because all legislative matters relating to the Jews had previously been based on unreliable statistics, the number of Jews had been overestimated, and, therefore, the Jewish population had often been overburdened with taxes and other state duties. The census of 1897 included the whole of the Russian territory except Finland, Bokhara, and Khiva.

According to this census, the total population of Russia in 1897 was 126,368,827. This number included 5,189,401 Jews, or 4.13 per cent. The ascertaining of this single fact concerning the Jewish population was of great importance for the interests of the Jews. On the basis of these figures there have appeared in the Jewish as well as in the general press many articles which show clearly that according to their numerical proportion to the general population the Jews pay heavier taxes and duties than they should. The same condition prevails with regard to the military service. There is in Russia an entire series of special legislation directed against the Jews and based on the supposition that they try to avoid military service; as a consequence the measures taken against them are quite abnormal. A specimen of this special legislation is the fine of 300 rubles imposed on the relatives, from the nearest to the most distant, of any one who has avoided military service. This heavy fine has ruined many hundred Jewish families because, in order to levy the fine, the government officials were compelled to sell the property of the Jews at auction. Sometimes the household goods, including the most necessary articles, were sold by the auctioneer. The result of the census showed that the suppositions regarding the military service of the Jews were entirely unfounded. In 1901, for instance, 303,897 persons were called to military service, of whom 17,412, or 5.73 per cent, were Jews. According to law, however, only 12,550 Jews were liable to military service; that is, it would have been necessary for the Jews to furnish only 4.13 per cent instead of 5.73 per cent. From this it is evident that the Jewish population not only was not trying to avoid military service, but actually furnished 4,862 soldiers more than law and duty required.

The distribution of the 5,189,401 Jews throughout Russian territory is quite uneven. For administrative purposes the Russian empire is divided into eight large territories: (1) European Russia, with fifty governments; (2) Poland, with ten governments; (3) Caucasus, with eleven governments; (4) Siberia, with nine governments; (5) Central Asia, with nine governments; (6) Finland; (7) Bokhara; (8) Khiva.

The greater part of the Russian Jews lives in the Pale of Settlement, which occupies only one-twenty-third of the general territory. The proportion of the Jewish population to the Christian in this Pale is 11.46 per cent, while outside of the Pale it is only 0.38 per cent. The percentage of Jews living within the Pale is 93.93, as against 6.07 per cent who live outside the Pale.

Density of the Jewish Population.

From the foregoing figures the following conclusions may be drawn: (1) That there is scarcely a single province in Russia without a Jewish population. The Jews are to be found even in the steppes of Astrakhan, among the Kalmucks and Kirghiz, on the island of Sakhalin, and even in the out-of-the-way territory of Yakutsk. (2) That only in the farthest north is the Jewish population very small, as for instance in the government of Archangel. In the governments of Vyatka, Vologda, and Olonetz there are no Jews whatever; but of the 592 districts ("uyezdy") in European Russia only 17 are without any Jewish population. In the Asiatic governments the proportion is greater, as there 18 districts out of 176 have no Jewish population. In the Pale of Settlement proper—consisting of Poland, Lithuania, Volhynia, Kiev, Bessarabia, Podolia, and Odessa—the Jewish population varies from 10 to 15 per cent; in the immigration region—also a part of the Pale, and consisting of the governments of Poltava, Chernigov, Yekaterinoslav, Crimea, and Kherson (except Odessa)—from 4 to 5 per cent; and in the rest of

Russia, from 0.03 to 0.5 per cent. In the immigration district the Jews settled at the end of the eighteenth century in great numbers, and constant immigration followed from the formerly Polish governments.

It is interesting to note the proportion of sexes among the Jewish and non-Jewish population of Russia. The following table shows the percentage of females to the male population in the Pale of Settlement:

Territory.	Among Jews.	In the Total Population.
In Northwest Russia..........	108.2	101.5
In Southwest Russia..........	106.1	101.5
In South Russia..............	101.8	93.9
In Poland....................	105.6	99.5

Conditions directly the opposite of this are found in the interior of Russia. Outside of the Pale of Settlement to every hundred males there are the following numbers of females:

Territory.	Among Jews.	In the Total Population.
North Russia..................	82.4	106.5
Central Russia................	73.1	110.5
Southeast Russia..............	99.2	100.4
Baltic Provinces..............	103.8	106.2
Caucasus	82.7	90.1
Siberia.......................	86.5	94.3
Middle Asia...................	75.4	85.8

This difference may be explained by the fact that the emigration from the Pale into the interior of Russia naturally brings more men than women, owing to the peculiar conditions existing there, while the emigration to America, Africa, etc., consists chiefly of whole families.

H. R.

——**Artisans: In the Pale of Settlement:** In the middle of the nineteenth century the Russian government, realizing the usefulness of the Jewish artisans, issued a ukase (June 28, 1865) permitting them to reside anywhere in the empire. This edict, however, did not ameliorate to any great extent the condition of the Jewish artisans crowded together within the Pale; for its indefinite character afforded many opportunities for abuse in its execution by the local administrations. Hence only a comparatively small number of artisans dared to avail themselves of the opportunity to settle in the interior, the territory being strange to them. Moreover, they had to take into consideration the fact that their children, when grown, would be returned to the Pale if they failed to follow some handicraft, and that they themselves, when prevented by sickness or other disability from pursuing their vocations, might be expelled from the places in which they had settled, even though they had lived there for decades. It is not surprising, therefore, to find that only 2 per cent of the Jewish artisans in the Pale and in Poland availed themselves of the provisions of the new law. On the other hand, the "Temporary Regulations" (MAY LAWS) of 1882, which caused the removal en masse of Jews from villages into towns and townlets, contributed still further to the congestion of artisans within the Pale. Neither the emigration to America nor the growth of manufactures improved the condition of the Jewish artisans, since the emigration of the latter was not sufficiently extensive, and since many manufacturing establishments were closed to Jewish employees because they would not work on Saturdays or on Jewish holy days.

Congestion of Artisans Within the Pale.

The number of Jewish artisans in the twenty-five governments of the Pale of Settlement and Poland in 1898 was 500,986, or 13.2 per cent of the Jewish population of that territory. This is a very high percentage considering that in Germany artisans form only from 6 to 7 per cent of the entire population. The proportion of Jewish artisans to the entire Jewish population varies in the different portions of Western Russia. The lowest percentage is that of Western Poland, namely, 9.9 per cent; the highest, of Lithuania, namely, 14.8 per cent. In the government of Warsaw it is only 7.5 per cent; in Suwalki 8.7 per cent; in Grodno 18.5 per cent; in Taurida and Radom 20 per cent. On an average, in the twenty-five governments of Western Russia one-tenth to one-fifth of the Jews are engaged in handicrafts.

The following table shows the proportion of Jewish artisans to the total Jewish population in the fifteen governments of the Pale of Settlement, according to statistics of 1887 collected by a government committee, and those of 1898 gathered by the Jewish Colonization Association:

STATISTICS OF JEWISH ARTISANS IN THE PALE OF SETTLEMENT IN 1887 AND 1898.

Governments.	1887			1898		
	Jewish Population.	Number of Jewish Artisans.	Percentage of Jewish Artisans to Jewish Population.	Jewish Population.	Number of Jewish Artisans.	Percentage of Jewish Artisans to Jewish Population.
Bessarabia	136,053	18,193	13.4	173,641	20,976	12.1
Chernigov	57,339	7,315	12.8	71,357	11,063	15.5
Grodno	155,149	34,442	22.2	243,556	44,829	18.5
Kherson	197,338	17.573	8.9	230,669	24,782	10.8
Kiev	194,471	23,321	12.0	269,305	43,386	16.1
Kovno	252,492	21,275	8.4	200,133	23,525	11.8
Minsk	215,013	30,875	14.4	250,578	35,587	14.2
Moghilef	155,732	14,969	9.6	178,714	25,849	14.5
Podolia	304,955	37,080	12.2	319,691	40,621	12.7
Poltava	49,208	5,909	12.0	76,541	8,815	11.5
Taurida	34,940	5,264	15.1	36,091	7.466	20.0
Vitebsk	115,116	14,534	12.6	146,612	23.473	16.1
Volhynia	290,962	28,167	9.7	241,512	36,964	15.3
Wilna	192,988	27.660	14.3	193,461	26,240	13.6
Yekaterinoslav	52,500	6,932	13.2	71,086	8,039	11.2

Markedly large increases are shown for the governments of Kovno, Moghilef, Taurida, and Volhynia. The proportion of Jewish to non-Jewish artisans may be illustrated as follows: in 1880 there were in the government of Moghilef 5,509 master artisans, among whom were 4,290 Jews, or 78 per cent; in 1897 in that of Grodno there were 26,515 Jewish artisans, or 61 per cent of the total; and in 1903 in that of Vitebsk the total number of master artisans was 2,820, of whom 72 per cent were Jews. It thus becomes clear that, with the scarcity of artisans among the peasant class, and the growing demand in the villages for cheap manufactured articles, the Jews are important factors in the economic life of Western Russia.

The 500,986 Jewish artisans in Western Russia in 1898 were distributed as follows: Lithuania, 94,594; Poland, 119,371; South Russia, 61,263; Southwest Russia, 140,849; and White Russia, 84,909.

In White Russia 55 per cent of all the Jewish artisans lived in the cities of Vitebsk, Dünaburg (Dvinsk), and Polotsk. In the government of Poltava 57 per cent lived in the cities of Poltava, Kremenchug, and Kobyliaki; and in that of Kherson 77 per cent lived in Odessa, Kherson, and Yelizavetgrad. This disproportionate number of Jewish artisans in cities with large Jewish populations was due to the economic and legal disabilities of the Jews in the Pale of Settlement. The percentage of Jewish artisans in the different trades in the Pale and in Poland was as follows:

Boot-making, shoe-making, etc	17.0
Building and ceramics	6.3
Carpentry, cabinet-making, etc	9.9
Chemicals	0.7
Clothing, etc	38.7
Food preparations	11.6
Metal-working, high grade	4.1
Metal-working, low grade	5.7
Paper-making, paper-box making, etc	2.3
Weaving, spinning, rope-making, etc	3.7

It is thus seen that one-half of the Jewish artisans within the Pale are engaged in the manufacture of clothing and foot-wear.

The distribution of Jewish artisans within the Pale and Poland according to trades is as follows:

Trades.	Twenty-five Governments.	Lithuania.	White Russia.	Southwest Russia.	South Russia.	Western Poland.	Eastern Poland.
Bakers	4.6	6.3	4.3	3.2	2.8	5.6	6.6
Barbers and wig-makers	1.2	1.2	0.9	1.2	1.1	1.5	1.5
Blacksmiths	3.1	3.2	4.2	4.0	3.4	0.7	1.7
Bookbinders	1.4	1.1	1.3	1.7	1.8	1.5	1.2
Butchers	4.4	4.8	4.3	4.4	3.1	4.6	5.5
Cabinet-makers and joiners	6.0	5.2	7.9	7.3	5.8	3.8	4.3
Cap-makers	3.2	2.0	2.8	4.1	4.7	2.8	2.7
Carpenters	2.3	3.9	3.1	2.0	1.2	0.6	2.6
Coppersmiths	2.4	2.2	2.0	2.5	3.4	2.5	1.5
Dressmakers	6.5	7.3	8.5	5.9	7.5	3.7	6.3
Dyers	1.2	1.4	1.5	1.1	1.5	0.7	1.0
Glaziers	1.3	1.2	1.2	1.6	1.2	1.3	1.5
Locksmiths	1.1	1.0	1.2	0.9	2.3	0.5	1.4
Musicians and piano-tuners	1.1	0.6	1.1	1.6	1.2	0.9	0.7
Oven-makers and bricklayers	2.2	4.0	3.2	2.1	0.7	0.5	2.2
Painters	1.6	1.9	1.4	1.3	2.8	1.3	1.7
Saddlers and harness-makers	1.0	0.8	0.7	1.2	1.7	0.9	0.7
Seamstresses	3.8	3.2	3.4	4.3	2.8	4.7	4.1
Shoemakers	14.4	13.9	16.7	12.6	13.2	14.4	17.5
Stocking-makers	1.5	3.0	1.5	1.1	0.8	1.2	0.7
Tailors	19.1	13.8	14.5	19.7	21.4	27.7	20.7
Tanners	1.4	2.1	1.4	1.6	0.2	1.1	1.5
Tobacco-cutters	1.2	1.5	1.3	1.4	1.6	0.3	0.8
Watchmakers	1.0	0 8	0.8	0.9	1.7	1.1	0.9
Weavers	1.7	2.7	0.7	0.5	0.03	6.1	0.3

It will be noticed that with the exception of Poland the distribution is tolerably uniform. Most of the Jewish weavers are concentrated in Western Poland and Lithuania.

The following table shows the classification of the Jewish artisans in the twenty-five governments of the Pale and of Poland as masters, assistants, and apprentices, with the percentages in each class:

Territory.	Masters.	Assistants.	Apprentices.	Total.	Percentage of Masters.	Percentage of Assistants.	Percentage of Apprentices.
Lithuania	55,980	18,393	20,221	94,594	59	19	22
Poland, Eastern	25,420	13,380	10,748	49,548	51	25	24
Poland, Western	38,234	17,121	14,468	69,823	54	24	22
South Russia	28,258	20,062	12,943	61,263	46	33	21
Southwest Russia	69,583	46,395	24,871	140,849	50	33	17
White Russia	41,921	25,177	17,811	84,909	50	30	20
Totals	259,396	140,528	101,062	500,986	52	28	20

Here Lithuania shows the greatest proportion of masters (59 per cent); South Russia, the smallest (46 per cent). The small number of assistants in Lithuania indicates a greater amount of poverty among the master-workmen there.

The Jewish women engaged in the various trades within the Pale are distributed as follows:

Territory.	Number.	Percentage of Total Jewish Artisans.
Lithuania	16,754	18
Poland, Eastern	7,263	14
Poland, Western	7,671	11
South Russia	8,581	14
Southwest Russia	21,233	15
White Russia	15,046	18

The trades followed by them are shown in the table below:

Territory.	Dress-makers.	Seam-stresses.	Milliners.	Stocking-Makers.	Cigarette-Makers.	Glovers.	Other Trades.	Total.
Lithuania	6,860	2,799	523	2,566	630	101	3,275	16,754
Poland, Eastern	3,104	1,851	295	249	37	173	1,554	7,263

The Jewish artisans learn their trades in the old-fashioned way, the appreciation of the importance of technical training being of recent growth only. The trade-schools and evening-schools recently opened in Pinsk, Byelostok, Warsaw, etc., are overcrowded and altogether inadequate for present needs.

Trade-Schools.

In general it may be said that the state of Jewish handicrafts in the Pale at present is like that of German handicrafts at the beginning of the nineteenth century. At the same time, in the large cities, where there is a growing demand for articles of better workmanship, the Jews furnish the best tailors, shoemakers, joiners, watchmakers, etc.

Owing to keen competition, and the unfavorable conditions of credit and of the market, whereby money-lenders and middlemen receive a large part of the profits, the income of the Jewish toilers is very small. The average income of Jewish tailors in Poland is 250 to 300 rubles per annum; of shoemakers, 150 to 250 rubles. Seamstresses earn on the average not more than 100 rubles; lacemakers, about 45 rubles, because the demand for lace lasts only a short season.

Wages of Artisans.

The highest wages, from 8 to 12 rubles a week, are earned by embroiderers. Conditions are somewhat better in South Russia, where some of the Jewish artisans earn from 400 to 1,000 rubles per annum. As a rule, throughout the Pale the incomes of the Jewish artisans are insufficient for the proper support of their families. Thousands lead a hand-to-mouth existence and are compelled to seek the aid of charity. In 1900 in Odessa 1,427 Jewish artisans lived in extreme poverty and amid indescribable insanitary surroundings. These conditions can be improved only by the dispersion of the artisans throughout the empire or by their more extensive removal to other countries.

In the Interior of Russia: Statistics concerning the Jewish artisans in the governments of the interior of Russia, outside the Pale, are derived from reports of the artisan gilds to the Ministry of the Interior in 1893. The table on page 537, giving data concerning the Jewish artisans in the fifteen more important governments, is based on these reports.

Legal Position.

In the enactment of 1804 the necessity was recognized of granting to Jewish artisans the right of residence in governments outside the Pale; but the complicated formalities, the lack of familiarity with the life of interior Russia, the inadequate means of communication, and ignorance of the Russian language prevented the bulk of the Polish-Lithuanian Jewish artisans from taking advantage of this permission. Individuals possessing enterprise and courage, however, found opportunities in the interior governments, where they not only became prosperous, but were the means of establishing the reputation of the Jewish artisan. Jewish distillers especially were in demand among the Russian estate-owners. Accordingly, the laws of 1819 and of 1827

JEWISH ARTISANS IN WESTERN RUSSIA IN 1898-99.

granted Jewish distillers the right to live anywhere in the interior of Russia, and in Irkutsk, Siberia, also.

By the ukase of 1835, limitations were imposed upon the rights of Jewish artisans in the interior. Thereupon the military governor of Astrakhan requested permission to retain forty-nine Jewish artisans on the ground of their usefulness (Second Complete Code, vol. x., No. 8481); but his request was not granted. On the other hand, a request of the viceroy of the Caucasus that Jewish artisans might be allowed to remain in that territory was acceded to. It should be added that the viceroy pointed out that the Jews, being the only tailors, shoemakers, etc., there, were indispensable to the garrisons. These utilitarian motives made it possible as early as the fourth decade of the nineteenth century for Jewish artisans to settle in Tula, Voronezh (Voronej), Saratov, and other Great-Russian governments. As stated above, the Russian government in 1865 found it expedient for economic reasons (law of June 28, 1865) to permit Jewish artisans freely to settle in the interior of Russia and to remain there as long as they continued to follow their vocations.

This enactment, however, did not allow the Jewish artisans to register in the local communities, and it permitted them to remain there only with temporary passports. This dependence on their native communities, and the extortion practised in this connection by the local administrations made it impossible for the Jewish artisans of the Pale to emigrate in large numbers to the governments of the interior. Nevertheless from that time until 1881 permission was granted to 682 Jewish artisans to open workshops, as follows: in the government of St. Petersburg, 187; Smolensk, 142; Pskov, 108; Orel, 66; Kursk, 32; Voronezh, 6; Saratov, 25; Moscow, 24; etc. The riots of 1881 and the May Laws of 1882 compelled many of these to abandon their new homes. Large numbers emigrated to Western Russia and to America. From 1881 to 1887, workshops were established by 479 Jewish families in the fifteen governments. From 1887 to 1893 no less than 779 such workshops were established by Jews in the governments of the interior. According to the reports of 1893, there were in the fifteen governments of the interior 1,948 Jewish workshops, as against 24,020 belonging to non-Jews, or 7.5 per cent of the latter. The greater number of these were located in St. Petersburg. In the government of Pskov, as against 667 non-Jewish workshops there were 308 Jewish ones, or 31.58 per cent of the total. In the government of Smolensk the numbers were 1,125 non-Jewish workshops and 347 Jewish (23.5 per cent); Orel had 11.52 per cent, and Kursk 10.9 per cent.

The distribution of Jewish artisans as compared with non-Jews among the various trades is of importance, and is illustrated in the following table:

Trades.	In the Fifteen Governments.						In the Government of Vitebsk.					
	Jewish Workshops.	Percentage.	Non-Jewish Workshops.	Percentage.	Total.	Percentage.	Jewish Workshops.	Percentage.	Non-Jewish Workshops.	Percentage.	Total.	Percentage.
Building and ceramics	40	2.1	1,495	6.3	1,535	2.6	187	9.0	76	9.4	263	71.1
Cabinet-making and wooden ware	54	2.8	2,657	11.3	2,711	1.9	163	7.8	152	18.8	315	23.7
Chemicals	27	1.3	124	0.5	151	17.8	7	0.3	..	..	7	100.0
Clothing, etc	902	46.6	6,034	25.3	6,936	13.0	749	36.0	70	8.7	819	91.4
Food preparation	70	3.6	2,950	12.5	3,020	2.3	206	9.9	86	10.6	292	70.5
Gloves and leather goods	175	9.1	4,580	19.4	4,755	3.7	400	19.2	286	35.4	686	58.3
Metal-work (high grade)	352	18.2	1,812	7.7	2,164	16.2	135	6.5	22	2.7	157	85.9
Metal-work (low grade)	156	8.1	2,479	10.5	2,635	5.9	158	7.6	82	10.2	240	65.8
Paper-making, etc	117	6.0	722	3.1	839	13.9	61	2.9	2	0.2	63	96.8
Weaving, spinning, rope-making	42	2.2	727	3.1	769	5.4	16	0.8	32	4.0	48	66.6
Totals	1,935	100	23,580	100	25,515	..	2,082	100	808	100	2,890	..

This account does not include trades outside of those above classified. It will be seen that the Jews are most numerous in tailoring, clothing, etc. (902); but among the Christian artisans also tailoring predominates (6,034). While the non-Jewish tailors form only 25.6 per cent of the total of non-Jews, the Jewish tailors form 46.6 of the total number of Jews. Another occupation in which Jews are prominent is high-grade metal-work, but in metal-work of the lower grade they are not numerous. Paper-making, bookbinding, and paper-box making also employ many Jews of the interior.

Besides artisans there are in the fifteen governments of the Pale and in the ten governments of Poland about 105,000 Jewish day-laborers, or about 2 per cent of the whole Jewish population of that region. Ivan S. Blioch, in his pamphlet on the moral conditions of the population in the Jewish Pale of Russia (see Jew. Encyc. iii. 251a), gives the percentage of Jewish day-laborers to the whole Jewish population as 6.2. This may be explained by the fact that Blioch had in view not only the common day-laborers but also those who work in factories or are occupied in peddling and as middlemen.

Bibliography: *Sbornik Materialov ob Ekonomicheskom Polozenii Yevreyev v Rossii* (published by the Jewish Colonization Association), St. Petersburg, 1904.

H. R. V. R.

——**Charities:** Statistics of the Passover charities in 1,200 Russian towns show that 132,855 families applied for relief in 1898. They were distributed as follows, the figures in parentheses, following provinces, representing the percentage of pauper families to the total of Jewish families: Kalisz, Warsaw, Syedlitz, Plock, Lomza, Suwalki (14); Taurida (16); Vitebsk, Moghilef, Minsk, Volhynia, Chernigov (17); Podolia, Kiev, Poltava, Yekaterinoslav, Kherson, Bessarabia (20); Lublin, Radom, Kielce, Piotrkow, Kovno, Wilna, Grodno (22). This gives an average of 18.8, which is 7 per cent of the total urban population of Russia.

The following table is given for purposes of comparison:

Country.	Year of Investigation.	Percentage of Jewish Poor to Total Population.
Austria-Hungary	1892	1.0
France	1892	4.7
Holland	1892	5.4
Sweden	1893	5.5
Norway	1892	4.1
Germany	1885	3.4
Great Britain	1896	2.9
United States	1890	0.14

In Germany the proportion of poor in cities with a population of from 10,000 to 20,000 was 4.93, from 20,000 to 50,000 was 5.53, from 50,000 to 100,000 was 6.31, over 100,000 was 6.9; in Hamburg it was 9.66; and in Paris (1883), 7.5.

In 1898 the Fuel Charities reported 59,468 families applying for relief—8 per cent of the total number of Jewish families in the territory covered by the report: Northwest, 14,203 families; Southwest, 20,920; New Russia, 15,311; other districts, 9,034.

City.	Percentage of Jewish Families Receiving Fuel.	City.	Percentage of Jewish Families Receiving Fuel.
Wilna	37.7	Kovno	25.8
Dvinsk	30.9	Yekaterinoslav	25.4
Jitomir	29.5	Kherson	22.8
Nikolaief	28.7	Berdychev	19.7
Poltava	27.8	Minsk	17.2
Krementchug	26.7	Kishinef	14.9
Yelizavetgrad	26.7		

In the territory covered by the report of the Fuel Charities, then, from 25 to 37.7 per cent of the population are paupers.

Increase of Pauperism.

The number of destitute Jewish families increased, according to statistics, from 85,183 in 1894 to 108,922 in 1898; even this is far below the actual number, as many towns gave only partial reports. Many thousands of "reticents" shrink from open charity, and inmates of asylums are not included. The increase during these four years was distributed as follows:

Division.	Per Cent.	Division.	Per Cent.
South	39.9	Northwest	26.3
Southwest	32.5	Poland	21.3

Province.	Per Cent.	Province.	Per Cent.
Syedlitz	46.8	Podolia	38.2
Chernigov	46.1	Moghilef	38.1
Piotrkow	42.3	Kielce	35.7
Bessarabia	42.0	Kovno	33.3
Yekaterinoslav	41.9	Vitebsk	31.6
Kherson	39.6	Taurida	29.2
Volhynia	39.4	Suwalki	27.9
Poltava	26.0	Radom	17.5
Lomza	25.7	Minsk	17.3
Wilna	25.5	Lublin	15.5
Grodno	20.8	Plock	13.3
Kiev	20.2	Warsaw	6.7
Kalisz	18.8		

General business depression, the development of railroads and banking, and the expulsion of the Jews from villages and from the 50-verst frontier-belt account for this increase.

Loan Associations.

Loan-funds on which no interest is charged are organized to help artisans and small traders to carry on their business independently of the usurer. These funds are usually derived from contributions or bequests, as well as from membership dues ranging from 25 copecks to 3 rubles annually. The number of loan associations is as follows:

Division.		Division.	
Northwest	205	South	71
Southwest	50	Poland	350

In the separate provinces of Northwest Russia there are:

Province.		Province.	
Kovno	47	Minsk	27
Grodno	44	Vitebsk	13
Wilna	36		

In the other sections of Western Russia there are:

Province.		Province.	
Suwalki	16	Lublin	2
Chernigov	14	Warsaw	4
Kalisz	13	Plock	4
Syedlitz	1	Kherson	4
Kielce	2		

NUMBER OF LOAN ASSOCIATIONS, WITH THEIR ANNUAL INCOMES.

	100 Rubles.	100-500 Rubles.	500-1,000 Rubles.	Over 1,000 Rubles.
Northwest	57	70	22	9
Southwest	5	18	3	7
South	2	7	3	3
Poland	13	17	10	7

The loans generally range from 5 to 15 rubles. Such small amounts are usually secured by pledges, which are sometimes returned even in case of nonpayment. In some associations the amounts loaned are higher. In 1898 the transactions of the association in Poniewicz, whose capital was 3,402 rubles, amounted to 8,581 rubles. Loans of 100 rubles or more are secured by a note and two indorsements. The Volkovisk association loans as much as 50 rubles at a time.

Most of these associations are unincorporated and are managed by one or several trustees. The Grodno association is incorporated, with a capital stock of 7,000 rubles (in 1900). From 1893 to 1900 its loans ranged from 3.86 to 4.47 rubles. The security accepted is personalty. Even in this model association from one-fifth to one-fourth of the amount loaned remains unpaid. The Warsaw loan-bank advances small amounts without interest, taking pledges as security. In 1901 the number of persons thus accommodated reached 6,671; the loans aggregated 76,062 rubles; 155 unredeemed pledges were sold.

A number of charity boards appropriate a part of their funds for benevolent loans, managed by an auxiliary board, as in the case of the Society Linat ha-Ẓedeḳ of Byelostok. In 1901 the society appropriated 1,300 rubles for this purpose. It advances small loans to artisans and traders for terms not exceeding six months, and charges 0.5 per cent per month to defray expenses. Only easily stored movables are accepted as security.

In about 36 cities 50 loan and savings associations of the Schulze-Delitsch and Reifersen type have been organized. Shares are from 10 to 25 rubles each. The membership, from 1,000 to 3,000, largely consists of small Jewish traders and artisans. Loans must not exceed eight times the amount of a member's share. The interest charged on loans is from 9 per cent to 12 per cent. The largest associations are in Wilna (230,000 rubles capital stock), Warsaw (200,000 rubles capital stock), Kishinef (70,000 rubles capital stock), and Grodno (38,000 rubles capital stock).

There are 126 homes and houses of shelter for transient poor in the larger cities; 6 per cent of them are in Southwest Russia. They are maintained chiefly by appropriations from the meat-tax, seldom by private contributions. The largest of these are in Wilna, Minsk, Berdychev, Krementchug, Odessa, Yelizavetgrad, and Warsaw. The home in Krementchug has 455 inmates and shelters from 3,000 to 4,000 transients annually. There are besides 100 sheltering-homes, called "heḳdeshim," in the small towns of the 25 provinces of Western Russia, especially in the provinces of Grodno, Wilna, Suwalki, Lomza, and Plock (in which there are 96 of these homes). The transient poor are crowded into small, unfurnished, and very unsanitary rooms, where they stay as long as they desire. The Heḳdesh shelters are supported by membership dues and small contributions.

In the small towns within the Pale the destitute poor are fed chiefly by private households; the regular institutions for this form of relief are shown in the following table:

Number of Institutions.

	In the Chief Towns.	In Medium-Sized Towns.	In Small Towns.	Total.
Northwest Russia	8	10	5	23
Southwest Russia	3	7	4	14
South Russia	7	1	1	9
Poland	1	2	1	4

Four of these institutions supply Jewish soldiers with kasher food, and most of them are supported by members' dues. The largest of these is the cheap eating-house of Odessa, in which 400 dinners are supplied daily at the rate of three cents per dinner. About 30 per cent of these are free, being mostly given to poor students.

There are 72 societies for supplying poor students with clothing, 37 in Northwest Russia, 5 in Southwest Russia, 8 in South Russia, and 22 in Poland. In the following provinces there are 37 such societies:

Province.	Societies.	Average Expense: Rubles.
Wilna	5	67
Kovno	6	408
Grodno	6	319
Vitebsk	4	217

The number of medical committees and hospitals within the Pale is large, and is distributed as follows:

Division.	Medical Committees.	Hospitals.
Northwest	349	29
Southwest	111	48
South	32	16
Poland	173	19
Totals	665	112

The medical committees are confined to small towns. They arrange with the local physician for treating the poor; often they send patients to health resorts or to cities where they can secure better treatment, meeting a part or the whole of the cost of treatment. Members take turns in nursing the sick. The annual income of 124 of the committees is over 500 rubles each; of 43, over 1,000 rubles; of a few, over 5,000 rubles—all derived from members' dues. The hospitals and free dispensaries are chiefly in the larger cities. The income of most of them does not exceed 10,000 rubles. The exceptions are the Jewish hospitals of Warsaw (116,000 rubles) and of Kiev (60,000 rubles). The Vilkomir (Kovno government) hospital owns a drug-store, the public bath, the meat-market, and the slaughter-house, the income from which helps to maintain the hospital. Most of the other hospitals are supported by appropriations from the meat-tax in addition to members' and other dues; they accommodate generally from 15 to 20 resident patients, preferably Jews living in the town, and treat large numbers of visiting patients. Non-Jews and non-residents are admitted when there is room.

To help poor brides there are 51 societies in small towns in Western Russia. Their incomes, from 50 to 400 rubles annually in most cases, are derived from collections made every Friday. Five rubles is the maximum sum given to one bride. There are 486 charitable societies of a general type within the Pale. The following table shows the amounts, in rubles, annually expended by these societies, together with their distribution:

Divisions.	500.	500 to 1,000.	1,000 to 5,000.	Over 5,000.	Total.
Northwest	90	12	20	5	127
Southwest	47	6	13	3	69
South	10	4	8	2	24
Poland	13	3	6	1	23

Of these, 75 receive appropriations from the meat-tax; the rest are supported by members' dues. Besides these, 89 "societies for helping the poor" were called into existence by a special ministerial circular. These societies are distributed as follows: Northwest, 37; Southwest, 4; South, 39; Poland, 6; outside the Pale, 3. They give pecuniary assistance chiefly, but frequently they do the work of the special charities, affording medical help, paying funeral expenses, distributing books, maintaining free dining-rooms, and nursing the sick.

The charters granted to some societies permit the investing of money in loans, the opening of cooperative stores, and the industrial education of orphans and poor children. The two wealthiest societies are those in Lodz (annual income 35,925 rubles) and Yekaterinoslav (50,352 rubles). The societies are well organized, and they are modifying profoundly the economic condition of the Jewish poor. The society of Khotin (Bessarabia) is typical in this respect. Since 1898 it has absorbed all the local charities, the poor-house, the cheap dining-room, and medical relief. It has undertaken the care of orphans and poor children and organized model ḥeders. It supplies the poor with unleavened bread at Passover and makes an arrangement with the bakers in accordance with which the latter deliver maẓẓot at a reduced price to those who are deserving.

H. R. V. R.

——**Education:** A systematic and organized attempt was made by the Russian government in 1840 to raise the intellectual and moral condition of its Jewish subjects by the establishment of modern Jewish schools. In accordance with this idea committees were called for from the six chief cities within the Pale of Settlement, whose task it was to formulate plans for the secular education of the Jews of Russia. These committees gave an impetus to the movement for culture among the Jews themselves, and aroused the interest of the ministry of public instruction, at the head of which was Count Uvarov. However, even before Uvarov's day, there had been various attempts at encouraging general education among the Russian Jews. The celebrated "Enactments" of 1804 paid some attention to the matter and provided for the admission of Jewish students to the general educational institutions of the empire. These provisions are marked by a humanitarian and tolerant spirit, and state that no attempts should be made to lead away from their religion Jewish children obtaining their education in the schools, and that those Jews who obtained the customary university education in medicine, surgery, physics, mathematics, or other branches of learning should be granted the proper degrees on equal terms with other subjects of Russia. **Degrees.** By the law of 1811 Jewish students who had completed their university studies were exempted from the head-tax. But notwithstanding these provisions the few Jewish students who attempted to avail themselves of the privileges were discriminated against. Thus Simon Levin Wolf, who in 1816 completed the full course at the University of Dorpat, petitioned for permission to take his examinations for the degree of doctor of jurisprudence, but was informed by the faculty that as a Jew he could not be given such permission. When the case was referred to the ministers this decision was confirmed. Again, in 1836 a Jewish doctor, Joseph Bertensohn, applied to the ministry of the interior for appointment to a government position. The minister of the interior presented the matter to the committee of ministers, and the sanction of the czar was obtained for an appointment, but "in the Western provinces only."

Such were the difficulties encountered by Jewish youth in that day. In addition, the Jews of the old school regarded with decided hostility all attempts on the part of their sons to obtain a secular education, while the latter had to contend with deep-seated prejudices among the wealthier classes of Christian society. Among the Jews themselves narrowness and intolerance were most intense, before the forties of the nineteenth century, in the Northwestern provinces, while a more liberal spirit prevailed in the Southwestern provinces.

Odessa was especially distinguished for its liberality, and to its community belongs the credit of having established the first modern Jewish school in

Schools.

Russia. This school was founded in 1826 through the initiative of Jacob Nathansohn, Leon Landau, H. Herzenstein, and Joseph Schwefelberg, and was supported by the Jewish community. It originally contained four classes, in which, besides specifically Jewish subjects, mathematics, calligraphy, Russian, and German were taught. The school was under the management of a director and school board whose appointment had to be sanctioned by the governor-general of New Russia. The first school board consisted of Dr. Rosenblum, David Friedman, Behr Bernstein, and Solomon Gurovich, and the first director was a German Jew, Sittenfeldt. With one exception the instructors were all Jews, either Austrian or German, and the text-books used were all German; even Karamzin's history of Russia was used in the German translation of Jaffe. The expenses of the school were provided for by an initial appropriation of 9,000 rubles and an annual appropriation of 7,600 rubles for maintenance.

The number of pupils at the beginning was 208, and in the following year the number increased to such an extent that the first appropriations were found inadequate; additional funds were provided by a special tax on kasher meat, imposed by order of Count Pahlen, the governor-general. Odessa was thus the first city in which the meat-tax was collected, its introduction elsewhere not taking place until 1844. Even in Odessa, which possessed at that time probably the most enlightened Jewish community in Russia, the establishment of the school created much bitter feeling in Orthodox circles, where it was feared that it would prove a menace to Orthodox Judaism. The Jews of Odessa even petitioned Count Pahlen against the project, claiming that there was no necessity for such an institution, that the local Hebrew schools were sufficient for Jewish subjects, and that German and Russian could be acquired in the lyceum. The reply of Count Pahlen, who had grown impatient with the refractory members of the community, caused the latter to relinquish their opposition. On the death of the first director, Sittenfeldt, in 1828, Basilius Stern was appointed, and retained the position for many years.

Following the example of Odessa the Jewish community of Kishinef established a school, which it placed under the direction of Dr. Goldenthal. In 1838 a similar school was founded in Riga under the direction of Dr. Lilienthal. The curriculum of the Riga school as outlined by its founders included, among other subjects, reading, penmanship, grammar, and history (Russian). The principal, according to the program, was to be an alien of Jewish faith, "educated in the spirit of true learning." According to an official report of July 18, 1840, the school prospered.

With the exception of these schools, whose establishment was largely due to foreign influence, the Jews of Russia were almost strangers to European education. The old organization of the kahal, the respect for tradition and ancient custom, as well as poverty, ignorance, and prejudice, made it very difficult to establish an effective educational system. Before the forties the Jewish population of the Northwestern provinces insisted on strict interpretation of the Talmud and close adherence to the dogmas of religion, while the Jews in the Southwestern provinces, from the beginning of the nineteenth century, had leaned toward a liberal interpretation of the religious laws. Between these was a numerically small party advocating European education, which found it necessary to hide its inclinations and was compelled to peruse non-Jewish books in cellars or attics to escape detection.

Secret societies were formed among young men for the promotion of the work of enlightenment. At the head of one of these organizations was an alien named Dr. Rothenberg, who labored with great enthusiasm for the cause. Russian society, unacquainted with the aspirations of these Jewish young men, took little interest in them; this explains why the best Jews of that time were educated in the German spirit and studied German literature, while things Russian were unfamiliar to them.

Count Uvarov's Report.

According to Lilienthal, the idea of improving the condition of the Russian Jews by educating them in a modern spirit originated with the czar himself, and an earnest attempt to carry out this idea was made by Count Uvarov, then minister of public instruction. He worked out the first plan for the establishment of special Jewish schools and presented it to Emperor Nicholas I. (June 22, 1842). His report, remarkable for its breadth of view, states that "radical reforms are imperative for the education of the growing generation of Russian Jews." He shows that the repressive measures against the Jews in many European countries had failed to achieve any beneficial results, and then points out the excellent effects of the humanitarian measures adopted since the beginning of the nineteenth century. His suggestions were approved by Nicholas, who wrote on the margin of the report, "These deductions are correct." The czar requested his ministers to acquaint themselves with the condition of the Jews in order to make possible the enactment of proper laws. To facilitate the work committees were appointed in provinces where Jews were permitted to live. These committees were to render reports, and it was on the basis of these reports that Uvarov worked out his project. He commissioned Dr. Lilienthal to visit the various centers of Jewish settlement in the Pale, determine the attitude of the Jews toward the proposed measures, and allay existing suspicion as to the intentions of the government. From the circular letter issued by Count Uvarov for this purpose it is evident that the Jewish masses regarded with animosity the establishment of the Jewish schools in Odessa, Kishinef, and Riga, and believed that the promoters of these schools intended to lead the Jewish youth away from Judaism. Suspicions of this nature were not without some show of reason; indeed, they were partly justified by the measures taken during the latter part of Alexander I.'s reign and by the attitude of Nicholas I. toward the CANTONISTS.

Count Uvarov's plan for the establishment of Jewish schools was substantially as follows: The schools were to be divided into two classes—higher and lower. The higher were to be established in the cities and were to contain the equivalent of the first four or five grades of a classical gymnasium. These schools could, if necessary, be modified to serve as preparatory schools for middle or higher institutions of learning. The lower schools were to be established in district towns and were ultimately to replace the Jewish private schools. For the carrying out of the plans of the government Uvarov proposed a committee of rabbis and scholars, whose appointment was to be approved by the governors of their respective provinces and who were to be known as the "Commission for the Education of the Jews of Russia." This plan was approved by the czar, who added in his own handwriting, "I approve of it on condition that the commission shall consist of no more than four rabbis, one from each of the provinces in which Jews are permitted to reside."

Wilna.

Lilienthal occupied himself working out the details of organization, corresponding with foreign Jews in order to determine how many teachers could be secured for the projected schools, and visiting in person some of the larger cities. On going to Wilna he soon became convinced that he would meet very serious opposition there. The Jews of that city impressed him as "familiar with Talmudic and rabbinical lore, but very ignorant of other learning and without much knowledge of the modern branches of science; full of prejudice and narrow-mindedness, and steeped in wild, absurd Ḥasidism which passes all understanding." But after much effort Lilienthal succeeded in convincing the leaders of the community that the school would not be a menace to their religion, whereupon an annual sum of 5,100 rubles was promised by them toward the support of the institution. Lilienthal was then invited to Minsk by the rabbis and the ḳahal, but met there a very determined opposition. The objectors claimed that without equal rights education for the Jew would be a misfortune—words that are proved to have been almost prophetic.

Returning to Wilna, Lilienthal found that the opposition there had gained strength during his absence. The community withdrew its promise and exerted itself to discredit Lilienthal's efforts. The minority in favor of modern education made matters worse by its belligerent attitude. Lilienthal left Wilna greatly disheartened and rendered his report to Count Uvarov. Notwithstanding the discouraging results of the first tour, Lilienthal was again sent out, encouraged at the beginning of the second journey by the friendly attitude of the Jews of Berdychev. This time his efforts proved more successful. He met few difficulties in the Baltic Provinces, where the Jews were to some extent acquainted with modern schools. Lilienthal sent a circular letter to the communities of the Western provinces, wherein he clearly showed their true interests and the danger of narrow opposition; this undoubtedly produced a deep impression. He was awaited impatiently in Berdychev, and his message was received there with great enthusiasm. Similar receptions were accorded him in South Russia. New Russia was prepared for modern schools. There Lilienthal was received joyously, and was pleasantly surprised at the advance already made by the Jews of Odessa in matters educational. He was warmly received also in Kherson and Kishinef. On his return to St. Petersburg, Lilienthal took part in the sessions of the rabbinical commission as the representative of the government. The commission consisted of Voronchenko (chairman), Dukst-Dukshinski (recording secretary), Lilienthal (government representative), Kusnetzov (secretary), and Rabbi Isaac ben Ḥayyim of Volozhin, Mendel Shneersohn, rabbi of Luybavich, Bezaleel Stern, director of the Odessa school, and Israel Halperin, a banker of Berdychev.

Difficulties of the Uvarov Schools.

The schools established according to Uvarov's plans did not meet with the expected success. On the one hand there was a scarcity of competent instructors. It was Lilienthal's expectation that foreign Jews would be appointed as instructors, and he had practically engaged about 200 of them for the proposed work. The authorities decided, however, to employ only natives, believing that enough Jewish instructors could be found in Russia itself. There was no difficulty in securing Christian principals for the schools; and for the classes in general subjects (Russian, geography, arithmetic, etc.) instructors from the non-Jewish schools were appointed. It was not easy, however, to find suitable teachers of Jewish subjects and of German, and appointments were made from among persons not fully competent for their task. Considerable difficulty was encountered in the teaching of German. Professor Mukhlinski, who visited, at the instance of the ministry of public instruction, the Jewish schools of Western Russia, wrote in 1851 that "the Jews of the Western provinces complain of the slight progress of their children in the German language, and for this reason it would be advisable to have in the schools specially qualified teachers of this language, as the influence of the German language in the education of the Jews may prove to be of great importance." The "learned Jew" M. Berlin, assigned to the governor-general of the provinces of Smolensk, Vitebsk, and Moghilef, made a tour of inspection in 1854 among some of the Jewish schools, the result of which was a written warning to a number of the teachers and principals that their duties were being very unsatisfactorily discharged.

The situation of the instructors in the Jewish schools was not an enviable one. The salaries paid were for that time rather high—250 rubles a year to the principals and 225 rubles to the instructors. Nevertheless, since the money for the purpose was derived from the candle-tax, the authorities often delayed payment for months, thus leaving the teachers almost destitute.

Beside these difficulties there was the animosity of the Jewish population, which regarded the instructors as traitors to their religion, and, fearing them as representatives of the government, was always ready to express its enmity toward them. For instance, the instructors and their children were not subject to military service; yet the Jewish communities vented their spite by presenting to the authorities the names of the relatives of the instructors. When these relatives were missing the instructors, according to law, were held responsible for concealing their whereabouts and were thus subjected to much annoyance.

As to pupils in the Jewish schools, it appears that few were sent voluntarily by their parents or guardians. The organization of a school usually began with the arrival of the Christian principal, whose duty it was to enroll students. For this purpose he applied to the Jewish community, stating that it was absolutely necessary to create a student body. The community, being in fear of the administrative authorities, acted in precisely the same spirit that it displayed in the matter of military service. Orphans, artisans' children, and beggars were forced by the influential members of the community into constituting the school contingent; the school was recruited, in fact, from the very dregs of the Jewish population; at times parents were paid for sending their children to the school. The community took care to secure only the minimum number of pupils necessary to give the school the semblance of an educational institution. Thus in one city, where there was, according to official statistics, a Jewish population of 10,000, there were, in 1852, only 27 pupils in the Jewish school; in Vitebsk, in 1849, there were only 13; in Jan., 1851, only 19; and 50 in the November following.

Expedients of the Principals.

But even these figures do not betray the exact condition of affairs. A principal would have been embarrassed, for instance, had he been compelled to report that his school, with three teachers, had often less than ten students. For this reason he would report as being in attendance even those who had left during the year. For example, in one school twenty-three pupils were reported on the rolls, though as a matter of fact fifteen of them had left during the term. In another school most of the students who had entered during the preceding year appeared in the report of the current year, though most of them were marked in the class register as having left "on account of poverty." The irregular attendance led to many attempts at improvement. Thus Professor Mukhlinski suggested that "there should be at every Jewish school a Jewish attendant who could be sent after pupils that failed to report"; and in 1855 the principals of the Jewish schools in the government of Minsk were ordered to see that the Jewish teachers visited the dwellings of the pupils and reported the causes that led to their absence. The school authorities usually ascribed all absences either to poverty or sickness; indeed, there is no doubt that poverty was responsible in part, since, as already stated, most of the pupils came from the poorest homes.

The program of instruction in the schools provided for sixteen lessons of one and a half hours each in the week. Of these lessons seven were devoted to religious instruction, two to Hebrew, four to Russian and penmanship, two to arithmetic, and one to German. Before and after the lessons prayers were said in Russian and Hebrew. The schools were ordered by the higher authorities to omit certain passages from the Hebrew books. For instance, in 1854, when the school authorities of the government of Minsk replaced the Shulḥan 'Aruk with the Ḥayye Adam, they pointed out the passages to be omitted from the latter. In 1853 the same authorities ordered that the teaching of the Mishnah should be discontinued. These changes and omissions were undoubtedly due to the suspicion entertained by the government that the Hebrew books contained statements, expressed or implied, directed against the civil government or against Christianity. Notwithstanding the fact that in some places the population consisted almost exclusively of Ḥasidim, the ministry of public instruction made obligatory upon the schools the use of the Ashkenazic prayer-book with its German translation. Of the text-books employed, several were prepared by Leon Mandelstamm, including Hebrew, German, and Russian grammars.

Failure Recognized.

The evident failure of the Jewish government schools convinced the government after some years that a reorganization of these schools was desirable. At the suggestion of several of the governors of the South-Russian provinces the ministry of public instruction took the problem under consideration. The question was raised whether these schools should be abolished as useless. After a thorough investigation covering a period of eight months the special agent submitted his report to the governor-general of New Russia and the superintendent of instruction in the Odessa district. The report declared that these schools, while requiring reorganization, should not be abolished entirely, and that the main defects in the existing organization were due to an inadequate knowledge of the Russian language on the part of the children admitted and to the unsympathetic and severe methods of the Christian principals, who usually possessed but little pedagogic training. Besides, the pupils who came from the ḥadarim were not accustomed to school discipline, and capable teachers would not remain long in positions affording a salary of only 225 rubles per annum. As a result, the number of ḥadarim had increased rather than decreased since the establishment of the schools; the more so since the principals of the Jewish schools, to whom was given the supervision of the melammedim, often furnished the latter with certificates on personal and illegal grounds. An instance of the increase of the ḥadarim is afforded in the case of Kishinef, where there were 100 in 1864.

The following recommendations were made in the report of the special agent to the governor-general: (1) The schools should be reorganized so as to make those of the first class preparatory for entrance to the classical gymnasium; those of the second class should be provided with a more practical curriculum, so that pupils might be to some extent better prepared for life if obliged to discontinue their studies before graduation. (2) Elementary classes for the younger children should be instituted, thus doing away with the necessity for the ḥeder. (3) As principals of such schools should be appointed only such as had completed their studies in a rabbinical school or in some higher institution of learning. (4) Sufficient money for the purchase of books and other school materials should be allowed to every poor pupil. The remuneration of the Jewish teachers should be increased, and principals should be chosen from among them. (5) It should be made obligatory upon teachers and principals to serve at least five years in one place. (6) The melammedim should be placed under the supervision of the school administrations, and ḥadarim should be allowed only in those places where schools did not exist. The report pointed out also that the reorganization should be of such a character as not to lead the parents to think that the main purpose of the school was to discourage the religious and national sympathies of their children. "The abolition of these schools," said Count Kotzebu, "would drive the Jews back into their fanaticism and isolation. It is necessary to make of the Jews useful citizens, and I see no other means for achieving this than their education."

Artzimovich's Recommendations.

Artzimovich, the superintendent of public instruction of the Odessa district, came to a somewhat different conclusion, as is shown in his report to the minister of public instruction. He dwelt on the suggestion of Dr. Shwabacher, then rabbi of Odessa, to found rabbinical seminaries; he recommended the establishment of such a seminary in Odessa and the appointment of Dr. Shwabacher as its director, the funds for its support to be derived from special Jewish taxes. He further suggested transferring one of the rabbinical schools of Western Russia to Odessa, where there was less prejudice and more intelligence among the Jewish population, where the many educated Jews—doctors, lawyers, bankers, etc.—would exert a beneficial influence upon the students, and where there were many Jewish children who had obtained the desired preliminary education in the general schools. Thus in the Second Gymnasium at Odessa, in 1862, there were 115 Jews; in the woman's gymnasium 36 Jewish girls; in the commercial school 39 Jews; while the number of students in the specially Jewish schools was steadily decreasing. In 1862 there were in the first-class Jewish government schools of Odessa 316 pupils; in 1863 and 1864, 300 pupils; and in Jan., 1865, only 260 pupils. In the second-class school there were 114 in 1862, 135 in 1863, and only 45 in 1864.

The suggestion for the establishment of rabbinical seminaries did not receive support from the government, and the plan was still unrealized twenty-five years later, when the Society for the Promotion of Culture Among the Jews of Russia again raised the question of establishing a seminary in Odessa.

Education in the Agricultural Colonies.

In April, 1866, General Zelenoi, then secretary of the imperial estates, pointed out in a report that the great obstacle to the success of the Jewish agricultural colonies in South Russia was the extreme religious fanaticism of the colonists, and that the surest means of removing it would be to abolish the system which permitted the teaching of children at home. In consequence, Marcus Gurovich, an educated Jew, was commissioned to inspect the Jewish colonies and outline practicable school reforms. Gurovich suggested that in the schools to be opened the melammedim should be retained as instructors in Hebrew, lest changes of too radical a nature should excite the prejudices of the colonists. His plan provided for the establishment of two-class schools with a teaching staff of two melammedim and one secular teacher. In the larger colonies a two-room school should be opened, one room for general subjects, as Bible, Hebrew, German, Russian, arithmetic, and penmanship, and the other for complementary studies, as geography, Russian history, drawing, and agriculture. The secular instructor should be paid by the government, while the melammedim should receive payment from the parents according to agreement.

The minister of public instruction adopted this plan with slight modifications, excluding German as unnecessary, and increasing the attention given to the Russian language. He agreed with Gurovich that great care should be exercised in effecting the proposed changes. Official inertia caused the execution of the proposed measures to be delayed until 1868, when the communities in the various colonies offered to supply the money necessary to carry on the work of instruction provided funds were advanced to them for the initial outlay. In that year there were opened in the ten colonies twelve schools (ten for boys, and two for girls), the maintenance of which was undertaken by the respective communities. In recognition of his services the ribbon of the Order of St. Stanislaus (3d degree) was conferred upon Gurovich, with a purse of 500 rubles.

Good Effects of the Government's Attitude.

The benevolent efforts of the government during the reigns of Nicholas I. and Alexander II. gradually but surely effected important changes in the attitude of the Russian Jews toward modern education. Thousands of Jewish families settled outside of the Pale, became familiar with the Russian language and customs, lost some of their narrowness, and no longer kept their children from attending non-Jewish educational institutions. The classical gymnasiums and universities soon came to have more than a mere sprinkling of Jewish students, and, while in the smaller towns within the Pale secular education was still regarded by the masses with extreme disfavor, the educated and progressive elements of Jewish society in the larger towns constantly gained in strength and importance.

With the reactionary reign of Alexander III. the liberal interpretation of the existing laws was abandoned, and new regulations were passed concerning the attendance of Jewish students in the middle and higher schools. In 1887 a regulation was put in force according to which only 3 to 6 per cent of the students in any gymnasium or university might be Jews. Naturally, while outside the Pale the Jews are comparatively few and the vacancies existing in these institutions are not always filled, the number of Jews in towns within the Pale who wish to enter is greater than the number of vacancies. Thus higher education is difficult to attain for most of the Jewish youth. The very strict interpretation of this law makes matters still worse. It appears that there is a determination on the part of the authorities to reduce the number of Jewish students to a minimum. Many Jew-

Later Attitude of the Government.

ish students graduating from the middle schools with honors are not permitted to enter the universities, the reason alleged being lack of vacancies. In the entire province of Wilna, *e.g.*, there were in a certain year only three or four vacancies. The result is that those who have the means go to schools or universities in Germany, France, or Switzerland.

The lower general schools, while nominally open to Jewish children, are not always accessible to them. The city and district schools admit Jewish students on an equal footing with the others, yet the regulation, issued by the ministry of public instruction in 1901, which requires Jewish students to do written work on Saturday, virtually excludes the children of Orthodox Jews. In Lubny, government of Poltava, there had been twelve Jewish students in the district school, but after the enforcement of the new regulation only one remained. The same is true of many other places. Many of the lower schools even refuse to receive Jewish children, claiming that there are no vacancies. The Jewish communities are thus obliged to provide for the elementary education of their children, and as a result the Jewish schools are indispensable.

Specifically Jewish Schools.

The specifically Jewish schools in Russia to-day may be divided into three classes: (1) government schools, (2) communal schools, (3) private schools. The first class comprises the schools established in the forties and described above, and the teachers' seminary at Wilna. The government schools founded in 1844 were reorganized in 1873. The minister of public instruction pointed out at that time that these schools were to be regarded as temporary and were to be abolished when "the Jews begin to send their children to the general schools." Apparently it was not suspected at that time that ultimately the general schools would be closed to most Jewish students. The Jewish elementary schools are divided into one- and two-class schools, each having a preparatory class. The full course extends over six years. The instructors are usually graduates of the Wilna Jewish seminary, but in case of necessity appointments are made from among Christians familiar with Judæo-German. These schools are not popular with the Jewish masses because too little time is devoted to Jewish subjects; nevertheless they are well attended where other schools are lacking.

The Jewish private schools usually offer a two- or three-year course, but in a few cases a four-year course. Of twenty-four lessons every week, four at the most are devoted to teaching Jewish religion. In most cases the time devoted to Jewish subjects is much less, being rarely sufficient for more than the study of the prayers and of Biblical history. The teachers in private schools are poorly paid—on the average, from 300 to 400 rubles annually for instructing from thirty to forty students. In many instances the expenses of the private schools do not exceed the income.

Talmud Torahs and Ḥadarim.

In addition to these schools there are the Talmud Torahs and the ḥadarim. The Talmud Torah came into existence owing to the necessity of caring for orphans. Being unable to maintain orphan asylums, the community had to content itself with sheltering the orphans through the day. The children were fed, clothed, and taught. The instruction usually consisted in the reading of Hebrew and the study of the prayers, the Bible, and other religious books. The Talmud Torahs are still maintained for the poorer classes and are under the direct supervision of the elders of the community. As a rule the teaching is irregular and without system. Notwithstanding the great interest of the masses in the Talmud Torah and their conscientious contributions, they have little voice in its management; the leaders of the community usually conduct it according to their own ideas. Moreover, the income of the average Talmud Torah rarely exceeds from 400 to 500 rubles annually, and with such small means but little can be accomplished. The methods in vogue in the ḥeder are generally followed, and the children are scarcely less ignorant when they leave the Talmud Torah than they were on entering. There are some exceptions, however, in which the Talmud Torahs are conducted according to modern pedagogic principles. Usually, people who can afford to send their children elsewhere do not send them to the Talmud Torah.

The ḥeder, which is a type of school evolved during many generations of religious isolation, is a purely religious school. The so-called "model" ḥeder is the more modern type, in which an attempt is made to include secular subjects. In 1875 a law was passed which prohibited the ḥeder to admit those who were not graduates of a rabbinical school or of a middle-class school. This law failed to achieve its purpose because of the slight remuneration offered by the ḥeder—often not more than 100 rubles a year; persons who had obtained an education in a rabbinical or middle-class school were not tempted to apply for positions. The government, realizing the futility of the regulation, passed a new law in 1893, which allows any one who so desires to conduct a ḥeder on payment of an annual tax of three rubles.

The ḥeder as an institution is intimately connected with the life of the Jewish masses, and it will take many years and much effort to replace it with modern Hebrew schools. The ḥeder transforms healthy children into sickly and nervous ones, and it has been said with much truth that the physical degeneration of the Jewish masses is due in part to the baneful influence of this class of schools. The ḥeder is usually conducted in the home of the melammed, and often in the family living-room. The melammed usually attends to one or two children at a time, while the rest repeat their lessons aloud. The ḥeder contains children of all ages, rendering system impossible; its sessions are carried on for six days in the week, during the entire day. There is no summer vacation for the Jewish boy, and most of his time is spent in the ḥeder. The model ḥeder is more cleanly, and has the appearance of a properly furnished schoolroom. Unfortunately, the model ḥeder is not met with very frequently.

A better conception of the old ḥeder and the old Talmud Torah may be obtained from the following, taken from the "Voskhod": "Our ḥadarim," writes a correspondent from Zvenigorodka, government of Kiev, "with their melammedim, represent a copy in miniature of the medieval Inquisition applied to children. There are no rules and no system. . . . Our Talmud Torah makes a still sadder picture. . . . Its program consists of cold, hunger, corporal punishment, and Hebrew reading." Another correspondent, from Vitebsk, writes: "Our Talmud Torahs are filthy rooms, crowded from nine in the morning until nine in the evening with pale, starved children. These remain in this contaminated atmosphere for twelve hours at a time and see only their bent, exhausted teachers. . . . Most of them are clad in rags; some of them are almost naked. . . . Their faces are pale and sickly, and their bodies are evidently not strong. In parties of twenty or thirty, and at times more, they all repeat some lesson aloud after their instructor. He who has not listened to the almost absurd commentaries of the ignorant melammed can not even imagine how little the children gain from such instruction." These quotations might be multiplied indefinitely. Those given are, however, sufficient to show how the Jewish masses within the Pale of Settlement obtain their ḥeder education.

——**Emigration**: The extensive emigration of Jews from eastern Europe, where a large Jewish population has concentrated within the last century, forms a very significant phenomenon of Jewish life during the last two decades, and is full of meaning for the entire Jewish people. This emigration has been directed to different regions; namely, North America, England, South Africa, Palestine, Argentina, and Australia. There is no doubt, however, that the main stream has been directed to the United States, and in consequence the Jewish population of that country, which until the eighth decade of the nineteenth century was but small, is now about 1,500,000 persons.

Sources of Information.

The study of this subject presents very considerable difficulties. Russian official statistics afford no information, while the registration at certain foreign ports gives the countries from which the immigrants come, but not their nationality or religion. Though data of Russian emigration through all the German ports and through Antwerp are available, it would seem that during certain years more immigrants from Russia entered the United States alone than had passed through all these ports together; nevertheless a not inconsiderable number of emigrants proceed from Antwerp and Germany to Argentina, Brazil, and South Africa. It becomes necessary, therefore, to seek the desired information in the immigration statistics of the country which is the principal destination of the immigrants, namely, the United States. These statistics, which have been kept since 1820, and which are absolutely reliable, are for the purposes of this article, however, not entirely satisfactory; for up to the year 1898 immigrants were classified only according to the countries from which they came, and not according to race and religion as well. Since the year 1898-99, however, this additional information has been registered, so that it is now possible to determine the extent and character of Jewish emigration to the North-American continent. Moreover, competent authorities agree that until the ninth decade of the nineteenth century the immigrants from Russia (excluding Poland and Finland) were, with the exception of some thousands of Mennonites, almost exclusively Jews. Of recent years the Russian immigrants have included a considerable number of Lithuanians and Germans; but for the year 1903-4 two-thirds of the immigrants from Russia (exclusive of Poland and Finland) were Jews. The following table shows the total immigration into the United States, and that from Russia, beginning with the year 1870-71:

IMMIGRATION TO THE UNITED STATES.

Year.	Total Immigrants.	Russian Immigrants.	Year.	Total Immigrants.	Russian Immigrants.
1870-1871.....	321,350	1,005	1887-1888 ...	444,427	31,256
1871-1872.....	404,806	1,311	1888-1889....	444,427	31,889
1872-1873.....	452,803	3,490	1889-1890....	455,302	33,147
1873-1874.....	313,339	7,477	1890-1891....	560,319	42,195
1874-1875.....	227,498	4,369	1891-1892....	479,663	76,417
1875-1876.....	169,986	6,787	1892-1893....	439,730	35,626
1876-1877.....	141,857	3,370	1893-1894....	285,631	36,725
1877-1878.....	138,469	4,216	1894-1895....	258,536	33,232
1878-1879.....	177,826	3,784	1895-1896....	343,267	45,137
1879-1880.....	457,257	5,278	1896-1897....	230,832	22,750
1880-1881.....	669,431	8,193	1897-1898....	229,299	27,221
1881-1882.....	788,992	17,497	1898-1899....	311,715	24,275

1886-1887.....	546,889	28,944	1903-1904....	812,870	77,544

Jews Driven from the Pale.

The data concerning the total immigration have been purposely given, inasmuch as immigration to any country is influenced mainly by two factors. It depends, in the first place, on the advantages to be obtained in the new country, and in the second upon the forces tending to send the emigrants from the old. In years of industrial prosperity, when there is a great demand for labor, immigration increases rapidly, and during an industrial crisis it decreases proportionately. It is but natural that the general causes influencing the economic life of the United States should modify the extent of Russian immigration. Of still greater influence in the case of Russian Jews are the forces which drive the Jewish population from the Pale of Settlement. An examination of the foregoing table shows that there have been two distinct waves in Russian immigration. The first was not great, the maximum intensity being attained in 1873-74, when there were 7,477 arrivals in the United States. This was a time of prosperity in that country. After the crisis which led to a decrease in the total immigration, an increase is again apparent in 1879-80; and the figures gradually rise until 1881-82, when the high-water mark of 788,992 in the total immigration is reached. This is accompanied by a similar increase in the immigration from Russia, the arrivals in the latter year numbering 17,497, an increase over the preceding year of more than 100 per cent. In this rapid increase are seen evidences of the results of the well-known events of the early eighties in Russia—the anti-Jewish riots, the ministry of Count Ignatiev, and the passing of the "Temporary Regulations" (May Laws). With the resignation of Ignatiev (June 12, 1882) the number of immigrants from Russia decreased to 6,907; but in 1883-84 it again rose, to 15,122. Since that time emigration from Russia to the United States has steadily grown.

Effect of the "Temporary Regulations."

It is evident that within the Pale of Settlement chronic conditions had arisen which drove its population to other countries. These conditions were no less than an economic crisis in the life of the Jewish population, intimately connected with the legal limitations and particularly with the rigid application of the "Temporary Regulations." In 1891-92 the gradually growing Jewish immigration took another bound upward, from 42,195 to 76,417. This was the year of the expulsion of the Jews from Moscow by order of the fanatical Grand Duke Sergius, and of their extensive removal from the interior of the country and from the villages. After this the number of immigrants from Russia diminished until 1896-97, when the minimum of 22,750 was reached. A summary of the figures in the foregoing table by decades since 1870 shows that during the first decade there annually entered the United States an average of 4,108 Russian immigrants; during the second decade, 20,686; and during the third, 38,058. For further statistical data see Migration; United States.

——**Legislation:** With the expulsion of the Jews by the czarina Elizabeth Petrovna (Dec. 2, 1742) the Jewish problem in Russia was apparently solved; but on the partition of Poland, Russia received the territory now known as "White Russia," and other provinces having a large Jewish population. The people of these regions were granted all rights "without distinction of faith or nationality" (Feb. 26, 1785). But even as early as the reign of Catherine II. this decree was not strictly observed, and afterward the Jews were subjected to various acts of special legislation, the origin of which may be ascribed to several motives: (1) *The Religious Motive:* The conversion of a Jew to Christianity frees him from all restrictions. The only impediment to the enjoyment of equal rights by Jews is their religion (Senate decisions, 1889, § 25). (2) *The Economic Motive:* To protect the native population from so-called Jewish exploitation. (3) *The Fiscal Motive:* The fear that Jews might engage in contraband trade. This caused restrictive measures to be passed against them, and led, for instance, to their removal from the western boundaries to a circle 50 versts distant. (4) *To Reduce the Population:* The permission to establish a Jewish colonization association for the emigration of the Jews. Jews leaving Russia with permits to colonize elsewhere are considered (Rules, May 8, 1892) to have abandoned Russia forever. (5) *The Assimilation Motive:* Jews are forbidden to wear clothes different from those worn by the rest of the population; Jewesses are forbidden to shave their heads (ukase, March 31, 1856).

On Oct. 19, 1881, the commission which had been appointed to report on the subject of Jewish affairs, having completed a project for Jewish registration, was discharged, and in its place a committee was formed for the examination of the material collected by the local commissions on the Jewish question. This committee was placed under the chairmanship of Assistant Minister of the Interior Gotovtzev. When the committee was summoned the following persons took part in the proceedings: I. N. Durnovo, the Prince of Tzertelev, and Professors Andreyevski, Grigoryev, and Bestyuzhev-Ryumin. Shortly afterward this committee was merged in a high commission appointed to examine into the operation of the laws affecting the Jews. Its first chairman was Makov, the minister of the interior, who served till his death in 1883, and was succeeded by Count K. N. Pahlen. This commission was discontinued Nov. 17, 1888.

The existing laws affecting Jews will be found in articles 952-989, 992, 993, 1004, of volume ix. of the Code (ed. 1876); articles 11-25, 157-165, 289-291, of volume xi., part 1 (ed. 1890); and articles 700-705, 1060-1096, 1135-1139, of volume xi., part 1.

Following is a summary of the special legislation concerning the Jews of Russia:

I. Legislation on Subdivision: This concerned the separating of Jews into three classes: (*a*) Karaites; (*b*) foreign Jews; (*c*) Polish Jews. As regards (*a*): The czarina Catherine II., in the year 1795, suggested to the governor-general of Voznesensk and Taurida that certain regions of these districts be assigned to the Karaites. From that time additional rights were granted them until 1863, when it was declared that the Karaites "enjoy all the rights accorded to Russian subjects."

At first all foreign Jews (*b*) were allowed to reside in Russia within the Pale of Settlement. In 1824, however, this privilege was restricted, and now only the following are allowed to live within the Pale: rabbis, sent for by the government; physicians for the army or navy; manufacturers intending to establish factories (not distilleries); mechanics for Jewish factories. Foreign Jews not having right of residence may not own real property in the Pale; and if they inherit any, it must be sold within six months of the notification of the inheritance. The right of residence and freedom to engage in any occupation were granted to Polish Jews (*c*) under certain restrictions until 1862, but they were not permitted to own real estate. Though on May 24, 1862, they were granted full rights, in recent years restrictive measures have been revived.

II. Legislation Concerning Religious and Communal Organizations: Within the Pale, Jews may have one bet ha-midrash to every thirty dwellings and one synagogue to every eighty. Without the Pale, a permit to establish a bet ha-midrash or a synagogue must first be obtained from the ministry of the interior (Dec. 25, 1867). Regular attendants at a synagogue constitute a praying community and may elect their own ecclesiastic government, which consists of one man learned in the ritual, an elder, and a treasurer, the local rabbis being ex-officio members. Jews in every locality are organized into a taxable community, which may elect its own tax-collector and assistants, the latter being also assessors.

In 1842 a Jewish commission was appointed to solve certain religious problems. From this was developed a rabbinical commission which was attached to the ministry of the interior (June 24, 1848); its purpose was to sanction by religious authority reforms contemplated by the government. Sessions of the commission were held in 1852, 1857, 1861, 1879, and 1893.

III. Legislation Regarding the Pale of Settlement: For conditions within the Pale see PALE OF SETTLEMENT.

As regards Jews without the Pale, *i.e.*, those enjoying the right to live in isolated localities, the following legislation was enacted: (1) Only those Jews who had been registered prior to April 18, 1835, were permitted to reside in Courland and in the suburb Shlok Lievland. (2) In Nikolaief and Sebastopol Jews were granted residential rights on Dec. 23, 1791, but were expelled Nov. 20, 1829, notwithstanding the governor-general's intercession. In 1859 it was again found useful to grant them permanent residence in those cities. (3) In the city of Kiev, on June 23, 1794, Jews were permitted to engage in business; they were expelled in 1827, but on Dec. 11, 1861, Jews of the first and the second mercantile gilds (at present the permission is extended only to those of the first gild) were granted permanent residence in the districts of Lybedskaya and Ploskaya. (4) By the Senate decisions of 1888 the native mountain Jews of the Caucasus enjoy the same rights as the native Caucasians (No. 10). (5) In Turkestan the name "native," according to article 262 of the Turkestan Code, applies also to old Jewish settlers and their progeny (May 23, 1889). (6) In Siberia, Jewish agricultural colonies were established at Tobolsk and Omsk in 1835. Emigration thither was stopped in 1857, and measures were taken to diminish the number of Jews there. At present domicil in Siberia is permitted to banished Jewish settlers and their children.

IV. Legislation Concerning Temporary Sojourn: The following classes of Jews may remain temporarily outside the Pale: heirs, for the purpose of receiving legacies; litigants before the courts of justice; merchants; and bidders on contracts. These may remain six weeks, with a possible extension to two months. Carriers are allowed two weeks; a merchant of the first gild, six months; one of the second gild, two months; and learned Jews attached to the staffs of the governors, during their term of service. Those having no rights are deported.

V. Legislation Concerning the Right to Acquire or Lease Property: During the nineteenth century the Russian government, wishing to interest the Jews in agriculture, issued various rules to facilitate their acquisition or renting of land. This encouragement continued during the reign of Nicholas I. Wherever they were allowed permanent residence Jews could acquire all kinds of realty, except inhabited estates. At present (1905), however, they are forbidden to acquire, hold under mortgage, or lease realty in any of the following localities: (1) Outside the cities and towns within the Pale. (2) In nine of the western provinces of the Pale. (3) On a strip 50 versts wide along the western border, when not registered there. (4) In the provinces of Courland, Donarmy, Finland, Kuban, Lievland, Akmolinsk, Semipalatinsk, Semirechinsk, Terek, and Ural.

VI. Legislation Concerning Commercial and Industrial Rights: Jews within the Pale may join mercantile gilds and engage unrestrictedly in business and manufactures. Jewish artisans and laborers may join trade corporations ("tzekh") even outside the Pale; within the Pale, Jews form their own corporations (Rules, 1852). First-gild merchants in the Pale may import or export goods through Christians. Restrictions imposed on manufacturers may be removed by government purveyors of their products.

Jews, where allowed temporary residence, may neither sell goods at home nor peddle them, under penalty of confiscation of the goods or of deportation of the person offering them for sale. This law is now applied even to Jews having common right of residence (Decisions, Criminals Cassations Department $\frac{731}{743}$, $\frac{12}{17}$, $\frac{20}{77}$, $\frac{7}{89}$), etc.

VII. Legislation Concerning Education: (1) *General Institutions:* The laws of 1835 expressed the principle that Jewish children might be received into all schools. In 1886 and 1887 the number of Jewish students in secondary and higher institutions was restricted within the Pale to 10 per cent, elsewhere except in St. Petersburg and Moscow to 5 per cent, and in those cities to 3 per cent. To some schools Jews are not admitted. (2) *Government Schools for Jews:* On Nov. 13, 1844, a decree ordered the establishment of primary and secondary schools for Jewish children, and rabbinical schools for the training of teachers and rabbis. On March 16, 1873, it was decreed that: (*a*) the rabbinical schools in Wilna and Jitomir be changed into institutes for Jewish teachers; (*b*) the grammar schools be closed; (*c*) the Jewish primary schools be retained only where the number of general schools was insufficient. At present only the teachers' institute in Wilna and a few primary schools remain. (3) *Private Schools:* In 1856 rules were issued for the supervision of the private education of Jewish children. Teachers were compelled to procure certificates, and were restricted as to subjects and the methods of teaching. Since 1893 teachers' certificates have been issued for one year only, for a fee of from one to three dollars.

VIII. Legislation Concerning the Right to Hold Office: (1) *State Service:* In 1835 the state service was open to Jews without the Pale holding the doctor's degree and possessing a testimonial from the minister of education and a permit from the czar. To these were added in 1836 and 1838 Jews living within the Pale who held similar credentials, and on Nov. 28, 1861, all Jews with academic degrees were included, without restriction of residence. These privileges were extended in 1865, 1866, and 1867, somewhat restrictedly, to physicians not having academic titles. At present the rights above mentioned are practically void. In 1882 the number of Jewish physicians and nurses in the army was limited to 5 per cent. (2) *Communal Service:* (*a*) In the ante-reform institutions. Jewish municipal representatives, limited to one-third of the council, were elected (1839) by their respective communities. Jews are eligible to no other municipal offices. (*b*) In the new institutions (Jan. 1, 1864). The Jewish elective rights, which at first were unrestricted, were suspended on June 12, 1890, and regulations ordering the preparation of a list of eligible Jews from which the councilmen might elect a number (not exceeding one-tenth of the whole council) to the chamber, was substituted on June 11, 1892. (*c*) As jurors, Jews are elected in proportion to the population. They may not be foremen, nor may they try cases of infraction of the ecclesiastical laws. (3) *In the Army:* Jewish privates or volunteers may not be granted commissions nor be admitted to the military schools (1887). They may not direct military bands, nor be assigned to quarantine, frontier, navy, or gendarmerie service, nor to service in Warsaw or Caucasia.

IX. Legislation Concerning the Practise of Law: The code of Nov. 20, 1864, puts no limitation on the practise of law by the Jews. The regulations of Nov. 8, 1884, and April 10, 1890, make the admission of Jews to attorneyship dependent on a permit from the minister of justice. This, however, has never been granted.

X. Legislation Concerning Military Duty: Until 1827 Jews, instead of performing military duty, had to pay a money-tax. On Aug. 26, 1827, personal military duty on the part of Jews was introduced, the ages of recruits being from twelve to twenty-five years, and the rate ten from each thousand males per annum (at this time the non-Jewish rate was seven per thousand every second year). On Aug. 26, 1856, Jews were granted equal rights with other citizens as regards military duty. The military code of Jan. 1, 1864, contains no special rules for Jews. Later, orders were issued (Feb. 3, 1876) that unfit recruits be replaced by their healthy coreligionists; (May 9, 1878) that any shortage in a precinct be supplied by the drafting of those exempt from duty in such precinct; and (April 12, 1886) that the transfer of Jews from one recruiting precinct to another be restricted. The family of a Jew who evaded service was liable to a fine of 300 rubles, and a reward of 50 rubles was offered for his capture. The number of Jewish recruits drafted during the period embraced within the years 1874 to 1892 (excepting 1883, for which no reliable figures are obtainable) was 173,434.

XI. Legislation Concerning the Jewish Oath: The chief peculiarity of the Jewish oath is that it implies distrust of the person who is taking it and assumes that he will swear falsely. The person swears that he will testify or act not with mental reservation nor according to any secret meaning of the oath taken, but in accordance with the intention of those administering it. Imprecations and renunciations of the Jewish faith in case the oath is violated are eliminated from the oath as at present administered.

H. R. M. My.

XII. Legislation Concerning Special Taxation: *The Double Tax:* By the decree of 1794 the Jews were ordered to pay double taxes for the privilege of engaging in handicrafts or commercial enterprises. Those already engaged in such enterprises were given the alternative of leaving Russia after the expiration of three years, during which period, however, the double taxes on their respective occupations were to be paid. In 1799, when the Jews of Courland were granted the right of permanent residence, this decree was reaffirmed, but modified in favor of those of the Courland Jews who were too poor to pay the double tax for three years, and they were immediately sent across the frontier. In 1800 this modification was abolished, and persons too poor to pay the double tax were to set to work in the government smelting-works.

The double tax was retained in the regulations of 1804, exceptions being made in favor of Jewish farmers, factory-hands, and artisans. At this time the government promised to take proper measures to place the Jews on the same level as other subjects, "when all the Jews engaged in agriculture, manufactures, and commerce will show tenacity of purpose and diligence." This tax was imposed on both sexes and thus made more burdensome.

After 1818 a decree was promulgated which declared that "on account of the impoverished condition of the Jews" they should be required to pay only a single tax; but the government took harsh measures in the collection of arrears. Thus, in 1830, in order to collect them in the governments of Minsk, Grodno, Wilna, and Podolia, the Jews were impressed into military service with the provision that each community furnishing recruits should be credited with 1,000 rubles for every recruit over twenty years old and with 500 rubles for every recruit under that age. This regulation was abolished in the same year, revived in 1851, and finally abolished in 1857.

Another measure, passed in 1831, called for an additional payment by Jewish merchants whenever the amount paid by their Jewish townspeople was insufficient. This was abolished in 1856.

A third measure, the purpose of which was to provide for tax deficiencies and also to supply funds for the education of the Jewish youth, originated the basket-tax, the candle-tax, the tax on Jewish garments, and the tax on Jewish printing establishments. For details of the Basket-Tax see Jew. Encyc. ii. 578b.

The Candle-Tax: This tax is collected on candles lighted by Jewesses on Saturday night. It was established in 1844 and was intended exclusively for the support of Jewish schools. It was at first subject to lease, but as this led to abuses the following regulations were formulated in 1851, to be in force for a period of three years: (1) The total amount to be levied by candle-tax was 230,000 rubles. This was to be collected for three years beginning with 1853. (2) This amount was to be apportioned annually by the ministry of the interior. (3) Each community was to subdivide its pro rata tax. (4) Each community was to be responsible for collecting its proper share. (5) The tax was to be collected by the elders and their assistants, and was to be remitted to the city councils. (6) The elders, their assistants, the members of the city councils, etc., were to be held responsible to the government for the fulfilment of their duties. (7) The ministry of public instruction was to inform the ministry of the interior annually of the amount of the candle-tax fund due from the various communities. (8) The dates when the taxes should be remitted were to be determined by the common consent of the two ministries. (9) The ministry of the interior was to be entrusted with the carrying out of the details affecting the distribution of the funds.

In accordance with a decree issued Dec. 24, 1858, these rules are still in force.

The Tax on Jewish Garments: For the legislation on Jewish garments see the article COSTUME.

The Tax on Jewish Printing Establishments: In 1845 the printing of Jewish books was confined to two printing-houses; the privilege of printing was sold at public auction to the highest bidder among Jews in good standing. Moreover, a duty not to exceed 1½ kopeks per printed sheet was imposed on Jewish books brought from abroad, exception being made in favor of those treating scientific subjects or relating to the study of languages. As a result of this tax the prices of books rose beyond the means of the Jewish masses. The attention of Alexander II. having been directed to this matter, he ordered by a decree dated July 1, 1862, that the Jews should be permitted to open establishments for the printing of Jewish books exclusively, (1) in all places where Jews were permitted to reside, and wherever the ministry of public instruction might find it possible and convenient to have special Jewish censors, and (2) in St. Petersburg, the books to be sold to Jews who enjoyed the right of residence in the capital. These printing establishments were taxed to support the Jewish schools—20 rubles for each hand-press; 120 rubles for each small power printing-press; and 240 rubles for each large power printing-press.

——**The Jew in Russian Literature:** The earliest treatment of the Jew in Russian literature is an abstract one, the conception of his character being founded on the ancient Church enmity. This conception gives place but very gradually to a tolerant attitude inspired by broader knowledge. Notwithstanding the fact that certain relations with the Jews were maintained by ancient Moscow, and that at the end of the eighteenth century Russia included among its subjects hundreds of thousands of Jews, all the references to the Jews in Russian literature up to the middle of the nineteenth century are marked by intolerance and deep ignorance. The oldest literature, which is religious and polemical in character, is directed not so much against men as against religion; its purpose is to show the superiority of the New Testament "grace" to the Old Testament "Law," and to expose from the dogmatic standpoint the teachings of the Jewish religion.

First Attempts.

The supposed social and ethical faults of the Jews, brought to the front by medieval Europe, are scarcely touched upon. Ancient Muscovy occasionally expelled or slaughtered its Jews, not because they were usurers, nor because they exploited the population, but on the ground that their ancestors crucified Jesus. This circumstance determined the point of view of the literature, in which, until its renaissance in the first half of the nineteenth century, references to the Jews are exceedingly rare. It was only in the reign of Nicholas I., when questions of Jewish life called with particular insistence for the attention of the government, that Russian literature first created Jewish types and found an expression for its conception of the Jews.

Notwithstanding the fact that these first attempts to portray the Jews were made by the greatest of contemporary writers, the descriptions do not indicate an intimate acquaintance with Jewish life; they merely reproduce commonplace types, partly caricatures and partly repulsive monstrosities. Such are the detestable poisoner in Pushkin's "Skupoi Rytzar"; the Jewish traitor and coward in the "Taras Bulba," by Gogol; the professional Jewish spy in young Lermontof's poem, "Sashka." Later on, in a story entitled "Zhid," by the tolerant Turgenef, there occurs an even more disgusting and impossible Jewish spy, who barters his own daughter. Economic and periodical literature, hampered by the censorship and hardly able to maintain its existence, paid no attention to the Jews. But new tendencies were already discernible, and the great teacher of an entire generation of Russian humanists, the cultured Granovski, declared from his chair in the University of Moscow: "Two thousand years of cruel suffering and affliction have erased at last the bloody boundary-line separating the Jews from humanity. The honor of this reconciliation, which is becoming firmer from day to day, belongs to our age. The civic status of the Jews is now established in most of the European countries, and even in the backward countries their condition is improved, if not by law, then by enlightenment."

At the outset of the civic regeneration of Russia, the Russian Liberals readily agreed that it was merely necessary for the Jews to adapt themselves to the national culture in order to remove entirely the last traces of the ancient enmity. No one suspected at that time that for the proper solution of the Jewish question it would be necessary to enlighten, not the Jews, but the nations surrounding them. Then came the epoch of the "great reforms" of Emperor Alexander II. With irresistible force young Russia abolished her previous injustice and resigned her traditional prejudices. The Jews, who had freed themselves of the faults produced by centuries of slavery and had surrendered everything which isolated them from the great Russian family, were entitled in the near future to become its full-fledged members. A protest signed by all the prominent writers was made against the use of the word "Zhid." In Russian literature itself the Jewish question had no separate place; it appeared there only as a portion of a greater question concerning the fundamental regeneration of Russian life and Russian government. There was no belligerent anti-Semitism. The weak and infrequent attacks of the obscurantists were met by the recently founded Jewish journals.

Alexander II.

Worthy of note in this connection is the activity of the pedagogue and surgeon N. I. Pirogov. To the traditional ill-will exhibited toward the Jews he opposed clear and convincing proofs of their worth founded on his intimate acquaintance with the life of the Jewish masses in Southwest Russia. In the main, however, Russian literature still showed but a slight and superficial knowledge of the economic and spiritual life of the Jews. This fact was realized, but there was no one with the ability to remove the reproach. In the early seventies the mouthpiece of young and cultured Russia, the monthly "Otechestvenyya Zapiski," began to publish Grigori Bogrov's "Zapiski Yevreya," a story of Russian-Jewish life. It acquainted educated Russian society with a world new to it, so near and yet so strange. The novel had a greater success in Jewish than in Russian circles. In 1855 there appeared in "Russki Vyestnik" O. Rabinovich's "Shtrafnoi." In "Yevreskaya Biblioteka" Levanda first published his artistic sketches of the life of Russian Polish Jews and of the ḳahal of the sixties of the nineteenth century. The entire Russian literature of the seventies is stamped by a careless indifference toward the Jews.

In this epoch of "great reforms," inspired by general political and progressive ideals, the Jews had no active enemies, neither had they real friends. They were not known, nor was it regarded as necessary to know them. But a change was soon brought about. The declining prosperity of the peasantry led to a search for the cause of its poverty, unforeseen at the time of the liberation of the serfs. The petty officials readily found it in the activity of the village Jews. More intelligent, industrious, gifted, and temperate, they crowded out the unstable representatives of the corrupt landlord class from the various spheres of free labor. The part played by Jews in revolutionary movements was found to be considerable. The war with Turkey easily infected superficially cultured Russian society with coarse nationalism. This prepared the way for an outbreak of anti-Semitism, always near the surface among the great mass of the people. Its strongest exponent among the prominent writers was Dostoyevski, who saw in the Jews only the most modern vehicles of those liberal ideas which he had constantly fought against. With the ingenuity characteristic of him, he advocated the granting to the Jews of full rights, on condition, however, that this political equality should not make them stronger than the native population—a condition which deprived his suggestion of any significance. The anti-Russian activity of Lord Beaconsfield and several lawsuits with Jewish military contractors afforded considerable material for the agitators. The Russian press found a demand for anti-Semitism which it actively supplied.

The "Novoye Vremya."

To this period belong the first success of the newspaper "Novoye Vremya" and the beginning of the active and successful anti-Jewish propaganda which this influential paper has been carrying on for more than a quarter of a century. It was joined by others less widely circulated: the "Novorossiski Telegraph," published by Ozmidov in Odessa; the "Kievlyanim," published by Pikhno in Kiev; and the insignificant "Luch," in St. Petersburg. The terrible violence of the South-Russian "pogromy" (riots) and the reactionary reign of Alexander III. placed the Liberal press at a disadvantage; lack of familiarity with Jewish life was always one of its failings. It could not at once assume a definite attitude toward this important question, and protest with proper firmness and force against the tragedy of the annihilation of an entire people. It had previously been accustomed to guard the nation against the discretionary measures of the government; but in this case common sense showed that no policy could be suggested other than a physical struggle of the authorities in behalf of the Jews against the turbulent masses.

Still more important was the fact that the Jewish populace appeared to the Russian Liberals not as an industrial people, but exclusively as petty bourgeois. Being accustomed to trust in popular opinion and await the solution of political questions by contemporary popular movements, a portion of the Russian Radicals was not loath to see in the Jewish pogromy the beginning of such a popular movement; nor was it entirely free from the belief that the pogromy were violent attempts of the masses to throw off the burdens of exploitation. For this reason the protests of the Russian writers against the pogromy were, if not evasive, at least not sufficiently courageous and sincere. The forceful exception was the voice of the great Russian satirist and journalist Saltykov-Shchedrin. In an article entitled "Yulskoye Vyeyaniye," published in the most influential of the Russian progressive papers, edited by himself, he expressed with splendid passion and pathos the deep significance and tragedy of the suffering of the Jews and the absurdity of the accusations directed against them. With his customary penetration he described the real cause of anti-Semitism and the soil on which it had developed, appealing to his readers to make themselves acquainted at first hand with Jewish life. When the single appeal of Saltykov was sounded it was as from a voice crying in the wilderness.

Alexander III.

The entire reign of Alexander III. was an epoch of anti-Semitic orgies, in the press, in society, and above all in government circles. Enactments directed not only against the economic welfare of the Jews, but also against their participation in the blessings of culture, followed one another rapidly. The bringing of accusations against the Jews in the anti-Semitic press was systematized. The "Novoye Vremya," with its satellites, among which the "Nablyudatel," edited by Pyatkovski, was preeminent in unrestrained attacks, stopped at nothing, not even at methodically persistent accusations of ritual murder. This met with but feeble resistance.

Reactionary feeling dominated not only the government, but a considerable portion of the Russian people, and the refutations of the historian of the Jews, S. A. Bershadski, of the statesman Demidov, and of the journalists Chicherin and K. K. Arsenyev were without avail.

The Jewish Question a Christian Question.

Some time afterward the attention of society was attracted by the attempts of two really influential writers to defend the Jews. The attitude of the philosopher V. S. Solovyev and of the writer V. G. Korolenko was the more valuable because it was not inspired by mere pity, but by the evident consciousness of the fact that the suppression of anti-Semitism is of great importance not only for the Jews, but also for the Christians. For Solovyev the Jewish question was a Christian one—namely, that of Christianizing the Aryan world, hitherto Christian only in name. A deeply religious thinker and a Hebrew scholar, he energetically rehabilitated the Talmud and personally endeavored wherever possible to influence the representatives of society and government. The humanitarian champion of everything outlawed and oppressed in Russia, Korolenko attempted to influence Russian society not only by the artistic types in his excellent stories, but also by articles on current questions and by enthusiastic participation in every social undertaking aiming to improve the condition of the Jews. In his "Yom Kippur" he showed that even when seen through an anti-Semitic lens the average Jew, with all his faults, is better than the native Russian "Kulak" who exploits the village population. "Skazanye o-Florye-Rimlyaninye," transporting the reader to the time of the Roman sway over the Holy Land, depicts in living and attractive colors the types of Jewish youth who would not wait to conquer by submission. It was the intention of the author to reply in this story to Tolstoi's theory of non-resistance to evil, but the "Skazanye," addressed to the Jews, could have been taken also as an appeal to their national consciousness. Two voluminous, coarsely anti-Semitic novels that appeared at this time—"Tiomny Put," by Kot-Murlyka, and "Tma Yegipetskaya," by Vsevolod Krestovski—met with no success.

Anton Chekhov, also, a native of South Russia, devoted some time and attention to the Jews. Highly talented, but with insufficiently developed social temperament, he modified his attitude toward the Jews according to the fluctuations in his social sympathies. At first a collaborator on humorous papers, he did not fall far short of clownish raillery. After he had become connected with the "Novoye Vremya" he presented, in two stories entitled "Perakati-Pole" and "Tino," several more passable though somewhat negative Jewish types; and finally, in his "Step" (a story) and "Ivanov" (a comedy), published in the Liberal "Syeverny Vyestnik," he showed that he had had direct acquaintance with the Jews and was capable of working his impressions into lifelike images. But the general attitude of Russian literature at that time toward the Jews may be described as indefinite. Although aggressive and defensive tendencies were distinctly observable, neither were characterized by what is most important, namely, insight into the essence of Jewish life, a clear understanding thereof, and the ability to express this understanding to others. New restrictive enactments were met simply by objections—logical and sensible, it is true—on the part of the Liberal press, while the violently vindictive accusations of the anti-Semites were answered by a few stories from Jewish life which showed that the Jews also were human beings and were besides for the most part poor and suffering—as much so as their supposed victims.

Importance of Solving the Jewish Question.

This was the condition in which Russian literature was found by the social movement of the nineties of the nineteenth century. The reactionary policy of the government became unbearable, even for the patient Russian society. The most acute expression of this reaction was the attitude of the government and its press toward the Jews. Naturally this attracted the attention of the progressive Russian elements, and the enlistment of their sympathies was favored by the evidences of a growing consciousness of responsibility on the part of the Jews, who, ceasing to regard their interests as identical with those of general Russian progress, turned their attention to the specific needs of their own people and began to announce them boldly and persistently. This caused certain modifications in the attitude of Russian literature toward the Jews. Its representatives realized for the first time that the Jewish question called for concentrated attention, that they had hitherto sinned by their indifference, and that they had thereby injured their own cause. They realized, even if not fully, that the solution of the Jewish question was not only a portion of their coming victory, but that in fact it was a preliminary condition of that victory; and the mere number of active participants furnished by the Jews in the final struggle for the complete liberation of Russia showed that their emancipation would be the greatest contribution to the successful conclusion of the struggle. Sketches from Jewish life are gradually occupying more space in Russian periodicals. The misfortunes of the Jews are meeting with greater sympathy among the more cultured Russians than has been the case heretofore. Famine among the Bessarabian Jews led to an appeal in "Pomoshch," a literary annual, which appeal was supported by the most prominent Russian writers.

After the Kishinef Affair.

The coarsely anti-Semitic play of the converted Jew Litvin, "Kontrabandisty," was received with hisses by the Russian youth, both in the capital and in the provinces. Finally, the tragedy of Kishinef brought into existence an entire literature of indignant protests, individual and collective, from the most prominent representatives of Russian letters. Among them should be mentioned Maxim Gorki, always sympathetic to Jewish needs, who gave a powerful description of the Nijni-Novgorod pogrom of 1882, of which he was an eye-witness, and who after the Kishinef horrors raised a passionate protest against the exemption from punishment of the moral instigators of the crime. The romantically exaggerated figure of the pitiable Jew in Gorki's "Artemi Kain" should be noted here. The more conscious attitude of the Russian writers toward the Jews found weak expression in the artistic literature. Among its most prominent manifestations may be noted the stories by Machtet; "Zhid," by Potapenko; "Itzek-Shmul Briliantshchik," by Garin-Michailovski; "Itzka i Davidka," by Yablonovski; "Nukhim," by Alexander Novikov; "Poslednyaya Povyest Katzenbogena," by Menshin Yakubovich; "Kobylka v Puti"; and others.

The Russian writers are seemingly attempting to share with their readers those living and strong impressions which they themselves receive in their infrequent meetings with the Jews. That they are thus supplying a real demand is proved by the success which has been gained among the Russian reading public by writers upon Jewish life. At one time the artistic creations of the Jewish belletristic writers found with difficulty a place in the Russian journals. The greatness of such writers as Levanda passed entirely unnoticed among Russian readers, who were not acquainted with the Jewish periodical press (in Russian). On the other hand, the stories of Kogan-Naumov, Khin, Yushkevitch, Aiseman, and Khotimski found a place in the general journals and considerable success in separate editions.

One of the most recent Russian productions from Jewish life is "Yevrei," by Chirikov, a successful attempt to put into dramatic setting not only the daily life but also the spiritual tendencies of contemporary Russian Jews. This attempt is quite characteristic of the present-day attitude of Russian Liberal literature, which has now separated itself from the old abstract conceptions concerning the Jews. It has become more careful and sympathetic toward them. It has passed beyond the boundaries of the old, obscure humanist apology, and describes various groups and spiritual types among the Jews, though to an insufficient extent; and it still lacks, as formerly, a more exact acquaintance with Jewish life and an understanding of Jewish psychology. Russian literature, for all its outward nearness to the Jews, notwithstanding the necessity of penetrating into this but slightly explored world, and in spite of the significant place Jews hold in Russian life, can not show to the present day a single production from Jewish life equal in pathos and tolerance to Lessing's "Nathan the Wise," in power of description to Gutzkov's "Uriel Acosta," in insight into Jewish daily life to the works of Elizabeth Ozheshko. The Jews have not yet found their poet in Russian literature.

H. R. A. Go.

——**Municipal Government:** When at the first partition of Poland the Jews of the region that was ultimately known as White Russia became subjects of the czarina, they were all registered in the towns and neighboring villages. But they were not included in the mass of the Christian urban population, and their status remained the same as when they lived in Poland. The ḳahals represented the Jews in communal affairs, and were responsible to the government in all matters of taxation; as a result the Jews as individuals were isolated from the civic and social life of their neighbors. But in 1780 the Jews were given the right to register in merchant gilds, and, in consequence, those of their number who had not the capital necessary for registration in the merchant class, and who were also deprived of the right to join other classes, became members of the townfolk class. In this way the mass of the Jewish population was included in its entirety in the town population and also in the tradesman and merchant class, and formed in many cities a quantitatively predominant element.

The class of inhabitants engaged in manufacturing and commerce at that time exerted a dominant influence in the town life and in the municipal government, and its representatives filled positions in the magistracies and the town councils. Having joined the merchants and townsmen, the White-Russian Jews became subject to the urban class institutions (thus lessening the influence of the ḳahal), and took part in municipal administration. The ukase granting this right was issued by Catherine II. in 1783. The Christians of White Russia, accustomed to seeing the Jews excluded from social and political life under the Polish régime, opposed their election. The Jews complained to the empress, and the Senate decided (1786) that Jews and Christians should be elected to municipal offices in proportion to the number of Jews and Christians registered in the municipality. This decision was applied also to other governments that were added, at one time or another, to Russia from Poland.

Nevertheless, when Russian administration was established in the governments of Volhynia and Podolia the governor of these provinces prescribed that the number of Jews serving in the magistracies, which according to law were composed of two burgesses and four aldermen, should not exceed one-third of the total number—more exactly that only two of the aldermen might be Jews. This was the beginning of the limitations of the electoral rights of the Jews in Russia as a whole.

Under Paul I., on account of the reorganization of the municipal administrations, the Jews of the governments of Volhynia and Podolia were elected to the magistracies to the number of one-half of the entire number of councilmen. In 1802 the new governor of these provinces requested the Senate to prescribe that the Jews be elected to the city councils only to the extent of one-third of the entire number of councilors, and that the Christians and Jews elect their representatives separately, and not jointly as had been the custom until then. The Senate not only granted this request, but also extended the new regulation to all the governments where Jews lived, even though no complaints had been made of the supposedly injurious activity of the Jews in the municipal administrations of the other governments.

The position of the Jews in the Lithuanian governments was somewhat different. In 1802 they were granted electoral rights, but the Christians of several towns strongly opposed this concession, and it was consequently revoked. On the other hand, the Jews of the province of Byelostok received the right, under a special law, to become members of the magistracies without any limitation, and of the city councils to the extent of one-half of the entire number of councilmen; but for some unknown reason they were subsequently entirely excluded from the magistracies, and in some cities from the town councils also.

However, all these limiting regulations were local in character. Neither the Regulations (Polozheniye) of 1804 nor the Code of Laws of 1832 mentions the limitations in question, although both decree that the Jewish representatives shall wear German or Polish dress, and shall know one of three languages: Russian, Polish, or German.

New enactments concerning the Jews were promulgated in 1835, and one of them contained among others the following provision: "The Jewish town classes may take part in the elections for municipal offices, and any Jews knowing how to read and write Russian may be elected as members of the city councils, town councils, and magistracies under the same conditions as prevail in the election to these offices of persons of other religious beliefs." In this manner all of the limitations then in force were to become void. The enactment was energetically opposed by Prince Dolgoruki, administrator at that time of the governments of Lithuania, White Russia, and Minsk. He pointed out, among other matters, "that the election of Jews as presidents of the boards of aldermen and as city mayors would hardly be permissible since the president is the presiding officer in the courts, and the city mayor, as the representative of the entire municipality, is obliged at the opening of the elections . . . to lead the townspeople to church for religious service and is then admitted to take the oath"; and that in general "the election of Jews even as members of city magistracies and town councils is in a manner inappropriate to the decorum and sacredness of the courts, where not infrequently the oath is taken with cross and mirror; moreover, the judges should be drawn from men whose integrity and uprightness could be guaranteed at least by the morality instilled into them by education and religious precepts."

While Prince Dolgoruki's representations as to the limitation of the electoral rights of the Jews were being considered in St. Petersburg, there appeared an independent enactment (1836) limiting the election of Jews in the western governments to one-third of the total number of municipal officers. Following this came a new law (1839), called into being as a result of the representations of Prince Dolgoruki, in accordance with which the Jews in any western government might be represented in municipal organizations to the extent of only one-third the number of municipal officers, and only Christians might act as chairmen. The Jews were excluded from the positions of borough president, city mayor, etc., and also from "municipal positions which either are entirely reserved for Christians, or by virtue of their duties could not with convenience and propriety be entrusted to Jews." Aside from membership in town councils and magistracies the Jews could be elected only as aldermen, as deputies of house commissions, and to various other insignificant positions. At the same time the election of Jewish and Christian representatives was to be carried out separately by the Jews and Christians. This law led to even greater limitations in practical application. The circumstance that, contrary to law, the Jews were excluded from participation in elections of Christians to positions reserved for Christians alone, assumed a peculiar significance, because through this interpretation of the law the Jewish population was deprived of any influence in the election of higher officials, and this could but have an evil effect on the attitude of the latter toward the Jews.

In this manner participation by Jews in the various departments of the municipal government was reduced to a minimum by the law of 1839, and yet, when the ḳahal was abolished in 1844, these institutions assumed a special significance for the Jews, as they were entrusted with the administration of all matters especially affecting the Jews.

The law of 1835, which placed Jews and Christians on an equality in electoral rights, was applicable to the entire Jewish population of Russia, while the subsequent restrictive laws of 1836 and 1839 were valid only in the western governments. Nevertheless, the statement that the laws of 1836 and of 1839 were intended only for the western governments was omitted from the code of laws published in 1842, and it was probably due to this that the same limitations were occasionally to be noted in other governments. Thus, in Odessa the Jews participated with the Christians in the election of the city mayor. In 1857, at the instance of the governor-general of New Russia, the Jews took part with the Christians in the elections of the city of Kishinef.

In general, the Jews of South Russia did not suffer from the social ostracism that at one time was carefully fostered in Poland. In the former region greater respect was accorded them in civil life, and the local authorities made repeated representations to the higher government for improvement in their political condition. In 1857 Count Stroganov, the governor-general of New Russia, applied to the minister of the interior for broader electoral rights for the Jews. He was guided in this instance not alone by sentiments of justice toward them, but also by the interests of the cities, which were made to suffer because of the removal of Jews from certain positions and their replacement by persons altogether incompetent and who were therefore not qualified under the law to be entrusted with a share in the municipal administration. In consequence of this the governor of Kherson requested permission to elect a Jew as mayor of Kherson in 1862.

The ministry of the interior began the framing of new city regulations in 1862, and among these one of the ministry of Valuyev prescribed that Jews might be elected to the town council to the number of one-half of the total members thereof, and that they might also participate in the election of the city mayor, although no Jew was eligible for that office. But subsequently the new minister, Timashev, decreed that Jews might be elected to the town council and town administration only to the number of one-third of the total members of the elective body; and, notwithstanding opposition from the representatives of the Imperial Bureau and of the ministry of finances, this limitation was incorporated into the law of July 11, 1870. A point was gained, however, in that the Jews were now included in the general body of electors, and thus received power to influence the election of Christians.

The new regulations had hardly been in force for twenty years when by sudden decision the Imperial Council (July 11, 1892) decreed that the Jews should not take part in municipal elections, and that they should be excluded from municipal administrative positions and the management of separate departments of municipal finance and administration. In other words, the Jews were excluded altogether from the election of councilmen, of members of the administration, and of the city mayor, and were themselves no longer eligible for election to any of the public offices mentioned above. They were permitted to "assume the duties of councilmen" only under the following conditions: The town administrations were to prepare lists of Jews who, were they not Jews, might, according to the general regulations, be elected to the post of councilman, and from this list the commission on municipal affairs was to appoint at its discretion councilmen, whose number was to be determined by the minister of the interior, but was not to exceed one-tenth of the entire number of such officials. Under such conditions the Jewish councilmen ceased to be actual representatives of the Jewish population, and the latter remained without representation. Many instances might be cited to show the injurious effect of this condition of things upon the interests of the Jewish population.

At the beginning of the year 1904 the town council of Odessa resolved to urge the admission of Jews to municipal offices under the general regulations. The outcome of this resolution is still unknown (1905).

——**Periodicals, Russo-Jewish:** Russo-Jewish journalism came into being on May 27, 1860, with the appearance in Odessa of the weekly entitled RAZSVYET (see also RABINOVICH, OSIP AARONOVICH). In the same year there began to appear in Wilna, as a supplement to "Ha-Karmel," articles in the Russian language; but these had no literary or social significance.

The Anti-Semitic Press and "Sion."

From 1861 to 1862 the journal formerly known as "Razsvyet" appeared under the new title **"Sion,"** being edited by E. Soloveichik and L. Pinsker, later the author of "Autoemancipation." Pinsker soon gave place to N. Bernstein. "Sion," as compared with the "Razsvyet," restricted its publicistic activity, and devoted more space to questions of Jewish learning and history. The editors hoped that by familiarizing Russian society with both the historical past and the contemporary life of the Jewish people, they could render its attitude toward the Jews more friendly. The journal was therefore more conservative than the "Razsvyet" had been; and it aimed to discuss the Jewish question in an academic spirit. This, however, proved impossible. The anti-Semitic press by its irritating accusations compelled "Sion" to reply sharply, for it was only through this hostile source that Russian society had learned to know of the Jewish question; but the censorship, which left the other papers unrestrained, interfered in the case of "Sion," and the latter found it necessary to terminate its activities. "Having met," announced the editors, "with peculiar difficulties in refuting unfounded accusations brought against the Jews and the Jewish religion by certain Russian journals, and also wishing to acquaint the public with the true spirit of the Jewish religion, the editors of 'Sion' consider it their duty to discontinue its publication until they shall have obtained permission to edit it with a broader program."

Apparently the reference to "a broader program" was made for the purpose of concealing another cause for discontinuing the publication; namely, the lack of a sufficient number of subscribers. It is believed by some that the limited circulation of the journal was due to the desire of the Jewish youth for a general education, they having become indifferent to the interests of Judaism. But the lack of subscribers may be explained also by the fact that a knowledge of Russian was restricted at that time to a limited portion of the Jewish population.

The "Den" and Russification of the Jews.

After the discontinuance of "Sion," the Jewish community had for a period of seven years no publication of its own. In 1869 there appeared in Odessa a weekly entitled **"Den,"** under the editorship of S. Orenstein, with M. G. Morgulis and I. G. Orshanski as collaborators. The new journal directed its attention mainly to the external relations of the economic and social life of the Russian Jews. Having found that their isolated position was due not to religious or national causes, but to those of a civil, social, and economic nature, "Den" pointed out those conditions under which it seemed likely that the interests of the Jewish inhabitants would become identical with those of the rest of the population, and the existing animosity of the Russians toward the Jews be thus overcome. These conditions, however, could only be created under circumstances legally favorable to Jewish life: in other words, by civil emancipation. This naturally called for certain concessions on the part of the Jews to the spirit of the times and to the general conditions of the life of the empire. "Den" advocated the Russification of the Jews, their education in the Russian spirit, etc.; but no attempts were made to undermine the foundations of Jewish life. It fought with equal courage against the anti-Semitic press and for Jewish rights; and this firmness led to its suppression. In 1871, when the anti-Jewish riots occurred in Odessa, its publication ceased.

After the demise of "Den," St. Petersburg became the center of Russo-Jewish journalism. From 1871 to 1873, with long intermissions, a daily paper entitled **"Wyestnik Russkikh Yevreyev"** and edited by A. Zederbaum and A. Goldenblum was published in that city. It had no public significance. In the year 1879 there appeared simultaneously at St. Petersburg two weeklies, **"Razsvyet"** and **"Russki Yevrei."** "Razsvyet" was published from Aug., 1879, until Jan., 1883. The editors of

Journalistic Activity in St. Petersburg.

"Wyestnik Russkikh Yevreyev" were the nominal editors of "Razsvyet" also; but those who were more directly responsible for the editorial work on the latter journal were M. S. Varshavski, N. M. Vilenkin, M. I. Kulisher, J. L. Rosenfeld, and others. With No. 15 of the year 1880 the editorship was transferred to the writer Bogrof and to J. Rosenfeld, the latter subsequently becoming sole editor. "Russki Yevrei" was published from Aug., 1879, until Dec., 1884, under the editorship of L. J. Bermann and G. M. Rabinovich.

The "Russki Yevrei" and Assimilation.

The advocacy of assimilation with the Russians attained to considerable proportions in Russian Jewry in the seventh decade of the nineteenth century. It was believed that the Jewish question, if indeed there really was one, was in reality only a part of the general Russian problem; that the fortunes of the Jews would be modified only with a change in the fortunes of the Russian people; and that therefore it was necessary to work with the latter in endeavoring to realize the common Russian aims. It was at the same time considered advisable that the Jews should throw aside everything specifically Jewish. This attitude caused indifference on the part of educated Jews to the oppressive legal and economic conditions of the Jewish population. The two journals arose in opposition to this abnormal state of things. Both of them were representatives of modern assimilation. The "Russki Yevrei" undertook to facilitate a more intimate acquaintance between the Jewish and the Russian people—the same aim that had inspired the "Razsvyet" of 1860 and "Sion," with the difference that the "Russki Yevrei" emphasized the fact that the Russian Jews, though not Russians, were Russian subjects of Jewish faith. The journal proved the injustice of the accusations brought against the Jews. While devoting a certain amount of space to questions of Jewish internal life, it did not denounce Jewish shortcomings lest, by such self-criticism, it should supply the enemies of the Jews with material for further persecutions.

The Second "Razsvyet."

The "Razsvyet" assumed a different attitude. As the advocate of "Russo-Jewish needs and wants," it dwelt more on the phenomena of Jewish every-day life. It courageously directed attention to its failings, and, anticipating no outside help, urged the educated Jews to assume the work of self-improvement. At the same time it pointed out that this work for the Jewish population would prove useful to the world at large also. Apparently it was not practicable at that time, owing to internal conditions, to urge specifically Jewish work, or perhaps the cooperation of the educated Jews could not be counted upon. The pogromy which swept through Russia in 1881 gave birth to the idea of nationalism; and the "Razsvyet" was soon transformed into an advocate of Zionism. It terminated its existence a year or two later.

For the space of one year (1881–82) there was published in Riga the monthly **"Yevreiskiya Zapiski,"** under the editorship of A. Pumpyanski. It was of a historico-literary character. In 1884 there appeared in St. Petersburg seven numbers of the monthly **"Yevreiskoye Obozryeniye,"** edited by L. O. Cantor.

A more kindly fate awaited the journal **"Voskhod."** It was founded in 1881 by A. E. Landau, who from 1871 to 1880 had published eight volumes under the general title **"Yevreiskaya Biblioteka."** Only monthly volumes were published in 1881, but from 1882 there appeared also the weekly **"Nedyelnaya Khronika Voskhoda."** Volume ix. of the "Yevreiskaya Biblioteka" appeared in 1901, and vol. x. (published by G. A. Landau, the son of Adolph Landau) in 1903.

Aims of the "Voskhod."

"Voskhod" was founded at the most unsettled period of Jewish as well as of Russian life. It has fought with unvarying courage for civil rights for the Jews, and has at the same time fearlessly exposed Jewish national defects as well as the failings of certain social groups. It has received many hard blows, both from Jews and from non-Jews, but it has survived to carry out its original program. At the time when Jewish society was seized with fear and despair, after the pogromy in the early eighties, the "Voskhod" opposed the counsels of the "Razsvyet" and of individuals advocating emigration, declaring itself against such a solution of the Jewish question. At that time the Jews themselves argued that the worse the condition of the Jews in Russia, the better for the idea of the regeneration of the nation on its own soil. The "Voskhod," however, declared that: "Its aim is to defend the interests of the Russian Jews, and to strive to make the life of Jews in Russia possible and bearable. With this purpose it will defend and guard their rights, and attempt, in so far as lies in its power, to effect an extension of these rights. On the other hand, it will cooperate by all possible means in the improvement of the inner life of the Jews themselves and in the attainment of their social regeneration on Russian soil." The "Voskhod" continued to adhere to this policy. It defended the rights of the Jews so vigorously and with such persistence that it soon attracted the attention of the government. On June 24, 1884, it received its first warning for "permitting itself very frequently to criticize insolently the existing laws and government measures and to interpret falsely their meaning and aims." It received a second warning on July 3, 1885, for continuing to criticize the laws adversely, "spreading among the Jews the belief that the government and all classes of the Russian people maintain toward them an attitude of merciless and unreasoning harshness." Finally, in 1891 the journal was suspended for eight months.

As the only periodical in the field for about fifteen years, the "Voskhod" was read by all the Jewish social groups, and the number of its subscribers increased from 2,692 in 1883 to 4,294 in 1898. In 1899, while Landau was still living, the journal was transferred to other hands.

The significance of the "Voskhod" is not confined to its publicistic activity. During Landau's editorship there appeared in its pages a whole series

Its Publicistic Activity.

of writings on Jewish life from the social, literary, and historical standpoints. Belletristic writings by Levanda, Ben-Ami, Yaroshevski, and others; historical works by S. M. Dubnow and the Christian jurist S. A. Bershadski; juridical and publicistic papers by M. Morgulis, M. Kulisher, and M. Mysh; archeological and philological contributions by A. J. Harkavy; poems by S. Frug; and translations into Russian of the leading works in foreign languages—all these, representing material of the greatest value, were published in the "Voskhod."

Its Impartial Attitude Toward Zionism.

Under the new management, with G. Syrkin as editor, the journal has adhered to its original program while adapting itself to the requirements of the times. Devoting to the Zionist cause only so much attention as is demanded by its impartial attitude toward this movement, the "Voskhod" is nevertheless read by the most enthusiastic adherents of Zionism. As formerly, the journal is courageously outspoken in defense of the rights of the Jews. It sounded a mighty note of protest against the Kishinef pogrom of 1903, and was punished therefor by the government. Nos. 16 and 17 of the "Khronika" (one of which contained an article by J. Brutzkus urging the Jews to armed defense) were confiscated. The publishers received two other warnings, on April 28 and May 15, 1903, respectively. In 1904 the "Khronika" was suspended for six months for a sharp criticism of the activity of the anti-Semitic journal "Znamya" and of its friends in Russian society. Besides Syrkin there are closely connected with the "Voskhod" L. Zev, M. Trivus, and M. Vinaver. Notwithstanding its high subscription price, 10 rubles, it has not less than 5,000 subscribers. For the last two years it has offered as a supplement the "History of the Jews," by S. M. Dubnow. Recently the weekly numbers of the journal have been named "Voskhod," and the monthly volumes "Knizhki Voskhoda."

The "Buduschnost" a Zionist Organ.

At the end of 1899 there appeared in St. Petersburg the weekly (with a volume of collected articles as annual supplement) entitled "**Buduschnost,**" under the editorship of S. O. Gruzenberg, who was for many years a contributor to the "Voskhod." The journal was soon transformed into a Zionist organ, and this caused it to lose public support. It is, moreover, indifferently supported by the Zionists. At first the contributors were well-known writers, but one after another these withdrew, and its editor, though an old, experienced, and capable journalist, was unable to maintain the paper at its original high level.

In 1903 there appeared in St. Petersburg the "**Yevreiskaya Semeinaya Biblioteka,**" a monthly journal under the editorship of M. Ryvkin. In the following year the title was changed to "**Yevreiskaya Zhizn,**" and the editorship was undertaken by G. Sorin, with the collaboration of M. M. Margolin and J. D. Brutzkus. The journal, which is devoted to Zionism, at once gained popularity, securing in the first year of its existence about 7,000 subscribers—a circumstance explained to a certain extent by the support of a Zionist organization and by the low subscription price, 4 rubles. As a supplement the journal offers a collection of Frug's poems.

——**Rural Communities:** Wishing to create important commercial centers, Catherine II. ordered, in 1782, that merchants and commoners no longer reside in rural communities to the detriment of the peasants, but remove to the towns. This measure was directed at the commercial classes, which included the Jews; and as they were without exception registered among the merchants and tradespeople, the regulation, which was only a partial limitation for the Christians, became for the Jews a general legal limitation, and was especially burdensome because the great mass of them resided in rural communities. Closely allied with the concentration movement was the question of the distilling and sale of spirits. As merchants and tradespeople the Jews of White Russia were at that time forbidden by the local authorities to distil spirits, to lease estates, or to manage rural industries, that is, to continue in those occupations by which the Jews, owing to peculiar historical conditions, had earned their livelihood for a period of years. This regulation was generally considered a restrictive measure directed against the Jews, as before its enactment they had received the same privileges as the merchants and trading classes. But in 1786 the Senate repealed the regulations regarding leases and the distilling of spirits; and in so far as the question of residence in rural districts was concerned, the Senate, knowing that the empress, for important reasons of economic policy, desired the removal of the Jews to the towns, and knowing also that the conditions prevailing in the towns did not warrant peremptory removal, contented itself by ruling that the Jews should not remove prematurely, because it was uncertain whether they would find work or dwellings in the towns. Nevertheless many Jews were removed and thereby ruined.

Removal of Jews.

Before long this question was revived. In 1795, when Russian administration was being introduced in the new governments annexed from Poland, viz., those of Minsk, Volhynia, and Podolia, the empress ordered that "efforts be made" to remove the Jews to the towns so that they might engage there in commerce and in handicrafts. She did not intend to make the measure compulsory in character, yet the governor-general of White Russia, who had received a similar order concerning the Jews, set one year as the time-limit for their removal. But at the time the sparsely populated cities were not adapted to accommodate so great an influx of new inhabitants. Even then the towns contained many Jews, who furnished a greater number of merchants and artisans than was necessary. The order for the removal of the Jews created apprehension also among the estate-owners, to whom it meant pecuniary loss, and for these reasons the governor-general ordered that only Jews living in inns and villages situated on main roads be forced to obey it. An extension of time was also granted; but notwithstanding the fact that the removals were not carried out on as large a scale as was desired, such removals as did take place materially affected the prosperity of the Jews, and much suffering and inconvenience was caused thereby.

The question of the harm said to be caused by Jews dwelling in rural districts, and the best means of dealing with the subject, were matters referred for consideration, by order of the Senate, to the local authorities and to owners of estates situated in governments which had a Jewish population. Neither the authorities nor the owners found it desirable to remove all the Jews, who, moreover, they suggested should be distributed over a larger area. These suggestions were transmitted to the Senate, which was at that time engaged in working out a general plan for Jewish reform.

In 1801 a new regulation was passed ordering merchants and tradesmen to remove to the cities. The Jews of White Russia petitioned the Senate to be allowed to remain in their old homes, and the Senate granted their request. But in other governments no attempt was made to remove the Jews, and the administration of the government of New Russia went before the Senate to urge the nonremoval of Jews from the rural districts, as the administration declared they caused no harm or damage to the peasants.

Committee of 1802.

In 1802 the project of Jewish reform was submitted to a committee composed of persons near to the emperor, and, according to the regulations worked out by it (1804), the Jews were to be deprived of the right of distilling spirits, of leasing estates, and of residing in villages and hamlets. A time-limit of three years was set for their removal. This committee expressed itself as opposed to resorting to stringent measures in dealing with the Jews, and explained that only dire necessity induced it to forbid them to distil, to sell spirits, and to lease estates.

In connection with this prohibition the committee ordered the removal of all the Jews from the rural districts, as under the proposed conditions the greater part of the Jewish population would be without means of subsistence. The exclusion of the Jews from the distilling industry and from leaseholding was declared incompatible with justice and with the requirements of life: the government budget was based largely on the income from the tax on spirits; and the estate-owners also derived their incomes almost exclusively from the proceeds of distillation. This condition of affairs was permitted to continue in the former Polish governments for many decades, and had led to the Jews, in virtue of peculiar circumstances, serving during all that time as intermediaries between the estate-owners and the peasants; the Jews caused economic injury not as Jews but as intermediaries, and that without benefit to themselves.

Count Gudovich, governor-general of Minsk, Podolia, and Volhynia, stated that the tavern-keepers had no daily bread for themselves nor for their families, "for they receive only a tenth or even a fifteenth part of the profits." The governor of Lithuania stated that the taverns were in charge only of women, as lack of means drove the men to other work. Senator Derzhavin wrote that the Jewish masses in White Russia were suffering from extreme privation and poverty. The governor of Kiev reported that the Jews not only were unable to pay taxes but had no means of subsistence, which showed very clearly that the Jews secured no profit for themselves either from the distilling of spirits or from the ownership of leases. Senator Derzhavin, in a private letter written in 1800 to one of the legal officers of the crown, dealt with the famine in White Russia, which he officially ascribed to the Jews; but he said also: "It is difficult to seriously accuse any one without actually violating the common principles of justice and fairness. The peasants sell their grain to the Jews for spirits, and therefore they do not have enough bread. The landlords do not prohibit drinking because they derive their entire incomes from the sale of liquor; and the Jews can not be held entirely to blame if they take the last crust from the peasants for their own sustenance."

Its Conclusions.

From the evidence collected the committee reached these conclusions: (1) The landlords made an excessive quantity of distilled spirits in order to pay the heavy taxes with which they were burdened, and to provide for their living expenses. (2) The Jews trafficked in spirits in order to be able to pay the double taxes imposed upon them, and to keep from starvation. Owing to the existing economic conditions the Jews could not have found other means of subsistence at that time. (3) The peasants in their turn drank in order to forget the burdens of their serfdom.

The committee, being powerless to improve the social and economic life of the peasants, decided to pretend that the removal of the Jews to the towns would result in such an improvement. Undoubtedly it realized the impossibility of carrying into effect the measure proposed, for it involved the removal of more than fifty thousand Jewish families. Nevertheless steps were taken to enforce the removal, and they were attended by extreme barbarity. Count Kotchubei, a member of the committee placed in charge of the movement, learned what misery was thereby caused in some villages. Hundreds of families were left without shelter in the fields or on the squares of near-by cities, as there were not sufficient houses to accommodate them, and nothing was provided with which to feed them. The government was unable to supply the necessary means or to grant the tracts of land promised for the purpose of transforming the former merchants into agriculturists.

The suffering was intense, and, to maintain the prestige of the government, orders were given to suspend the removals, ostensibly because Napoleon had summoned a Jewish synod in Paris—a circumstance that, had not the order been suspended, might have caused restlessness among the Jewish masses. A new committee was organized for reviewing the question, and Count Kotchubei insisted on delay, pointing out that only a part of the Jews could be removed, and that enormous sums would be required by the government to carry the measure into effect; for the poor Jews, under the existing economic conditions, could not readily find other means of sustenance. **Removal Postponed.** The subject was referred to a new commission composed of higher officials, and later Senator Alexieff was ordered by the emperor to make a journey through localities having a Jewish population, for the purpose of seeing whether immediate removal was feasible. He was instructed that if it was feasible he should order the governors to effect it. If, however, he found it impracticable, he was to report to the emperor the best means for removing the Jews gradually. At this time permission was given to the Jews to select delegates to present to the senator their views on the question of removal. The Jewish delegates petitioned for the repeal of the enactment, and the senator declared the removal impracticable; but this did not lead to a solution of the matter, for the government desired to maintain its prestige and did not care to consider the repeal of this law, and set itself to temporizing by postponing its enforcement. On Oct. 19, 1807, a ukase was issued ordering gradual removal during a term of three years. In consequence of this decree the expulsion of Jews from the villages was resumed, and the suffering inflicted thereby attracted the attention of the new minister of the interior, Count Kurakin. He reported to the emperor that the removal could only be effected in the course of several decades. Therefore, by decree of Dec. 29, 1809, the ukase was repealed, and a few days later a new commission for the investigation of the subject was appointed under the chairmanship of Senator Popov. This commission continued its labors for three years. It made a general and thorough investigation, and declared in its voluminous report that the exclusion of the Jews from the manufacture of and traffic in spirits would not decrease drunkenness among the peasants, as the general social and economic conditions, and not the Jews, were accountable therefor. The removal of the Jews from the rural districts would work injury to the peasantry from both the economic and the commercial standpoint; their immediate transformation into farmers was an impossibility; the overcrowding of the towns with an excess of poor would lead only to very distressing consequences. Hence, the commission recommended that the Jews be allowed to remain in their old homes, and that they be permitted to continue their vocations as theretofore. This report was not given the force of a legal enactment, but as removals had already been discontinued by order, the Jews were permitted to enjoy a period of peace. **Removal of 1821.** This peace, however, was not of long duration, for in 1821, in consequence of representations from the military governor of Chernigov, which branded the Jews as speculators, an order was issued calling for their removal from the rural districts of that government. This measure was extended to the government of Poltava in 1822, and in the following year to the governments of White Russia because of a deficiency in foodstuffs there. In 1827 a partial removal of the Jews was begun in the rural districts of the government of Grodno, and in 1830 a similar one was enforced in the government of Kiev.

In 1835 a decree was issued ordering the suspension of the removals; but they were undertaken again in 1843, when the Jews were excluded from the military settlements of Kiev and Podolia.

All the removals in question were presumably inspired by the supposed evil influence of the Jews in increasing drunkenness among the peasants. But there were also other reasons for the expulsion. For instance, in 1835 the Jews were excluded from the government of Astrakhan on the pretext that they caused harm to the trade with Asia. The Jews in the boundary-zone were expelled therefrom in order to suppress contraband trade. Thus in 1812 the Jews living on the landed estates situated near the frontier of the government of Volhynia were removed, and in 1816 a decree was issued calling for the removal of the Jews from the 50-verst boundary-zone. Under the decree the places where the Jews were registered according to the census and where there were organized ḳahals were exempt. This led to removals from the government of Volhynia up to the year 1821. Subsequently the Jews returned to their old homes. However, in 1825 another decree concerning the western-frontier governments announced that only those Jews who owned real property should be allowed to remain within the 50-verst zone. In 1839 this decree was extended to the territory of Bessarabia. On April 20, 1843, an imperial decree ordered that all the Jews living in the 50-verst boundary-zone adjacent to Prussia and Austria should be removed to the interior of the governments, the owners of houses being permitted to sell them within two years provided they obeyed the law without reservation. Later an extension of time was granted, and the removal was not carried out in its entirety; nevertheless the policy of removal was far-reaching and was continued for a term of years.

In addition to removal from villages and hamlets there was also the removal from towns, but this was conducted on a much smaller scale. **Removal from Towns.** In this the Christians of Kovno took the initiative. They petitioned Emperor Paul I. in 1797 for the removal of the Jews from their city on the ground of ancient Polish privileges. The governor-general of Lithuania, Count Ryepnin, declared, however, that the Christians "did not themselves know for what they were asking, and merely obeyed their ancient antipathy and unwarranted envy of the Jews," and that the removal of the Jews would cause harm to the city; therefore this petition was not granted. Paul I. ordered that the Jews be left also in Kaminetz-Podolsk, whence it had been intended that they should be removed. Similarly, in 1801 he rejected the petition of the merchants of Kiev for the exclusion of the Jews. Under Alexander I. petitions of this kind were renewed, but unsuccessfully. In 1803 the petition of the Christians of Kovno and in 1810 a similar one from the Christians of Kiev were rejected. In all these petitions the Christians were impelled by the desire of ridding themselves of their competitors in commerce and manufacture. In more recent times the agitation for the exclusion of Jews from the towns was resumed. In 1827 the Christians of Kiev had their wish granted and the Jews were expelled, notwithstanding the fact that the local authorities earnestly desired their retention. In 1829 expulsion from Nikolaief and Sebastopol was ordered, and only those Jews who had served in the army or navy were authorized to remain. However, in 1830 the military governor of Nikolaief and Sebastopol, in agreement with the sentiments of the city police administration, the magistrates, and the city council, applied to the ministry of the interior for the retention of the Jews, and pointed out that if they were removed the city would be without artisans. This application not being granted, in 1832 the governor applied for at least a postponement of the expulsion. This was granted, at first for two years, and later for another year; but ultimately the Jews were expelled. In this instance the government was apparently influenced by the military importance of the cities. In 1883 the Jews were expelled from Yalta (there only remained those who were registered in the local community), which was then excluded from the Pale of Settlement, probably because the imperial family sojourned there during the summer months. In accordance with the laws of 1891 and 1892 there were expelled from Moscow, within a short time, all Jewish artisans, brewers, distillers, and even soldiers who had served under Nicholas I. for twenty-five years and who had enjoyed certain privileges. Altogether there were expelled from Moscow about 20,000 Jews.

Aside from these expulsions en masse, the removal of separate groups of Jews and of individuals was continued until very recently. The complicated enactments concerning the Pale of Settlement, in connection with the general disabilities of the Jews, offer a wide field for unwarranted interpretation of the written laws; added to this there are at times ignorance of the laws and, not infrequently, intentional disregard of them on the part of those in subordinate authority. Finally, the change in family relations, the change of occupation, and other circumstances often led to the expulsion of Jews.

On April 3, 1880 (under Alexander II.), the minister of the interior suggested to the governors that they should not expel the Jews who did not enjoy right of residence in any given locality, but who were already established there and engaged in commercial undertakings, the destruction of which would ruin not only the Jews but also the Christians who had entered into business relations with them. In connection with this it was ordered that no Jews should be permitted to establish themselves in new localities without having first secured permission to do so. A document containing these orders was again sent out in 1882. On Jan. 14, 1893, the order was rescinded, and the governors were commanded to enforce, not later than Nov. 1, 1893, the expulsion of the Jews directed by the law. Later the time was extended to June 1, 1894 (persons who had attained the age of seventy or more were exempted entirely). For the reasons indicated above, the expulsion of the Jews from various localities was thereafter intermittently persisted in.

After the outbreak of the war with Japan orders were issued by circular to discontinue the expulsions temporarily. In Kiev the local authorities attempted to expel the mother and the wife of a Jewish physician who had been sent to the scene of war, because according to the strict interpretation of the law the mother and wife could live in Kiev only with the male head of the family.

H. R. *

——**Poland*** (Polish, "Polska"; German, "Polen"; Hebrew, פולין; Russian, "Polsha"): Former powerful kingdom in north central Europe, comprising, until its first partition, in 1772, a territory bounded by the Oder and the Warta on the west, by the Carpathian Mountains and the Dniester on the south, by the Dnieper on the east, and by the Düna on the north.

From the historical documents thus far available it is difficult to determine with certainty when the first Jewish settlers arrived in Poland. Some Polish writers, like Naruszewicz, are of the opinion that Jews went to Poland in very early times, and that they lived there before the introduction of Christianity (965) under Mieczyslaw I. Others, like Janicki, claim that authentic evidence as to the presence of Jews in Poland does not go further back than the twelfth century, when, under Prince Mieczyslaw III. (1173–1209) and kings Casimir the Just and Leshek the White (1194–1205), the Jews had charge of the mints.

The Polish historian Maciejowski advances the view ("Zydzi w Polsce," etc., p. 8) that "Jews were present in Poland if not in the eighth century at least in the ninth"; but on the other hand he ridicules the statement of Leon Weil ("Orient," 1849, p. 143), who, on the strength of certain documents, relates the following: "Hard pressed by the Germans, the Jews sent to Poland (894) a delegation composed of the most eloquent Spanish rabbis, in order to petition the reigning prince, Leshek, for the apportionment to them of a parcel of land in Polish territory on which they might establish themselves and engage in agricultural pursuits and in handicrafts and the liberal arts. No special territory was assigned to them; but they were given permission to settle anywhere in the land, and to engage in the occupations specified. Eleven years later (905) the Jews were by charter assured religious liberty, autonomy in judicial matters, freedom of trade, independence from the Shlyakhta, or lesser nobles, and protection from the attacks of hostile mobs. This charter was lost in the Polish-German war of 1049."

Jewish Charter of 905.

Coins unearthed in 1872 in the Great-Polish village of Glenbok show conclusively that in the reigns of Mieczyslaw III., Casimir, and Leshek the Jews were, as stated above, in charge of the coinage in Great and Little Poland. These coins bear emblems having inscriptions of various characters; in some examples only the name of the king or prince being given, as, for instance, "Prince Meshko," while in others the surname is added, as "Meshek the Blessed" or "the Just." Some of the coins, moreover, bear inscriptions having no direct reference to Poland, to the reigning princes, or even to the coin itself, but referring to incidents of a purely Jewish character, as, for instance, "Rejoice, Abraham, Isaac, and Jacob"; "Abraham Duchs (אבראם דוכם) and Abraham Pech (פחה)." Similar coins had been discovered elsewhere several years earlier; but, owing to their peculiar inscriptions, doubts were expressed, even by such a noted numismatist as Joachim Lelewel, as to their being coins at all. Their true nature was revealed only with the discovery of the Glenbok treasure. All the inscriptions on the coins of the twelfth century are in Hebrew; and they sufficiently prove that at the time in question the Jews had already established themselves in positions of trust and prominence, and were contented with their lot.

Polish Coins with Jewish Inscriptions.
(From "Revue Numismatique.")

"The Jewish coiners," says Bershadski, "might have been people who came to the country only occasionally, and for that special purpose." But there is found among the few documents dating from the second half of the thirteenth century a charter issued by Premyslaw II., successor of Boleslaw of Kalisz, confirming a previous grant of privileges whereby the Jew Rupin, son of Yoshka, is permitted to dispose of his inheritance, a hill ("montem") situated near the boundary of his estate of Podgozhe.

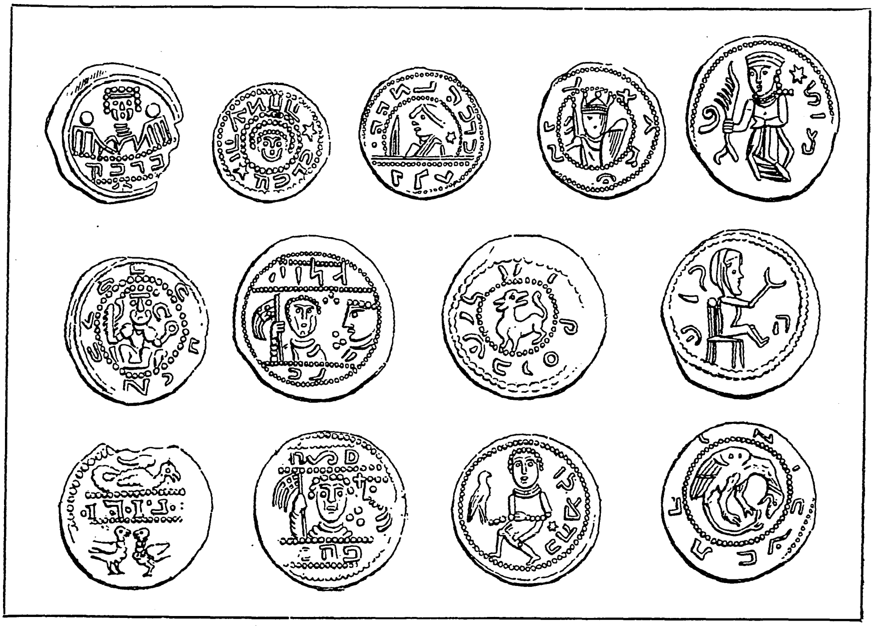
Jewish Coiners.

It is difficult to assume that the acquisition of real estate, its transmission by inheritance, and its further cession to the "Jewish elders of Kalisz and their entire community" were permitted on the strength of the charter of privileges granted by Boleslaw of Kalisz to Jewish immigrants, for the charter makes no mention of a Jewish community, nor of the right of Jews to acquire landed property. "The facts," says Bershadski, "made plain by the grant of Premyslaw II. prove that the Jews were ancient inhabitants of Poland, and that the charter of Boleslaw of Kalisz, copied almost verbally from the privileges of Ottocar of Bohemia, was merely a written approval of relations that had become gradually established, and had received the sanction of the people of the country."

Bershadski comes to the conclusion that as early as the thirteenth century there existed in Poland a number of Jewish communities, the most important of which was that of Kalisz. Maximilian Gumplovicz, however, hazards the conjecture that the word "Pech" on the Glenbok coins is the Chazarian "Pech" or "Beck," meaning "viceroy of the Chaghan" (see Jew. Encyc. iv. 5a, *s.v.* Chazars), and that the supposedly legendary King Abraham Prochownik, who according to tradition ruled Poland for one day only, perhaps really existed in the person of some Chazarian prince who was for a time viceroy of Poland. Gumplovicz cites the Polish writer Stronezynski ("Pieniadze Piastow," 2d ed., Warsaw, 1883), who thinks that the coins with Hebrew inscriptions belong to a period prior to the introduction of Christianity. The Arab geographers of the ninth century relate that Jews of western Europe who traveled to Chazaria came there by way of the Slavonic countries and Poland (see Jew. Encyc. iv. 3a, *s.v.* Chazars).

It is not definitely known whether the first Jewish arrivals in Poland were from the Chazarian countries in South Russia or from western Europe. The first historian of the Jews of Poland, Czacki, states in his "Rozprawa o Zydach i Karaitach" (1807) that the earliest Jewish immigrants in Poland were of German origin; but, as has been pointed out by Bershadski and Dubnow, Czacki's work, however conscientious and clear-sighted, can be regarded only as a historical document, and not as a complete history of the Polish Jews. Unfortunately, Czacki was followed blindly by Sternberg, Weil, and Graetz.

Though direct proof is absent, it is nevertheless safe to assume from the documents at present available that South Russia furnished the first Jewish settlers in Poland (see Jew. Encyc. viii. 118, *s.v.* Lithuania). It is known also that German Jews traded in the Slavonic countries as early as the reign of Charlemagne; and some of them may have established themselves in Poland.



Polish Coins with Jewish Inscriptions.
(From "Revue Numismatique.")

The first actual mention, however, of Jews in the Polish chronicles occurs under date of the eleventh century. It appears that Jews were then living in Gnesen, at that time the religious capital of the Polish kingdom. Some of them were wealthy, owning Christian slaves; they even engaged in the slave-trade, according to the custom of the times. The pious Queen Judith, wife of the Polish king Ladislaus Herman (d. 1085), spent large sums of money in purchasing the freedom of Christian slaves owned by Jews.

Early Jewish Slave-Traders.

The first extensive Jewish emigration from western Europe to Poland occurred at the time of the First Crusade (1098). Under Boleslaw III., Krzywousty (1102–39), the Jews, encouraged by the tolerant régime of this wise ruler, settled throughout Polish and Lithuanian territory as far as Kiev. Boleslaw on his part recognized the utility of the Jews in the development of the commercial interests of his country. The Jewish traveler Pethahiah ben Jacob ha-Laban visited Poland toward the end of the twelfth century. At that time their position in the numerous principalities had been securely established. The Prince of Cracow, Mieczyslaw III. (1173–1202), in his endeavor to establish law and order in his domains, prohibited all violence against the Jews, particularly attacks upon them by unruly students. Boys guilty of such attacks, or their parents, were made to pay fines as heavy as those imposed for sacrilegious acts. Early in the thirteenth century Jews owned land in Polish Silesia.

The commercial relations between the Jewish settlements in Poland and those in western Europe were not without effect in intellectual and religious matters. The Polish Jews, devoting their energies to commercial pursuits, were obliged, according to the testimony of Eliezer of Bohemia, to obtain their rabbis from France, Germany, and other west-European countries, while the young Polish Jews went abroad for the study of rabbinical and other literature. Among the rabbinical scholars of the twelfth century mention is made of Mordecai of Poland (Dubnow).

From the various sources it is evident that at this time the Jews enjoyed undisturbed peace and prosperity in the many principalities into which the country was then divided. In the interests of commerce the reigning princes extended protection and special privileges to the Jewish settlers. With the descent of the Tatars on Polish territory (1241) the Jews in common with the other inhabitants suffered severely. Cracow was pillaged and burned, other towns were devastated, and hundreds of Jews were carried into captivity. As the tide of invasion

The Tatar Invasion.

receded the Jews returned to their old homes and occupations. They formed the middle class in a country where the general population consisted of landlords and peasants, and they were instrumental in promoting the commercial interests of the land. Money-lending and the farming of the different government revenues, such as those from the salt-mines, the customs, etc., were their most important pursuits. The native population had not yet become permeated with the religious intolerance of western Europe, and lived at peace with the Jews.

This patriarchal order of things was gradually altered by the Roman Church on the one hand, and by the neighboring German states on the other. The emissaries of the Roman pontiffs came to Poland in pursuance of a fixed policy; and in their endeavors to strengthen the influence of the Catholic Church they spread teachings imbued with hatred toward the followers of Judaism. At the same time BOLESLAW V., WSTYDLIWY (1228–79), encouraged the influx of German colonists. He granted to them the Magdeburg Rights (see MAGDEBURG LAW), and by establishing them in the towns introduced there an element which brought with it deep-seated prejudices against the Jews. There were, however, among the reigning princes determined protectors of the Jewish inhabitants, who considered the presence of the latter most desirable in so far as the economic development of the country was concerned. Prominent among such rulers was BOLESLAW POBOZNY of Kalisz, King of Great Poland. With the consent of the class representatives and higher officials he issued in 1264 a charter which clearly defined the position of his Jewish subjects. This charter, which subsequently formed the basis of Polish legislation concerning the Jews, does not differ greatly from that granted by Witold (1388) to the Jews of Lithuania (for text of the latter charter see JEW. ENCYC. viii. 120, *s.v.* LITHUANIA).

In a critical review of L. Gumplovicz's work on Polish-Jewish legislation, Levanda (in "Voskhod," 1886, No. ix.) comes to the conclusion that Boleslaw's charter was meant to define unequivocally the exact position that the Jews were to occupy in the body politic throughout Poland's history. The terms of the charter, marked by patriarchal simplicity, show clearly that the Jews were regarded as an association of money-lenders to whom a concession was made to trade and to lend money on interest, with the guaranty of religious freedom and of the inviolability of person and property. They were to circulate their capital and thus supply the needs of the Christian population, and were to be allowed to enjoy profits made through their business operations. No mention occurs in the charter of other business pursuits, handicrafts, or industries, from which it may be inferred that the Jews were to engage in no other occupation than money-lending. The term "privilegium" applied to the charter shows that the latter was not a part of the general laws, but an exception to their provisions. It opened a wide gap between the Christian and the Jewish population that was never closed. It placed the latter in a position of isolation, owing to which they were compelled to develop an internal organization of their own. This, however, served them in good stead with regard to the defense of their commercial interests and in the mastery of new forms of commercial activity.

The charter dealt in detail with all sides of Jewish life, particularly the relations of the Jews to their Christian neighbors. The guiding principle in all its provisions was justice, while national, racial, and religious motives were entirely excluded. In order to safeguard their persons and property, the Jews were in some instances granted even greater privileges than the Christians, who thus came to recognize that the Jews were to be regarded as a people with a civilization of their own and entitled to the protection of the laws.

Hostility of the Church.

But while the temporal authorities endeavored to regulate the relations of the Jews to the country at large in accordance with its economic needs, the clergy, inspired not by patriotism, but by the attempts of the Roman Church to establish its universal supremacy, used its influence toward separating the Jews from the body politic, aiming to exclude them, as people dangerous to the Church, from Christian society, and to place them in the position of a despised sect. In 1266 an ecumenical council was held at Breslau under the chairmanship of the papal nuncio Guido. The council introduced into the ecclesiastical statutes of Poland a number of paragraphs directed against the Jews. In paragraph 12 it is stated that "since Poland has but lately joined the fold of the Christian Church it may be apprehended that its Christian inhabitants will the more easily yield to the prejudices and evil habits of their Jewish neighbors, the establishment of the Christian faith in the hearts of the believers in these lands having been of such a recent date. We therefore emphatically decree that Jews living in the bishopric of Gnesen shall not dwell together with Christians, but shall live separately in some portion of their respective towns or villages. The quarter in which the Jews reside shall be divided from the section inhabited by the Christians by a fence, wall, or ditch." The Jews were ordered to dispose as quickly as possible of real estate owned by them in the Christian quarters; they were not to appear on the streets during Church processions; they were allowed to have only a single synagogue in any one town; and they were required to wear a special cap to distinguish them from the Christians. The latter were forbidden, under penalty of excommunication, to invite Jews to feasts or other entertainments, and were forbidden also to buy meat or other provisions from Jews, for fear of being poisoned. The council furthermore confirmed the regulations under which Jews were not allowed to keep Christian servants, to lease taxes or customs duties, or to hold any public office. At the Council of Ofen held in 1279 the wearing of a red badge was prescribed for the Jews, and the foregoing provisions were reaffirmed.

The Badge Instituted.

Though the Catholic clergy continued in this way to sow the seed of religious hatred—which in time bore a plentiful harvest—the temporal rulers were not inclined to accept the edicts of the Church, and the Jews of Poland were for a long time left in the enjoyment of their rights. Ladislaus Lokietek, who ascended the Polish throne in 1319, endeavored to establish a uniform legal code throughout the land. By the general laws he assured to the Jews safety and freedom and placed them on an equality with the Christians. They dressed like the Christians, wearing garments similar to those of the nobility, and, like the latter, wore also gold chains and carried swords. Ladislaus likewise framed laws for the lending of money to Christians. In 1334 Boleslaw issued a charter of still greater significance. It was much amplified by King Casimir III., the Great (1303-70), who was especially friendly to the Jews, and whose reign is justly regarded as an era of great prosperity for the Polish Jewry. His charter was more favorable to the Jews than was Boleslaw's, in so far as it safeguarded some of their civil rights in addition to their commercial privileges. This far-seeing ruler sought to employ the town and rural populations as checks upon the growing power of the aristocracy. He regarded the Jews not simply as an association of money-lenders, but as a part of the nation, into which they were to be incorporated for the formation of a homogeneous body politic. For his attempts to uplift the masses, including the Jews, Casimir was surnamed by his contemporaries "king of the serfs and Jews." His charter for the Jews provided among other things that any lawsuit in which Jews were concerned might at their request be brought before the king; that they might not be summoned before the ecclesiastical tribunals; that elders or waywodes had no right to exact special taxes or contributions from them; that the murder of a Jew was to be punishable by death, whereas in Boleslaw's charter the penalty had consisted merely of a fine and confiscation of property. Apart from these amplifications of Boleslaw's charter, Casimir granted to the Jews the right of unrestricted residence and movement; and they were not obliged to pay taxes other than those paid by the Christians. They were permitted to lend money on farms and other real property, and to rent or acquire lands and estates (L. Gumplovicz, "Prawodawstwo," etc., p. 23).

Prosperity Under Casimir III.

Most of the documents of the fourteenth century treat of the Jews of Little Poland and especially of those of Cracow. Notwithstanding its paucity the material is ample to show the gradual growth of the Jews in numbers and in wealth. Thus in 1304 mention is made of the cession by Philip Pollack to Genez Magdassen of one-half of the former's property on the Jewish street in Cracow; in 1313 the Jew Michael and his son Nathan purchased an estate in the Jewish quarter from the widow of the burgher Günther; in 1335 the Jew Kozlina acquired from the burgher Herman four houses near the Jewish cemetery; in 1339 the widow of the Jew Rubin sold her house to the burgher Johann Romanich; and in 1347 there occurs a reference to a Jewish quarter in the suburb of Cracow ("vicus Judæorum"), with a synagogue and a cemetery on the banks of the Rudava. The cemetery had existed from the beginning of the century. Prominent among the Jews of Cracow in the latter half of this century was the leaseholder Levko, who was under the direct jurisdiction of the king. Levko leased the salt monopoly, and had exclusive jurisdiction over the numerous laborers in the salt-mines. He was regarded as the money-king of his time; and his sons, who inherited his wealth, frequently lent large sums to Queen Yadwiga and also to Ladislaus Jagellon (see Casimir III.).

Nevertheless, while for the greater part of Casimir's reign the Jews of Poland, as has been seen, enjoyed tranquillity, toward its close they were subjected to persecution on account of the Black Death. Massacres occurred at Kalisz, Cracow, Glogau, and other Polish cities along the German frontier, and it is estimated that 10,000 Jews were killed. Compared with the pitiless destruction of their coreligionists in western Europe, however, the Polish Jews did not fare badly; and the Jewish masses of Germany fled to the more hospitable lands of Poland, where the interests of the laity still remained more powerful than those of the Church.

But under Casimir's successor, Louis of Hungary (1370-84), the complaint became general that justice had disappeared from the land. An attempt was made to deprive the Jews of the protection of the laws. Guided mainly by religious motives, Louis persecuted them, and threatened to expel those who refused to accept Christianity. His short reign did not suffice, however, to undo the beneficent work of his predecessor; and it was not until the long reign of the Lithuanian grand duke Ladislaus II., Jagellon (1386-1434), that the influence of the Church in civil and national affairs increased, and the civic condition of the Jews gradually became less favorable. Nevertheless, at the beginning of Ladislaus' reign the Jews still enjoyed the full protection of the laws. Hube cites a series of old documents from Posen, from which it appears that in monetary transactions the Jews of Great and Little Poland were protected by the courts to such an extent that in cases of non-payment they might take possession of the real estate of their Christian debtors. Thus in 1388 a verdict was rendered in favor of the Jew Sabdai, whereby his debtor was placed under arrest and was made to pay the principal together with nine years' interest upon it. In 1398 another debtor pledged himself to transfer to his Jewish creditors half of a village with all its revenues, excluding the manor and the land belonging to it. In 1390 the Jew Daniel was placed in possession of the estate of Kopashevo for a debt of 40 marks; and in the same year a debt of 20 marks due to the above-mentioned Sabdai from the owner of a certain estate was given preference over all other obligations of the latter, and Sabdai was put in possession of the estate.

Extensive Persecutions in the Fourteenth Century.

As a result of the marriage of Jagellon to Yadwiga, daughter of Louis of Hungary, Lithuania was temporarily united to the kingdom of Poland. Under his rule the first extensive persecutions of the Jews in Poland were inaugurated. It was said that the Jews of Posen had induced a poor Christian woman to steal from the Dominican church three hosts, which they desecrated, and that when the hosts began to bleed, the Jews had thrown them into a ditch, whereupon various miracles occurred. When informed of this supposed desecration, the Bishop of Posen ordered the Jews to answer the charges. The woman accused of stealing the hosts, the rabbi of Posen, and thirteen elders of the Jewish community fell victims to the superstitious rage of the people. After long-continued torture on the rack they were all burned slowly at the stake. In addition, a permanent fine was imposed on the Jews of Posen, which they were required to pay annually to the Dominican church. This fine was rigorously collected until the eighteenth century. The persecution of the Jews was due not only to religious motives, but also to economic reasons, for they had gained control of certain branches of commerce, and the burghers, jealous of their success, desired to rid themselves in one way or another of their objectionable competitors.

The same motives were responsible for the riot of Cracow, instigated by the fanatical priest Budek in 1407. The first outbreak was suppressed by the city magistrates; but it was renewed a few hours later. A vast amount of property was destroyed; many Jews were killed; and their children were baptized. In order to save their lives a number of Jews accepted Christianity. The reform movement of the Hussites intensified religious fanaticism; and the resulting reactionary measures spread to Poland. The influential Polish archbishop Nicholas Tronba, after his return from the Council of Kalisz (1420), over which he had presided, induced the Polish clergy to confirm all the anti-Jewish legislation adopted at the councils of Breslau and Ofen, and which thitherto had been but rarely carried into effect. In addition to their previous disabilities, the Jews were now compelled to pay a tax for the benefit of the churches in the precincts in which they were residing, but "in which only Christians should reside."

In 1423 King Ladislaus Jagellon issued an edict forbidding the Jews to lend money on notes. In his reign, as in the reign of his successor, Ladislaus III., the ancient privileges of the Jews were almost forgotten. The Jews vainly appealed to Jagellon for the confirmation of their old charters. The clergy successfully opposed the renewal of these privileges on the ground that they were contrary to the canonical regulations. In the achievement of this purpose the rumor was even spread that the charter claimed to have been granted to the Jews by Casimir the Great was a forgery, inasmuch as a Catholic ruler would never have granted full civil rights to "unbelievers."

The machinations of the clergy were checked somewhat by Casimir IV., Jagellon (1447–92). He readily renewed the charter granted to the Jews by Casimir the Great, the original of which had been destroyed in the fire that devastated Posen in 1447. To a Jewish deputation from the communities of Posen, Kalisz, Syeradza, Lenchich (Lenczyca), Brest, and Wladislavov which applied to him for the renewal of the charter, he said in his new grant: "We desire that the Jews, whom we protect especially for the sake of our own interests and those of the royal treasury, shall feel contented during our prosperous reign." In confirming all previous rights and privileges of the Jews—the freedom of residence and trade, judicial and communal autonomy, the inviolability of person and property, and protection against arbitrary accusation and attacks—the charter of Casimir IV. was a determined protest against the canonical laws, which had been but recently renewed for Poland by the Council of Kalisz, and for the entire Catholic world by the Diet of Basel. The charter, moreover, permitted more intimate relations between Jews and Christians, and freed the former from the jurisdiction of the clerical courts. Strong opposition was created by the king's liberal attitude toward the Jews, and was voiced by the leaders of the clerical party. Cardinal Zbignyev Olesnicki, Archbishop of Cracow, placed himself at the head of the opposition and took the king sternly to task for his favors to the Jews, which he claimed were "to the injury and insult of the holy faith." "Do not think," he wrote to the king in 1454, "that you are to decree whatever you please in matters of the Christian religion. No man is so great or so powerful that he may not be opposed in the cause of religion. Hence I beg and implore your majesty to repeal the privileges and rights in question." Joining forces with the papal nuncio Capistrano, Olesnicki inaugurated a vigorous campaign against the Jews and the Hussites. The repeated appeals of the clergy, and the defeat of the Polish troops by the Teutonic Knights —which the clergy openly ascribed to the wrath of God at Casimir's neglect of the interests of the Church, and his friendly attitude toward the Jews —finally induced the king to accede to the demands which had been made. In 1454 the statute of Nieszawa was issued, which included the abolition of the ancient privileges of the Jews "as contrary to divine right and the law of the land." The triumph of the clerical forces was soon felt by the Jewish inhabitants. The populace was encouraged to attack them in many Polish cities; the Jews of Cracow were again the greatest sufferers. In the spring of 1464 the Jewish quarters of the city were devastated by a mob composed of monks, students, peasants, and the minor nobles, who were then organizing a new crusade against the Turks. More than thirty Jews were killed, and many houses were destroyed. Similar disorders occurred in Posen and elsewhere, notwithstanding the fact that Casimir had fined the Cracow magistrates for having failed to take stringent measures for the suppression of the previous riots.

Charter of Casimir IV.

The policy of the government toward the Jews of Poland was not more tolerant under Casimir's sons and successors, John Albert (1492–1501) and Alexander Jagellon (1501–6). John Albert frequently found himself obliged to inquire into local disputes between Jewish and Christian merchants. Thus in 1493 he adjusted the conflicting claims of the Jewish merchants and the burghers of Lemberg concerning the right to trade freely within the city. On the whole, however, he was not friendly to the Jews. The same may be said of Alexander Jagellon, who had expelled the Jews from Lithuania in 1495 (see Lithuania). To some extent he was undoubtedly influenced in this measure by the expulsion of the Jews from Spain (1492), which was responsible also for the increased persecution of the Jews in Austria, Bohemia, and Germany, and thus stimulated the Jewish emigration to Poland. For various reasons Alexander permitted the return of the Jews in 1503, and during the period immediately preceding the Reformation the number of Jewish exiles grew rapidly on account of the anti-Jewish agitation in Germany. Indeed, Poland became the recognized haven of refuge for exiles from western Europe; and the resulting accession to the ranks of the Polish Jewry made it the cultural and spiritual center of the Jewish people. This, as has been suggested by Dubnow, was rendered possible by the following conditions:

Importance of the Polish Jewry.

> "The Jewish population of Poland was at that time greater than that of any other European country; the Jews enjoyed an extensive communal autonomy based on special privileges; they were not confined in their economic life to purely subordinate occupations, as was true of their western coreligionists; they were not engaged solely in petty trade and money-lending, but carried on also an important export trade, leased government revenues and large estates, and followed the handicrafts and, to a certain extent, agriculture; in the matter of residence they were not restricted to ghettos, like their German brethren. All these conditions contributed toward the evolution in Poland of an independent Jewish civilization. Thanks to its social and judicial autonomy, Polish Jewish life was enabled to develop freely along the lines of national and religious tradition. The rabbi became not only the spiritual guide, but also a member of the communal administration [Ḳahal], a civil judge, and the authoritative expounder of the Law. Rabbinism was not a dead letter here, but a guiding religio-judicial system; for the rabbis adjudged civil as well as certain criminal cases on the basis of Talmudic legislation."

The Jews of Poland found themselves obliged to make increased efforts to strengthen their social and economic position, and to win the favor of the king and of the nobility. The conflicts of the different parties, of the merchants, the clergy, the lesser and the higher nobility, enabled the Jews to hold their own. The opposition of the Christian merchants and of the clergy was counterbalanced by the support of the Shlyakhta, who derived certain economic benefits from the activities of the Jews. By the constitution of 1504, sanctioned by Alexander Jagellon, the Shlyakhta Diets were given a voice in all important national matters. On some occasions the Jewish merchants, when pressed by the lesser nobles, were afforded protection by the king, since they were an important source of royal revenue.

Favorable Reign of Sigismund I.

The most prosperous period in the life of the Polish Jews began with the reign of Sigismund I. (1506–48). In 1507 that king informed the authorities of Lemberg that until further notice its Jewish citizens, in view of losses sustained by them, were to be left undisturbed in the possession of all their ancient privileges ("Russko-Yevreiski Arkhiv," iii. 79). His generous treatment of his physician, Jacob Isaac, whom he made a member of the nobility in 1507, testifies to his liberal views. In the same year Sigismund leased the customs revenues of Lubuchev to the Jew Chaczko, exempting him from all taxes. Similar exemptions from general or special taxes were granted by the king to a number of other Jews. In 1510 he reduced the taxes imposed upon the Jewish community of Lemberg to 200 florins, in consideration of their impoverished condition, and appointed as tax-collectors the Jews Solomon and Baruch. In the following year he was called upon to adjudicate in a case which illustrates the strained relations between the Jews and Christians of that city. The Jew Abraham was accused of sacrilege and placed under arrest. The king ordered his release on May 1 with the stipulation that he should either appear before the king's court on May 2 of the following year or pay a penalty of 3,000 marks. His bondsmen were the Jews Abraham Franczek of Cracow, Isaac Jacob Franczek of Opoczno, Slioma Swyathly, Oser, David and Michael Tabyc, and the Lemberg Jews Israel, Judah, two named Solomon, and Samuel. In the same year Sigismund exempted the Jews of Lemberg from the payment of all crown taxes for six years. In 1512 he leased to the Lemberg Jew Judah, son of Solomon, the customs revenues of Yaroslav for a term of four years. On June 2 of the same year he appointed Abraham of Bohemia prefect of the Jews of Great and Little Poland; and on Aug. 6 following he appointed the Kazimierz Jew Franczek as tax-collector for all the provinces of Little Poland, excepting Cracow and Kazimierz. In 1515 he adjudged an important suit between the aldermen and the Jews of Lemberg concerning the rights of the latter to carry on trade in that city. The aldermen had complained that the Jews had gained complete control of the trade, thus rendering it impossible for the Christian merchants to do business. Both parties submitted to the king copies of their ancient charters of privileges, and Sigismund decreed that the Jews, like the other merchants of Lemberg, were entitled to trade in various products throughout the country, but that they might sell cloth in the cities and towns during fairs only. The purchase of cattle by them was permitted only to the extent of 2,000 head annually, and then on the payment of a special duty.

Certain Jews Admitted to Denizenship.

In 1517 Sigismund confirmed the ancient privileges of the Jews of Posen. In 1518 he ordered the customs-collector of Posen not to exact from the Jews larger duties on their wares than those collected from the king's other subjects. In the same year he confirmed the election for life of the rabbis Moses and Mendel as judges over the Jews of Great Poland. They were given the authority to decide suits both individually and jointly; and the Jews of Great Poland were required to recognize their authority, and to pay a fine into the royal treasury in case of failure to accept their decisions. In October of the same year the king admitted to Polish denizenship the Bohemian Jews Jacob and Lazar, granting them the right of unrestricted residence and movement throughout the kingdom. In 1519 Sigismund released the Jews of Great Poland, for a period of three years, from the payment of any crown taxes directly to the royal tax-collectors. He decreed that instead five Jewish collectors should be chosen, and a commission of eleven persons be appointed for the apportionment of the total tax of 200 florins among the several Jewish taxpayers, due regard being had to the wealth of each, and special reductions being provided in the case of the poor. In the event of the death or impoverishment of any of the taxpayers the collectors were empowered to increase the taxes of the well-to-do, in order that the poorer taxpayers might not be excessively burdened and that the total amount of the tax might remain undiminished. This decree was the result of complaints made by the Jews of Great Poland against the abuses and oppressions of the royal tax-collectors. The members of the commission appointed for this purpose were: Isaac of Meseritz (Mezhirechye), Samson of Skwirzyna, Mendel of Gnesen, Beniash of Obornik, Moses of Vlazlav, Kalman of Pakosch, David of Brest-Kuyavsk, Slioma of Lenchich, Abraham of Polotzk (formerly of Sokhaczev), Uziel of Kalisz, and Solomon of Plonsk. The tax-collectors appointed were: Samuel and Beniash of Posen; Mossel, the customs collector of Inovlozlav; Moses, the customs collector of Brest-Kuyavsk; and Jacob, a physician of Sokhaczev.

Two Congregations in Cracow.

In the same year a quarrel arose between the Bohemian and the Polish Jews in the community of Cracow over the question whether there should be one rabbi for the entire community or a separate rabbi for each faction. The case was brought before the king, who decided (May 25, 1519) that, in accordance with established custom, the community should have two rabbis. Rabbi Peretz, who had already held that position for two years, and Rabbi Asher (son-in-law of Rachael), both of them experts in the Law, were proposed by the respective parties with the consent of the entire community. The king reserved the right, in case Peretz declined to continue in the rabbinate, to appoint his successor. Each rabbi was forbidden to interfere in the affairs of the other, under a penalty of 100 marks in silver payable into the royal treasury; and each member of the community was at liberty to choose which congregation he would join. The entire community was ordered, under a penalty for disobedience, to pay to the rabbis the various fees and other sources of income assigned to them by ancient custom. This arrangement failed to adjust the difficulties, as is seen from a subsequent decision of the king (Nov. 5, 1519). A party of recently arrived Bohemian Jews, headed by Rabbi Peretz, wished to crowd out from the synagogue belonging to the Polish congregation the native part of the community, headed by Rabbi Asher. This ancient synagogue had been built by the Polish Jews and kept in repair by them until the arrival of the Bohemians. The king's second decision was more favorable to the native portion of the community, which was left in permanent possession of the synagogue. The followers of Rabbi Peretz were not permitted to enter the edifice without the consent of Rabbi Asher and his followers; and a penalty of 1,000 marks was imposed for infraction of this regulation. The Bohemians were, moreover, precluded on pain of a similar fine from inducing members of the native community to join their synagogue; while Rabbi Asher and his followers still retained the right to admit any person at their discretion.

The commercial activity of the Jewish merchants arrayed against them their Christian rivals of the larger cities. The magistrates of Posen and Lemberg, in their opposition to the Jews, even went so far as to propose a coalition against them (1521). The struggle was not always above board. In some towns the populace was incited against the Jews, and several riots occurred. Sigismund took measures to prevent the repetition of such disorders; and in the case of Cracow he warned the magistrates that he would hold them responsible for any recurrence.

Jewish Favorites of Sigismund.

Sigismund's protection of his Jewish favorites is demonstrated by his letter of respite, Aug. 26, 1525, to the Posen Jew Beniash, surnamed "Dlugi" (= "the Tall"), an insolvent debtor, granting him an extension of time (until Feb. 21, 1527) wherein to pay his liabilities. This letter was intended to enable Beniash to adjust his business affairs, which had become involved owing in part to the large amount of debts due to him from various persons, especially Christians. A subsequent letter extended the royal protection to him for a further term of three years, prohibited forcible collection of money from him, and ordered that he be assisted in the collection of his debts. Any infringement of the provisions of the letter was to be regarded as lese-majesty. Further, Beniash was made subject to the jurisdiction of the king and of the waywode of Cracow. An especial mark of favor was shown also to the Jew Lazar of Brandenburg in a royal order dated Nov. 14, 1525, and exempting him for life from payment of the taxes imposed upon the other Jews of Cracow. In return for this privilege he was to pay only the sum of three florins annually. These favors were an acknowledgment of services rendered at Venice in the interests of the royal treasury and to Jodoc Ludwig, the king's ambassador there.

By an edict of June 14, 1530, the king exempted the Jew Simon and his family of the new town of Cerczin from subjection to any religious bans, and announced that any rabbi or doctor of the kingdom issuing an excommunication against them would be liable to a fine of 100 marks. On July 30, 1532, the king appointed Moses Fishel chief rabbi of the Polish synagogue of Cracow in succession to Rabbi Asher; and Fishel, with all his property in Kazimierz, was exempted for life from all taxes and duties, both ordinary and extraordinary. On Aug. 8, 1541, Sigismund issued an edict whereby the Jews of Great Poland were given the right to elect a chief rabbi, "a doctor of Judaism," subject to confirmation by the king. The government officials were forbidden to install in this office any person not previously elected thereto by the voluntary act of the Jews themselves.

But while Sigismund himself was prompted by feelings of justice, his courtiers endeavored to turn to their personal advantage the conflicting interests of the different classes. Sigismund's second wife, Queen Bona, sold government positions for money; and her favorite, the waywode of Cracow, Peter Kmita, accepted bribes from both sides, promising to further the interests of each at the Diets and with the king. In 1530 the Jewish question was the subject of heated discussions at the Diets. There were some delegates who insisted on the just treatment of the Jews. On the other hand, some went so far as to demand the expulsion of the Jews from the country, while still others wished to curtail their commercial rights. The Diet of Piotrkow (1538) elaborated a series of repressive measures against the Jews, who were prohibited from engaging in the collection of taxes and from leasing estates or government revenues, "it being against God's law that these people should hold honored positions among the Christians." The commercial pursuits of the Jews in the cities were placed under the control of the hostile magistrates, while in the villages Jews were forbidden to trade at all. The Diet revived also the medieval ecclesiastical law compelling the Jews to wear a distinctive badge. In 1539 a Catholic woman of Cracow, Katherine Zalyeshovska, was burned at the stake for avowed leanings toward Judaism, the populace being incited against the Jews by various pamphlets circulated among the people. This and similar cases of conversion to the Jewish faith were probably the result of the secret societies which were established among the Shlyakhta in 1530, and which owed their origin to the religious reforms among the intelligent members of Polish society on the advent of Lutheranism in the German districts of Poland (see Dubnow in "Voskhod," May, 1895).

Converts to Judaism.

The influx of foreign Jews, particularly from Bohemia, was probably responsible for a decree of Oct. 17, 1542, by which ordinance they were forbidden to settle within the kingdom, and freedom of movement was accorded only to such Bohemian Jews as had already settled on crown or Shlyakhta lands. An exception was allowed, however, in favor of the cities of Cracow, Posen, and Lemberg. This decree, issued at the request of the Jews themselves, was promulgated before the death of Sigismund Jagellon, and was not signed by Sigismund II., Augustus, as certain sources state.

Sigismund II., Augustus (1548–72) followed in the main the tolerant policy of his father. He confirmed the ancient privileges of the Polish Jews, and considerably widened and strengthened the autonomy of their communities. By a decree of Aug. 13, 1551, the Jews of Great Poland were again granted permission to elect a chief rabbi, who was to act as judge in all matters concerning their religious life. Jews refusing to acknowledge his authority were to be subject to a fine or to excommunication; and those refusing to yield to the latter might be executed after a report of the circumstances had been made to the authorities. The property of the recalcitrants was to be confiscated and turned into the crown treasury. The chief rabbi was exempted from the authority of the waywode and other officials, while the latter were obliged to assist him in enforcing the law among the Jews. In agreements concluded (June 30 and Sept. 15, 1553) between the Jews of Cracow and the Christian merchants of Kazimierz and Stradom the signatures of the following prominent Jews occur: Rabbi Moses; Jonas Abramovich; Israel Czarnij; Simon, son-in-law of Moses; Samuel, son of Feit; Moses Echlier; Rabbi Esaias; Lazar, son-in-law of the widow Bona; and Rabbi Alexander. In 1556 the king issued a decree defining the judicial rights of the Jews of Lublin. In a similar document issued in the same year the conflicting claims of the Jewish and Christian merchants of Posen were adjusted.

Under Sigismund II.

The favorable attitude of the king and of the enlightened nobility could not prevent the growing animosity against the Jews in certain parts of the kingdom. The Reformation movement stimulated an anti-Jewish crusade by the Catholic clergy, who preached vehemently against all heretics—Lutherans, Calvinists, and Jews. In 1550 the papal nuncio Alois Lipomano, who had been prominent as a persecutor of the Neo-Christians in Portugal, was delegated to Cracow to strengthen the Catholic spirit among the Polish nobility. He warned the king of the evils resulting from his tolerant attitude toward the various non-believers in the country. Seeing that the Polish nobles, among whom the Reformation had already taken strong root, paid but scant courtesy to his preachings, he initiated a movement against the Tatars and the Jewish inhabitants of Lithuania, whom he attempted to convert to Catholicism (1555). Returning from Wilna to Cracow in 1556 he inaugurated there a crusade against the Jews. In the interests of this crusade a rumor was spread among the populace to the effect that a Christian woman of Sochaczow, Dorotea Lazencka, had sold to the local Jews a host which she had received at communion and which they had pierced until blood began to flow from the punctures. By order of the Bishop of Kholm three Jews of Sochaczow and their "accomplice," Dorotea Lazencka, were put in chains, and later sentenced to death. When the king, who was at that time in Wilna, learned of the matter, he sent to the burgomaster of Sochaczow orders to stop the proceedings until a thorough investigation could be made. The bishop, however, presented a forged royal order for the execution; and the supposed blasphemers were burned at the stake a few days before the king's deputy arrived (1557). Sigismund Augustus was highly incensed at this sanguinary deed, the prime mover in which was the nuncio Lipomano. "I am horrified at the thought of this shameful crime," he said, "and besides I do not wish to be regarded as a fool who believes that blood may flow from a pierced host." The Protestant nobles, who could not conscientiously bring themselves to believe in the absurd medieval fable, took the part of the Jews; and numerous satires were written against the nuncio and the bishop. Sigismund pointed out that papal bulls had repeatedly asserted that all such accusations were without any foundation whatsoever; and he decreed that henceforth any Jew accused of having committed a murder for ritual purposes, or of having stolen a host, should be brought before his own court during the sessions of the Diet.

Host-Desecration Charges.

Notwithstanding this decree and the ridicule of the reformers, clerical influences forced the enactment of anti-Jewish laws at the Diets of 1562 and 1565. At this time the Jews found a defender in Solomon ben Nathan Ashkenazi, who before his departure for Turkey was the king's physician. Simon Günzburg, a wealthy court Jew and a celebrated architect, also defended the cause of his coreligionists. In 1566 the Jew Benedict Levith was awarded for a term of four years the monopoly of importing Hebrew books and of selling them throughout the country. At the request of the Jews the king permitted (1567) Rabbi Isaac May to build a yeshibah in the suburb of Lublin. In 1571 the elders of the Jewish community of Posen were given the right to expel from the city lawless or immoral members of the community, and even to sentence them to death. The local waywode was at the same time forbidden to oppose the execution of such sentences. The autonomy thus granted by Sigismund August to the Jews in the matter of communal administration laid the foundation for the power of the Kahal, which, as has been pointed out by Dubnow, subsequently brought to the Polish Jewry both great advantage and considerable harm.

The officers of the ḳahal frequently made agreements with the magistrates on the strength of which the Jews were given the right, in return for certain taxes, to trade freely and to own real estate within the city limits. There were, however, some cities like Syeradz and Vielun in which Jews were not allowed even to reside. In 1659 Lithuania was united to Poland; for the effect of this union on Jewish life in Poland see Jew. Encyc. viii. 126, *s.v.* Lithuania.

The death of Sigismund Augustus (1572) and the termination therewith of the Jagellon dynasty necessitated the election of his successor by the elective body of the Shlyakhta. The neighboring states were deeply interested in the matter, each hoping to insure the choice of its own candidate. The pope was eager to assure the election of a Catholic, lest the influences of the Reformation should become predominant in Poland. Catherine de Medici was laboring energetically for the election of her son Henry of Anjou. But in spite of all the intrigues at the various courts, the deciding factor in the election was the above-mentioned Solomon Ashkenazi, then in charge of the foreign affairs of Turkey. Henry of Anjou was elected, which fact was of deep concern to the liberal Poles and the Jews. Fortunately this participator in the massacre of St. Bartholomew secretly fled to France after a reign of a few months, in order to succeed his deceased brother Charles IX. on the French throne.

Under Stephen Bathori.

Stephen Bathori (1576–86) was now elected king of Poland; and he proved both a tolerant ruler and a friend of the Jews. On Feb. 10, 1577, he sent orders to the magistrate of Posen directing him to prevent class conflicts, and to maintain order in the city. His orders were, however, of no avail. Three months after his manifesto a riot occurred in Posen, for details of which see Jew. Encyc. ii. 596a, *s.v.* Bathori, Stephen. Political and economic events in the course of the sixteenth century forced the Jews to establish a more compact communal organization, and this separated them from the rest of the urban population; indeed, although with but few exceptions they did not live in separate ghettos, they were nevertheless sufficiently isolated from their Christian neighbors to be regarded as strangers. They resided in the towns and cities, but had little to do with municipal administration, their own affairs being managed by the rabbis, the elders, and the dayyanim or religious judges. In the reign of Stephen Bathori they were attacked by the Polish poet Sebastian Klenowicz (1545-1602) in his works "Worek Judaszow" (= "The Bags of the Judas") and "Victoria Deorum." These conditions contributed to the strengthening of the ḳahal organizations. Conflicts and disputes, however, became of frequent occurrence, and led to the convocation of periodical rabbinical congresses, which were the nucleus of the central institution known in Poland, from the middle of the sixteenth to the middle of the eighteenth century, as the Council of Four Lands. The meetings were usually held during the fairs of Lublin; and the sphere of the activity of the council gradually widened until it came to include not only judicial but administrative and legislative functions also. At times the regulations of the Polish government were strengthened by the official sanction of the council. A notable instance of this occurred in 1587, when the council approved with great solemnity the well-known edict forbidding the Jews to engage in the farming of government revenues and of other sources of income, since "people eager for gain and enrichment by means of extensive leases might bring great danger to the many."

Yeshibot were established, under the direction of the rabbis, in the more prominent communities. Such schools were officially known as gymnasiums, and their rabbi-principals as rectors. Important yeshibot existed in Cracow, Posen, and other cities. Jewish printing establishments came into existence in the first quarter of the sixteenth century. In 1530 a Hebrew Pentateuch was printed in Cracow; and at the end of the century the Jewish printing-houses of that city and Lublin issued a large number of Jewish books, mainly of a religious character. The growth of Talmudic scholarship in Poland was coincident with the greater prosperity of the Polish Jews; and because of their communal autonomy educational development was wholly one-sided and along Talmudic lines. Exceptions are recorded, however, where Jewish youth sought secular instruction in the European universities. The learned rabbis became not merely expounders of the Law, but also spiritual advisers, teachers, judges, and legislators; and their authority compelled the communal leaders to make themselves familiar with the abstruse questions of Talmudic law. The Polish Jewry found its views of life shaped by the spirit of the Talmudic and rabbinical literature, whose influence was felt in the house, in the school, and in the synagogue.

In the first half of the sixteenth century the seeds of Talmudic learning had been transplanted to Poland from Bohemia, particularly from the school of Jacob Pollak, the creator of Pilpul. Shalom Shachna (*c.* 1500–58), a pupil of Pollak, is counted among the pioneers of Talmudic learning in Poland. He lived and died in Lublin, where he was the head of the yeshibah which produced the rabbinical celebrities of the following century. Shachna's son

Pioneers of Talmudic Learning.

Israel became rabbi of Lublin on the death of his father, and Shachna's pupil Moses Isserles (ReMA; 1520–72) achieved an international reputation among the Jews. His contemporary and correspondent Solomon Luria (1510–73) of Lublin also enjoyed a wide reputation among his coreligionists; and the authority of both was recognized by the Jews throughout Europe. Among the famous pupils of Isserles should be mentioned David Gans and Mordecai Jaffe, the latter of whom studied also under Luria. Another distinguished rabbinical scholar of that period was Eliezer b. Elijah Ashkenazi (1512–85) of Cracow. His "Ma'ase ha-Shem" (Venice, 1583) is permeated with the spirit of the moral philosophy of the Sephardic school, but is extremely mystical. At the end of the work he attempts to forecast the coming of the Messiah in 1595, basing his calculations on the Book of Daniel. Such Messianic dreams found a receptive soil in the unsettled religious conditions of the time. The new sect of Socinians or Unitarians, which denied the Trinity and which, therefore, stood near to Judaism, had among its leaders Simon Budny, the translator of the Bible into Polish, and the priest Martin Czechowic. Heated religious disputations were common, and Jewish scholars participated in them.

The Catholic reaction which with the aid of the Jesuits and the Council of Trent spread throughout Europe finally reached Poland. The Jesuits found a powerful protector in Bathori's successor, Sigismund III. (1587–1632). Under his rule the "golden freedom" of the Polish knighthood gradually vanished; government by the "liberum veto" undermined the authority of the Diet; and the approach of anarchy was thus hastened. However, the dying spirit of the republic was still strong enough to check somewhat the destructive power of Jesuitism, which under an absolute monarchy would have led to drastic anti-Jewish measures similar to those that had been taken in Spain. Thus while the Catholic clergy was the mainstay of the anti-Jewish forces, the king remained at least in semblance the defender of the Jews (see Jew. Encyc. viii. 127b, *s.v.* Lithuania). False accusations of ritual murder against the Jews recurred with growing frequency, and assumed an "ominous inquisitional character."

Sigismund III.

The papal bulls and the ancient charters of privilege proved generally of little avail as protection. In 1598 the crown judges of Lublin condemned three Jews to death for the supposed murder of a Christian child whose body had been found in a swamp near the village of Voznika. The accused were tortured on the rack and then quartered amid impressive ceremonies at Lublin. The body of the murdered child was placed in one of the monasteries in Lublin and became an object of worship for the populace. A polemical movement against the Jews also was initiated by the clergy. The priest Moeczki published in Cracow (1598) a bitter denunciation of the Jews under the title "Okrucienstwa Zydowskie" (= "Jewish Atrocities"); and similar works were published by Gubiczki (1602), by Wyeczlaw Grabowski ("O Zydach w Koronie," 1611), and by the Polish physician Sleshkowski, who accused the Jewish physicians of systematically attempting to poison their Catholic patients. The plague then raging in Poland was attributed by him to divine wrath at the protection afforded to the Jews of the country (1623). Most bitter of all in his tirades against the Jews was the Polish writer Sebastian Miczinski, author of "Zwierciadlo Korony Polskie" (3d ed. 1618). A pupil of the Jesuits, he collected in this book every charge that was ever invented against the Jews by fanatical superstition and popular malice. He incited the Polish people, and especially the delegates to the Diet, to treat the Jews as they had been treated in Spain and elsewhere.

Ladislaus IV. (1632–48), though personally a tolerant ruler, could not check the bitter factional hatreds of his subjects. In 1642 he permitted the Jews of Cracow to engage freely in export trade, but withdrew this permission two months later in compliance with the demands of the Christian merchants. Many of the Jews, thus restricted and oppressed in the cities, moved to the villages and became leaseholders of estates belonging to the Shlyakhta, and engaged also in the liquor trade. The powerful nobles as well as the high church dignitaries leased their lands to them, and the synod of Warsaw (1643) severely criticized some of the bishops for thus placing the Jews over the Christian peasants. The synod of Posen indignantly commented on the "audacity of the Jews" in trading in the market-places on Christian holy days. In 1636 the Jews of Lublin had been acquitted by the crown tribunal of the charge of having murdered a Christian child for ritual purposes. The local clergy, annoyed at the acquittal, invented another charge, supported by "evidence." The Carmelite monk Paul declared that Jews had lured him into a house, had bled him with the aid of a German barber named Schmidt (a Lutheran), and had collected his blood in a dish, whispering meanwhile some prayer. The tribunal accepted this accusation, and, after a trial accompanied by torture on the rack, sentenced one Jew, named Mark, to death. The Carmelites hastened to make this case public in order to strengthen the prejudice of the populace. The Jew Mark is mentioned also on the fly-leaf of an old prayer-book preserved in the synagogue of Pinchov. The inscription speaks of "the martyrs on this earth in the city of Lublin, in the year (5)396 = 1636." The martyr Mark is called here "the learned Rabbi Mordecai, son of the sainted Rabbi Meïr." The pamphlet by the Carmelite monks referring to this case is entitled "Processus Causæ Inter Instigatorem Judicii Tribunalis Regni et Perfidium Marcum Judæum Agitatæ." This case is reported also in the book of the priest Stefan Zuchowski, published in 1713. Nine months after the revolting judicial murder of Lublin a more horrible execution took place in Cracow (1637). The details of this case are not known; but, from entries in the Pinchov prayer-book and the pinkes of the burial society of Cracow, it appears that seven Jews were executed; namely, Rabbi Abraham ben Isaac, Jacob b. David, Samuel b. Samuel, Elijah b. Judah, Benjamin b. Shalom, Jacob b. Issachar, and Moses b. Phinehas. Zhukhowski makes no mention of this

Blood Accusations.

case. A similar case occurred in Lenchich in 1639 (see Jew. Encyc. viii. 128, *s.v.* Lithuania).

The hostility of their Christian neighbors reacted on the inner life of the Polish Jews; and the scholar Delmedigo, who visited Poland and Lithuania in 1620, was struck by their indifferent and at times hostile attitude toward secular learning. But, while the intellectual field of the Jews was narrowed equally with their social life, there was displayed in both an unceasing activity inspired by Talmudic precepts. The Talmud served them as an encyclopedia of all knowledge and for questions of everyday life, including abstract law, legal decisions, both civil and criminal, religious legislation, theology, etc. It was diligently studied; but the methods of study depended on the social position of the student. The rabbis of higher rank, those who took an active part in the kahal administrations and who participated in the Council of Four Lands, paid most attention to the practical application of the Talmudic law. Chief among them was Mordecai Jaffe (see Jew. Encyc. vii. 58), who at the end of the sixteenth century frequently presided at the meetings of the council. His successor as rabbinical elder and president of the council was Joshua ben Alexander ha-Kohen Falk, rabbi of Lublin, and later director of the yeshibah at Lemberg. Together with these should be mentioned: Meïr ben Gedaliah Lublin (d. 1616), authority in rabbinical matters; Samuel Edels (d. 1631); and Joel Sirkes (d. 1641). The Cabala had become entrenched under the protection of Rabbinism; and such scholars as Mordecai Jaffe and Joel Sirkes devoted themselves to its study. The mystic speculations of the cabalists prepared the ground for Shabbethaianism, and the Jewish masses were rendered even more receptive by the great disasters that overtook the Jews of Poland about the middle of the seventeenth century. Had the rabbis of that time evinced a more active interest in worldly affairs, and had they taken warning from the ominous popular unrest, they might in a measure have averted the calamity of the Cossacks' uprising. It should be stated, however, that the great catastrophe was due not to the Jews themselves, but to the decay of the entire system of which the Jews were but an inactive part (see Jew. Encyc. iv. 283b, *s.v.* Cossacks' Uprising).

Study of the Talmud.

The kingdom of Poland proper, which had hitherto suffered but little either from the Cossacks' uprising or from the invasion of the Russians, now became the scene of terrible disturbances (1655-58). King Charles X. of Sweden, at the head of his victorious army, overran Poland; and soon the whole country, including the cities of Cracow and Warsaw, was in his hands. The Jews of Great and Little Poland found themselves between two fires: those of them who were spared by the Swedes were attacked by the Poles, who accused them of aiding the enemy. The Polish general Stefan Czarniecki, in his flight from the Swedes, devastated the whole country through which he passed and treated the Jews without mercy. The Polish partizan detachments treated the non-Polish inhabitants with equal severity. Moreover, the horrors of the war were aggravated by pestilence, and the Jews of the districts of Kalisz, Cracow, Posen, Piotrkow, and Lublin perished en masse by the sword of the enemy and the plague. Certain Jewish writers of the day were convinced that the home and protection which the Jews had for a long time enjoyed in Poland were lost to them forever.

Cossacks' Uprising.

Some of these apprehensions proved to be unfounded. As soon as the disturbances had ceased, the Jews began to return and to rebuild their destroyed homes; and while it is true that the Jewish population of Poland had decreased and become impoverished, it still was more numerous than that of the Jewish colonies in western Europe. Poland remained as hitherto the spiritual center of Judaism; and the remarkable vitality of the Jews manifested itself in the fact that they in a comparatively short time managed to recuperate from their terrible trials.

King John Casimir (1648-68) endeavored to compensate the impoverished people for their sufferings and losses, as is evidenced by a decree granting the Jews of Cracow the rights of free trade (1661); and similar privileges, together with temporary exemption from taxes, were granted to many other Jewish communities, which had suffered most from the Russo-Swedish invasion.

In spite of the spiritual poverty of the Jews of Poland, some of them sought instruction at foreign universities. Among the Polish physicians of the time was Jacob, who studied medicine at Padua, and came to Posen after the expulsion of the Jews from Vienna in 1670. He married the daughter of the physician Moses Judah (Mojzese Judko). In 1673 Moses Judah became the physician to the Jewish community at a salary of 40 gold ducats; he was also one of the elders of the Jewish community, and defended its suits at the Diets. He was highly respected by the nobility. His son, who also had studied medicine at Padua, succeeded him in his post, and remained in Posen until 1736. The grammarian Isaac ben Samuel ha-Levi lived for some time in Posen, and died there in 1646. The philosopher Solomon Ashkenazi of Posen and the mathematician Elijah of Pinczow were prominent at the end of the seventeenth century.

John Casimir's successor, King Michael Wischneveczki (1669-73), also granted some privileges to the Jews. This was partly due to the efforts of Moses Markowitz, the representative of the Jewish communities of Poland. The heroic king John Sobieski (1674-96) was in general very favorably inclined toward the Jews; but the Senate and the nobility deprecated such friendliness toward "infidels."

With the accession to the throne of the Saxon dynasty the Jews completely lost the support of the government. While it is true that Augustus II., the Strong (1697-1733), and Augustus III. (1733-63) officially confirmed at their coronations the Jewish charters, such formal declarations were insufficient, owing to the disorders prevailing in the kingdom, to guard the already limited rights of the Jews against the hostile elements. The government was anxious only to

Accession of the Saxon Dynasty.

collect from the ḳahals the taxes, which were constantly being made heavier in spite of the fact that the Jews had not yet recovered from the ruinous events of the Cossacks' uprising and the Swedish invasion. The Shlyakhta and the other classes of the urban population were extremely hostile to the Jews. In the larger cities, like Posen and Cracow, quarrels between the Christians and the Jewish inhabitants were of frequent occurrence; and they assumed a very violent aspect. Based originally on economic grounds, they were carried over into the religious arena; and it was evident that the seeds which the Jesuits had planted had finally borne fruit. Ecclesiastical councils displayed great hatred toward the Jews. Attacks on the latter by students, the so-called "Schüler-Gelauf," became every-day occurrences in the large cities, the police regarding such scholastic riots with indifference. Indeed, lawlessness, violence, and disorder reigned supreme at that time in Poland, marking the beginning of the downfall of the kingdom. In order, therefore, to protect themselves against such occurrences, the Jewish communities in many cities made annual contributions to the local Catholic schools.

Prevalence of Superstition.

Many miracle-workers made their appearance among the Jews of Poland, prominent among whom was Joel ben Isaac Heilprin, known also as "Ba'al Shem I.," a believer in and practitioner of demonology. These men added to the mental and moral confusion of the Jewish masses. "There is no other country," says a writer of the seventeenth century, "in which the Jews occupy themselves so much with mystic fantasies, devilism, talismans, and the invocation of spirits, as in Poland." Even famous rabbis of that time devoted themselves to cabalistic practises. Special notoriety as a cabalist was gained by Naphtali ben Isaac ha-Kohen, whose belief in the power of a certain amulet led to the destruction of almost the entire Jewish quarter of Frankfort. The popular superstitions that had so completely enveloped the Polish Jewry were the direct cause of the Messianic movements that had begun to agitate the Jewish world; and although Shabbethai Ẓebi, hailed at first as the Messiah, lost a large number of his followers on his conversion to Mohammedanism, mysticism had become too deeply rooted in the Jewish masses to be destroyed even by this rude awakening. Shabbethaianism was succeeded by Frankism (see Jew. Encyc. v. 475, *s.v.* Frank, Jacob, and the Frankists). The era of enlightenment which dawned for the Jews of Germany with the coming of Moses Mendelssohn in the second half of the eighteenth century was coincident with that of the decay of the Polish Jewry.

The sufferings of the Polish Jews from external enemies in times of war and from persecutions by their Christian neighbors in times of peace served to cement more strongly their internal life and stimulated a more thorough organization for the common protection. One of the proclamations of the Council of Four Lands, issued in 1676, reads as follows:

> "We have sinned grievously against the Almighty; the disturbances increase from day to day. It is becoming more and more difficult for us to live. Our people are considered as naught among other nations; and it is wonderful, in view of all our misfortunes, that we still exist. The only thing left for us to do is to form ourselves into a close union, following strictly the commands of the Lord and the precepts of our venerable teachers and guides."

This was followed by a series of paragraphs ordering implicit obedience to the instructions of the ḳahals, and forbidding the leasing of government taxes or estates of the Shlyakhta and the formation of any commercial companies with non-Jews, without the consent of the ḳahals, "since such enterprises lead to clashes with, and reproaches against the Jews by, the Christian population." It was also forbidden to "transfer Jewish goods into strange hands" or to appeal to the Polish authorities merely from a desire to injure the interests of society or to create discord or party conflicts in the communities. In this way the power of the ḳahals became very pronounced; and they were aided by the government, which found it more convenient to deal with a few centralized bodies than with a multitude of individuals. Each ḳahal was responsible to the government for the action of its individual members, and was required also to collect the taxes (see Jew. Encyc. vii. 409, *s.v.* Ḳahal). In time, however, the ḳahals began to abuse the power entrusted to them, and frequent complaints were heard against their oppressive rule.

Period of Decadence.

The decade from the Cossacks' uprising until after the Swedish war (1648–58) left a deep and lasting impression not only on the social life of the Polish-Lithuanian Jews, but on their spiritual life as well. The mental level of the Jews gradually sank. The Talmudic learning which up to that period had been the common possession of the majority of the people became accessible to a limited number of students only, while the masses remained in ignorance and superstition. The intellectual activity even of the rabbis fell to a low level; for while it is true that there were still many prominent rabbis in Poland who were men of great Talmudic learning and secular knowledge, they did not leave behind them any such great works as did their predecessors — Solomon Luria, Isserles, Mordecai Jaffe, and Meïr of Lublin. In the very few works that were produced there was noticeable an utter lack of originality. Some rabbis busied themselves with insignificant quibbles concerning religious laws; others wrote commentaries on different parts of the Talmud in which hair-splitting arguments were raised and discussed; and at times these arguments dealt with matters which were of no practical moment. Aaron Samuel Kaidanover (1614–76), who barely escaped with his life from the Cossacks in 1648, wrote "Birkat ha-Zebaḥ," a commentary on the sacrifices and the abolished rituals of the Temple of Jerusalem. Others, like Abraham Abele Gombiner in his "Magen Abraham," produced commentaries on the Shulḥan 'Aruk. Aside from sophistic argumentations these rabbis recognized no branch of knowledge, either secular or theological.

Side by side with the scholastic writings of the rabbis there flourished also a didactic literature. Such were the productions of the preachers ("darshanim") who occupied prominent positions in the synagogues or traveled from town to town. The collections of contemporary sermons contain a conglomeration of haggadic and cabalistic sayings on which in many cases are based entirely erroneous interpretations of the Biblical text. These darshanim cared little for the enlightenment of their hearers, and were intent solely on making a brilliant display of their own erudition in theological matters. Some preachers endeavored to inculcate in their people an appreciation of the practical Cabala. The works of Isaac Luria and his school were at that time very popular in Poland, and their teachings were spread among the people in the form of monstrous stories concerning the future life, the terrible tortures inflicted on sinners, the transmigration of souls, etc.

Reform Measures.

Disorder and anarchy reigned supreme in Poland during the second half of the eighteenth century, from the accession to the throne of its last king, Stanislaus Augustus Poniatowski (1764–95). This state of affairs was due to the haughty demeanor of the nobility toward the lower classes. The necessity for reform was, it is true, recognized by the king and by many of the Polish people; but Poland was already in the grasp of Russia, and little could be done in this direction. Jewish affairs were sadly neglected, the government seeking merely the extortion of larger taxes; thus the Diet which met at Warsaw in 1764 for the discussion of measures of reform considered the Jews only to the extent of changing the tax system. Up to that time a poll-tax had been imposed upon the total number of Jews in Poland, the synod and Diet apportioning it among the different ḳahals; but under the new system every individual Jew was taxed two gulden, and every ḳahal was responsible for payments by its own members. The already oppressive tax burden was increased by this "reform"; and the central autonomous government which the Jews had until then enjoyed was overthrown. At that time the Shlyakhta likewise were jealously guarding their own interests; and at the election of the king in 1764 they insisted that Jews should not be permitted to manage any crown lands or to lease taxes or other revenues of the kingdom. Again, in 1768 the Diet revived a law from the old constitution of 1538, to the effect that Jews wishing to engage in any commercial enterprise in the cities must obtain a permit from the local magistracies. In many instances the members of these were Christian merchants and burghers, competitors of the Jews.

First Partition.

About this time, and as a direct consequence of the disorganization of Poland, the disastrous incursions of the brigand bands known as the Haidamacks took place. The movement originated in Podolia and in that part of the Ukraine which still belonged to Poland. These and other internal disorders combined to hasten the end of Poland as a kingdom. In 1772 the outlying provinces were divided among the three neighboring nations, Russia, Austria, and Prussia. Russia secured a considerable part of the territory now known as White Russia; Austria obtained Galicia and a part of Podolia; while Prussia received Pomerania and the lands lying along the lower Vistula. Jews were most numerous in the territories that fell to the lot of Austria and Russia. The permanent council established at the instance of the Russian government (1777–88) served as the highest administrative tribunal, and occupied itself with the elaboration of a plan that would make practicable the reorganization of Poland on a more rational basis. The progressive elements in Polish society recognized the urgency of popular education as the very first step toward reform. In 1773 the Order of Jesus in Poland was abolished by Pope Clement XIV., who thus freed Polish youth from the demoralizing influences of Jesuitism. The famous Edukacyjne Komisje (educational commission), established in 1775, founded numerous new schools and remodeled the old ones. One of the members of the commission, Andrew Zamoiski, elaborated a project for the reorganization of the social life of the Jews (1778). The author demanded that the inviolability of their persons and property should be guaranteed and that religious toleration should be to a certain extent granted them; but he insisted that Jews living in the cities should be separated from the Christians, that those of them having no definite occupation should be banished from the kingdom, and that even those engaged in agriculture should not be allowed to possess land. This shows how deeply hatred of the Jew was rooted in the hearts of the Polish nobility and how difficult it was for even the best of them to consider the Jewish question from an unbiased point of view. In 1786 certain members of the Polish nobility conspired with the Catholic clergy, the governor-general, and others, and sent delegates to St. Petersburg with the object of depriving the Jews of the right to farm taxes and customs duties and to engage in distilling, brewing, etc. It should be mentioned, however, that among the clergy there were many who were friendly to the Jews. At the Quadrennial Diet (1788–91) the demand for reform grew stronger. Matheus Butrymowicz, a deputy to the Diet, published in 1789 a pamphlet in which he strongly condemned the lack of toleration, and advised that equality of rights and citizenship should be granted to the Jews. Tadeusz Czacki, the author and statesman, was even more liberal; and in his well-known "Rozprawa o Zydach," etc. (= "Discourse on the Jews"), he advocated the establishment of separate institutions by the Jews for the management of their religious affairs. In June, 1790, a special commission was appointed by the Diet to frame a measure for the reform of the social life of the Jews. At the head of this commission was Ezerski, and Butrymowicz was one of its members. Two projects were submitted: one by Hugo Kollontai, and the other, as some suppose, by King Stanislaus himself, of which the chief feature was the recognition, in the national system of government, of the civil and political equality of the Jews. This was the only example in modern Europe before the French Revolution of tolerance and broad-mindedness in dealing with the Jewish question. But all these proposed reforms were too late. Through the intrigues and bribery of Catherine II. the Confederation of Targowitza was formed, to which belonged the adherents of the old order of things. A Russian army invaded Poland, and soon after a Prussian one followed. A second partition of Poland was made July 17,

The Second and Third Partitions.

1793, Russia taking a large part of White Russia, half of Volhynia, all of Podolia, and the part of the Ukraine which had previously been retained by Poland, and Germany taking Great Poland (Posen).

A general rising of the Poles took place in 1794. Kosciusko was made dictator, and succeeded in driving the Russians out of Warsaw. Dissensions, however, arose among the Poles, and the Russians and Prussians again entered Poland. Kosciusko was decisively defeated at Maciejowice Oct. 10, 1794; Suvarof entered Warsaw Nov. 8, and Polish resistance came to an end. The Jews took an active part in this last struggle of Poland for independence. A certain Joselovich Berek formed with the permission of Kosciusko a regiment of light cavalry consisting entirely of Jews. This regiment accomplished many deeds of valor on the field of battle and distinguished itself especially at the siege of Warsaw, nearly all its members perishing in the defense of Praga, the fortified suburb of the capital.

The third and final partition of Poland took place in 1795. Russia acquired the whole of Lithuania and Courland; Austria, the remainder of Galicia, and Podolia, including Cracow; Prussia, the rest of Poland, including Warsaw, the capital; and therewith Poland ceased to exist as an independent country. The great bulk of the Jewish population was transferred to Russia, and thus became subjects of that empire.

RUSTCHUK: City of Bulgaria, on the southern bank of the Danube. It was founded by the Russians in 968, was occupied in turn by the Greeks and the Bulgarians, and was finally captured by the Turks under Bayazid I. in 1389. Jews are known to have gone to Rustchuk for commercial purposes from different points in the vicinity of the Danube in the early part of the eighteenth century; but they did not take their families with them. The foundation of the present Jewish community dates from 1792, when some natives of Belgrade, which city had been captured by Emperor Joseph II. of Austria in 1788 and retaken by the Turks in the following year, sought refuge in Rustchuk to escape the reprisals of the latter.

The first chief rabbi of the city was Abraham Graziani (1800-6), who drew up a code of regulations and obtained the grant of a piece of land for a cemetery, the community being placed under the control of the rabbinate of Adrianople. The Jews of Rustchuk flourished commercially until the Continental blockade; but the sieges of 1807 and 1811 destroyed the prosperity of the community. The Russians converted the synagogue into a stable for their horses, and finally destroyed it by fire, the memory of this catastrophe being perpetuated by the Jews of the city in a popular song entitled, after the Russian name of the war, "Za Vera" = "For Religion." By the time peace was declared, almost the entire Hebrew community had removed to Bucharest; but some time later ten families of refugees returned with several families from Nicopolis and with Graziani, the chief rabbi. Graziani, although he made some much-needed reforms, was removed from office in 1814. His successors were Solomon Capon (1814-20); Shabbethai Behar Abraham (1822-35); Jacob Yom-Ṭob b. Abraham, called Baïram (1835-46); Benjamin Pinto of Bosnia (1864); Abraham Melammed (1869), the first rabbi of Rustchuk to bear the official title "ḥakam bashi"; and A. Salonicchio, the present (1905) incumbent.

The War of Greek Independence in 1828 drove several thousand Mohammedan emigrants from Rumania to Rustchuk; and a Jewish resident named Perez Alkalai generously provided the fugitives with all necessary supplies, receiving as a reward a "berat" from Vali Pasha which exempted him permanently from all taxation. In 1837 and 1845 the city was visited by the sultans Maḥmud II. and 'Abd al-Majid respectively, and the Jewish congregation was the object of the imperial bounty.

The community of Rustchuk, which is the most prosperous in Bulgaria, possesses an excellent library, which is a legacy from Chief Rabbi Shabbethai Behar Abraham; and the family of Rosanes also has a library containing some rare works. The first rabbinical author of the city was Elijah Ventura, originally from Spalato, who wrote a Hebrew work entitled "Kokeba di-Shebiṭ"; the above-mentioned Abraham Graziani composed the "She'erit Ya'aḳob"; while in the libraries are preserved several manuscript works of his successor, Solomon Capon, among them the "Ḳonṭres 'al Re'em." Abraham b. Israel Rosanes (Abir) published in "Ha-Maggid" (1868) an account of his travels in Palestine, while his son Solomon Israel Rosanes, called "Tchelebon," is well known for the researches in the history of the Oriental Jews published by him in various periodicals, such as the "Anuar Penetru Israeliti" (1888, xi.).

The city contains two synagogues: one large one, and a smaller one called "Ḳahallah Ḳadosh Shalom." It possesses also two schools, supported by the Alliance Israélite Universelle, with an attendance of 272 boys and 204 girls, as well as a Zionist society, a ḥebra ḳaddisha, a chief rabbi, and a rabbinical tribunal. There is likewise a small Ashkenazic community, which has an oratory of its own. Every ten years the interment of the contents of the Genizah is celebrated with great ceremony.

A Jewish press was established at Rustchuk in

1894; and two Judæo-Spanish papers, "La Alborada" and "El Amigo," have been published there for some time.

In 1904 the Jews of Rustchuk numbered 4,030 in a total population of 48,000. They are chiefly engaged in commerce and banking.

RUSTICANUS. See Berthold of Regensburg.

RUTH, BOOK OF: The Book of Ruth, which is poetically idyllic in character, although the narrative is in the form of prose, contains an episode from the period of the Judges. For this reason it is placed in the Septuagint after the Book of Judges; and this order is followed in the Vulgate and in the English translations. In the Hebrew Bible, however, Ruth is found in the "Ketubim," or third part of the canon, where it stands next after the Song of Solomon, being the second of the Five Megillot. In Spanish manuscripts and in one Bible of 1009 Ruth comes first (Buhl, "Canon of the Old Testament," i., § 10; see Bible Canon). This position, as will be noted more fully below, probably accords better with the date of the book; for it was written so long after the date of which its story treats that many of the customs to which it refers had become antiquated.

——**Biblical Data:** The book takes its name from one of its characters, who, with her mother-in-law, Naomi, shares the honor of being its heroine. The story is as follows: Elimelech, a man of Bethlehem-judah, with his wife, Naomi, and his two sons, Mahlon and Chilion, went in time of famine and sojourned in the land of Moab. There Elimelech died, and the two sons married, Mahlon taking Ruth as his wife, and Chilion taking Ophra—both women of Moab, where both sons likewise died. In due time Naomi heard that the famine in Judah had passed, and determined to return thither. Ruth, in spite of the dissuasion of Naomi, accompanied her mother-in-law to Bethlehem, and cast in her lot with the people of Judah. The two women arrived in Bethlehem at the beginning of barley harvest. Naturally they were in a state of dire poverty. Elimelech had had an inheritance of land among his brethren, but, unless a Go'el could be found, Naomi would be compelled to sell it (in Ruth iv. 3 מָכְרָה should be pointed מֹכרה = "is going to sell"; comp. "Am. Jour. Semit. Lang." xix. 145). Elimelech had a prosperous relative in Bethlehem whose name was Boaz, and who, like others, was engaged in the harvest. Naomi sent Ruth to glean in his fields, and, after he had spoken kindly to her and shown her some favors, she, still acting upon the advice of her mother-in-law, approached Boaz at night and put herself in his power. Boaz was attracted to her, but informed her that there was a kinsman nearer than he who had the first right to redeem the estate of Elimelech, and that it would be necessary for this kinsman to renounce his right before he (Boaz) could proceed in the matter. Accordingly he called this kinsman to the gate of the city before the elders, and told him of the condition of the wife and daughter-in-law of Elimelech, and of his (the kinsman's) right to redeem the estate and to marry Ruth. The kinsman declared that he did not desire to do so, and drew off his shoe in token that he had renounced his rights in favor of Boaz. Boaz thereupon bought the estate from Naomi, married Ruth, and became by her the father of Obed, who in due time became the father of Jesse, the father of King David.
E. C. G. A. B.

——**Critical View:** It should be noted that in the narrative of the Book of Ruth there are several points which are not quite clear. In certain parts, as i. 12–14, the action seems to presuppose the existence of the levirate law (comp. Gen. xxxviii. and Deut. xxv. 5 *et seq.*), while in other parts, as iv. 3 *et seq.*, the redemption of Elimelech's estate for his widow seems to be the chief point in the discussion. This seems to presuppose the extension to wives of the law concerning the inheritance of daughters (Num. xxxvi.). Again, from the general course of the narrative one receives the impression that Boaz is the Go'el; but in iv. 13 *et seq.* the go'el seems to be Obed (comp. Nowack, "Handkommentar zum Alten Testament," p. 199, *s.v.* "Richter," "Ruth," etc.; Bertholet, in "K. H. C." *ad loc.*). Finally, if the levirate law had been really fulfilled, Obed should have been counted the son of Mahlon, the son of Elimelech, whereas he is really called (iv. 21) the son of Boaz.

Bewer (in "Am. Jour. Semit. Lang." xix. 143 *et seq.*) points out that four steps in the development of the levirate are met with in the Old Testament: (1) the go'el need not be a brother, but may be any kinsman of the deceased, as in Gen. xxxviii.; (2) he must be a brother (although this form is not actually found, it is necessarily presupposed by the following); (3) only such brothers as have lived with the deceased are required to perform the duties of the levirate (comp. Deut. xxv. 5 *et seq.*); and (4) no man is allowed to take his brother's wife (Lev. xx. 21). According to this classification, the form of levirate in the Book of Ruth is the oldest of all, but here is encountered the difficulty that the described form of purchase of the estate of Naomi does not at all accord with any form of levirate, but with the law of Lev. xxv. 25 (Holiness Code, cited hereafter as H). Bewer therefore concludes that the levirate idea is not an original part of the Book of Ruth, but that the work was first composed on the basis of Lev. xxv. 25, and that it was afterward interpolated to some extent to ingraft upon it the levirate idea. The phenomena of the book, however, may quite plausibly be explained in another way, as will be pointed out below.

Date of Composition.

According to Bewer the Book of Ruth is later than H., *i.e.*, it is post-exilic. This view of the date is for other reasons held by many scholars (*e.g.*, Kuenen, "Historische Bücher des Alten Testaments," i., part 2, p. 195; Cornill, "Einleitung," p. 241; Nowack, *l.c.*; Bertholet, *l.c.*; and Kautzsch, "Literature of the Old Testament," p. 129). The days of the Judges are referred to as a time far past (i. 1), and even the law of Deut. xxv. 5 *et seq.* is referred to as a custom now obsolete (comp. Ruth iv.

7); the language of the book contains several Aramaisms (*e.g.*, נשׂא נשים, i. 4; שׂבר, עגן, i. 13; and קים, iv. 7); the interest in the genealogy of David (iv. 20 *et seq.*) is thought to indicate a date when David had become the ideal of the nation; and the evident interest of the author in the marriage of an Israelite with a Moabitess—an interest in sharp contrast to the law of Deut. xxiii. 3 *et seq.* as well as the procedure of Ezra and Nehemiah (Ezra ix., x., and Neh. xiii. 23 *et seq.*)—indicates that the author of Ruth was a contemporary of Ezra and Nehemiah and wrote the book to show that their opposition to foreign marriages was contrary to ancient and most honorable precedent.

Although Driver ("Introduction," p. 427) urges that the general beauty and purity of style of Ruth indicate a pre-exilic date, holding that the Davidic genealogy at the end is probably a later addition, the post-exilic origin of Ruth seems to be confirmed by its position among the "Ketubim," in the third part of the canon. The view which makes it a tract against the marriage policy of Ezra and Nehemiah seems most probable.

Bewer's Theory of Interpolations.

Bewer (*l.c.* xx. 205 *et seq.*) holds that the work was written at that time and for that purpose, and that in its original form, without any reference to the levirate, it was a more effective weapon in the controversy than it is now. His view is that some friend of Ezra added the levirate interpolations in order to make it appear that the foreign marriage of Boaz was not a precedent for ordinary people, as the levirate compelled him to act thus.

If the book was written at the date supposed, it is clear from the law of H (Lev. xx. 21) that the levirate had passed away. It is too much, therefore, to expect an absolutely clear and accurate account of its workings. That the writer should mingle its provisions with those of Lev. xxv., which refer to the redemption of the estates of the poor, would at this date be very natural. Confusion, too, as to who the go'el actually was would also be natural. Bewer's theory of interpolations seems, accordingly, unnecessary. Cheyne's view ("Encyc. Bibl." *s.v.*) that Elimelech was a Jerahmeelite, and that he went to sojourn in the land of Miṣṣur, is one of the curiosities of his Jerahmeel-Miṣṣur theory.

RUTH RABBAH (called also **Midrash Rut**): A haggadic and homiletic interpretation of the Book of Ruth, which, like that of the four other scrolls ("megillot"), is included in the Midrash Rabbot. This midrash, divided into eight chapters or sections ("parashiyyot"), covers the whole text of the Biblical book, interpreting it verse by verse, now in its literal, now in an allegorical, sense. The first chapter terminates with Ruth i. 2; the second, with i. 17; the third, with i. 21; the fourth, with ii. 9; the fifth, with iii. 7; the sixth, with iii. 13; the seventh, with iv. 15; and the eighth, comprising only two verses, with iv. 19, verses 16 and 17 of ch. iv. being omitted. Like Ekah Rabbati, the commentary proper on the Book of Ruth is preceded by a long introduction ("petiḥta"), which consists of several proems having no connection with one another.

Introduction and Proems.

The commentary itself, except in ch. i. and vii., where it follows directly upon the Biblical text, is generally introduced by one or more proems. It is composed in the spirit of the Palestinian haggadists, its main sources being the Jerusalem Talmud, Bereshit Rabbah, Wayiḳra Rabbah, and Ekah Rabbati. It would seem, moreover, that its author was opposed to the Babylonian Talmud; for in his interpretation of iv. 7—a passage which is omitted in the printed editions—he disparages that work. It is true that parallel passages are found in Shir ha-Shirim Rabbah, which this midrash closely resembles as regards arrangement and mode of interpretation, and in Ḳohelet Rabbah. But as to the former, nothing proves that it is anterior to Ruth Rabbah, while the latter is recognized by modern scholars to be posterior to this midrash. It apparently contains no Babylonian haggadot, and, although in i. 3 (= ii. 4) it gives the haggadic interpretation of I Chron. iv. 22, which is also found in B. B. 91b, it may be seen that the source in the latter treatise is a baraita and not a Babylonian haggadah. Thus Ruth Rabbah is one of the earlier midrashim, composed about the same time as or shortly after Shir ha-Shirim Rabbah. According to Zunz ("G. V." ed. Brüll, p. 277, Frankfort-on-the-Main, 1892), Ruth Rabbah, as well as Shir ha-Shirim Rabbah and Ḳohelet Rabbah, was one of the sources of the Yelammedenu, Debarim Rabbah, Pesiḳta Rabbati, and Shemot Rabbah, being a medium between these midrashim and the older haggadah (comp., however, Friedmann, introduction to his edition of the Pesiḳta Rabbati, p. 25).

Examples of Haggadah.

Ruth Rabbah is specially interesting from a cultural-historical point of view in that it endeavors to throw light on the habits and conditions of the time in which the incidents of the Book of Ruth took place. Thus, interpreting the very first words of the book, "in the days when the judges judged" (Ruth i. 1), as "in the days when the people judged their judges," the author wishes to show that there was a time when the judges perverted their judgments so that they were held responsible by the people. But when was there such a time, and who were those judges? According to Rab, the judges were Barak and Deborah; according to R. Huna, Deborah, Barak, and Jael; and according to Joshua b. Levi, Ehud and Shamgar. The famine is circumstantially described; it was one of the ten great famines which afflicted the entire world.

Elimelech is represented in an unfavorable light, his name being interpreted as meaning "one eager for royalty." He left the land of Canaan not because he would himself suffer from the famine, but because he was afraid that the people might apply to him for help. In interpreting i. 14, the author of this midrash expresses his views with regard to kissing. According to an anonymous authority, kisses are permitted on three occasions only: (1) on conferring a high office, as when Samuel kissed Saul

(I Sam. x. 1); (2) at meetings, as in the case of Aaron kissing Moses (Ex. iv. 27); and (3) at parting, as when Orpah kissed her mother-in-law. According to R. Tanḥuma, kissing is permitted also to relatives, as when Jacob kissed Rachel (Gen. xxix. 11). Under other circumstances kissing is declared indecent. Very graphic is the description of Ruth's insistence on following Naomi (Ruth i. 16–18), in that, when her attention was directed by her mother-in-law to the laws relating to proselytes, she accepted them all.

Both Naomi and Ruth are described as righteous women whose acts were charitable. The latter particularly is pointed out as being modest and of exemplary manners (ii. 5). In his interpretation of iii. 3 the author of the midrash shows the necessity of honoring the Sabbath by wearing special garments. It may be remarked that in iii. 13 there is a recension of the story of Elisha b. Abuyah, the main source of which is Ḥag. 14b. The midrash terminates with a statement to the effect that the Messiah is to descend from Ruth through David.

With regard to lexical interpretations, in certain cases the explanation of words is not contrary to grammatical rules, but sometimes, as in all the other midrashim, the interpretation is arbitrary. Thus, while "Elimelech" is interpreted as composed of "elai" and "melek" (= "to me belongs royalty"; comp. above), "Naomi" as "she whose acts are agreeable," and "Orpah" (from "'oref" = "the nape of the neck") as "she who turned her back [comp. Jer. ii. 27 and elsewhere] upon her mother-in-law," "Wa-yehi" is interpreted as an exclamation of sorrow; and "Ruth" (derived from ראה = "to see") as "she who saw or considered her mother-in-law's words." For commentaries on and editions of Ruth Rabbah see Ekah Rabbati, Esther Rabbah, and Ḳohelet Rabbah.

S

SAADIA: Biblical commentator, whose native country and epoch can not be precisely determined. Rapoport (in "Bikkure ha-'Ittim," ix. 34–35) was the first to prove that the commentary on Daniel which is ascribed to Saadia Gaon does not belong to him, but to another Saadia. This scholar further says that, owing to differences between that commentary and the one on Chronicles (see Saadia b. Naḥmani), he can not affirm that both works belong to the same author, although he does not feel justified in asserting to the contrary. Matthews proves in "A Commentary on Ezra and Nehemiah" (Oxford, 1882) that the author of the latter commentary is identical with Saadia, the author of the commentary on Daniel.

In his commentary Saadia displayed a profound knowledge of both Talmudim and of the Targum, which latter he often quotes and explains. He was acquainted with the works of earlier commentators, whom he quotes under the general term "poterim" (= "interpreters") or "anshe lebab" (= "men of understanding"); only once (commentary on Dan. vi. 15) he quotes by name a Mattithiah Gaon. He very often bases his interpretations on the interchange of letters of the same class, as the "alef" and "'ayin," "lamed" and "resh"; also on the interchange of letters which occur near each other in various alphabetical combinations, as, for instance, the "alef" and "taw" in the combination את בש, or the "alef" and "lamed" in the combination אל בם. As is the Talmudic method of interpretation, Saadia often explains foreign nouns as well as Hebrew proper names by resolving them into the syllables of which they are constructed. It may be seen from his commentary on Dan. vi. 19 and Ezra i. 9 that Saadia knew Arabic well: possibly it was his mother tongue.

As to the time in which he lived, both Rapoport and Matthews suppose that he flourished in the beginning of the twelfth century. The former further supposes that he lived in France, that he was a contemporary of Yaḳar, and that Ibn Ezra may have known his commentary. On the other hand, Porges (in "Monatsschrift," xxxiv. 63–73) concludes that he lived at the end of the twelfth century, this conclusion being based on the fact that Saadia, in his commentary on Dan. viii. 9 *et seq.*, refers to the conquest of Jerusalem by the Mohammedans in which the Christian churches were destroyed. Porges thinks this is a reference to the conquest of Jerusalem by Saladin in 1187. Further, in the commentary on

Dan. xi. 30 Saadia refers to the fact that the Lombardians united afterward with the Romans to wrench Jerusalem from the Moslems. Although Saadia knew Arabic, Porges thinks he at least resided in Italy, as he mentions very often the Lombardians and Romans, and speaks of the book "Zerubbabel," which was written in Italy. Besides, almost all the manuscripts of Saadia's commentary on Daniel, Ezra, and Nehemiah were copied in Italy. It may be added that in Joseph Ḳara's commentary on Lam. iv. 6 there is a note by Moses of Rome: "Such is the interpretation of R. Saadia." Poznanski (in "Ha-Goren," ii. 120 *et seq.*), however, declares Porges' arguments doubtful; for the conquest of Jerusalem by the Moslems spoken of by Saadia may be that achieved by Omar in 638, and by "the Romans" Saadia may have understood the Byzantine empire. Nor is it likely, Poznanski thinks, that Saadia, who spoke Arabic and who knew the Karaite literature, lived in Italy. He thinks that Saadia lived in northern Africa, where even in the time of the Geonim works of various contents as well as commentaries on the Bible had been written.

SAADIA BEN ABRAHAM LONGO. See LONGO, SAADIA BEN ABRAHAM.

SAADIA (SA'ID) B. DAVID AL-ADENI (= "of Aden"): A man of culture living at Damascus and Safed between 1473 and 1485. He was the author of a commentary on some parts of Maimonides' Yad ha-Ḥazaḳah, and copied the commentary of an Arabian writer on the first philosophical sections of that work. He also edited an Arabic commentary on the Pentateuch, of which only fragments are now extant, and composed philosophical hymns in Arabic and Hebrew. In 1451 he copied at Aden the dictionary of Tanḥuma. Saadia b. David circulated under his own name and under the title "Zakat al-Nufus" a work of the Arabian writer Ghazali on the views of the philosophers. An autograph of this spurious work is extant in a defective manuscript in the St. Petersburg Library.

Another **Saadia b. David,** surnamed **Zarafah,** a Mauritanian, was the author of a responsum in the manuscript "Zera 'Anashim," and of a poem, printed in 1623, on Solomon Duran's "Ḥesheḳ Shelomoh."

J. M. K.

SAADIA B. JOSEPH (Sa'id al-Fayyumi): Gaon of Sura and the founder of scientific activity in Judaism; born in Dilaẓ, Upper Egypt, 892; died at Sura 942. The name "Saadia," which, so far as is known, he was the first to bear, is apparently an artificial Hebrew equivalent of his Arabic name, "Sa'id." In an acrostic of the Hebrew introduction to his first work, the "Agron," he calls himself סעיד בן יוסף; but later he wrote his name סעדיה, or in its fuller and punctuated form סַעֲדְיָהוּ, as in the "Sefer ha-Galui," while the form סעדאל is given by Moses ibn Ezra. Saadia's enemies spread malicious stories, which probably had no basis in fact, regarding his origin; and both Ben Meïr and the pamphlets referring to the controversy of Saadia with the exilarch allude to the low calling followed by his father, and speak of his parent as a non-Jew. On the other hand, Saadia in his polemic "Sefer ha-Galui" lays stress upon his ancient Jewish lineage, claiming that he belonged to the noble family of Shelah, the son of Judah (I Chron. iv. 21), and counting among his ancestors Ḥanina b. Dosa, the famous ascetic of the first century. Expression was given to this claim by Saadia in calling his son Dosa. Nothing is known, however, of the latter except his name. Regarding Joseph, Saadia's father, a statement of Ben Meïr has been preserved to the effect that he was compelled to leave Egypt and that he died in Joppa, probably during Saadia's lengthy residence in the Holy Land. The usual epithet of "Al-Fayyumi," represented in Hebrew by the similar geographical name "Pitomi" (comp. Ex. i. 11), refers to Saadia's native place, the Fayum in Upper Egypt; and it is known, through his opponents mentioned above, that he was born at Dilaẓ (דילץ), a village there.

Early Works.

Nothing whatever is known of the youth and education of Saadia; nor are his teachers named, except that Mas'udi, a Mohammedan author who died in 957, states that Saadia was a pupil of Abu Kathir, with whom Mas'udi himself carried on a disputation in Palestine. At all events he must have acquired very extensive knowledge in early life, as is shown by his writings. It was in his twentieth year (913) that Saadia completed his first great work, the Hebrew dictionary which he entitled "Agron." In his twenty-third year, according to a verse contained in Abraham ibn Ezra's "Yesod Mispar," he composed a polemical work against Anan, thus apparently beginning the activity which was to prove so important in opposition to Karaism and other heresies and in defense of traditional Judaism. In the same year he left Egypt and went to settle permanently in Palestine, as he states in a Hebrew letter (Schechter, "Saadyana," vii.) addressed at the beginning of his controversy with Ben Meïr to three of his pupils who had remained in Egypt. It was this discussion—a remarkable dispute between the authorities of Palestine and Babylonia concerning the calendar—which first revealed to public notice the full force of the energy which characterized Saadia's nature and the full depth of his knowledge, although he must even before this time have become generally known and been highly esteemed, not only on account of these qualities, but also on account of his literary activity. He was in Aleppo and on his way from the East when he learned of Ben Meïr's regulation of the calendar, which was imperiling the unity of Judaism. Thereupon he immediately addressed a warning to him, and in Babylon he placed his knowledge and pen at the disposal of the exilarch David b. Zakkai and of the scholars of the academy, adding his own letters to those sent by them to the communities of the Diaspora (922). In Babylonia, furthermore, he wrote his "Sefer ha-

Mo'adim," or "Book of Festivals," in which he refuted the assertions of Ben Meïr regarding the calendar, and probably helped much to avert from the Jewish community the perils of schism.

Dispute with Ben Meïr.

This activity of Saadia's was likewise doubtless an important factor in the call to Sura which he received in 928. He was made gaon by the exilarch David b. Zakkai; and the ancient academy, which had been founded by Rab, then entered upon a new period of brilliancy. This first gaon called from abroad, however, was not allowed undisturbed activity. There were doubtless many who viewed unwillingly a foreigner as the head of the academy; and even the mighty exilarch himself, whom the aged Nissim Naharwani had vainly attempted to dissuade from appointing Saadia, found, after two brief years, that the personality of his appointee was far different from that of the insignificant and servile geonim whom he had succeeded, and who had officiated at the exilarch's bidding. In a probate case Saadia refused to sign a verdict of the exilarch which he thought unjust, although Kohen Ẓedeḳ, gaon of Pumbedita, had subscribed to it. When the son of the exilarch threatened Saadia with violence to secure his compliance, and was roughly handled by Saadia's servant, open war broke out between the exilarch and the gaon. Each excommunicated the other, declaring that he deposed his opponent from office; and David b. Zakkai appointed the utterly unimportant Joseph b. Jacob as gaon of Sura, while Saadia conferred the exilarchate on David's brother Ḥasan (Josiah; 930). Ḥasan was forced to flee, and died in exile in Khorasan; but the strife which divided Babylonian Judaism continued. Saadia was attacked by the exilarch and by his chief adherent, the young but learned Aaron ibn Sargado, in Hebrew pamphlets, fragments of which show a degree of hatred on the part of the exilarch and his partizans that did not shrink from scandal. Saadia did not fail to reply.

The "Sefer ha-Galui."

He wrote both in Hebrew and in Arabic a work, now known only from a few fragments, entitled "Sefer ha-Galui" (Arabic title, "Kitab al-Ṭarid"), in which he emphasized with great but justifiable pride the services which he had rendered, especially in his opposition to heresy (see also Abraham ibn Daud in Neubauer, "M. J. C." i. 166).

The seven years which Saadia spent in Bagdad, far from the gaonate, did not interrupt his literary activity. His principal philosophical work was completed in 933; and four years later, through Ibn Sargado's father-in-law, Bishr (בשר, Neubauer, *l.c.* ii. 84, line 2; not כשר, which Grätz transliterates as "Kasser," and Steinschneider, "Die Arabische Litteratur der Juden," p. 47, by "Kasher") ben Aaron, the two enemies were reconciled. Saadia was reinstated in his office; but he held it for only five years. David b. Zakkai died before him (*c.* 940), being followed a few months later by the exilarch's son Judah, while David's young grandson was nobly protected by Saadia as by a father. According to a statement made by Abraham ibn Daud and doubtless derived from Saadia's son Dosa, Saadia himself died, as noted above, in 942, at the age of fifty, of "black gall" (melancholia), repeated illnesses having undermined his health.

After Philo, Saadia was the first great writer in post-Biblical Judaism. Like Philo, he called Egypt his fatherland; and as Philo had united the Hellenic language and culture with the Jewish spirit, so the language and civilization of the Mohammedan Arabs gained a similar but far more lasting influence over the history of Judaism through the writings of Saadia. He was, moreover, almost entirely a creator and an innovator in the scientific fields in which he labored, although much of his work, even that which was written in Hebrew, is now known only from citations.

His Works.

A complete edition of those of his writings which have been preserved either in their entirety or in fragments was begun by Joseph Derenbourg in 1892 in honor of the millenary of Saadia's birth. Of this work, which is expected to fill ten volumes, only five have thus far appeared (1893-99).

The following is a survey of Saadia's works arranged according to subject-matter:

Exegesis: Saadia translated into Arabic most, if not all, of the Bible, adding an Arabic commentary, although there is no citation from the books of Chronicles. The translation of the Pentateuch is contained in the Polyglot Bibles of Constantinople (1546), Paris (1645), and London (1657), and in an edition for the Jews of Yemen (תאג or כתר תורה, Jerusalem, 1894-1901), as well as in the first volume of Derenbourg's edition of Saadia's complete works. A large fragment of the commentary on Exodus exists also in manuscript (see Berliner's "Magazin," vii. 133). The translation of Isaiah was edited by Paulus (1790-91), and with portions of the commentary, by Derenbourg in his third volume. A translation of and commentary on the Psalms have been edited in the dissertation of Margulies (Breslau, 1884), and by others; selections were published by Ewald in his "Beiträge zur Aeltesten Auslegung und Spracherklärung des Alten Testaments" (i., Stuttgart, 1844); and the introduction was translated into German by J. Cohn (Berliner's "Magazin," viii. 1-19, 61-91). A translation of Proverbs, together with a commentary and an introduction thereto, was edited by Derenbourg; and extracts have been published by Bondi (1888), a detailed characterization being given by Heller ("R. E. J." xxxvii.). Cohn likewise edited the translation of and commentary on Job, a complete edition of which was published by Bacher (in Derenbourg, "Œuvres Complètes," v.); and extracts were published by Ewald (*l.c.*). The translations of the Five Megillot found in various manuscripts, and ascribed therein to Saadia, are not genuine, though they are probably based on his translation, the version of Esther contained in them and printed in a siddur of Yemen (Vienna, 1896) being, at all events, very close to Saadia's rendering (see Poznanski in "Monatsschrift," xlvi. 364). His translation of and a portion of his commentary on Daniel are preserved in manuscript; but the Hebrew commentary on Daniel which bears Saadia's name in the rabbinical Bible was written by another Saadia, who lived in the twelfth century (see Porges, *ib.* xxxiv. 63-73); and the same statement holds true with regard to the commentary on Ezra edited under Saadia's name by Mathews (1882; see "Ha-Goren," ii. 72 *et seq.*). Here likewise may be mentioned the Arabic midrash on the Decalogue ascribed to Saadia and frequently reprinted (see Steinschneider, *l.c.* p. 285; *idem*, "Hebr. Bibl." vii. 114; "J. Q. R." xii. 484). For the commentary on Canticles of which a Hebrew translation was edited at Constantinople (*c.* 1577) and which was attributed to Saadia see Ewald and Dukes, "Beiträge," ii. 104–109; and for a similar commentary on Ecclesiastes (Hasiatyn, 1903) see Bacher in "Hebr. Bibl." ix. (1905).

Hebrew Linguistics: (1) "Agron," so far as is known, Saadia's first production. It is a double dictionary, the two parts being arranged according to the alphabetic order of initials and of final letters respectively, and was intended to be used in versification, in which acrostics and rime were the chief requisites. In a later edition Saadia added the Arabic translation of each word, and also included passages concerning various "memorable subjects of the poets," naming the work in its new form "Kitab al-Shi‘r." The Arabic introduction to the second edition and the Hebrew preface of the first have been in great part preserved (see Harkavy, "Studien," v. 39–59). (2) "Kutub al-Lughah," twelve "Books on Language," which are also designated as the twelve parts of a work entitled "The Book on Language," in which, as the author himself states in his "Sefer ha-Galui," he sought to explain the "i‘rab," or the grammatical formation of the Hebrew language. Of this Hebrew grammar, which is the oldest one known, fragments of greater or less extent have been preserved, especially in Saadia's commentary on the "Sefer Yeẓirah" and by Dunash ben Labraṭ. (3) "Tafsir al-Sab‘ina Lafẓah," a list of seventy (properly ninety) Hebrew (and Aramaic) words which occur in the Bible only once or very rarely, and which may be explained from traditional literature, especially from the Neo-Hebraisms of the Mishnah. This small work has been frequently reprinted.

Halakic Writings: (1) Short monographs, in which individual problems of the Halakah are systematically presented. Of these Arabic treatises of Saadia's little but the titles and extracts is known (see Steinschneider, *l.c.* pp. 48 *et seq.*; Poznanski, "Orientalistische Literaturzeitung," 1904, col. 306), and it is only in the "Kitab al-Mawarith" that fragments of any length have survived; these were edited by Müller in the "Œuvres Complètes," ix. 1–53. A book of rules for the sheḥiṭah is extant in manuscript (*ib.* p. xxxvii.). (2) A commentary on the thirteen rules of Rabbi Ishmael, preserved only in a Hebrew translation (*ib.* pp. 73–83). An Arabic methodology of the Talmud is also mentioned, by Azulai, as a work of Saadia under the title "Kelale ha-Talmud" ("Shem ha-Gedolim," ii. 16). (3) Responsa. With few exceptions these exist only in Hebrew, some of them having been probably written in that language. About fifty have been collected from the mass of geonic responsa by J. Müller (*l.c.* ix. 87–142), who has also compiled numerous citations from Saadia which bear on the Halakah (*ib.* pp. 145–173). On the "Book of Feasts" see below. Saadia's interpretation, or more correctly translation, of the Mishnah into Arabic was used in the twelfth century in Bagdad, according to the traveler Pethahiah of Regensburg; but no further data are known concerning it.

Liturgy: (1) The "Siddur." Saadia's prayer-book, hitherto known in detail only from the analysis of Steinschneider ("Cat. Bodl." cols. 2203–2211, supplemented by Neubauer in "Ben Chananja," 1863–65), is called by its author ("Cat. Bodl." col. 1096) "Kitab Jawami‘ al-Ṣalawat wal-Tasabiḥ," or "Book of Collections of Prayers and Songs of Praise." It contains the entire ritual for week-days, Sabbaths, and festivals, with explanations in Arabic and Saadia's own synagogal poetry (comp. Bondi, "Der Siddur Saadia's," Frankfort-on-the-Main, 1904). (2) Of this synagogal poetry (comp. Steinschneider, *l.c.* cols. 2211–2217; Zunz, "S. P." pp. 93–98, 668; Schechter, *l.c.* xvii.–xxv.) the most noteworthy portions are the "Azharot" on the 613 commandments, which give the author's name as "Sa‘id b. Joseph" (see above), followed by the expression "Alluf," thus showing that the poems were written before he became gaon. They have been collected by Rosenberg ("Kobeẓ," pp. 26, 54, Berlin, 1876; see also "Œuvres Complètes," ix. 59–69; "J. Q. R." vi. 704; Schechter, *l.c.* xv.); and there are in addition the "‘Abodah" (Rosenberg, *l.c.* pp. 10–17), and the "Hosha‘not" (designated in Saadia's "Siddur" as the "Alfabatat"), a portion of the prayer-book of Yemen (see "J. Q. R." xiv. 592), edited by Kohut (in "Monatsschrift," xxxvii.). (3) In connection with Saadia's liturgical poetry may be mentioned his poem on the number of the letters in the Bible (see Derenbourg, "Manuel du Lecteur," pp. 139, 235), which has been incorrectly claimed for another author (see Steinschneider, "Hebr. Bibl." vii. 143, note 2).

Philosophy of Religion: (1) The "Kitab al-Amanat wal-I‘tiḳadat," or "Book of the Articles of Faith and Doctrines of Dogma," the first systematic presentation and philosophic foundation of the dogmas of Judaism, completed in 933. This work is better known under its Hebrew title, "Sefer Emunot we-De‘ot," as translated by Judah ibn Tibbon, his version having been first printed in Constantinople in 1562 and frequently republished, while the original was edited by S. Landauer (Leyden, 1880). Another translation, or rather paraphrase, of the "Kitab al-Amanat," of uncertain authorship, is contained in several manuscripts; large portions of this rendering were edited by Gollancz ("The Ethical Treatises of Berachyah," London, 1902; comp. "Monatsschrift," xlvi. 536). Of the ten sections or "maḳalat" of the work, the seventh, treating of the resurrection, is contained in two versions, the first of which, the basis of the translation of Ibn Tibbon, has been edited by Bacher in the "Steinschneider Festschrift," pp. 98–112, and the second by Landauer.

The "Emunot we-De‘ot."

(2) "Tafsir Kitab al-Mabadi," an Arabic translation of and commentary on the "Sefer Yeẓirah," written while its author was still residing in Egypt (or Palestine). The Arabic original was edited with a French translation by Lambert (Paris, 1891). A Hebrew translation exists in manuscript; but the

Hebrew commentary on the "Sefer Yeẓirah" printed under Saadia's name in 1562 is incorrectly ascribed to him.

Polemical Writings: (1-3) Refutations of Karaite authors, always designated by the name "Kitab al-Rudd," or "Book of Refutation." These are directed respectively against Anan, the founder of Karaism (written in 915); against Ibn Saḳawaih or Saḳuyah, an author of whom nothing more is known; and "against a bitter assailant" ("'ala mutaḥamil ḥayyum") who had criticized the anthropomorphism of the Talmudic Haggadah. These three works are known only from scanty references to them in other works; that the third was written after 933, is proved by one of the citations. (4) "Kitab al-Tamyiz" (in Hebrew, "Sefer ha-Hakkarah" or "Sefer ha-Mibḥan"), or "Book of Distinction," composed in 926, and Saadia's most extensive polemical work. It was still cited in the twelfth century; and a number of passages from it are given in a Biblical commentary of Japheth ha-Levi ("J. Q. R." x. 245-252, xiii. 656 *et seq.*). (5) There was perhaps a special polemic of Saadia against Ben Zuṭa, though the data regarding this controversy between that Karaite scholar (who is otherwise unknown) and Saadia, which is mentioned in Ibn Ezra's commentary on the Pentateuch (comp. Jew. Encyc. v. 105), are known only from the gaon's gloss on the Torah. (6) A refutation directed against the rationalistic Biblical critic Ḥiwi al-Balkhi, whose views were rejected by the Karaites themselves; mentioned by Saadia in the first section, p. 37, of his "Kitab al-Amanat wal-I'tiḳadat." This work was written probably in Hebrew; the third section of the "Kitab al-Amanat wal-I'tiḳadat" doubtless contained the refutation which Saadia directed against Ḥiwi (comp. Jew. Encyc. vi. 429b). (7) "Kitab al-Shara'i'," or "Book of the Commandments of Religion," probably also polemical in content (see Steinschneider, "Die Arabische Litteratur der Juden," pp. 50 *et seq.*). (8) "Kitab al-'Ibbur," or "Book of the Calendar," likewise apparently containing polemics against Karaite Jews (see Posnanski in "J. Q. R." x. 260). (9) "Sefer ha-Mo'adim," or "Book of Festivals," the Hebrew polemic against Ben Meïr which has been mentioned above. It has, as the author himself states, the external appearance of the Biblical text, being divided into verses and pointed for vocalization and accent. Several large fragments of it have been found in recent times (Schechter, *l.c.* ii., iii., xlvii.; Harkavy, "Studien," v. 220; "R. E. J." xli. 225). (10) "Sefer ha-Galui," also in Hebrew and in the same Biblical style as the "Sefer ha-Mo'adim," being an apologetic work directed against David b. Zakkai and his followers. The author himself added an Arabic translation, commentary, and preface to his work. The introduction has been preserved in great part, and contains information regarding the work itself, of which only a few fragments are now extant (Schechter, *l.c.* i.; Harkavy, *l.c.* p. 186; "R. E. J." xl. 88). The book consisted of seven sections, in the fourth of which Saadia spoke of his providential position as the leader of Israel, while in the sixth and seventh he described the opposition which he had to encounter, and enumerated those who had been victorious over him. The second section contained a chronology (Arabic, "ta'rikh") of the Biblical and Talmudic periods; this is plausibly identified with the "Kitab al-Ta'rikh" from which Judah ibn Balaam, in his commentary on I Kings vi. 1, cites a chronological statement regarding the date of the Judges (Neubauer, "M. J. C." ii. 85; see also "R. E. J." xlix. 298). (11) Dunash ben Labraṭ cites a sentence of three Hebrew words in which Saadia polemizes against the famous Masorite Aaron ben Asher, although it is not certain that this was from a special work in which Saadia assailed his contemporary, whom he probably knew personally.

If the fulness and versatility of Saadia's literary labor, which represents the activity of thirty years, many of which were full of unrest, are astonishing, they are still more astonishing when one recalls that he was a pioneer in the fields in which he toiled, being, to employ a tannaitic phrase used by Abraham ibn Ezra, "the first head of words in every place" ("rosh ha-medabberim be-kol maḳom"). The foremost object of his unwearied mental activity was the Bible; indeed, his importance in history is due primarily to his establishment of a new school of Biblical exegesis characterized by a rational investigation of the contents of the Bible and a scientific knowledge of the language of the holy text. The services of Saadia as a representative of the "peshaṭ" and as the creator of Hebrew philology have been emphasized elsewhere (see Jew. Encyc. iii. 166, *s.v.* Bible Exegesis; *ib.* iv. 579, *s.v.* Dictionaries; *ib.* vi. 69, *s.v.* Grammar). Here, therefore, only a general summary of his exegetical and philological activities is necessary.

Characteristics.

Saadia's Arabic translation of the Bible is of importance for the history of civilization; itself a product of the Arabization of a large portion of Judaism, it served for centuries as a potent factor in the impregnation of the Jewish spirit with Arabic culture, so that, in this respect, it may take its place beside the Greek Bible-translation of antiquity and the German translation of the Pentateuch by Moses Mendelssohn. As a means of popular religious enlightenment, Saadia's translation presented the Scriptures even to the unlearned in a rational form which aimed at the greatest possible degree of clearness and consistency. His system of hermeneutics, furthermore, was not limited to the exegesis of individual passages, but treated also each book of the Bible as a whole, and showed the connection of its various portions with one another. As specimens may be cited the introduction to his translation of the Pentateuch and his prefaces to the Psalms, to Proverbs (which he called "The Book of the Search after Wisdom"), and to Job (which he termed the "Book of the Theodicy"), as well as his concluding remarks on the Psalms and on the speeches of Job and his friends. The minuteness which, in the judgment of Ibn Ezra, characterized the geonic commentaries on the Bible must have been especially marked in Saadia's Pentateuch commentary, to which, according to a citation by Judah ben Barzillai, a whole volume served as introduction. The commentary contained, as is stated in the author's own introduction to his translation of the Pentateuch, not only an exact interpretation of the text, but also a refutation of the cavils which the heretics raised against it. Further, it set forth the bases of the commandments of reason and the characterization of the commandments of revelation; in the case of the former the author appealed to philosophical speculation; of the latter, naturally, to tradition. His exegetic application of the most diverse passages of Holy Writ is conspicuously shown in that portion of his commentary which treats of Ex. xxx. 11–16, and which has been translated by Bacher in Winter and Wünsche's "Jüdische Litteratur" (ii. 251). It must be noted, however, that in many of his commentaries, as on the Psalms and Job, Saadia restricted himself to a very limited number of indispensable elucidations, since in general the translation itself properly served as a commentary, so that it was called "Tafsir."

The position assigned to Saadia in the oldest list of Hebrew grammarians, which is contained in the introduction to Ibn Ezra's "Moznayim," has not been challenged even by the latest historical investigations. Here, too, he was the first; his grammatical work, now lost, gave an inspiration to further studies, which attained their most brilliant and lasting results in Spain, and he created in part the categories and rules along whose lines was developed the grammatical study of the Hebrew language. His dictionary, primitive and merely practical as it was, became the foundation of Hebrew lexicography; and the name "Agron" (literally, "collection"), which he chose and doubtless created, was long used as a designation for Hebrew lexicons, especially by the Karaites. The very categories of rhetoric, as they were found among the Arabs, were first applied by Saadia to the style of the Bible. He was likewise one of the founders of comparative philology, not only through his brief "Book of Seventy Words," already mentioned, but especially through his explanation of the Hebrew vocabulary by the Arabic, particularly in the case of the favorite translation of Biblical words by Arabic terms having the same sound.

Hebrew Style.

The influence of the spirit and language of the Bible on Saadia is shown by his Hebrew writings. In his introduction to the "Agron" and in his polemics against Ben Meïr and David b. Zakkai he employs the method of presentation found in Biblical narrative, as well as the external form of division into verses. His models for this imitation of Biblical form were, as he himself says, the Book of Ben Sira, which he had in the Hebrew original, and the Aramaic scroll of Antiochus. Even in his choice of words Saadia endeavored to attain to Biblical simplicity and purity of vocabulary; but the stylistic artificiality, especially in the formation of words, which long since had been set up as a divergent ideal for the Hebraists of Saadia's time through the influence of the synagogal poetry of Jose, Yannai, and Ḳalir, impressed itself upon him, so that his Hebrew writings form a curious mixture of Biblical simplicity and payyeṭanic affectation. The same statement holds good of his liturgical poetry, of which Zunz ("S. P." p. 93) says that "he employs in his religious poems both the most lucid style and the most obscure; being in the one a worshiper, in the other a payyeṭan." Saadia himself declares, in his introduction to the "Sefer ha-Galui," that he intended to make his style the model for that of a school. To the seven chapters of polemics in this work he planned to add three of a general nature and referring to the entire book; he declares his intention, which he then proceeds to carry out, of analyzing, in these to a certain extent "latent" chapters, the three stylistic merits of his book, correctness of language, unity of composition, and logical sequence of thought. The first of these, a thorough mastery of Hebrew, was extremely important for the nation, since the predominant use of Arabic and Aramaic had caused the people to forget its use. It is true that the renaissance of Hebrew as a literary language approaching as much as possible to the language of the Bible first attained full potency in Spain a century after Saadia; but this most noteworthy sign of progress in the spiritual life of medieval Judaism owes its first great inspiration to the powerful example of the gaon. The important innovation of the use of Arabic meters in Hebrew poetry was due to Saadia in the sense that it was introduced by his pupil Dunash ben Labraṭ, who showed his metrical compositions to his teacher and received praise for them, although Saadia himself did not adopt this new form of verse.

His Responsa.

Of the halakic writings of Saadia only one has been preserved in any degree of entirety; but this is sufficient to show that even here he blazed a new path by arranging his material systematically and by presenting his subject methodically. Herein Saadia was the first precursor of Maimonides, whose masterpiece was his systematic presentation of the entire Halakah. In his division of the commandments of the Bible according to their subject-matter, Saadia likewise anticipated Maimonides, although in the other division (introduced as early as Philo), that according to the fundamental commandments of the Decalogue, he apparently followed Karaite models. In regard to Saadia's responsa and the specimens of his halakic decisions and interpretations which have been preserved, Müller, their collector, says: "As in his other writings, Saadia is fond of stating the number of possibilities which may arise in connection with a given subject. He draws his proof first from the Bible, then from the Talmud, and finally from reason; his arguments are always cogent; and his conclusions proceed from sound judgment and sober spirit. . . . He often concludes his responsa with words of warning and with quotations from the Bible."

In his "Kitab al-Amanat wal-I‘tiḳadat" (see above) Saadia became the creator of the Jewish philosophy of religion. His detailed introduction to the work speaks of the reasons which led him to compose it. His heart was grieved when he saw the confusion concerning matters of religion which prevailed among his contemporaries, finding an unintelligent belief and unenlightened views current among those who professed Judaism, while those who denied the faith triumphantly vaunted their errors. Men were sunken in the sea of doubt and overwhelmed by the waves of spiritual error, and

His Philosophy of Religion.

there was none to help them; so that Saadia felt himself called and in duty bound to save them from their peril by strengthening the faithful in their belief and by removing the fears of those who were in doubt. After a general presentation of the causes of infidelity and the essence of belief, Saadia describes the three natural sources of knowledge; namely, the perceptions of the senses, the light of reason, and logical necessity, as well as the fourth source of knowledge possessed by those that fear God, the "veritable revelation" contained in the Scriptures. He shows that a belief in the teachings of revelation does not exclude an independent search for knowledge, but that speculation on religious subjects rather endeavors to prove the truth of the teachings received from the Prophets and to refute attacks upon revealed doctrine, which must be raised by philosophic investigation to the plane of actual knowledge.

In the scheme of his work Saadia closely followed the rules of the Motazilites (the rationalistic dogmatists of Islam, to whom he owed in part also his thesis and arguments), adhering most frequently, as Guttmann has shown, to the Motazilite school of Al-Jubbai. He followed the Motazilite Kalam, especially in this respect, that in the first two sections he discussed the metaphysical problems of the creation of the world (i.) and the unity of the Creator (ii.), while in the following sections he treated of the Jewish theory of revelation (iii.) and of the doctrines of belief based upon divine justice, including obedience and disobedience (iv.), as well as merit and demerit (v.). Closely connected with these sections are those which treat of the soul and of death (vi.), and of the resurrection of the dead (vii.), which, according to the author, forms part of the theory of the Messianic redemption (viii.). The work concludes with a section on the rewards and punishments of the future life (ix.). The tenth section, on the best mode of life for mankind in this world, must be regarded as an appendix, since its admonitions to moral conduct supplement the exhortations to right thought and right belief contained in the main body of the book.

The most important points contained in the individual sections are as follows:

Special Views.

(i.) For the doctrine of the creation of the world Saadia offers four proofs; three of these show the influence of Aristotelian philosophy, which may be traced also elsewhere in this author's writings. After his speculation has led him to the conclusion that the world was created ex nihilo, he proceeds to state and refute the twelve theories of the origin of the world. This part of the first section gives a most interesting insight into Saadia's knowledge of the Greek philosophers, which he probably derived from reading Aristotle. At the end of the section Saadia refutes certain objections to the Jewish doctrine of Creation, especially those which proceed from the concepts of time and space.

(ii.) The theory of God is prefaced by a development of the view that human knowledge arises by degrees from the merest sensuous impressions to the most subtle concepts; so that the idea of the divine, which transcends all other knowledge in subtlety, is itself a proof of its verity. The concept of God as a creator necessarily implies the attributes of life, power, and knowledge. In like manner the concept of the Creator demonstrates the unity of God. For this view three direct and three indirect proofs are offered by Saadia, the latter consisting in demonstrating that dualism is absurd. The thesis of the absolute unity of God is established by a refutation of the Christian doctrine of the Trinity, which arises, in Saadia's opinion, from a misinterpretation of the three attributes of God already named—life, power, and knowledge. Connected with the refutation of the dogma of the Trinity is an outline of the various theories respecting the person of Jesus which reveals an accurate knowledge of Christian controversies. To render possible an understanding of the monotheistic concept of God in all its purity, and to free the statements of the Scriptures from their apparent contradictions of the spirituality of the absolute idea of God, Saadia interprets all the difficulties of the Bible which bear upon this problem, using the scheme of the ten Aristotelian categories, none of which, he shows, may be applied to God. At the conclusion of this section the author pictures with deep religious feeling the relation to the Deity sustained by the human soul when permeated by the true knowledge of God.

(iii.) The divine commandments revealed in the Holy Scriptures have been given to man by the grace of God as a means to attain the highest blessedness. According to a classification borrowed by Saadia from the Motazilites but based upon an essentially Jewish view, the commandments are divided into those of reason and of revelation, although even the latter may be explained rationally, as is shown by numerous examples. An excursus, in which Saadia attacks the view of the Hindu sect of the "Barahima" (Brahmans) to the effect that man needs no prophets, introduces his account of prophecy and his apology for the Prophets. This is followed by theses on the essential content of the Bible and the credibility of Biblical tradition, by a detailed refutation of the Christian and Mohammedan view that the Law revealed in Israel has been abrogated, and by a polemic against a series of Ḥiwi's objections to the authority of the Scriptures.

(iv.) The foundation of this section is the theory of the freedom of the will and its reconciliation with the omnipotence and omniscience of God. In its opening portion Saadia postulates the anthropocentric doctrine which regards man as the object of all creation; and at its close he explains under eight headings those passages of the Bible which might cause doubt regarding the freedom of the acts of man.

Contents of the "Emunot."

(v.) Men fall into ten classes with regard to merit and demerit, and their religious and moral bearings. In his description of the first two, the pious and the impious, Saadia devotes himself in the main to the problem of the sufferings of the pious and the good fortune of the impious, while the description of the last class, that of the contrite, leads him to detailed considerations, based upon the

Bible, of repentance, prayer, and other evidences of human piety.

(vi.) His view on the soul is prefaced by a survey of six other theories. He states the relation of the soul to the body, the basis of their union, their coöperation in human activity, their coexistence or the appointed term of life, their separation or death, and the state of the soul after death. The section concludes with a refutation of the doctrine of metempsychosis.

(vii.) Here Saadia refutes the objections made, on the basis of nature, reason, and the Bible, to the doctrine of the resurrection of the dead, and presents the proof for it contained in tradition. He then discusses ten questions bearing on this doctrine, which are of interest as "affording an insight into popular views which then prevailed, and which, despite their singularity, could not be ignored even by such a man as Saadia" (Guttmann).

(viii.) The teachings regarding Messianic redemption are based almost entirely on statements of the Bible and the Talmud, the definite year of salvation being fixed by an interpretation of well-known passages in the Book of Daniel. In the concluding portion the author refutes those who assume that the Messianic prophecies refer to the time of the Second Temple; and he argues also against the Christian doctrine of the Messiah.

(ix.) Saadia demonstrates that the recompenses of the world to come are proved by reason, the Bible, and tradition, and answers various questions bearing upon this subject.

(x.) The system of ethics contained in the appendix is based for the most part on a description and criticism of thirteen different objects of life, to which Saadia adds his own counsels for rational and moral living. He adds also that in the case of each of the five senses only the concordant union of sensuous impressions is beneficial, thus showing how great is the need of a harmonious combination of the qualities and the impulses of the soul of man. He concludes with the statement that he intends his book only to purify and ennoble the hearts of his readers.

Relations to Mysticism.

In his commentary on the "Sefer Yeẓirah" Saadia sought to render lucid and intelligible the content of this mystical work by the light of philosophy and other knowledge, especially by a system of Hebrew phonology which he himself had founded. He did not permit himself in this commentary to be influenced by the theological speculations of the Kalam, which are so important in his main works; and in his presentation of the theory of creation he made a distinction between the Bible and the book on which he commented, even omitting the theory of the "Sefer Yeẓirah" regarding the creation of the world when he discussed the various views on this subject in the first section of his "Kitab al-Amanat wal-I'tiḳadat." From this it may be concluded that he did not regard the "Sefer Yeẓirah"—which he traces ultimately to the patriarch Abraham—as a real source for a knowledge of the theory of Judaism, although he evidently considered the work worthy of deep study.

Relations to Karaism.

Of all Saadia's works his polemical writings, especially those against the Karaites, exercised the greatest immediate influence. As he himself declared, Karaism had within a century and a half become deeply rooted, while rabbinical Judaism, whose official heads, the academies of Babylonia, had begun to lose their importance, was in peril of being overwhelmed by the propaganda of the Karaites and even of suffering losses of increasing magnitude in its material welfare through the extension of Karaite doctrines. It was Saadia who, equipped with comprehensive knowledge, a thorough secular training, and an extraordinary literary activity, waged the battle against the foes of Jewish tradition, and not only averted the perils which threatened it, but also, by establishing the scientific study of the Bible and of the Hebrew language, gave rabbinical Judaism the supremacy even in this special province of Karaism. If the Karaites made remarkable contributions on these subjects during the tenth and in the first half of the eleventh century, their inspiration was due to Saadia's influence and to the necessity of defending themselves against his attacks; so that his activity was epochal likewise even for Karaism.

Nor was Saadia without influence outside Jewish circles. Abraham ibn Ezra, writing on Gen. ii. 11, states, probably on good authority, that Saadia planned his translation of the Bible for Mohammedans as well as for Jews, and that he used Arabic script for this reason; and Ibn Ezra accordingly explains the fact that Saadia translated even those expressions whose meaning was not known through tradition, as being due to a desire that the Mohammedan reader might not think the Bible contains words which are unintelligible. Not only does a noted Mohammedan author, Saadia's younger contemporary, Mas'udi, give data of the gaon's life, but another Arabic author of the second half of the tenth century, Mohammed ibn Isḥaḳ al-Nadim, gives, in his "Fihrist al-'Ulum," a list of eleven of Saadia's writings. This list includes, according to the editions, which are sometimes vague and partly corrupt, the translations of Isaiah, the Psalms, Proverbs, and Job, the translation of the Pentateuch, and the commentary on the second half of Leviticus, besides the commentary on the "Sefer Yeẓirah," the "Siddur," the "Kitab ha-'Ibbur," the "Kitab al-Shara'i," and probably his great work on philosophy ("Kitab al-Amanat"; the list has כתב אלאמת̄אל instead of כתב אלאמאנאת; see Hegenkamper, p. 27). It is, however, improbable that that author had seen all the writings of Saadia himself; for he seems to owe his knowledge of them to a Hebrew source or to the oral communication of some Jew. No manuscript of any of Saadia's works written in Arabic script exists. The Florentine codex (dating from 1256), containing a translation of the Pentateuch in Arabic characters (see Kahle, "Die Arabischen Bibelübersetzungen," p. viii., Leipsic, 1904), is not the original work of Saadia, but a revision thereof approaching more closely to the Hebrew text.

SAADIA B. JOSEPH BEKOR SHOR. See Bekor Shor, Saadia.

SAADIA BEN MAIMON IBN DANAN. See Ibn Danan.

SAADIA BEN NAḤMANI: Liturgical poet and perhaps also Biblical commentator; lived in the eleventh and twelfth centuries. He was the author of a piyyuṭ for the first "Ma'arib" of the Feast of Tabernacles, beginning "Sukkat shalem selah," and consisting of ten strophes of six lines each; and Zunz thinks him to have written likewise the piyyuṭ beginning "Elohekem dirshu" and recited on Sabbaths which fall on the first day of the month. Saadia ben Naḥmani is supposed by Ḥayyim Michael to be identical with the Saadia quoted by Rashi as having personally spoken to him ("Liḳḳuṭe ha-Pardes," Hilkot "Tish'ah be-Ab").

The supposition that Saadia was a Biblical commentator is based on the fact that the commentary on Chronicles, generally attributed to Rashi, was discovered not to belong to the latter, as is mentioned in Tos. to Yoma 9a, but to have been arranged by the pupils of a certain R. Saadia. It has also been proved that Saadia's commentary on Chronicles was copied by his pupils in different localities, the several copies, therefore, containing many variants. Ḥayyim Michael holds that the Saadia in question also may be identical with the subject of this article and likewise with the author of the commentary on the "Sefer Yeẓirah," in ascribing which to Saadia Gaon the printers, as was proved by Delmedigo ("Maẓref la-Ḥokmah," p. 9b) and by Jacob Emden ("Miṭpaḥat Sefarim," p. 4b), were in error. This commentary, too, was arranged by Saadia's pupils, who in certain passages altered their master's words.

If the various identifications are correct, it may be concluded, as appears from the many German words found in these commentaries, that Saadia was a native of Germany. The author of the commentary indicates Kalonymus b. Judah as his maternal uncle (commentary on II Chron. iv. 7, 17) and Eleazar b. Meshullam as his teacher (commentary on I Chron. iv. 31, *passim*). He studied at Narbonne also, under Isaac b. Samuel (*ib.* ix. 34, *passim*), which accounts for the French words in his commentary.

SAALSCHÜTZ, JOSEPH LEWIN: German rabbi and archeologist; born March 15, 1801, at Königsberg, East Prussia; died there Aug. 23, 1863. Having received his education at the gymnasium and university of his native city (Ph.D. 1824), he held several positions as rabbi and teacher at the Israelitic communal schools of Berlin and Vienna. Returning in 1835 to Königsberg, he became rabbi there, and in 1847 privat-docent in Hebrew archeology at Königsberg University.

In Hebrew archeology Saalschütz was a pioneer among the Jews. Among his works may be mentioned: "Von der Form der Hebräischen Poesie Nebst einer Abhandlung über die Musik der Hebräer" (Königsberg, 1825), reedited (*ib.* 1853) under the title "Form und Geist der Biblisch-Hebräischen Poesie"; "Geschichte und Würdigung der Musik bei den Hebräern Nebst einem Anhang über die Hebräische Orgel" (Berlin, 1830); "Gotteslehre" (Vienna, 1833), a book on the Jewish religion, formerly used in many schools in Austria and Hungary; "Forschungen im Gebiete der Hebräisch-Aegyptischen Archäologie" (Königsberg, 1838); "Die Versöhnung der Confessionen, oder Judenthum und Christenthum in Ihrem Streit und Einklange" (*ib.* 1844); "Vocabularium zum Hebräischen Gebetbuche," with supplement; "Einleitung in die Hebräische Grammatik" (*ib.* 1844). He also edited a new edition of Johann David Michaelis' "Das Mosaische Recht mit Berücksichtigung des Spätern Jüdischen" (Berlin, 1846–48), in two parts: part i., on public law, is subdivided into six parts; and part ii. into three. Other works by him are: "Das Königthum vom Israelitisch-Biblischen Standpunkte" (1852); "Zur Geschichte der Unsterblichkeitslehre bei den Hebräern" (1853); "Archäologie der Hebräer" (Königsberg, 1855–56), in twelve parts: (1) dress, home, and food; (2) life and industries; (3) religion; (4) art; (5) literature; (6) science; (7) customs; (8) family; (9) city law; (10) the administration of law; (11) priests and superstitions; (12) government (this book still remains the only complete survey of the subject from a Jewish standpoint); "Repetitionsbüchlein der Israelitischen Religion und Sittenlehre"; and "Gebetbuch der Synagoge" (1859).

Saalschütz's son, **Louis,** is assistant professor of mathematics at Königsberg University (1905).

S. F. T. H.

SAALSCHÜTZ, LOUIS: German mathematician; born at Königsberg, Prussia, Dec. 1, 1835; son of Joseph Levin Saalschütz. From 1854 to 1860 he studied mathematics and physics at the university of his native city, graduating as Ph.D. in 1861: his dissertation was "Ueber die Wärmeveränderungen in den Höheren Erdschichten Unter dem Einfluss des Nicht-periodischen Temperaturwechsels an der Oberfläche," and was published in the "Astronomische Nachrichten." From 1861 to 1882 he was teacher of mathematics, mechanics, and engineering at the Royal School of Mechanics, Königsberg. During the same period he lectured at the university; and since 1875 he has been assistant professor. For a number of years he has filled the office of president of the Jewish orphan asylum of Königsberg.

Saalschütz is the author of: "Der Belastete Stab," Leipsic, 1880; "Vorlesungen Ueber die Bernouillischen Zahlen," Berlin, 1893; and of a number of treatises in the technical journals. S.

SABA (סבא): A word derived from the root סיב, "to be white, old"; used in the Talmud with various meanings:

(*a*) It designates an old man or old woman in general, as in the saying "an old man ["saba"] in the house means ruin, but an old woman ["sabeta"] is a treasure; since the former is unfit for work, while the latter helps in the house" ('Ar. 19a).

(*b*) Preceded by the demonstrative ("hai Saba" = "that old man") it was assumed to refer to the prophet Elijah whenever the phrase occurs in either Talmud; but this assumption was rejected by the tosafists (Ḥul. 6a), and even before their time by Hai Gaon in a responsum (ed. Harkavy, "Responsen der Geonim," p. 23).

(*c*) It is used also as an honorific title, so that R. Huna and R. Ḥisda are called "the old men of Sura," and R. Judah and R. 'Ena "the old men of Pumbedita" (Sanh. 17a).

(*d*) It was the name of R. Niḥa's father (Kil. ix. 1; comp. Frankel, "Introductio in Talmud Hierosolymitum," p. 117a.

(*e*) It occurs in the phrase "sabe debe Atuna" = "the wise men of Athens" (Grätz, "Jahresbericht des Breslauer Seminars," 1884, p. 28).

SABBATH (שבת): The seventh day of the week; the day of rest.

——**Biblical Data:** On the completion of His creative work God blessed and hallowed the seventh day as the Sabbath (Gen. ii. 1-3). The Decalogue in Exodus (xx. 8) reverts to this fact as the reason for the commandment to "remember" the Sabbath day to keep it holy. The Sabbath is recognized in the account of the gathering of the manna; a double portion was gathered on the previous day, and the extra supply gathered for consumption on the Sabbath, when no manna descended, did not spoil (xvi. 22-30). The Sabbath is a sign between Yhwh and Israel, an everlasting covenant (xxi. 13). Death or excision (xxxi. 14, 15) was the penalty for its profanation by work. An instance of this is afforded by the case of the man who gathered sticks on the Sabbath and was condemned to die by lapidation (Num. xv. 32-36). Work is prohibited, even during harvest-time (Ex. xxxiv. 21), and is declared to be a profanation of the holy Sabbath; and the kindling of fire in the habitations is especially interdicted (Ex. xxxv. 3).

In the Decalogue as contained in Deuteronomy (v. 12 *et seq.*) the observance of the Sabbath is again enjoined, but as a day of rest for the servants as well as their masters, in commemoration of Israel's redemption from Egyptian bondage. The Sabbath heads the enumeration of the appointed holy seasons (Lev. xxiii. 3). The Showbread was changed every Sabbath (Lev. xxiv. 8). The sacrifice ordained for the Sabbath consisted of two he-lambs of the first year, without blemish, and of two-tenths of an ephah of fine flour for a meal-offering, mingled with oil, and "the drink-offering thereof"; these constituted the burnt offering, and were brought in addition to the continual burnt offering (Num. xxviii. 9, 10). The Sabbath is designated also as "Shabbat Shabbaton," as is the Day of Atonement (Lev. xvi. 31), often with the added qualification of "holy unto Yhwh" (Ex. xvi. 23, xxxi. 1, xxxv. 2); and it is set apart for a holy convocation (Lev. xxiii. 3).

From II Kings xi. 5 it appears that the royal body-guard was changed every Sabbath. The Sabbath and the day of the New Moon were the favorite occasions for consulting the Prophets (II Kings iv. 23).

Non-Observance by Some in Prophetic Times.

That the Sabbath was either improperly observed or sometimes, perhaps, altogether ignored in the time of the Prophets seems to be evidenced by their writings. Amos castigates those that are impatient for the passing of the Sabbath because it interferes with their usurious business (viii. 5). Isaiah is equally emphatic in condemning his contemporaries for their unworthy celebrations (i. 9). Jeremiah exhorts his people to refrain from carrying burdens on the Sabbath (xvii. 21 *et seq.*). Ezekiel describes the laxness of the fathers, for the purpose of impressing upon his auditors the importance of observing the Sabbath, evidently neglected in his day (xx. 12, 16, 20, 21, 24; xxii. 8; xxiii. 38). In his scheme of reconstruction the hallowing of the Sabbath holds a prominent place (xliv. 24, xlvi. 2, 3). According to him the burnt offering for the Sabbath, provided by the prince (xlv. 17), consisted of six lambs and a ram, with an entire ephah of meal-offering and a "hin" of oil to every ephah (xlvi. 4-5).

Isaiah conditions Israel's triumph on the observance of the Sabbath, which may not be set aside for secular pursuits; its observance should be a delight (lviii. 13, 14). In his vision of Jerusalem's exaltation the prophet predicts that from one Sabbath to another all flesh will come to worship before Yhwh (lxvi. 23). The colonists under Nehemiah charged themselves yearly with a third of a shekel to provide, among other things, for the burnt offerings of the Sabbaths (Neh. x. 32). Nevertheless Nehemiah took them to task for profaning the day (xiii. 16, 17), and to prevent them from continuing to turn it into a market-day he ordered the gates to be closed and kept closed until the end of the Sabbath. This measure, after a while, had the desired effect (x. 19 *et seq.*). Ps. xcii. is entitled "A Psalm or Song for the Sabbath Day." As Hosea (i. 11) threatens the cessation of the Sabbath and other feasts as a punishment to disloyal Israel, so does the author of Lamentations (ii. 6) lament that the Sabbath has come to be forgotten in Zion.

——**In Apocrypha and Pseudepigrapha:** Under the stress of the Syrian persecution, faithful compliance with the strictest interpretation of the Sabbath commandment came to be regarded as a sign of loyalty to God, especially since previously the Sabbath had been habitually desecrated (I Macc. i. 30). Many of the refugees in the mountains, thousands in number, preferred to die rather than violate the Sabbath by hurling stones upon their assailants (I Macc. ii. 29 *et seq.*). This made it necessary for Mattathias to issue an imperative order that the Jews, if attacked, should defend themselves (I Macc. ii. 41). Nevertheless, II Macc. xv. 1 *et seq.* relates that Nicanor planned the destruction of the Jews by attacking them on the Sabbath-day, when he had reason to believe they would not attempt to resist. Though the Jews implored him to honor the "day which had been dignified with holiness by the Heavenly Ruler," he persisted, declaring that he was ruler on earth. His expedition, however, failed. A previous raid against Jerusalem on the Sabbath-day, under Appolonius, had proved successful (II Macc. v. 25, 26).

The Book of Jubilees calls the Sabbath the great sign that work should be done during six days and dropped on the seventh (ii. 17). The chief orders of angels also were bidden to observe the Sabbath with the Lord (ii. 18). In selecting Israel as His chosen people, YHWH purposed to make them a Sabbath-observing people. Eating, drinking, and blessing God are distinguishing features of the Sabbath, besides cessation of work (ii. 21). The Sabbath was given to Jacob and his seed that they might forever remain "the blessed and holy ones of the first testimony and law," as is the seventh day. Labor thereon entails death, but its defilement leads to violent death (ii. 25, 27). Among the acts prohibited are included preparing food, drawing water, and carrying burdens, however small, out of or into the house, or from one house to another. The Sabbath was hallowed in heaven before it was ordained for earth. Israel alone has the right to observe it (ii. 28–31). Again, in ch. iv., buying and selling, making verbal agreements for future fulfilment, and journeying are mentioned as among the acts prohibited, as well as drawing water, carrying burdens, and marital indulgences. Only work that is necessary for the sacrificial Temple service is permitted. Death shall be the penalty for any one who works, walks any distance, tills his land, kindles a fire, loads a beast of burden, travels on a ship, beats or kills any one, slaughters bird or beast, captures in the chase any living creature, or even fasts or wages war, on the Sabbath.

The archangel Michael instructs Seth (Vita Adæ et Evæ, 43) not to mourn on the seventh day (Kautzsch, "Apokryphen," ii. 528).

In Josephus and the Classical Writers.

——**In Post-Biblical Literature:** Josephus, in the main, follows the Biblical narrative, giving the word "Sabbath" the meaning "rest" ("Ant." i. 1, § 1), and controverting the stupid etymology of the name upheld by Apion, according to whom the Jews were forced to observe the Sabbath by the fact of their being afflicted with bubonic boils known in Egyptian by a word similar to the Hebrew word "sabbath" ("Contra Ap." ii., § 2). Moreover, his descriptions of Sabbath celebration do not differ from the Biblical. That the beginning and end of the Sabbath were announced by trumpet-blasts ("B. J." iv. 9, § 12) is shown by the Mishnah (Suk. v. 5).

Josephus makes much of the spread of Sabbath observance in non-Palestinian cities and among non-Jews ("Contra Ap." ii., § 39; comp. Philo, "De Vita Moysis," ii. 137 [ed. Mangey]). That he does not exaggerate is apparent from the comments of Roman writers on the Jewish Sabbath. Horace, in his "Satires" (i. 9, 69), speaks of "tricesima Sabbata," which certainly does not refer to a Sabbath so numbered by the Jews. Juvenal ("Satires," xiv. 96–106), Persius (v. 179–184), Martial (iv. 4, 7), and Seneca (Augustine, "De Civitate Dei," vi. 11) also refer to the Sabbath. In the Maccabean struggle the observance of the Sabbath came to have special significance as distinguishing the faithful from the half-hearted; but Josephus confirms I Macc. ii. 39–41, where the faithful, under Mattathias, decided to resist if attacked on the Sabbath, and not to permit themselves to be destroyed for the sake of literal obedience to the Sabbath law (comp. "Ant." xii. 6, § 2). He mentions instances in which the Jews were taken advantage of on the Sabbath-day—for example, by Ptolemy Lagi ("Ant." xii. 1; xviii. 9, § 2). Still, according to Josephus, the Jews carried on offensive warfare on the Sabbath ("B. J." ii. 19, § 2). Titus was outwitted by the plea that it was unlawful for Jews to treat of peace on the seventh day (*ib.* iv. 2, § 3). Josephus also publishes decrees exempting Jews from military service on the Sabbath, which exemption gave rise to persecutions under Tiberius ("Ant." xiv. 10, §§ 12 *et seq.*). The Essenes are referred to as very rigorous observers of the Sabbath ("B. J." ii. 8, § 9).

In Philo.

In Philo an element of mysticism dominates the interpretation of the Sabbath: the day was really intended for God, a part of whose divine happiness it is to enjoy perfect rest and peace. "Hence the Sabbath, which means 'rest,' is repeatedly said by Moses to be the Sabbath of God, not of men, for the one entity that rests is God." Divine rest, however, does not mean inactivity, but unlabored energy ("De Cherubim," § 26 [i. 154–155]). "Seven" being "the image of God," the seventh day is a pattern of the duty of philosophizing ("De Decalogo," § 20 [ii. 197]). The purpose of man's life being "to follow God" ("De Migratione Abrahami," § 23 [i. 456]), the commandment was given for man to observe the seventh day, ceasing from work, and devoting it to philosophy, contemplation, and the improvement of character ("De Decalogo," § 20 [ii. 197]). The Sabbath is the most appropriate day for instruction ("De Septenario," § 6 [ii. 282]).

Aristobulus, a predecessor of Philo, wrote a treatise on the Sabbath, fragments of which are extant. Following the Pythagoreans, he enlarges on the marvelous potency of the number "seven," but endeavors, like Philo after him ("De Septenario," §§ 6-7 [ii. 281-284]), to prove the observance of the day to be both reasonable and profitable (Eusebius, "Præparatio Evangelica," xiii. 12, §§ 9-16). He asserts that even Homer and Hesiod observed the Sabbath, citing lines from them and from Linus. According to his understanding, the Sabbath was primarily to be used for searching the Scriptures, fostering the soul's powers, and striving after the knowledge of truth. The Sabbath might be called the first creation of the (higher) light, in which all is revealed (comp. the benedictions preceding the Shema'; Herzfeld, "Gesch. des Volkes Jisrael," p. 478, Nordhausen, 1867).

In the Talmud.

These Alexandrian speculations partake of the nature of haggadic homilies. In those of the Tannaim and Amoraim similar strains are heard. The Sabbath overshadowed every other day (Pesiḳ. R. 23), while Shammai began even on the first day of the week to make provision for the proper observance of the seventh day. It was Hillel who recalled the dignity of other days (Beẓah 16a). The Sabbath is considered to be equivalent to the Abrahamitic covenant (Mek. 62b; Pesiḳ. R. 23; Agadat Bereshit, xvii.). Its observance forestalls the threefold judgment—the Messianic sufferings, the wars of Gog and Magog, and the final day of retribution (Mek. 50b, 51a; comp. Shab. 118a). The privilege of celebrating the three great pilgrim festivals is the reward for faithful Sabbath observance (Mek. *l.c.*). The Sabbath is likened to wholesome spices (Shab. 119a; Gen. R. xi.; Jellinek, "B. H." i. 75). Whosoever keeps the Sabbath holy is protected against temptation to sin (Mek. 50b).

Most characteristic is the dialogue between Rufus and Akiba concerning the two signs of the Covenant—circumcision and the Sabbath (Sanh. 65b; Gen. R. xi.; Pesiḳ. R. 23; Tan., Ki Tissa; Jellinek, "B. H." i. 75). The will of God is alleged to be the sole reason for the day's distinction. As proof that the seventh day is the Sabbath the inability of the necromancer to call a spirit from the River Sambation, and the fact that the grave of Rufus' father sends forth smoke during the six week-days, but ceases to do so on the Sabbath, are adduced. Akiba meets the objection that God violates His own law by sending wind and rain on the Sabbath with the statement that the universe is God's private domain, within which the proprietor is at liberty even on the Sabbath. Moreover, God proved Himself to be a Sabbath observer by interrupting the fall of manna on that day. To observe the Sabbath is regarded as equivalent to having originally instituted it (Mek. 104a, b).

The Sabbath expresses the intimacy between God and Israel; from the days of Creation this relation has existed. Each week-day is associated with another, the first with the second, and so on; but the Sabbath stands alone. In answer to its complaint at being thus neglected, God explained that Israel is its peculiar associate (Beẓah 16a; Gen. R. xi.). Man's face takes on a new luster on the Sabbath. The two great heavenly lights, the sun and the moon, did not begin to lose their original brilliancy until after the first Sabbath (Mek. 69b; Gen. R. xi., xii.). If all Israel were to observe two successive Sabbaths as they should be observed, redemption would ensue at once (Shab. 118b; comp. Yer. Ta'an. 64a); if even one Sabbath were rightly kept the Messiah would appear (Shab. 118b). Simeon ben Yoḥai regarded too much talking as inconsistent with the proper celebration of the day (Yer. Shab. 15b); R. Ze'era reproved his pupils for committing this fault (Shab. 119a, b). Those that observe the Sabbath are ranked with those that give tithes and honor the Law; their rewards are identical (Shab. 119a; Gen. R. xi.; Pesiḳ. R. 23). Two angels, one good, the other evil, accompany every Jew on Sabbath eve from the synagogue to the house. If the Sabbath lamp is found lighted and the table spread, the good angel prays that this may be the case also on the following Sabbath, and the evil angel is compelled to say "Amen" to this; but if no preparations for the Sabbath are seen, the evil angel pronounces a curse, and the good angel is compelled to say "Amen" (Shab. 119b).

Haggadic References.

The law of the Sabbath is equal to all the other laws and commandments in the Torah (Yer. Ber. 3c; Yer. Ned. 38b; Ex. R. xxv.). The ẓiẓit is intended to be a constant reminder of the Sabbath (Yer. Ber. 3c). "Queen" and "bride" are two typical appellations for the day (Shab. 119a; B. Ḳ. 32a, b; Gen. R. x.); it is the signet on the ring (*ib.*). A special soul ("neshamah yeterah") is given to man on the eve of the Sabbath, and leaves him again at its close (Beẓah 16a; Ta'an. 27b). Simeon ben Laḳish explains the repetition of the Sabbath commandment by relating a parable of a father who sent his son to a merchant with a bottle and some money. The son broke the bottle and lost the money, whereupon the father admonished him to be more careful and gave him another bottle and some more money. Hence comes the use of the word שמור in Deuteronomy ("be careful"; Pesiḳ. R. 23). According to R. Simlai, the "remember" in Ex. xx. 8 indicates the duty of thinking of the Sabbath before, the "observe" in Deut. v. 12 that of keeping it holy after, its advent (Pesiḳ. R. 23). The Sabbath is a precious pearl (Midr. Teh. to Ps. xcii., ed. Buber, p. 201a). The one day which belongs to God is, according to Ps. cxxxix. 16, the Sabbath; according to some it is the Day of Atonement (Pesiḳ. R. 23; Tan., Bemidbar, 20). The superior character of the seventh day is marked by the circumstance that everything connected with it is twofold: *e.g.*, the double portions of manna (Ex. xvi. 22); the two lambs (Num. xxviii. 9); the double menace in Ex. xxxi. 14; the repetition of the Sabbath commandment (Ex. xx. 8 and Deut. v. 12); the double title of Ps. xcii.—"mizmor" and "shir" (Midr. Teh. to Ps. xcii., ed. Buber, p. 201b).

The Sabbath is a foretaste of the world to come (Gen. R. xvii., xliv.; Ber. 57b ["one-sixtieth of the world to come"]). The example of the Creator is cited to teach that all work, however important, should cease as soon as the Sabbath approaches; for God was about to create bodies for the demons whose souls He had fashioned when the Sabbath came and prevented the execution of the intention (Gen. R. vii.). The Patriarchs are said to have kept the Sabbath even before the revelation on Sinai (Gen. R. lxxix.; Tan., Naso, 33 [ed. Buber, p. 22a, b]).

Dress.

According to the testimony of the Haggadah, the Sabbath was looked upon and observed as a day of joy. Samuel ben Naḥman declared that the Sabbath was intended to be a day of good cheer (Yer. Shab. 15a; Ḥiyya b. Abba in Pes. R. xxiii.). Fasting was forbidden upon it (Ber. 31b), even up to noon (Yer. Ta'an. 67a; Yer. Ned. 40d). Expenses incurred for a proper, joyful Sabbath celebration do not impoverish (Gen. R. xi.); on the contrary, riches are the reward of those that enjoy the Sabbath (Shab. 118a). Hence the special blessing for the Sabbath in Gen. ii. 3, to vouchsafe impunity to the weak for excesses in eating and drinking committed in honor of that day (Bacher, "Ag. Pal. Amor." i. 111). Three meals were considered indispensable (Shab. 118b). Of Ḥanina and Hoshaiah, disciples of R. Johanan, it is reported that they occupied themselves on Friday with the story of creation, which miraculously enabled them to procure a fattened calf for their Sabbath meal (Sanh. 65b, 67b) when they were too poor to prepare properly for the day. Nothing should be eaten on Friday later than the first hour after noon, in order that the Sabbath meal may be better enjoyed (Pes. 99b; Tos. Ber. v. 1; Yer. Pes. 37b). Change of garments was also deemed essential to a proper observance; white Sabbath garments are mentioned in Shab. 25b. Every person should have at least two sets of garments, one for week-days and another for the Sabbath (Yer. Peah 21b); Ruth is referred to as an example (Ruth R. iii. 3; Pes. R. xxxiii.; Shab. 113b). The Jews of Tiberias, who plead their poverty as a reason for not being able to celebrate the day, are advised to make some change in their dress (*ib.*). To this refers also the proverb, "Rather turn thy Sabbath into a profane day [in dress], than be dependent on the assistance of others" (Pes. 112a). The myrtle was used for purposes of decoration on the Sabbath (Shab. 33b). It was noticed with displeasure that Aḥa ben Ḥanina wore mended sandals on the Sabbath (Shab. 114a). The Sabbath was given to instructive sermons and discourses (Yer. Soṭah 16d; Num. R. ix.; Deut. R. v.). To run to the bet ha-midrash on the Sabbath to hear a discourse does not constitute desecration (Ber. 6b). Rain on Friday is not welcome, as it interferes with Sabbath preparations, while sunshine on the Sabbath is a divine boon to the poor (Ta'an. 8b).

The Haggadah clearly shows that the Sabbath-day was celebrated in a spirit of fervent joyfulness, which was by no means intended to be repressed, and which was not chilled or checked by the halakic construction of the Sabbath commandments. The Sabbath, indeed, was deserving of the designation of "mattanah ṭobah" (a precious gift from on high; Shab. 10b).

E. G. H.

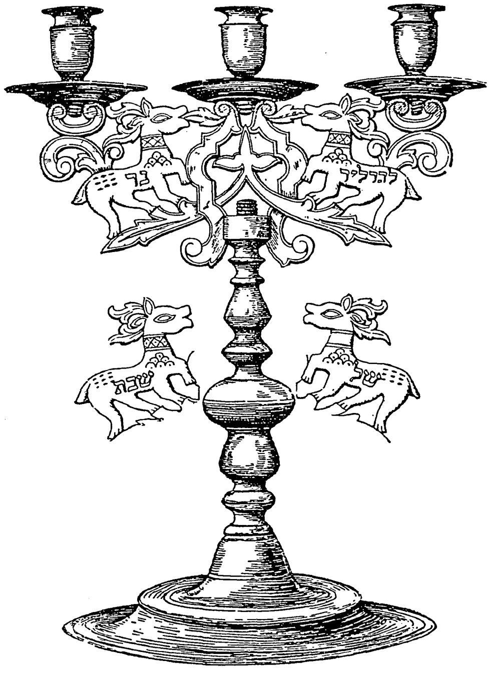
Probable Lunar Origin.

——**Critical View:** The origin of the Sabbath, as well as the true meaning of the name, is uncertain. The earliest Biblical passages which mention it (Ex. xx. 10, xxxiv. 21; Deut. v. 14; Amos viii. 5) presuppose its previous existence, and analysis of all the references to it in the canon makes it plain that its observance was neither general nor altogether spontaneous in either pre-exilic or post-exilic Israel. It was probably originally connected in some manner with the cult of the moon, as indeed is suggested by the frequent mention of Sabbath and New-Moon festivals in the same sentence (Isa. i. 13; Amos viii. 5; II Kings iv. 23). The old Semites worshiped the moon and the stars (Hommel, "Der Gestirndienst der Alten Araber"). Nomads and shepherds, they regarded the night as benevolent, the day with its withering heat as malevolent. In this way the moon ("Sinai" = "moon ["sin"] mountain") became central in their pantheon. The moon, however, has four phases in approximately 28 days, and it seemingly comes to a standstill every seven days. Days on which the deity rested were considered taboo, or ill-omened. New work could not be begun, nor unfinished work continued, on such days. The original meaning of "Shabbat" conveys this idea (the derivation from "sheba'" is entirely untenable). If, as was done by Prof. Sayce (in his Hibbert Lectures) and by Jastrow (in "American Journal of Theology," April, 1898), it can be identified in the form "shabbaton" with the "Shabattum" of the Assyrian list of foreign words, which is defined as "um nuḥ libbi" = "day of propitiation" (Jensen, in "Sabbath-School Times," 1892), it is a synonym for "'Aẓeret" and means a day on which one's actions are restricted, because the deity has to be propitiated. If, with Toy (in "Jour. Bib. Lit." xviii. 194), it is assumed that the signification is "rest," or "season of rest" (from the verb "to rest," "to cease [from labor]"; though "divider" and "division of time" are likewise said to have been the original significations; comp. also Barth, "Nominalbildungen," and Lagarde, "Nominalbildung"), the day is so designated because, being taboo, it demands abstinence from work and other occupations. The Sabbath depending, in Israel's nomadic period, upon the observation of the phases of the moon, it could not, according to this view, be a fixed day. When the Israelites settled in the land and became farmers, their new life would have made it desirable that the Sabbath should come at regular intervals, and the desired change would have been made all the more easily as they had abandoned the lunar religion.

Dissociated from the moon, the Sabbath developed into a day of rest for the workers and animals on the farm (Deut. v. 14; Ex. xx. 10). Traces of the old taboo are, however, still found. In Amos viii. 5 it is the fear of evil consequences that keeps the impatient merchants from plying their wicked trade. The multitude of sacrifices (Isa. i. 8; Hosea ii. 11) on Sabbath and New Moon indicates the anxiety on those particular days to propitiate the deity. Closer contact with Assyro-Babylonians from the eighth to the sixth pre-Christian century probably revitalized the older idea of taboo. The assumption

Assyrian Analogues.

that the Hebrews borrowed the institution from the Babylonians, which was first suggested by Lotz ("Quæstiones de Historia Sabbati"), is untenable; but that the Exile strengthened the awe in which the day was held can not be denied. It having become a purely social institution, a day of rest for the farmers, the taboo element in course of time had lost its emphasis. The Assyro-Babylonians may have had similar days of abstinence or propitiation (the 7th, 14th, 19th, 21st, and 28th of the month Elul), and contact with them may have served to lend the Jewish Sabbath a more austere character. The Assyrian calendar seems to disclose an effort to get rid of the movable Sabbath in favor of the fixed. If after the twenty-eighth day two days are intercalated as new-moon days, the 19th day becomes the 49th from the beginning of the next preceding month, as in the Feast of Weeks, in connection with which the emphasis on "complete Sabbaths" ("sheba' Shabbot temimot"; Lev. xxiii. 15) is noteworthy. At all events, in the Priestly Code, Sabbath violation is represented as entailing death (Num. xv. 32-36). The prohibition against kindling fire (Ex. xxxv. 3) probably refers to producing fire by the fire-drill or by rubbing two sticks together; this was the crime of the man put to death according to Num. xv. 32-36, the "meḳoshesh" (see also Beẓah iv. 7), the presence of fire being considered, if the analogy with superstitious practises elsewhere is decisive, a very grave sign of disrespect to the deity.



Candlestick Used in Blessing the Sabbath Light.
(From a drawing by Viefers.)

But Hebrew institutions are often in direct antagonism to similar ones among the Assyro-Babylonians. The seventh days in the Babylonian scheme were days of ill omen. The prophets of the Exile laid especial emphasis on the fact that the Sabbath is a day of joy, as did those of the Assyrian period on the futility of the propitiating sacrifices (Isa. i.). The Priestly Code could not neutralize this view. Its rigorous observance found acceptance only among the "Nibdalim" (the Separatists; see Neh. x. 31). Every festival in the Biblical scheme is associated with a historical event. The connection of the Sabbath with the Exodus, in Deut. v. 14-15, was altogether vague; and to supply a more definite relation to an event in Israel's history the Sabbath was declared to have had an important significance in the desert when manna fell (Ex. xvi. 27 *et seq.*). The Decalogue of Exodus supplies a theological reason for the observance of the day; its phraseology reflects that of Gen. ii. 1 *et seq.* Both—this explanation and the story in Genesis—are among the latest additions to the Pentateuch.

Bibliography: In addition to the abundant literature mentioned in the bibliographies of the Bible dictionaries see Friedrich Bohn, *Der Sabbat im Alten Testament*, Gütersloh, 1893 (the latest contribution; it abounds in parallels for the taboo).

E. G. H.

——Historical and Legal: A comparison between rabbinical Sabbath legislation and the data of the Bible, Apocrypha, and Pseudepigrapha must establish the fact that the Talmudical conception of what is implied by Sabbath "rest," with the practical determination of what may and what may not be done on that day, is the issue of a long process of development. Even the commandment ("remember") in Exodus presupposes the previous existence of the institution; indeed, tradition assumes that the Sabbath law had been proclaimed at Marah, before the Sinaitic revelation (Rashi on Ex. xv.; Maimonides, "Moreh," iii. 32; Sanh. 56b). The restoration of Sabbath observance in Ezra and Nehemiah's time in no sense transcended the Pentateuchal ordinances. By "no manner of labor" (Ex. xx. 10, Hebr.), as the context shows, were indicated domestic and agricultural occupations (comp. B. Ḳ. v. 7). The special mention of plowing and harvesting, and probably the direct prohibition of kindling fire, the explicit mention of which the Rabbis attempt to explain away (Shab. 70a), suggest that, in the main, field- and household-work were covered by the Biblical idea of labor (Ex. xxxiv. 21, xxxv. 3). Carrying of loads "in and out" can not be held to be an exception (Jer. xvii. 21-22). Probably Jeremiah's censure had reference to carrying to market the yield of field and farm, or the articles manufactured at home (comp. Amos viii. 5). It is just this that Nehemiah deplores (Neh. xiii. 15).

Evolution of Conception of Sabbath Rest.

The Maccabean rebellion marks the beginning of an altogether different conception of the term "labor." The rigorists regarded self-defense, even against a mortal attack, as included in the prohibition (Josephus, "Ant." xii. 6, §§ 2-3). The stricter construction, then, must have been devised among the Ḥasidim, Mattathias representing the broader view. That for a long time the question of what was permitted in this direction on the Sabbath remained open is shown by a comparison of I Macc. ix. 34, 43; II Macc. viii. 26; Josephus, "Ant." xii. 6, § 2;

xiii. 1, § 3; 8, § 4; xiv. 10, § 12; xviii. 9, § 2; *idem*, "B. J." ii. 21, § 8; iv. 2, § 3; *idem*, "Contra Ap." i. § 22; Ta'an. 28b, 29a; 'Ar. 11b. Rabbinical law is still busy debating in Shab. vi. 2, 4 whether weapons may be carried on the Sabbath, and what are weapons and what ornaments. Some latitude is allowed soldiers in camp ('Er. i. 10; Dem. iii. 11), and such as had gone forth carrying arms on the Sabbath to wage war were permitted to retain their weapons even when returning on the Sabbath (Yer. Shab. i. 8; 'Er. iv. 3; 15a; Maimonides, "Yad," Melakim, vi. 11, 13).

Military Exceptions.

Freedom to move about is indispensable to military operations; but the interdict against marching, walking, or riding established by the rabbinical law rendered military ventures impossible on the Sabbath. In the time of Josephus this interdict was known. He reports that Jewish soldiers do not march on the Sabbath, their non-Jewish commanders respecting their religious scruples ("Ant." xiv. 10, § 12; xviii. 3, § 5). The "Sabbath way" (see 'Erub), limited to 2,000 ells, is fully recognized in the New Testament (comp. Acts i. 12). The institution of this Sabbath way, or walk, clearly shows a purpose to extend the established limits. There were several calculations by which the limit of distance was arrived at. In the injunction concerning the gathering of manna (Ex. xvi. 29) the phraseology used is, "Let no man go out of his place." But this noun "place" is used also in the law concerning the cities of refuge (Ex. xxi. 13). In Num. xxxv. 26 the "limit" or border of the city is named, while verses 4 and 5 of the same chapter give 2,000 ells as its extent ('Er. 48a). Josh. iii. 4 also is considered, 2,000 ells being the interval that must be maintained between the ark and the people. Whether this distance should be measured in a straight line in one direction, or whether it should be taken from the center of a circle, was open to argument. If the latter, freedom to move within a circle 4,000 ells in diameter would result. This would certainly answer the ordinary needs of the Sabbath walker ('Er. iv. 3, 5, 8; R. H. ii. 5). By another calculation, in which the area of limitation is a square, with each side of 4,000 ells, even greater latitude is arrived at; movement along the border-lines as well as along the diagonal would be free ('Er. iv. 8; see Baneth, "Einleitung zum Traktat Erubin").

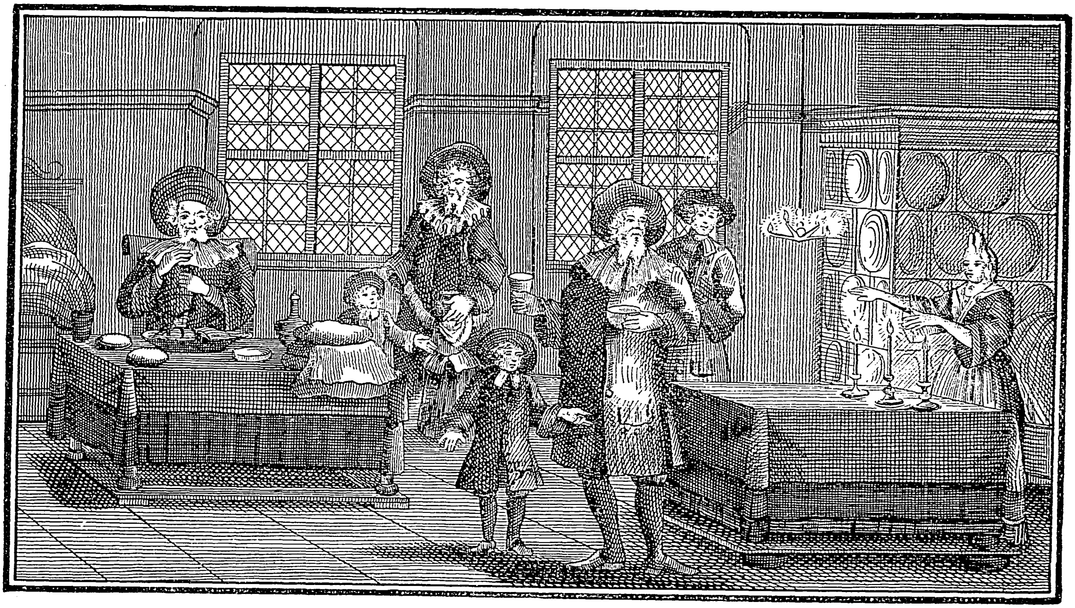
In reference to other Sabbath distances, the traditional four ells, so often found in specifications of proportions and quantities, are given as the limit (Yoma i. 2; Suk. i. 10; Ber. iii. 5; B. B. ii. 4, 5, 12). Within the distance of four ells throwing was allowed (Shab. xi. 3, 4). Only so much water might be poured out on the Sabbath as four ells square of ground would absorb ('Er. viii. 9, 10; for other instances see 'Er. i. 2; iv. 1, 5; x. 4, 5). How these four ells should be measured is also a matter of serious inquiry ('Er. iv. 5, 6). Thus the Mishnah preserves the evidence of a constantly active desire to relax the rigor of probably Ḥasidean constructions. For this purpose the legal fiction of the 'erub was resorted to, creating constructively a new residence. Perhaps, originally, huts were built (for instance, the huts, 2,000 paces apart, for those that accompanied the scapegoat on Yom Kippur; Yoma vi. 4; Bohn, "Der Sabbat im Alten Testamente," p. 72, Gütersloh, 1903). Against this 'erub the Sadducees (literalists) are reported to have protested ('Er. vi. 1, 2). It is well known that the Samaritans withdrew freedom of movement almost entirely, as did the Essenes ("B. J." ii. 8, § 9). The gloss to R. H. ii. 5 is indicative of the existence of similarly rigorous views among others. At first, in the case of an observation of the new moon on Sabbath, the witnesses were not permitted to move about; but later R. Gamaliel allowed them the freedom of 2,000 ells in every direction. Such laws as the one that he who has exceeded the "teḥum" (Sabbath distance) even by one ell may not reenter point to the same conclusion ('Er. iv. 11). Traveling on a ship was not prohibited, though even in this case the disposition at one time was to require the traveler to remain on the ship three days previous to sailing if the day of departure was the Sabbath, circumstances, of course, necessitating certain exceptions (Shab. 19a; "Sefer ha-Terumah," quoted in "Shibbole ha-Leḳeṭ," ed. Buber, p. 41). A fictitious "shebitah" (acquisition of domicil) helped to remove the rigoristic construction. During the voyage itself it sufficed, even for the stricter interpreters, if the passenger informed the captain of his desire that the ship should lay to on the Sabbath. No responsibility rested upon him if his desire were disregarded. On Sabbath, during the voyage, the Jew might walk the whole length of the ship even if her dimensions exceeded the measure of the Sabbath way (*ib.*). Still, R. Joshua and R. Akiba are remembered as having refrained, while on a voyage, from walking farther than four ells on shipboard on the Sabbath ('Er. iv. 1).

Restricted Freedom of Movement.

The fact that artificial "gezerot" (apprehensions lest a forbidden act be done) are adduced to explain the so-called "shebutim" (Beẓah v. 2), *i.e.*, acts that ought to be omitted on Sabbath (for instance, climbing a tree or riding on an animal), discloses a purpose to relax the law. It is most probable that at one time the acts classified under this name were not proscribed. Only later practise prohibited them, and when a less strict spirit began again to assert itself, it was found that there was not sufficient warrant for the enforcement of the prohibition.

Restrictions on Riding.

In the case of riding on the Sabbath this evolutionary process is plain. The prohibition appears to have been first promulgated during the Hasmonean period. But riding, especially on asses, was the usual mode of locomotion, and the injunction seems not to have been readily heeded. An instance exists of a court that, desiring to make an example, put an offender to death (Yeb. 90b; Sanh. 46a; Yer. Ḥag. ii. 1). Yet Elisha ben Abuyah is reported to have ridden on horseback within the limits of the Sabbath distance, R. Meïr following to hear him discourse on the Torah until the hoofs of the horse reminded him that he ought to turn back, as he had ridden the full length of the distance permitted (Ḥag. 15a). While the names of riders mentioned in the Talmud are mostly those of apostates, yet the Talmud affords no justification for the prohibition (see Löw, "Gesammelte Schriften," iv. 305 *et seq.*). The Talmud assumes that every living creature carries itself (Shab. 94a); hence the horse or ass does not carry a burden when ridden by a man; and in order to find some basis for the injunction, rabbinical writers allege the apprehension that the rider might cut a switch on the way with which to whip the horse, and thereby become a violator of the Sabbath (Shab. 153b; Maimonides, "Yad," Shabbat, xviii. 16–17; Ṭur Oraḥ Ḥayyim, 305). It was a rule not to sell or hire animals to non-Jews lest they be deprived of their Sabbath rest. The horse alone was excepted, since it would be used only for riding, which was not in Talmudic law a violation of the Sabbath ('Ab. Zarah i. 6; 15a; Pes. iv. 3).



Sabbath Eve Ceremonies in a German Jewish Home of the Eighteenth Century.
(From Kirchner, "Jüdisches Ceremonial," 1726.)

Against Kindling Fire.

The prohibition against kindling a fire was rigorously and literally observed by the Samaritans (Leopold Wreschner, "Samaritanische Traditionen," p. 15; De Sacy, "Notices et Extraits," xii. 163, 176). The Sadducees, as were later the Karaites, were similarly convinced that light and fire should not be found on Sabbath in the habitations of the faithful (Geiger, "Nachgelassene Schriften," vol. iii.). The purpose of rabbinico-Pharisaic casuistry is to combat this ascetic literalism. Hence its insistence on the lighting of the lamps and its micrologic devices for keeping food warm; it accommodated itself to the rigorism of the literalists only so far as to avoid the creation of an open, flaming fire (Shab. ii., iv.). Marital indulgence on the Sabbath was regarded as a profanation by the Samaritans (De Sacy, *l.c.*). This opinion prevailed also in the earlier rigoristic period of Sabbath legislation. Weddings were not permitted on the Sabbath (Beẓah v. 2). Later casuistry endeavored to find a reason for this prohibition, but the multitude of the explanations advanced—fear of mixing joys; apprehensions that preparation for the wedding-feast might lead to infraction of Sabbath laws; etc.—shows the embarrassment of the later teachers (Ket. i. 1). Except in the case of weddings, which were forbidden, later practise was opposed to that of the Samaritans (Ned. ii. 10, viii. 6).

The Puritan character of the rabbinical Sabbath is shown in the aversion, deducible from some laws, to loud noises (instance Simeon ben Yoḥai's reproof of his mother for loud talking), clapping of hands, striking with a hammer, trumpet-calls, and music (Löw, *l.c.* ii. 355). While to some of the more ascetic rabbis any loud demonstration of joy undoubtedly approached irreverence and impiety, it may be noted that the minor reasons adduced in regard to music (*e.g.*, lest musicians might be tempted to make or repair instruments, or the estimate of music as "labor," not "art" [חכמה]) indicate that ascetic tendencies had but little to do with the prohibition of it. In the later post-Talmudical days non-Jewish musicians were employed on the Sabbath.

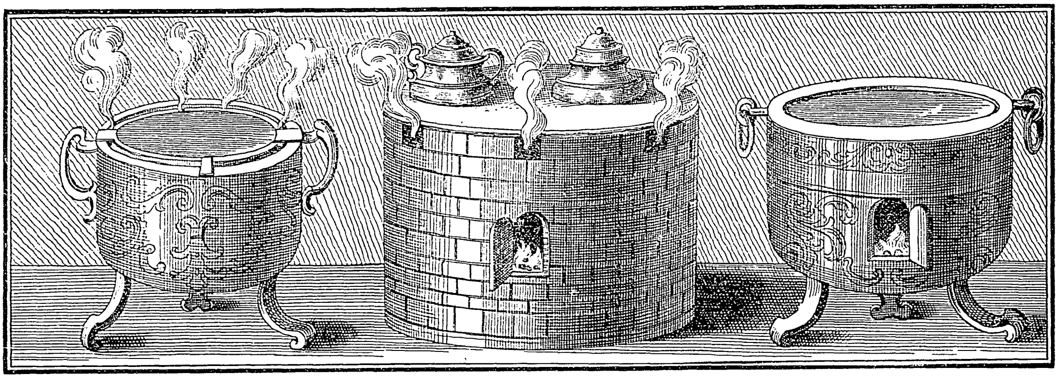
Employment of the "Goy."

But the employment of non-Jews to do what it was not lawful for the Jew to do on the Sabbath presented difficulties. If they were servants they might not work (Ex. xx.). By a legal fiction, however, the presumption was established that in reality the non-Jew worked for himself (see "Shibbole ha-Leḳet," pp. 84 *et seq.*; "Yad," *l.c.* vi.). Among the thirty-nine classes of forbidden acts are also swimming, jumping, dancing, holding court (but comp. Sanh. 88b), performing the ceremony of ḥaliẓah, setting aside as holy, vowing to pay the value of things so set aside, putting under the ban (a beast as devoted to the Temple), and collecting the priest's portion or the tithes (Beẓah v. 2).

The Book of Jubilees reflects the earlier, more rigid conception of the Sabbath. The acts enumerated therein as forbidden are almost identical with those found in the Mishnah. Its temper is evidenced by the fact that it makes death the penalty for violations. Later, flagellation was substituted for the severer penalty.

Principle of Halakah.

In the Halakah the observance of the Sabbath, like any other Pentateuchal ordinance or statute, is treated as a legal duty or debt laid upon the Israelite, and the manner and measure in which this duty must be discharged are legally fixed. Undoubtedly, in the case of the Sabbath as in that of other institutions, the Halakah legalized and systematized customs of long standing, endeavoring to connect them with Pentateuchal text and precedent. This systematization resulted in the accentuation of limitations. Under the general precept a number of specific prescriptions were evolved.



Devices for Keeping Water and Food Warm on Sabbath.

(From Bodenschatz, "Kirchliche Verfassung," 1748.)

Again, the principle of "a fence around the Law" led to the enactment of precautionary regulations. Still, rabbinical Sabbath legislation was by no means altogether restrictive. In many instances its effect was to broaden the scope of the Biblical law or its literal interpretation (see 'Erub).

The subtleties which this legalism engendered are illustrated by the first mishnah in Shabbat, which analyzes the possibilities of Sabbath violation in connection with carrying from one territory into another, or in the passing of alms from the donor within the house to the donee outside it.

Another example is furnished by the following abstract of Maimonides' first chapter of Shabbat. To rest from labor on the Sabbath ("shebitah") is a mandatory commandment. Transgression thereof, however, violates both a positive and a negative precept, as the Pentateuch enjoins rest as well as prohibits work. The penalty for intentional violation by work is excision ("karet"); if there were witnesses to the act and the legal warning ("hatra'ah") had been given, the penalty was stoning. Unintentional desecration entails the bringing of the prescribed sin-offering. The law analyzes and discriminates among the various kinds of acts: some acts are in themselves permissible, though they may involve possible, though not unavoidable, infractions of the Sabbath law. Unless a previous intention was manifest to perform an act in a way that would lead to incidental violation, this latter is not to be taken into account. If, however, the secondary violation is necessarily involved in the usually permissible act, even though no intention to violate the Sabbath may be imputed, the perpetrator is guilty.

Motive Considered.

The existence of a good motive for doing a thing that is prohibited does not exonerate the doer thereof. For instance, extinguishing a light is forbidden; it is forbidden also to extinguish it for the purpose of economizing oil. The motive, however, is decisive in cases where one act was intended and another of different scope is accidentally performed. Where two men perform one piece of work (*e.g.*, carry a beam) in common, but each alone does less than would render him liable, and it is within the power of either to do it alone, both are exempt. But where the work exceeds the strength of each alone, and it is necessary to do it together, both are guilty. Work which destroys merely ("meḳalḳel") does not entail a penalty; but destruction preliminary to building is forbidden.

Friday Preparation.

With a view to more thoroughly safeguarding the Sabbath against profanation an hour of the previous day ("'ereb Shabbat") was added to it. This was called "adding from the profane to the holy" (Shulḥan 'Aruk, Oraḥ Ḥayyim, 261, 2). The Pentateuchal warrant for this was found in the use of the definite article in Gen. i. 31 (הששי, "the sixth day") or in Ex. xx. 10 (השביעי, "the seventh day"; see Gen. R. ix.; Pesiḳ. R. 23). Indeed, to a certain extent Friday was included in the Sabbath legislation. Everybody was expected to rise very early on that day in order to make the purchases necessary for a worthy celebration of the Sabbath (Shab. 117b; Oraḥ Ḥayyim, 250); the greater the outlay the greater the merit (Yer. Sanh. viii. 2). Personal participation in various preparations for the meals was recommended; indeed, many among the most learned were remembered as having proudly shared in such preparations (Shab. 119a; Ḳid. 41a; Oraḥ Ḥayyim, *l.c.*). According to one of the ten ordinances of Ezra, Jewish women were advised to bake bread early on Friday to supply the poor (B. Ḳ. 82a).

The details of the toilet, such as the dressing of hair and paring of finger-nails, were attended to before the advent of the Sabbath (Shab. 25b, 31a; Sanh. 95a; Beẓah 27b; Oraḥ Ḥayyim, 260). Workaday garments were exchanged for better Sabbath clothes (Shab. 119a; B. Ḳ. 32b; Oraḥ Ḥayyim, 262). While it was still daylight the table was set (Shab. 119a; Oraḥ Ḥayyim, *l.c.*), and it became the custom to cover the table with a white cloth (Tos. Pes. 100b, *s.v.* "She'en"); this was held to be in memory of the manna, as was a certain favorite 'ereb Shabbat pie consisting of two layers of dough between which the meat was placed ("mulai" is the name given by MaHaRIL; Hilkot "Shabbat"). Two loaves of bread, also in allusion to the manna, were to be on the table (Shab. 117a; Ber. 39b; see Kiddush). Near dusk the head of the family would inquire: "Have you set aside the tithe, made the 'erub, and separated the ḥallah?" Upon receiving an affirmative answer, he would say: "Then light the lamp" (Oraḥ Ḥayyim, 260).

According to the Mishnah (Shab. i. 3), a tailor should not venture out near dusk with his needle (stuck in his coat); nor a writer of books with his pen; one should not read near the lamp, though children might do so under the supervision of the master. In fact, work was declared unpropitious after "minḥah" (construed to be the "minḥah gedolah," *i.e.*, thirty minutes after noon; Pes. 51b; Oraḥ Ḥayyim, 251). Yet this applied only to work for personal profit; such work as was styled "work of heaven," *i.e.*, work from a religious or some high, altruistic motive, was permitted. Long walks away from one's home on Friday were discountenanced (Oraḥ Ḥayyim, 249). Such work as could not be finished before the beginning of the Sabbath, but would "finish itself" during the Sabbath (as in the case of flax put into an oven to bleach), might be begun near dusk on 'ereb Shabbat (Oraḥ Ḥayyim, 252). So was it lawful to put food intended for the Sabbath where it would stay warm, though under certain conditions and precautions (Shab. 18b, 38a; Tos. *ib.*, s.v. "Shakaḥ Ḳederah"; "Or Zarua'," *s.v.* "'Ereb Shabbat," 9; "Shibbole ha-Leḳeṭ," p. 44 [57]; Oraḥ Ḥayyim, 253, 254, 257-259).

The Sabbath Lamp.

The lighting of the lamp was considered an obligation which had to be discharged before darkness set in (Shab. 25b, 31a; "Yad," Shabbat, v. 1). This duty could be deputed to a non-Jew (Oraḥ Ḥayyim, 261), but so essential was the Sabbath light considered to a joyful celebration that one was advised to beg for the oil if necessary ("Yad," *l.c.*). A benediction was prescribed (Tos. Shab. 25b, *s.v.* "Ḥobah"; R. Tam, in "Sefer ha-Yashar," § 622; "Yad," *l.c.*; Ber. R. xi., lxv.; Pesiḳ. R. 21). Men and women alike were under this obligation, though its discharge generally fell upon the women ("Yad," *l.c.* v. 3). Some rabbis demanded that at least two lamps should be lighted, one to express the "zakor" (remember) of Ex. xx., and the other the "shamor" (observe) of Deut. v. (Shab. 33b). The Sabbath meal might be eaten only where the lamp was burning (Shab. 25b; Tos. *ib.*, s.v. "Hadlaḳah"). Explicit directions are given concerning the material for the wick, the kind of oil that was lawful, the manner of lighting the lamp, and how far one might profit from the light of the Sabbath lamp for reading and other purposes (Shab. ii. 1; "Yad," *l.c.* v.). Later authorities question whether lighting the lamp marked the beginning of the Sabbath rest, or whether Sabbath did not set in until after the prayers had been recited and Ḳiddush performed (see "Tania Rabbati," ed. Warsaw, p. 36a). In Palestine the approach of the Sabbath was announced by six trumpet-blasts, with an interval after each blast, to give workers a succession of warnings to cease from their labors (Oraḥ Ḥayyim, 256; "Yad," *l.c.* v. 18 *et seq.*).

One of the solicitudes of rabbinical law was to enforce the exceptional character of the Sabbath as a day of rejoicing and good cheer; hence on Friday no sumptuous repast was to be eaten, not even at a wedding, in order that all might anticipate the Sabbath meal with avidity. Some of the pious even went to the length of fasting during Friday in order to whet their appetite (Oraḥ Ḥayyim, 249). For this reason, most of the people being hungry, the service in the synagogue on the eve of Sabbath was shortened; the reader, instead of reciting the tefillah, gave an epitome of it (Ber. 21a, 29a). According to Shab. ii. 1, the "Bameh Madliḳin" was read (see "Sefer ha-Manhig" and "Kol Bo"). Another reason for abbreviating the service was that evil spirits were said to roam about on this evening in greater numbers than on other evenings (comp. Rashi, "Sefer ha-Pardes"; Pes. 112b). See Kiddush.

The Thirty-nine Prohibited Acts.

The Mishnah (Shab. vii. 2) enumerates thirty-nine principal classes of prohibited actions, these "abot" (lit. "fathers" or "chief categories") comprehending, when developed casuistically, a large variety of "toledot" (lit. "offspring" or "derivatives"). The number mentioned has been recognized as conventional even by Talmudists, the list as given containing virtual duplications, while certain kinds of work are clearly omitted (Shab. 74a). The explanation is that whatever was done in the erection of the Tabernacle in the desert was classified as "principal," even if this rendered certain duplications necessary (*ib.*). This number is derived from the phrase אלה הדברים ("These are the words") in Ex. xxxv. 1 (Yer. Shab. 9b; Shab. 70a; Num. R. xviii.; Tan., Ḳoraḥ), the numerical value of אלה being 36; and as "debarim" is plural it must signify at least "two," while the article prefixed indicates that it stands for "three" (36 + 3 = 39). The misreading in Tan., Ḳoraḥ, where מלקות ("beatings") appears for מלאכות ("labors"), discloses the true nature of the number. "Forty," in Hebrew, denotes the extreme number or quantity in the connection in which it is used; for instance, "forty" lashes means the utmost number of lashes that may be inflicted in any given case. Hence, in order to remain within the limit, forty less one was fixed upon as the greatest number of lashes that might be inflicted upon the culprit. The mishnah in regard to the classes of prohibited actions follows the precedent, and borrows the phraseology ("forty, less one") used in regard to flagellation. See Sabbath Laws.

Maimonides ("Yad," Shabbat, vii.) has the same enumeration, though in different order and with verbal changes, and with the substitution of "ruling [the hide] with lines" for the "salting it" of the Mishnah. According to Driver (Hastings, "Dict. Bible," iv. 320, note †), Margoliouth (in "Expositor," Nov., 1900, pp. 336 *et seq.*) cites, from an unedited Persian manuscript of the eleventh century, a catalogue of thirty-eight forbidden acts containing many variants from the Mishnah. An examination of the thirty-nine discloses that they comprise only the agricultural and industrial occupations as known in the mishnaic period (Löw, "Graphische Requisiten," ii. 28). But these thirty-nine principals expanded into 1,521 (= 39 × 39) derivatives (Yer. Shab. vii. 2); though even before R. Johanan b. Nappaḥa and R. Simeon ben Laḳish, after three and a half years' study of the Sabbath laws, had made this discovery, a mishnah in Ḥagigah (i. 8) had characterized these amplifications as "mountains suspended by a hair."

Underlying Principle of Preparation.

A few examples may serve to illustrate the method and system of this expansion. The general principle being given that "knots shall not be tied or untied," it was necessary to determine the kinds of knots that were proscribed. This led to the declaration that a camel-driver's or boatman's knot was intended; or a knot that could not be untied with one hand. Knots might be tied by a woman on articles of dress, or in packing articles of food. A pail might be fastened with a band, but not with a rope. Micrological as all this seems at first glance, closer inspection discloses the sound underlying principle that work done on Sabbath to save labor on another day renders guilty. Permanent knots, says R. Judah, are prohibited (Maimonides, "Yad," *l.c.* x., says "professional knots"; comp. Shab. 111a, 112b). This is apparent also from the provision that one may not, on the Sabbath, prepare the couch for the following evening (Shab. iii., xv.).

The things that might be saved from a conflagration constituted another solicitude of rabbinical Sabbath legislation. Sacred books, no matter in what language they might be written, might be saved, though on this point, and as to whether the books of Christians, as containing the name of God, were included, some controversies are reported (Shab. xvi. 1, 115a). Non-Jews were invited to help in such cases. Of course, it was not lawful to resort to the usual method of putting out the fire if no life were endangered ("Yad," *l.c.* xii. 3); but indirect means might be resorted to, such as covering with a hide or making a barrier by piling up vessels (Shab. xvi. 5).

But the injunction against carrying received the greatest attention. Territories were classified under four heads ("reshuyot"; Shab. 6a): (1) "Reshut ha-yaḥid": To this belonged an elevation ten spans in height and four by four or more in width; an excavation ten spans deep and four or more in width; a space enclosed by four walls ten spans high and four wide, no matter what its area, if intended for dwelling purposes; a city walled in and with gates shut at night; or covered passages with three enclosures, the fourth being a board; a house and courtyard used for dwelling purposes ("Yad," *l.c.* xiv. 1). (2) "Karmalit": A heap from three to ten spans in height and four by four in width; a corresponding excavation or depression; an area enclosed by four walls three to ten spans in height; a corner adjoining the "reshut ha-rabbim" (the public domain), with three walls on three sides and the public reshut on the fourth (*e.g.*, a covered passage without board or beam on the fourth side). (3) The public domain: Deserts, towns, market-places, and roads at least fifteen cubits wide. (4) "Maḳom paṭur": A free, open space, *i.e.*, a place less than four by four spans in width and three or more spans in height; what is less than three in height is considered the earth, so that thorn-bushes in the public domain, if less than four by four in width, belong to this class ("Yad," *l.c.*). For the effect of the 'Erub see article.

Sabbath Garb.

Another consideration involved in this injunction is as to what one may wear abroad on the Sabbath. Arms, certain kinds of sandals, signet-rings in the case of women, plain rings in that of the men (though women were cautioned against wearing these ornaments at all), and many more things in connection with the toilet, were under the ban (see "Yad," *l.c.* xix.). Under certain conditions the head-dress might be considered as a form of building, and therefore prohibited on the Sabbath (Yer. Shab. 12c, where plaiting is regarded as building). Later literature on the toilet for the Sabbath is very extensive, and historically valuable as showing masculine and feminine customs of attire ("Shibbole ha-Leḳeṭ," pp. 38 *et seq.*). It may be noted that in decisions made in the Middle Ages it is assumed that the Jews had at that time no regular reshut ha-rabbim.

The cautions against wearing jewels and similar ornaments were not inspired by Puritanical moods or views. The Sabbath was always and essentially a day of rejoicing. Hence fasting was forbidden, even for half a day (Ta'an. iii. 7; Yer. Ta'an. 67a; Yer. Ned. 40d; Judith viii. 6). Mourning was interrupted by the Sabbath (M. Ḳ. v. 3).

Suspensions of the Sabbath.

The technical term for suspensions of the Sabbath is "doḥin et ha-Shabbat" (push aside or set back the Sabbath). For a higher duty, that of observing the Sabbath was held in abeyance. A priest might violate the Sabbath in the discharge of his sacerdotal work at the altar, or while performing the sacrificial rite, or any other function, assigned to him. For "en Shabbat ba-miḳdash" the Sabbath law is not applicable to the service in the Temple (Pes. 65a). Acts necessary for the Passover are not affected by the prohibitions (Pes. vi. 1, 2). The blowing of the shofar is permitted (R. H. iv. 1). A Levite may tie a broken string on his instrument while performing in the Temple ('Er. x. 13). Circumcision also takes precedence of the Sabbath, though whatever preparations for this rite can be completed previously should not be left for the Sabbath (Shab. xviii. 3, xix. 1-3). But whenever there was danger to life, or where a Jewish woman was in the throes of childbirth, the Sabbath law was set aside (Shab. xviii. 3). In the case of one dangerously sick, whatever was ordered by a competent physician might be done regardless of the Sabbath; but it had to be done by pious and prominent Jews, not by non-Jews ("Yad," *l.c.* ii. 1-3). It was forbidden to delay in such a case, for it was intended that man should live by the Law, and not die through it (Yoma 85a, b; Sanh. 74a; 'Ab. Zarah 27b, 54a; Mek., Ḳi Tissa). Water might be heated and the lamps lighted. In accidents, too, every help might be extended. Some restrictions were placed on the choice of fluids to relieve toothache or of ointments to relieve pain in the loins (Shab. xiv. 4). A sprained member might not have cold water poured over it, but it might be bathed in the usual way (Shab. xxii. 6).

It was permissible to take animals to water, provided they carried no load ("Shibbole ha-Leḳeṭ," p. 74, where it is explained that covers necessary for the comfort of the animal are not considered a load). Water might be drawn into a trough so that an animal might go and drink of its own accord ('Er. 20b). If an animal has fallen into a well, it is provided with food until Sabbath is over, if this is possible; but if it is not, covers, cushions, and mattresses are placed under it so that it may get out without further aid; the pain of the animal is sufficient excuse ("ẓa'ar ba'ale ḥayyim") for this Sabbath violation. But the animal might not be drawn out by men, a precaution taken in those cases where animals had gone astray and had to be driven back into the courtyard ("Yad," *l.c.* xxv. 26; Shab. 128b; B. M. 32b; Ex. xxiii. 5).

In view of the spirit of philanthropy that, as Maimonides constantly asserts ("Yad," *l.c.* ii. 3), underlies the Law, it is difficult to understand the controversies with Jesus attributed to the Pharisees in the New Testament. In Matt. xii. 1, Mark ii. 23, Luke vi. 1, the disciples plucked and rubbed the ears of corn and thus violated a rabbinical Sabbath ordinance ("Yad," *l.c.* viii. 3; Yer. Shab. 10a; Shab. x. 7). But the defense of Jesus assumes that the disciples were in danger of dying of starvation; he charges his critics with having neglected charity. This must imply that they had not provided the Sabbath meals for the poor (Peah viii. 7). Thus he answers their charge with another. For the act of his disciples there was some excuse; for their neglect to provide the Sabbath meals there was none.

New Testament Examples.

In the cases mentioned in Matt. xii. 11 and Luke xiv. 5 the "drawing up" of the animal would be an innovation, but the provision made by the rabbinical law for the comfort and possible escape of the animal is also a violation of the Sabbath. In the instance of the blind man whose sight was restored (John ix. 6) the important point is not the fact that Jesus broke the Sabbath law by kneading (Shab. xxiv. 3), for the provisions in regard to pain in the eyes ("Yad," *l.c.* xxi.; Yer. Shab. xiv.) have no bearing on this case; the point involved is rather the use of magic in the restoration of sight (comp. Shab. 67a; Sanh. 101a). In all cures effected by Jesus this was the matter at issue, not the incidental violation of the Sabbath, which might be justified on the ground that life was in danger.

In John v. 2 *et seq.* the taking up of the bed would constitute the violation. But possibly "bed" here is a misreading for "staff" ("miṭṭah" instead of "maṭṭeh"). A "lame" person may carry his crutch or staff (Oraḥ Ḥayyim, 301). If, moreover, the reading "bed" must be retained, for which there is a strong presumption, another explanation may be advanced. "Take up thy bed" may be a misapprehension of the Aramaic "ṭol we-ẓe," the well-known formula for bidding one depart, "ṭol" being construed as "pick up" (naturally, therefore, "thy couch"), when in reality it means "pick thyself up," or "walk away." Jesus' saying that the "Sabbath was made for man, and not man for the Sabbath" (Mark ii. 27) is a free translation of the Mekilta's comment on Ex. xxxi. 13—"The Sabbath is given over unto you, you are not delivered unto the Sabbath."

Sabbath Celebration.

A brief description of the Sabbath celebration under the rabbinical system may show that even with all these minute constructions the day was a bringer of unmixed joy. The preparations for the Sabbath having been given in detail in a previous section, they need not be repeated here. At the conclusion of the services in the synagogue with the orphans' "Ḳaddish," the attendants hurried to their homes, where upon crossing the threshold they recited the prayer, "Peace be with ye, ye ministering angels," etc. (comp. Shab. 119b, for the reason why the angels were apostrophized). This prayer was preceded by the greeting "Good Shabbat," which was also exchanged on the way with passers-by; it was followed by the recital, on the part of the husband, of Prov. xxxi. 10 *et seq.*, verses laudatory of the good housewife; after which the younger members of the family were blessed by their parents; the elder sons having received this benediction in the synagogue, where the rabbi was wont to bless all the young people of the congregation. Every family had, as a rule, a stranger as its guest, who had been to the synagogue and had been invited to participate in the celebration of the Sabbath. Students ate at the table of their masters (Güdemann, "Gesch." iii. 102). The meal on the eve of Sabbath began with the "Ḳiddush." The meal itself was sumptuous, fish being a favorite dish (Abrahams, "Jewish Life in the Middle Ages," p. 150). The tableware was often of the finest and costliest; there was hardly a family that did not possess its gold or silver drinking-cup for the "Ḳiddush" and an ornamental seven-branched lamp for Friday night (Abrahams, *l.c.* p. 146). After the meal, the Ashkenazim throughout the year, the Sephardim only in winter and summer, sang the "zemirot ha-Shabbat" (idem, *l.c.* pp. 133 *et seq.*). This was followed by a grace containing a special reference to the Sabbath, after which all retired.

On Sabbath the people slept longer than on week-days (Oraḥ Ḥayyim, 281; comp. Ex. xviii. 4, "in the morning," with verse 9, "uba-yom ha-Shabbat," from which the inference is drawn that on week-days one should rise early in the morning; on Sabbath, when the day is well advanced). After rising and

Sabbath Prayers.

repeating the usual morning prayers, they repaired to the synagogue to recite the "shaḥarit," ending with "ab ha-raḥamim"; after this the Torah roll was taken out and the proper "parashah" read, for which seven men were called up to the pulpit. "Ḳaddish" following, the "maftir" was called up, special benedictions were recited, the Torah returned to the ark, and, finally, the "Musaf" pronounced. The services ended, the second Sabbath meal was commenced. Hands were washed and then the blessing was recited over wine and bread. The meal included the "shallet" (dish kept warm overnight in the congregation's oven) and fruit. After this meal "zemirot" were sung, and, grace being said, the next hours were devoted to study or discourses on the Law. Gilds ("ḥebrot") were sometimes organized for this purpose (Abrahams, *l.c.* p. 327). The discourses were often largely attended (see Maimonides' letter in Abrahams, *l.c.* p. 236). The Rabbis regarded the Sabbath as a befitting occasion to exhort their congregations. The "elders" are bidden to do this by a "taḳḳanah" contained in "Ḥuḳḳe ha-Torah" (published by Güdemann, *l.c.* i. 271), especially that the Torah may again come to its own. People of less serious mood would walk about, or be found dancing or gossiping in the yard of the synagogue (Abrahams, *l.c.* p. 381). Music was not regarded as incompatible with the character of the day, and Christian musicians often played gratuitously (see Mordecai on Beẓah v.; MaHaRIL, Hilkot "'Erube Ḥaẓerot").

Chess was a recreation largely indulged in on Sabbath, the figures being made of silver in honor of the day. Some of the rabbis stipulated that no money should change hands at the play (Löw, "Lebensalter," p. 328). The Minḥah service interrupted studies, but this prayer having been concluded, the discussions were resumed (Pirḳe Abot especially was studied in the summer). After Minḥah the third meal, which, however, was much lighter than the others, was served. The Sabbath concluded with the "Habdalah."

The Sabbath was often a refreshing oasis in the desert of persecution. Maimonides ("Moreh," ch. ii. 31) assigns both repose of body and the symbolization of God's existence as the reasons for its institution. Judah ha-Levi, a most scrupulous observer of the Law, while emphasizing the joyful character of the day, doubts that the Sabbath of the Christians and of the Mohammedans is as blessed as that of the Jews ("Cuzari," iii. 5, 9). His Sabbath hymns, as those of Ibn Ezra and of many others, among them being the "Lekah Dodi," attest the justice of Schechter's words concerning the Sabbath ("J. Q. R." iii. 763): "Notwithstanding rabbinical micrology, the Sabbath was a day of delight, whose coming was looked for with fond anticipations, whose parting was sped with grateful regrets."

In the synagogal services the joyous note alone was heard. In fact, the life of the Jews is ample testimony that the Sabbath under the Law was anything but irksome, gloomy, and fatal to spirituality. Karaitic literalism succeeded in turning the Sabbath into a burden; but rabbinical legalism, with its legal fictions, avoided this. The injunction not to kindle a fire might have worked hardship; but the institution of the Sabbath goy met the exigency, though Meïr Rothenburg and Solomon ben Adret scrupled to avail themselves of this loophole. Even the provisions regulating partnerships with and service of non-Jews with reference to the Sabbath law may be called legal fictions; they are of an order of juridical reasoning which is not foreign to modern English and American courts. Rabbinical law accommodated itself to the demands of life.

J. E. G. H.

——**Laws:** The Sabbath, being the fundamental and the most frequently recurring institution of Judaism, naturally engaged the attention of the Rabbis and of the codifiers to a very great extent. The few scattered laws of the Bible pertaining to the observance of this day grew into two large volumes of the Talmud (Shabbat and 'Erubin), into thirty-eight chapters of the code of Maimonides, and into 175 sections of Caro's Shulḥan 'Aruk. The present article can deal only with the more important laws, especially those having relation to the conditions of modern life. These may be conveniently treated under two headings: (1) laws prohibiting the performance of any kind of work; and (2) those enjoining the observance of certain religious acts and ceremonies.

In the Decalogue.

I. In both Decalogues is included the prohibition against performing any work on the Sabbath-day. In Ex. xx. 10 this prohibition is extended to all the members of one's family (including male and female slaves), to one's cattle, and to "the stranger that is within thy gates." The same prohibition occurs in Deut. v. 14, where details are added and a philanthropic motive is assigned for the rest to be given to the slave on that day. The transgressor of this law incurs the death penalty (Ex. xxxi. 15, xxxv. 2). No precise definition of the term "work" is given in the Bible. From the account of the prohibition against gathering the manna on the Sabbath, it appears that cooking and baking were understood to be included under the head of work (*ib.* xvi. 22-27). The kindling of lights is expressly prohibited (*ib.* xxxv. 3). From Ex. xxxiv. 21 (comp. the parallel passage *ib.* xxiii. 12) it appears that plowing, sowing, and harvesting also were included in this prohibition. It is related (Num. xv. 32-36) that a man who was found gathering sticks on the Sabbath-day was, by divine command, stoned to death. In the prophetic books references are found to what was then regarded as work. Amos (viii. 5) refers to the prohibition of trading on the Sabbath. Jeremiah (xvii. 21, 22) emphasizes this prohibition, and warns the people against carrying burdens or performing any kind of work on the Sabbath-day. Nehemiah enters into a covenant with the people not to buy of strangers who bring their wares to the market on the Sabbath-day (Neh. x. 32); and when he finds this covenant disregarded and sees the people doing all kinds of work, as treading wine-presses, lading asses, and carrying wine, grapes, figs, and all manner of burdens, he remonstrates with the elders and closes the gates of Jerusalem on that day, so that the merchants have to remain outside the city (*ib.* xiii. 15-

21). In other books of the Bible similar references are made to the performance on the Sabbath-day of what was considered work; but nowhere is the term "work" in relation to the Sabbath strictly defined and circumscribed. The Rabbis, however, with their love for legal precision, laid down strict rules for the Sabbath, always endeavoring to find a Scriptural basis for their assertions.

Classes of Prohibited Work.

The Mishnah (Shab. vii. 2) enumerates thirty-nine classes ("abot" = "fathers") of work prohibited on the Sabbath. These are: sowing, plowing, reaping, gathering into sheaves, thrashing, winnowing, cleansing, grinding, sifting, kneading, and baking; shearing, bleaching, beating, and dyeing wool; spinning, making a warp, making two thrum-threads, weaving two threads, splitting two threads, tying, untying, sewing two stitches, tearing in order to sew two stitches; hunting deer, slaughtering, skinning, and salting it (its hide), tanning, scraping off the hair, cutting up (the hide); writing two letters, erasing for the purpose of writing two letters; building, pulling down; extinguishing fire, kindling fire; beating with a hammer; and carrying from one premise into another (see Maimonides, "Yad," Shabbat, vii. 1). All of these kinds of work were presumed by the Rabbis to have been associated with the building of the Tabernacle; and because the prohibition against doing work on the Sabbath is found in close proximity to the account of the erection of the Tabernacle (Ex. xxxv. 2, 3), they assumed that only that was considered work which was necessary to be done in its construction (Shab. 73b, 96b). Each of these thirty-nine classes comprises a number of kinds of work which resemble it in some form or other. The specific kinds of work comprised under one head are called the "toladot" (children) of that class. For instance, the class of plowing, which embraces such kinds of work as digging or making canals, has for its toladot such labors as weeding or the pruning of trees (Shab. 103a; "Yad," *l.c.* viii. 1). Similarly, reaping, which implies all kinds of harvesting, whether of grain, vegetables, or fruit, has for its toladot such acts as plucking fruit from a tree, or tearing off grass or mold that has grown on a box or a barrel, or cutting off a flower (Shab. *l.c.*; "Yad," *l.c.* vii. 4, viii. 3).

There was no distinction in the punishment meted out to the transgressor, whether he performed one of the chief works ("abot") or one of their toladot, except as regards the sacrifice to be offered in case a number of works coming under the same head were performed unwittingly ("shogeg"; "Yad," *l.c.* vii. 7, 8). In either case, if the work was done wittingly ("mezid") in the presence of two witnesses who had warned the transgressor of the attendant penalty, the punishment was stoning; if there were no witnesses, the punishment was "karet"; and if the transgression was committed unwittingly, the transgressor had to bring a sin-offering ("ḥaṭṭat"; *ib.* i. 2).

Modifications as to Punishment.

Work on the Sabbath, in order to be punishable, must be performed with the intention of doing this particular work. If one threw a stone, intending to strike a man or an animal, and the stone struck a tree and broke one of its branches, or if one intended to gather grapes and gathered dates, or vice versa, there was no punishment (מלאכת מחשבת אסרה תורה; Ker. 19a; "Yad," *l.c.* i. 8–13). The necessary result of any action is regarded as lying in the intention of its author, whatever his avowed object may be. For instance, one who cut off the head of a living bird in order to give it to a child as a toy, was declared to be liable to punishment, since the death of the bird was a necessary consequence of the decapitation (פסיק רישיה ואל ימות). Similarly, if a man blew out a light, even though not for the purpose of being in darkness, but merely in order to save the oil or the wick, he was liable to punishment (Shab. 29b, 93a; "Yad," *l.c.* i. 7; comp. RABaD *ad loc.*). If, however, the result was not a necessary one, although it did occur in consequence of the action, there was no punishment. If a man while walking on grass tore some of the blades, he was not liable to punishment, since the tearing of the grass could not be considered as a necessary consequence of the walking thereon (Shab. 95a; "Yad," *l.c.* i. 5, 6). The work, in order to make the agent liable to punishment, had to be such as would be of advantage to him. If a man tore garments or set fire to objects with the sole intention of destroying them, he was not liable to punishment. If, however, he destroyed them with a view to later improvement, as in tearing down a house in order to rebuild it, punishment followed (Shab. 105b; "Yad," *l.c.* i. 17, 18).

Exceptions When Life Is in Danger.

The laws relating to the Sabbath, in common with the other ceremonial laws, are set aside in case of danger to life (סכנה). Moreover, if such an occasion for the violation of the laws arises, the work should be done not by non-Jews or minors, but by adult Jews or learned and pious rabbis, to show that while the laws of the Sabbath are important, the preservation of life is still more so (Tosef., Shab. xvi. 12; "Yad," *l.c.* ii. 3). In case of dangerous illness about which physicians disagree, if only one says that certain work should be done in order to save the patient's life, no question need be asked, and any one may perform such work. If a child is locked in a room and there is danger that it will die of fright, the door may be battered down in order to release it. It is forbidden to hinder even the desecration of the Sabbath when a life is at stake; "for the laws of the Torah are not laws of vengeance against the world, but laws of pity, mercy, and peace" ("Yad," *l.c.* ii. 3).

The regular work of the Temple service was not interrupted on the Sabbath (see SACRIFICES; TEMPLE). Wars of defense might be waged on the Sabbath. Wars of offense were not to be begun during the three days before Sabbath, but if begun earlier they might be continued on that day (Shab. 19a; "Yad," *l.c.* ii. 23–25).

The Rabbis, in their endeavor to insure the proper observance of the Sabbath, prohibited a Jew from ordering a non-Jew to do any kind of work for him on the Sabbath-day ("shebut"). If, however, the non-Jew performed some work for himself, without intending that the Jew should benefit by it, the Jew

Sabbath Work by Gentile for Jew.

might enjoy the product of such work. Thus the Jew might use a light kindled by a non-Jew or grass gathered by a non-Jew for his own benefit (Shab. 19a, 122a; "Yad," *l.c.* vi.). The Jew might even order the non-Jew to do certain work for him, when such work was forbidden only by rabbinic decree. Similarly, in case there was a sick person who was not in danger of death, and in whose behalf the Jew himself dared not violate the Sabbath, the non-Jew might be instructed to do the work ("Yad," *l.c.* ii. 10). When a non-Jew was engaged by contract to do a piece of work for a Jew, the Jew did not need to inquire whether the non-Jew worked on the Sabbath or not, except when the work was to be performed openly and it was known that it was being done for the Jew. Thus, if a non-Jew entered into an agreement with a Jew to build him a house, the Jew had to stipulate in the contract that the non-Jew should do no work on that house on the Sabbath, unless it was to be erected in a place where no Jews passed (*ib.* vi. 12–15). When a Jew and a non-Jew entered into partnership, the Jew had to stipulate beforehand that the non-Jew was to receive all the profits made on the Sabbath and that the Jew should take all the profits made on some other day. If such a condition was not made, the Jew forfeited his share of the profits made on the Sabbath ('Ab. Zarah 22a). According to a later opinion, when the partnership was of such a nature that both partners worked together every day, the non-Jew might attend to the work on the Sabbath and the Jew might take his share of the aggregate profits ("habla'ah"; R. Nissim on Alfasi, 'Ab. Zarah i., end, *s.v.* "Umeha," and Shab. xvi., end, *s.v.* "We-Yisrael"; Shulḥan 'Aruk, Oraḥ Ḥayyim, 245, 1, Isserles' gloss).

The Rabbis forbid also the handling on the Sabbath-day of objects that are "set aside" ("muḳẓeh") for work prohibited on that day. For instance, it is forbidden to handle money, stones, boards, and objects not regarded as vessels (*e.g.*, a candlestick in which candles have burned, although they are now extinguished, or a purse in which money has been held, although now empty), since these objects were "set aside" for service such as is not permitted on the Sabbath. Vessels or other objects that are used in work prohibited on the Sabbath may not be handled unless they are needed for an action that may be performed. For instance, a hammer may be handled if it is needed for the purpose of cracking nuts, or if the place whereon it lies is needed; but it may not be handled for its own sake, *e.g.*, to provide against its being stolen or damaged. It is also forbidden to handle objects that came into their present form of existence on the Sabbath ("nolad"), as an egg laid, fruit that fell from a tree, or milk milked by a non-Jew, on that day ("Yad," *l.c.* xxv., xxvi.; Oraḥ Ḥayyim, 308, 13).

Speaking on Business Matters Forbidden.

Basing their action on the Scriptural passage, "If thou turn away thy foot from the Sabbath, from doing thy pleasure on my holy day . . . and shalt honor him, not doing thine own ways, nor finding thine own pleasure, nor speaking thine own words" (Isa. lviii. 13), the Rabbis forbid conversation about ordinary matters of business; also unnecessary exertion, as running, for any purpose not connected with worship or study. Thus a man is forbidden to examine his fields, to hire workmen, to walk (even less than the forbidden distance) from the town and wait on the way till sunset and then proceed on his journey, to calculate, to read business or even personal letters, to speak of profane objects, and the like. It is, however, permitted to speak or calculate about matters pertaining to holy purposes or to communal affairs, as the engaging of a teacher to teach one's child religion or a trade, or to speculate about matters of congregational concern (Shab. 150a; "Yad," *l.c.* xxiv.; Oraḥ Ḥayyim, 306–307).

With regard to the laws relating to the prohibition of the transportation of objects from one place to another on the Sabbath, the Rabbis distinguish several kinds of premises, *e.g.*, "reshut ha-yaḥid," premises belonging to an individual, measuring at least four square handbreadths ("ṭefaḥim"), and surrounded by a fence at least ten handbreadths in height; "reshut ha-rabbim," public premises, as streets, market-places, or thoroughfares, measuring at least sixteen cubits in width; "karmelit," premises that can be considered neither as public nor as private property, as fields that are not enclosed, streams that are at least ten handbreadths deep and four wide, the sides and corners of streets, or stands erected in front of stores and similar places. In the reshut ha-rabbim and in the karmelit it is forbidden to carry an object a distance of four cubits. In the reshut ha-yaḥid transportation is permitted. The main prohibition is against removing an object from private property to public premises, or vice versa ("Yad," *l.c.* xiv.–xviii.; Oraḥ Ḥayyim, 345 *et seq.*), the difficulties attending which may be overcome by the institution of the 'Erub. The prohibition of the transportation of objects from an enclosed to an open place is extended also to the carrying upon one's garments of objects which can not be regarded as ornaments and which are not necessary for one's health. An animal should not be permitted to leave private premises with anything that may be considered as a burden ("Yad," *l.c.* xix., xx.; Oraḥ Ḥayyim, 301, 5).

Sabbath Journey Limited.

The passage "let no man go out of his place on the seventh day" (Ex. xvi. 29) was interpreted by the Rabbis as a prohibition against going beyond the limits ("teḥum") of the city in which one resides. However, the limits of the city in this connection were regarded as being 2,000 cubits beyond its actual limits. Thus it was permitted to walk within the city, no matter how large, and without the city 2,000 cubits on each side, but not farther than that ("Yad," *l.c.* xxvii., xxviii.; Oraḥ Ḥayyim, 396 *et seq.*; see Jew. Encyc. v. 204, *s.v.* 'Erube Teḥumin).

II. From the expression "Remember the Sabbath day, to keep it holy" (Ex. xx. 8), the Rabbis inferred that the holiness of the Sabbath should be announced at its inception, and thus instituted the Ḳiddush service, to be recited while holding a cup of wine. From the passage "and call the Sabbath a delight, the holy of the Lord, honorable" (Isa. lviii.

13), they further inferred that one should endeavor to provide for the Sabbath objects that delight the soul of man, and to honor it in every way. It is an obligation resting upon every Israelite to eat three meals (according to some four meals; see Ḥidḳa) during the Sabbath-day (Shab. 117b). For these meals the best food that one is able to procure should be prepared (*ib.* 118b). Even those able to enjoy the best food every day of the week should arrange for some change in the Sabbath meals, if it be only in regard to the hours of eating. The poor also should endeavor to provide better food for the Sabbath meals, even if it be only an additional kind of vegetable. One is warned, however, against going to too great an expense in providing for the Sabbath; especially is one warned against soliciting charity for that purpose. On this point the rabbinic maxim is "Make thy Sabbath an ordinary day rather than render thyself dependent on the charity of other men" (*ib.* 118a). It is forbidden to eat a full meal on Friday afternoon, so that one may enjoy one's Sabbath-eve meal with greater relish (see Eve of Holidays). Every Israelite, even though he may have many servants, should himself engage in the preparation of the Sabbath meal. It is customary to have two loaves of bread ("barches"; comp. Jew. Encyc. ii. 529) on the table at each of the meals, symbolizing the double portion of manna gathered by the Israelites on Friday in the wilderness (*ib.* 117b).

Provisions for Sabbath Joy.

The honoring ("kibbud") of the Sabbath consists in wearing finer garments than usual, in being bathed and shaven, and in showing reverence for the day in every manner possible (*ib.* 25b). The lighting of special lights by the housewife on Sabbath eve (see Lamp, Sabbath), the spreading of a special table-cloth, the use of special dishes, may be included under the same heading ("Yad," *l.c.* xxx.; Oraḥ Ḥayyim, 242, 249, 250, 260, 262 *et seq.*).

Sabbath Ritual.

The public worship on the Sabbath has many characteristic features peculiar to the day. Before the regular evening prayers on Friday night, the Sabbath is introduced ("ḳabbalat Shabbat") by the chanting of Ps. xcv.-xcix. (the Sephardim omit these) and xxix., "Lekah Dodi," and Ps. xcii.-xciii. Some read also before the evening service the Song of Solomon, selections from the Zohar, and some cabalistic poems. The service proper is the same as on week-days, except that the last blessing before the 'Amidah is replaced by the two verses Ex. xxxi. 16, 17. A change from the regular form is made also at the end of the benediction "Hashkibenu" (the changes made by the Sephardim are greater than those made by the Ashkenzim). The 'Amidah itself, as well as the 'Amidahs for the other services of the Sabbath, contains only seven instead of the nineteen blessings, the first three and the last three of the latter being retained, while the middle thirteen are replaced by one blessing varying in content in the different services of the day. Ḳiddush is recited by the reader after the 'Amidah so that even those who have no homes may hear this blessing. In many synagogues the Mishnah of the second chapter of the treatise Shabbat is read before Ḳiddush.

In the morning service the "Zemirot" are augmented by the addition of Ps. xix., xxxiv., xc., xci., cxxxv., cxxxvi., xxxii., xcii., xciii., while Ps. c., read on week-days at this point, is omitted (Sephardim read Ps. xix., xxxiii., xxxiv., xc., xci., xcviii., cxxi., cxxii., cxxiii., cxxiv., cxxxv., cxxxvi., and then "Baruk She-Amar" followed by Ps. xcii., xciii.). After the Song of Moses, a special prayer, "Nishmat," is used; and in the "Yoẓer," the first part ("Ha-Me'ir") is replaced by three other selections ("Ha-Kol Yoduka," "El Adon," and "La El Asher Shabbat"). The characteristic feature of the Sabbath-morning service is the Reading from the Law. The taking out of the scroll from the Ark and the replacing of it are usually accompanied by the chanting of various hymns and psalms. After the scroll is replaced the Musaf prayer is recited.

Sabbath afternoon is usually spent by pious Jews in the study of various sacred subjects, each one according to his knowledge and ability. It is not an unusual sight on Sabbath afternoons to see the bet ha-midrash full of people, some reading psalms, others reading from the Scriptures the portion of the week with various commentaries, others studying the haggadic portions of the Talmud, and others again engaged in the study of the more difficult portions of the Talmud and of the codes. These studies are pursued by the people either singly or in groups, each group having its leader or reader. In some synagogues there is a permanent preacher ("maggid"), who delivers a homiletic address during the afternoon; in more modern synagogues the address is delivered by the rabbi during the morning service after the scroll is replaced in the Ark.

Sabbath-Afternoon Service.

The Minḥah service begins with the reading of "Ashre" (Ps. cxlv.) and "U'ba le-Ẓiyyon Go'el," after which the first section of the next week's portion of the Law is read, when only three persons—a kohen, a Levite, and a lay Israelite—are called up to pronounce the blessing. After the 'Amidah it is customary to read one of the chapters of the treatise Abot on summer Sabbaths and Ps. civ., cxx.-cxxxiv. on winter Sabbaths. After Minḥah the last of the three prescribed meals ("shalosh se'uddot") is partaken of, after which the people again assemble in the synagogue to read psalms in unison. Ps. cxix. is recited at dusk; and Ps. cxliv. and lxviii. are sung just before the evening service.

In the prayers for the Sabbath-day all references to sad events should be omitted. It is forbidden to fast on the Sabbath, even for a part of the day (see Fasting), or to lament or to supplicate for relief when one is in distress. On visiting the sick on the Sabbath one should say, "It is Sabbath; we dare not lament: healing will soon come; celebrate your Sabbath in peace" (Shab. 12a). Similarly, on visiting mourners one should say, "It is Sabbath; we dare not console: consolation will soon come" (Oraḥ Ḥayyim, 287, and "Ṭure Zahab" *ad loc.*). Prayers for the dead are read in some synagogues before the scroll is replaced in the Ark, after which a general prayer for the souls of Jewish martyrs of all generations ("ab ha-raḥamim") is recited. These prayers should be omitted when there is present in the synagogue a bridegroom or the father of a child that is to be circumcised on that day, or when the day of the approaching new moon is proclaimed, or on any other joyous occasion (Oraḥ Ḥayyim, 284, 7, Isserles' gloss).

Exaltation of the Sabbath.

The observance of the Sabbath in all its details is highly extolled in the rabbinic haggadah. If all Israel observes two Sabbaths (or even one Sabbath; Lev. R. iii. 1) in all their details, it will immediately be redeemed from exile (Shab. 118b). The Sabbath is a costly present given by God to Israel (*ib.* 10b). The pleasures of the Sabbath are one-sixtieth of the delights of the world to come (Ber. 57b). He who honors the Sabbath with the preparation of delightful things will receive all that his heart desires: his portion will be limitless, and his sins will be forgiven. He who eats the three prescribed meals on the Sabbath will be saved from the troubles of the Messianic age, from the judgment of Gehenna, and from the wars of Gog and Magog (Shab. 118a, b). Had the Israelites observed the first Sabbath in all its details, no nation or tongue could have prevailed against them (*ib.*; comp. *ib.* 87b; Tos. to Shab, *s.v.* "Kasher"). Maimonides concludes the chapters on the laws of the Sabbath in his code with the following paragraph:

> "The institution of the Sabbath and the prohibition against idolatry are each equal in importance to all the other laws of the Torah [comp. Ḥul. 5a]. . . . The Sabbath is also a sign between the Holy One, blessed be He! and us forever. Therefore while he who transgresses all the other laws of the Torah is regarded merely as one of the wicked ones of Israel, he who publicly desecrates the Sabbath is placed on the same level with the idolater. . . . Thus the prophet Isaiah says, 'Blessed is the man that doeth this, and the son of man that layeth hold on it; that keepeth the Sabbath from polluting it, and keepeth his hand from doing any evil' [Isa. lvi. 2]. Tradition plainly declares that the reward of him who observes the Sabbath in all its details will be greater in this world than in the world to come, as it is written, 'Then shalt thou delight thyself in the Lord; and I will cause thee to ride upon the high places of the earth, and feed thee with the heritage of Jacob thy father; for the mouth of the Lord hath spoken it'" (*ib.* lviii. 14; "Yad," *l.c.* xxx. 15; comp. Maimonides, "Moreh," ii. 31).

SABBATH LIGHTS. See LAMP, SABBATH.

SABBATH-SCHOOLS (termed also **Sunday-Schools** and **Religious Schools**): Among the Jews the Sabbath-school or congregational religious school is a product of the nineteenth century. True, in past times every Jewish community of any size had its school for the teaching of the young; but this was a day-school where the children received all their instruction. Moreover, this school, or "ḥeder" as it was called, was a private enterprise of the "melammed" or teacher, and was not a school instituted and supported as such by the congregation. The distinction between secular and religious education which became current in Jewry in the nineteenth century was hardly known before the Mendelssohnian period. The only instruction that the Jewish child had received was in the Hebrew disciplines, Bible, Mishnah, Talmud, and the like. The closing quarter of the eighteenth century witnessed the establishment in Germany of schools for Jewish children in which secular subjects were taught in addition to the Hebrew branches. The first of these schools in point of time was the Freischule founded in Berlin in 1778 by David Friedländer and others. Similar schools were opened during the next few decades in Breslau, Seesen, Dessau, Wolfenbüttel, Frankfort, Cassel, and Hamburg, and gradually throughout Germany and other European countries in which the Jews were being emancipated from medieval conditions. See EDUCATION; PEDAGOGICS.

In the United States.

The absolute separation of secular and religious education through the medium of distinct schools was first achieved in the United States. This was due without doubt to the national policy of the separation of church and state. The public-school system, altogether secular in its nature, was one of the results of this policy. If religious instruction was to be given at all to the children of various denominations it had to be imparted in separate religious schools organized and supported by these denominations. In the few cities of the United States that contained Jewish congregations before the fourth decade of the nineteenth century the children received Hebrew instruction either in a ḥeder or from private teachers at home, but the methods of the ḥeder were too much at variance with the American spirit to be continued for any length of time after the Jewish child had become thoroughly imbued with that spirit.

The fourth decade of the nineteenth century may be regarded as the dividing-line between the old and the new religious educational methods in the United States, as obtaining in the ḥeder, on the one hand, and in the Sabbath-school on the other, because it was in the year 1838 that the first Sunday-school for Jewish children was established. This school was founded in the city of Philadelphia by Rebecca Gratz with the assistance of some ladies of the Mikveh Israel congregation. The school was intended for any Jewish child of the city that desired to attend, and was not therefore, strictly speaking, a congregational school: it was a free religious school, and was conducted along the lines of Christian Sunday-schools. In the same year the Beth Elohim congregation of Charleston, S. C., organized a Sunday-school; and in the following year a similar institution was opened in Richmond, Va., by Congregation Beth Shalome. A number of ladies of the B'ne Israel congregation instituted another such school in Cincinnati in 1842.

At that time there were not twenty congregations in the country; but soon afterward a remarkable congregational activity began which has continued to the present day. New congregations were formed constantly, and these almost invariably made provision for the religious instruction of the children in their Sabbath-schools. At present this is so generally the case that the exception thereto proves the rule. The sessions of these schools are usually held on Sunday mornings, in some instances on Saturday and Sunday mornings, in a few cases on Sunday afternoons, and exceptionally on some week-day afternoon. The subjects taught are Biblical and post-Biblical Jewish history, religious and ethical lessons, and Hebrew, the last-named subject being optional in some schools, while in a very few it is not taught at all. The rabbi is generally superintendent of the school; and in small communities that have no rabbi this office is filled by some interested layman or woman. There are usually five graded classes, the age of admission being fixed at eight years, although some schools have introduced recently a kindergarten class for younger children. The pupils attend the school until they are confirmed; and many schools have post-confirmation classes composed of those who have been confirmed and who return to the school for further instruction in religion and in Jewish history.

Subjects Taught.

There is as yet neither unity nor uniformity among the Jewish religious schools of the United States. Each school is autonomous. In order to promote a sentiment of union the HEBREW SABBATH-SCHOOL UNION OF AMERICA was organized in 1886. At its meeting held in Chicago in Jan., 1905, the union resolved to merge with the Union of American Hebrew Congregations; and the religious educational work will henceforward be conducted under the auspices of the congregational union through a committee to be known as the Committee on Religious Education. The Jewish Chautauqua Society devotes a number of sessions of its summer assembly to the consideration of the problems of religious education; and the Council of Jewish Women has a standing committee on Sabbath-schools. The Central Conference of American Rabbis gives a place in its programs to papers treating of religious pedagogics; and several years ago a committee of the conference prepared a curriculum for Jewish Sabbath-schools. In quite a number of towns where the Jewish communities are not large enough to form congregations, religious schools have been organized, mainly through the agency of the Hebrew Sabbath-School Union. This body has attempted to gather the statistics of the schools of the country; but the returns to date are far from complete. It is, however, safe to say that there is no city or town in the country that contains a congregation where provision is not made for the religious education of the young.

In Europe.

It appears likely that the first congregational religious school ("Religionsschule") in Germany was that established by the Berlin Reform congregation in 1847, although religious classes had previously been conducted by Ludwig Philippson (in Magdeburg), Abraham Geiger (in Breslau), and others. The subjects taught were Bible, history, and religion. Since then the religious school has become an adjunct of all congregations in the larger communities of Prussia; and it is in the strictest sense a congregational school. The government exercises no manner of supervision over or interference with the management of these schools. The same is the case in Saxony. In the other large German states—Baden, Bavaria, and Württemberg—there are no separate Jewish religious schools, moral instruction being imparted to Jewish children in the public schools by the rabbi or the Jewish teacher at certain hours set apart in the curriculum for this instruction. The same holds true of Austria. In France a similar course is pursued in the lycées or secondary schools; the children in the confirmation classes, however, are twice a week instructed in the synagogues by the rabbis.

Up to the year 1876 the Jewish children of London received Hebrew instruction either privately or in the so-called voluntary schools, *i.e.*, Jewish day-schools in which instruction was given in both secular and religious subjects. The Jewish children, however, who attended the board-schools were unprovided with instruction in religious matters. To remedy this defect the Jewish Association for the Diffusion of Religious Knowledge (now the Jewish Religious Education Board) established classes in Hebrew and religious knowledge at the board-school in Old Castle street, Whitechapel. Since then this organization has extended its activity, and has established similar classes in various board-schools in the metropolis. Different congregations, too, have religious classes corresponding to the Sabbath-schools in the United States.

In one form or another, then, the religious education of the Jewish child of to-day is provided for either through the medium of separate religious schools maintained by congregations, as is the case altogether in the United States and partly in England, Germany, and France, or by means of instruction imparted in public schools at stated hours by rabbis or Jewish teachers, as in Austria and partly in England, Germany, and France. It may be stated that the term "Sabbath-school," which has been the designation mostly employed in the United States, has fallen into disfavor, and that many religious educators advocate the use of the term "religious school" in its place.

J. D. P.

SABBATH AND SUNDAY: A brief consideration is desirable as to why and when the keeping of the seventh day as the Sabbath ceased among Christian churches. That Jesus and his disciples kept the seventh day, and without vital departures from Pharisaic usages, is indisputable. The question of Sabbath observance first became acute under Paul, with the rise of the non-Jewish Christian communities. The Petrine, or Judæo-Christian, party insisted on rigid adherence to the Jewish law. It scorned the looser practises of the converts from without Israel. To this Col. ii. 16 *et seq.* has reference; Paul protests against judging the piety of the neophytes "in meat, or in drink, or in respect of a feast-day . . . or a Sabbath-day" (R. V.). He protests with greater bitterness in Gal. iv. 9–11, where observance of days is denounced as a return to the "weak and beggarly elements." In Rom. xiv. 5 *et seq.* it is assumed that whether one day or another is distinguished, or whether all are regarded as equally sacred, is a matter of indifference: every man must decide for himself. Thus while the Petrine partizans continued to assemble for worship on the Sabbath (Acts ii. 1, iii. 1, *et al.*), in non-Jewish Christian circles the first day of the week came to be marked by longer worship than usual and by collections of gifts (I Cor. xvi. 2; comp. Acts xx. 7). The name *κυριακὴ ἡμέρα*

Early Christian Practise.

(= "Lord's day") first occurs in Rev. i. 10, where it may mean the day of judgment (see Day of the Lord); it is next found in Ignatius, "Ad Magnesianos" (§ 9). Pliny testifies to the fact that the Christians assembled on "a fixed day" ("stato die"; "Epistolæ," x. 96).

The author of the "Epistle of Barnabas" adduces the occurrence of the Resurrection on the first day as the reason for the observance of this "true day" (xv.). In the meantime the attitude of the Roman authorities had become intermittently hostile to the Jews; and after the rebellion under Hadrian it became a matter of vital importance for such as were not Jews to avoid exposing themselves to suspicion (Huidekoper, "Judaism at Rome"). The observance of the Sabbath was one of the most noticeable indications of Judaism. Hence, while in the first Christian century more or less regard and tolerance for the Jewish day were shown in Rome, even by non-Jewish Christians, in the second century the contrary became the rule (Justin Martyr, "Dial. cum Tryph." ii., § 28). In the East, however, less opposition was shown to Jewish institutions. Saturday and Sunday both were celebrated by "abstaining from fasting and by standing while praying" (Rheinwald, "Archäologie," § 62). In the West, especially where Roman influence dominated, Saturday was turned into a fast-day (Huidekoper, *ib.* pp. 343-344). The name "Sunday" is used for the first time by Justin Martyr ("Apologies," i. 67) in accommodation to a Roman nomenclature, but with reference to the circumstances that the light was created on the first day (noticed also in the Midrash; Gen. R. iii.: "ten crowns adorned the first day") and that the "light of the world" rose from the night of the grave on the first day of the week. The Christians, accordingly, were obliged to defend themselves against the charge of worshiping the sun (Tertullian, "Apologeticus," xvi.). The celebration of two days (by the Judæo-Christians?) is attested by Eusebius ("Hist. Eccl." iii. 37) and by the "Apostolic Constitutions," which advise the keeping of Saturday as a memorial of the Creation, and of Sunday, the Lord's day, in memory of the Resurrection (ii. 59).

Two Sabbaths Kept in the Second Century.

Originally, then, Sunday and Sabbath were kept sharply distinct. But, like the Jewish Sabbath, Sunday was deemed not merely a holiday, but a holy day, and hence fasting thereon was interdicted (Tertullian, "De Corona Militis," § 3). Ease of mind (*εὐφροσύνη*, which corresponds to "naḥat ruaḥ"; "Epistle of Barnabas," *l.c.*) was the proper condition for the day. One should not kneel at prayer (Irenæus, "Fragm. de Paschate"; "Apostolic Constitutions," *l.c.*); the standing posture, being at first a protest against mourning and ascetic rites (such as were forbidden on the Jewish Sabbath), came to be explained as suggestive of the Resurrection. Tertullian would have all work cease on Sunday as interfering with the proper mental condition, preoccupation and worry being incompatible with joy ("De Oratione," xxiii.).

Down to the sixth century the solicitude of the Church authorities was to prevent what they called the "Judaizing" of the Sunday by the rigorous prohibition of riding, cooking, etc. Even Constantine the Great, when he enacted the first Sunday law in 321, did not refer to Old Testament injunctions, but wished to have the day distinguished and kept sacred merely as the "Sun's day." This first decree was supplemented by orders concerning military exercise, but in general it affected only the courts and the markets (Eusebius, "De Vita Constantini," iv. 18-20, quoted in Herzog-Plitt, "Real-Encyc." xiv. 429). Still, such decrees virtually sanctioned the recognition of Sunday as the sole day of rest, the "Sabbath," and thus consummated the tendency that had been developing in the Christian Church for nearly two centuries to substitute the day of Jesus' resurrection for the Jewish Sabbath. In this way Sunday was given an anti-Jewish significance in accordance with Paul's contention that the Resurrection abrogated completely the old dispensation and the Law.

First Sunday Law, 321.

This aspect of Sunday has been emphasized, and with considerable force, in the discussions more or less continuously provoked in modern Jewry by the increasing neglect of Sabbath observance in the countries where the keeping of Sunday is so strongly established in industrial and social custom that the Jew has been practically compelled to follow the general usage. A few leaders (Holdheim, Samuel Hirsch) proposed to apply to this problem the principles of Reform followed in the readjustment of other religious practises to changed conditions. It is recognized that the Sabbath as the symbol of the full content of Judaism is a fundamental institution; but the argument has been advanced that astronomy discredits the assumption of a universal cosmic seventh day (comp. Judah ha-Levi, "Cuzari," ii. 20); and the notion of God's "resting" on a certain day the beginning and ending of which are determined by terrestrial phenomena, is regarded as tinged with mythology. Six days of labor are prescribed as clearly in the Sabbath law as is one day of rest; both must be religiously observed, which is impossible under prevailing conditions. Furthermore, the phraseology of the commandment does not fix the six days (the definite article is not prefixed to ימים); the definite article before "seventh" implies merely that the day referred to is that following any group of six consecutive days; the phrase "the seventh day" is found also in the Pessah law (Deut. xvi. 8), where it is evident that no fixed day of the week is intended.

Jewish Attitude Toward Sunday.

No obligation should be imposed that is impossible of fulfilment to the majority (B. B. 60b; Maimonides, "Yad," Mamrim, ii. 5). To the Sabbath may be applied Ps. cxix. 126, in the sense often given it (Ber. ix. 5; Yer. Ber. vii. 17; Giṭ. 60a), for now the Sabbath is "remembered," not "observed," just as Pesiḳ. R. 23 asserts is the case with non-Jews. The only consideration to be weighed is the unity of Israel. If all or most Jews were to observe Sabbath on the so-called first day in the manner in which it should be observed, namely, by abstention from work, the difficulty would be met without loss to true religion. This in substance is the contention of Samuel Hirsch and others. Whatever may be the merits of the argument, it has had no practical result. Supplementary Sunday services have been introduced in some congregations, but the facts that Sunday has an anti-Jewish implication and that in the past many allowed themselves to be martyred for the honor of the Sabbath have never failed to arouse both the indifferent and the zealous.

J. E. G. H.

SABBATICAL YEAR AND JUBILEE: The septennate or seventh year, during which the land is to lie fallow, and the celebration of the fiftieth year after seven Sabbatical cycles. As regards the latter, the Hebrew term "yobel" refers to the blast of the shofar on the Day of Atonement announcing the jubilee year (comp. שופרות היובלים = "trumpets of rams' horns"; Josh. vi. 4), though Ibn Ezra thinks it signifies the transfer of properties (comp. יובל; Isa. xviii. 7). So important was the law regarding the jubilee that, like the Decalogue, it was ascribed to the legislation on Mount Sinai (Lev. xxv. 1). It was to come into force after the Israelites should be in possession of Palestine: "When ye come into the land which I give you" (*ib.*). The law provides that one may cultivate his field and vineyard six years, but "in the seventh year shall be . . . a Sabbath for the Lord," during which one shall neither sow nor reap as hitherto for his private gain, but all members of the community—the owner, his servants, and strangers—as well as domestic and wild animals, shall share in consuming the natural or spontaneous yield of the soil.

Biblical Injunctions.

The fiftieth year, *i.e.*, that following the last year of seven Sabbatical cycles, is the jubilee; during it the land regulations of the Sabbatical year are to be observed, as is also the commandment "ye shall return every man unto his possession" (*ib.* verse 10), indicating the compulsory restoration of hereditary properties (except houses of laymen located in walled cities) to the original owners or their legal heirs, and the emancipation of all Hebrew servants whose term of six years is unexpired or who refuse to leave their masters when such term of service has expired (Gen. xviii. 6; 'Ar. 33b; see Josephus, "Ant." vi. 8, § 28).

The regulations of the Sabbatical year include also the annulment of all monetary obligations between Israelites, the creditor being legally barred from making any attempt to collect his debt (Deut. xv. 1 *et seq.*). The law for the jubilee year has not this provision.

Technically the Talmud distinguishes the Sabbatical year for the release or quitclaim of loans as "shemiṭṭah," more distinctly "shemiṭṭat kesafim" (money-release), in contradistinction to "shebi'it" (seventh) or "shemiṭṭat ḳarḳa'ot" (land-release). There is this difference, however, that loans are not annulled before the expiration (= "the end") of every seven years, as the Mosaic law (*ib.*) provides, whereas the land-release, the shemiṭṭat ḳarḳa'ot, begins with the seventh year. The general term for the Sabbatical cycle is "shabua'" = "septennate" (Sanh. v. 1).

Reasons for Observance.

Several reasons are advanced for these laws: (1) In the Cabala the number seven is a symbolic division of time, and is sacred to God. The week of Creation consisted of seven days, the last being the Sabbath. The Feast of Weeks is so called because it occurs seven weeks after Passover, the fiftieth day being Pentecost. These days are parallel to the years of shemiṭṭah and yobel. The duration of the world is 7,000 years, the seven thousandth year being the millennium, the Great Sabbath of the Lord (Sanh. 97a). (2) The physico-economic and socialistic theories are that rest from labor is an absolute necessity both for animal and for vegetable life; that continuous cultivation will eventually ruin the land. The law of the Sabbatical year acts also as a statute of limitation or a bankruptcy law for the poor debtor, in discharging his liability for debts contracted, and in enabling him to start life anew on an equal footing with his neighbor, without the fear that his future earnings will be seized by his former creditors. The jubilee year was the year of liberation of servants whose poverty had forced them into employment by others. Similarly all property alienated for a money consideration to relieve poverty, was to be returned to the original owners without restoration of the amount which had been advanced.

(3) The rabbinical view, however, is that these laws were made to promote the idea of theocracy: that one year in seven might be devoted "to the Lord," as the weekly Sabbath is devoted to rest from manual labor and to the study of the Law. The jubilee was instituted primarily to keep intact the original allotment of the Holy Land among the tribes, and to discountenance the idea of servitude to men. "For unto me the children of Israel are servants; they are my servants" (Lev. xxv. 55); and they shall not be servants to servants, as God's bond has the priority (Sifra, Behar Sinai, vii. 1). That the main object was to keep intact each tribe's inheritance is evident from the fact that shemiṭṭah and yobel were not inaugurated before the Holy Land had been conquered and apportioned among the tribes and their families. The first shemiṭṭah year is said to have occurred twenty-one years after the arrival of the Hebrews in Palestine, and the first yobel thirty-three years later (*ib.* i. 3). The jubilee was proclaimed "throughout all the land unto all the inhabitants thereof"; only when all the tribes were in possession of Palestine was the jubilee observed, but not after the tribes of Reuben and Gad and the half-tribe of Manasseh had been exiled (*ib.* ii. 3); nor was it observed during the existence of the Second Temple, when the tribes of Judah and Benjamin had been assimilated (Sheb. x. 2; 'Ar. 32b). After the conquest of Samaria by Shalmaneser the jubilee was observed nominally in the expectation of the return of the tribes—according to some authorities, Jeremiah brought them back (*ib.* 33a)—and till the final exile by Nebuchadnezzar.

There is a difference of opinion in the Talmud as to whether the jubilee year was included in or excluded from the forty-nine years of the seven cycles. The majority of rabbis hold that the jubilee year was an intercalation, and followed the seventh Sabbatical year, making two fallow years in succession.

Fifty- and Forty-nine-Year Cycles.

After both had passed, the next cycle began. They adduce this theory from the plain words of the Law to "hallow the fiftieth year," and also from the assurance of God's promise of a yield in the sixth year sufficient for maintenance during the following three years, "until the ninth year, until her fruits come in" (Lev. xxv. 22), which, they say, refers to the jubilee year. Judah ha-Nasi, however, contends that the jubilee year was identical with the seventh Sabbatical year (R. H. 9a; Giṭ. 36a; comp. Rashi *ad loc.*). The opinion of the Geonim and of later authorities generally prevails, that the jubilee, when in force during the period of the First Temple, was intercalated, but that in the time of the Second Temple, when the jubilee was observed only "nominally," it coincided with the seventh Sabbatical year. In post-exilic times the jubilee was entirely ignored, though the strict observance of the shemiṭṭah was steadily insisted upon. This, however, is only according to a rabbinical enactment (Tos. to Giṭ. 36a, *s.v.* "Bizeman"), as by the Mosaic law, according to R. Judah, shemiṭṭah is dependent on the jubilee and ceases to exist when there is no jubilee (Giṭ. *l.c.* and Rashi *ad loc.*).

That the Sabbatical year was observed during the existence of the Second Temple is evident from the history of the Maccabees (I Macc. vi. 51, 55). The Mishnah includes in the examination of witnesses questions as to dates, in giving which there must be specified the Sabbatical year, the year, month, week, day, and hour (Sanh. v. 1).

Palestinian Area of Shemiṭṭah.

The area of the Holy Land over which the shemiṭṭah was in force included in the time of the First Temple all the possessions of the Egyptian emigrants ("‘Ole Miẓrayim"), which territory extended south to Gaza, east to the Euphrates, and north to the Lebanon Mountains. Ammon and Moab in the southeast were excluded. In the period of the Second Temple the area of the Babylon emigrants ("‘Ole Babel"), headed by Ezra, was restricted to the territory west of the Jordan and northward as far as Acre (Acco). The Rabbis extended the shemiṭṭah to Syria, in order not to tempt settlers of the Holy Land to emigrate thither (Yad. iv. 3). The area of Palestine was divided into three parts, Judea, Galilee, and the transjordan districts, where shemiṭṭah existed in more or less rigorous observance (see Sheb. ix. and Yer. *ad loc.*).

The duration of the shemiṭṭah year was from autumn to autumn, beginning with New-Year's Day; but as a precaution against any infringement of the Law, the Rabbis extended the time and prohibited sowing and planting thirty days before Rosh ha-Shanah. Still later they prohibited the sowing of grain from Passover, and the planting of trees from Pentecost preceding the shemiṭṭah year, in order not to derive any benefit from the fruits bearing in that year (Sheb. i. 1, ii. 1). The extension of the time is known as "‘ereb shebi‘it" (= "preceding the seventh"). The penalty for non-observance of the shemiṭṭah year is exile; for eating the fruits of the seventh year (*i.e.*, of the sixth year's growth), pestilence (Abot v. 11, 12).

Rabbinical Extensions; Bankruptcy.

The rabbinical enactment extended the shemiṭṭat kesafim or money-release to countries other than the Holy Land, but confined the shemiṭṭat ḳarḳa‘ot or land-release to Palestine within Ezra's boundary-lines of occupation during the period of the Second Temple. The money-release was obviously independent of the Holy Land and was intended to free from his debts the poor in every land, and at a certain period of time. On the other hand, this bankruptcy law checked all business enterprises which the Jews were engaged in after they had largely abandoned agricultural pursuits. Hillel the Elder then amended the law by his institution of the Prosbul. In addition to this subterfuge, there are various exceptions which exclude the following debts from the operation of shemiṭṭah: wages, merchandise on credit, loans on pledges, a note guaranteed by mortgage, one turned over to the bet din for collection (according to the theory of the prosbul), and one which stipulates that the debtor waives the shemiṭṭah defense as regards this particular note (but he can not waive the law in general; Sheb. xi.; Yer. *ad loc.*; Giṭ. 36a, b, 37a).

The shemiṭṭat kesafim was undoubtedly intended for the poor debtor, though the rich man also might take advantage of the general law. The Mishnah, however, plainly expresses the Rabbis' satisfaction with the debtor who does not make use of the shemiṭṭah in order to be relieved of his obligations (Sheb. x. 4). The Rabbis nevertheless desired that "the law of the shemiṭṭah shall not be forgotten" (Giṭ. 36b).

Maimonides, in his responsa, rules that shemiṭṭah is not operative against orphans, but that all other debts are wiped out. Incidentally he says "the Sabbatical year occurred last year" (1507 of the Seleucidan era = 4956 of Creation = 1195 c.e.; "Pe'er ha-Dor," No. 127, Amsterdam, 1765).

Apparently the Jews of Spain, in the thirteenth century, did not observe the shemiṭṭat kesafim; and in Germany the Jews made use of the prosbul. When Asher b. Jehiel (1250–1328) went to Spain he was surprised at the violation of the law of shemiṭṭah, finding that collection was exacted of notes that had passed many shemiṭṭahs without a prosbul (Asheri, Responsa, rule 77, §§ 2, 4, 6). Neither Jacob Asheri in his Ṭur nor Joseph Caro in his Shulḥan ‘Aruk, Yoreh De‘ah, mentions the shemiṭṭat ḳarḳa‘ot and yobel (evidently considering the law obsolete); but both of them refer to the shemiṭṭat kesafim and prosbul (Ḥoshen Mishpaṭ, § 67), which they claim are operative both in and out of Palestine. Moses Isserles adds, however, that the majority of Jewish authorities in Germany are indifferent to or ignore the custom of the shemiṭṭah. He dates the latest shemiṭṭah in the year 5327 (1567 c.e.), and says the next was to occur in 5334 (= 1573 c.e.).

Isserlein, in a responsum ("Terumat ha-Deshen," No. 304), explains the relaxation in the observance in European countries as due to the fact that the rabbinical extension was originally for the purpose "that the law of shemiṭṭah may not be forgotten," and that it was apparently intended to apply to

Relaxation in Observance.

Palestine proper and its neighboring countries, Babylon and Egypt, but not elsewhere. Joseph Colon (Responsa, No. 92) decides that the shemiṭṭah defense is a very weak one; consequently a creditor is believed without an oath when he says that he has lost the prosbul. He rules, as regards the enforcement of the shemiṭṭat kesafim, that the bet din should be guided by the prevailing Jewish custom in the particular country.

The shemiṭṭat kesafim is equally relaxed in Palestine to-day. The principal reasons seem to have been that the fixed date of payment, the guaranty attached, and the terminology of the present-day notes abrogate the law of shemiṭṭah. The shemiṭṭat ḳarḳa'ot, however, has been generally observed in Palestine; and during the shemiṭṭah year the Jews of the Holy Land eat only of the products grown in the transjordanic districts (Schwartz, "Tebu'at ha-Areẓ," ed. Luncz, p. 20, Jerusalem, 1900).

Shemiṭṭah and Palestinian Colonists.

Since the Zionist movement began to encourage agriculture in Palestine, the observance of shemiṭṭah has become a problem for solution. The leaders of the movement, who had the interest of the colonists at heart and feared that the shemiṭṭah might jeopardize their existence, claimed that the law is now obsolete. The Jewish periodicals, especially "Ha-Meliẓ," strenuously objected to enforcing the law of shemiṭṭah upon the colonists. When the shemiṭṭah year 5649 (= 1888-89) approached, the question was submitted to the chief rabbis in Europe and Palestine. Rabbi Isaac Elhanan Spector was inclined to be lenient, and advocated a nominal sale of the land to a non-Jew and the employment of non-Jewish laborers during shemiṭṭah. The Sephardic ḥakam bashi, Jacob Saul Elyashar, concurred in this decision (see his "Simḥah la-Ish," p. 107). But the Ashkenazic rabbis in Jerusalem opposed any subterfuge, and issued the following declaration:

> "As the year of the shemiṭṭah, 5649, is drawing nigh, we inform our brethren the colonists that, according to our religion, they are not permitted to plow or sow or reap, or allow Gentiles to perform these agricultural operations on their fields (except such work as may be necessary to keep the trees in a healthy state, which is legally permitted). Inasmuch as the colonists have hitherto endeavored to obey God's law, they will, we trust, not violate this Biblical command. By order of the bet din of the Ashkenazim at Jerusalem. [Signed by the rabbis] J. L. Diskin and Samuel Salant" ("Ha-Ḥabaẓẓelet," Oct. 26, 1888, No. 6; "Jew. World," Nov. 16, 1888).

An appeal, signed by prominent Jews in Jerusalem, for funds to enable the colonists to observe the shemiṭṭah was directed to the Jews outside the Holy Land. Dr. Hildesheim as president of the society Lema'an Ẓiyyon, in Frankfort-on-the-Main, collected donations for this purpose. Baron Edmond de Rothschild, being informed by Rabbi Diskin that the law of shemiṭṭah is valid, ordered the colonists under his protection in Palestine to cease work during the Sabbatical year.

Talmudic and Samaritan Calculation of Jubilees.

The exact year of the shemiṭṭah is in dispute, and different dates are given. According to Talmudic calculations the entrance of the Israelites into Palestine occurred in the year of Creation 2489, and 850 years, or seventeen jubilees, passed between that date and the destruction of the First Temple. The first cycle commenced after the conquest of the land and its distribution among the tribes, which occupied fourteen years, and the last jubilee occurred on the "tenth day of the month [Tishri], in the fourteenth year after that the city was smitten" (Ezek. xl. 1), which was the New-Year's Day of the jubilee ('Ab. Zarah 9b; 'Ar. 11b-12b). Joshua celebrated the first jubilee, and died just before the second (Seder 'Olam R., ed. Ratner, xi. 24b-25b, xxx. 69b, Wilna, 1895).

The Samaritans in their "Book of Joshua" date the first month of the first Sabbatical cycle and of the first jubilee cycle as beginning with the crossing of the Jordan and the entrance of the Israelites into their possession; and they insist that the date was 2794 of Creation, according to the chronology of the Torah "and the true reckoning known to the sages since the Flood" ("Karme Shomeron," ed. Raphael Kirchheim, § 15, p. 63, Frankfort-on-the-Main, 1851).

The First and the Second Temple, the Talmud says, were destroyed "on the closing of the Sabbatical year" ("Moẓa'e Shebi'it"). The sixteenth jubilee occurred in the eighteenth year of Josiah, who reigned thirty-one years; the remaining thirteen years of his reign, together with the eleven years of those of Jehoiakim and Jehoiachin and the eleven years of that of Zedekiah (II Kings xxv.), fix the first exilic year as the thirty-sixth year of the jubilee cycle, or the twenty-fifth year of the captivity of Jehoiachin, or fourteen years from the destruction of the Holy City ('Ar. and 'Ab. Zarah *l.c.*; see Rashi *ad loc.*).

The Babylonian captivity lasted seventy years. Ezra sanctified Palestine in the seventh year of the second entrance, after the sixth year of Darius, when the Temple was dedicated (Ezra vi. 15, 16; vii. 7). The first cycle of shemiṭṭah began with the sanctification of Ezra. The Second Temple stood 420 years, and was destroyed, like the First, in the 421st year, on the closing of the shemiṭṭah ('Ar. 13a).

Various Dates.

The Talmud gives as a rule for finding the year of shemiṭṭah to add one year and divide by seven the number of years since the destruction of the Second Temple, or to add 2 for every 100 years and divide the sum by seven ('Ab. Zarah 9b). The difference among the Jewish authorities as to the correct shemiṭṭah year is due to the varied interpretation of the words "closing of shebi'it," as meaning either the last year of the cycle or the year after the cycle; also as to the beginning of the exilic shemiṭṭah from the year when the destruction of the Temple occurred, or from the year after. There is another version of the Talmudic rule mentioned above, namely, to "add two years to or deduct five years from" the number of years since the destruction ('Ab. Zarah 9b).

Maimonides gives the date of a shemiṭṭah year occurring in his time as the year 1107 from the destruction of the Temple, 1487 of the Seleucidan era, 4936 of Creation (= 1175 C.E.; "Yad," Shemiṭṭah we-Yobel, x. 4); *i.e.*, he begins the cycle with the year following that of the destruction. Rashi's interpretation is that the destruction occurred at the "closing of shebi'it" (= "after the cycle had been closed with the previous year"), and he makes the year in which the destruction occurred as the first year of the new cycle. Rabbenu Tam agrees with Rashi as to the date of the destruction, but differs from him in asserting that the shemiṭṭah fell in the year of the destruction, which was the "closing year of the cycle." He fixes the shemiṭṭah at the time of his writing as the year 5012 of Creation (= 1251 C.E.; Tos. to 'Ab. Zarah 9b, *s.v.* האי, end); this result agrees with that of Maimonides, though it is reached by a different method of calculation. Rabbenu Hananeel claims that the closing of shebi'it—that is, shemiṭṭah—was the year after the destruction of the Temple.

The year of the shemiṭṭah was finally settled according to the view of Maimonides, which agreed with the most plausible interpretation of the correct Talmudic text and also with the practise of the oldest members of the Jewish communities in the Orient by whom the shemiṭṭah years were observed. Evidence to this effect was given at a conference of rabbis called in Jerusalem, who concurred in the opinion expressed by the rabbis from Safed, Damascus, Salonica, and Constantinople fixing the shemiṭṭah year of their time as 5313 = 1552 (Azkari, "Sefer Ḥasidim," ed. Warsaw, 1879, p. 83).

DATES OF SABBATICAL AND JUBILEE YEARS, ACCORDING TO THE TALMUDICAL CALCULATION.

Period.	Year of Creation.	Year of Settlement in Palestine.	B.C. or C.E.	Number of Sabbatical Years.	Number of Jubilee Years.
Crossing of the Jordan	2489	....	B.C. 1271		(50-year cycle)
Conquest and allotment of Palestine	2503	....	1257		
First Sabbatical year	2510	7	1250	1.	
First jubilee year	2553	50	1207	7.	1.
Exile of the Ten Tribes	3187	684	573	95.6	13.34
Destruction of the First Temple	3338	835	422	117.	16.35
Second entrance to Palestine	3408	From destruction of the Temple.	352	127.	(49-year cycle) 18.7
Seleucidan era commenced	3448		312	135.5	18.47
Destruction of the Second Temple	3828		C.E. 68-69	187.	26.35
Exilic Sabbatical cycle-commenced	3829	1	69-70		
Current Sabbatical year	5665	1836	1904-5	449.2	64.9
Last Sabbatical year will begin	5999	....	2238	497.	71.
Cabalistic jubilee will commence	6000	....	2239

SABBIONETTA.—Typography: From 1551 to 1559 the printer Tobias ben Eliezer Foa produced several Hebrew works beginning with Joseph Shalit's "Merkabat ha-Mishnah" (1551) and finishing with an edition of the Ḥoshen Mishpaṭ of the Ṭur (1559). He began also a maḥzor there in 1556 and finished it in Cremona, whither he moved in 1560; part of his Mishnah, begun in Sabbionetta in 1559, was finished in Mantua in 1563. His career as printer was forcibly ended at Sabbionetta because he had published certain anti-Christian books. His work and possibly his type were taken up by a Christian printer, Vicenzo Conte, who moved from Cremona to Sabbionetta in 1567, and who there produced an edition of the Pirḳe R. Eliezer.

SABEANS: The inhabitants of the ancient kingdom of Sheba in southeastern Arabia, known from the Bible, classical writers, and native inscriptions. The genealogies of Genesis give three pedigrees for Sheba, the eponymous ancestor of the Sabeans, who is variously termed (1) the son of Raamah and the grandson of Cush (Gen. x. 7; I Chron. i. 9; comp. Ezek. xxvii. 22, xxxviii. 13), (2) the son of Joktan and a great-great-great-grandson of Shem (Gen. x. 28; I Chron. i. 22), and (3) the son of Jokshan and a grandson of Abraham by Keturah (Gen. xxv. 3; I Chron. i. 32). There seem, therefore, to have been three stocks of Sabeans: one in Africa (comp. the Ethiopian city of Saba mentioned by Strabo, "Geography," p. 771), and the other two in Arabia. Of the latter one is connected with the story of Abraham, and the other with that of the kingdom localized by Gen. x. 30, including the Joktanites generally, and extending "from Mesha, as thou goest unto Sephar, a mount of the east." In Job vi. 19 the Sabeans are mentioned in close association with the Temeans, an Ishmaelite stock (Gen. xxv. 15) that dwelt in Arabia (Isa. xxi. 14; comp. Jer. xxv. 23-24).

In the Bible.

The Psalms and the prophetical books lay special emphasis upon the wealth and commercial activity of the Sabeans. The gifts of the kings of Sheba (שבא)-and of Seba (סבא) to Solomon are noted in Ps. lxxii. 10, gold being especially mentioned among these presents (*ib.* verse 15). In both these passages the Septuagint, followed by the Vulgate, identifies Sheba with Arabia (*βασιλεῖς 'Αράβων, 'Αραβία*). Isa. lx. 6 adds incense to the gifts which these countries were to bring (comp. Jer. vi. 20). Despite the collocation with Dedan in Gen. x. 7, I Chron. i. 9, and Ezek. xxxviii. 13, the merchants of Sheba, whom Ezekiel addressed in the words "occupied in thy fairs with chief of all spices, and with all precious stones, and gold" (Ezek. xxvii. 22), were doubtless Sabeans; but the reference in the following verse to the "merchants of Sheba," together with Haran, Canneh, Eden Asshur, and Chilmad, who by implication would be Asiatics, is probably a mere dittography, and is rightly omitted in the Septuagint. The wealth of Sheba is indicated also by the list of the gifts brought by its queen to Solomon, and which were "a hundred and twenty talents of gold, and of spices very great store, and precious stones: there came no more such abundance of spices as these which the Queen of Sheba gave to King Solomon" (I Kings

x. 10; comp. *ib.* verse 2; II Chron. ix. 1, 9; see Sheba, Queen of).

The only mention of the Sabeans in a warlike connection is in Job i. 15, where they are described as attacking and killing the servants of Job to rob them of cattle; but according to Joel iv. [A. V. iii.] 8, they dealt in slaves, including Jews. In the New Testament there is a reference to the kingdom of Sheba in the allusion to "the queen of the south" (Matt. xii. 42; Luke xi. 31). Sheba must be carefully distinguished from the Cushite or African Seba (comp. Gen. x. 7; I Chron. i. 9), as is shown by the discrimination between the "kings of Sheba and Seba" in Ps. lxxii. 10, and by the collocation of Egypt, Ethiopia, and Seba in Isa. xliii. 3, xlv. 14.

In the Classical Writers.

Strabo, basing his account for the most part on Eratosthenes, an author of the third century B.C., gives considerable information of value concerning the Sabeans ("Geography," ed. Müller, pp. 768, 778, 780). Their territory was situated between those of the Mineans and Cattabanes; and their capital, Mariaba, stood on the summit of a wooded hill. The country, like those adjoining, was a flourishing monarchy, with beautiful temples and palaces, and with houses which resembled those of the Egyptians. The mode of succession to the throne was peculiar in that the heir apparent was not the son of the king, but the first son born to a noble after the monarch's accession. The king himself was also the judge; but he was not allowed to leave the palace under penalty of being stoned to death by the people.

Commerce, Agriculture, and Religion.

Inscriptions of the Sabeans are numerous, but the information which these records furnish is comparatively meager. They cover, it is true, a period of about 1,300 years, ceasing only with the extinction of the kingdom in the sixth century C.E.; but only of the period just before and just after the beginning of the present era are they sufficiently abundant to allow even an approximation to a coherent history. The earliest inscription known is one containing the name of Yetha-amara, who has been identified with the "Ithamara the Sabean" of an inscription of Sargon dated 715 B.C. Besides the epigraphical remains, there is a large number of coins, dating chiefly from 150 B.C. to 150 C.E. These are of special value for the history of the nation, even during its period of decline, since they bear both the monograms and the names of numerous kings. The Sabean inscriptions are dated by eponymous magistrates previous to the introduction of an era which has been identified with the Seleucidan (312 B.C.), and which has also been fixed by other scholars as beginning in 115 B.C., although there are traces of other chronological systems as well. These texts frequently allude to commerce, agriculture, and religion. The chief articles of trade are the same as those mentioned in the Bible and the classics, with the addition of horses and camels. The agricultural texts are chiefly prayers for increase in crops and live stock, with the inevitable petition of the Semite for male offspring. They contain also a number of plant-names, as well as occasional references to systems of irrigation. The military texts, in their accounts of successful raids on and repulses of other marauding tribes, confirm the allusion in Job i. 15. The references to religion are for the most part names of deities; but the entire lack of description renders a reconstruction of the Semitic pantheon practically impossible. It is clear, however, from the appellations of the gods that the religion of Sheba closely resembled the pre-Islamic Arabian cult, and showed certain affinities with the Assyro-Babylonian system as well. Among the Sabean gods the most important were Almaḳah ("the hearing god"?), Athtar (a protective deity and the male form of "Ashtaroth," to whom the gazel seems to have been sacred), Haubas (possibly a lunar deity), Dhu Samawi ("lord of heaven"), Ḥajr, Ḳainan, Ḳawim ("the sustaining"), Sin (the principal moon-god), Shams (the chief solar deity), Yaṭa‘, Ramman (the Biblical Rimmon), El ("god" in general), Sami‘ ("the hearing"), Shem (corresponding in functions to the general Semitic Ba‘al), Ḥobal (possibly a god of fortune), Ḥomar (perhaps a god of wine), Bashir ("bringer of good tidings"), Raḥman ("the merciful"), Ta‘lab (probably a tree-god), and Wadd (borrowed from the Mineans). A number of goddesses are mentioned, among them Dhat Ḥami ("lady of Ḥami"), Dhat Ba‘dan ("lady of Ba‘dan"), Dhat Gaḍran ("lady of Gaḍran"), and Tanuf ("lofty").

Deities.

It becomes clear, even from this scanty information, that the religion was in the main a nature-cult, like the other Semitic religions; and this is borne out by a statement in the Koran (sura xxvii. 24) that the Sabeans worshiped the sun. Few details of the cult are given, although there are frequent mentions of gifts and sacrifices, as well as of "self-presentation," a rite of doubtful meaning, but one which evidently might be performed more than once. Ritual purity and abstinence of various forms also seem to have formed part of the Sabean religion, and the name of the month Dhu Ḥijjat or Maḥijjat, the only one retained by the Arabs (Dhu'l-Ḥijja, the twelfth month), implies a custom of religious pilgrimage to some shrine or shrines.

Government and Society.

To the account of the government as described by Strabo the Sabean inscriptions add little. The word for "nation" is "khums" (fifth), which apparently implies an earlier division of Arabia or of a portion of it into five parts; and the people were divided into tribes ("shi‘b"), which, in their turn, were composed of "tenths" or "thirds." The kings at first styled themselves "malik" (king) and, possibly later, "mukarrib," a term of uncertain meaning, while they afterward were called "kings of Saba and Dhu Raidan," and finally monarchs of Ḥaḍramaut and Yamanet as well. There were likewise kings of a number of minor cities. From a late text which mentions a king of Ḥimyar and Raidan and of Saba and Silḥin, it has been inferred that the capital of Sheba was later removed to Raidan while the actual palace remained at Ḥimyar, and that from this circumstance the dynasty and all that it ruled were formerly called Himyaritic (the "Homeritæ" of Ptolemy and of Christian ecclesiastical authors), a designation now generally discarded.

The state of society in Sheba seems to have been somewhat feudal in character. The great families, which evidently possessed large landed estates, had castles and towers that are frequently mentioned in the inscriptions; and remains of some of these buildings are still extant. The status of woman was remarkably high. The mistress of a castle is mentioned in one inscription, and the epigraphical remains represent women as enjoying practical equality with men, although a few passages imply the existence of concubinage.

Language.

The Sabean language belonged to the Semitic stock. While some of the inscriptions differ little from classical Arabic, most of them show a close affinity with Ethiopic. The weak letters occasionally possessed their consonantal value as in Ethiopic, although they have become vowels in Arabic. On the other hand, the article is affixed as in Aramaic, instead of being prefixed as in Arabic, and certain syntactic phenomena recall Hebrew rather than the South-Semitic dialects. The alphabet, which, like all the Semitic systems except Ethiopic, represents the consonants only, is plausibly regarded by many as the earliest form of Semitic script.

SABINA POPPÆA. See Poppæa Sabina.

SABINUS: **1.** Roman procurator; treasurer of Augustus. After Varus had returned to Antioch, between Easter and Pentecost of the year 4 B.C., Sabinus arrived at Cæsarea, having been sent by Augustus to make an inventory of the estate left by Herod on his death. Despite his promise to Varus to remain at Cæsarea until the emperor should reach a decision regarding Herod's will, he broke his word and hurried to Jerusalem. His arrival was immediately followed, however, during the week of Pentecost, by a revolt, apparently due to his severe oppression of the people, who retired to the Temple Mount and the hippodrome, and besieged Sabinus in the tower Phasaelus. From this stronghold he encouraged the Romans to fight, and he also sent to Varus for aid; but the Jews hurled from the roof of the Temple stones upon the troops, and so enraged them that they threw inflammable material upon the roof of the colonnade, and set fire to it. The Jews there were unable to save themselves and either perished in the flames or were killed by the Romans, who then entered the Temple and sacked the treasury, from which, according to Josephus, Sabinus himself took 400 talents of gold. Other rioters then besieged Sabinus in the palace of Herod, threatening him with violence if he did not immediately withdraw. While he was still in terror of defeat, Varus arrived with his troops. The Jews then fled in panic; and Sabinus, who had rendered himself liable to the charge of sacrilege, returned at once to Rome.

J. S. O.

SABORA (plural, **Saboraim**): Title applied to the principals and scholars of the Babylonian academies in the period immediately following that of the Amoraim. According to an old statement found in a gloss on a curious passage in the Talmud (B. M. 86a), Rabina, the principal of the Academy of Sura, was regarded as the "end of the hora'ah," *i.e.*, as the last amora, while Sherira Gaon, in his letter (ed. Neubauer, "M. J. C." i. 25), dates the beginning of the activity of the Saboraim from the day of Rabina's death, which he gives as Kislew 13, 811 of the Seleucidan era = Dec. 2, 499 (*ib.* i. 34). He says also (*ib.*), alluding to Rab Jose, Rabina's contemporary at Pumbedita: "In his days the hora'ah was completed, and the Talmud was concluded. Then followed the Saboraim, most of whom died within a few years, as the Geonim have said in their historical notes." The period of the Saboraim was, therefore, brief. In harmony with this, the statement just cited is followed in an ancient authority, the "Seder Tanna'im wa-Amora'im" (Neubauer, *l.c.* i. 180), by a passage reading: "The termination [*i.e.*, the last] of the Saboraim were Gizai [Giza] and Simuna." Although Sherira does not use exactly the same words, yet he declares at the end of his list of the saboraic principals of the school (*ib.* i. 34) that 'Ena, who is identical with Giza, officiated at Sura, while Simuna presided at Pumbedita. It is true that Sherira assigns no date to either of them; but it would seem, from other statements made by him, that their activity ceased before the end of the second half of the sixth century. Abraham ibn Daud, however, says definitely (*ib.* i. 62) that Simuna (or, according to another manuscript, 'Ena) died in 540. This date may, therefore, be taken as the termination of the period of the Saboraim, according to the calculations of Sherira on the basis of ancient geonic traditions.

List of Saboraim.

The following comprises a list of the principals and scholars mentioned by Sherira during this time (*ib.* i. 34), together with the dates assigned them: (1) Sama b. Judah (d. Siwan, 504); (2) Aḥai b. Huna (d. Adar 4, 506); (3) Riḥumai, or Niḥumai (d. Nisan, 506); (4) Samuel b. Judah of Pumbedita (d. Kislew, 506); (5) Rabina of Amisa (d. Adar, 507); (6) Aḥa b. Abuha (d. Yom Kippur, 511); (7 and 8) Teḥinna and Mar Zuṭra, sons of Ḥinenai (d. 515). Sherira adds that (9) Jose or Joseph, mentioned above, long directed the Academy of Pumbedita, while it is known from Abraham ibn

Daud (*ib.* i. 61) that he died in 513; so that there, as elsewhere, Sherira gives him the title of gaon as a director of the pre-geonic period. The list concludes with the names of (10) ‘Ena (*i.e.*, Giza), (11) Simuna, and (12) Rabbai of Rob, who was described by some authorities as a gaon or principal. In another passage (*ib.* i. 25) Sherira enumerates the following Saboraim: Nos. 3, 9, 6 (Aḥa of Be-Ḥatim, a city in the vicinity of Nehardea, mentioned in Giṭ. 7a), 12 (with the statement that Rob likewise was a city in the vicinity of Nehardea, and that a remark by Rabbai of Rob was introduced into the text of the Talmud, Sanh. 43a; see "Diḳduḳe Soferim," ix. 125), 10, and 11.

In Abraham ibn Daud's historical narrative, which as late as the nineteenth century was regarded as an authority for the period of the Saboraim, this period is extended to the year 689, this authority assuming that Ḥinena of Nehar Peḳod, the principal of the Academy of Pumbedita (from 689 to 697), was the first of the Geonim, and that all preceding directors must be regarded as Saboraim. Of the latter he enumerates five generations. The first of these is represented by the single name of Mar Jose (No. 9 in foregoing list), who officiated fourteen years after the completion of the Talmud or, in other words, after Rabina's death. The second generation includes the following Saboraim mentioned by Sherira: Nos. 2, 4 (here called Samuel b. Rabba); Nos. 5, 7 (Taḥnina; variant, Teḥinta); Nos. 11, 10. The pupils of Nos. 11 and 10 constituted the third generation; but their names are unknown, because, as Ibn Daud remarks, the academy had been closed for about fifty years at that period. The last three generations, which, however, are not designated as the fourth, fifth, and sixth, but as the third, fourth, and fifth generations, included the principals of Sura and Pumbedita, who, according to the correct interpretation of Sherira's statements, were the geonim that officiated between 589 and 689 (see Jew. Encyc. v. 571). A noteworthy list of the Saboraim is found in the two versions (edited by Neubauer, *l.c.* i. 177, ii. 246) of an old source based on the "Seder ‘Olam Zuṭa" and the "Seder Tanna'im wa-Amora'im." One of these versions has the following Saboraim mentioned by Sherira: No. 6 (instead of אחימן בני חתום and אחאי מביה תיסי read אחאי מן בי חתים); Nos. 1, 4, 5, 7 (תייקא and קטינא, corrupted from תחינה); No. 8. It names also Aḥai b. Nehilai (possibly identical with No. 2), Gebiha of Argizah (one source has בנבואה מדאנירא, and the other גביהה מאגיזק; this is the Gebiha of ארגיזא mentioned in Giṭ. 7a), and Aḥdeboi. The same list is also found in a version of Sherira's letter, shorter in form, despite its spurious additions (Neubauer, *l.c.* i. 46).

Their Activity.

The activity displayed by the Saboraim is described by Sherira (*ib.* i. 25) in the following terms: "Afterward [*i.e.*, after Rabina] there was probably no hora'ah [*i.e.*, no independent decision based on the interpretation of the Mishnah], but there were scholars called Saboraim, who rendered decisions similar to the hora'ah, and who gave clear explanations of everything that had been left unsettled." This evidently means that although the Saboraim added nothing essentially new to the Talmud as redacted by Ashi and Rabina, they enlarged the text by means of explanations which to a certain extent resembled the decisions of the Amoraim, and which referred especially to questions that had been left vague and undecided by the latter. Sherira says, furthermore (*ib.* p. 26, line 5): "A number of decisions (סברי), rendered by later scholars such as ‘Ena and Simuna, have been included in the Talmud, and we have the statement, transmitted by our forefathers, that the Gemara, from the beginning of the first chapter of Ḳiddushin as far as the words בבכסף מגלן (Ḳid. 2a–3b, line 6), together with all the questions and answers on this passage, is the work of the later scholars, or Saboraim, who included it in the text of the Talmud, while the same statement holds good concerning other passages." The word here used by Sherira ("sebar"; plural, "sebare") for those portions of the Talmud which were added by the Saboraim, explains also the designation of "saboraë" as applied to the immediate successors of the Babylonian Amoraim. The Aramaic noun "sabora" (סבורא) is found in Yerushalmi (Ḳid. 63d) as a term for a scholar competent to render decisions (see Bacher, "Ag. Pal. Amor." iii. 670), although the title, as now used, implies merely private subjective judgment as contrasted with the authoritative decisions and the amoraic interpretations of the Mishnah which were based on tradition. The Saboraim assumed this title probably when they undertook to give the last touches to the Talmud, which had been redacted by Rabina. The "Seder Tanna'im wa-Amora'im" (Neubauer, *l.c.* i. 178; comp. "R. E. J." xxxii. 234; Maḥzor Vitry, p. 484) describes their activity as follows: "They have added nothing of their own to the Talmud, nor have they expressed any divergent opinions, merely determining the arrangement of the text of the Talmud in all its chapters." In this sentence the final redaction of the Talmud as a whole is ascribed to the Saboraim. Those who are first enumerated in Sherira's list, and who outlived Rabina only a few years, evidently continued the work, in which they took part during his lifetime, while Giza and Simuna, the "last Saboraim," completed it.

Final Redaction of Talmud Due to Saboraim.

The nature of the additions made by the Saboraim to the Talmud can only be conjectured. They were partly passages of considerable length, such as the saboraic addition mentioned by Sherira at the beginning of Ḳiddushin, and partly brief notes, especially the anonymous note generally added to a discussion, explaining which of the two opinions under consideration is practical in character ("we-hilketa . . ."). Of particular importance are the additions in which Saboraim are mentioned by name as authors of the notes in question. Aḥai is frequently named, being once (Giṭ. 7a, according to Sherira's reading) explicitly termed Aḥai of Be-Ḥatim (see Tos. to Ket. 2b, *s.v.* פשיט, where R. Samuel b. Meïr's opinion is quoted to the effect that Aḥai of Shabḥa, author of the "She'eltot," is meant; but Samuel b. Meïr evidently named the later scholar Aḥai by mistake instead of the sabora Aḥai); and mention is made also of Samuel b. Abahu (identical with the Samuel b. Rabbah mentioned above), who took part in a controversy with Aḥai (Ḥul. 59b), and of Gebiha of Argizah, who is likewise named in association with Aḥai (Giṭ. 7a). In the present text of the Talmud the maxims of both are given as though they were contemporaries of Ashi (see Jew. Encyc. v. 578, *s.v.* Gebiha of Argizah). Sherira, however, seems to have had a different version of the text. For further details regarding the Talmudical additions ascribed to the Saboraim see N. Brüll, "Entstehungsgeschichte des Babylonischen Talmud als Schriftwerk," in his "Jahrb." ii. 28 *et seq.*; and Rapoport, in "Kerem Ḥemed," vi. 249 *et seq.* The Saboraim may also have formulated the rules collected in the "Seder Tanna'im wa-Amora'im" and governing the decisions of the halakic controversies found in the Talmud.

The arguments advanced in Halevy's confusing discussion ("Dorot ha-Rishonim," iii. 23–63; "R. E. J." xxxiii. 1–17, xxxiv. 241–250), based on an uncritical use of the statements of Sherira Gaon regarding the Saboraim, have been refuted by Epstein ("R. E. J." xxxvi. 222–236).

W. B.

SABSOVICH, HIRSCH LEIB: Mayor of Woodbine, N. J.; born at Berdyansk, Russia, Feb. 25, 1860. After his graduation from the classical gymnasium of his native town he spent two years at the University of Odessa. In 1882 he went to Zurich, Switzerland, and studied agriculture and agricultural chemistry. On his return to Russia in 1885 he continued his studies at the University of Odessa, and helped to organize there the laboratory for agricultural chemistry. From 1886 to 1888 he was manager of an estate in the district of Kuban, northern Caucasus; and in the summer of the latter year he emigrated to the United States. In 1889 he was appointed chemist of the Colorado Experiment Station, Fort Collins, Colo.; and two years later he became agricultural adviser to the newly established agricultural colony at Woodbine (see Jewish Encyclopedia, i. 262).

In the capacities of superintendent of the Woodbine Land and Improvement Company, agricultural adviser to the Woodbine farmers, superintendent of the Baron de Hirsch Agricultural and Industrial School, and mayor of the borough Sabsovich has been intimately connected with Woodbine since its inception. His work has been of great importance in connection with the Agricultural School and with the social, economic, and political progress of Woodbine itself. He has been closely identified also with the Cape May county board of agriculture, having served as its secretary from 1893 until 1898. Sabsovich was elected mayor of Woodbine in 1903; and in the same year he was appointed by the governor of New Jersey a member of the board of visitors to the state college.

A. J. G. L.

SACERDOTE, DONATO: Italian poet; born at Fossano 1820; died there Nov. 27, 1883. Passionately devoted to the classics, Donato from his early youth applied himself to the comparative study of the works of Æschylus, Sophocles, and Euripides and those of Alfieri and Del Monti. Of his own dramas the following deserve special mention: "Bianca Cappello," represented with great success at the Alfieri Theater, Turin, in 1874; "Cola di Rienzo"; "Catilina," tragedy in five acts; and "Eglon," dramatic poem in five acts, full of Biblical inspiration. Sacerdote was also an accomplished writer of sonnets, odes, and songs.

S. F. S.

SACHS, BERNHARD: American physician; born at Baltimore Jan. 2, 1858; educated at Harvard College, Cambridge, Mass., and at the universities of London, Berlin, Vienna, and Strasburg (M.D. 1882). In 1884 he settled in New York city, where since 1888 he has been a specialist in nervous diseases. In 1889 he became professor of neurology at the New York Polyclinic. He belongs to the staffs of the Montefiore Home and the Mount Sinai Hospital also. Sachs is the author of: "Cerebrale Lähmungen der Kinder," 1890 (also in English, "Epilepsy," 1892); "Amaurotische Familiale Idiotie," 1895; "Lehrbuch der Nervenkrankheiten," 1897 (also translated into English).

Bibliography: Pagel, *Biog. Lex.* s.v. *Sachs, Parney*; *Who's Who in America*, 1904.

A. F. T. H.

SACHS, JOHANN JACOB (JOSEPH ISIDOR): German physician; born at Märkisch Friedland July 26, 1803; died at Nordhausen Jan. 11, 1846. Educated at the University of Königsberg (M.D. 1827), he established himself as a physician in Berlin. There he founded in 1832 the "Berliner Medizinische Zeitung," called from 1833 to 1842 "Berliner Medizinische Central-Zeitung," and since the last-noted year "Allgemeine Medizinische Central-Zeitung," under which name the journal is now (1905) published. From 1835 he published also the "Medizinischer Almanach," and from 1837 the "Repertorisches Jahrbuch für die Leistungen der Gesammten Heilkunde," a continuation of Bluff's "Jahrbücher der Fortschritte der Medizin." These two papers were combined in 1843 and issued under the title "Medizinischer Almanach."

In 1841 Sachs received the title "Medizinalrath" from the Grand Duke of Mecklenburg-Schwerin. In 1843 he moved to Nordhausen, where he opened a publishing-house.

Sachs was a prolific writer. His literary undertakings were attacked by J. Mindig and M. Kalisch in 1842, and he defended himself in several essays, especially in "Zur Würdigung der Seitherigen Literarischen Umtriebe Gegen Mich," Berlin, 1842. Among his works may be mentioned: "Grundriss der Diätetik beim Gebrauch Aller Mineralwässer," Berlin, 1830; "Ueber die Cholera auf Deutschem Boden," *ib.* 1831; "Die Influenza in Ihrem Wesen und Ihrer Verbreitung," Potsdam, 1832; "Christian Wilhelm Hufeland," Berlin, 1832; "Das Leben und Streben Samuel Hahnemann's," *ib.* 1834.

Bibliography: Hirsch, *Biog. Lex.*; *Allgemeine Zeitung des Judenthums*, 1903, p. 356.

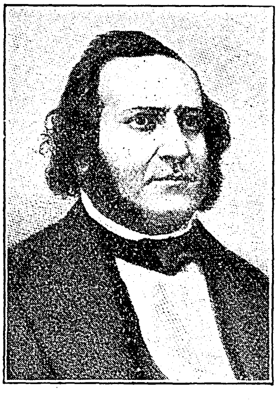
SACHS, JULIUS: American educator; born at Baltimore July 6, 1849; educated at Columbia University and Rostock (Ph.D. 1867). He founded the Collegiate Institute, New York, and is now

(1905) also professor of secondary education in Teachers' College, Columbia University. He has been president of the following bodies: the Schoolmasters' Association (New York); the American Philological Association (1891); the Middle States Association of Colleges and Secondary Schools (1898); the Head Masters' Association of the United States (1899); and the New York Society of the Archæological Institute of America (1900–3). He has, moreover, been a member of the Latin Conference Committee (1893), and a secondary school representative on the College Entrance Examinations Board (1900–4). His writings include contributions on educational problems to the "Educational Review," and on classical philology and archeology to the "Journal of the American Philological Association," as well as occasional reports, papers, and addresses.

BIBLIOGRAPHY: *American Jewish Year Book*, 5665 (1904–5), p. 179.

A. L. H. G.

SACHS, MICHAEL JEHIEL: German rabbi; born at Glogau Sept. 3, 1808; died in Berlin Jan. 31, 1864. He was educated in the University of Berlin, taking the degree of Ph.D. in 1836. In the same year he was called to Prague, where he officiated as preacher until 1844. He was then called to Berlin, where he remained until his death. His attitude toward the Reform question, which had become insistent during the closing years of his life, destroyed the harmony which thitherto had existed between his congregation and himself. There were three points on which the question of Reform became personal to him, and in regard to which he, as rabbi, was required to give decisions. He agreed to the abolition of the piyyuṭim on feast-days; but to the use of the organ during divine service he positively would not consent, although the use of the organ in Jewish services had been introduced in Prague during his rabbinate. The confirmation ceremony was a matter of indifference to him. The final result of his differences with his congregation was that he withdrew into private life and devoted himself to study.



Michael Jehiel Sachs.

Sachs published: a long poem in "Reshit ha-Meliẓah" (Zamosc, 1821); a German translation of the Psalms (Berlin, 1835); the exegesis of the 58th chapter of Jeremiah, published in letter form in "Kerem Ḥemed," vii. 124–138; an essay on Johanan b. Zakkai (*ib.* vii. 269-278); "Religiöse Poesie der Juden in Spanien" (2 parts, Berlin, 1845; the first part is entitled "Religiöse Dichtungen," and contains poems by Ibn Gabirol, Ibn Abitur, Ibn Ghayyat, Behai b. Joseph, Judah ha-Levi, R. Ḥalfon, Ibn Ezra, and Moses b. Naḥman; the second part is entitled "Geschichtliche Entwickelung der Religiösen Poesie der Spanischen Juden im Mittelalter"; the original Hebrew poems are printed together at the end of the work); "Beiträge zur Sprach und Alterthumsforschung" (vol. i., Berlin, 1852; vol. ii., *ib.* 1854); "Stimmen vom Jordan und Euphrat; ein Buch fur's Haus" (1st ed., Berlin, 1853; 3d ed., Frankfort-on-the-Main, 1890). The last-mentioned work is in two sections; the first reproduces in poetical form legends from the Bible, the Talmud, and the Midrash, and contains a number of practical sayings; the second contains stories from the life of Abraham, observations, parables, hymns, and allusions to the Song of Songs. It contains notes by Dr. M. Veit.

The "Beiträge zur Sprach und Alterthumsforschung" discusses the relations of the Greco-Roman world to the Talmudic-midrashic literature and explains the historical method of investigating midrashic word-forms. This line of investigation was at that time entirely new. The work was reviewed by Zacharias Frankel in "Monatsschrift," 1854 (pp. 33–39).

Sachs published also: "Mahzor," a translation of festival prayers (9 vols.; 1st ed., Berlin, 1855; republished five times); a translation of the Siddur (1st ed., *ib.* 1858); "Predigten" (2 vols., *ib.* 1866 and 1869); and he translated fifteen of the books included in Zunz's edition of the Bible.

Moritz Steinschneider ("Hebr. Bibl." vii. 9–10) regarded Sachs as one of the most famous preachers of his time. The lectures delivered by him in 1845 and 1846 on the literature and cultural history of the Jews, and his lectures on the Book of Proverbs, delivered in 1853, were very popular.

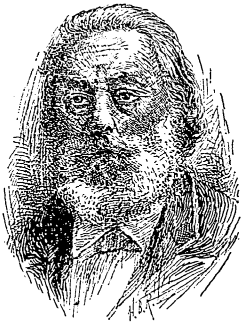
S. S. O.

SACHS, SENIOR: Russo-French Hebrew scholar; born at Kaidany, government of Kovno, June 17, 1816; died at Paris Nov. 18, 1892. When Senior was only one and one-half years old his father, Ẓemaḥ Sachs, became rabbi of Zhagory, also in the government of Kovno, and here he instructed his young son in Hebrew and Talmud. While still a boy Sachs manifested his predilection for Hebrew literature. Later he became acquainted with Joshua Klein, parnas of the Kaidany community, who furnished him with HASKALAH books. Having read Erter's works, Senior purposed going to Brody in order to study directly under that author; but his early marriage, in accordance with the custom of that time, prevented the execution of this plan. He, however, left Zhagory for Wasilishok, where he studied during a whole year as a beneficiary of the bet ha-midrash. Then, after teaching for a year in Dubno, he finally arrived at Brody (*c.* 1839), where, through the assistance of Erter, he earned a livelihood by teaching Hebrew. Meanwhile he studied German and Syriac, and devoted the greater part of his time to reading scientific and philosophical works.

Early Vicissitudes.

Sachs remained two years in Brody, and while there wrote an article in Hebrew on Russo-Hebrew scholars and on the education of the Jews in Russia; this he sent to Jost, who translated it into German, and published it in his "Annalen" (1840, Nos. 4–10), omitting, however, the author's signature. His parents having requested him to return home, Sachs set out on his journey, but, having no passport, was arrested on the Russian frontier. He was brought to Kremenetz, where he was thrown into prison, remaining in confinement five months, when he was liberated through the efforts of Isaac Baer Levinsohn. Sachs stayed at Zhagory six months, when he was invited to teach at Rossiena (Rossieny), where he remained till the end of 1843. At length he went to Berlin (1844), where he entered the university, attending particularly the lectures of Schelling and Althaus. In 1856 Sachs was invited to Paris by Baron Joseph Günzburg to become his private librarian and the tutor of his children.



Senior Sachs.

In Paris Sachs displayed great activity in various branches of Hebrew literature; but as he occupied himself with different subjects at one and the same time, most of his works remained unfinished. While in Berlin he had begun to edit literary periodicals, the first of which was "Ha-Teḥiyyah," treating chiefly of medieval religious philosophy. Only two numbers were issued, the first in 1850 and the second in 1857. In 1850 Sachs edited also Zunz's "Ha-Palit," an index of valuable Hebrew manuscripts, with biographical notes on some of the author's. Of his "Ha-Yonah" only one number appeared (Berlin, 1851); it contains among other things an article by Slonimski on the Jewish calendar according to the ancient Talmudists. Sachs then undertook to continue the publication of the "Kerem Ḥemed," editing vols. viii. (Berlin, 1854) and ix. (*ib.* 1856). His other works are: "Kanfe Yonah," a supplement to "Ha-Yonah" (*ib.* 1858 ?); "Le-Yom Huledet" (Paris, 1859), a pamphlet on the anniversary of Mathilda Günzburg's birth; "Ḳikayon Yonah" (*ib.* 1860), an announcement of the continuation of "Ha-Yonah," containing, besides the prospectus, literary essays; "Ben Yonah" (*ib.* 1860), a rimed prospectus of "Ha-Yonah"; "Sefer Taggin" (*ib.* 1866), a midrash, attributed to R. Akiba, on the crowns of the letters ("taggin"), edited with an essay on the age of this work and also on the "Sefer Shimmusha Rabba" and "Otiyot de-R. 'Aḳiba"; "Reshimah" (*ib.* 1866), a catalogue (unfinished) of the Günzburg library; "Shire ha-Shirim Asher li-Shelomoh" (*ib.* 1868), the poems of Ibn Gabirol revised, punctuated, and commentated by the editor (this work has also a French title, "Cantiques de Salomon ibn Gabirole [Avicebron]"); "Ḥidot R. Shelomoh ben Gabirol" (in "Oẓar ha-Sifrut," iv. 90–111), Ibn Gabirol's riddles with solutions and explanations.

H. R. M. Sel.

SACHS, WILHELM: German dental surgeon; born at Wesenberg, Mecklenburg-Strelitz, Sept. 22, 1849. He received his education at the University of Breslau and the Philadelphia Dental College, graduating as doctor of dental surgery in 1872. After practising dentistry in Vienna (1873) and Paris (1874) he established himself in Breslau, becoming privat-docent in dental surgery at the university of that city in 1890 and receiving the title of professor in 1896.

Sachs has published many essays in the dental journals and is the author of "Die Pflege der Zähne," Stuttgart, 1887. He has contributed articles on the filling of teeth and on pivot-teeth to Scheff's "Handbuch der Zahnheilkunde," Vienna, 1900.

S. F. T. H.

SACKCLOTH (Hebrew, "saḳ"): Term originally denoting a coarsely woven fabric, usually made of goat's hair. It afterward came to mean also a garment made from such cloth, which was chiefly worn as a token of mourning by the Israelites. It was furthermore a sign of submission (I Kings xx. 30 *et seq.*), and was occasionally worn by the Prophets.

As the Old Testament gives no exact description of the garment, its shape must be a matter of conjecture. According to Kamphausen, the saḳ was like a corn-bag with an opening for the head, and another for each arm, an opening being made in the garment from top to bottom. Grüneisen ("Ahnenkultus," p. 80) thinks the saḳ resembled the hairy mantle used by the Bedouins. Schwally (in Stade's "Zeitschrift," xi. 174) concludes that it originally was simply the loin-cloth, which is an entirely different conception from that of Kamphausen or of Grüneisen. Schwally bases his opinion on the fact that the word "ḥagar" is used in describing the mode of putting on the garment (see Josh. i. 8; Isa. iii. 24, xv. 8, xxii. 12; Jer. vi. 26, xlix. 3). One fastens the saḳ around the hips ("sim be-motnayim," Gen. xxxvii. 34; "he'elah 'al motnayim," Amos viii. 10), while, in describing the doffing of the saḳ, the words "pitteaḥ me-'al motnayim" are used (Isa. xx. 2). According to I Kings xxi. 37 and II Kings vi. 30, it was worn next the skin.

Schwally assumes that in prehistoric times the loin-cloth was the usual and sole garment worn by the Israelites. In historic times it came to be worn for religious purposes only, on extraordinary occasions, or at mourning ceremonies. It is natural that, under certain circumstances, the Prophets also should have worn the saḳ, as in the case of Isaiah, who wore nothing else, and was commanded by Yhwh to don it (Isa. xx. 2). Old traditions about to die out easily assume a holy character. Thus Schwally points to the circumstance that the Moslem pilgrim, as soon as he puts his foot on Ḥaram, the holy soil, takes off all the clothes he is wearing, and dons the iḥram.

The views mentioned above of the original shape of the saḳ do not, of course, exclude the possibility that, in accordance with more refined ideas, it was afterward made larger, and in later passages (*e.g.*, Esth. iv. 1, 2; Jonah iii. 5) the verb "labash" is used in describing the mode of putting it on.

J. W. N.

SACKHEIM, ABRAHAM BEN JOSEPH: Lithuanian scholar and Talmudist; died at Wilna June 26, 1872. He was well versed in rabbinics, as may be seen from his "Yad ha-Ḥazaḳah," a casuistic commentary on the Pesaḥ Haggadah (Wilna, 1835; the editor's name appears in this work, Sackheim not wishing to affix his own); and he was acquainted with several European languages. Thus, when Sir Moses Montefiore was entertained in Wilna (1846) by Joseph Sackheim, Abraham's father, Abraham was the interpreter for the English language. He wrote a laudatory epistle on Slonimski's "Kokeba di-Shebit" (*ib.* 1835); and his letters have been published in several works, among them Günzburg's "Debir" (part ii., *ib.* 1862) and Siebenberger's "Oẓar ha-Sherashim ha-Kelali" (part iii., Warsaw, 1862).

Bibliography: Eisenstadt-Wiener, *Da'at Ḳedoshim*, p. 27, St. Petersburg, 1897-98.

E. C. M. Sel.

SACKHEIM, TOBIAH B. ARYEH LÖB: Russian Talmudist and communal worker; died in Rosinoi, government of Grodno, at an advanced age, Jan. 28, 1822. He was a descendant in the sixth generation of Israel b. Shalom of that town, who suffered martyrdom on Rosh ha-Shanah, 1659. Sackheim was a wealthy merchant in his younger days, but retired from business in middle life, and devoted his time to study and charitable work. He was for many years dayyan in Rosinoi, and was highly respected for his piety and other noble qualities. His son **Joseph** was one of the most prominent Jews of Wilna when that city was visited by Sir Moses Montefiore in 1846.

Bibliography: Eisenstadt-Wiener, *Da'at Ḳedoshim*, pp. 19, 22, St. Petersburg, 1897-98.

SACRIFICE: The act of offering to a deity for the purpose of doing homage, winning favor, or securing pardon; that which is offered or consecrated. The late generic term for "sacrifice" in Hebrew is קרבן, the verb being הקריב, used in connection with all kinds of sacrifices.

——**Biblical Data:** It is assumed in the Scriptures that the institution of sacrifice is coeval with the race. Abel and Cain are represented as the first among men to sacrifice; and to them are attributed the two chief classes of oblations: namely, the vegetable or bloodless, and the animal or blood-giving (Gen. iv. 3, 4). After the Flood, Noah offered of "every clean beast, and of every clean fowl" (*ib.* viii. 20). The building of altars by the Patriarchs is frequently recorded (*ib.* xii. 7, 8; xiii. 4, 18; xxi. 33; xxvi. 25; xxxiii. 20; xxxv. 7). Abraham offers a sacrifice at which Yhwh makes a covenant with him (*ib.* xv.). In the history of Jacob a sacrifice is mentioned as a ratification of a treaty (*ib.* xxxi. 54). He sacrifices also when he leaves Canaan to settle in Egypt (*ib.* xlvi. 1). Abraham had been or believed he had been given the command to sacrifice his son (*ib.* xxii.). These ancient offerings included not only the bloodless kind (*ib.* iv. 3), but also holocausts (*ib.* viii. 20, xxii. 13) and animal thank-offerings (*ib.* xxxi. 54, xlvi. 1).

Place of Sacrifice.

The primitive altar was made of earth (comp. Ex. xx. 24) or of unhewn stones (*ib.* xx. 25; Deut. xxvii. 5), and was located probably on an elevation (see Altar; High Place). The story in Genesis proceeds on the theory that wherever the opportunity was presented for sacrifice there it was offered (Gen. viii. 20, xxxi. 54; comp. Ex. xxiv. 4). No one fixed place seems to have been selected (Ex. xx. 24, where the Masoretic text, אזכיר = "I will have my 'zeker' [= "remembrance"]," and Geiger's emendation, תזכיר = "Thou wilt place my 'zeker,'" bear out this inference). This freedom to offer sacrifices at any place recurs in the eschatological visions of the Later Prophets (Isa. xix. 19, 21; Zeph. ii. 11; Mal. i. 11; Zech. xiv. 20, 21), thus confirming the thesis of Gunkel ("Schöpfung und Chaos") that the end is always a reproduction of the beginning.

The Paschal Sacrifice.

Under Moses, according to the Pentateuch, this freedom to offer sacrifices anywhere and without the ministrations of the appointed sacerdotal agents disappears. The proper place for the oblations was to be "before the door of the tabernacle," where the altar of burnt offerings stood (Ex. xl. 6), and where Yhwh met His people (*ib.* xxix. 42; Lev. i. 3; iv. 4; xii. 6; xv. 14, 29; xvi. 7; xvii. 2-6; xix. 21), or simply "before Yhwh" (Lev. iii. 1, 7, 12; ix. 2, 4, 5), and later in Jerusalem in the Temple (Deut. xii. 5-7, 11, 12). That this law was not observed the historical books disclose, and the Prophets never cease complaining about its many violations (see High Place). The Book of Joshua (xxiv. 14) presumes that while in Egypt the Hebrews had become idolaters. The Biblical records report very little concerning the religious conditions among those held in Egyptian bondage. The supposition, held for a long time, that while in the land of Goshen the Israelites had become adepts in the Egyptian sacrificial cult, lacks confirmation by the Biblical documents. The purpose of the Exodus as given in Ex. viii. 23 (A. V. 25) is to enable the people to sacrifice to their God. But the only sacrifice commanded in Egypt (*ib.* xii.) was that of the paschal lamb (see Passover Sacrifice). In the account of the Hebrews' migrations in the desert Jethro offers a sacrifice to Yhwh; Moses, Aaron, and the elders participating therein (*ib.* xviii. 12). Again, at the conclusion of the revelation on Sinai (*ib.* xxiv. 5), Moses offers up all kinds of sacrifices, sprinkling some of the blood on the altar. At the consecration of the Tabernacle the chiefs of the tribes are said to have offered, in addition to vessels of gold and silver, 252 animals (Num. vii. 12-88); and it has been calculated that the public burnt offerings amounted annually to no less than 1,245 victims (Kalish, "Leviticus," p. 20). No less than 50,000 paschal lambs were killed at the Passover celebration of the second year after the Exodus (Num. ix. 1-14).

Private Sacrifices.

According to the Book of Joshua, after the conquest of Canaan the Tabernacle was established at Shiloh (Josh. xviii. 1, xix. 51, xxii. 9). During the periods of the Judges and of Samuel it was the central sanctuary (Judges xviii. 31; I Sam. iii. 3, xiv. 3; comp. Jer. vii. 12), where at certain seasons of the year recurring festivals were celebrated and the Hebrews assembled to perform sacrifices and vows (Judges xxi. 12, 19; I Sam. i. 3, 21; ii. 19). But it seems that the people assembled also at Shechem—where was a sanctuary of Yhwh (Josh. xxiv. 1, 26)—as well as at Mizpeh in Gilead (Judges xi. 11), at Mizpeh in Benjamin (*ib.* xx. 1), at Gilgal (I Sam. xi. 15, xiii. 8, xv. 21), at Hebron (II Sam. v. 3), at Beth-el, and at Beer-sheba (Amos iv. 4, v. 5, viii. 14). They sacrificed at Bochim and Beth-el (Judges iii. 5, xxi. 4). Private sacrifices, also, in the homes of the families, appear to have been in vogue, *e.g.*, in the house of Jesse in Beth-lehem (I Sam. xx. 6), of Ahithophel at Giloh (II Sam. xv. 12), and of Job (Job i. 5, xlii. 8). Assisting Levites are mentioned (Judges xvii. 4-13). Gideon offered at Ophrah (*ib.* vi. 11-20, 26 *et seq.*); Manoah, at Zorah (*ib.* xiii. 16, 19, 20); Samuel, at Mizpeh, Ramah, Gilgal, and Beth-lehem (I Sam. vii. 9, 10, 17; ix. 12, 13; x. 8; xi. 15; xvi. 25); Saul, at Gilgal (*ib.* xiii. 9 *et seq.*) and during his pursuit of the Philistines (*ib.* xiv. 32-35); David, on the thrashing-floor of Araunah (II Sam. vi. 17, xxiv. 25); Absalom, at Hebron (*ib.* xv. 7-9); Adonijah, near En-rogel (I Kings i. 9); Solomon, "in high places" (*ib.* iii. 2, 3); and Elijah, in his contest with the prophets of Baal, on Mount Carmel (*ib.* xviii.). Naaman took Palestinian soil with him because he desired to offer sacrifice to Yhwh in Syria (II Kings v. 17, 19). The Books of Chronicles throw a different light on this period. If their reports are to be accepted, the sacrificial services were conducted throughout in strict conformity with the Mosaic code (I Chron. xv. 26, xxvi. 8-36; II Chron. i. 2-6, ii. 3, xiii. 11). Enormous numbers of sacrifices are reported in them (II Chron. xv. 11; xxix. 32, 33).

In the Solomonic Temple, Solomon himself (though not a priest) offered three times every year burnt offerings and thank-offerings and incense (I Kings ix. 25); he also built high places. Down to the destruction of the Temple, kings, priests, and even prophets, besides the people, are among the inveterate disregarders of the sacrificial ritual of the Pentateuch, worshiping idols and sacrificing to them; *e.g.*, Jeroboam with his golden calves at Dan and Beth-el (I Kings xii. 28; comp. II Kings xvii. 16), Ahimelech at Nob (I Sam. xxi. 2-10), and even Aaron (Ex. xxxii. 1-6, comp. Neh. ix. 18). Ba'al was worshiped (Hos. ii. 10, 15; II Kings iii. 2; x. 26, 27; xi. 18; Judges vi. 25; Jer. vii. 9, xi. 13, xxxii. 29), as were Astarte, Baal-berith, Baal-peor, Baal-zebub, Moloch, and other false gods, in the cult of which not only animal and vegetable but even human sacrifices (see Sacrifice, Critical View) were important features.

Attitude of Prophets.

The attitude of the literary prophets toward sacrifice manifests no enthusiasm for sacrificial worship. Hosea declares in the name of Yhwh: "I desired mercy, and not sacrifice; and the knowledge of Yhwh more than burnt offerings" (Hos. vi. 6; comp. *ib.* viii. 13; ix. 3, 4; xiv. 3). Amos proclaims: "I [Yhwh] hate, I despise your feast-days; . . . if you offer me burnt offerings and your bloodless offerings, I will not accept them nor will I regard the thank-offerings of your fat beasts, . . . but let justice flow like water" (Amos v. 21-24, Hebr.; comp. iv. 4, 5). He goes so far as to doubt the existence of sacrificial institutions in the desert (*ib.* v. 25). Isaiah is not less strenuous in rejecting a ritualistic sacrificial cult (Isa. i. 11-17). Jeremiah takes up the burden (Jer. vi. 19, 20; comp. xxxi. 31-33). He, like Amos, in expressing his scorn for the burnt offerings and other slaughtered oblations, takes occasion to deny that the fathers had been commanded concerning these things when they came forth from Egypt (*ib.* vii. 21 *et seq.*). Malachi, a century later, complains of the wrong spirit which is manifest at the sacrifices (Mal. i. 10). Ps. l. emphasizes most beautifully the prophetic conviction that thanksgiving alone is acceptable, as does Ps. lxix. 31, 32. Deutero-Isaiah (xl. 16) suggests the utter inadequacy of sacrifices. "To do justice and judgment is more acceptable to Yhwh than sacrifice" is found in I Sam. xv. 22 (Hebr.) as a censure of Saul; and gnomic wisdom is not without similar confession (Prov. xv. 8; xxi. 3, 27; xxviii. 9; Eccl. iv. 17). Some passages assert explicitly that sacrifices are not desired (Ps. xl. 7-9, li. 17-19). Micah's rejection of sacrificial religion has become the classical definition of ethical monotheism (Mic. vi. 6-8). Other Psalms and prophetic utterances, however, deplore the cessation of sacrificial services at the Temple and look forward to their reinstitution (Ps. li. 20, 21; Joel ii. 12, 13; Jer. xxxi. 14; xxxiii. 11, 17, 18). The apocalyptic character of some of these predictions is not disputable, neither is that of Isa. xix. 21, lvi. 7, lx. 7. In Ezekiel's scheme of the restoration, also, the sacrifices receive very generous treatment (Ezek. xl.-xlviii.).

The Mosaic Sacrifices.

The Mosaic sacrificial scheme is for the most part set forth in Leviticus. The sacrifices ordained may be divided into the bloodless and the blood-giving kinds. This division takes into consideration the nature of the offering. But another classification may be made according to the occasion for which the oblation is brought and the sentiments and motives of the offerers. On this basis the sacrifices are divided into: (1) burnt offerings, (2) thank- or praise-offerings, (3) sin- or trespass-offerings, and (4) purificative offerings. Among the thank-offerings might be included the paschal lamb, the offering of the first-born, and the First-Fruits; in the category of sin-offerings, the jealousy-offering. As a rule, the burnt, the expiatory, and the purificative offerings were animal sacrifices, but in exceptional cases a cereal sin-offering was accepted or prescribed. Thank-offerings might consist either of animal or of vegetable oblations.

Animal sacrifices were generally accompanied by bloodless offerings, and in many cases by a libation of wine or a drink-offering also. Bloodless offerings were, however, brought alone; for instance, that of the showbread and the frankincense offering on the golden altar. Another classification might be (1) voluntary or free-will offerings (private holocausts and thank- or vow-offerings) and (2) compulsory or obligatory offerings (private and public praise-offerings, public holocausts, and others).

The Materials of Sacrifices.

The sacrificial animals were required to be of the clean class (Gen. vii. 23; Lev. xi. 47, xiv. 4, xx. 25; Deut. xiv. 11, 20). Still, not all clean animals occur in the specifications of the offerings, for which were demanded mainly cattle from the herd or from the flock; viz., the bullock and the ox, the cow and the calf; the sheep, male or female, and the lamb; the goat, male or female, and the kid. Of fowls, turtle-doves and pigeons were to be offered, but only in exceptional cases as holocausts and sin-offerings; they were not accepted as thank- or praise-offerings nor as a public sacrifice. Fishes were altogether excluded. The bullock formed the burnt offering of the whole people on New Moon and holy days, and for inadvertent transgressions; of the chiefs at the dedication of the Tabernacle; of the Levites at their initiation; and of private individuals in emergencies. It was the sin-offering for the community or the high priest, for the priests when inducted into office, and for the high priest on the Day of Atonement. In cases of peculiar joyfulness it was chosen for the thank-offering. The ram was presented as a holocaust or a thank-offering by the people or by their chiefs, the high priest or ordinary priests, and by the Nazarite, never by an individual layman. It was the ordinary trespass-offering for violation of property rights. The kid was the special animal for sin-offerings. It was permitted also for private burnt offerings and for thank-offerings; but it was never prescribed for public burnt offerings. The lamb was employed for the daily public holocausts, and very commonly for all private offerings of whatever character. The pigeon and turtle-dove served for burnt offerings and sin-offerings in cases of lustrations. They were allowed as private holocausts, and were accepted as sin-offerings from the poorer people and as purification-offerings; but they were excluded as thank-offerings, nor did they form part of the great public or festal sacrifices.

The bloodless oblations consisted of vegetable products, chief among which were flour (in some cases roasted grains) and wine. Next in importance was oil. As accessories, frankincense and salt were required, the latter being added on nearly all occasions. Leaven and honey were used in a few instances only.

Qualities of Offerings.

Concerning the qualification of the offerings, the Law ordained that the animals be perfect (Deut. xv. 21, xvii. 1; specified more in detail in Lev. xxii. 18–25), the blind, broken, maimed, ulcerous, scurvied, scabbed, bruised, crushed, and castrated being excluded. This injunction was applied explicitly to burnt (Lev. i. 3; ix. 2, 3; xxiii. 18), thank- (*ib.* iii. 1, 6; xxii. 21), and expiatory offerings (*ib.* iv. 3, 23, 28, 32; v. 15, 18, 25; ix. 2, 3; xiv. 10) and the paschal lamb (Ex. xii. 5). To offer a blemished animal was deemed sacrilegious (Deut. xvii. 1; Mal. i. 6, 7, 8, 9, 13). In most cases a male animal was required; but a female victim was prescribed in a few cases, as, for instance, that of the sin-offering of the ordinary Israelite. In other cases the choice between male and female was left open, *e.g.*, in private thank-offerings and offerings of the firstlings. For pigeons and turtle-doves no particular sex is mentioned.

As to the age of the victims, none might be offered prior to the seventh day from birth (Lev. xxii. 27). Mother and young might not be slaughtered on the same day (*ib.* xxii. 28). The first-born males were to be killed within the first year (Deut. xv. 19 *et seq.*). Burnt offerings and sin- and thank-offerings were required to be more than one year old, as was the paschal lamb (Ex. xii. 5, xxix. 38; Lev. ix. 3; xii. 6; xiv. 10; xxiii. 12, 19; Num. vi. 12, 14; vii. 17, 23, 29; xv. 27; xxviii. 3, 9, 11, 19, 27). For doves and pigeons no age was set. Sometimes the sacrifice called for an animal that had neither done any work nor borne any yoke, *e.g.*, the Red Heifer (Num. xix. 1–10; Deut. xxi. 3, 4). The animal was required to be the lawful property of the sacrificer (II Sam. xxiv. 24; Deut. xxviii. 19; Ezra vi. 9; vii. 17, 22; I Macc. x. 39; II Macc. iii. 3, ix. 16; Josephus, "Ant." xii. 3, § 3).

Liquid Sacrifices.

The ears of corn (Lev. ii. 14) presented as a first-fruits offering were required to be of the earlier and therefore better sort, the grains to be rubbed or beaten out; the flour, as a rule, of the finest quality and from the choicest cereal, wheat. The offering of the wife suspected of adultery was of common barley flour. As to quantity, at least one-tenth part of an ephah or an omer of flour was used. It was mixed with water, and in most cases was left unleavened; it was then made into dough and baked in loaves or thin cakes. The oil had to be pure white olive-oil from the unripe berries squeezed or beaten in a mortar. It was usually poured over the offering or mingled therewith, or it was brushed over the thin cakes. Sometimes, however, the offering was soaked in oil. The frankincense was white and pure. The wine is not described or qualified in the Law. "Shekar" is another liquid mentioned as a libation (Num. xxviii. 7); it must have been an intoxicating fermented liquor, and was prohibited to priests during service and to Nazarites. Salt was used with both the blood-giving and the bloodless sacrifices (Lev. ii. 13); its use is not further described. Leaven and honey were generally excluded, but the former was permitted for the first new bread offered on Pentecost and for the bread and cakes at every praise-offering; the latter, when offered as a first-fruits offering.

Of the necessary preparations the chief was "sanctification" (Joel i. 14; ii. 15, 16; iv. 9; Mic. iii. 5; Neh. iii. 1; Ps. xx.), consisting in bathing, washing, and change of garments, and in conjugal abstinence (Gen. xxxv. 2–4; Ex. xix. 10, 14, 15; xxxiii. 5, 6; Josh. iii. 5, vii. 13). These laws were amplified with reference to the officiating Priest (Ex. xxx. 17–21, xl. 30–32).

No particular time of the day is specified for sacrifices, except that the daily holocausts are to be killed "in the morning" and "between the two evenings" (Ex. xvi. 12; xxix. 39, 41; xxx. 8; Num. xxviii. 4).

Times of Sacrifice.

When the gift had been properly prepared, the offerer, whether man or woman, brought (Lev. iv. 4, 14; xii. 6; xiv. 23; xv. 29) it to the place where alone it was lawful to sacrifice—"before Yhwh," or "to the door of the tent of meeting," *i.e.*, the court where the altar of burnt offering stood. To offer it elsewhere would have been shedding blood (Lev. xvii. 3-5, 8, 9). The injunction to offer in the proper place is repeated more especially in regard to the individual class of sacrifice (Lev. i. 3; iv. 4, 14; vi. 18; xii. 6; xiii. 2, 8, 12; xv. 29; xix. 21). The victim was killed "on the side of the altar [of holocausts] northward" (Lev. i. 11, iv. 24, vi. 18, vii. 2, xiv. 13). When the offering, if a quadruped, had been brought within the precincts of the sanctuary, and after examination had been found qualified, the offerer laid one hand upon the victim's head (Lev. i. 4; iii. 2, 8, 13; iv. 5, 15). On the scapegoat, the high priest laid both of his hands (*ib.* xvi. 21). This "laying on of hands" ("semikah") might not be performed by a substitute (Aaron and his sons laid hands on the sin- and burnt offerings killed on their own behalf; see Lev. viii. 14, 18). After the imposition of his hand, the offerer at once killed the animal. If presented by the community, the victim was immolated by one of the elders (*ib.* iv. 15). Priests might perform this act for the offering Israelites (II Chron. xxx. 15-17; xxxv. 10, 11), though the priestly function began only with the act of receiving the blood, or, in bloodless offerings, with the taking of a handful to be burned on the altar, while the Israelite himself poured over and mixed the oil. The priests invariably killed the doves or pigeons by wringing off their heads (Lev. i. 15, v. 8).

The Blood.

Waving and Heaving.

The utmost care was taken by the priest to receive the blood; it represented the life or soul. None but a circumcised Levite in a proper state of Levitical purity and attired in proper vestments might perform this act; so, too, the sprinkling of the blood was the exclusive privilege of the "priests, the sons of Aaron" (*ib.* i. 5, 11; iii. 2, 8, 13). Moses sprinkled it when Aaron and his sons were inducted; but this was exceptional (*ib.* viii. 15, 19, 23). In holocausts and thank-offerings the blood was sprinkled "round about upon the altar" (*ib.* i. 5, 11; iii. 2, 8, 13). In the sin-offering, the later (*ib.* vii. 2) practise seems to have been to put some of the blood on the horns of the brazen altar, or on those of the golden altar when that was used, or even on parts of the holy edifice (*ib.* iv. 6, 7, 17, 18, 25, 30, 34). The same distinction appears in the case of turtle-doves and pigeons: when burnt offerings, their blood was smeared on the side of the brazen altar (*ib.* viii. 15; xvi. 18, 19); when sin-offerings, it was partly sprinkled on the side of the altar and partly smeared on the base. The animal was then flayed, the skin falling to the priest (*ib.* i. 6, vii. 8). In some Sin-Offerings the skin was burned along with the flesh (*ib.* iv. 11, 12, 20, 21; comp. *ib.* iv. 26, 31, 35). If the entire animal was devoted to the flames, the carcass was "cut into pieces" (*ib.* i. 6, viii. 20). The bowels and legs of the animals used in the burnt offerings were carefully washed (*ib.* i. 9, viii. 21, ix. 14) before they were placed on the altar. Certain offerings or portions thereof had to pass through the ceremony of waving, a rite which is not further described in the Bible (see Sacrifice, in Rabbinical Literature). Another ceremony is mentioned in connection with the waving, viz., the heaving. This ceremony, likewise not further described, was observed with the right shoulder of the thank-offering, after which the part belonged to the priest. The sacrificial rites were completed by the consumption by fire of the sacrifice or those parts destined for God.

Sacrificial meals were ordained in the cases where some portion of the sacrifice was reserved for the priests or for the offering Israelites. The bloodless oblations of the Israelites, being "most holy," were eaten by the males of the priests alone in the court of the sanctuary (*ib.* vii. 9, 10), those of the priests being consumed by fire on the altar. In other sacrifices other provisions for these meals were made (*ib.* vii. 12-14). The repast was a part of the priest's duties (*ib.* x. 16-18). Public thank-offerings seem to have been given over entirely to the priests (*ib.* xxiii. 20), with the exception of the Fat. In private thank-offerings this was burned on the altar (*ib.* iii. 3-5, 9-11, 14-16; vii. 31), the right shoulder was given to the priest (*ib.* vii. 31-34, x. 14-15), the breast to the Aaronites (*ib.* vii. 31-34), and the remainder was left to the offering Israelite. The priests might eat their portions with their families in any "clean" place (*ib.* x. 14). The offering Israelite in this case had to eat his share within a fixed and limited time (*ib.* vii. 15-18, xix. 5-8), with his family and such guests as Levites and strangers, and always at the town where the sanctuary was (for penalty and other conditions see *ib.* vii. 19-21; Deut. xii. 6, 7, 11, 12; I Sam. ix. 12, 13, 19). Participation in the meals of idolatrous sacrifices was a fatal offense (Ex. xxxiv. 14, 15; Num. xxv. 1-3; comp. Ps. cvi. 28, 29).

Compound Sacrifices.

The vegetable- and drink-offerings accompanied all the usual holocausts and thank-offerings on ordinary days and Sabbaths, and on festivals (Num. xv. 3) of whatever character (Ex. xxix. 40, 41; Lev. vii. 12, 13; xxiii. 13, 18; Num. xv. 3-9, 14-16; xxviii. 9, 20, 21, 28, 29). The kind of cereal oblation offered varied according to the species of the animals sacrificed, and the amount was increased in proportion to the number of the latter (Lev. xiv. 21; Num. xv. 4, 12; xxviii. 5, 9, 12; xxix. 3, 4, 9, 10, 14, 15). However, a cereal oblation ("minḥah") might under certain circumstances be offered independently, *e.g.*, the Showbread, the first sheaf of ripe barley on Pesaḥ, the first loaves of leavened bread from new wheat on Pentecost (Lev. xxiii. 16, 17, 20; Num. xxviii. 26), and the sin-offering of the very poor (Lev. v. 11-13). The minḥah with the burnt offerings and thank-offerings was always fine wheaten flour merely mingled with oil; it is not clear whether this minḥah was burned entirely (*ib.* xiv. 20; comp. *ib.* ix. 16, 17). If it was presented alone as a free-will offering or as a votive offering, it might be offered in various forms and with different ceremonies (*ib.* ii. 2; v. 12; vi. 8; vii. 9, 10; also ii.; vi. 12-16; vii. 12-14; xxvii. 10, 11). The mode of libation is not described in the Law; but every holocaust or thank-offering was to be accompanied with a libation of wine, the quantity of which was exactly graduated according to the animal, etc. (Num. xv. 3-11). Water seems to have been used at one time for "pouring out" before Yhwh (I Sam. vii. 6; II Sam. xxiii. 16). As to the spices belonging to the sacrifices, four are named in the Torah, Balsam and Frankincense being the more important ("stacte, and onycha, and galbanum . . . with pure frankincense," Ex. xxx. 34).

——**In Rabbinical Literature:** The sacrifices treated of in the Law were, according to tradition, the following: (1) the holocaust ("'olah"); (2) the meal-offering ("minḥah"); (3) the sin-offering ("ḥaṭat"); (4) the trespass-offering ("asham")—these four were "holy of holies" ("ḳodesh ha-ḳodashim"); (5) the peace-offerings ("shelamim"), including the thank-offering ("todah") and the voluntary or vow-offering ("nedabah" or "neder"). These shelamim, as well as the sacrifice of the first-born ("bekor") and of the tithe of animals ("ma'aser" and "pesaḥ"), were less holy ("ḳodashim ḳallim"). For the 'olot, only male cattle or fowls might be offered; for the shelamim, all kinds of cattle. The ḥaṭat, too, might consist of fowls, or, in the case of very poor sacrificers, of flour. For the trespass-offering, only the lamb ("kebes") or the ram ("ayil") might be used. Every 'olah, as well as the votive offerings and the free-will shelamim, required an accessory meal-offering and libation ("nesek"). To a todah were added loaves or cakes of baked flour, both leavened and unleavened.

Acts of Sacrifice.

Every sacrifice required sanctification ("ḥakdashah"), and was to be brought into the court of the sanctuary ("hakrabah"). In the animal offerings the following acts were observed: (1) "semikah" = laying on of the hand (or both hands, according to tradition); (2) "sheḥiṭah" = killing; (3) "ḳabbalah" = gathering (receiving) the blood; (4) "holakah" = carrying the blood to the altar; (5) "zeriḳah" = sprinkling the blood; (6) "haḳṭarah" = consumption by fire. For the sacrifices of lesser holiness the victims might be slaughtered anywhere in the court; for the ḳodesh ha-ḳodashim, at the north side of it only. Zeriḳah, in all cases except the sin-offering, consisted of two distinct acts of sprinkling, in each of which two sides of the altar were reached. In the case of the sin-offering, the blood was as a rule smeared with the fingers on the four horns of the brazen altar, but in some instances (*e.g.*, in the case of the bullock and the goat on Yom ha-Kippurim) it was sprinkled seven times upon the curtain of the Holy of Holies and smeared upon the four horns of the golden altar. Offerings of the latter class were on this account called the "inner" sin-offerings. The remainder of the blood of these was poured out at the base of the west side of the brazen altar; in other oblations, on the south side.

The haḳṭarah consisted in flaying the carcass and cutting it into pieces, all of which, if it was an 'olah, were burned on the altar; in the case of other offerings only a few prescribed parts, which were called the "emorim," were burned. If an 'olah consisted of a fowl, the acts of offering were as follows: (1) "meleḳah" = wringing the neck so as to sever both the esophagus and the trachea; (2) "mizẓuy" = the pressing out of the blood against the wall; (3) "haḳṭarah" = burning. When a fowl was sacrificed for a sin-offering the procedure was as follows: (1) "meleḳah" = wringing the neck, but less completely, only one "siman" being severed; (2) "hazzayah" = sprinkling the blood; and (3) the "mizẓuy."

Preparation of Minḥah.

In the preparation of the meal-offering some differences were observed. Most of such offerings were of the finest wheat flour, the minimum quantity being fixed at an "'issaron" (= one-tenth ephah). One log of oil and a handful of incense were added to every 'issaron. Mention is made of the following minḥot: (1) "minḥat solet," the meal-offering of flour, of which a handful ("ḳomeẓ") was placed on the altar; (2) "me'uppat tanur" = baked in the oven (*i.e.*, consisting either of cakes ["ḥallot"] or wafers ["reḳiḳin"], both of which were broken into pieces before the ḳomeẓ was taken from them); (3) "'al ha-maḥabat" = baked in a flat pan; (4) "'al ha-marḥeshet" = baked in a deep pan; (5) "minḥat ḥabitim" (this consisted of one-tenth ephah of flour mixed with three logs of oil, formed into twelve cakes, and baked in pans, six of which cakes the high priest offered by burning with a half-handful of incense in the morning, and the other six in the evening; Lev. vi. 12 *et seq.*); (6) "minḥat 'omer" (= "second of Passover"; see 'Omer), consisting of one-tenth of an ephah of barley flour, incense, and oil (*ib.* xxiii. 10; comp. *ib.* ii. 14); (7) "minḥat ḥinnuk," the dedication meal-offering (similar to minḥat ḥabitim, with the difference that only one log of oil was used, and the whole was burned at once [*ib.* vi. 13; Maimonides, "Yad," Kele ha-Miḳdash, v. 16; Sifra, Ẓaw, ii. 3; Sifra, ed. Warsaw, 1866, p. 31b; Rashi on Men. 51b; comp. Men. 78a; Hoffmann, "Leviticus," pp. 230 *et seq.*]); (8) "minḥat ḥoṭe," the meal-offering of the very poor, when compelled to offer a "ḳorban 'oleh we-yored"; (9) "minḥat soṭah," the jealousy meal-offering (Num. v. 15); (10) "minḥat nesakim," the meal-offering of the libations (*ib.* xv.).

Haggashah.

"Haggashah," the carrying to the "ḳeren ma'arbit deromit" (Lev. vi. 7; Hoffmann, *l.c.* p. 150), the southwest corner of the altar, of the vessel or pan in which the minḥah had been placed, was the first act. The second, in the case of the meal-offering of the priests ("minḥat kohen"), was the burning. In other cases, (1) the "ḳemiẓah" (taking out a handful) followed upon the haggashah, and then ensued (2) the putting of this handful into the dish for the service ("netinat ha-ḳomeẓ bi-keli sharet"), and finally (3) the burning of the ḳomeẓ ("haḳṭarat ḳomeẓ"). At the 'omer- and the jealousy-minḥah (6 and 9 above), "tenufah" (waving) preceded the haggashah.

Burnt offerings, meal-offerings, and peace-oblations might be offered without specific reason as free-will offerings ("nedabot"); not so sin- and trespass-offerings, which could never be nedabot. A sin-offering might be either "kabua'" (fixed) or a "ḳorban 'oleh we-yored" (*i.e.*, a sacrifice dependent on the material possessions of the sacrificer; the rich bringing a lamb or a goat; the poor, two doves; and the very poor, one-tenth of an ephah of flour). This latter ḳorban was required for the following three sins: (1) "shebu'at ha-'edut" or "shemi'at ḳol" (Lev. v. 1, in reference to testimony which is not offered); (2) "ṭum'at miḳdash we-ḳodashim" (unwittingly rendering unclean the sanctuary and its appurtenances; *ib.* v. 2, 3); and (3) "biṭṭuy sefatayim" (incautious oath; *ib.* v. 5 *et seq.*; Shebu. i. 1, 2). In the last two cases the ḳorban was required only when the transgression was unintentional ("bi-shegagah"); in the first, also when it was intentional ("be-mezid"). The offering of the leper and that of the woman after childbirth were of this order ("Yad," Shegagot, x. 1).

This principle obtained with reference to the fixed sin-offerings: offenses which when committed intentionally entailed excision required a sin-offering when committed inadvertently, except in the case of BLASPHEMY and in that of neglect of CIRCUMCISION or of the Passover sacrifice. The latter two sins, being violations of mandatory injunctions, did not belong to this category of offenses, which included only the transgression of prohibitory injunctions, while in blasphemy no real act is involved ("Yad," *l.c.* i. 2). Of such sin-offerings five kinds were known: (1) "par kohen mashiaḥ" (Lev. iv. 3 *et seq.*), the young bullock for the anointed priest; (2) "par ha-'alem dabar shel ẓibbur" (*ib.* iv. 13 *et seq.*), the young bullock for the inadvertent, unwitting sin of the community; (3) "se'ir 'abodat elilim" (Num. xv. 22 *et seq.*), the goat for idolatry—these three being designated as "penimiyyot" (internal; see above); (4) "se'ir nasi," the he-goat for the prince (Lev. iv. 22 *et seq.*); (5) "ḥaṭṭat yaḥid," the individual sin-offering—these last two being termed "ḥiẓonot" (external; Zeb. 4b, 14a) or, by the Mishnah (Lev. xi. 1), "ne'ekelot" (those that are eaten; "Yad," Ma'ase ha-Ḳorbanot, v. 7–11).

The trespass-offerings ("ashamim") were six in number, and the ram sacrificed for them was required to be worth at least two shekels: (1) "asham me'ilot" (Lev. v. 14 *et seq.*); (2) "asham gezelot" (*ib.* v. 20 *et seq.*; in these two, in addition, "ḳeren we-ḥomesh" [= principal plus one-fifth] had to be paid); (3) "asham taluy," for "suspended" cases, in which it was doubtful whether a prohibition to which the penalty of excision attached had been inadvertently violated (*ib.* v. 17 *et seq.*); (4) "asham shipḥah ḥarufah" (*ib.* xix. 20 *et seq.*); (5) "asham nazir" (Num. vi. 12), the Nazarite's offering; (6) "asham meẓora'" (Lev. xiv. 12), the leper's offering. In (5) and (6) the sacrifice consisted of lambs.

Vegetable Sacrifices.

In reference to the vegetable or unbloody oblations, it may be noticed that the Talmud mentions certain places where the grapes for sacrificial wine were grown (Men. viii. 6), *e.g.*, Kefar Signah. On the strength of Prov. xxiii. 31 and Ps. lxxv. 9 (A. V. 8) some have contended that only red wine was used (but see Bertinoro on Men. viii. 6). Salt was indispensable in all sacrifices, even the wood and the libations being salted before being placed on the altar (Men. 20b, 21b).

While the text of the Pentateuch seems to assume that in the laying on of hands one hand only was employed, rabbinical tradition is to the effect that both were imposed and that with much force (Men. 93a; Ibn Ezra on Lev. v. 4; but Targ. Yer. says the right hand only). This semikah had to be performed personally by the offerer; but in case the latter was an idiot, a minor, deaf, a slave, a woman, blind, or a non-Israelite, the rite was omitted. If two partners owned the animal jointly, they had to impose their hands in succession. Only the Passover sacrifice ("pesaḥ") and those of the first-born and the tithe were exceptions to the rule that individual sacrifices were to include semikah. Communal offerings, except that mentioned in Lev. iv. 13 *et seq.*, and the scapegoat (Lev. xvi. 21), were exempt. In the case of the former the act was performed by the elders; in that of the latter, by the high priest. R. Simon is given as authority for the statement that in the case of the goat offered as a sacrifice for idolatry (Num. xv. 34) the elders were required to perform the laying on of hands (Men. 92a).

The position assumed by the offerer during this ceremony is described in Tosef., Men. x. 12 (comp. Yoma 36a). The victim stood in the northern part of the court, with its face turned to the west; the offerer, in the west with his face likewise to the west. Maimonides asserts that in the case of the ḳodesh ha-ḳodashim the offerer stood in the east looking westward ("Yad," Ma'ase ha-Ḳorbanot, iii. 14). The offerer placed his two hands between the animal's horns and made a confession appropriate to the sacrifice. In the case of a peace-offering, confession would not be appropriate, and in its stead laudatory words were spoken ("Yad," *l.c.* iii. 5). The holakah (by this term is denoted the carrying of the pieces of the dismembered victim [Zeb. 14a, 24a; Men. 10a] as well as the carrying of the blood to the altar) is not mentioned in the Bible as one of the successive acts of the sacrifices. However, as the slaughtering might take place at the altar itself, this act was not absolutely required: it was an "'abodah she-efshar le-baṭṭeah," a ceremony that might be omitted. The blood was collected by a priest in a holy vessel called the "mizraḳ." The holakah, it was generally held, might be performed by priests only, though R. Ḥisda (Zeb. 14a) thinks that laymen were permitted to undertake it.

Terumah.

Where terumah or heaving was prescribed, the part subject to this rite was moved perpendicularly down and up, or up and down. In tenufah or waving the motion was horizontal from left to right or vice versa (Men. v. 6; see Rashi on Ex. xxix. 24). The killing might be done by laymen as well as by priests ("Yad," *l.c.* v. 1 *et seq.*); minute directions concerning the place of its performance were observed ("Yad," *l.c.*; see Ey-zehu Meḳoman, Zeb. v.). In the Second Temple a red line was marked on the altar five ells from the ground below or above which, as the case required, the blood was sprinkled (Mid. iii. 1). Regulations concerning the localities, three in number, where parts of the victim, or the entire carcass under certain eventualities, had to be burned, were prescribed (Zeb. xii. 5).

Under the name "ḥagigah" were known free-will offerings of the shelamim class presented by individuals, mostly at festivals (Ḥag. i. 2, 5).

The defects which in Talmudic law disqualified the victims were minutely described (see "Yad," Issure ha-Mizbeaḥ). While in the Bible the incense consisted of four ingredients, the Rabbis add seven others, making the total number eleven (Ker. 6a; Yoma iii. 11; Yer. Yoma 41d; comp. "Yad," Kele ha-Miḳdash, ii.).

Sacrifice in the Haggadah.

According to the Shammaites, the two lambs of the daily "tamid" (Num. xxviii. 3) indicate by their name that the sacrifices "press down" (כבש), *i.e.*, diminish, the sins of Israel. The Hillelites connect the term with the homonym כבס (= "to wash"), and contend that sacrifices wash Israel clean from sin (Pes. 61b). Johanan ben Zakkai held that what was wrought for Israel by the sacrifices was accomplished for the non-Israelites by philanthropy (B. B. 10b); and when the Temple was destroyed he consoled his disciple Joshua by insisting that good deeds would take the place of the sin-offerings (Ab. R. N. iv.).

The sacrificial scheme was the target at which gnostics and other skeptics shot their arrows. God, it was argued, manifested Himself in this as a strict accountant and judge, but not as the author of the highest goodness and mercy. In refutation, Ben 'Azzai calls attention to the fact that in connection with the sacrifices the only name used to designate God is YHWH, the unique name ("Shem ha-Meyuḥad; Sifra, Wayiḳra, ii. [ed. Weiss, p. 4c], with R. Jose b. Ḥalafta as author; Men. 110a; Sifre, Num. 143). Basing his inference on the phrase "for your pleasure shall ye offer up" (Lev. xxii. 29, Hebr.), Ben 'Azzai insists also that sacrifices were not planned on the theory that, God's will having been done by man, man's will must be done in corresponding measure by God: they were merely expressive of man's delight; and God did not need them (Ps. l. 12, 13; Sifre, *l.c.*; Men. 110a).

Speculating on the exceptions which the minḥah of the sinner and that of the jealousy-offering constitute, in so far as neither oil nor incense is added thereto, Simeon ben Yoḥai points out that the absence of these components indicates that the offering of a sinner may not be adorned (Tos. Soṭah i. 10; Men. 6a; Soṭah 15a; Yer. Soṭah 17d). The name of the 'olah indicates that the sacrifice expiates sinful thoughts ("go up into one's mind"; comp. Job i. 5; Lev. R. vii.; Tan., Lek Leka, ed. Buber, 13; for other comments of similar purport see Bacher, "Ag. Tan." ii. 104). The defense of the Law for having forbidden the participation of non-Israelites in the communal sacrifices while it permitted the acceptance of their free-will offerings (Sifra, Emor, vii. [ed. Weiss, p. 98a]), was not a matter of slight difficulty. A very interesting discussion of the point is found in the appendix to Friedmann's edition of the Pesiḳta Rabbati (p. 192a), in which the non-Jew quotes with very good effect the universalistic verse Mal. i. 11.

Functions of the Several Offerings.

To bring peace to all the world is the purpose not merely of the peace-offerings, but of all sacrifices (Sifra, Wayiḳra, xvi. [ed. Weiss, p. 13a]). It is better to avoid sin than to offer sacrifices; but, if offered, they should be presented in a repentant mood, and not merely, as fools offer them, for the purpose of complying with the Law (Ber. 23a). God asked Abraham to offer up Isaac in order to prove to Satan that, even if Abraham had not presented Him with as much as a dove at the feast when Isaac was weaned, he would not refuse to do God's bidding (Sanh. 89b). The sacrificial ordinances prove that God is with the persecuted. Cattle are chased by lions; goats, by panthers; sheep, by wolves; hence God commanded, "Not them that persecute, but them that are persecuted, offer ye up to me" (Pesiḳ. de R. Kahana 76b; Lev. R. xxvii.). In the prescription that fowls shall be offered with their feathers is contained the hint that a poor man is not to be despised: his offering is to be placed on the altar in full adornment (Lev. R. iii.). That sacrifices are not meant to appease God, Moses learned from His own lips. Moses had become alarmed when bidden to offer to God (Num. xxviii. 2): all the animals of the world would not suffice for such a purpose (Isa. xl. 10). But God allayed his apprehension by ordaining that only two lambs (the tamid) should be brought to him twice every day (Pes. 20a, 61b). Salt, which is indispensable at sacrifices, is symbolic of the moral effect of suffering, which causes sins to be forgiven and which purifies man (Ber. 5a). God does not eat. Why, then, the sacrifices? They increase the offerer's merit (Tan., Emor, ed. Buber, p. 20). The strongest man might drink twice or even ten times the quantity of water contained in the hollow of his hand; but all the waters of the earth can not fill the hollow of God's hand (Isa. xl. 12).

Symbolic Interpretations.

The words in connection with the goat serving for a sin-offering on the New Moon festival "for YHWH" (Num. xxviii. 15) are explained in grossly anthropomorphic application. The goat is a sin-offering for God's transgression committed when He decreased the size of the moon (Sheb. 9a; Ḥul. 60b). The offerings of the sons of Noah were burnt offerings (Yer. Meg. 72b; Gen. R. xxii.; Zeb. 116a). The "illegitimate" sacrifices on high places, *e.g.*, those by Elijah (I Kings xviii. 30 *et seq.*), were exceptions divinely sanctioned (Yer. Ta'an. 65d; Yer. Meg. 72c; Lev. R. xxii.; Midr. Teh. to Ps. xxvii. 5). The seventy bullocks of Sukkot correspond to the seventy nations; the single bullock on the eighth day, to the unique people Israel. God is like that king who, having entertained his guests most lavishly for seven days, commanded his son after their departure to prepare a very plain meal (Suk. 55b; Pes. 143b). Children, when learning the Pentateuch, used to begin with the third book because they that are pure should first occupy themselves with offerings that are likewise pure (Pes. 60b; Lev. R. vii.). God has taken care not to tax Israel too heavily (hence Lev. i. 10, 14; ii. 1; vi. 13). Indeed, one who offers only a very modest meal-offering is accounted as having offered sacrifices from one end of the world to the other (Mal. i. 11; Lev. R. viii.). By their position, coming after the laws prescribed for the other sacrifices, the peace-offerings are shown to be dessert, as it were (Lev.

R. ix.). God provides "from His own" the minḥah of the sin-offering (Lev. R. iii.). The use of the word "adam" ("Adam" = "man"), and not "ish," in Lev. i. 2 leads the offerer to remember that, like Adam, who never robbed or stole, he may offer only what is rightfully his (Lev. R. ii.).

Substitutes for Sacrifice.

The importance attaching to the sacrificial laws was, as the foregoing anthology of haggadic opinions proves, fully realized by the Rabbis. Unable after the destruction of the Temple to observe these ordinances, they did not hesitate to declare that, in contrast to the sacrificial law which rejected the defective victim, God accepts the broken-hearted (Ps. li. 19; Pes. 158b). With a look to the future restoration, they call attention to the smallness of the desert offerings, while delighting in the glorious prospect of the richer ones to come (Lev. R. vii.). The precept concerning the daily offering is given twice (Ex. xxix. 38-42; Num. xxviii. 1-8), from which repetition is deduced the consolation for Israel in exile, that he who studies these verses is regarded as having offered the sacrifices (Pes. 60b; Lev. R. vii. 3). The same thought is based on "the torah of the sin-offering" and "the torah of the trespass-offering" (Lev. vi. 18, vii. 7; Men. 110a, b). Prayer is better than sacrifice (Ber. 32b; Midr. Shemuel i. 7; Bacher, "Ag. Pal. Amor." ii. 217). Lulab and etrog replace the altar and offering (Suk. 45a, b). Blood lost when one is wounded replaces the blood of the 'olah (Ḥul. 7b). The reading of the "Shema'" and the "Tefillah" and the wearing of phylacteries ("tefillin") are equivalent to the building of the altar (Ber. 15a; comp. Ber. 14b; Midr. Teh. to Ps. i. 2). As the altar is called "table" (Ezek. xlii. 22), the table of the home has the altar's expiatory virtue (Ber. 55a; Men. 97a). This was understood to have reference to "good deeds," such as hospitality shown to the poor (see Ab. R. N. iv.). The humble are rewarded as though they had presented all the offerings prescribed in the Law (Ps. li. 19; Soṭah 5b; Sanh. 43b; Pesiḳta Ḥadashah, in Jellinek, "B. H." vi. 52). Prayer in the synagogue is tantamount to offering a pure oblation (Isa. lxvi. 20; Yer. Ber. 8d). The students engaged everywhere in the study of the Torah are as dear to God as were they who burned incense on the altar (Men. 110a). The precentor ("sheliaḥ ẓibbur") is regarded as officiating at the altar and sacrificing (קרב; see Levy, "Neuhebr. Wörterb." iv. 386b; Yer. Ber. 8b). In the Messianic time all sacrifices except the thank-offering will cease (Pes. 79a; Lev. R. ix., xxvii.). Whoever observes the provisions made for the poor (Lev. xxiii. 22) is regarded as highly as he would have been if during the existence of the Temple he had been faithful in making his oblations (Sifra, Emor, 101c). To entertain a student in one's house is an act of piety as notable as the offering of daily sacrifice (II Kings iv. 9; Ber. 10b). To make a present to a learned man (a rabbi) is like offering the first-fruits (Ket. 105b). Filling the rabbi's cellars with wine is an equivalent to pouring out the libations (Yoma 71a). In their extravagant, apocalyptic fancy, the haggadot even describe a heavenly altar at which the archangel Michael ministers as high priest; but his offerings are the souls of the righteous. In the Messianic time this altar will descend from on high to Jerusalem (Midr. 'Aseret ha-Dibrot; see Tos. Men. 110; comp. another midrash of the same tenor, Num. R. xii.).

Totemistic Interpretation.

——**Critical View:** Modern scholars, after Robertson Smith ("Rel. of Sem." 2d ed.) and Wellhausen ("Reste Alt-Arabischen Heidentums"), have abandoned the older views, according to which the sacrificial scheme of the Old Testament was regarded as the outflow of divine wisdom or divine mercy, disciplinary or expiatory in its effects, or as the invention of a man of great genius (Moses), who devised its general and specific provisions as symbols wherewith to teach his people some vital truths. Nor is the sacrificial code the outcome of a spontaneous impulse of the human heart to adore God and placate Him, or to show gratitude to Him. Sacrifices revert to the most primitive forms of religion—ancestral animism and totemism. The sacrifice is a meal offered to the dead member of the family, who meets his own at the feast. As the honored guest, he is entitled to the choicest portions of the meal. From this root-idea, in course of time, all others, easily discovered in the sacrificial rites of various nations, are evolved. The visitor at the feast will reward his own for the hospitality extended. Or it is he that has sent the good things: hence gratitude is his due. Or perhaps he was offended: it is he, therefore, who must be appeased (by expiatory rites). He may do harm: it is well to forestall him (by rites to secure protection or immunity).

Human Sacrifice.

The primitive notion of sacrifice is that it is a gift, which is the meaning of the Hebrew word "minḥah." During the period of cannibalism the gift naturally takes the form of human victims, human flesh being the choice article of food during the prevalence of anthropophagism. It is also that which by preference or necessity is placed on the table of the deity. Traces of human sacrifices abound in the Biblical records. The command to Abraham (Gen. xxii.) and the subsequent development of the story indicate that the substitution of animal for human victims was traced to patriarchal example. The Ban ("ḥerem") preserves a certain form of the primitive human sacrifice (Schwally, "Kriegsaltertümer"). The first-born naturally belonged to the deity. Originally he was not ransomed, but immolated; and in the Law the very intensity of the protest against "passing the children through the fire to Moloch" reveals the extent of the practise in Israel. In fact, the sacrifice of a son is specifically recorded in the cases of King Mesha (II Kings iii. 27), of Ahaz (*ib.* xvi. 3; II Chron. xxviii. 3), and of Manasseh (*ib.* xxi. 6). Jeremiah laments bitterly this devouring disgrace (iii. 24, 25); and even Ezekiel (xx. 30, 31) speaks of it as of frequent occurrence. Ps. cvi. 37, 38 confesses that sons and daughters were sacrificed to demons; and in Deutero-Isaiah lvii. 5 allusions to this horrid iniquity recur. If such offerings were made to Moloch, some instances are not suppressed where human life was "devoted" to Yhwh. The fate of Jephthah's daughter presents the clearest instance of such immolations (Judges

xi. 30, 31, 34–40). That of the seven sons of Saul delivered up by David to the men of Gibeon (II Sam. xxi. 1–14) is another, though the phraseology is less explicit. Other indications, however, point in the same direction. Blood belonged to Yhwh; no man might eat it (I Sam. xiv. 32–34; Lev. xvii. 3 *et seq.*). The blood was the soul. When animals were substituted for human victims, blood still remained the portion of the Deity. No subtle theological construction of a philosophy of expiation is required to explain this prominent trait (see S. I. Curtiss, "Primitive Semitic Religion," *passim*). The blood on the lintel (the threshold covenant) at the Passover was proof that that which the Destroyer was seeking—viz., life—had not been withheld. The rite of Circumcision (Ex. iii. 24) appears to have been originally instituted for the same purpose.

As at every meal the Deity was supposed to be present and to claim His own, every meal became a sacrifice, and the killing of the animal a sacrificial act (see I Sam. xiv.); and so strong did this feeling remain, even after the lapse of centuries, that when the Second Temple was destroyed, the rigorists abstained from eating meat on the plea that as the sacrifices had been discontinued, all meat was rendered unfit for food (Tos. Soṭah, end; B. B. 60b).

The donative character of the Hebrew sacrifices appears also from the material used, which is always something to eat or drink, the common dietary articles of the Israelites. The phrase "food of God" (Lev. xxi. 6, 8, 17, 21; xxii. 25; Ezek. xliv. 7) proves the use for which such offerings were intended; and Ps. l. 13 also reveals this intention.

Early Stages.

Primitive Yhwh-religion seems at the very outset not to have favored an elaborate sacrificial ritual. In the desert but little grows. The first of the flock, the spring lamb (see Passover), in all probability, constituted the gift prepared, as was that described in Ex. xii., for the God residing on Sinai in unapproachable (*i.e.*, holy) aloofness. The Canaanites, with whom later the Hebrews came in contact, had, as agricultural peoples, a more elaborate and lascivious sacrificial form of worship. From them the Hebrews adopted most of the features of their own priestly scheme, which, even as exhibited in the latest strata of the code, presents some remarkable elements disclosing a non-Hebrew origin (*e.g.*, Azazel, the scapegoat, the red heifer).

This process of adaptation did not proceed without arousing the opposition of the Prophets. They were outspoken in their disapproval of sacrificial religion; and some of them made no concealment of their opinion that the sacrificial rites had no original connection with the worship of Yhwh. At all events, the sacrificial ordinances of the Book of the Covenant are simple, as, indeed, the historical glosses of the feasts at Shiloh would lead one to suppose (see Sacrifice, Biblical Data). Even Deuteronomy can not be said to have proceeded very far toward a detailed system. The one step taken therein was the centralization of the cult in Jerusalem, with the final official suppression of the High Places, and the assignment of rank to the Levitical priests. The freedom to sacrifice thus received a severe check.

In P the system is developed in detail; and comparison with the Holiness Code (H) and with Ezekiel gives some notion of the manner of development. In Deuteronomy the prescribed offerings (firstlings, tithes, etc.) are "ḳodashim" (sacred), in distinction from votive and free-will offerings and from animals slaughtered for food (Deut. xii. 26); victims are taken from the flock and herd ("baḳar"); human sacrifices are inhibited (*ib.* xii. 31); victims must be without blemish (*ib.* xvii. 1); the ritual is given of holocausts and other sacrifices (*ib.* xii. 27), burning of fat, libations (*ib.* xxxii. 38), offerings at feasts (*ib.* xvi. 1 *et seq.*, xxvi.), tithes, priestly dues (*ib.* xii. 17, xiv. 23, xviii.), and firstlings (*ib.* xv. 19 *et seq.*).

H is cognizant of 'olah (Lev. xxii. 18), 'olah and zebaḥ (*ib.* xvii. 8), zibḥe shelamim (*ib.* xvii. 5, xix. 5), todah (*ib.* xxii. 29), neder and nedabah (*ib.* xxii. 18, 21); sacrifices are ḳodashim (*ib.* xxii. 2–15) and are the "food of God" (see above). In addition to the animals in Deuteronomy, "kebes" and "'ez" are enumerated; strict regulations for free-will offerings are elaborated (*ib.* xxii. 23); they must be brought to the holy place (*ib.* xvii. 3, and elsewhere); blood is prohibited as food (*ib.* xvii. 10); the flesh of shelamim must be eaten on the day of the sacrifice or on the following day (*ib.* xix. 5 *et seq.*); that of the todah on the day itself (*ib.* xxii. 29).

Sacrifice According to Ezekiel.

Ezekiel deals almost exclusively with public sacrifices. He names two new species of offerings: ḥaṭṭat and asham. Minḥah is an offering of flour and oil (Ezek. xlvi. 5, 7, 11); a libation is also named (nesek; *ib.* xlv. 17). Birds are not mentioned. The terumah is a tax from which the sacrifices are provided by the prince (*ib.* xlv. 13–17). The morning tamid consists of one lamb, the Sabbath burnt offering, of six lambs and a ram with their appurtenances (*ib.* xlvi. 4 *et seq.*); at the great festivals the prince provides shelamim also. The Levites appear as distinct from the priests (*ib.* xliv. 11; comp. *ib.* xlvi. 2); the flesh is boiled in kitchens in the four corners of the outer court by Temple servants (*ib.* xlvi. 21–24); and so forth (see Ezekiel).

P and Ezekiel do not harmonize as regards every provision. The former reflects conditions actually in force after the Exile. But it is a mistake to suppose that P is entirely new legislation, a copy of Babylonian institutions. The similarity of the sacrificial rites of Israel and Babylonia does not extend beyond some technical terms—which (see Zimmern in Schrader, "K. A. T." 3d ed.), moreover, often had different bearings in the two cults—and such other analogies as may be detected in all sacrificial systems. P represents many old priest-rituals ("torot"), probably in force for centuries at some older shrine or High Place.

Deep *θεολσγούμενα* do not underlie the system; problems of salvation from original sin, restitution, and justification did not enter into the minds of the priests that ministered at the altar in Jerusalem.

E. G. H.

——**Samaritan:** The Samaritans, claiming to be the true Israelites whose ancestors were brought by Joshua into the land of Canaan, declare that every one of the sacrifices prescribed in the Pentateuch was punctiliously observed by their fore-

Ancient Sacrifice.

fathers on Mount Gerizim, the blessed mountain. The latter was the only mountain on which an altar to YHWH could be built and sacrifices brought, as it was claimed to be the place chosen by God for sacrifices according to Deut. xii. 13-14, 18. The Samaritans consequently deny the fact, related in Ezra iv. 1-3, that their ancestors applied to Zerubbabel for permission to help build the Temple of Jerusalem in order that they might bring their sacrifices there. The Samaritan Book of Joshua, while describing the prosperous state of the Israelites during the 260 years of "satisfaction," that is to say, from the reign of Joshua till the death of Samson, gives a few particulars of the sacrifices of the Samaritans of that time. It is stated (ch. xxxviii.) that the Levites assisted the priests in the sacrificial ceremonies. The former were divided into sections. Some had charge of the daily burnt offerings and of the meal-offerings; others examined the animals to see if they had any blemish; others again served as slaughterers and sprinkled the blood of the victims on the altar; while still others were employed in waving the parts prescribed for the wave-offering. The morning burnt offering was brought before sunrise; the evening one, after sunset (comp. Pes. v. 1). During the time the sacrifice was being offered on the altar, the priest standing on the top of Mount Gerizim blew the trumpet; and the other priests, when they heard the sound, also blew trumpets in their respective places (comp. Tamid iii. 8). Later, the sacrifices fell into disuse, prayers being substituted, a practise apparently borrowed from the Jews.

Cessation of Sacrifice.

As to the epoch in which the sacrifices ceased with the Samaritans, nothing can be established with certainty. The Samaritans themselves either are ignorant on the subject or do not care to disclose information concerning this historical event. In 1808 Corancez, consul-general of France at Aleppo, wrote to the high priest Salamah inquiring about the sacrifices and other observances of the Samaritans. Salamah's answer of July, 1808 (Corancez, in "Notices et Extraits des Manuscrits," xii. 72), reads as follows: "The sacrifices are among the chief commandments of the Torah, and were observed on the mountain of Gerizim and not on Ebal during the time of 'satisfaction.' But after the epoch of grace and the Tabernacle had vanished, the priests substituted prayers for all the sacrifices, except the Passover lamb, which we still offer on the fourteenth of Nisan." Salamah's answer is somewhat vague: it is not likely that he wished to imply that the sacrifices ceased entirely at the end of the days of "satisfaction"; and the Samaritan historians themselves record that sacrifices were offered in their temple on Mount Gerizim in the time of Alexander the Great and that of Ptolemy Philadelphus, and even later (comp. Abu al-Fath, "Kitab al-Ta'rikh," ed. Vilmar, pp. 96-97 *et passim*, Gotha, 1865).

In the Twelfth Century.

That the Samaritans offered sacrifices in the twelfth century is attested by Benjamin of Tudela and by the Karaite Judah Hadassi. The former, who visited the Samaritans of Nablus or Shechem, says ("Itinerary," ed. Asher, i. 33): "They offer sacrifices and burnt offerings in their synagogue on Mount Gerizim according to the prescription of the Law. They bring burnt offerings on the Passover feast and other holy days to the altar which they built on Mount Gerizim." Similarly Hadassi says ("Eshkol ha-Kofer," alphabet 96, end): "They still offer sacrifices to this day, according to the law of Moses, though they have no temple, and it is the priest who performs the ceremonies." It would seem from Joseph Bagi's "Ḳiryah Ne'emanah" (quoted by Wolf in "Bibl. Hebr." iv. 1090) that the Samaritans had offered sacrifices up to his time, that is to say, the beginning of the sixteenth century, unless Bagi simply repeated the words of Hadassi. On the other hand, Mas'udi, the author of "Muruj al-Dhahab" (quoted by Sylvestre de Sacy in "Chrestomathie Arabe," i. 343), who lived in the tenth century, records that the Samaritans of his time had silver trumpets which they blew at the time of prayer; but he makes no mention of sacrifices. Neither do the Samaritan chroniclers speak of any sacrifices offered during the Middle Ages; they refer only to the trumpets and to the fact that under the incumbency of Aaron b. Amram (about the end of the eleventh century) the water of separation was prepared (Adler and Seligsohn, "Une Nouvelle Chronique Samaritaine," p. 97, Paris, 1903). It should be noted that Salamah's report is not strictly reliable even for the nineteenth century; for Corancez was informed by the Jews of Aleppo that, besides the Passover lamb, the Samaritans offered a special lamb in the course of the second day on Mount Ebal, and not on Gerizim (Corancez, *l.c.* xii. 48). Moreover, the report is contradicted also by a statement of the Samaritan high priest of 1838 to Loewe, who visited Nablus in that year. In the course of conversation the high priest said: "We alone possess Mount Gerizim, and we alone offer sacrifices there" ("Allg. Zeit. des Jud." 1839, No. 46). On another occasion the high priest said: "We complete the reading of the Pentateuch every year; and we celebrate the day on which the reading is terminated ["Simḥat Torah"] with burnt offerings on Mount Gerizim" (*ib.* No. 56). Salamah, in his letter of 1808 says that, according to the Law, the Passover lamb must be slaughtered on Mount Gerizim, but that for the past twenty years, access to the mountain having been refused them, the Samaritans have had to content themselves with slaughtering the animal in the interior of the town, turning their faces toward the sacred mountain. It seems, however, from Loewe's above-mentioned interview with the high priest, that the Samaritans regained admission to the mountain.

Modern Sacrifice.

The Passover sacrifice, as celebrated at the present day, is described by Nutt ("A Sketch of Samaritan History," pp. 72, 73) as follows: "The lambs must be born in the month of Tishri [October] preceding and be without any blemish. On the previous day the Samaritans pitch their tents on the lower plateau of Mount Gerizim. At sunset of the following day [the fourteenth of Nisan] or in the afternoon, if that day falls on Friday, the lambs are slain, prayers being recited meanwhile, then stripped of their wool, cleaned, and sprinkled with salt, after which they are well roasted in hermetically covered trenches. In either case the lambs are eaten hastily after sunset with unleavened bread and bitter herbs, all the participants having staves in their hands [comp. Ex. xii. 9-11]. The men and the boys eat first, and afterward the women and girls; the remainder is consumed with fire."

The really remarkable feature of the Samaritan Passover sacrifice is that the people dip their hands into the blood of the slaughtered lamb and besmear therewith the foreheads and the arms of their children—a survival of the ancient rite prescribed in Ex. xiii. 9, 16, and no longer understood by the Jews, for whom the tefillin took the place of this talismanic rite (see Stanley, "Lectures on the Jewish Church," i. 561; comp. S. I. Curtiss, "Ursemitische Religion im Volksleben des Heutigen Orients," 1903, index, *s.v.* "Blutbestreichung").

Antiquity of Sacrifice.

——**Talmudic:** Judging from the various sentences referring to sacrifice scattered through the Talmud, sacrifice in itself has a positive and independent value. The institution is as old as the human race, for Adam offered a sacrifice ('Ab. Zarah 8a), and the Israelites offered sacrifices even before the Tabernacle was set up in the wilderness (Zeb. 116a). An altar has even been erected in heaven on which the angel Michael sacrifices (Men. 110a; Ḥag. 12b). There is a difference between thank- and food-offerings on the one hand and sin-offerings on the other, in that a person should take care not to commit any act obliging him to bring such offerings (Ḥag. 7a); one who does so must bring the offering in the proper frame of mind, showing sorrow and repentance, and confessing his sin; for if he does not fulfil these conditions his sacrifice is in vain (Ber. 23a). The sacrifice cleanses only through the blood that is sprinkled, the blood symbolizing the life of the one sacrificing, which, but for the substitution of the victim, would have to be surrendered in expiation of the sin (Zeb. 6a). The meal-offering, the sacrifice of the poor, has the same significance. Although this does not contain any blood, the poor person who sets it aside from his own food is regarded as if he had sacrificed himself (Men. 104b).

Prayer and Study Replace Sacrifice.

The view that the sacrifice is such a substitute is clearly expressed in the prayer which R. Sheshet was wont to recite on the evening after a fast-day: "Lord of the World, when the Temple was standing one who sinned offered a sacrifice, of which only the fat and the blood were taken, and thereby his sins were forgiven. I have fasted to-day, and through this fasting my blood and my fat have been decreased. Deign to look upon the part of my blood and my fat which I have lost through my fasting as if I had offered it to Thee, and forgive my sins in return" (Ber. 17a). The study of the laws of sacrifice was regarded as a sacrifice in itself (Men. 110), and thereby one obtained forgiveness after the destruction of the Temple had rendered the offering of sacrifices impossible (Ta'an. 27b).

The thank- and food-offerings are more sacred than the sin-offerings. They are offered because it is not fitting that the table of man should be filled while the table of the Lord, the altar, is empty (Ḥag. 7a). There are, however, various sentences in the Talmud which show the different views as to the value of these sacrifices. According to one view they have an absolute value in themselves, and the sacrifices which a person brings are a meritorious work for which he will be rewarded by God. Thus King Balak of Moab was rewarded for his sacrifices to God by being permitted to become the ancestor of Ruth (Nazir 23b). Similarly the sacrifices which Israel offered to God are meritorious works by which it was distinguished from the other peoples (Meg. 12b), and God can not forget the sacrifices which Israel offered to Him in the wilderness (Ber. 32b). A sacrifice is meritorious in proportion to its value (Sanh. 43b). But the view is expressed also that the value of a sacrifice depends upon the spirit in which it is brought; it matters not whether a person offers much or little, so long as he offers it in a spirit pleasing to God (Men. 110a).

Subordination of Sacrifice.

A person must not imagine that his sacrifices are meat and drink for God nor that he has therewith fulfilled a wish of God and that therefore He will fulfil his wishes (*ib.*; this passage must be explained according to Maimonides, "Moreh," iii. 46, contrary to Rashi). The study of the Law is regarded as more valuable than sacrifices (Meg. 3b). Similarly, philanthropy is worth more than all sacrifices (Suk. 49b), and a modest and humble disposition is equivalent to all kinds of sacrifices (Sanh. 43b). One who intends to give wine for the altar should give it to those who devote themselves to the study of the Law (Yoma 71a); and if one shows hospitality to a student of the Law, it is the same as if he had offered the daily burnt offerings (Ber. 10b). Prayer is regarded as a substitute for sacrifice (Ber. 6b; Suk. 45a); indeed, it is even more than sacrifice (Ber. 15a, b; 32b).

S. J. Z. L.

Expiatory Function of Sacrifice.

——**In Theology:** The critical school contends, and on good grounds (Nowack, "Lehrbuch der Hebräischen Archäologie," ii. 223), that sin-offerings in the technical sense of the word were not recognized before Ezekiel. However, the distinction between "ḳodesh" and "ṭame" is drawn by the Prophets anterior to the Exile; and even in Samuel (I Sam. iii. 14, xxvi. 19; II Sam. xxiv. 25) the notion is expressed that by sacrifice sin may be atoned for ("yitkapper"), though the sacrifices named are meal-, meat-, and burnt offerings. In the question put by Micah's interlocutor, also, the thought is dominant that offerings, even of human life, may protect against the consequences of sin and transgression (Mic. xvi. 6 *et seq.*). That sacrifice had some bearing on sin was not, then, an unknown idea, even if there was no technical term therefor. In the progressive systematization of the sacrificial practises, with a view to placing them more and more under the exclusive control of the priesthood of the central sanctuary, specialization in the nomenclature and assignment of the offerings could not but ensue.

Yet, in what sense the specific sin-offerings were credited with atoning power can not be understood without an antecedent knowledge of what constituted sin in the conception of those that first observed the sacrificial cult. "Clean" or "holy" and "unclean" are the two poles; and "holy" implies "set aside for the Deity"; *e.g.*, an object which only the Deity's own may touch, or a precinct into which only the Deity's own may enter. Sin is an act that violates the taboo. As originally the sacrifice was a meal offered to the Deity at which He was to meet His own family (see Sacrifice, Critical View), only such as were in the proper state of holiness might take part in this "communion service" (see Passover). On the other hand, the Deity Himself would not accept the gift if the taboo was not respected. Contact with persons or things in an "unclean" state violated the taboo. Sin originally connoted a condition which rendered approach to the Deity impossible, and conversely made it impossible for the Deity to approach, to attend the family communion meal. To correct this the sacrifice was offered, *i.e.*, brought near to ("ḳorban," "hiḳrib") the Deity, more especially the blood, which preeminently belonged to God, and that by the priest only. In this connection it must be remembered that slaughtering was primitively a sacrificial rite. Meat was not to be eaten unless the Deity had received His share, viz., the blood. This insistence is the motive of the otherwise strange prohibition to slaughter anywhere save at the door of the tent of meeting (Lev. xvii. 3). The presumption was that all belonged to the Deity. Later literature expresses this idea as a spiritual verity (Ps. l. 10–12; I Chron. xxix. 14).

Connection with Taboo.

The idea itself is very old. It is dominant in the sacrificial scheme. All animals, as belonging to God, are taboo. Hence at first man is a vegetarian (Gen. ix.). The right to partake of animal food is conditioned on the observance of the blood taboo; by killing an animal one taboo is violated; but if an equivalent one (the blood taboo) is kept inviolate, the sin is condoned. The blood is the animal's life; hence the equation "blood" = "animal." The Deity loses nothing by permitting the slaughtering if the blood is reserved for the altar or covered up (Lev. xvii. 13). This throws light on the primitive implications of the root ("kafar," "kipper"), which has furnished the technical terminology for the Levitical and also for the spiritual doctrine of Atonement.

Later, as in Assyrian, a signification synonymous with "maḥah" (to wipe off) and a meaning similar to "kisseh" (to cover up), its earlier connotation, were carried by the noun "kofer" (= "ransom"), in the sense of "one for another" ("nefesh taḥat nefesh" = "one life for another life"). The blood (= life), the kofer given to God, was for the life (= animal) taken from God. With this as the starting-point, it is not difficult to understand how, when other taboos had been violated, the sacrifice and the blood came to be looked upon as a "kapparah." The refined sense of the soul's separation from God which is to be offset by another soul (blood) is certainly not inherent in the primitive conception. Moreover, the sin-offering is never presented for grave moral offenses (see above); only such sins as refusal to give testimony, contact with unclean objects, and hasty swearing are enumerated (Lev. v. 1 *et seq.*). That the three sins here specified are of the nature of violated taboos is recognizable. Trial and testimony are ordeals. "Ṭame" is synonymous with broken taboo. "Biṭṭe bi-sefatayim" in all probability refers to "taking the name in vain." Enunciating the "name" was violating the taboo.

In this connection the ceremony of laying on of hands is discovered to be only one of the many symbolic rites, abundant in primitive jurisprudence, whereby acquisition or abandonment of property is expressed. In the case of the sacrifices it implies absolute relinquishment ("manumissio"). The animal reverts thereby to its original owner—God.

This excursus into primitive folk-lore suggests at once the untenable character of the various theological interpretations given to the sacrificial institutions of the Bible. It will not be necessary to explain at length that the expiation of guilt—in any other sense than that given above, though perhaps with a more spiritual scope—is not the leading purpose of the Levitical sacrifices. Purification from physical uncleanness is an important function of sacrifices, but only because "unclean" has a very definite religious meaning (in connection with childbirth or with contact with a dead body, etc.). The consecration of persons and things to holy uses through the sacrifices is not due to some mysterious sacramental element in them; but the profane is changed into holy by coming in contact with what is under all circumstances holy, viz., the blood.

Symbolical Interpretation.

Christian theologians maintain that sacrificial worship was ordained as a twofold means of grace: (1) By permitting penal substitution. The sinner, having forfeited his life, was by a gracious provision permitted to substitute an immaculate victim, whose vicarious death was accepted by God; and this typified another vicarious sacrifice. (2) By recalling to man certain vital truths. This second theory is that of the symbolists, the classical exponent of which in modern times has been Bähr ("Symbolik des Mosaischen Kultus": "the soul placing itself at the disposal of God in order to receive the gift of the true life in sanctification"). The unblemished victim symbolizes the excellence and purity to which the offerer aspires. Other expositions of this kind are found in Oehler ("Theologie des Alten Testament"), Maurice ("The Doctrine of Sacrifice," London, 1879), and Schultz ("American Journal of Theology," 1900). This theology rests on the assumption that God is the direct author of the scheme, and that such analogies as are presented by the sacrificial rites of other nations are either copies of the Jewish rites or dim, imperfect foreshadowings of and gropings after the fuller light; or that Moses with supernatural wisdom devised the scheme to teach the ideas underlying his own laws in contradistinction to the similar legislations of other races.

That the Prophets had risen to a sublime conception of religion must be granted; but this does not necessitate the inference that the primitive basic ideas of sacrifices (a gift to God as one of the clan at the communion meal, taboo, etc.) are not to be detected in the legislation and never were contained therein. The Prophets showed no enthusiasm for the system. Ritual religion always preserves older forms than spiritual religion would or could evolve.

The New Testament doctrine of sacrifice has clearly influenced this theological valuation of the Old Testament laws. The death of Jesus was held to be a sacrifice (Eph. v. 2; Heb. ix. 14). Saving efficacy is imputed to the blood or the cross of Christ (Rom. iii. 25, v. 9; I Cor. x. 16; Rev. i. 5). Jesus is the sin-offering (Rom. viii. 3; Heb. xiii. 11; I Peter iii. 18), the covenant sacrifice (Heb. ii. 17, ix. 12 *et seq.*), the Passover (I Cor. v. 7). In the Epistle to the Hebrews (ix. 28) Jesus is the sin-bearer, the agency of sanctification (*ib.* x. 10); he is also the obedient servant (*ib.* x. 8, 9) and the high priest (*ib.* ix. 11 *et seq.*, 23). Here the precedent is given of treating the Hebrew sacrifices typologically, *i.e.*, as predictive, "expressing a need which they could not satisfy, but which Christ does, and embodying a faith which Christ justifies" (W. P. Paterson, in Hastings, "Dict. Bible," iv. 348b).

Philo's Symbolism.

Of symbolism many indications are found in the homiletic haggadah (see above): the Tabernacle symbolizes Creation; the ten rods, heaven and earth, etc. (Yalḳ., Ex. 490). Its chief exponent in Jewish literature is Philo, who in his exposition of the sacrifices differs from the Halakah in some details. He ignores the rabbinical prescription of thirty days as the victim's minimum age (Parah i. 4), and he claims that pregnant animals might not be used for the sacrifice, extending thus to all victims a provision mentioned for the Red Heifer (Parah ii. 1). According to him, none but priests were permitted to slaughter the victim (Philo, *ib.* ii. 241). He names only three classes of sacrifices: (1) holocaust (= "'olah"); (2) *σωτήριον* (= "shelamim"), like the Septuagint; and (3) *περὶ ἁμαρτίας* (= "ḥaṭṭat"). The "todah" (*ἡλεγομένη τῆς αἰνήσεως*) he regards as a subdivision of the 'olah, while the "asham" he ranks with the ḥaṭṭat (*ib.* ii. 246).

Philo devotes a treatise to the victims, the "animals that are fit for sacrifice." God selected the most gentle birds and animals. The perfection of the victims indicates that the offerers should be irreproachable; that the Jews should never bring with them to the altar any weakness or evil passion in the soul, but should endeavor to make it wholly pure and clean; so that God may not turn away with aversion from the sight of it ("De Victimis," § 2). In this way Philo construes every detail of the sacrificial ritual. Withal, he remarks that the "tribunal of God is inaccessible to bribes: it rejects the guilty though they offer daily 100 oxen, and receives the guiltless though they offer no sacrifices at all. God delights in fireless altars round which virtues form the choral dance" ("De Plantatione Noe," § 25 [ed. Mangey, i. 345]). To the eucharist (*i.e.*, thanksgiving) he attaches special importance. This, however, consists not in offerings and sacrifices, but in praises and hymns which the pure and inward mind will chant to inward music (*ib.* § 30 [ed. Mangey, i. 348]). Josephus mentions only two classes of sacrifices: (1) holocaust and (2) *χαριστήριον* = "eucharistic" = "shelamim" ("Ant." iii. 9, § 1).

Views of Maimonides and Naḥmanides.

The opinion of Maimonides appears to anticipate the views advanced by the most modern investigators. He in the first place refuses to follow the symbolists in finding reason for the details of the various sacrifices. Why a lamb and not a ram was chosen is, he says, an idle inquiry befitting fools, but not the serious-minded ("Moreh," iii., xxxvi.). "Each commandment has necessarily a reason as far as its general character is concerned; but as regards its details it has no ulterior object." These details are devised to be tests of man's obedience. The sacrifices more especially are really not of Jewish origin. As during Moses' time it was the general custom among all men to worship by means of sacrifices and as the Israelites had been brought up in this general mode of religion, God, in order that they might not go from one extreme to the other (from ritualism to a pure religion of righteousness), tolerated the continuance of the sacrifices. As in Maimonides' days prayer, fasting, and the like were serviceable, whereas a prophet preaching the service of God in thought alone, and not in ceremony, would find no hearing, so in the days of Moses the sacrifices were permitted by God in order to blot out the traces of idolatry and to establish the great principle of Judaism—the unity and being of God—without confusing the minds of the people by abolishing what they had been accustomed to (*ib.* iii., xxxii.). The experience of Israel, led not by the shorter way, but by the circuitous route through the land of the Philistines (Ex. xiii. 17), he quotes as typical of the method apparent in the legislation concerning offerings. The sacrificial service is not the primary object of the Law; but supplications, prayers, and the like are. Hence the restriction of the sacrifices to one locality, by which means God kept this particular kind of service within bounds.

Naḥmanides (see his commentary on Lev. i. 9) rejects this view in unsparing words, appealing to the Biblical examples of Abel and Noah, in whose days Egyptian and Chaldean idolatry was unknown, and who were monotheists and not idolaters, but whose offerings furnished a sweet savor for Yhwh. If sacrifices must have a meaning, he prefers to see in them a moral symbolism founded on the psychology of conduct. Every act is composed of thought, speech, and execution. So in the sacrifice the offerer must do and speak, while the burning of the kidneys, the seat of thought, refers to the intention.

Abravanel resumes Maimonides' argument and refutes those advanced by Naḥmanides (preface to his commentary on Leviticus). He cites a midrash (Wayiḳra Rabbah xxii. 5; see also Bacher, "Ag. Pal. Amor." ii. 316) to the effect that as the Hebrews had become accustomed to sacrifices (idols) while in Egypt, God, to wean them from idolatry, commanded, while tolerating the sacrifices, that they should be brought to one central sanctuary. This is illustrated by a parable. A king noticed that his son loved to eat forbidden food, as carrion and animals torn to pieces. In order to retain him at his table, he directed that these things should be set before the son at home every day. This induced the prince to forego his evil habits. Hoffmann ("Leviticus," p. 88), speaking of Abravanel, charges him with having altered the text of the midrash, from which, as quoted in the commentary's preface, it would appear that sacrifices are placed in one category with ṭerefah and nebelah. Hoffmann cites another version of the fable, to the effect that on the king's table no forbidden food was found, and that this led to the prince's conversion. But Bacher (*l.c.*) gives Abravanel's version. Rabbi Levi, who is the author of the haggadah, may thus be said to have shared Maimonides' and Abravanel's views. The "Sefer ha-Ḥinnuk" (section "Terumah"), by Aaron ha-Levi of Barcelona, discusses the purpose of the sacrifices. The troubles connected with their proper preparation and with bringing them to the Temple, etc., were planned to arouse the sinner to a sense of his shame. He repeats also the psychological symbolism explained by Naḥmanides ("Sefer ha-Ḥinnuk," ed. Warsaw, pp. 23 *et seq.*).

David Ḳimḥi suggests (see his commentary on Jer. vii. 23) that the sacrifices were never mandatory, but voluntary ("God did not command that they shall offer up ["yaḳribu"], but merely gave contingent orders, 'if a man should offer up' ["adam ki yaḳrib"]").

Judah ha-Levi believes without equivocation in the divine wisdom and origin of the sacrifices. As Israel is the "chosen people" in the midst of whom alone prophets have arisen, as Palestine is the chosen land, and as both Israel and the land therefore are in closest affinity with God, so is Israel on this soil commanded to observe His law, central to which is the sacrificial cult. He spiritualizes the anthropomorphic expressions, contending nevertheless that the sacrifices revealed whether in Israel all was as it should be and all the component members had become united into a well-functioning organism. This was divulged by the divine fire that descended on the offerings ("My fires" = "created by My word" ["ishshai"]; "Cuzari," ii. 26-28).

Views of Hoffmann.

According to Hoffmann (*l.c.* pp. 88 *et seq.*), the sacrifices are symbols of: (1) man's gratitude to God (illustrated in Abel's minḥah); (2) man's dependence on Him (Noah's offering; blood = life saved); (3) man's absolute obedience (Abraham's 'olah); and (4) man's confidence in God (Jacob's shelamim). They symbolize Israel's election to be, as it were, the camp within which God dwells. This is the only reward for Israel's fidelity: "Ye shall be My people and I will be your God" (see Ha-Levi, "Cuzari," i. 109). As the host of God, Israel must remain pure; and every Israelite must keep himself so as not to be cut off ("nikrat") from his people. Still, sins committed inadvertently are pardonable if man approaches God repentantly. That is the purpose of the sin-offerings. But there is no mortal who sinneth not; hence the Day of Atonement for Israel and all. Sacrifice is called "'abodah" = "service." It is "'abodah sheba-ma'aseh" = "ceremonial service," symbolizing the "'abodah sheba-leb" = "service in the heart," the tefillah prayer.

Hoffmann believes in the ultimate reestablishment of the sacrificial cult. The old synagogal prayer-books recognized the sacrificial service as essential; but as it was impossible to bring the offerings prescribed, they were remembered in prayer (Musaf); for their study was as meritorious as their practise (see above). The prayer for the reestablishment of the altar, in which is included the petition "We-Hasheb Et ha-'Abodah"—the "Reẓeh" of the "Shemoneh 'Esreh"—is called the "'Abodah" (Ber. 29b; Shab. 24a; R. H. 12a; Meg. 18a; Soṭah 38b); for the body of the benediction was recited by the priests at the tamidim (Tamid v. 1; Ber. 11b) and by the high priest on the Day of Atonement after reading the Torah (Yoma 68b). Similar petitions for the reestablishment of the "'Abodah" are found in Lev. R. vii., Ex. R. xxxi., and Midr. Teh. to Ps. xvii. Three times every day this or a similar prayer was to be recited. The enforced suspension of the real "'Abodah" was regarded as a punishment for Israel's sins (see the prayer "Mi-Pene Ḥaṭa'enu" in the Musaf for Rosh ha-Shanah).

Attitude of Rabbinical Judaism.

But the real attitude of rabbinical Judaism on the sacrifices is exhibited in Num. R. xix. A pagan having inquired concerning the Red Heifer, an explanation was tendered by Johanan b. Zakkai, who referred to the analogous treatment of one possessed of an evil spirit. The pupils of the rabbi demurred to that explanation, saying: "Him thou hast driven off with a reed. What answer wilt thou give us?" "By your lives," exclaimed the teacher, "dead bodies do not render unclean, nor does water make clean; but God has decreed 'a statute I have ordained and an institution I have established'; and it is not permitted to transgress the Law." Rabbinical Judaism accepted the law of sacrifices without presuming to understand it. Reform Judaism omits from the prayer-book reference to the sacrifices, sanguinary ceremonies being repugnant to its religious consciousness; it holds that the Jewish doctrine of sin and atonement is not grounded on the sacrificial scheme.

SACRILEGE: The act of profaning or violating sacred things. The prohibition of sacrilege was primarily in connection with the sanctuary (Lev. xix. 8, xxi. 23). The services in the Tabernacle or Temple could not be relegated to any one other than the priesthood (*ib.* xxxi. 17; Num. i. 51), nor could anything used in the sanctuary be appropriated for common purposes. Even the following for secular use of the formula of the sacrificial incense was prohibited (Ex. xxx. 32, 37). It was equally forbidden to copy the model of the Tabernacle or Temple, the candlestick, or any of the holy vessels; and the use of such vessels except in the sacred services was especially prohibited. If a man unintentionally committed a trespass on any of the sacred things or sacrifices he was required to make full restitution, with the addition of one-fifth of the amount of the damage, and to offer a sacrifice in expiation of the sin (Lev. v. 15, 16). Joshua consecrated the spoils of Jericho to the treasury of the sanctuary; and Achan, who committed a trespass in stealing some of them, suffered capital punishment (Josh. vi. 17, 24; vii. 20-25).

"Me'ilah."

The Talmud treatise Me'ilah explains the nature and details of trespass in regard to holy things. According to R. Akiba, any benefit derived from a sacred thing is punishable under the law of me'ilah. The ḥakamim divide me'ilah into (1) benefits and (2) damages to the value of a peruṭa (the smallest copper coin). Under this classification the use of gold vessels or ornaments of the sanctuary for profit is forbidden; but the use of garments or eatables is permitted provided they will not be damaged or consumed to the value of a peruṭa (Me'i. v. 1). The amount of the profit or of the damage is to be paid in full with the addition of one-fifth; and a sacrifice worth two silver shekels must be offered for the sinful trespass ("asham me'ilah"). The law against sacrilege in the sanctuary applies to the sacred things pertaining to the sacrifices on the altar ("ḳodshe mizbeaḥ"), and to the sacred treasures and the material for repairing the sanctuary ("ḳodshe bedeḳ habayit"). For larceny of the Temple sacred vessel called "ḳiswah" (bowl for libation), the culprit may, if caught in the act, be killed by zealots (Sanh. ix. 6, 81b; see Rashi *ad loc.*). This, however, is explained by Geiger as an exceptional punishment provided in the case of Sadducees, who opposed the water libation (see Suk. 48a). "One who profanes sacred things has no share in the world to come" (Ab. iii. 15).

The opinion prevails, however, that the law concerning sacrilege lapsed when the Temple was destroyed, and that it has no force in exilic times. It is not operative in the synagogue, which is considered merely as a charitable institution; and its infraction is liable to civil action only (Shulḥan 'Aruk, Ḥoshen Mishpaṭ, 95, 1; 212, 8; Asheri, Responsa, rule 13, Nos. 1, 8). Nevertheless, the house of prayer or of learning may not be made a drinking-place, nor may it be commonly used as a conveniently short passageway ("compendiaria"; Ber. 62b). Scrolls of the Law that become unfit for reading, mantles of the Law, and covers of holy books (Meg. 26b), as well as all unused Hebrew manuscripts and torn leaves of printed books containing the name of God ("shemot") are placed in the genizah, it being considered sacrilege to make indiscriminate use of them.

Grave and Corpse.

The Rabbis extend the law of sacrilege to the cemetery, and prohibit the derivation of any benefit from a corpse, a coffin, a shroud, or a grave. No frivolity, feeding of cattle, picking of flowers, or cutting of trees is permitted in the cemetery, nor may a canal for the purposes of irrigation be run through it (Meg. 29a). The disinterment of a body, except under certain conditions and regulations, is prohibited. Wood, straw, or other merchandise may not be stored in the cemetery (Shulḥan 'Aruk, Yoreh De'ah, 361, 364, 368).

Another sort of sacrilege is the bringing into contempt of things that are holy. The first record of such a sacrilegious act is that of Esau selling his birthright (Gen. xxv. 33). The literary misuse of the Holy Scriptures is sacrilege: "No one may recite the Song of Solomon as he would secular poetry, or quote verses at inappropriate times or in drinking-places. When this occurs the Torah laments and complains before the Almighty, saying: 'Master of the world! Thy children have made a lyre of me for the amusement of the scorners'" (Sanh. 101a).

Contempt of Scripture.

Imitation of the style of the Bible or even of the Talmud was looked upon as sacrilege. Moses Ḥayyim Luzzatto was censured for such an act of sacrilege. It is claimed that he composed 150 psalms in the style of the Book of Psalms, and that he did not dare publish them for fear of incurring from the Jewish community a charge of contempt (F. Delitzsch, "Zur Gesch. des Jüdischen Poesie," p. 90, Leipsic, 1836; "Toledot M. Ḥ. Luzzatto," Lemberg, 1879); at any rate two such psalms by him appeared in print (in "Bikkure ha-'Ittim," 1827, vii. 99). In 1863 M. L. Lilienblum composed "Massa' Polin," a poem against the Polish revolt, with vowels and accents in the style of the Scriptures, which style of imitation was condemned by the Rabbis ("Ḥaṭṭe'ot Ne'urim," pp. 45, 48, 69, Vienna, 1876). The Talmudic imitation of Masseket Kelim by Rabbi Gershon Enoch Henach was censured and its sale forbidden by the rabbinate of Wilna because in form and style the book resembled the ordinary Gemara. It was sacrilege, the Rabbis claimed, to put the work of Rabina and R. Ashi on a level with the work of a latter-day rabbi ("Ha-Maggid," xix. [1875], Nos. 32, 33; "Ha-Lebanon," xi., No. 34; Hillel Noah Steinschneider, "'Ir Wilna," p. 60, Wilna, 1900).

For sacrilege in profaning the name of God see Blasphemy; for sacrilege in dedicating a book to God see Prefaces and Dedications. See also Desecration; Disinterment; Me'ilah.

SACUTO (ZAKUTO), MOSES B. MORDECAI. See Zacuto, Moses b. Mordecai.

SA'D AL-DAULAH: Jewish physician and statesman; grand vizier from 1289 to 1291 under the Mongolian ruler in Persia, Argun Khan; assassinated March 5, 1291; son of Hibbat Allah b. Muḥasib of Ebher (Hammer-Purgstall, "Gesch. der Ilchane," i. 382) and, according to Abu al-Faraj, father-in-law of the prefect of Bagdad. He held a position in the treasury department, where he so distinguished himself that the Mongolian governor was jealous and recommended him to court as a physician. Here Sa'd made a friend of Ordu Kia, a powerful general, and through his influence was sent to collect the arrears of taxes in Bagdad. He was so successful in raising money that Argun appointed him assistant ("muṣarrif") in the department of finances at Bagdad, Ordu Kia being appointed military governor, or emir, of that province. The historian Wassaf says that Sa'd cured Argun of an illness, and, having thus gained his confidence, informed the "Ilkhan" of the corruption among the officials at Bagdad. At the same time he impressed Argun with his own ability by his knowledge of Mongolian and Turkish, and by his intimate acquaintance with the conditions existing in the province. He was soon made general controller of the finances of Bagdad, and then of the whole empire, becoming grand vizier. "Thus," remarks Abu al-Faraj, "were the Moslems reduced to having a Jew in the place of honor."

The administration of Sa'd al-Daulah (= "Felicity of the Empire," a name which he took as vizier) appears to have been wise and just, although Von Hammer calls it "sanguinary and golden." He adopted the Mohammedan code in civil affairs, and instituted regulations which, although strict, were wise and aimed at a sure increase of the revenue. The taxes were on a fixed basis, and no extraordinary requisitions—of food or animals—were allowed. He employed only Jews and Christians in office, and, as was natural, a large share of the positions fell into the hands of his own relatives. Under him the Jews enjoyed a short period of prosperity, and Abu al-Faraj says they flocked to Bagdad from all parts of the world. It is possible that Sa'd was instrumental in establishing diplomatic relations with Europe. Besides, he patronized the arts and literature; and a collection of poems and eulogies dedicated to him was made and circulated in Bagdad. On account of this work, mentioned by Wassaf, Grätz identifies Sa'd with Mardocai b. al-Kharbiya, who is described in a poem (still extant) dedicated to him in terms that might well apply to Sa'd (Grätz, "Gesch." vii., note 10).

Sa'd had many enemies. The Mongolian officials hated him because they could no longer divert the revenues to their own use; and the Mohammedans felt it a degradation to have a Jew placed over them. Sa'd had moreover made an enemy of Argun's favorite. He himself was proud and haughty in his bearing. False reports were circulated about him; and no opportunity was lost of maligning him to Argun, although without effect. It was said that Sa'd was trying to introduce a new religion at the head of which was to be the Ilkhan. Finally Argun fell ill, and Sa'd's enemies took advantage of the opportunity to get rid of the Jew. He was killed, as stated above, on March 5, 1291; his goods were confiscated; and his family and the Jews in general were persecuted. Argun died soon after.

ṢADAḲAH BEN ABU AL-FARAJ MUNAJJA: Samaritan physician and philosopher; died near Damascus 1223. He was the court physician of Al-Malik al-'Adil, the Ayyubid prince, who ruled at Damascus. Ṣadaḳah was the author of: "Sharh Fuṣul Buḳraṭ," a commentary on Hippocrates; "Kitab fi al-Nafs wal-Ruḥ," on the soul and spirit; "Al-Kunz fi al-Fauz," on the unity of God; "Kitab al-I'tiḳad," on dogmatics. In addition to these works, which, according to Ibn Abi Uṣaibiah and Hajji Khalfa, are still extant in manuscript, Ṣadaḳah is said to have composed commentaries on the Pentateuch.

SADDUCEES (Hebrew, צדוקים; Greek, *Σαδδουκαῖοι*): Name given to the party representing views and practises of the Law and interests of Temple and priesthood directly opposite to those of the PHARISEES. The singular form, "Ẓadduḳi" (Greek, Σαδδουκαῖος), is an adjective denoting "an adherent of the Bene Ẓadoḳ," the descendants of Zadok, the high priests who, tracing their pedigree back to Zadok, the chief of the priesthood in the days of David and Solomon (I Kings i. 34, ii. 35; I Chron. xxix. 22), formed the Temple hierarchy all through the time of the First and Second Temples down to the days of Ben Sira (II Chron. xxxi. 10; Ezek. xl. 46, xliv. 15, xlviii. 11; Ecclus. [Sirach] li. 12 [9], Hebr.), but who degenerated under the influence of Hellenism, especially during the rule of the Seleucidæ, when to be a follower of the priestly aristocracy was tantamount to being a worldly-minded Epicurean.

Name from High Priest Zadok.

The name, probably coined by the Ḥasidim as opponents of the Hellenists, became in the course of time a party name applied to all the aristocratic circles connected with the high priests by marriage and other social relations, as only the highest patrician families intermarried with the priests officiating at the Temple in Jerusalem (Ḳid. iv. 5; Sanh. iv. 2; comp. Josephus, "B. J." ii. 8, § 14). "Haughty men these priests are, saying which woman is fit to be married by us, since our father is high priest, our uncles princes and rulers, and we presiding officers at the Temple"—these words, put into the mouth of Nadab and Abihu (Tan., Aḥare Mot, ed. Buber, 7; Pesiḳ. 172b; Midr. Teh. to Ps. lxxviii. 18), reflect exactly the opinion prevailing among the Pharisees concerning the Sadducean priesthood (comp. a similar remark about the "haughty" aristocracy of Jerusalem in Shab. 62b). The Sadducees, says Josephus, have none but the rich on their side ("Ant." xiii. 10, § 6). The party name was retained long after the Zadokite high priests had made way for the Hasmonean house and the very origin of the name had been forgotten. Nor is anything definite known about the political and religious views of the Sadducees except what is recorded by their opponents in the works of Josephus, in the Talmudic literature, and in the New Testament writings.

Josephus relates nothing concerning the origin of what he chooses to call the sect or philosophical school of the Sadducees; he knows only that the three "sects"—the Pharisees, Essenes, and Sadducees—dated back to "very ancient times" (*ib.* xviii. 1, § 2), which words, written from the point of view of King Herod's days, necessarily point to a time prior to John Hyrcanus (*ib.* xiii. 8, § 6) or the Maccabean war (*ib.* xiii. 5, § 9). Among the Rabbis the following legend circulated: Antigonus of Soko, successor of Simon the Just, the last of the "Men of the Great Synagogue," and consequently living at the time of the influx of Hellenistic ideas, taught the maxim, "Be not like servants who serve their master for the sake of wages [lit. "a morsel"], but be rather like those who serve without thought of receiving wages" (Ab. i. 3); whereupon two of his disciples, Zadok and Boethus, mistaking the high ethical purport of the maxim, arrived at the conclusion that there was no future retribution, saying, "What servant would work all day without obtaining his due reward in the evening?" Instantly they broke away from the Law and lived in great luxury, using many silver and gold vessels at their banquets; and they established schools which declared the enjoyment of this life to be the goal of man, at the same time pitying the Pharisees for their bitter privation in this world with no hope of another world to compensate them. These two schools were called, after their founders, Sadducees and Boethusians (Ab. R. N. v.).

Legendary Origin.

The unhistorical character of this legend is shown by the simple fact, learned from Josephus, that the Boethusians represent the family of high priests created by King Herod after his marriage to the daughter of Simon, the son of Boethus ("Ant." xv. 9, § 3; xix. 6, § 2; see BOETHUSIANS). Obviously neither the character of the Sadducees nor that of the Boethusians was any longer known at the time the story was told in the rabbinical schools. Nor does the attempt to connect the name "Sadducees" with the term "ẓedeḳ" or "ẓedaḳah" (= "righteousness"; Epiphanius, "Panarium," i. 14; Derenbourg, "Histoire de la Palestine," p. 454) deserve any more consideration than the creation by Grätz ("Gesch." 3d ed., iii. 88, 697) and others, for the purpose of accounting for the name, of a heretic leader called Zadok. Geiger's ingenious explanation ("Urschrift," pp. 20 *et seq.*), as given above, indorsed by Wellhausen ("Die Pharisäer und die Sadducäer," p. 45), is very generally approved to-day (see Schürer, "Gesch." 3d ed., ii. 408); and it has received striking confirmation from the special blessing for "the Sons of Zadok whom God has chosen for the priesthood" in the Hebrew Ben Sira discovered by Schechter (see Schechter and Taylor, "Wisdom of Ben Sira," 1899, p. 35). In the New Testament the high priests and their party are identified with the Sadducees (Acts v. 17; comp. *ib.* xxiii. 6 with *ib.* xxii. 30, and John vii. 30, xi. 47, xviii. 3 with the Synoptic Gospels; see also "Ant." xx. 9, § 1).

The views and principles of the Sadducees may be summarized as follows: (1) Representing the nobility, power, and wealth ("Ant." xviii. 1, § 4), they had centered their interests in political life, of which they were the chief rulers. Instead of sharing the Messianic hopes of the Pharisees, who committed the future into the hand of God, they took the people's destiny into their own hands, fighting or negotiating with the heathen nations just as they thought best, while having as their aim their own temporary welfare and worldly success. This is the meaning of what Josephus chooses to term their disbelief in fate and divine providence ("B. J." ii. 8, § 14; "Ant." xiii. 5, § 9).

(2) As the logical consequence of the preceding view, they would not accept the Pharisaic doctrine of the resurrection (Sanh. 90b; Mark xii. 12; Ber. ix. 5, "Minim"), which was a national rather than an individual hope. As to the immortality of the soul, they seem to have denied this as well (see Hippolytus, "Refutatio," ix. 29; "Ant." x. 11, § 7).

(3) According to Josephus (*ib.* xiii. 10, § 6), they regarded only those observances as obligatory which are contained in the written word, and did not recognize those not written in the law of Moses and declared by the Pharisees to be derived from the traditions of the fathers. Instead of accepting the authority of the teachers, they considered it a virtue to dispute it by arguments.

(4) According to Acts xxiii. 8, they denied also the existence of angels and demons. This probably means that they did not believe in the Essene practise of incantation and conjuration in cases of disease, and were therefore not concerned with the ANGELOLOGY and DEMONOLOGY derived from Babylonia and Persia.

Their Views and Principles.

(5) In regard to criminal jurisdiction they were so rigorous that the day on which their code was abolished by the Pharisaic Sanhedrin under Simeon b. Sheṭaḥ's leadership, during the reign of Salome Alexandra, was celebrated as a festival (Meg. Ta'an. iv.; comp. Ket. 105a). They insisted on the literal execution of the law of retaliation: "Eye for eye, tooth for tooth" (Ex. xxi. 24; Meg. Ta'an. iv.; B. Ḳ. 84a; comp. Matt. v. 38). On the other hand, they would not inflict the death penalty on false witnesses in a case where capital punishment had been wrongfully carried out, unless the accused had been executed solely in consequence of the testimony of such witnesses (Mak. i. 8; Tosef., Sanh. vi. 6, where "Boethusians" stands for "Sadducees").

(6) They held the owner of a slave fully as responsible for the damage done by the latter as for that done by the owner's ox or ass; whereas the Pharisees discriminated between reasonable and unreasonable beings (Yad. iv. 7).

(7) They also insisted, according to Meg. Ta'an. iv., upon a literal interpretation of Deut. xxii. 17 (comp. Sifre, Deut. 237; Ket. 46; see also the description of the custom still obtaining at weddings among the Jews of Salonica, in Braun-Wiesbaden's "Eine Türkische Reise," 1876, p. 235), while most of the Pharisaic teachers took the words figuratively. The same holds true in regard to Deut. xxv. 9: "Then shall his brother's wife . . . spit in his [her deceased husband's brother's] face," which the Pharisees explained as "before him" (Yeb. xii. 6; see Weiss, "Dor," i. 117, note).

(8) They followed a traditional practise of their own in granting the daughter the same right of inheritance as the son's daughter in case the son was dead (Meg. Ta'an. v.; Tos. Yad. ii. 20; B. B. viii. 1, 115b).

(9) They contended that the seven weeks from the first barley-sheaf-offering ("'omer") to Pentecost should, according to Lev. xxiii. 15-16, be counted

from "the day after Sabbath," and, consequently, that Pentecost should always be celebrated on the first day of the week (Meg. Ta‘an. i.; Men. 65a). In this they obviously followed the old Biblical view which regards the festival of the firstlings as having no connection whatsoever with the Passover feast; whereas the Pharisees, connecting the festival of the Exodus with the festival of the giving of the Law, interpreted the "morrow after the Sabbath" to signify the second day of Passover (see Jubilees, Book of).

Views on Temple Practises.

(10) Especially in regard to the Temple practise did they hold older views, based upon claims of greater sanctity for the priesthood and of its sole dominion over the sanctuary. Thus they insisted that the daily burnt offerings were, with reference to the singular used in Num. xxviii. 4, to be offered by the high priest at his own expense; whereas the Pharisees contended that they were to be furnished as a national sacrifice at the cost of the Temple treasury into which the "sheḳalim" collected from the whole people were paid (Meg. Ta‘an. i. 1; Men. 65b; Sheḳ. iii. 1, 3; Grätz, *l.c.* p. 694).

(11) They claimed that the meal-offering belonged to the priest's portion; whereas the Pharisees claimed it for the altar (Meg. Ta‘an. viii.; Men. vi. 2).

(12) They insisted on an especially high degree of purity in those who officiated at the preparation of the ashes of the Red Heifer. The Pharisees, on the contrary, demonstratively opposed such strictness (Parah iii. 7; Tos. Parah iii. 1–8).

(13) They declared that the kindling of the incense in the vessel with which the high priest entered the Holy of Holies on the Day of Atonement was to take place outside, so that he might be wrapped in smoke while meeting the Shekinah within, according to Lev. xvi. 2; whereas the Pharisees, denying the high priest the claim of such supernatural vision, insisted that the incense be kindled within (Sifra, Aḥare Mot, 3; Yoma 19b, 53a, b; Yer. Yoma i. 39a, b; comp. Lev. R. xxi. 11).

(14) They extended the power of contamination to indirect as well as to direct contact (Yad. iv. 7).

(15) They opposed the popular festivity of the water libation and the procession preceding the same on each night of the Sukkot feast, as well as the closing festivity, on which the Pharisees laid much stress, of the beating of the willow-trees (Suk. 43b, 48b; Tos. Suk. iii. 16; comp. "Ant." xiii. 13, § 5).

(16) They opposed the Pharisaic assertion that the scrolls of the Holy Scriptures have, like any holy vessel, the power to render unclean (taboo) the hands that touch them (Yad. iv. 6).

(17) They opposed the Pharisaic idea of the ‘Erub, the merging of several private precincts into one in order to admit of the carrying of food and vessels from one house to another on the Sabbath (‘Er. vi. 2).

(18) In dating all civil documents they used the phrase "after the high priest of the Most High," and they opposed the formula introduced by the Pharisees in divorce documents, "According to the law of Moses and Israel" (Meg. Ta‘an. vii.; Yad. iv. 8; see Geiger, *l.c.* p. 34).

Whether the Sadducees were less strict in regard to the state of impurity of woman in her periods (Niddah iv. 2), and what object they had in opposing the determination by the Pharisees of the appearance of the new moon (R. H. ii. 1, 22b; Tos. R. H. i. 15), are not clear. Certain it is that in the time of the Tannaim the real issues between them and the Pharisees were forgotten, only scholastic controversies being recorded. In the latter the Sadducees are replaced by the late Boethusians, who had, only for the sake of opposition, maintained certain Sadducean traditions without a proper understanding of the historical principles upon which they were based.

Decline of Sadduceeism.

In fact, as Josephus ("Ant." xviii. 1, § 3) states in common with the Talmudical sources (Yoma 19b; Niddah 33b), the ruling members of the priesthood of later days were forced by public opinion to yield to the Pharisaic doctors of the Law, who stood so much higher in the people's esteem. In the course of time the Sadducees themselves adopted without contradiction Pharisaic practises; it is stated (Shab. 108a) that they did so in regard to the tefillin, and many other observances appear to have been accepted by them (Hor. 4a; Sanh. 33b).

With the destruction of the Temple and the state the Sadducees as a party no longer had an object for which to live. They disappear from history, though their views are partly maintained and echoed by the Samaritans, with whom they are frequently identified (see Hippolytus, "Refutatio Hæresium," ix. 29; Epiphanius, *l.c.* xiv.; and other Church Fathers, who ascribe to the Sadducees the rejection of the Prophets and the Hagiographa; comp. also Sanh. 90b, where "Ẓadduḳim" stands for "Kutim" [Samaritans]; Sifre, Num. 112; Geiger, *l.c.* pp. 128–129), and by the Karaites (see Maimonides, commentary on Ab. i. 3; Geiger, "Gesammelte Schriften," iii. 283–321; also Anan ben David; Karaites).

The Book of Ecclesiastes in its original form, that is, before its Epicurean spirit had been toned down by interpolations, was probably written by a Sadducee in antagonism to the Ḥasidim (Eccl. vii. 16, ix. 2; see P. Haupt, "Koheleth," 1905; Grätz, "Koheleth," 1871, p. 30). The Wisdom of Ben Sira, which, like Ecclesiastes and older Biblical writings, has no reference whatsoever to the belief in resurrection or immortality, is, according to Geiger, a product of Sadducean circles ("Z. D. M. G." xii. 536). This view is partly confirmed by the above-cited blessing of "the Sons of Zadok" (Hebrew Ben Sira, li. 129; see also C. Taylor, "Sayings of the Fathers," 1897, p. 115). Also the first Book of Maccabees is, according to Geiger (*l.c.* pp. 217 *et seq.*), the work of a Sadducee. Allusion to the Sadducees as "sinners" is found in the Psalms of Solomon (i. 1, iv. 1–10); they are "severe in judgment" (comp. "Ant." xiii. 10, § 6; xx. 9, § 1), "yet themselves full of sin, of lust, and hypocrisy"; "men pleasers," "yet full of evil desires" (*ib.* viii. 8; see H. E. Ryle and M. R. James, "Psalms of the Pharisees Commonly Called 'Psalms of Solomon,'" 1891, xlvi.–

In Literature.

xlviii. and elsewhere; Kautzsch, "Apokryphen," pp. 128 *et seq.*). Still more distinctly are the Sadducees described in the Book of Enoch (xciv. 5-9, xcvii.-xcviii., xcix. 2, civ. 10) as: "the men of unrighteousness who trust in their riches"; "sinners who transgress and pervert the eternal law." Sadducees, if not in name, at least in their Epicurean views as opposed to the saints, are depicted also in the Book of Wisdom (i. 16-ii. 22), where the Hellenistic nobility, which occupied high positions likewise in Alexandria, is addressed.

In the New Testament the Sadducees are mentioned in Matt. iii. 7 and xvi. 1, 6, 11, where they are identical with the Herodians (Mark xii. 13), that is, the Boethusians (Matt. xxii. 23, 34; Mark xii. 18; Acts iv. 1, v. 17, xxiii. 6-8). In John's Gospel they simply figure as "the chief priests" (vii. 23, 45; xi. 47, 57; xviii. 3).

In rabbinical literature careful discrimination must be made between the tannaitic period and that of the Amoraim. The Mishnah and Baraita in the passages quoted above indicate at least a fair knowledge of the character and doctrines of the Sadducees (see, for instance, R. Akiba in Yoma 40b), even though the names "Boethusians" and "Sadducees" occur promiscuously (see Grätz, "Gesch." iii. 693, and Boethusians). In the amoraic period the name "Ẓadduḳi" signifies simply "heretic," exactly like the term "min" = "gnostic"; in fact, copyists sometimes replaced, it may be intentionally, the word "min" by "Ẓadduḳi," especially when Christian gnostics were referred to. However, in many cases in which "Ẓadduḳim" stands for "minim" in the later Talmud editions the change was due to censorship laws, as is shown by the fact that the manuscripts and older editions actually have the word "minim." Thus the Ẓadduḳi who troubled R. Joshua b. Levi with Biblical arguments (Ber. 7a; Sanh. 105b), the one who argued with R. Abbahu and Beruriah (Ber. 10a), the one who bothered R. Ishmael with his dreams (*ib.* 56b), and the one who argued with R. Ḥanina concerning the Holy Land in the Messianic time (Giṭ. 57a; Ket. 112a) and regarding Jesus ("Balaam," Sanh. 106b), were Christian gnostics; so were also the two Ẓadduḳim in the company of R. Abbahu (Suk. 48b). But the Ẓadduḳim who argue in favor of dualism (Sanh. 37a [the original version of the Mishnah had "apikoresin" or "minim"], 38b-39a; Ḥul. 87a) are gnostics or Jewish heretics, as are also those spoken of as "a vile people" (Yeb. 63b). "Birkat ha-minim," the benediction against Christian informers and gnostics, is called also "Birkat ha-Ẓadduḳim" (Ber. 28b, 29a). "The writings of the Ẓadduḳim" (Shab. 116a) are gnostic writings, the same as "Sefarim Ḥiẓonim" (Sanh. x. 1; "Sifre ha-Minim," Tos. Shab. xiii. 5). So it is said of Adam that he was a Ẓadduḳi, that is, a gnostic who did not believe in God as the Giver of the Law (Sanh. 38b). "The Ẓadduḳim and informers" (Derek Ereẓ Rabbah ii.; Derek Ereẓ Zuṭa i.) are Christian gnostics. In Hor. 11a a Ẓadduḳi is declared to be a transgressor of the dietary and other Mosaic laws, nay, an idolater. On the other hand, the Ẓadduḳim who conversed with Rab Sheshet (Ber. 58a), with Raba (Shab. 88a), and with R. Judah (Ned. 49b) seem to have been Manicheans. See Pharisees.

K.

SAFED (Hebrew, "Ẓefat"): City of Upper Galilee (it has no connection with the Zephath of Judges i. 17). Its foundation dates from the second century of the common era (Yer. R. H. 58a). There is no further mention of the town for many centuries. In 1289 Moses b. Judah ha-Kohen, chief rabbi of Safed, accompanied by his assessors, went to Tiberias, and pronounced over the tomb of Maimonides an anathema on all who should condemn his writings (Grätz, "Gesch." vii. 171). In 1491 the chief rabbi was Perez Colobo, who was so poorly paid that he was obliged to carry on a grocery business; but in the following year the community was reorganized by Joseph Saragossi, a Spanish immigrant. He was succeeded in the office by Jacob Berab (1541); Joseph Caro (1575); Moses Galante the Elder (1580); Moses mi-Trani (1590); Joshua ben Nun (1592); Naphtali Ashkenazi (1600); Baruch Barzillai (1650), and Meïr Barzillai (1680).

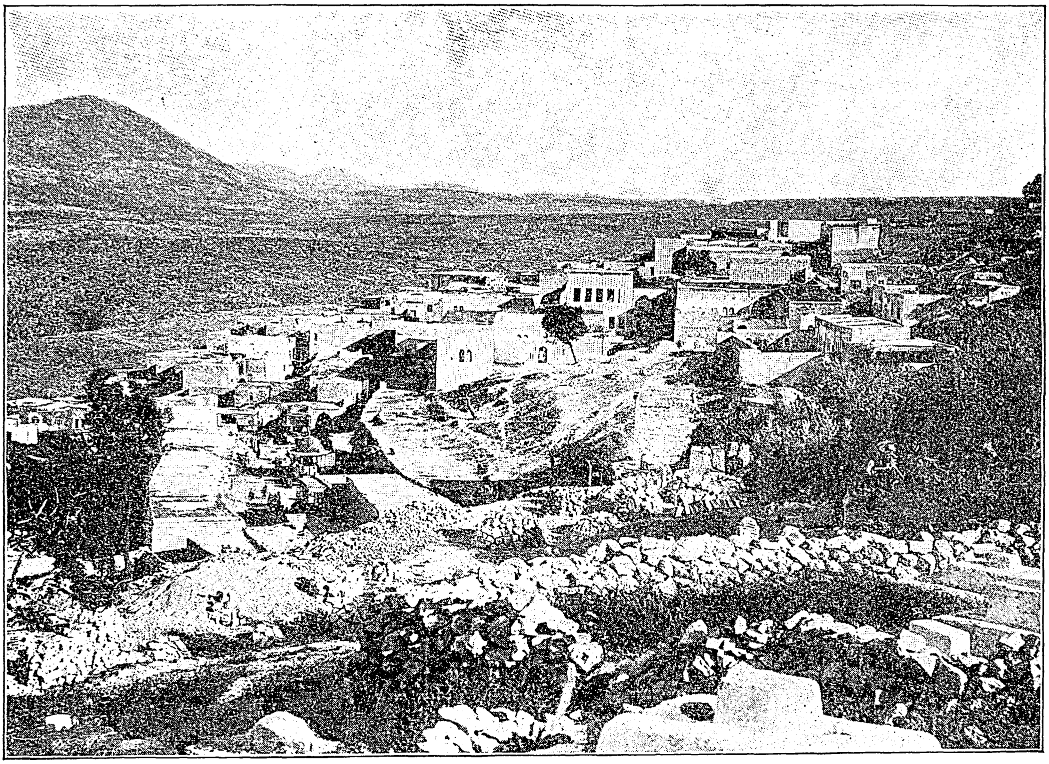
During the sixteenth and seventeenth centuries there was marked rabbinic activity in Safed. There Jacob Berab established a patriarchate, Isaac Luria and Ḥayyim Vital revived the Cabala in Palestine, and Joseph Caro wrote the Shulḥan 'Aruk. The eighteenth century, however, was a period of decline; for the plague of 1742 and the earthquake of 1769 caused the death of 140 Jews, and compelled the rest to emigrate to Damascus and elsewhere, so that only seven families remained, whereas in 1492 the Hebrew population had numbered 10,000. In 1776 Safed was repeopled by Russian Jews; and five years later two Russian rabbis, Löb Santower and Uriah of Wilna, brought there a number of families from Volhynia, Podolia, and the Ukraine, the consuls of Russia and Austria taking these foreign Jews under their protection.

Misfortunes of the Nineteenth Century.

The history of Safed during the first half of the nineteenth century is but a series of misfortunes. The plague of 1812 carried off four-fifths of the Jewish population; and seven years later Abdallah Pasha, the governor of Acre, imprisoned the remainder in his stronghold, and released them only on the payment of ransom. In 1833, at the approach of Ibrahim Pasha, the Jewish quarter was plundered by the Druses, although the inhabitants escaped to the suburbs; and the following year it was again pillaged, the persecution lasting thirty-three days, and causing damage to the amount of 135,250 piasters, according to Löwe's investigations. When Ibrahim Pasha returned, however, he imposed an indemnity on the surrounding villages, and repaid the Jews 7 per cent of their losses. On Jan. 1, 1837, more than 4,000 Jews were killed by an earthquake, the greater number of them being buried alive in their dwellings; and ten years later the plague again raged at Safed. In the second half of the nineteenth century Jews emigrated from Persia, Morocco, and Algeria to the city. Its houses and synagogues were rebuilt by Sir Moses Montefiore, who visited the city seven times between 1837 and 1875, and by Isaac Vita of Triest.

The chief rabbis of the Sephardim in the nineteenth century were: Reuben Behar Baruch (c. 1800), Abraham Kohen (c. 1820), Abraham Anhori (c. 1824), Ḥayyim Mizraḥi (c. 1846), Raphael Maman (c. 1870), Manasseh Sethon (c. 1874), Samuel Abbo (1874–79; also consular agent of France for thirty-three years), Solomon Hazan (1888), Joseph Ḥakim (1890), and Jacob Haï Abbo (1890–1900, also consular agent of France). Moses Maman is the present incumbent. Among the Ashkenazic chief rabbis may be mentioned Abraham Dob Beer (c. 1835) and Samuel Heller (c. 1880).

The position of French consular agent at Safed has been hereditary in the family of Abbo since the reign of Louis Philippe, and is now (1905) held by Isaac Abbo, whose authority extends over 4,000 Algerine Jews at Safed and Tiberias, while another Jew, Abraham Kohen 'Ajami, is consular agent of Persia.



View of the Jewish Quarter at Safed.
(From a photograph by Bonfils.)

Literature.

In rabbinical literature Safed may be considered one of the richest of Oriental cities. In 1588 the printing-press of Abraham Ashkenazi was established there, while that of Israel Back was active from 1833 to 1841, and that of Israel Dob Beer after 1864. Moreover, many writers of Safed profited by their travels throughout Europe, and had their works published at Pisa, Venice, Leghorn, and other cities. Among these authors may be mentioned: Bezaleel Ashkenazi, Jacob Berab, Joseph Caro, Joseph Benveniste, Elisha Gallico, Elijah de Vidas, Moses Galante the Elder, Ḥayyim Vital, Abraham b. Solomon Treves Ẓarfati, Moses Alshech, Eleazar Azikri, Joshua ben Nun, Abraham Galante, Samuel Uceda, David abi Zimra, Moses Mitrani, Moses Cordovero, Moses ben Machir, Ḥiyya Rofé, Abraham Ẓemaḥ, Abraham Lañado, Menahem de Lonzano, Moses Galante the Younger, Benjamin Cazès, Moses Chajes, Eleazar of Brody, Israel of Wilna, Abraham Dob Beer, Samuel Heller, Solomon Hazan, Isaac Vita, Raphael Maman, and Manasseh Sethon.

Repeated catastrophes have destroyed almost all the antiquities of Safed. Of those that remain the following may be mentioned: the tomb of the prophet Hosea, said to have been built by the Karaites of Damascus in the fifteenth century; the Torah scroll, called "Sefer Aboab," and attributed to Isaac Aboab, "the last gaon of Castile" (1492); the bath of the cabalist Isaac Luria (c. 1540); some heaps of stones, without inscriptions, in the vicinity of Safed, believed to mark the graves of Benaiah ben Joiadah, R. José dé Yoḳrat, and others.

The synagogues of Safed have all been built since the earthquake of 1837. The Sephardim possess two midrashim and four synagogues, namely, those named after Aboab, Stam'buli or Joseph Caro, Rabbi José Banaï, and Rab ha-'Ari or Isaac Luria, while the Ashkenazim have two midrashim and two large synagogues. The Ashkenazim have also a library containing a large collection of modern Hebrew works, while the Sephardic Jews possess two public libraries well supplied with rabbinical works, as well as a private library named after Ḥayyim Sethon.

Present Condition.

In 1904 the population of Safed, 21,000, included 7,000 Jews, comprising natives or Moriscos, Mograbins from the Barbary States, 'Ajamis from Persia, Bulgarians, and Ashkenazic Jews from Hungary, Russia, Poland, Austria, and other countries, the most of them subsisting by the Ḥaluḳḳah, although many were engaged in various trades or in commerce. The languages spoken by the Safed Jews are Judæo-German, Hebrew, and Arabic. The community has two well-organized schools supported by the Alliance Israélite Universelle and by Baron Edmond de Rothschild, with accommodations for 73 boys and 180 girls, in addition to about thirty small Ashkenazic schools having from 10 to 40 pupils each. There is also a Talmud Torah, or "kuttab," attended by 80 Sephardic children. The community likewise supports a Zionist society, a society for the aid of women ("Benot ha-Galil"), a lodge of the B'nai B'rith, a bakery, and a hospital.

The Jews of Safed have a few peculiar customs, consisting chiefly of the celebration of certain local religious festivals, notably that of Simeon ben Yoḥai, which attracts many thousands of pilgrims. Three miles northwest of the city is Meron, noted for the mausoleum erected over Simeon's remains.

North of the town lies Biria, where a Hebrew congregation flourished from the Talmudic period until the beginning of the nineteenth century; and at the foot of the hill of Safed stands 'Ain Zaitun, an ancient Jewish village, in which an agricultural colony was established in 1891. An hour and a half from Safed are the ruins (covered with Hebrew inscriptions) of Nabartine, a Jewish community of Talmudic times, destroyed in the tenth century; and one hour east of the city is the agricultural colony of Rosh Pinnah.

SAGERIN (lit. "female sayer"): Leader of the women in public prayer. The separation of the sexes at Jewish worship was insisted on even in the days of the Temple (Suk. 51b); but women were by tradition recognized as entitled to appoint a prayer-leader from among themselves (Ber. 45b; 'Ar. 3a). While there have always been educated, even learned, Jewesses, the greater prominence usually given to boys in the instruction of Hebrew, through a misinterpretation of the diction of R. Eliezer in Soṭah iii. 4 (see M. Friedländer, "The Jewish Religion," London, 1900, p. 481, note) resulted in many women remaining unversed in the sacred language. Again, the duties of the mother and the general pressure of domestic ceremonial on the pious Jewess in every age resulted in the women becoming generally rarer visitors at the synagogue than the men, and only exceptional attendants on ordinary week-days. The custom, therefore, developed, and is still followed in eastern Europe, for women to meet in small groups, in which one of them, a more fluent reader than her sister worshipers, and provided, in the old days of costly books, with a single copy of the manual, read aloud in the vernacular of the locality the "Teḥinnes" or supplications (see Judæo-German) or from some volume of ethical and theological instruction. In countries where Judæo-German is spoken, this reading-woman is called the "sagerin" (usually pronounced "zoogerin"). She is at the present day remarkable for the persistence with which, whatever the character of the text, she recites the devotions or the lessons in a wailing croon (comp. Oren) punctuated with sobs (comp. Jew. Encyc. iv. 551, *s.v.* Devotional Literature) and in unison with her audience. This peculiar custom dates probably from the Chmielnicki massacres of 1649.

The "sagerin" was known also in the Middle Ages. The ancient synagogue at Worms had no gallery for the women, who were accommodated, instead, in a chapel on the same level as the body of the synagogue, but separated by a wall between four and five feet in thickness. This wall was removed in 1840, and the former chapel made part of the men's portion of the synagogue. Previously communication was had only through a narrow hatch, covered with a curtain. The women could hear nothing distinctly from the synagogue; and a "sagerin" was a necessity. In the middle of the thirteenth century this female officiant was a young woman of unusual capacity—Urania, the daughter of Abraham, himself chief cantor of the synagogue; her gravestone, still standing in good condition in the Worms cemetery, states her to have "chanted piyyuṭim and supplications for the women"—to have acted, in fact, as a female cantor. Urania died on Sunday, Adar 6, 1275 (see L. Lewysohn, "Nafshot Ẓaddiḳim," p. 86, Frankfort-on-the-Main, 1855).

SAHAGUN (SANT FAGUND): City in the old Spanish kingdom of Leon. On March 5, 1152, King Alfonso VII. granted to the thirty Jewish families living there the same privileges which the Jews in the city of Leon had received from Alfonso VI. (Becerro, "Ms. de Sahagun," in Mendes dos Remedios, "Os Judeos em Portugal," p. 118). By the time of Alfonso X. the Jewish community of the city had become one of considerable size, and the question of privileges again arose. On April 12, 1255, the king issued an edict placing the Jews of Sahagun on an equal footing with those of Carrion. They had special judges, who were appointed by the rabbis of Burgos, and who took an oath before the Abbot of Sahagun that they would decide the cases brought before them to the best of their ability, while the abbot had the right to carry all cases on appeal to the rabbis. Disputes between Christians and Jews were to be decided by the alcaldes of the city. A Jew and a Christian were to be admitted as witnesses in cases between Christians and Jews; but no Jews were to be admitted in cases where Christians alone were concerned, nor any Christians in cases in which only Jews were involved. The abbot was empowered to appoint a Jew, a resident of Sahagun, as president of the Jewish court or "abbi dy" (Rios in his "Hist." i. 487 corrupts these words into the inexplicable "abbedi"; it stands in reality for "ab bet din"). It was furthermore decreed that the Jews should pay to the abbot a tax of 18 dineros, and in addition a yearly sum not exceeding 100 maravedis for the maintenance of his table "ayantar," etc.

Later, when the abbot extorted various larger and smaller sums from them, imprisoning those that refused to pay, the Jews of Sahagun appealed for their ancient privilege. They laid their complaint before King Henry III., saying that in consequence of the abbot's arbitrary procedure many of their brethren had left the city, and that the remaining Jews were not able to pay the royal taxes. On Aug. 15, 1401, the king issued an order to the abbot forbidding him, under penalty of a fine of 10,000 maravedis, thenceforth to molest the Jews with fines or imprisonment. The abbot, however, disregarded the royal order, and four weeks later (Sept. 18) the king ordered him to appear within two weeks at court to explain personally his reasons for his disobedience. The abbot, however, again disobeyed the royal command and imprisoned, among others, R. Abraham Obadiah and D. Gracia, his wife; the teacher or physician Maestro Yuce (Joseph) and wife; and Samuel aben Pex, none of whom had been taken, as required by law, before the Jewish judge and sentenced. As soon as they were set at liberty the five representatives of the community, D. Çag (Isaac) Maimon, D. Sentó (Shem-Ṭob) Timon, D. Moses Timon (a merchant), D. Moses aben Pex, and R. Abraham Maimon, protested to the governor of the aljama, D. Juan Sanches de Gusman, against the illegal proceeding of the abbot. Together with them appeared the five persons who had been imprisoned, with Moses Gorion and D. Sentó Gabay as witnesses. Another dispute between the abbot and the Jews of Sahagun was decided a few weeks later by the Curia. In 1399 Juan Martinez de Balves, a presbyter of Burgos, had made strenuous attempts to baptize forcibly the Jews of Sahagun, and, when attacked by them, had fled to the monastery. The authorities commanded the abbot to deliver up the presbyter within two weeks or to state the reasons for his refusal. The abbot again disobeyed; and he applied to Pope Benedict XIII., who decided the matter in his favor (Aug. 30, 1403).

Sahagun, which at one time was a flourishing community, had before the expulsion sunk to comparative insignificance. While in 1290 it had paid a royal tax of 28,653 maravedis, in 1474 its taxes, combined with those of the Jews of Monesterio, amounted to only 2,500 maravedis.

J. M. K.

SAHL (called **Rabban,** *i.e.*, **Rabbi al-Ṭabari,** *i.e.*, "of Tabaristan"): Physician, astrologer, and mathematician of the ninth century (*c.* 786–845 ?); father of the physician Ali ben Sahl. Sahl translated the "Almagest" of Ptolemy. Steinschneider identifies him with the celebrated Sahl ibn Bishr ("Zur Pseudepigraphischen Litteratur," p. 78).

Bibliography: Steinschneider, *Die Arabische Literatur der Juden*, pp. 24, 31 *et seq.*; Grätz, *Gesch.* 3d ed., v. 187–188; Suter, *Die Mathematiker und Astronomen der Araber und Ihre Werke*, in *Zeitschrift für Mathematik und Physik*, ed. Mehmke and Cantor, supplement to the 45th year of publication, Leipsic, 1900.

s. M. Sc.

SAHL BEN MAẒLIAḤ HA-KOHEN AL-MU'ALLIM ABU AL-SARI: Karaite philosopher and writer; born at Jerusalem 910. He belonged to the Rechabites, and was one of the apostles of the Karaites who traveled extensively to win new adherents for Karaism and thereby strengthen the failing faith of their coreligionists. He was distinguished for his profound knowledge of Biblical and post-Biblical literature, and was a master of Arabic. Although he was one of Saadia's bitterest enemies, most of his attacks were directed against Samuel ben Jacob, a pupil of the gaon. The subject of his polemics, as with his predecessors, was the abolition of purification laws and of the lighting of lights and drawing of water on the Sabbath. He often reproaches the Rabbinites for preaching and teaching for the sake of gain, asserting that their aims are not as free from selfishness as those of the Karaites. Sahl's polemics throw much light upon the degree of laxness in religious ceremonial prevalent in his time. Thus he complains against the Rabbinites that in many matters they openly made common cause with non-Jews and were thereby led astray from the strict observance of the dietary laws.

Sahl was especially interested in calendric questions, and in one of his writings reviews the whole controversy between R. Meïr of Jerusalem and Saadia in order to draw attention to the conciliatory disposition of the Palestinian Jews. He rendered valuable services to Karaism by establishing four fundamental exegetical principles. These four principles were: (1) the laying of special emphasis on the literal interpretation of the Scriptures; (2) speculation; (3) inference by analogy ("hekkesh"); (4) the agreement of the totality. By these principles he made possible the acceptance by Karaism of many decisions not found in the Bible, and also brought about the introduction of many modifications in the ceremonial.

Sahl was the author of the following works: (1) "Mishneh Torah," commentary on the Pentateuch (mentioned in "Orḥot Ẓaddiḳim," p. 24b; see Munk, "Notice sur Abul Walid Merwan ibn Djanah," iv. 6); (2) commentary on the books of Isaiah and Daniel (often mentioned in the "Ba'al ha-Mibḥar" of Aaron b. Joseph); (3) "Sefer Dinim" (a copy of this work, possessed by Dr. Munk, is entitled "Sefer ha-Miẓwot" and is ascribed to Samuel Rofe); (4) "Sefer ha-Miẓwot"; (5) a grammatical-lexical work entitled "Leshon Limmudim" (Fürst, "Gesch. des Karäert." ii. 91); (6) "Sefer Diḳduḳe," a Hebrew grammar; (7) a long letter against Jacob b. Samuel, protesting against public insult and abuse (found by Elijah Yerushalmi in Jerusalem); (8) ten unpublished responsa against Elijah Yerushalmi; (9) an anti-Rabbinite poem, his name being given in acrostic; (10) "Iggeret Toḥakat," or "Sefer Toḥakat."

E. C. S. O.

SAHULAH, ISAAC BEN SOLOMON IBN ABI: Spanish scholar and Hebrew poet of the thirteenth century; born, as some believe, at Guadalajara in 1244. Geiger, in "Melo Chofnajim," German part,

p. 62, gives the name as **Segullah.** According to Abraham Zacuto ("Yuḥasin," ed. Filipowski, p. 222), Sahulah died in 1268; but the latter, in the preface to his "Meshal ha-Ḳadmoni," clearly indicates that he began to write that work in 1281. He states, moreover, that from his childhood he had had a predilection for poetry and fables, but that on attaining manhood he had occupied himself exclusively with profane poetry. It was only at the age of thirty-seven that he changed his mind and composed his "Meshal ha-Ḳadmoni" (Soncino, 1480), a collection of allegories or fables in rimed prose. In his preface, which also is written in rimed prose interspersed with verse, he states that his material was original, but that in style he imitated the Prophets, in order to present moral subjects in a concrete form. His chief aim was to show that the Hebrew language was as suitable for allegories as the Arabic, and yet he imitated the Arabic style. The work is divided into five parts ("she'arim"), each of which is subdivided into two chapters ("sedarim"). The first part contains a treatise on the intellect; the second, on penitence; the third, on correct advice; the fourth, on humility; and the fifth, on the fear of God. The fables often overlap one another; and sometimes the author puts into the mouths of animals utterances not usually met with in the domain of fable. The fables and narratives give evidences of the cabalistic tendencies of the time, so much so, indeed, that Moses ben Shem-Ṭob de Leon read this work carefully and, being greatly pleased with it, actually claimed its authorship for himself in his "Mishkan ha-'Edut" (comp. Jellinek, "Moses b. Schem Tob de Leon," p. 43, Leipsic, 1851). The work was translated into Judæo-German by Gershon Wiener (Frankfort-on-the-Oder, 1749). Sahulah wrote also a commentary on Canticles and Job, which is still unpublished. Henry Mauroy ("Apologia pro Judæis Christianis," i. 222) attributes to Sahulah a commentary on the Psalms.

s. M. Sel.

SA'ID BEN ḤASAN OF ALEXANDRIA: Jewish convert to Islam; lived in the thirteenth and fourteenth centuries. He was the author of an apologetic work entitled "Masalik al-Nazar fi Nubuwwat Sayyid al-Bashar." The author intended to demonstrate from Holy Scripture the genuineness of the mission of Mohammed. Like all controversialists, he accuses the Jews of corrupting the Biblical text, and of substituting other names for those of Mohammed and Ishmael. Sometimes, in quoting Biblical passages, Sa'id interpolates words of his own.

Sa'id prefaces his book with an account of his conversion to Islam, which took place in May, 1298. When seemingly on his death-bed he heard in a dream a voice saying: "Recite the sura 'Al-Ḥamd' ["Al-Fatihah"] and thou shalt escape death." Sa'id obeyed the command of the heavenly voice; and he recovered.

SAILORS. See Navigation.

SAINT AND SAINTLINESS: In Jewish tradition saintliness ("ḥasidut") is distinguished from holiness ("ḳedushah"), which is part of the Mosaic law. Saintliness is a divine and lofty type of piety, and a higher morality, not bound by law. Saintliness is "in front [outside] of the law boundary" ("lifenim mi-shurat ha-din"). Saintship ("middat ḥasidut") is distinguished from mere obedience to the Law (B. M. 52b; Ḥul. 130b).

The Rabbis' conception of saintliness may be gathered from their description of Biblical and Talmudical personages styled by them "saints." R. Meïr thought that "Adam was a great saint. Knowing that he had caused death to mankind, he fasted daily for 130 years, ceased cohabitation, and covered his body with fig-leaves" ('Er. 18b). Another saint was David, who prayed, "preserve my soul, for I am a saint" ("ḥasid"; Ps. lxxxvi. 2, Hebr.). The Talmud justifies David's self-praise by comparing him with other kings, who slept till the third hour of the day, while David arose at midnight to give thanks unto God (Ps. cxix. 62; Ber. 4a). Job is counted as a saint of the Gentiles (B. B. 15b).

One of the attributes of God is "ḥasidut" (saintliness). The Talmud interprets the verse "The Lord is righteous in all His ways, and saintly in all His deeds" (Ps. cxlv. 17, Hebr.) as follows: "At the beginning He is righteous [within the Law], and at the end He deals outside the legal line [if the world can not exist by the strict enforcement of the law and requires the administration of His mercy and saintliness]" (R. H. 17b, and Tosef. *ad loc.*).

The Talmud recognized the "early saints" ("ḥasidim ha-rishonim") as a few elect ones, perhaps one or two in a generation (comp. "the saint of the generation"; Ta'an. 8a). This class became extinct in the tannaitic period with the death of R. Jose, a disciple of R. Johanan b. Zakkai (Abot ii. 10), known also as R. Jose Ḳaṭanta (the minor, or remnant, of the Ḥasidim; Soṭah ix., end, and 49b).

Talmudical Saints.

Hillel the Elder is the first of these saints mentioned by name, and at his death he was eulogized as "the saint, the virtuous, the disciple of Ezra" (Soṭah 48b). A similar tribute was rendered to Samuel ha-Ḳaṭan, the disciple of Hillel (*ib.*). R. Simeon, the saint, praised Judah even above Joseph, who in private resisted evil, while Judah, by the public admission of his guilt, sanctified the name of God (Soṭah 10b, referring to Gen. xxxviii. 26). Judah b. Baba, the martyr, and Judah ben Ilai were saints, and wherever a story is related in the Talmud about a saint it refers to one of the two (Tem. 15b). The eminent saints of Babylon were R. Huna and R. Ḥisda, the efficacy of whose prayers for rain, however, was not equal to that of the great saints of Palestine (Ta'an. 23b). Mar Zuṭra, the saint, when he found it necessary, as a matter of discipline, to rebuke and put a student under the ban, would, out of respect for him, first proclaim the anathema against himself and then against the student; and as soon as he reached his lodging-place he would remove the anathema first from himself and then from the student (M. Ḳ. 17a). One saint occupied himself digging wells and caves for the benefit of travelers (Sheḳ. v. 4).

The piety of the early saints is mentioned but once, on which occasion they are referred to as waiting one hour before they prayed, in order to collect their thoughts and concentrate their minds upon the Father in heaven (Ber. v. 1). The early saints discouraged fasting in connection with prayers, as it caused physical pain. Resh Laḳish cited, "The merciful man ["ḥased" = "ḥasid"] doeth good to his own soul [life]: but he that is cruel troubleth his own flesh" (Prov. xi. 17; Ta'an. 11b; see Tosef. *ad loc.*).

Saints were in higher esteem than men of great learning. There were separate burial caves for saints and for the dayyanim; when a certain rabbinical student of ill repute died he was not allowed burial in the cave of the saints, but was interred in the cave of the dayyanim (M. Ḳ. 17a).

The Qualifications of Saints.

The saint, however, must be equally a man of wide learning. An "'am ha-areẓ" can not be a saint (Abot ii. 6). It is dangerous to live near an ignorant saint (Shab. 63a; Rashi *ad loc.*). The "ḥasid shoṭeh" (foolish saint) is classed with the scheming villain and the celibate woman; all of them are destructive elements of the world (Soṭah v. 2). A foolish saint is defined as "one who would see a woman drown without going to her rescue because of the rule forbidding a man to look upon a woman" (*ib.* 21b).

Saintliness, according to R. Phinehas ben Jair, is the highest perfection, and the successive stages by which it is reached are the following: study of the Law, energy, cleanliness, separateness (individuality), purity, modesty, fear of sin, inspiration, and capacity to bring about resurrection ('Ab. Zarah 20b).

The question "How can one become a saint?" is answered in various ways in the Talmud. R. Judah says one desiring to be a saint must be careful to observe the laws of tort ("neziḳin"). Raba (Rabina) says one should be careful of matters in the code of "abot"; others say, in matters of thanksgiving and benedictions ("berakot"; B. K. 30a).

Principle of Saintliness.

It appears that R. Judah's answer is the key to early saintliness, the fundamental principle of which was not even the morality that was common to every righteous man, but the determination not to do an injury or cause damage to a fellow man. "Mine and thine" was interpreted by the saint, "Thine is thine, and mine is thine" (Ab. v. 13), inasmuch as he sacrificed his own for the sake of guarding the property of individuals and of the general public. A story is told of a man who cleared his private premises of stones and rubbish and threw them on public ground. A saint passing by said to him: "Fool, why dost thou throw stones from premises that do not belong to thee into premises of thine own?" The man only laughed at him. In a short time, however, the man was compelled to dispose of his property, and as he passed along the public premises he slipped on the very stones he had cleared from his former property. He then acknowledged the wisdom of the saint (B. Ḳ. 50b). The early saints buried thorns and broken glass three handbreadths deep in their fields to prevent a possible injury to any one through stepping on them (B. Ḳ. 30a). The saint burned the parings from his finger-nails (B. M. 18a), evidently considering them poisonous and likely, if not disposed of, to come in contact with food.

A story is told of a saint who suffered from heart-disease and whom the physicians ordered to drink hot goat-milk every morning, telling him that otherwise his ailment would prove fatal. A goat was accordingly tied to the foot of his bed, and the saint drank its milk as prescribed. But when his colleagues visited him and saw the goat, they stepped back and exclaimed: "Here he keeps an armed brigand and shall we visit him?" (the raising of small cattle like goats and sheep was prohibited in the populated places of Palestine because they roam at large and damage private property). Although some of the Rabbis had permitted a goat to be kept tied in the house, and although this was a question of life or death, the saints regarded the goat as a highway robber and sent it away at the risk of life (B. Ḳ. 80a). A saint would not interfere in any way with a mendicant's right to beg. Once a saint who was accustomed to see and converse with the spirit of Elijah missed his visitor from the time he built a keeper's inn at the entrance of his courtyard, and which interfered with the free entry of beggars (B. B. 7b).

Later Saints.

The saints, after the early class had passed away, were mostly of the type described by Raba, or Rabina—renowned for their high morality, extreme piety, and rigid punctuality in prayer and benedictions. Their moral ideas are summarized in Raba's injunction, "Sanctify thyself even in that which is permitted to thee" (Yeb. 20a). The Torah in certain cases made concessions to human weakness, as in the case of the captive woman with whom marriage was permitted (Deut. xxi. 11). "The Torah provided against the 'yeẓer ha-ra''" (the natural, evil inclination; Ḳid. 21b, end). "Take no oath, even to speak the truth, as the name of God must not be mentioned in vain" (Ned. 8b). "Keep thee from every wicked thing" (Deut. xxiii. 9) is interpreted by R. Phinehas b. Jair as a command not to think of impure things during the day (Ket. 46a). Impure thoughts are even worse than impure acts (Yoma 29a). Purity of heart was the ideal of the saint, who was particularly severe against slander.

R. Judah ben Samuel he-Ḥasid of Regensburg was, perhaps, the best type of the saints of the Middle Ages. His ethical code, "Sefer Ḥasidim," is full of methods and regulations for his class. Among the rules for saintliness are: "To be ready to forgive the wrongs done by those who ask forgiveness" (§ 11). "To restrain oneself from doing evil, not because of fear of punishment, but for the reverence and love of God" (§ 12). "To be cheerful and greet every person in the street, even a Gentile" (§ 13). Others of his maxims are: "The study of the Law alone is not enough without good deeds; it is like obtaining the keys of the inner chamber without the keys of the outer chamber: how shall one enter?" (*ib.*). "The love for God shall be above any human love, as for wife and children; one shall be ready to sacrifice his life for God's commandments" (§ 14). "Modesty combined with the fear of God is like salt to food" (§ 15).

Equally important in connection with this subject are the "Reshit Ḥokmah" of Elijah b. Moses de Vidas of Safed, the "Ḥobot ha-Lebabot" of Baḥya b. Joseph, and the "Menorat ha-Ma'or" of Isaac Aboab. See ESSENES; ḤASIDIM; HOLINESS; MARTYRS; SLANDER.

SAINT CROIX. See WEST INDIES, DANISH.

SAINT GALL (ST. GALLEN): Chief town of the canton of the same name in the northeast of Switzerland. The first information concerning its Jewish inhabitants dates from the year 1349, when the Jews, who then lived in a special quarter, the "Hinterlauben" or "Brotlauben," were accused of having poisoned the wells. St. Gall followed the example of other towns near the Lake of Constance, imprisoning the Jews, burning them alive, or at best expelling them and confiscating their property. For a long time after this event no Jews lived in St. Gall; and in modern times also the right of settlement was granted only very exceptionally to a few Jews, who had to pay heavily for the concession. Even after the wars of independence the St. Gall "Jews' Law" of May 15, 1818, though it was not strictly enforced by the government, placed the Jews under severe restrictions. These exceptional laws remained on the statute-books until the emancipation of the Jews of Switzerland in Feb., 1863.

On April 8, 1864, the present Jewish community was constituted, the members having removed to St. Gall from the neighboring town of HOHENEMS. Religious services were organized, and Hebrew and religious classes founded. Soon afterward the cemetery was laid out; the dead had previously been conveyed probably to one of the neighboring communities.

The Jewish inhabitants of St. Gall increased numerically in the course of time through frequent migrations from the communities of Endingen and Lengnau, Gailingen (Baden), Laupheim (Württemberg), and from other places.

On Sept. 21, 1881, the present (1905) synagogue was consecrated. The first rabbi of the existing community was Hermann Engelbert, who was succeeded in 1900 by the present incumbent, Emil Schlesinger.

The Jews of St. Gall exceed 500 in a total population of 33,087.

SAINT-GILLES (בורק דישל ניל): Town of France, in the department of Gard, about eleven miles south-southeast of Nîmes. It was an important commercial center in the twelfth century. When Benjamin of Tudela visited the town it possessed a Jewish community numbering 100 members, who were under the protection of Raymond V., Count of Toulouse. It was at St.-Gilles that in 1216, through the efforts of Isaac Benvenisti and under the presidency of R. Levi, the representatives of the Jewish communities of southern France met to deliberate regarding the measures to be taken against the resolutions of the Lateran Council of 1215.

S. S. K.

SAINT-JOHN'S-BREAD: Fruit of the carob-tree. It is not mentioned in the Masoretic text of the Old Testament, though Cheyne assumes that in three passages (II Kings vi. 25, xviii. 27 = Isa. xxxvi. 12; Isa. i. 20) חרובים ("carob-fruit") should be read instead of חריובים ("Expositor," July, 1899). In the New Testament St.-John's-bread is called swine's food (Luke xv. 16); and it is mentioned as such in the Mishnah. The law regarding the edge of the field that may not be harvested applied to the carob-tree (Peah i. 4 *et seq.*), and the fruit had to be tithed (Ma'as. i. 3). The latter was preserved in wine (Sheb. vii. 7). The fact that carob-pods are mentioned in the New Testament and elsewhere as favorite fodder indicates that the tree grew in abundance. The fruit, which is palatable only when dried, was eaten by the poor alone.

SAINT JOSEPH. See MISSOURI.

SAINT LOUIS: Largest city in the state of Missouri, U. S. A. Its pioneer Jew was Wolf Bloch, a native of Schwihau, Bohemia, who is reported to have settled there in 1816. The early arrivals probably intermarried and in this way lost their identity; for it was not until the Jewish New-Year of 1836 that the first religious services were held, when ten men rented a little room over a grocery-store at the corner of Second and Spruce streets. The next year these pioneers organized the United Hebrew Congregation, which is still in existence. A. Weigel was its first president; and services were held for many years at a private house in Frenchtown. The first building used as a synagogue was located on Fifth street between Green and Washington avenues. In 1855 this organization bought a site and erected its own temple on Sixth street between Locust and St. Charles streets. The building was consecrated June 17, 1859, the Rev. M. J. Raphall of New York officiating. The rabbinate has been held by the Rev. Henry J. Messing for the past twenty-six years.

First Synagogue.

The B'nai El congregation was organized in 1840, and moved into its own house of worship at Sixth and Cerre streets in 1855. The Rev. Moritz Spitz, editor of "The Jewish Voice," is the present (1905) occupant of its pulpit.

In 1866 Shaare Emeth congregation was organized, with Rev. S. H. Sonnenschein as its spiritual leader, and Alexander Suss as its first president. The Rev. Samuel Sale is the present rabbi. In 1886 a number of the members, being dissatisfied, banded together, and with Rabbi Sonnenschein organized Temple Israel, with Isaac Schwab as president. Dr. Leon Harrison is the present spiritual adviser. There are also six regularly organized Orthodox congregations in the city.

In 1844 A. J. Latz purchased a lot on Pratte avenue for a cemetery, which was used until 1856,

Cemeteries.

when the United Hebrew Congregation acquired what is now known as Mount Olive Cemetery. The B'nai El congregation used as its first burial-ground a plot of land on Gravois road, now enlarged and known as Mount Sinai. This land was purchased in 1849. Later the Mt. Sinai Cemetery Association was formed, and the corner-stone of its chapel was laid June 22, 1873, the Revs. Wolfenstein and Sonnenschein officiating. The members of B'nai El, Shaare Emeth, and Temple Israel congregations are entitled to burial in these grounds.

The I. O. B. B. gained an early foothold in St. Louis, Missouri Lodge, No. 22, having been organized in 1855, and Ebn Ezra Lodge, No. 47, in 1863. Both lodges are still in existence and have large memberships. Progress Lodge, No. 53, of the Independent Order of Free Sons of Israel, a beneficiary organization, was founded Sept. 6, 1872.

As early as 1857 St. Louis had its social organization, the Harmonie Club beginning its existence at that time, with M. Hellman as its first president. Its club-rooms for fifteen years were on Market street between Fourth and Fifth streets. In 1872 the Concordia Club, with Leopold Steinberger as its presiding officer, was organized. Both of these bodies have passed out of existence, and the Columbian Club is now the only distinctly Jewish social institution in the city. Jacob Meyer was its first presiding officer (1892).

One of the prominent characters in St. Louis during the Civil war was Isidor Busch, a wine-merchant. He was one of the delegates on the "Unconditional Union Ticket" to a convention which decided that Missouri should remain in the Union.

United Hebrew Relief Association.

After the Chicago fire in 1871 many Jewish families removed from that city to St. Louis; and these required temporary assistance. It was then that the United Hebrew Relief Association was inaugurated, with B. Singer as president, and Rev. S. Wolfenstein (now superintendent of the Cleveland Orphan Asylum) as vice-president. Numerous charitable organizations sprang up from time to time until 1897, when the first consolidation was effected. The United Hebrew Relief Association, the Sisterhood of Personal Service, the Ladies' Zion Society, and the Hebrew Ladies' Sewing Society combined, with a view to more effective work, under the name "United Jewish Charities," with Moses Fraley as president.

The Hebrew Free and Industrial School Society, an organization for the instruction of children in Jewish history and religion, was founded by the Rev. H. J. Messing in 1879, with J. B. Greensfelder as president; and the Jewish Alliance Night-School for immigrants was established a few years later by Prof. W. Deutsch, and was presided over by Elias Michaels.

The Home for Aged and Infirm Israelites was founded in 1882, with B. Hysinger at its head. It owns the property which it occupies, and provides for about fifty inmates.

The United Jewish Charities being in need of funds in 1898, a large fair was held for one week in the Coliseum of the Exposition Building, under the auspices of a special committee presided over by Julius Lesser, with the result that the Charities received the sum of $37,000, one-half of which was appropriated toward the relief fund, while the remainder was used for erecting a building to be used by the Jewish charitable and educational bodies of St. Louis. The title to this building is vested in the United Jewish Charitable and Educational Associations, the first president of which is Elias Michaels.

Jewish Hospital.

Realizing the need of a hospital for the poor, the Jews of St. Louis contributed a fund of $100,000, which was paid to The Jewish Hospital of St. Louis, incorporated in 1900, and presided over by August Frank.

The spirit of consolidation which was prevalent during the year 1901 affected those Jews who were interested in the several charitable and educational institutions of the city, and who believed that by a stronger union more work could be accomplished and larger contributions secured. Accordingly on Nov. 7, 1901, a committee of 100 persons assembled at the Columbian Club, and it was decided to organize the Jewish Charitable and Educational Union, with Moses Fraley as president. Over $42,000 a year is paid into its treasury by the Jews of St. Louis and distributed among the following constituent societies: the United Jewish Charities, Jewish Hospital, Home for Aged and Infirm Israelites, Hebrew Free and Industrial School Society, and Jewish Alliance Night-School Society. Annual appropriations are made also for the Cleveland Orphan Asylum and for the Hospital for Consumptives at Denver.

The first national Conference of Jewish Charities was held at St. Louis in 1885, with Marcus Bernheimer as president and Albert Arnstein as secretary.

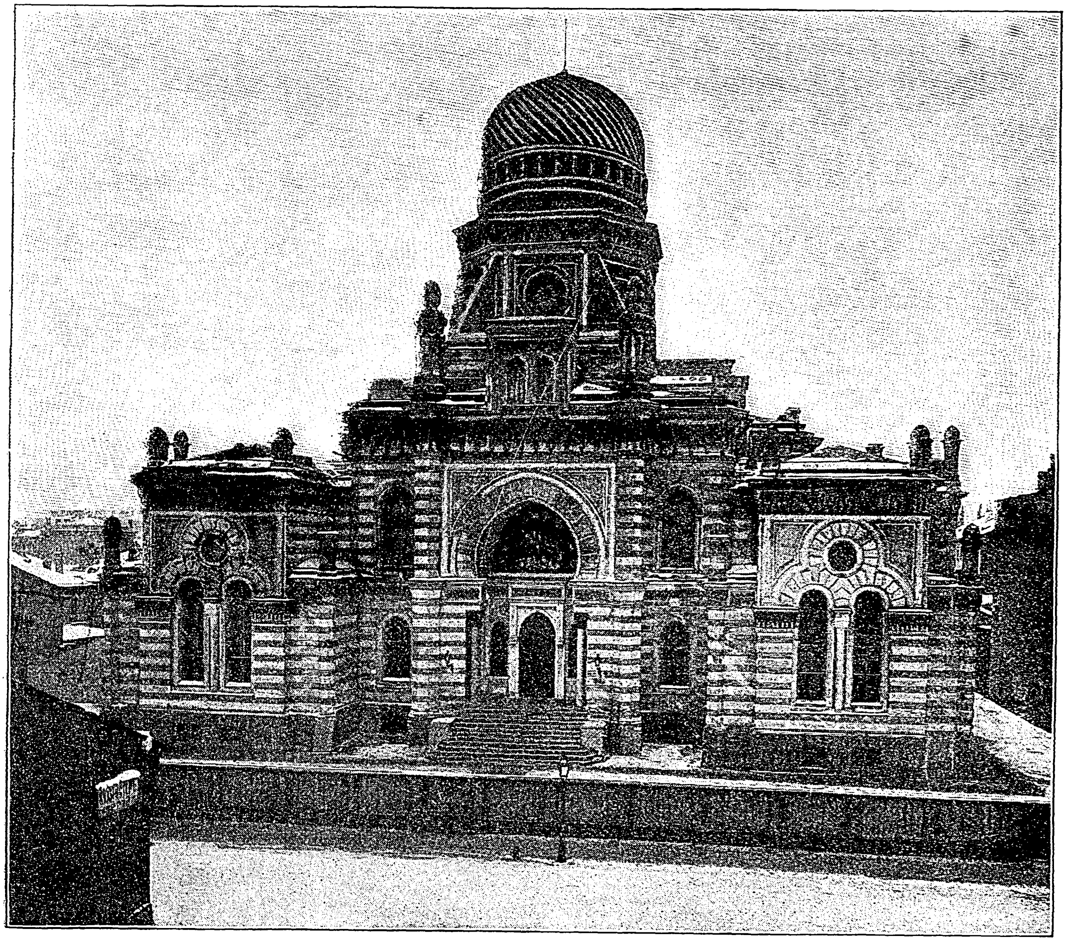
Papers and Educational Institutions.

St. Louis has two Jewish papers. "The Jewish Voice," successor to "The Jewish Tribune," was founded in 1876 by Godlove, Friedman, and Wolfner. The Revs. S. H. Sonnenschein and Moritz Spitz later became joint owners of the paper, which is now edited and owned by the latter. In 1901 "The Modern View," owned and edited by A. Rosenthal, made its first appearance.

The Hebrew Young Men's Literary Association, which in a few years became the Y. M. H. A. of St. Louis, began its existence in 1877, with J. B. Greensfelder as president. This organization in 1878 appointed a committee to solicit funds and distribute them among those refugees who were coming to St. Louis on account of the spread of yellow fever in the Southern States. Benjamin Altheimer was chairman of this committee. The Y. M. H. A. maintained its literary and social work for a number of years, but it gradually passed out of existence. In 1896 it was reorganized, with A. Rosenthal as its new president; and it has now 600 members. The reorganized association took the lead in providing aid for the Rumanian refugees in 1900. The Pioneers Ladies' Literary Society is the oldest organization of its kind in the country, having begun its work in 1877. Mrs. August Frank was its first president.

The Jews of St. Louis are fully identified with the welfare of the city. Isaac Schwab, Jonathan Rice, Jacob J. Wertheimer, Elias Michaels, Nathan Frank, and Charles A. Stix were members of the board of directors of the Louisiana Purchase Exposition Company, under whose auspices the World's Fair was held in St. Louis during the year 1904.

Among the Jews of St. Louis who have held positions of honor and trust in the community and have been prominent in the different public exchanges of the city may be mentioned: Nathan Frank, owner of the "St. Louis Star," a daily newspaper, who represented the city in Congress; Moses N. Sale, a judge of the Circuit Court; Albert Arnstein and Moses Fraley, former members of the city council; Meyer Rosenblatt, who served as collector of revenue for the city; Louis Aloe, a member of the board of election commissioners; Elias Michaels, a member of the school board, and at one time president of the Mercantile Club; Marcus Bernheimer, a former president of the Merchants' Exchange; and Jacob D. Goldman, who has held the same office in the Cotton Exchange.



Synagogue at Saint Petersburg, Russia.

At present (1905) the Jews of St. Louis number about 40,000 in a total population of about 575,000.

A. B. Gr.

SAINT PAUL. See Minnesota.

SAINT PETERSBURG: Capital city of Russia. Antonio Sanchez, a Spanish Jew and member of the Academy of Sciences, lived in St. Petersburg in the reign of Elizabeth Petrovna. In the reign of Catherine II. there were three or four Jews in the city, though legally they were not permitted domicil there (comp. Nevakhovich, Löb; Notkin, Nathan; Peretz, Abraham). From that time the number of Jewish inhabitants increased gradually, until, at the beginning of the nineteenth century, there was a substantial group of Jews living in the city.

The Ḥasidic rabbi Shneor Zalman of Lody was for a time confined in the fortress of St. Petersburg during the reign of Paul I. Seeing that the rabbi would not eat any of the prison fare, the commandant sent for Mordecai of Lepla to prepare his food according to the Mosaic law. At that time there were other Jews living in St. Petersburg, among them Löb Mianevich and Saul of Sizochina. By 1802 these had already effected a communal organization. Not possessing a cemetery of their own, they entered into an agreement with the St. Peter Lutheran-Evangelical congregation of St. Petersburg, whereby the latter allowed the Jews the use of a division of its extensive burial-grounds. In the minutes of the church meeting of Feb. 2, 1802, the following is recorded: "At to-day's meeting of the church elders three Jews appeared with a request for a piece of ground in the Bretfeld cemetery, to be used for the burial of their dead. The elders, having considered this request, decided to assign to them a place for burial beyond the wall of our cemetery, on the right side of the brook, and occupying 160 square 'sazhens,' on condition that there shall be paid to St. Peter's Church 10 rubles for every person buried there. The road to this plot must be constructed at their own expense, and in such a manner as to cause no inconvenience to us; they are not forbidden, however, to carry their dead through our cemetery." A copy of these minutes was placed, under date of April 1, 1802, in the register of the Jewish community. "To preserve the memory of the persons, now living here, who received this document," says the register, "their names are hereby appended: the respected and honored Nathan Notkin of Shklov; Ḥayyim Shmukler of Brod; Osher, son of Isaiah Katz of Moghilef; Mordecai, son of Shpraga-Faivish of Shklov; Mattithiah, son of Jonas Katz; Judah, son of Ozer of Shklov; Eliezer, son of Gershon of Novomyesto; Isaac, son of Nathan Segal of Moghilef; Joshua, son of Ḥayyim of Shklov; Shabbethai, son of the respected Nathan Notkin."

Cemetery of the St. Peter Lutheran-Evangelical Congregation.

It appears from the records that, numerically, the Jews of Shklov occupied the first place in the community, and that those from Moghilef were next. The records of the burial association contain the names of a number of Jews buried in the cemetery, among them that of Avigdor, son of David Chakhechover of Warsaw, who confessed to the authorities before his death that he was a Jew and expressed a wish to be buried in the Jewish cemetery. A similar notice occurs of Joseph, son of Benjamin Bunem. He was from Germany, and was a member of the Imperial Band. The last entry in this record is dated Jan. 31, 1822, and tells of the burial of the "famous rabbi and renowned physician Moses Elhanan Elkan of Tulchin." The burial-plot secured from the Lutheran congregation in 1802 was filled by 1862, the last to be buried there being the Wilna publisher David Romm. An additional plot was then assigned to the Jewish community by the German congregation, and was used until 1874. In that year another piece of ground, in the Preobrazhenski cemetery, was assigned by the city to the Jews for burial purposes.

While still forbidden by law to reside in St. Petersburg, the Jews there increased in number, thanks to the tolerant attitude of Alexander I., who highly appreciated the services rendered by the Jews in the war of 1812. The governor-general of St. Petersburg, Miloradovich, was very friendly toward the Jews, and designated them as the "most faithful of the emperor's servants." The treatment of the Jews in St. Petersburg underwent a change for the worse in the reign of Nicholas I. Many of the Jewish families living in that city were given the alternative of baptism into the Greek-Orthodox Church or banishment. A number were baptized, and some of these were given government positions, to influence, perhaps, the conversion of other Jews. One of these baptized Jews became the favorite secretary of Nicholas I.; another, Feigin, was the right-hand man of Kankrin. Permission to build the present synagogue was given in 1869, but owing to legal difficulties it was not opened until 1893.

Occupations.

For its livelihood the Jewish population of St. Petersburg depends chiefly upon the following occupations: making clothes and shoes, 25.2 per cent; working in metal, 8.8; literature, 6.2; the practise of medicine, 4.9.

Among the prominent Jews of St. Petersburg may be mentioned rabbis I. W. Olschwanger and Abraham Drabkin, the Günzburg family, Leon Rosenthal, A. Warshavski, S. S. Polyakov, M. Friedland, and A. Wavelberg. The roll of its scholars and writers, and of the members of the professions includes the names of M. Berlin, A. Harkavy, Daniel Chwolson, L. Mandelstamm, J. Seiberling, Robert Ilyish, A. Kaufman, M. Kulisher, Dr. Malis, Dr. A. Soloveichik, M. Vinaver, S. O. Gruzenberg, M. Syrkin, S. Wiener, S. Pineto, A. Zederbaum, Judah Löb Kantor, Z. H. Rabinovitz, Julius Hessen, M. Antokolski, J. L. Gordon, S. Trug, L. Bramson, Bruzkus, and many others whose names may be found in the membership lists of the Society for the Promotion of Culture Among the Jews of Russia. Within recent years the Jewish Colonization Association has done some useful work for the Jews of St. Petersburg.

The following periodicals are, or were, published in St. Petersburg: in Russian: "Yevreiskaya Biblioteka," "Voskhod," "Razsvyet," "Yevreiskoe Obozryenie," "Budushchnost," "Yevreiskaya Zhizn," "Almanach Lurye"; in Hebrew: "Ha-Meliẓ," "Ha-Yom," "Ha-Zeman"; in Judæo-German: "Jüdisches Volksblatt," "Der Freind."

The total population of St. Petersburg is 1,267,023. The Jewish population was 6,624 (0.99 per cent of the total population) in 1869; in 1881 it was 16,826 (1.95 per cent); in 1890 it was 15,331 (1.61 per cent); in 1900 it was 20,385. Of the last-mentioned only 6,456 were born in St. Petersburg.

SAINT-SYMPHORIEN D'OZON: Town in the ancient province of Dauphiné, France. In the fourteenth century it had a large and wealthy Jewish community, to which the dauphin Charles granted (1355) important privileges; for this a special impost was paid (Prudhomme, "Les Juifs en Dauphiné," pp. 38, 42).

The most important banking-house of the city

was that of the Cohen brothers, who numbered among their clients, there as well as at Vienne, clerics, priests, nobles, and prominent burghers (*ib.* p. 74). In spite of the dauphin's favor, the Jews of St.-Symphorien paid special highway-tolls; *e.g.*, a Jew on foot four deniers, a Jew on horseback or an enceinte Jewess eight deniers (Depping, "Les Juifs dans le Moyen Age," p. 162). On March 30, 1396, three Jewish youths were accused of having caused the arrest of a Christian tailor, Antoine Escoffier, upon a fictitious charge, and, moreover, of having mocked and reviled the name of Jesus. Arraigned before the dauphin's council, they were sentenced to pay a fine of 200 francs in gold ("Revue des Etudes Juives," ix. 259).

SAINT THOMAS. See West Indies, Danish.

SAJÓ, ALADÁR: Hungarian author; born at Waitzen Sept. 8, 1869; educated for the law at Budapest, where he devoted himself at the same time to writing novels. He served as lieutenant in the Twenty-third Battalion of Chasseurs in Bosnia from 1892 to 1894, and therefore chose his subjects chiefly from army life, soon becoming one of the most popular authors. Sajó has published the following works: "Katonáéknál" (Among the Soldiers), Budapest, 1893; "De Profundis," *ib.* 1894; "Kaszárnyatitkok" (Secrets of the Barracks), *ib.* 1895; "Regruták és Más Katonák" (Recruits and Other Soldiers), *ib.* 1897; and the novel "Ezredes Boriska," 1897. He is a collaborator on the "Budapesti Hirlap"; and in 1897 he became secretary of the journalistic society Otthon.

SALAMAN, ANNETTE A.: English authoress; died April 10, 1879; youngest daughter of S. K. Salaman, and sister of the musician of that name. In her girlhood, during which she was for a time bedridden, she compiled the texts of Scripture illustrative of the precepts and teachings of Judaism, which were afterward published in a volume entitled "Footsteps on the Way of Life," 2d ed., London, 1874. She was the author also of "Aunt Annette's Stories to Ada," a series of tales for children.

J. G. L.

SALAMAN, CHARLES KENSINGTON: English pianist, composer, and controversialist; born in London March 3, 1814; died there June 23, 1901. His musical talent became apparent at a very early age, when he studied under Neate (a pupil of Beethoven), Crotch, and Eley. Playing at the suggestion of J. B. Cramer before the Royal Academy of Music, he was elected, at the age of ten, a member of that institution. In 1828, when only fourteen, he played compositions of his own in public. After studying in Paris under Henri Herz, he reappeared in London, and was in 1830 selected to compose the ode for the Shakespeare Jubilee Festival of that year at Stratford-on-Avon. At Salaman's first orchestral concert, in 1833, Grisi was introduced to a London audience. In 1836 Salaman published his still well-known setting of Shelley's "I Arise from Dreams of Thee"; and until his death he steadily produced numerous songs, delicate alike in melody and in style.

The poems which Salaman set to music were noticeably chosen from a wide field, covering most European languages as well as Latin (Horace and Catullus), Greek (Anacreon), and Hebrew (Judah ha-Levi and the liturgy). From 1845 to 1848 he was in Rome, conducting the first performance of a Beethoven symphony there, and being present at the removal of the gates of the ancient ghetto (on Monday evening, Passover eve, April 7, 1847). He received the rare distinction of honorary membership in the Academy of St. Cecilia.

On his return to England he founded the Musical Society of London, acting for several years as its honorary secretary, and organizing the orchestra, which Meyerbeer pronounced magnificent. He became prominent also as a public lecturer.

Salaman's attention had early been turned to devotional music, and he produced several anthems which are prominent in the repertory of the Anglican Church. His music for Psalm lxxxiv., originally written for the reopening of the West London Synagogue, when the organ was first introduced into an English synagogue, was performed also at the reopening of Worcester Cathedral, and was sung at Westminster Abbey, during the Church Congress of 1900, as one of the three representative anthems of the nineteenth century. His Psalm c. is sung at most Anglo-Jewish choral weddings; his "Funeral March" (in memory of Victor Hugo), his pianoforte sketches, and his organ interludes are also prized.

He was among the early advocates of the Reform movement in England. On joining the West London Synagogue he wrote 124 settings for its reformed musical service; and several of these are now used by Orthodox congregations also. His trenchant letters on the methods of the conversionist missions, addressed to the Bishop of Manchester in 1875 and to the Dean of Lichfield in 1877, attracted general attention; and in 1885 he published "Jews as They Are" (of which a second edition has appeared), containing valuable records of the history of Jewish emancipation in England, and refuting some current errors concerning Judaism.

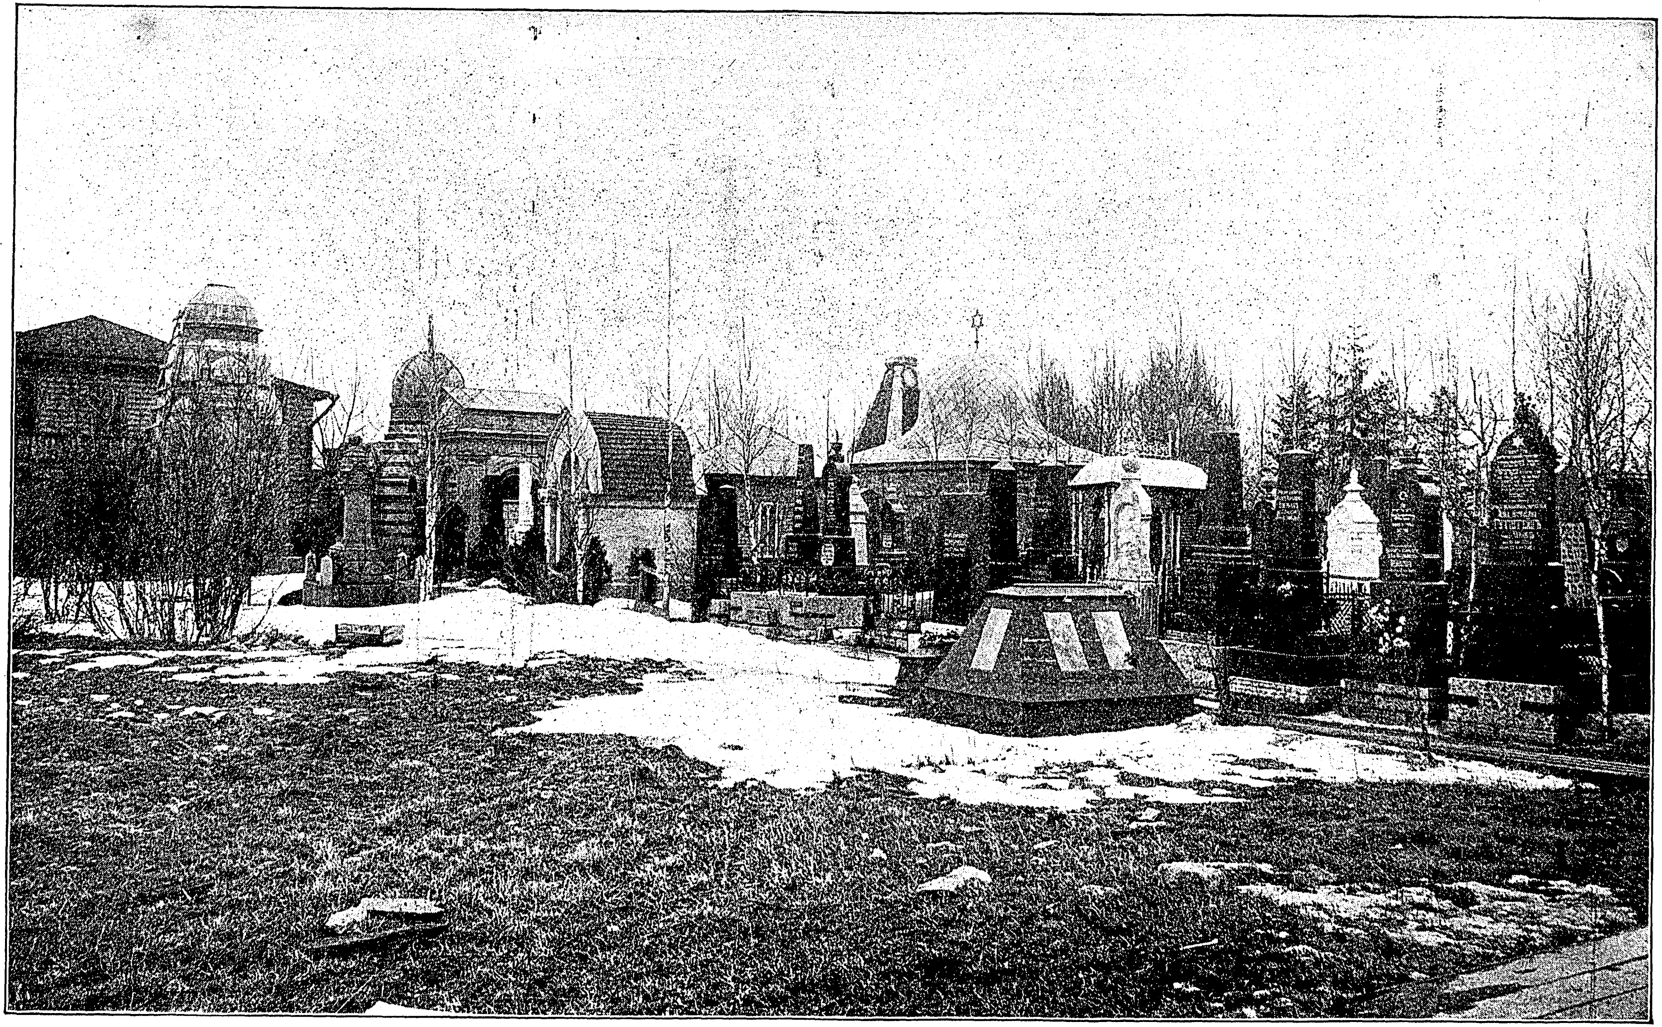
J. F. L. C.

SALAMAN, CHARLES MALCOLM: English journalist and dramatist; born in London Sept. 6, 1855; son of Charles Kensington Salaman, the composer. He is the author of "Ivan's Love-Quest" and other poems (London, 1879), and he has written the verses to many of his father's best-known songs, and also the words to compositions by Sir G. A. Macfarren, G. A. Osborne, and others.

In the dramatic field and as a librettist, Salaman has produced "Deceivers Ever," a farcical comedy (Strand Theatre, 1883); "Boycotted," a one-act comedietta, with music by Eugene Barnett; "Dim-



MODERN JEWISH CEMETERY AT SAINT PETERSBURG, RUSSIA.
(From a photograph.)

ity's Dilemma," farce (Gaiety Theatre); "Both Sides of the Question," comedietta; and "A Modern Eve" (Haymarket Theatre). Salaman is known also as a critic of the drama and of painting. He is editor of the published plays of A. W. Pinero, and author of the popular book "Woman—Through a Man's Eye-glass" (1892).

SALAMANCA: Spanish city; capital of the province of the same name; famous for its university. The Jews of Salamanca rendered valuable services to King Ferdinand II. of Leon during the war against the King of Castile in 1169, and in return were granted (in 1170) equal rights and liberties with the Christian inhabitants ("Fuero de Salamanca," tit. ccclxii.). The town council was ordered to protect and, if necessary, to defend the Jews; and for this protection a yearly tax of 15 morabetinos was imposed on the latter. They were not, however, spared during the persecutions of 1391.

In 1412 Vicente Ferrer preached in Salamanca, his sermons having for their object the conversion of the Jews; and such of the latter as were baptized there called themselves "Vicentinos." The large synagogue was at that time transformed into a church to which was given the name "Vera Cruz," and afterward into a college of the Brothers of Charity. At the entrance to this college the following Latin verses were displayed:

> "Antiquum coluit vetus hoc Sinagoga sacellum,
> At nunc est verae religionis sacrum:
> Judaeo expulso, primus Vincentius istam
> Lustravit pura religione domum.
> Fulgens namque jubar subito descendit Olimpo,
> Cunctisque impressit pectora signa Crucis.
> Judaei trahunt cives Vicentii nomina multi,
> Et templum hoc Verae dicitur inde Crucis."

The Jews of the city were in grave danger from a ritual-murder accusation which was made against them in 1456. On a Christian holiday, presumably Easter, the little son of a rich merchant ("filho de hum rrico mercador"), adorned with golden trinkets, had left his home. The child was lured out of town by robbers, who, after stealing the valuables, murdered him and buried the body in a secluded spot. After a long, vain search for the boy a reward was publicly offered for any information concerning him. Some days later certain shepherds came with their cattle to the place where the corpse was buried, and their dogs, scratching the earth, uncovered an arm and brought it to their masters, who exhibited it in the town. The father and relatives of the murdered child, together with other citizens, on proceeding to the place where the arm had been found, discovered the rest of the remains. The populace, inspired by hatred of the Jews, proclaimed without further investigation that the child had been killed by the latter, who, they asserted, had taken out the heart, fried it, and partaken of it as food. The relatives of the child, together with many others, soon armed themselves in order to attack the Jews. The king, however, hearing of the affair, ordered a thorough investigation, and the innocence of the Jews was finally established through the evidence of the goldsmith to whom the murderers had sold the trinkets taken from the slain boy (S. Usque, "Consolaçam as Tribulaçoens de Ysrael," p. 189b; also Joseph ha-Kohen, "'Emeḳ ha-Baka," pp. 77 *et seq.*). In 1492 the Jews of Salamanca, who had been so numerous that they, together with those of Ciudad-Rodrigo, paid 7,800 maravedis in taxes for the year 1474, emigrated, mostly to Portugal.

In Salamanca lived Rabbi Menahem ben Ḥayyim ha-Aruk, otherwise Longo (d. 1425), and the Talmudist Moses ben Benjamin and his son Isaac, both of whom maintained a correspondence with Isaac b. Sheshet. Salamanca was also the birthplace of the mathematician and astronomer Abraham Zacuto, who lectured at the university there.

SALAMANDER (Greek, *σαλαμάνδρα*): According to the Talmud, a species of toad which lives on land but enters the water at the breeding season (Ḥul. 127a; Lewysohn, "Z. T." §§ 277, 278). It generally appears, however, as a fabulous animal, generated in fire and perishing in air, this being the view concerning it held by R. Akiba himself (Sifra, ed. Weiss, p. 52b; Ḥul. 127a). God showed the animal to Moses in fire (Ex. R. xv. 28); and when glass-blowers stoke their furnace unceasingly for seven days and seven nights, the great heat produces a creature which is like a mouse (or spider), and which is called a salamander. If one smears his hand or any other part of his body with its blood, the spot is proof against fire; for the animal is created of fire (Tan., Wayesheb, 3). When King Manasseh was about to sacrifice Hezekiah to Moloch, the child's mother anointed her son with the blood of a salamander, that the fire might not injure him (Sanh. 63b; "Z. D. M. G." xxviii. 15). The fire of hell does not harm the scribes, since they are all fire, like the Torah; and if flames can not hurt one who is anointed with salamander blood, still less can they injure the scribes (Ḥag., end).

The name "salamander" itself indicates the adoption of a foreign belief by the Jews. According to Aristotle, "At Cyprus, where the stone chalcites [a kind of copper ore] is heated for several days, winged creatures, somewhat larger than our house-fly, appear in the midst of the fire, walking and flying through it, but dying immediately on leaving the flame. The salamander shows that certain animals are naturally proof against fire, for it is said to extinguish a flame by passing through it" ("Historia Animalium," v. 19; Lewysohn, *l.c.* § 279). Akiba likewise speaks of animals other than the salamander which are generated in fire, while Pliny declares ("Historia Naturalis," x. 68, 87) that the salamander does not propagate by copulation, and that, like ice, it extinguishes fire by touching it.

While the fire, according to the Midrash, need burn only seven days and seven nights to produce a salamander, Rashi says that it requires seven years (Ḥag.), and the 'Aruk (*s.v.*) postulates seventy years. The trend toward magic appears, furthermore, in the statement that myrtle wood is required for the fire.

The Ẓohar (ii. 211b) even mentions garments of salamander skin; and this legend is found in non-Jewish sources also. According to Grässe ("Beiträge zur Litteratur und Sage des Mittelalters," p. 81, Dresden, 1850), "The poets, *e.g.*, Titurel (ch. xl. 341), say that cloth of gold is woven from salamanders, and Marco Polo (Latin translation, ch. xlv.) says that at Rome there is a cloth of the same material as that from which the salamander is made" (comp. Jellinek, "Beiträge zur Gesch. der Kabbala," i. 48, Leipsic, 1852). A recipe in Hebrew, though termed Hindu, and in which salamander is the chief ingredient, is quoted by Steinschneider ("Pseudepigraphische Litteratur," p. 88, Berlin, 1862; see also Grunwald, "Mitteilungen," v. 10, 47; Wuttke, "Deutscher Volksaberglaube der Gegenwart," 3d ed., § 714). On the salamander as the elemental spirit of fire in the Middle Ages see "Brockhaus Konversations-Lexikon," 14th ed., vi. 14, *s.v.* "Elementargeister."

E. C. L. B.

SALAMON, NAHUM: English inventor; born in London 1828; died there Nov. 23, 1900. He may be regarded as practically the founder of the British trade in sewing-machines. He early recognized the possibilities of this invention; and introduced from America into England the "Howe," the pioneer machine. Salamon was also the first to establish a plant for the manufacture of bicycles, at Coventry in Warwickshire, at the time when the invention of the spider-wheel resulted in the development of the velocipede into the modern bicycle and tricycle. Under the auspices of his company, the Coventry Machinists, Coventry took the foremost place in the manufacture for which it is now famous.

Salamon was much interested also in technical and chemical studies. In conjunction with his son **Alfred G. Salamon,** chemist, he acquired the English patents of saccharin when the efforts of chemists to make a substitute for sugar out of inorganic materials proved successful. Down to the time of his death he, as one of the directors of the Saccharin Corporation, took a personal interest in popularizing this product.

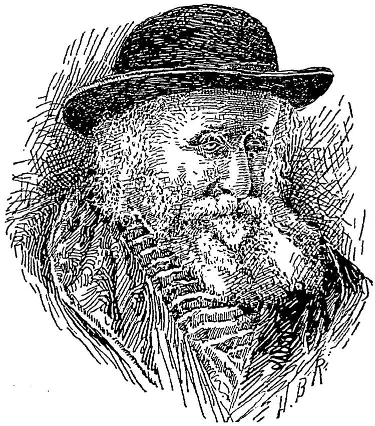
J. G. L.

SALANT, SAMUEL: Chief rabbi of the Ashkenazic congregations in Jerusalem; born Jan. 2, 1816, at Byelostok, Russia. Samuel married the daughter of Sundl of Salant and assumed the name "Salant." At an early age his lungs became affected, and he was advised to seek a warm climate. This induced him in 1840 to go with his wife and his son Benjamin Beinish to Jerusalem. At Constantinople he met and gained the friendship of Sir Moses Montefiore, then on his way to defend the Damascus Jews who had been falsely accused of ritual murders. Salant arrived in Jerusalem in 1841, and rejoined Sundl of Salant, his father-in-law, and about 500 Ashkenazim, who had preceded him. From 1848 to 1851 Salant, as a "meshullaḥ" (see Ḥalukkah), visited the principal cities of Lithuania and Poland. He reorganized the Wilna congregation ("Kolel") so successfully that its ḥalukkah contributions were nearly doubled. In 1860 he went to Germany, to Amsterdam, and to London, and on his return succeeded in inducing the trustees who had charge of the ḥalukkah to divide the contributions equally between the Sephardim and Ashkenazim. Salant also collected donations for the building of the synagogue Bet Ya'aḳob in Jerusalem. In 1878 he succeeded Meïr Auerbach as chief rabbi of the Ashkenazim.



Samuel Salant.

In 1888 Salant's eyesight began to fail, and a few years later he became blind; but this did not impair his usefulness and activity in Jewish affairs. In 1900, however, he requested an assistant; and accordingly Rabbi Elijah David Rabbinowitz-Theomim of Russia was selected for the position.

Salant is an eminent Talmudist, but not an author of any consequence. He has excellent executive ability, as is shown in his leadership in the Jewish community. He is the head of the "wa'ad ha-kelali" (central committee) of the Ashkenazic ḥalukkah in Palestine, to which all contributions are addressed. He has won the sympathy and confidence of the outside world by his moderation and by his toleration toward all classes of Jews. Salant as chief rabbi of the Ashkenazim and Jacob Saul Alyashar as chief rabbi of the Sephardim maintain friendly intercourse, and generally act in harmony in matters concerning the welfare of the community at large.

SALANTER, ISRAEL. See Lipkin, Israel.

SALE.—Of Land: The steps by which the title to land is changed in a gift or sale have been shown under Alienation. The conveyance might be by deed ("sheṭar"), for the requisites of which see Deed. It remains to be shown how the object conveyed is described, and how the words describing it are construed.

It was so usual for the ownership of houses to be divided (mostly among coheirs), one man owning the rooms on the ground floor and another the upper story, that the maxim of the Roman law "cujus est solum, ejus est usque ad cœlum" was not applied to buildings. Two chapters of the Mishnah (B. B. iv., v.) define the meaning of words applied to the objects of a sale. Such of these definitions as refer to land or to things annexed thereto are here given, though most of them are only of archeologic interest.

Inclusive Sale.

(1) He who sells a house ("bayit") does not sell the separate wainscot walls, nor a movable interior closet, nor a roof with a railing more than ten hands in height, nor a dug cistern, nor a walled cistern. In order to include these, the words "from the abyss below to the sky above" are necessary, "depth and height" not being sufficient.

According to the prevailing opinion of R. Akiba, the purchaser, if the cistern is included, has the exclusive right of way to it; and where the cistern alone is sold, the right of way to it passes to the purchaser by implication. He who sells a house sells the door, but not the key; he sells a mortar attached to the ground, but not a movable one; he sells also the base for a mill, but not the hollow stone receptacle, nor the baking-oven or cooking-hearth (all these being considered personalty); but where the seller says "the house and all that is in it," all these things pass in the sale. Where one sells a "court" he sells the houses, cistern, pit, and cellar, but not the movables; however, if he sells "the court and all that is in it," everything is sold excepting the bath-house and the oil-press in the court. He who sells an oil-press (let into the ground) sells the "sea" (the hollow stone which receives the olives), the stone roller, and the "maidens" (the cedar frame on which the beams rest), but not the planks (for weighting down the olive-bags), nor the wheel (for turning the press), nor the cross-beam; but if the seller says "the oil-press and all within it" everything passes.

He who sells a bath-house does not sell the shelves (for clothes), nor the benches, nor the curtains (? bathing-wrappers). If he says "the bath-house and what is in it," these things are sold, but not the pipes which conduct water to the bath, nor the stock of fuel on hand.

He who sells a town sells the houses, cisterns, pits, and cellars, the bath-houses and dove-cots, the olive-presses and the "gardens and orchards" (?), but not the movables therein; but if he says "the town and all that is in it," even the slaves and cattle that may be in the town are regarded as having been included in the sale.

He who sells a field or a vineyard sells the stones that are there for its needs, and the canes in the vineyard (necessary to prop the vines), and the crops still standing, and a cane fence enclosing less than a "quarter" (see Weights and Measures), and a watchman's lodge not made of mud, and carob-trees that have not been grafted, and the young, uncut sycamores; but he does not sell stones not needed for the field, nor canes not in use in the vineyard, nor the crop that has been cut. If, however, he says "the field and all that is within it," everything is sold with the exception of the following: a place fenced about with cane and of more than a quarter's contents (this being considered a separate field), a watchman's lodge built of mud (it being deemed a house), grafted carob-trees or improved sycamores, a cistern or an oil-press, whether dry or in use, and a dove-cot. And, according to the prevailing opinion of Akiba, the seller must obtain from the buyer a right of way (to reach the cistern and oil-press), with the same incidents and exceptions as in the sale of a house.

All these rules apply to the terms of a sale; but a gift is construed more liberally, so as to comprise everything in and upon the ground. Where brothers divide an estate, he who receives a named field for his share is entitled to everything upon it.

General Rule.

The rules here given for special cases may be generalized thus: Where a house, field, etc., are sold simply, nothing passes which bears a special name, whether real estate in itself or not, nor anything that is not attached bodily to the ground. If the words "and all that is in it" or "on it" are added, such parts as are always known by a separate name, and such movables as are not permanently on the place but are changed from day to day, are still excluded.

The dispute between Akiba and his contemporaries about the right of way turns on the question (*ib.* 64b) whether the seller sells "with a kindly eye" or "with an evil eye"; that is, whether his words are to be interpreted so as to enlarge the scope of the sale or so as to restrict it. The former view prevails.

(2) So far the Mishnah deals with the incidents of a house, court, town, field, etc. But B. B. v., § 4 presents the inverse case of the sale of single trees (this includes grape-vines), which may carry with them the underlying and surrounding land—an idea not strange in Syria, where even to-day single fruit-trees are often owned separately. With the aid of the comments in the Talmud (*ib.* 81–83) the law may be stated thus: "He who buys two trees in the midst of another man's field does not thereby buy the soil [R. Meïr says he does]. If the branches spread out too far, the owner of the soil must not trim them, though they shade his land; for by selling the trees he has put a servitude on his land. What grows out from the trunk belongs to the owner of the tree; whatever shoots come above the ground out of the roots belong to the land-owner; and, if the trees die, their owner has no further right to the soil. But when a man buys three trees, not less than four cubits and not more than sixteen apart, and placed in a triangle, he acquires the soil under them and a path around them wide enough for a fruit-gatherer with his basket. If the branches spread beyond this space, they should be trimmed. If the trees should die, the soil belongs to their owner, who may plant others in their places.

(3) Executory sales, in which land is sold by measure, and has to be laid off, or buildings are contracted for by name, to be put up thereafter, have still to be considered (see *ib.* vi., vii.).

"When one says to his companion 'I sell thee a named measure of soil,' and there are holes ten palms in depth, or rocks rising more than ten palms in height, these are not counted in the measure. Smaller holes or lower rocks are measured as part of the soil sold; but if the words are 'I sell *about* such a measure,' then holes and protruding rocks

Measures.

are all measured along with the rest" (thus the Mishnah; but in the Gemara this statement concerning smaller holes or standing rocks is limited as to quantity and position). When one says "I sell thee a named quantity [*e.g.*, enough for a kor of seed, *i.e.*, 75,000 square cubits] chain measure," the seller, if he gives any less, no matter how little, must make a rebate; if he gives any more, the buyer must return it. But if one sells a named quantity "more or less," should there be a deficit of as much as one part in thirty, the contract is filled; if the difference is greater, an account must be taken. It seems that the naming of a quantity without adding "chain measure" is of the same import as if the words "more or less" were added (*ib.* 104a).

Where an excess is to be corrected the buyer may return the surplus land; but where the excess is small (the Mishnah names the measure of nine kabs for a field, and a half-kab for a garden) the returned land would do the seller no good; hence the sages require the buyer to rectify the mistake in money. In case of deficit, the seller, of course, returns a part of the price pro rata.

Where both the expressions "chain measure" and "more or less" are used, according to the eminent lawyer Ben Nannos, the expression used first in the contract should prevail, the other falling to the ground; but the prevailing opinion is that the doubt is resolved against the buyer. Where the sale is made according to monuments and metes and bounds, and the quantity stated disagrees with the description, if the discrepancy is more than one-sixth it must be corrected; if less, the sale stands (see Ona'ah).

Where one says "I sell thee half my field," one-half in value is meant; but the seller has the privilege of choosing the smaller portion from the best land. If the proposition is "I sell thee the southern half," the southern half by area is estimated. The seller may then give to the buyer the equivalent of that area from any part of the land; and the buyer takes in his part the space for dividing fence and ditch.

Sales of Vacant Lots and of Tombs.

(4) He who sells to another a place whereon to build a house, or he who contracts with another to build a house for his son-in-law or his widowed daughter, must make it at least eight cubits in length by six in width (the opinion of R. Ishmael, which here seems to prevail over that of R. Akiba, who says six by four); a stall for oxen means one at least six by four; a large house, eight by ten; a banqueting-hall, ten by ten; and the height half of the sum of length and breadth. These measurements are evidently meant to be "in the clear." The word "house" ("bayit") in the Mishnah seems to mean one with a single room, a house of several rooms being known as a "birah."

He who sells a lot for a family tomb, or contracts with another to make a tomb for him, has to furnish a vault with a clear space of six cubits by four, with eight actual graves ("kukin") opening into it, three on each side, and two opposite the entrance, each grave being four cubits in length, six palms in width, and seven palms in height. Another opinion (which did not prevail) made the vault eight by six cubits, and surrounded it with thirteen graves, requiring, moreover, that two such vaults should open from a "court," six by six cubits, on the surface of which the bier and the grave-diggers might rest.

——**Of Chattels:** The modes by which and the precise time at which the ownership of movables passes from the seller to the buyer are set forth under Alienation; the rescission of a sale and purchase for Fraud and Mistake or for Duress is treated under those heads; and the right to rescind for inadequacy or excess of price is dealt with under Ona'ah. It remains to indicate, as under Sale of Land, how the words denoting the movable object sold are construed by the Mishnah (B. B. v.) and Gemara (*ib.* 73a-81), and to speak of some incidental points.

Inclusive Sale.

He who sells a ship sells with it the mast and sail (others render "flag"), the anchor, and the oars and tackle, but not the slaves (employed in navigation), nor the bags (to hold the cargo), nor the cargo, nor the boats; but when the seller says "the ship and all that is in it" all of these things are included. He who sells a wagon does not sell the horses (unless they are harnessed to it); he who sells the horses does not sell the wagon to which they are attached; he who sells the yoke (and appendages) does not sell the oxen (though they be attached); he who sells the oxen does not sell the yoke; he who sells an ass does not sell the harness. R. Judah's opinion, that the price should indicate what was meant to be sold, is disallowed, because the rule of Ona'ah offers sufficient protection.

He who sells a suckling ass sells her colt; but he who sells a suckling cow does not sell the calf, for the milk of the cow is of value. He who sells a beehive sells the bees in it. He who sells a dove-cot sells the pigeons; he who buys from another the "fruits" (*i.e.*, the next brood) of a dove-cot leaves to the seller the first two chicks for each mother bird, to keep her from deserting the nest. He who buys the next brood of a beehive takes the first three swarms that come out of the hive, and then stops impregnation, to save the honey for the seller. He who buys the cakes of honey leaves two behind (as winter food for the bees). He who buys olives, to cut them (from the tree), leaves two twigs full (to the seller). Unless there is a local custom to the contrary, the sale of the head of a beef does not include the feet, nor vice versa; the sale of the liver does not include the lungs, nor vice versa; but in the case of sheep and goats the sale of the head carries with it the feet, and the sale of the lungs includes the liver.

In measuring out oil or wine the seller (unless he is a retail merchant) must give the buyer three extra drops, to make up for that which adheres to the measuring vessel; but any that adheres to the bottom of the measure when it is tipped belongs to the seller.

Where grain is sold the buyer must accept as much dirt as one part in thirty; in buying figs, ten that are worm-eaten in a hundred; in a row of wine-jars, ten that are below the prescribed grade in a hundred. Where one sells wine to another and it sours, he is not liable on an implied warranty; but if the seller's wine is known to be apt to sour, it is a "mistaken purchase" (see Fraud and Mistake). If the seller says, "I sell thee spiced wine," it must keep good till Pentecost; if he sells it for "old wine," it must be of the previous year; if for "aged," it must be in its third year.

Dispute as to Price.

If seller and buyer disagree about the price, and if when they meet again the buyer takes the goods away unasked, he is supposed to take them at the seller's price; but if the seller tells the buyer to take his goods, they are sold at the price which is offered by the buyer.

The Mishnah treats the duty of keeping scales, weights, and measures in proper order in connection with the law of sales of goods (B. B. v. 10, 11), Rabban Simeon ben Gamaliel being the principal authority therefor. The rules deduced in the Talmud and found in the codes stand thus: A wholesale seller should wipe his hollow measures for liquids once in every thirty days; a householder need not do it more than once a year: the retailer should wipe them twice a week, and he should wipe his scales after every weighing. The patriarch named says that hollow measures for dry foodstuffs need not be wiped; and this (the opinion of Maimonides, "Yad," Genebah, viii., to the contrary) seems to be the accepted rule. In using scales the merchant must allow the meat or other goods weighed to sink down a palm's width below the level; or if he brings the scales to a dead level, he should give the customer the usual overweight, that is, 1 in 100 in the case of liquids, and 1 in 200 in that of solids. Where the custom is to deal out by small measures, the merchant must not use larger ones, as the customer would thereby lose part of the heaping; nor the contrary, where he buys. In like manner local custom must be followed as to heaped or level measure; and it is no excuse that deviation is compensated for by difference in price. A baraita (B. B. 89a) derives this rule from Deut. xxv. 15 ("a perfect and just weight," etc.). On the moral aspect of wrong weights and measures see Jew. Encyc. v. 500, *s.v.* Fraud and Mistake, I. 4.

SALE AND SEIZURE. See Execution.

SALEM (שלם = "peaceful" or "whole"): Name of a place, first mentioned in connection with Abraham's return from the battle with Chedorlaomer, when Melchizedek, King of Salem, went to meet him (Gen. xiv. 18). Josephus ("Ant." i. 10, § 2; "B. J." vi. 10), the three Targumim, all the later Jewish commentators, and Jerome ("Quæstiones in Genesin," *ad loc.*, and "Epistola LXXIII., ad Evangelum de Melchisedech," § 2), believing "Salem" to be a shortened form of "Jerusalem," identify it with the latter place (comp. Eusebius, "Onomasticon," *s.v.* 'Ιερουσαλήμ). This identification is supported by the expression "In Salem also is his tabernacle" (Ps. lxxvi. 2), which undoubtedly refers to Jerusalem. Still Jerome himself, alluding probably to the Biblical indication that Salem was in the neighborhood of the valley called "the valley of Shaveh" (Gen. xiv. 17), identifies ("Epistola," *l.c.* § 7; "Onomasticon," *s.v.* "Salem" and "Aenon") Salem with the Salim of John iii. 23, now called Salamias, which is situated in the Jordan valley, eight miles south of Scythopolis. The Septuagint reads in Jer. xli. 5 "Salem" for "Shiloh," correcting משלו into משלם, and referring to Shalem, a city near Shechem (Gen. xxxiii. 18). In Judith iv. 4 occurs "to the valley of Salem," which Reland ("Palestine," p. 977) suggests should be amended to read "into the valley [the Jordan valley] to Salem." This place is apparently the Salamias of Jerome.

J. M. Sel.

SALEM, ASHER BEN IMMANUEL: Turkish scholar of the eighteenth century. He was the author of "Maṭṭeh Asher" (Salonica, 1748), containing responsa, novellæ on some parts of the "Yad ha-Ḥazaḳah," laws concerning the slaughtering of animals after the method of Jacob Weil, and sermons.

SALEM SHALOAM DAVID: Chinese convert to Judaism; born at Hankow, China, of Chinese parents in 1853, and named **Feba.** Feba remained with his parents till 1861, when his family were murdered during the Taeping rebellion. He, along with other boys, was held captive by the rebels until they came within a short distance of Shanghai, where the rebels were routed and scattered by British soldiers under "Chinese" Gordon. Feba, being left helpless, sought protection of Solomon Reuben, one of the volunteers, who presented him to David Sassoon & Co., Shanghai. Here S. H. David took him under his care; and in 1862 he sent him to Bombay, where he was admitted to the Jewish faith and named Salem Shaloam David. He was educated at the David Sassoon Benevolent Institution, and joined the firm of E. D. Sassoon & Co. in 1872; served in their Shanghai house from 1874 to 1882; and since 1882 has been in their Bombay establishment. As a communal worker he is equally popular with the Jews and Beni-Israel. He is honorary secretary to the Magen David Synagogue Byculla and to the Jacob Sassoon Jewish Charity Fund, as well as to the Hebrath Kehat-Kadosh, Bombay. He was unanimously appointed by the last-named as visitor to the Jewish patients in the hospitals. He is, besides, a member of the Shanghai Society for Rescuing the Chinese Jews.

J. E. M. E.

SALFELD, SIEGMUND: German rabbi; born at Stadthagen, Schaumburg-Lippe, March 24, 1843. Having received his degree of Ph.D. from the University of Berlin in 1870, he became in the same year rabbi of Dessau, Anhalt. In 1880 he was chosen rabbi of Mayence, where he is still officiating (1905). Salfeld has published: "Fünf Predigten" (1879), sermons delivered on different occasions; "Das Hohelied Salomo's bei den Jüdischen Erklärern des Mittelalters" (Berlin, 1879); "Dr. Salomon Herxheimer" (Frankfort-on-the-Main, 1885), a biography; (with

M. Stern) "Nürnberg im Mittelalter" (Kiel, 1894–1896); "Der Alte Israelitische Friedhof in Mainz" (Berlin, 1898); "Das Martyrologium des Nürnberger Memorbuches" (*ib.* 1898), a work edited for the Gesellschaft für die Geschichte der Juden in Deutschland; "Bilder aus der Vergangenheit der Jüdischen Gemeinde Mainz" (Mayence, 1903). Since 1875 he has been a collaborator on "Meyers Konversations-Lexikon," and since 1902 on THE JEWISH ENCYCLOPEDIA.

Salfeld has long been active in public affairs. At Dessau he served as alderman; and at Mayence he is a member of the municipal school board.

SALGÓ, JAKOB: Hungarian psychiatrist; born at Pesth in 1849; educated at Pesth, at Vienna (M.D., Vienna, 1874), and at Göttingen, where he was assistant to Max Leidesdorf. In 1879 he became privat-docent, and from 1880 to 1882 he was head physician, at the Swetlin sanitarium, Vienna. In 1884 he became head physician at the State Insane Asylum, Budapest. Salgó embraced Christianity.

Salgó is a member of the state sanitary council, of the medico-legal district council, of the Société de Médecine Mentale de Belgique, and of the Société Médico-Psychologique of Paris. His chief works are: "Werth und Bedeutung der Reformbestrebungen in der Psychiatrie" (Stuttgart, 1877); "Die Cerebralen Grundzustände der Psychosen" (*ib.* 1877); "Ueber Gerichtliche Bedeutung des Alkoholismus," in "Compendium der Psychiatrie" (Vienna, 1889); and "Az Elmekór Tankönyve" (Budapest, 1890), a handbook of psychiatry.

SALIVA (Hebrew, "roḳ"): Spittle. To spit in a person's face was regarded as an expression of the utmost contempt for him (Num. xii. 14; Deut. xxv. 9; Isa. l. 6; Job xxx. 10; Matt. xxvi. 67; Lev. R. ix. 9). It was also a sign of disrespect to spit in front of a person (Josephus, "B. J." ii. 8, § 9; Sifre, Deut. 291; Yeb. 106b, where the Pharisaic interpretation of Deut. xxv. 9 is given); wherefore it is stated (Ber. ix. 5, 62b) that "one should not spit in the Temple precincts." Levitical impurity, however, is not ascribed to the saliva by the Mosaic law as it is in the law of Manu (v. 135), except in the case of one having an impure issue (Lev. xv. 8).

Healing properties, especially in eye-diseases, were ascribed to saliva by the Jews and the early Christians as well as by the Greeks and Romans (Yer. Shab. xiv. 14d; Yer. 'Ab. Zarah ii. 40d; Sanh. 101a; B. B. 126b; Mark vii. 33, viii. 23; John ix. 6; comp. Pliny, "Historia Naturalis," vii. 2; xxviii. 4, 7, 22). The power of curing eye-diseases with saliva was ascribed to the emperor Vespasian (Tacitus, "Historia," iv. 8; Suetonius, "Vespasianis," vii.). Both ancient and modern superstition attributed to spittle the power to ward off malign influences (see Krenkel, "Beiträge zur Aufhellung der Geschichte des Apostels Paulus," 1890, pp. 84–88; Grimm, "Deutsche Mythologie," p. 681).

K.

SALKIND, SOLOMON BEN BARUCH: Lithuanian Hebrew poet; teacher in the rabbinical seminary, Wilna; died there March 14, 1868. He was the author of: "Shirim li-Shelomoh" (Wilna, 1842), a collection of poems, most of which are adaptations from other languages; "Ḳol Shelomoh" (*ib.* 1858) and "Shema' Shelomoh" (*ib.* 1866), collections of poems. Many of his Hebrew speeches are to be found in the "Ḳobeẓ Derushim" (*ib.* 1864), a collection of addresses by teachers of the seminary, published at the expense of the Russian government.

SALKINSON, ISAAC EDWARD: Russian Hebraist; convert to Christianity; born at Wilna; died at Vienna June 5, 1883. According to some, Salkinson was the son of Solomon Salkind. As a youth, he set out for America with the intention of entering a rabbinical seminary there; but while in London he was met by agents of the London Missionary Society and was persuaded to forsake Judaism. Baptized soon afterward, he entered, in 1849, the college of that society, where he studied four years. His first appointment was as missionary to the Jews at Edinburgh, where he became a student at Divinity Hall. He was ordained a minister of the Presbyterian Church at Glasgow in 1859. He served his church as a missionary in various towns, including Presburg, and finally settled in Vienna (1876).

Salkinson translated: "Philosophy of the Plan of Salvation," under the title "Sod ha-Yeshu'ah" (Altona, 1858); Milton's "Paradise Lost," under the title "Wa-Yegaresh et ha-Adam" (Vienna, 1871); Shakespeare's "Othello" and "Romeo and Juliet," under the titles "Iti'el ha-Kushi" (*ib.* 1874; preface by P. Smolenskin) and "Ram we-Ya'el" (*ib.* 1878); Tiedge's "Urania," under the title "Ben Ḳohelet" (*ib.* 1876; rimed); the New Testament, under the title "Ha-Berit ha-Ḥadashah." The last-mentioned translation was undertaken for the British Missionary Society in 1877; it was published posthumously, under the supervision of C. D. Ginsburg, at Vienna in 1886. It is much inferior to his other translations.

SALOMAN, GESKEL: Painter; born of German parents April 1, 1821, at Tondern, Sleswick; died July 5, 1902, at Stockholm. Soon after his birth his parents removed to Copenhagen, where Saloman received his education and attended the art school. While a student he painted, among other works, "A Game of l'Hombre," 1845; "The First Violin Lesson," 1846; and several portraits. For one of these, a portrait of the poet Overskov, he received in 1848 the Neuhauser prize of 400 Danish dollars. In 1849 appeared his "Writing Instructions." After a stay in Paris, where he painted "News from the Crimean War," he settled in Göteborg, Sweden. From 1860 to 1863 he lived in Algiers, where he painted "The Chicken Sacrifice." In 1870 he removed to Stockholm, where he lived until his death, often making trips abroad. In 1872 he became professor at the Stockholm Art Academy.

Besides the above-mentioned pictures, the following deserve notice: "The First-Born," Göteborg, 1852; "The Weaver Woman," *ib.* 1856; "The Emigrants," *ib.* 1858; "The Home-Coming of the Victor," Stockholm, 1881; "Gustavus Vasa and the Dalecarlians," *ib.* 1886; "The Blessing of the Sabbath Lights," *ib.* 1900.

Saloman was not only a celebrated painter, but also a well-known archeologist. As such he wrote: "Die Statue der Venus von Milo," "Die Statue des Belveder'schen und Vatikanischen Apollo," and other works. He was throughout his life a pious Jew.

Bibliography: A. Kohut, in *Ost und West*, April, 1903, p. 246.
S. F. T. H.

SALOMAN, NOTA S.: Danish physician; born at Tondern, Sleswick-Holstein, March 21, 1823; died at Copenhagen March 20, 1885. Educated at the University of Copenhagen (M. D. 1850), he was for one year physician in the merchant navy, and then became assistant at the Frederiks Hospital, Copenhagen. In 1853 he joined the Danish army as assistant surgeon. He became surgeon in 1858, took part in the war of 1864, and was appointed in 1873 surgeon-general of the Danish army. He greatly improved the hospital and ambulance services of the army.

Of Saloman's works mention should be made of "Bemærkninger om Sundhedstjenesten i Felten," Copenhagen, 1872.

SALOMAN (originally **SALOMON**), **SIEGFRIED:** Danish violinist and composer; born in Tondern, Sleswick-Holstein, Oct. 2, 1816; died July 22, 1899, on the island of Dalarö, Sweden; brother of Geskel and Nota Saloman. He received instruction in violin-playing from Fröhlich, Paulli, Wexschall, and J. P. E. Hartmann, and when only twelve years old appeared in public at a concert in Copenhagen. In 1838 he received a scholarship which enabled him to travel for three years. He stayed for a time in Dessau, where he studied theory and composition under F. Schnieder, who obtained for him an appointment as first violin in the Hofkapel in that city. In 1841 he went to Dresden, where he studied under Lipinski. In 1842 he published in Hamburg nine booklets of romances and songs.

Returning to Copenhagen in 1843, Saloman lectured, and gave instruction in music, at the same time writing several operas, of which "Tordenskjold i Dynekilen" (1844) and "Diamantkorset" (1847) were the most noteworthy. The latter work was later translated into German, and staged in Berlin and Leipsic, where it met with marked success. In 1847 Saloman again went abroad, and in 1850 his comic opera "Das Korps der Rache" was presented at Weimar, and had a most successful run. In Berlin Saloman was married to the Swedish singer Henriette Nissen, with whom he toured the continent of Europe for several years. In 1867 his opera "Karpathernes Rose" was produced in Moscow.

On the death of his wife (1879) Saloman settled in Stockholm, where he composed several new operas, of which "Flyktningen Från Estrella," "I Bretagne," and "Led ved Lifvet" met with great favor.

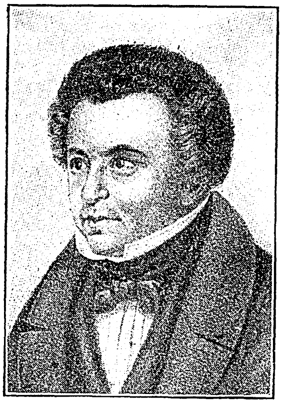
Pedigree of the Salomon Family.

SALOMON, GOTTHOLD: German rabbi; born Nov. 1, 1784, at Sondersleben, Anhalt; died Nov. 17, 1862, in Hamburg. His first teacher in Bible and Talmud was his uncle R. Meister Heinemann. In 1800 he went to the school of R. Joseph Wolf at Dessau. In 1801 he became tutor in the Kalman family, and in the following year was appointed teacher at the Jewish Free School, subsequently called "Franzschule für Hebräische und Deutsche Sprache," where he had as colleagues David Fränkel and Moses Philippson. He delivered his first public discourse, "Ueber die Entfaltung des Inneren Lebens Durch die Sprache," in 1806, on the occasion of a school examination. It was printed in the periodical "Sulamith," which Salomon was then editing, and of which six volumes appeared. In 1815 he was invited to deliver a ser-

First German Sermon.

mon at the Beer private synagogue at Berlin. It should be noted that he devoted much time to the study of the sermons of famous contemporary Christian preachers, which influenced considerably his own homiletic methods. In 1818 he was called as preacher to the newly founded congregation at Hamburg, as associate to Eduard Kley. In 1822 he visited Copenhagen, where he preached with great success; but he declined a call to that city. In 1835 he engaged in polemics with the theologian Hartmann of Rostock, who publicly opposed the emancipation of the Jews, Salomon answering with his "Briefe an Hartmann." In 1837 he issued the "Deutsche Volks- und Schulbibel für Israeliten" with the assistance of Isaac Noah Mannheimer and with the financial support of the Hamburg philanthropist Solomon Heine, uncle of Heinrich Heine. In 1841 the famous temple controversy ("Tempelstreit") arose in Hamburg on the occasion of the publication of Salomon's prayer-book, which was put under the ban by Ḥakam Isaac Bernays. To this period belongs his defense of the Jews against Bruno Bauer. Between 1843 and 1845 he took part in the rabbinical conferences at Leipsic, Brunswick, Frankfort-on-the-Main, and Breslau. In 1843 he celebrated his twenty-fifth anniversary as preacher at Hamburg, and soon after dedicated the new temple in the Poolstrasse. He resigned his office in 1858.



Gotthold Salomon.

Works.

Salomon, who was one of the most eloquent Jewish preachers of the nineteenth century, was often invited to deliver discourses in various cities, *e.g.*, in London, Frankfort, Vienna, and Prague. Aside from his polemical writings, a great number of sermons and liturgical poems which were included in the hymnal of the Hamburg Temple, Salomon published: a German translation, with notes, of the Minor Prophets (1806); a translation, with notes, of the "Shemonah Peraḳim" of Maimonides (1809); "Selimas Stunden der Weihe," a devotional book for young women; and a monograph on the occasion of the one hundredth anniversary of the birth of Moses Mendelssohn (1829).

S. D. L.

SALOMON, HAYM: American financier; born at Lissa, Poland, in 1740; died in Philadelphia Jan. 6, 1785. It is probable that he left his native country after the partition of Poland in 1772. He settled in New York, and there married Rachel, daughter of Moses B. Franks. When the Revolutionary war began he identified himself with the American cause, and was arrested and imprisoned as a spy soon after the occupation of New York by the British in Sept., 1776. He appears to have been kept in close confinement for a considerable period, but when his linguistic proficiency became known, he was turned over to the Hessian general Heister, who gave him an appointment in the commissariat department. The greater liberty thus accorded him enabled him to be of service to the French and American prisoners, and to assist numbers of them to effect their escape. He appears to have exerted himself to create dissension among the Hessian officers, prompting many to resign from the service. This led him into difficulties, but on Aug. 11, 1778, he managed to escape from New York, leaving behind property to the amount of five or six thousand pounds sterling, a distressed wife, and a child one month old. It is characteristic of his unselfish nature that when, at this critical period of his career, he addressed a petition to the Continental Congress (Aug. 25, 1778) recounting his services and praying for some employment, he at the same time entered a plea for the exchange of Samuel Demezes, with whom he had been intimate during his imprisonment.

Early Career.

Salomon's escape to Philadelphia marks the turning-point in his career. His appeal to Congress met with no success, but it was not long before he succeeded in establishing himself in business, becoming one of the prominent citizens of his adopted city. Early in 1781 he made known through the newspapers that he was a dealer in bills of exchange on France, Saint Eustatius, and Amsterdam. A few days after this announcement Robert Morris became Superintendent of Finance. Morris kept a diary in which he recorded many of his financial transactions, and some idea of the extent to which he relied on Salomon may be gathered from the fact that between Aug., 1781, and April, 1784, Salomon's name appears in the diary not less than seventy-five times. Salomon's services were especially valuable in connection with the negotiation of bills of exchange, by which means the credit of the government was so largely maintained during this period; he was practically the sole agent employed by Morris for this purpose. On July 12, 1782, he requested Morris' permission to publish the fact that he was broker to the Office of Finance; in reference to this Morris entered in his diary: "This broker has been useful to the public interests. . . . I have consented, as I do not see that any disadvantage can possibly arise to the public service, but the reverse; and he expects individual benefits therefrom."

But Salomon's activities were not limited to his relations with the government. He had been appointed broker to the French consul and the treasurer of the French army, and fiscal agent of the French minister to the United States, Chevalier de la Luzerne, and in these capacities enormous sums passed through his hands. His large financial transactions made him the principal individual depositor of the Bank of North America, an institution founded through the instrumentality of Robert Morris to serve as a means of obtaining funds to carry on the government. Salomon's accounts filled fifteen pages of the ledger of this bank, and at various times he had specie balances of from $15,000 to $50,000. From these accounts it would appear that Salomon from time to time paid out to Robert Morris sums amounting in the aggregate to $200,000. It is an interesting fact that on a day when Robert Morris deposited $10,000 in the bank, he received exactly the same amount from Haym Salomon.

On Aug. 26, 1782, Morris recorded in his diary: "I sent for Salomon and desired him to try every way he could devise to raise money, and then went in quest of it myself." Two days later he wrote: "Salomon the broker came, and I urged him to leave no stone unturned to find out money and the means by which I can obtain it."

Relations with Financial World.

In 1782 Salomon indorsed the note of a M. de Brassine, who, with M. de Mars, the chief of the French hospital department, was engaged in sundry mercantile ventures which turned out to have been entered into for their own advantage and on account of the French army. When the note became due, it was protested, and at Morris' instance Salomon entered suit against De Brassine and De Mars (March, 1783), and had them both put in jail. On March 20, 1783, Morris recorded in his diary: "I must here, in justice to Haym Salomon, declare that, although he has indorsed the note, I consider him only as a broker in this business, and not liable to pay as an indorser thereof." As De Mars was the responsible party he was forced to make good the amount involved. It is worthy of note that James Wilson, the distinguished lawyer and member of the Constitutional Convention, represented Salomon on this occasion. It was due no doubt to many other transactions of this character that Salomon advanced to the government large sums for which he received no return. A report of a United States Senate committee, made in 1850, upon the claims of Salomon's heirs states that he "gave great assistance to the government by loans of money and by advancing liberally of his means to sustain the men engaged in the struggle for independence at a time when the sinews of war were essential to success." For the most part, the money advanced by Louis XVI., and the proceeds of the loans negotiated in Holland passed through his hands. The advertisements which Salomon constantly inserted in the newspapers filled at times a whole column and were printed in French as well as in English; indeed, he was the leading financier of the principal city of the country; and no other had such extensive connections or engaged in such a variety of ventures. The inventory of his estate at the time of his death showed that he owned more than $350,000 in loan-office, treasury, and state certificates, and contained, besides, other evidences of official indebtedness.

Salomon's generosity in advancing aid to numerous prominent characters of his time forms one of the most striking evidences of his largeness of heart and mind. When the funds of James Madison and his associates fell so low as to force them to have recourse to the bounty of individuals, Salomon appears to have been their chief reliance. Madison, in a letter (Aug. 27, 1782) urging the forwarding of remittances from his state, which he represented at Philadelphia, wrote: "I have for some time past been a pensioner on the favor of Haym Salomon, a Jew broker." On Sept. 30 of the same year, when again appealing for remittances to relieve his embarrassments, he wrote: "The kindness of our little friend in Front street, near the coffee-house, is a fund which will preserve me from extremities, but I never resort to it without great mortification, as he obstinately rejects all recompense. The price of money is so usurious that he thinks it ought to be extorted from none but those who aim at profitable speculations. To a necessitous delegate he gratuitously spares a supply out of his private stock." There is ample evidence that Salomon is here referred to, and that he was not less generous to many of the military and civil officials of those trying times, with some of whom he was on intimate terms. Had it not been for the aid he supplied to James Wilson, already referred to as his attorney, and one of the most prominent Pennsylvanians, the latter would have been forced to retire from the public service. This aid he is stated to have "administered with equal generosity and delicacy." It is also recorded that he rendered services to Don Francesco Rendon, the secret agent of the King of Spain, who states that without this assistance he would have been unable to "support his character as His Most Catholic Majesty's agent here with any degree of credit and reputation." There are other evidences of his generosity and of his contributions to charity, and it is stated that at one time during the Revolution, when paper money had practically no circulation and specie was rarely seen, he distributed $2,000 in specie among the poor and distressed of Philadelphia. So successful had Salomon become by 1784 that in the spring of that year he opened an establishment in New York in partnership with Jacob Mordecai, at 22 Wall street, where he carried on the business of "factor, auctioneer, and broker."

Jewish Activities.

Haym Salomon's interests were not restricted to secular affairs. He participated in Jewish communal life; was one of the original members of the Congregation Mickvé Israel of Philadelphia; and, in 1783, at least was one of the mahamad of that synagogue. On Dec. 23, 1783, with others of the congregation, he sent an address to the Council of Censors of Pennsylvania, which met in that year for the first time, calling attention to the fact that, though the constitution of the state provided that no religious test should be imposed upon civil officials, they had all, upon assuming office, to take oath that they believed the Scriptures of the Old and New Testaments to be given by divine inspiration; and as this prevented professing Jews from holding public office, the petitioners prayed for the repeal of that clause of the constitution. Though they met with no success at this time, their action doubtless had some effect in bringing about the removal of this restriction when the constitution was revised at a later date. In 1784 Salomon was treasurer of what was probably the first charitable organization among the Jews of Philadelphia, a society for the relief of destitute strangers.

When Salomon died he left a widow and two infant children, who were named Ezekiel and Haym M. Various attempts were made between 1848 and 1864 to procure from the government a settlement of Haym Salomon's claims for sums advanced during the Revolution, but, though several committees of both houses of Congress made favorable reports, no appropriation has ever been made. In 1893 an attempt was made to have Congress order a gold medal struck in recognition of Salomon's services, the heirs agreeing for this consideration to waive their claims against the United States; but even this failed, though a favorable report upon the measure was made by the House committee having the matter in charge.

A. H. F.

SALOMON, MAX: German physician; born at Sleswick, Sleswick-Holstein, April 5, 1837; son of Jacob Salomon; educated at the gymnasium of his native town and at the universities of Heidelberg, Berlin, and Kiel (M.D. 1861). After a postgraduate course under Von Graefe, he became in 1862 assistant at the city hospital of Altona. Joining the Prussian army in 1866, he served as surgeon until 1870, when he established himself as a physician in Hamburg. In 1874 he removed to Berlin, where he is still practising (1905), having received the title of "Sanitätsrath."

Of Salomon's works may be mentioned: "Geschichte der Glycosurie von Hippocrates bis zum Anfange des 19. Jahrhunderts," Leipsic, 1871; "Die Krankheiten des Nevensystems," Brunswick, 1872; "Die Entwicklung des Medicinalwesens in England, mit Vergleichenden Seitenblicken auf Deutschland und Reformvorschlägen," Munich, 1884; "Handbuch der Speciellen Internen Therapie," Berlin, 1885 (3d ed., 1897; translated into Italian, Milan, 1889); "Lungenkrankheiten," Berlin, 1886, 1887; Leipsic, 1888; Hamburg, 1890 (a translation of Germain Sée's "Médecine Clinique"); "Giorgio Baglivi und Seine Zeit," Berlin, 1889; "Die Kinderheilstätten an den Deutschen Seeküsten in Ihrem Kampfe Gegen die Tuberculose," *ib.* 1899; "Amatus Lusitanus und Seine Zeit," *ib.* 1901; "Die Tuberkulose als Volkskrankheit und Ihre Bekämpfung Durch Verhütungsmassnahmen," *ib.* 1904.

SALOMON, WILLIAM: American financier; born at Mobile, Ala., Oct. 9, 1852; great-grandson of Haym SALOMON. His parents removed to Philadelphia a few years after his birth; and in 1864 he went to New York city, where he received his education. In 1867 he entered the employ of Philip Speyer & Co., subsequently Speyer & Co., of New York. During his leisure hours he studied German and French; and in 1870 he was transferred to the house of Speyer & Co. of Frankfort-on-the-Main, spending a few months with the London branch. Returning in 1872 to New York city, he in 1873 was made one of the managers and in 1882 a member of the firm of Speyer & Co., which firm he left in 1899, founding the banking-house of William Salomon & Co. in 1902.

Salomon has been very active in railroad finance, and was prominently interested in the reorganization of the Baltimore & Ohio Railroad. He has been an extensive traveler in America and Europe, and has contributed a number of articles on financial and other topics to the magazines of the day.

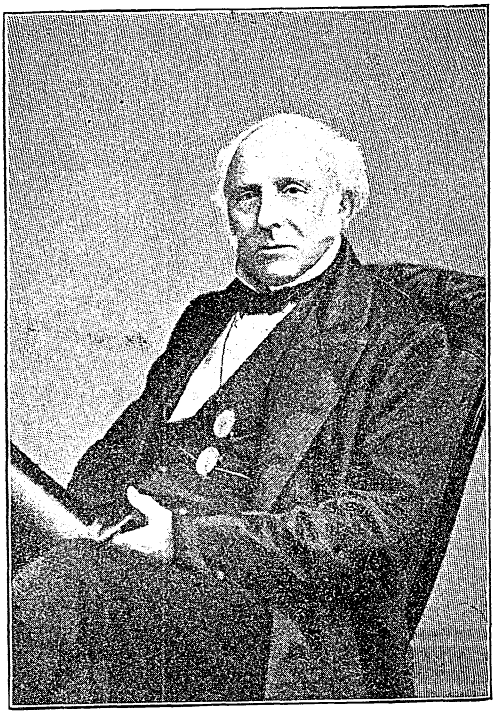
SALOMONS: English family descended from **Solomon Salomons**, a London merchant on the Royal Exchange in the eighteenth century. The following are the principal members:

Levi (Levy) Salomons: London financier and underwriter; born Jan. 16, 1774; died Jan., 1843. He lived at one time in Crosby Square, a few doors from the Great St. Helen's Synagogue, of which he was one of the principal wardens and the representative on the Board of Deputies up to the time of his death. He acquired a valuable collection of scrolls of the Law, some of which he bequeathed to his own synagogue. He married Matilda de Mitz, of Leyden, Holland, and had a family of three sons and three daughters.

Philip Salomons: Eldest son of Levi Salomons; born May 30, 1796; died Jan. 28, 1867; lived at Brighton, Sussex. He married Emma, daughter of Jacob Montefiore, of Sydney, N. S. W., and had as issue a son and two daughters.

Sir David Salomons, Bart.: First English Jew to become sheriff, magistrate, alderman, member of Parliament, and lord mayor of London; born Nov. 22, 1797, in London; died there July 18, 1873; second son of Levi Salomons, one of the chief Jewish merchants of London at the end of the eighteenth century; educated at London and Tottenham. He was one of the founders of the London and Westminster Bank in 1832, and became an underwriter in 1834. He was thus brought into personal association with the higher financial ranks of the metropolis, and he now determined on seeking the suffrages of his fellow citizens.

Salomons' claim to distinction rests on the courageous efforts he made to obtain the removal of Jewish disabilities. Having been admitted in 1831 by the Coopers' Company a freeman and liveryman of the city of London, in 1835 he became the first Jewish sheriff of London and Middlesex; and a special act of Parliament was passed to set at rest any doubts which might exist as to the legality of the election. He was the first Jew to be appointed magistrate for Kent (1838) and high sheriff of that county (1839-40) without being obliged to subscribe to the usual declaration, "on the true faith of a Christian." In 1835 he was elected alderman of Aldgate ward, in 1844 of Portsoken ward, and in 1847 of Cordwainer's ward, but was not admitted till the last-mentioned year. The former elections, however, had to be set aside owing to Salomons' refusal to subscribe to the regular oath. Sir Robert Peel, recognizing the hardship under which the Jews suffered, then introduced a bill in Parliament securing municipal privileges to his Jewish fellow subjects. In due course Salomons became the first Jewish lord mayor of London (1855). His mayoralty was a series of triumphs, his career at the Mansion House being one of exceptional brilliancy and popularity. He received the King of Sardinia at the Guildhall, and during his mayoralty the inscription on the London monument attributing the Great Fire of 1666 to the Roman Catholics was removed.



Sir David Salomons.

Salomons then became a candidate for Parliament and unsuccessfully contested Old Shoreham in 1837, Maidstone in 1841, and Greenwich in 1847; but he was returned as a Liberal for the last-mentioned borough in June, 1851. He declined to take the oath "on the true faith of a Christian," a proceeding which drew the attention of the whole country to the question of Jewish disabilities. Taking his seat in the House, he was ordered to withdraw after having been heard in defense of his unprecedented action, and was subsequently fined £500 for illegally voting (see ENGLAND). The Greenwich constituency which he represented, however, reelected him again and again; but it was not until the alteration of the Parliamentary oath in 1858, after many futile attempts, that he was enabled to take his seat without further demur in 1859, one year after Baron Lionel de Rothschild had taken his oath and his seat as M. P. for the city of London. On the rebuilding of the House of Commons Salomons obtained possession of the actual seat which he had striven so valiantly to obtain and placed it in his country house as an heirloom. On Oct. 26, 1869, he was made a baronet of the United Kingdom with special remainder, in default of male issue, to his nephew David Lionel Salomons, who accordingly succeeded him.

Sir David Salomons was president of the Board of Deputies, of the Society of Hebrew Literature, of the Westminster Jews' Free School, and of the Jews' Hospital. He exerted himself in Parliament on behalf of the Jews in Gibraltar and Damascus, and sought to alleviate the condition of the Jewish working classes with reference to those provisions of the factory acts relating to Sunday labor.

He was twice married, but died without issue. By his will he left a legacy of £1,000 to the Guildhall Library, which was applied in part to augmenting the collection of Jewish works presented by his brother Philip, and in part to the purchase of books on commerce and art. A catalogue of the former was subsequently published by A. Löwy. A testimonial which had been presented to Salomons by his coreligionists in 1836 was also left by him to the Guildhall.

Sir David was the author of: "A Defense of Joint-Stock Banks," 1837; "The Monetary Difficulties of America," 1837; "An Account of the Persecution of the Jews at Damascus," 1840; "Reflections on the Recent Pressure on the Money Market," 1840; "The Case of David Salomons," being an address which was delivered before the court of aldermen, 1844; "Parliamentary Oaths," 1850; and "Alteration of Oaths," 1853.

J. G. L.—I. H.

David Lionel Salomons: Second baronet, and electrician. He was born Jan. 28, 1851, and succeeded his uncle Sir David Salomons, under a special limitation, July 18, 1873. He married a daughter of Baron Herman de Stern.

Joseph Salomons: Third son of Levi Salomons; born April 17, 1802; died Jan., 1829. He married, in 1824, a daughter of Joseph Montefiore. By this marriage he had three daughters, one of whom became the wife of Aaron Goldsmid of London; another, of Lionel Benjamin Cohen; and the third, of Prof. Jacob Waley.

SALOMONS, SIR JULIAN EMANUEL:

Australian statesman; born in Birmingham 1834. He was called to the bar in Jan., 1861. Having emigrated to New South Wales, he was called to the bar of that colony, and practised with much success before the Supreme Court in Sydney, being made Q.C. He defended O'Farrel, the Fenian, who shot the Duke of Edinburgh in 1868.

Salomons was solicitor-general in the Robertson and Cowper ministries from Dec., 1869, to Dec., 1870; and in 1886, on the retirement of Sir William Manning, he was offered the position of chief justice of the colony, which he resigned after holding it for a few days. He then served as agent-general in England for New South Wales till 1890. In June, 1891, he was knighted, and in the following October was appointed vice-president of the executive council and representative of the Dibbs government in the legislative council. In Jan., 1899, he was again appointed agent-general in London for New South Wales, in which position he served till 1902.

SALOMONSEN, CARL JULIUS: Danish bacteriologist; born at Copenhagen Dec. 6, 1847; son of Martin S. Salomonsen. He studied medicine at Copenhagen (M.D. 1871) and took a postgraduate course at Paris and Breslau. Returning to Denmark, he established himself as a physician in his native city, and became privat-docent in 1878, assistant professor in 1883, and professor of pathology in 1893. He was the first Danish physician to establish a laboratory exclusively for the preparation of anti-toxin for the treatment of diphtheria in Danish hospitals. This laboratory was soon found to be too small, and Salomonsen accordingly introduced into the Rigsdag a bill requiring the state to undertake the building of a Serum-Therapeutisk Institut; this bill became law on March 20, 1901.

Salomonsen is the author of many essays in the Danish and German medical journals, and has written among other works "Ledetraad for Medicinere i Bakteriologisk Technik," Stockholm, 1885. Since 1891 he has been a member of the Académie des Sciences.

S. F. C.

SALOMONSEN, MARTIN: Danish physician; born in Copenhagen March 9, 1814; died there Dec. 21, 1889; father of Carl Julius Salomonsen. He graduated from the University of Copenhagen (Candidatus Medicinæ, 1838), and afterward took up the study of physiology. In 1842 he was appointed assistant physician in the Royal Guards, and in 1844 district physician in Copenhagen. In this capacity he did much to bring about a reform in the statistics of diseases; and it was largely due to him that the law requiring physicians in Copenhagen to issue weekly reports was enacted (1850). Salomonsen's work "Udsigt over Kjöbenhavns Epidemier i Sidste Halvdel af det Attende Aarhundrede" (Copenhagen, 1854) gained for him from his alma mater the honorary degree of doctor of medicine.

SALONICA (SALONIKI; ancient **Thessalonica** and **Therma):** Seaport city in Rumelia, European Turkey; chief town of an extensive vilayet of the same name which includes the sanjaks of Salonica, Serres, Drama, and Monastir; situated at the northeast extremity of the Gulf of Salonica. Although it may be inferred from the Acts of the Apostles and from the Epistles of Saint Paul that a Jewish community existed there in the first century of the common era, the earliest document concerning it dates from the time of the first Crusade. It is a letter, found in the genizah at Cairo (see "J. Q. R." ix. 27-29), which was sent from Tripolis to Constantinople, and in which the community of Salonica is said to have been exempted from taxation by Emperor Alexius Comnenus and the patriarch.

Earliest Notice.

This liberality was due either to the fact that the Jews of Salonica were unable to pay their taxes at that time, or to an ulterior motive on the part of the emperor, who, fearing that the Jews would sympathize with the Crusaders, endeavored thus to secure their loyalty. About 1170 Benjamin of Tudela visited Salonica and found there 500 Jewish inhabitants. They were engaged in various handicrafts, and had their own mayor (ἔφορος), who was appointed by the government (Benjamin of Tudela, "Itinerary," ed. Asher, p. 18). During the thirteenth and fourteenth centuries the community was increased by the arrival of a great number of immigrants from Germany, France, and Italy, who, fleeing from persecutions in their respective countries, settled in Salonica, where they were afforded many commercial opportunities. The immigrants from Italy formed two distinct congregations, the Sicilian and the Apulian.

Group of Salonica Jews.
(From a photograph.)

A new era for the community began with the conquest of Salonica by Amurath (May 1, 1430). The Jews were granted equal rights with the other non-Mussulman inhabitants, and their rabbis were placed on the same footing as the spiritual heads of the Greek Church. The happy condition of the Jewish community of Salonica at that time is described by Isaac Ẓarfati in a letter addressed to the Jews of Germany, whom he advises to emigrate to Turkey. His advice was followed by many, and at the end of the fifteenth century there were so many German Jews in Salonica that Benjamin ha-Levi of Nuremberg deemed it necessary to compose a special ritual for them. The sixteenth century was the golden age of the Salonica community; Sultan Bayazid II. (1480-1512) received the exiles from Spain, and these gave a great impulse to material and intellectual life. Moreover, thousands of wealthy Maranos who had been persecuted in Italy and in Portugal sought refuge in Salonica, where they resumed the profession of their old faith.

Resort of Maranos.

Talmudic schools were founded, which acquired such a high reputation that Isaac Abravanel sent his son Samuel to study there. Large libraries were opened for the public by Judah Benveniste, the son of a former Spanish minister of finance, and by others. Besides the Greek congregation, called "El Kahal de los Javanim," and that which comprised immigrants from Germany, France, Italy, and other lands, there were about thirty Spanish and Portuguese congregations, each of which had its own synagogue and retained its own customs, rites, and liturgy. A poet of that period, Samuel Usque, paints in vivid colors the prosperity of Salonica, which he calls "a mother of Judaism." "The largest numbers," he says, "of the persecuted and banished sons from Europe and other places have met therein and have been received with loving welcome, as though it were our venerable mother Jerusalem."

The year 1545 was a very unfortunate one for the Jews of Salonica. On the 4th of Ab a terrible fire broke out which caused the death of 200 persons and destroyed 8,000 houses and eighteen synagogues. Except for this catastrophe, which was soon forgotten, the prosperity of the community long remained uninterrupted. It is true some Greeks, envious of the riches of certain Jews, endeavored from time to time to incite the populace against them; but as the government, at the request of deputies sent to Constantinople, renewed on several occasions Jewish privileges, the anti-Jewish movements invariably failed.

Fire of 1545.

Still, in order to give their neighbors less cause for envy, the rabbinate deemed it necessary to take measures against the display of luxury of which the Spanish Jews seemed to be very fond. These measures were embodied in a decree which for a period of ten years forbade women to wear any jewel or any ornament of gold or silver, with the exception of a simple ring on the finger. Wedding processions at night also were prohibited. At the same time the Rabbis forbade the employment of male musicians at solemnities, participation in games of hazard, and the dancing together of the members of both sexes.

A decadence both in the material and in the intellectual condition of the community began in the second half of the seventeenth century. It was greatly due to the Shabbethai Ẓebi agitation, which found a very fertile soil in Salonica, then the center of cabalistic studies and Messianic vagaries. The Rabbis at first took measures against the movement, and they even had the courage to banish the pseudo-Messiah from Salonica; but in the end they were compelled to give way to the popular enthusiasm, and Salonica became the theater of disgraceful scenes of revelry. The Shabbethaian movement gave birth to a sect of Crypto-Jews, descendants of whom are still living in Salonica. They call themselves "ma'aminim" (believers), "ḥaberim" (associates), or "ba'ale milḥamah" (warriors), while officially they are known under the name of "Dönmeh" (apostates). Following the example of their master, Shabbethai Ẓebi, they outwardly profess Mohammedanism, but they secretly observe certain Jewish rites, though in no way making common cause with the Jews, whom they call "koferim" (infidels). See DÖNMEH.

Modern Conditions.

From the middle of the nineteenth century the material and intellectual condition of the community began gradually to improve. This was due to the efforts of several prominent Salonica families, such as the Fernandez, the Allatini, and others. In 1873 the Alliance Israélite Universelle opened in the city a school for children; and in 1875 two additional schools, patterned after Western institutions, were founded by the Allatini. There are at present (1905) about 75,000 Jews in Salonica in a total population of 120,000. The majority of them are poor, and are engaged in all kinds of handicrafts and in petty trade. Still there are among them wealthy exporters of corn (the main article of commerce), besides bankers, physicians, and lawyers of high standing. Salonica possesses thirty-seven synagogues, most of which belong to the Sephardim. Among the numerous benevolent institutions which were founded in the course of the nineteenth century, the most noteworthy are: Eẓ Ḥayyim, Ẓedaḳah we-Ḥesed, Ḥuppat 'Aniyot, Biḳḳur Ḥolim, and 'Ozer Dallim. The aim of the first two is to furnish medical assistance and medicine to the poor; of the third, to provide dowries for orphaned girls; and of the last two to render pecuniary aid to families impoverished by illness, death, or the like.

The security and prosperity enjoyed by the Jews under the first Turkish rulers brought about an active intellectual movement; and Salonica became the center of Jewish learning. Sambari (see Neubauer, "M. J. C." i. 154) gives the names of the rabbis of Salonica who officiated from 1430 to 1672 as follows:

Authors and Rabbis.

Eliezer Shimeoni, Eliezer Aruvas (? ארובים), Jacob ben Ḥabib, Solomon Ḥazzan, Joseph ibn Leb, Levi ben Ḥabib, Joseph Fasi, Joseph ben Yaḥya, Solomon de Trani, Joseph Ṭaiṭaẓak, Samuel Almosnino, Ḥayyim Bozzolo, Abraham Sidalvo, Meïr ben Aramah, Solomon Ṭaiṭaẓak, Ḥayyim Obadiah, Samuel Ṭaiṭaẓak, Benjamin ha-Levi Ashkenazi of Nuremberg, Meïr Benveniste, Isaac Bedersi, Akiba ha-Kohen, Samuel di Medina, Isaac Adarbi, Solomon ha-Kohen, Mordecai Matalon, Jacob Ṭaiṭaẓak, Daniel Peraḥyah ha-Kohen, Jacob Samet, Moses Obadiah, Elijah Uziel, Moses Almosnino, Solomon Levi, Isaac Levi, Solomon Levi, Samuel Almosnino, Samuel Kala'i, Jacob ben Aramah, Samuel Florentin, Aaron ben Ḥasan, Aaron Sason, Abraham de Boton, Joseph ibn Ezra, Samuel Ḥayyim, Shemaiah di Medina, Shabbethai Jonah, Ḥayyim Shabbethai, Elijah Rozanes, Samuel ha-Kohen Peraḥyah, Joseph Levi, Solomon ben Ḥasan, Asher Cohen Ardot, Mordecai Kala'i, Baruch Kala'i, Abraham Motal, Jacob Robio (? רוביין), Levi Cosin, Solomon Matalon, Abraham Yiẓḥaḳi, Ḥiyya Abravanel (?), Moses ben Samuel di Medina, David ha-Kohen, Isaac Pardo, Menahem Solas (? סילס), Daniel איש מרו משה, Jacob ben Abraham de Boton, Abraham ha-Kohen Peraḥyah, Ḥisdai ha-Kohen Peraḥyah, Baruch Engel, Samuel Gaon, Judah Benveniste, Joseph Crasso, and Moses ben Ḥayyim Shabbethai.

The retrogression in the political and economic condition of the community caused by the Shabbethai Ẓebi agitation extended to the literary field; and names of high repute like those given by Sambari were not to be found in Salonica during the eighteenth and nineteenth centuries. The most renowned rabbis of the nineteenth century were Raphael Asher Covo (1848–74) and Abraham Gatigno or Gattegno (1875).

For the present status of the community see TURKEY.

——**Typography:** In the year 1515 Judah Gedaliah established the first printing-office in Salonica, with type supposed to have been transported from Lisbon. Its initial work was an edition of the Book of Job, with a commentary thereon by Arama. After a period of about twenty years of great activity Gedaliah's establishment began to decline: it produced only two or three works between 1534 and 1546 (or 1551), when it ceased to exist. A new printing-office, which existed for about ten years, was established in 1560 by the brothers Solomon and Joseph Jabez. The first work produced by them was a Maḥzor of the Ashkenazic rite published by Benjamin ben Meïr ha-Levi Ashkenazi of Nuremberg. After a lapse of several years a press was established by David ben Abraham Asovev, whose first work was an edition of the Midrash Tanḥuma. It was characterized by indifferent execution and by the coarseness of its type. With the financial aid of several wealthy men of Venice, a press of a better class was established in 1592 by the sons of one Mattithiah. Its first work was an appendix to the second volume of Solomon Cohen's responsa.

Printing was not carried on in Salonica between 1628 and 1651. It was resumed by Abraham the Proselyte, but his establishment existed for four years only. Toward the end of the seventeenth century two printing-offices were established by David Naḥman and Campellas respectively, which, together with those founded later by Bezaleel Levi Ashkenazi and Raphael Kala'i, existed throughout the eighteenth century.

SALT.—Biblical Data: A condiment for food. From earliest times salt was indispensable to the Israelites for flavoring food. Having a copious supply in their own country, they could obtain it with little trouble. The Dead or "Salt" Sea (Gen. xiv. 3; Josh. iii. 16) holds in solution not less than 24.57 kg. of salt in 100 kg. of water, and after every flood, upon the evaporation of the water, a coarse-grained salt is left behind in the pools and ditches. Salt-pits, in which salt was thus obtained, are mentioned in Zeph. ii. 9 ("mikreh melaḥ") and in I Macc. ii. 35. The hill Jebel Usdum, situated at the southern extremity of the Dead Sea, and having a length of ten miles, is composed almost entirely of rock salt; and from it was probably procured the "Sodom salt" mentioned in the Talmud.

The various ways in which salt was used in Hebrew cookery need not be enumerated here. Although the fact is not explicitly stated in the Old Testament, salt occupied the same place as in modern cookery; it was of course a most important necessary of life (comp. Ecclus. [Sirach] xxxix. 26; comp. Job vi. 6). Eating the salt of a man means, therefore, to derive one's sustenance from him, to take pay from him or to be hired by him (Ezra iv. 14; comp. "salarium" = "salt money," "salary"). Salt is considered pleasant and wholesome for animals also (Isa. xxx. 24); and the ancient Hebrews of course knew that food was preserved by salt. Tarichεæ, on the Sea of Gennesaret, indicates by its name that, in later times at least, the preparation of salted fish, a staple article of commerce, was extensively carried on there.

The medical properties of salt also seem to have been known to the Israelites at an early date. New-born infants were rubbed with it (Ezek. xvi. 4). Though at first this may have been done for religious reasons, as a protection against demons, the significance of the custom was doubtless forgotten at the time of Ezekiel, and probably much earlier. The curative and sanitary properties of salt are probably referred to in the story related in II Kings ii. 19 *et seq.*, according to which Elisha "heals" the poisonous spring near Jericho by throwing salt into it.

This indispensable ingredient of man's food naturally assumed a great importance in the ritual. Just as salt was absolutely necessary at meals, so it was indispensable at the sacrifice, the "food of God" (comp. "leḥem Elohaw," Lev. xxi. 22). The Law expressly says (*ib.* ii. 13): "Every oblation of thy meal-offering shalt thou season with salt." This prescription referred not only to the meal-offering but also to the burnt offering of animals, as appears from Ezek. xliii. 24 (comp. Josephus, "Ant." iii. 9, § 1). Salt was used also in the preparation of the showbread (comp. LXX. on Lev. xxiv. 7) and of Incense. Great quantities of salt (Ezra vi. 9, vii. 22; comp. "Ant." xii. 3, § 3) were therefore required in the Temple service. The expression "salt of the covenant" in Lev. ii. 13 shows that at the time with which the book deals salt was regarded in a symbolic sense. Originally, however, it is probable that the use of salt at a sacrifice did not arise from this conception, but from the fact that an offering was the meal of God.

The importance of salt in daily life and in the ritual explains its symbolic importance in the ceremony of the covenant. Particularly holy and inviolable obligations were designated as "salt covenants" (*ib.*; Num. xviii. 19; II Chron. xiii. 5). It must be borne in mind that in ancient times, as to-day among the Arab nomads, a meal taken in company meant temporary association among the members of the company and that a covenant was accompanied by a sacrificial meal. Consequently, as salt was always used on both occasions, it was probably taken as an especially fitting symbol of the eternal duration of such a covenant. To-day the Arab still says, "There is salt between us" (comp. Wellhausen, "Reste Arabischen Heidentums," 2d ed., pp. 124, 189; Trumbull, "The Covenant of Salt," 1899). The practise of sprinkling salt on the ruins of a doomed city may also refer to the ritual use of salt (Judges ix. 45), expressing its entire dedication to Yhwh (for parallel instances see W. R. Smith, "Rel. of Sem." 2d ed., p. 454).

——In Rabbinical Literature and Jewish Life: Owing to the fact that salt is referred to in the Bible as symbolizing the covenant between God and Israel (see Biblical Data, above), its importance is particularly pointed out by the Rabbis. They interpret the words "a covenant of salt" (Num. xviii. 19) as meaning that salt was used by God on the occasion in question to signify that it should never be lacking from sacrifices. Thus, although it appears from Lev. ii. 13 that salt was required for meal-offerings only, the Rabbis concluded from a comparison between Num. *l.c.* and Num. xxv. 13 that, just as none of the sacrifices could be offered without priests, so they could not be offered without salt (Men. 19b–20a). The salt which belonged to the Temple for sacrificial purposes could be used by the priests when they ate their portion of the sacrifices, but not otherwise; this was one of the seven institutions of the bet din (Sheḳ. vii. 6; Maimonides, "Yad," Me'ilah, viii.). As, after the destruction of the Temple, the table set for a meal was considered as an altar, the Rabbis recommended that salt should be put upon it; nor should the blessing be recited without salt. The necessity for the presence of salt is indicated by the fact that when the bread is of inferior quality a man may ask for salt between the recitation of the blessing and the partaking of the bread, while for any other purpose one is not allowed to utter a single word. But when the bread is of good quality, although salt should have been put upon the table, yet, if it is missing, one may not interrupt by asking for it between the blessing and eating (Shulḥan 'Aruk, Oraḥ Ḥayyim, 167, 5; Jacob Zausmer, "Bet Ya'aḳob," No. 168; comp. Ber. 40a). In the time of the Tosafists the placing of salt on the table was dispensed with; the bread being good, the condiment was considered unnecessary. Menahem, however, strictly observed the above-mentioned custom, declaring that when people sit at table

Symbolic Use.

without performing any commandment ("miẓwah") Satan accuses them, and only the covenant of salt protects them (Tos. to Ber. *l.c.*). The custom was revived later, and to-day the hand is regularly dipped into the salt before "ha-moẓeh" (Isserles, in Shulḥan 'Aruk, *l.c.*).

Ritual Customs.

Salt is considered as the most necessary condiment, and therefore the Rabbis likened the Torah to it; for as the world could not do without salt, neither could it do without the Torah (Soferim xv. 8). A meal without salt is considered no meal (Ber. 44a). Still, salt is one of the three things which must not be used in excess (*ib.* 55a). It is not considered by the Rabbis as a food; thus when one makes a vow to abstain from food he may eat salt. It may not be used for an 'Erub ('Er. iii. 1).

The Rabbis recognized in salt different properties owing to which it is prominent in the ritual code. The most important one is its decomposing action on the blood; and therefore its use was recommended by the Rabbis for draining the blood from meat. Blood can not be thoroughly extracted from meat unless the latter is well salted (Ḥul. 113a). The laws for salting meat are given in sections 69–78 of the Shulḥan 'Aruk, Yoreh De'ah, some particulars of which may be here mentioned. The layer of salt must be neither too thin, for then it is lacking in strength, nor too thick, for then it does not adhere to the meat; and it must remain on the meat not less than twenty minutes. It has no effect on the blood of meat three days old (as the blood is then considered to have coagulated), unless the meat has been previously rinsed in water (Yoreh De'ah, 69, 3, 6, 12). Salt has no effect on liver on account of the large quantity of blood contained in the latter; still, if the liver has been salted and cooked, it may be eaten (*ib.* 73, 1; comp. *ib.* 105, 9–14). In other respects salting is like cooking (Ḥul. 97b); and therefore he who salts vegetables in the field makes them fit for the tithe (Ma'as. iv. 1). Salting food or vegetables is considered one of the principal labors which are forbidden on the Sabbath (Shab. 75b). To dissolve salt in water is also considered work; consequently one may not prepare a quantity of salt water on the Sabbath. Salt may not be pounded in a mortar on that day; but it may be crushed with the handle of a knife (Oraḥ Ḥayyim, 321, 2, 8).

Salt of Sodom.

Salt is mentioned as a remedy for toothache (Shab. vi. 5), and women were accustomed to hold a grain of salt on the tongue in order to prevent unpleasant odors in the mouth (*ib.*); and on this account the Rabbis similarly recommended that salt be eaten at the conclusion of every meal, as it prevents such odors in the daytime and at night is a preventive of angina. But it must not be eaten from the thumb, for that causes the loss of children; nor from the little finger, for that causes poverty; nor from the index-finger, for that causes murder; but only from the middle finger or the ring-finger (Ber. 40a; Oraḥ Ḥayyim, 179, 6). A kind of salt designated "salt of Sodom" ("melaḥ Sedomit"), which was an ingredient of the spices burned in the Temple (Ker. 6a), was so pungent that if one put the finger from which he ate it on his eye, it might cause blindness. The Rabbis therefore instituted the washing of the hands after the meal (Ḥul. 105b). In one respect salt is considered like hailstones or ice; so that it may complete a Miḳweh and make it fit for a ritual bath (Mik. vii. 1). Salt was strewed on the step of the altar to prevent the priest from slipping ('Er. x. 14). A reference to salt as a preservative is made in the proverb: "Shake the salt off meat, and you may throw the latter to dogs" (Niddah 31a); that is to say, without salt meat is good for nothing. "When salt becomes corrupt with what is it salted?" (Bek. 8b). "The salt of money is charity" (Ket. 66b). The term "salted" is applied to a man in the sense of "quick-minded" (Ḳid. 29b).

It has been shown above that during the Middle Ages salt was connected with certain superstitious beliefs; it may be added that these have continued up to the present time. In certain places in Russia the belief is current among Jews that if salt is thrown in a part of a house where it is not likely to be swept away, the inhabitants of that house will become poor. In England and Holland it is commonly believed that the spilling of salt brings ill luck. Salt is particularly considered as a safeguard against the evil eye. This belief existed in Germany in the beginning of the eighteenth century, as is narrated by Schudt ("Jüdische Merckwürdigkeiten," ii. 385), who states that a Jewish woman who visited him advised him to hang salt and bread about his children's necks to preserve them from evil persons. This belief is especially current in Russia, where salt is put into the arba' kanfot and into children's pockets, and is thrown into the four corners of the room. There is also a saying in Russia: "Throw salt on a Gipsy as she or he leaves your house."

SALVADOR, FRANCIS: Prominent patriot in the American Revolution; a member of the Salvador family of London, the name of which was originally Jessurum Rodriguez; died Aug. 1, 1776. Francis was the son of Jacob Salvador, and nephew of Joseph Jessurum Rodriguez, known as Joseph Salvador, who had been president of the Portuguese Jewish congregation in London. When about two years of age young Salvador lost his father. He inherited immense wealth, which was subsequently increased by the dowry he received on his marriage with the daughter of the above-mentioned Joseph Salvador. He had been educated suitably to his station in life, and had also enjoyed the advantages of extensive travel. The wealth of the Salvador family was, however, swept away by great losses sustained in connection with the earthquake at Lisbon, and more particularly by the failure of the Dutch East India Company.

As a result of these misfortunes Salvador emigrated to South Carolina in America about the end of the year 1773, leaving his wife and four children in England. Despite his heavy losses, he seems to have brought some wealth with him; for in 1774, within a year of his arrival, he purchased considerable lands in the colony.

During the Revolutionary War.

The differences between England and the colonies were then approaching a crisis, and Salvador at once entered heart and soul into the American cause, soon becoming the intimate friend in the South of the leaders of the Revolution, particularly of Pinckney, Rutledge, Drayton, Laurens, and Hammond.

Salvador was elected a member of the first Provincial Congress of South Carolina, which met at Charleston Jan. 11, 1775, and he served therein for the Ninety-sixth District. He was an active member of that distinguished body, and rendered valuable assistance also in connection with the efforts made by the patriots to induce the Tories to join the American cause. Salvador was likewise a member of the second Provincial Congress, held in Charleston in Nov., 1775, serving on several important committees. The members of the Provincial Congress acted in a similar capacity in the General Assembly of South Carolina; and as a member of the latter body his name is frequently associated with those of Middleton, De Saussure, Horry, and Raply.

His Death.

Early in 1776 the British had induced the Indians to attack the South Carolina frontier to create a diversion in favor of British operations on the seacoast; and on July 1, 1776, the Indians began a general massacre. Salvador mounted his horse and galloped to Major Williamson, twenty-eight miles away, and gave the alarm. Accompanying Williamson on his expedition against the Indians, Salvador took part in the engagements which followed. In this expedition he lost his life. On the morning of Aug. 1, 1776, the Tories and Indians opened fire near Esseneka and Salvador was shot. Falling among the bushes, he was discovered by the Indians and scalped.

The correspondence of the leading men of the South shows their intimate relations with Salvador.

A. L. Hü.

SALVADOR, JOSEPH: French historian; born at Montpellier Jan. 5, 1796; died March 17, 1873, at Versailles; buried, at his own request, in the Protestant cemetery of Le Vigan, near Montpellier, in his brother's family vault, the rabbi of Nîmes officiating. Salvador's paternal ancestors, who, according to family traditions, were descendants of the Maccabees, the saviors of Israel—the name "Salvador" meaning "savior"—emigrated from Africa to Spain in the ninth century, and fled from the latter country, to escape the Inquisition, in the fifteenth century, finding a refuge in France.

Salvador received a Jewish education and subsequently graduated at the university of his native town as doctor of medicine (1816), his thesis being "The Application of Physiology to Pathology." He, however, abandoned the medical career, and devoted himself entirely to literature, for which purpose he went to Paris, where he spent the remainder of his life. Being possessed of great wealth, he refused several public offices which were offered to him, preferring to preserve his independence.

His mother (née Elizabeth Vincens) was a Roman Catholic; his brother Benjamin married a Huguenot; while his sister Sophie was married to a Jewish lawyer. He himself remained throughout his life a stanch Jew, and was the undisputed head of this multi-confessional family.

Salvador was the author of the following works: "La Loi de Moïse, ou Système Religieux et Politique des Hébreux" (Paris, 1822); "Histoire des Institutions de Moïse et du Peuple Hébreu" (*ib.* 1878); "Jésus-Christ et Sa Doctrine," a history of the founding and organization of the Church and of its progress during the first century (*ib.* 1838); "Histoire de la Domination Romaine en Judée et de la Ruine de Jérusalem" (*ib.* 1846; translated into German by Ludwig Eichler, 2 vols., Bremen, 1847); "Paris, Rome, Jérusalem, ou la Question Religieuse au XIXème Siècle" (Paris, 1859; 2d ed. prepared by the author in the winter of 1872, and published by his nephew Col. Gabriel Salvador in 1880).

In the first of these works Salvador attempted, through a minute analysis of its inherent spirit, to find a rational basis for the Mosaic legislation. Influenced by the rationalistic spirit of the eighteenth century, he tried to show that the tendency of the ancient legislation was to curb the power of the priest, and to place that of the king on constitutional grounds. In this manner his work touched on some of the most burning questions of the time, and was welcomed and denounced by the constitutionalists and clericals respectively during the controversies which led to the revolution of 1830. The weakness of the book consists in its want of historic conception and its failure to discriminate between the various sources.

The work on Jesus had the merit at least of dealing with the subject, for the first time in France, in a purely historic spirit, and Renan recognizes its merits. This book also aroused considerable discussion and opposition, some of the clericals demanding its suppression, while the liberals welcomed it as a contribution to free thought.

In his work on the fall of Jerusalem Salvador deals with his subject from the point of view of universal history, and regards the destruction of the Temple as a necessary stage in the spread among the peoples of what he would call the Christian form of Judaism.

In his posthumous work Salvador indulges in somewhat wild prognostications of the future of religious thought and its relations to Jerusalem. This had not so much influence on the movement of his time as had his earlier works, which were regarded as important contributions in the struggle against clericalism. Salvador was for a considerable time as important a figure in the liberal camp of theology as Lemennais on the opposite side. He was for nearly thirty years the intellectual representative of French Judaism, though he was not formally connected with any of the great institutions of French Jewry. He was on terms of friendship with the best-known Frenchmen of his day, and fragments of his correspondence with Guizot, S. de Sacy, and Montalembert have been preserved. It would appear that his enthusiasm for Jewish matters was brought about by the rise of anti-Semitism in Germany and the "Hep! Hep!" riots of 1819.

S.

SALVADOR, JOSEPH (known also as **Joseph Jeshurun Rodrigues**): English philanthropist; flourished about 1753. He came of a distinguished family that emigrated from Holland in the eighteenth century, bringing with it considerable sums of money which it invested in commerce. Salvador, who held rank as one of the merchant princes among the Jews, was a partner in the firm of Francis & Joseph Salvador, which, after the death of Sampson Gideon, negotiated loans for the British government. The magnitude of his operations in the world of finance and commerce was such that he was elected to the directorate of the Dutch East India Company, being the first Jew thus honored.

Salvador took a leading part in the affairs of his synagogue, and was president of the congregation and one of the most efficient members of the original committee of Portuguese deputies in 1761. He built a handsome house in White Hart court, Bishop street, and had also a country residence at Tooting. In his latter days, however, his fortunes declined. Being the holder of much property in Lisbon, he lost heavily in consequence of the earthquake in that city; and the subsequent failure of the Dutch East India Company, which affected so many of the rich Portuguese Jews of England and Holland, completed his downfall.

Etymological Meanings.

SALVATION: The usual rendering in the English versions for the Hebrew words ישע, ישועה, תשועה, derivatives of the stem ישע, which in the verb occurs only in the "nif'al" and "hif'il" forms. Other Hebrew terms translated by the corresponding forms of the English "save" and its synonyms are: (1) חיה. This word, meaning in the "ḳal" "to live," acquires in the "pi'el" and "hif'il" the signification "to keep alive," "to save alive" (Gen. xii. 12, xix. 19, xlv. 7; Ex. i. 17, 18; Num. xxii. 33; I Sam. xxvii. 11). Ezekiel employs it to express the condition of the repentant sinner who, having escaped the penalty of sin (death), continues safe in life. (2) הציל = "to deliver" (II Sam. xix. 9; A. V. "save"). (3) מלט, in the "pi'el" (I Sam. xix. 11; II Sam. xix. 5; Job xx. 20). (4) שמר = "to keep," "to spare" (Job ii. 6). (5) גאל = "to redeem" (see Go'el). (6) פדה = "to release."

Hosanna.

The underlying idea of all these words, save the last two, is help extended and made effective in times of need and danger, and protection from evil. "Padah" means "to free by paying ransom." "Ga'al" denotes the assumption of an obligation incumbent originally on another or in favor of another. "Yasha'" primitively means "to be or make wide." Evil and danger are always regarded as narrowing conditions or effects. From the "narrow" place the sufferer cries out. When help has come he is in a "wide" place (Ps. cxviii. 5). In battle enemies beset, surround, hem in (*ib.* verses 10, 11). Success in the combat relieves and removes the pressure. Hence "yasha'" and its derivatives express "victory." This is the import of the Hebrew in such passages as Judges xv. 12; I Sam. ii. 1, xiv. 45; II Sam. xxii. 51; and Isa. xlix. 8. Combined with "rinnah," the word "yeshu'ah" signifies the jubilant cry of the victors (Ps. cxviii. 15). The passionate appeal "Hoshi'ah-nna" (*ib.* verse 25; = "Hosanna") ought to be rendered "Give victory," a translation all the more assured by the certainty that the psalm is Maccabean. He who leads to victory in battle, therefore, is the "moshia'" = "savior" (*e.g.*, Othniel, in Judges iii. 9; Ehud, *ib.* iii. 15; Gideon, *ib.* vi. 36, 37; and the verb in Judges vii. 3; I Sam. xxv. 26; Ps. xliv. 4; Job xxvi. 2). But, according to the ancient concept, God Himself is the leader in battle ("Ish Milḥamah"; Ex. xv. 3). This throws light on the original bearing of the terms "savior" and "salvation" when applied to the Deity (comp. Isa. xxv. 9, xlv. 20). Language has preserved this notion in the epithet "Elohe yish'enu," which, idiomatically construed, means "our victorious God" (I Chron. xvi. 35; Ps. lxxix. 9; "thy victorious God," Isa. xvii. 10; comp. the similar construction "magen yish'aka" = "thy victorious shield," II Sam. xxii. 36; in the first three passages the A. V. has "God of our salvation" or "God of thy salvation"). Perhaps the king as the head of the army was greeted with the salutation "Hoshi'ah" = "Hosanna," corresponding to המלך לעולם יחיה (II Kings x. 19; Neh. ii. 3). This would appear from II Kings vi. 26, the woman's apostrophe carrying with it all the greater irony if it repeated the usual greeting of respect, and the king's answer being, like that of Naomi (Ruth i. 20, 21), a clever turn of the terminology of the address. This would explain also the greeting extended to Jesus (see Hosanna) and the Messianic construction of the psalm. He was hailed thereby as "the king."

From this idea of "victory," those of help in trouble and rescue from evil are logical derivatives; but it is not impossible that even in this secondary usage of the term "salvation" the primary notion of a successful combat is operative. Evils are caused by demons: victory over them results in escape, a grateful help. Thus man is saved from trouble (Ps. xxxiv. 7, Hebr.; Isa. xxxiii. 2; Jer. xiv. 8, xxx. 7), from enemies (I Sam. iv. 3, vii. 8), from violence ("lion," Ps. xxii. 22; "men of blood," *ib.* lix. 3, Hebr.), from reproach (*ib.* lvii. 4 [A. V. 3]), from death (*ib.* vi. 5, 6), from a great calamity (Jer. xxx. 7), from sin, by paying the ransom ("yifdeh"; Ps. cxxx. 8), and from uncleanness (Ezek. xxxvi. 29).

Post-Exilic Views.

The great catastrophe in Israel's history was the Exile. The prophetic doctrine concerning the remnant and the restoration readily transformed expressions for "victory" and "help" into technical terms. "Salvation" now connoted the survival (= victory) of the remnant, the return of the "saved" from exile; and God, in this new sense of the preserver of the remnant and the restorer of the new Israel, was recognized and proclaimed as the "savior" (Isa. xliii. 11; xlv. 15, 21; Zech. viii. 7). The prediction of Hosea (xiii. 4) was illustrated in the events that had come to pass, as was the assurance given by another prophet (Jer. xxx. 10, 11). In the happenings of the day Israel had learned that the Holy of Israel was the savior (Isa. xliii. 3, xlix. 26, lx. 16). Babylon had none to save her (*ib.* xlvii. 15).

In the Psalms "salvation," by a similar train of thought, expresses the triumph of the "poor" and of the "meek" (Ps. xii. 6). God is the "rock of salvation"; contrary to fickle man, He will not deceive (*ib.* lxii. 3, 7, Hebr.). By God's salvation the poor are lifted up (*ib.* lxix. 30). This salvation will be proclaimed from day to day (*ib.* xcvi. 2; comp. xcviii. 2). God is a stronghold of salvation for His anointed (*ib.* xxviii. 8). Under the scepter of the "anointed king" or Messiah this salvation (restoration), with all it implies of happiness, joy, security, splendor of Israel, and universal peace, would be realized. With God's judgment (which also is God's victory [צדק], for a trial is always a combat) God's salvation approaches; and finally salvation is established in Zion for Israel, God's splendor (Isa. xlvi. 13). In this sense, then, the Messiah is a savior; his kingdom, one of salvation.

Relation to Messiah.

"Salvation" and "redemption" ("ge'ulah"), as applied in the Messianic conception, are identical. As God is the "Moshia'," so He is also the "Go'el" (Isa. xliv. 23, xlviii. 20, lii. 9, lxiii. 9; Ps. lxxiv. 2). This savior or redeemer is Yhwh (Isa. xliv. 24, xlvii. 4, xlviii. 17, lxiii. 16; Deutero-Isaiah prefers the latter term). The remnant are the "ge'ulim," redeemed of Yhwh (Isa. lxii. 12; Ps. cvii. 2). The primary idea underlying the term "ga'al," like that basic to "padah," the derivatives of which are also employed to designate those that are saved for and in this Messianic kingdom (Isa. li. 11; Zech. x. 8; Ps. xxv. 22; cxxx. 7, 8; comp. Isa. i. 27), is related to that of "yasha'" only in so far as both connote an act that results in freedom or ease to its beneficiary. The slave, for instance, might be redeemed from bondage as was Israel (Deut. xiii. 6, xxi. 8; II Sam. vii. 23; Neh. i. 10; Mic. vi. 4). The Exile was a period of captivity. By bringing home the dispersed, God was their redeemer; and in consequence Israel was saved. In ancient Israel the go'el was one upon whom had fallen the obligation to pay the honors due to a deceased kinsman; for with no son born to him a man was deprived of the filial tribute, and his name was in danger of obliteration; therefore it was the duty of the go'el, the next of kin, to raise up his name (see Levirate Marriage).

In case of murder the go'el was the Avenger of Blood. Thus even in these primitive conceptions the go'el may be said to have been a redeemer, saving men from extinction of name; also saving spirits from restlessly wandering about because deprived of funeral honors, and, in the case of the murdered, because the wrong remained unrequited ("blood for blood"). In no other sense than "avenger" may "go'el" be understood in Job xix. 25 (A. V. "redeemer"). This passage is construed by many theologians as proof of the belief in immortality, and as indicating a presentiment of Paulinian soteriology. The context, even with the corrupt Masoretic text unemendated, refutes this interpretation. The speaker is merely uttering his unshaken belief that the wrongs done him will find their avenger. Emendated the passage would read, "I know my avenger is even now alive, and later will avenge ["yiḳom"] upon [for] my dust." In the next verse "mi-besari" (A. V. "from my flesh") is rightly understood as "away from [outside] my family," the thought being that even if the members of his family ("flesh"; designated also as "skin") prove derelict to their duty, he has seen one, and not a stranger, that will assume the obligation.

The Jewish Messianic doctrine of salvation does not center in personal immortality, nor in the theologized application of the solidarity of the clan. The Jewish savior was not a go'el in the sense that he took upon himself the blood-guiltiness of sin incurred by another. Moreover, the avenger requited murder by killing another and not himself: he did not die for others, but he caused death in behalf of others. The go'el never was the vicarious victim. It was he who demanded blood, but never gave his own as a ransom. In this theology of salvation "go'el" is mistaken for "kofer" (see Atonement). For the later development of the eschatological implications of salvation see Eschatology.

SALZBURG: Austrian duchy (formerly a German archbishopric), and its capital of the same name. Jews, among them a physician, are mentioned in the Salzburg records as early as the ninth century. In the eleventh century there were in the archbishopric two settlements called "Judendorf" ("Judindorf" and "Villa Judeorum"). There is evidence that from the thirteenth century Jews resided at Salzburg, Hallein, Pettau, Friesach, and Mühldorf. In Salzburg and Pettau, as in Hallein in the fourteenth century, special streets were assigned to the Jews, who had their own schools and synagogues. The archbishops, to whom the Jews were subject, granted them in return for a large annual payment (Letter of Grace of Archbishop Ottolf von Weisseneck, dated June 25, 1346) the right of residence, of protection, of unrestricted commerce, and of emigrating freely from one part of the archbishopric to another. A municipal law of Pettau of the year 1376 mentions a Jewish magistrate. The ecclesiastical legislation, especially the measures of the twenty-second Salzburg provincial council, held at Vienna in 1267, contained numerous oppressive regulations concerning the Jews. In 1418 the council passed an order that Jewish men should wear on the streets horn-shaped hats ("pileum cornutum"), and that Jewish women should have little ringing bells ("nolam sonantem") fastened to their clothes. Other severe ordinances were published by the thirty-ninth provincial council, held at Mühldorf in 1490. But in spite of these restrictions the situation of the Jews in the archbishopric until the middle of the fourteenth century was comparatively favorable, because the secular government was mild. As instances of temperate legislation may be cited the regulations of the archbishop Frederick III. in 1328, and the municipal laws of Mühldorf, Salzburg (1368), and Pettau (1376). Where the Jews were numerous they engaged in commerce on an extensive scale, and possessed houses and estates.

The appearance of the Black Death in 1349 and the accusation of poisoning the wells brought persecution upon the Jews of Salzburg. About 12,000 of them, it is said, lost their lives in Salzburg and Bavaria. On July 10, 1404, a great number of Jews of Salzburg and Hallein were burned at the stake in Winkl on the charge of having desecrated the host.

Emperor Frederick III. for a long time granted his Jewish subjects protection and various privileges. He issued a decree of protection in 1478, when, in consequence of the proceedings against Simon of Trent, feeling ran high against the Salzburg Jews. In spite of this decree, in order to make sport of the Jews, in 1487 a wooden image of a pig nourishing Jewish children was erected at the city's expense on the tower of the Salzburg city hall. Thirty-three years later it was given a more enduring form in marble; and this monument of medieval intolerance was not removed until 1785. The severest hardship endured by the Jews of the archbishopric occurred in 1498, when the stern and unscrupulous Archbishop Leonard von Keutschach ordered their total expulsion under cruel circumstances.

From that time until the nineteenth century only traveling Jewish merchants were allowed to enter Salzburg. The last archbishop who had sovereign power, Francis de Paula, Prince of Colloredo-Mannsfeld (1772-1803), issued decrees favorable to such itinerant Jews; but in 1795 these were partially suspended. Gradually Jews again settled in Salzburg; and in 1813 the King of Bavaria, to whom the duchy had belonged since 1805, granted almost all the rights of citizenship to them. Afterward the Austrian government, which regained possession of Salzburg in 1816, revoked some of the privileges; but in 1867 it granted the Jews full citizenship.

The largest Jewish community of the duchy is that of the capital, Salzburg, where there is a new synagogue with all ritual conveniences. The community has not, however, an independent organization, but belongs to the community of Linz in Upper Austria.

SAMA B. RABBA: Babylonian amora; last head of the Pumbedita Academy. He was the successor of Raḥumai II., and officiated for about twenty years (456-476). He was a contemporary of Mar b. Ashi and of Rabba Tusfa'ah. Tradition relates that, in consequence of the prayers of the two school-leaders Mar b. Ashi and Sama b. Rabba, Yezdegerd II. was devoured in his bed by a dragon with the result that the persecution of the Jews ceased. Sama is mentioned three times in the Talmud (B. M. 42b; Zeb. 16a; Ḥul. 47b). Nothing else is known concerning him.

SAMA B. RAḲTA: Babylonian amora of the sixth generation. He was a contemporary of Rabina I., with whom he disputed concerning a halakah (Ḳid. 9a), and to whom he communicated a saying of Rab Awia (B. M. 10b, the correct reading in Rabbinowitz). He is probably identical with the R. Sama who with Rabina sat before R. Ashi (Men. 42a).

Bibliography: Heilprin, *Seder ha-Dorot*, ii. 297.

SAMAEL: Prince of the demons, and an important figure both in Talmudic and in post-Talmudic literature, where he appears as accuser, seducer, and destroyer. His name is etymologized as סם-אל = "the venom of God," since he is identical with the angel of death (Targ. Yer. to Gen. iii. 6; see also Death, Angel of), who slays men with a drop of poison ('Ab. Zarah 20b; Kohut, "Angelologie und Dämonologie," pp. 69, 71). It is possible, however, that the name is derived from that of the Syrian god Shemal (Bousset, "Religion," p. 242).

Samael is the "chief of Satans" (Deut. R. xi. 9; Jellinek, "B. H." i. 125), quite in the sense of "the prince of the devils" mentioned in Matt. ix. 34; but, on the other hand, he is "the great prince in heaven" (Pirḳe R. El. xiii., beginning), who rules over angels and powers (*ib.*; Martyrdom of Isaiah, ii. 2). As the incarnation of evil he is the celestial patron of the sinful empire of Rome, with which Edom and Esau are identified (Tan. on Gen. xxxii. 35; Jellinek, *l.c.* vi. 31, 109, etc.). He flies through the air like a bird (Targ. to Job xxviii. 7), and, while the ḥayyot and ofannim have only six wings, he has twelve, and commands a whole army of demons (Pirḳe R. El. xiii.). In so far as he is identified with the serpent ("J. Q. R." vi. 12), with carnal desire (Yeẓer ha-Ra'), and with the angel of death, all legends associated with Satan refer equally to him, while as a miscreant he is compared to Belial (בליעל = "worthless"; see collection of material in Bousset, "Antichrist," pp. 99-101).

All these descriptions of Samael show that he was regarded simply as the principle of evil that brought upon Israel and Judah every misfortune that befell them. Even at the creation of the world he was Lucifer, who ever sought evil and who began his malignant activity with Adam. His opponent is Michael, who represents the beneficent principle, and who frequently comes into conflict with him (comp. Jew. Encyc. viii. 536 *et seq.*; Lucken, "Michael," pp. 22 *et seq.*).

Samael in the History of Mankind.

The evil nature of Samael may be illustrated by a number of examples. He and his demonic host descended from heaven to seduce the first human pair (Pirḳe R. El. xiii., beginning; Yalḳ. Gen. i. 25), and for this purpose he planted the vine, the forbidden tree of paradise (Greek Apocalypse of Baruch, iv.). He was himself the serpent, whose form he merely assumed (*ib.* ix.; "J. Q. R." vi. 328), and was one of the leaders of the angels who married the daughters of men (Gen. vi. 1-4), thus being partially responsible for the fall of the angels (Enoch vi., in Kautzsch, "Apokryphen," ii. 238 *et seq.*; Lucken, *l.c.* p. 29). His former wife was Lilith (Jellinek, *l.c.* vi. 109). He endeavored to persuade Abraham not to offer up Isaac, and, failing in his purpose, he caused the death of Sarah by carrying the news of the sacrifice to her (Gen. R. lvi. 4; Sanh. 89a *et passim*; Pirḳe R. El. xxxii.). He wrestled with Jacob (Gen. R. lxxvii. and parallels), and also took part in the affair of Tamar (Soṭah 10b). He brought accusations against the Israelites when God was about to lead them out of Egypt (Ex. R. xxi. 7; Bacher, "Ag. Pal. Amor." i. 25, 473), and was jubilant at the death of Moses because the latter had brought the Torah (Deut. R. xi. 9; Jellinek, *l.c.* i. 12 *et passim*). Entering into King Manasseh, Samael caused the martyrdom of the prophet Isaiah (Martyrdom of Isaiah, i., in Kautzsch, *l.c.* ii. 124); and he considered himself victorious over Michael when God decided that the ten pious scholars during the reign of Hadrian must suffer death (Jellinek, *l.c.* ii. 66, iii. 87, vi. 31). On the Day of Atonement, however, Israel has no fear of him (Lev. R. xxi. 4).

In the Cabala.

In the quotations from the Slavonic Book of Enoch (vi.) Samael is represented as a prince of the demons and a magician. He is, therefore, frequently mentioned in the cabalistic writings of the Middle Ages, from which Eisenmenger compiled a rich collection of passages ("Entdecktes Judenthum," i. 826 *et seq.*), to which must be added those in Schwab's "Vocabulaire de l'Angélologie" (p. 199). As lord of the demons, Samael is regarded as a magic being, and must be considered in the preparation of amulets, although there is no agreement as to his power and activity. He presides over the second "teḳufah" (solstice) and the west wind of the fourth teḳufah, as well as the third day of the week ("Sefer Raziel," 6a, 40b, 41b; see also Schwab, *l.c.*). In Hebrew amulets Samael is represented as the angel of death ("Revue de Numismatique," 1892, pp. 246, 251). Eve is supposed to have become pregnant by him (Targ. Yer. to Gen. iv. 1); and the cabalists add many details to this legend (Eisenmenger, *l.c.* i. 832 *et seq.*). The spot in the moon is supposed to have been caused by the filth of Samael (Menahem of Recanati, p. 140, c. 2).

SAMARA (נהר אל סמרה): Babylonian river near which tradition has located Ezra's tomb. Many legends cluster round this sacred spot; and in former times both Jews and Mohammedans used to make pilgrimages thither for prayer and to procure relics. It was visited in the twelfth century (*c.* 1175) by Pethahiah of Regensburg and Benjamin of Tudela. According to the former, "there was a synagogue on one side of the tomb and a mosque on the other, both having been built by the Ishmaelites because of their great love for Ezra and, through him, for the Jews. But the keys to these places of worship were kept by the Jews, and by them were appropriated for divers charitable purposes of their own the various gifts collected there."

The best account of the manner of the discovery of the tomb is given by Al-Ḥarizi, who visited the Samara district about ten years after Pethahiah, and who identifies it with Ahawa (אהוא, mentioned by Ezra (viii. 15). According to him, a shepherd dreamed that in that neighborhood was the resting-place of a holy personage. After again dreaming about it several times he spoke of the matter to his friends and neighbors; and as a proof of the veracity of his statement he showed them that he could see with an eye which formerly had been blind. On digging at the place indicated an iron coffin was found on which were inscribed some unknown characters. These were interpreted by a Jew to mean "Ezra the priest's grave." So they carried the remains across the River Samara, and placed them there; and since then a light shines over them every night.

The population of the Samara district increased considerably after the twelfth century, and Al-Ḥarizi found there 1,500 Jewish families.

SAMARCAND: Town in Central Asia; chief town of the Zerafshan district of the Russian dominions. According to tradition, Samarcand was built by Emperor Kaikansu between 3000 and 4000 B.C. It was known as Maracanda in ancient times, was conquered by Alexander the Great in 329 B.C., and subsequently came under Chinese rule. In 675 C.E. it was taken by the Arabs, and in 1221 by Genghis Khan. In 1369 it was the residence of Tamarlane; in 1499 it passed under the rule of the Uzbegs; in 1784 under that of the Bokharian dynasty of Mangyt; and on May 2, 1868, it was annexed to Russia.

Jews were excluded from Samarcand when it was under Mohammedan rule, for the city was then regarded as sacred; but with its annexation to Russia, Samarcand became the favored refuge of the Bokhara Jews.

The Jews of Samarcand are almost all Orthodox. Prominent among them is Raphael Moses Kalendarov, who built the Samarcand synagogue at his own expense. In 1890 there were 30 Jewish pupils in the Russian native public school, in a total of 77. The entire Jewish population in that year was 2,500.

In 1897 there were two rabbis in the town, one for the Sephardic congregation, and one for the Ashkenazic congregation. The language commonly used by the community is Tajiki, akin to Persian. Only about 10 per cent of the local Jews know Hebrew, which was formerly taught in the one Talmud Torah existing in the town.

In 1897 Samarcand had a total population of 54,900, including about 3,000 Jews. At that time most of the Samarcand Jews were engaged in trade, chiefly that in silk. The poorer Jews, of whom there were not many, were engaged in dyeing silk, or as silversmiths, bookbinders, tailors, or carpenters. The distilleries formerly owned by Jews were ordered closed by the Russian government. There were among them no blacksmiths, copper-workers, musicians, or agriculturists. The Jews who owned gardens hired Sarts to cultivate them. While a few of the wealthy Jews engaged in usury, their rates were not as high as those of the non-Jewish usurers.

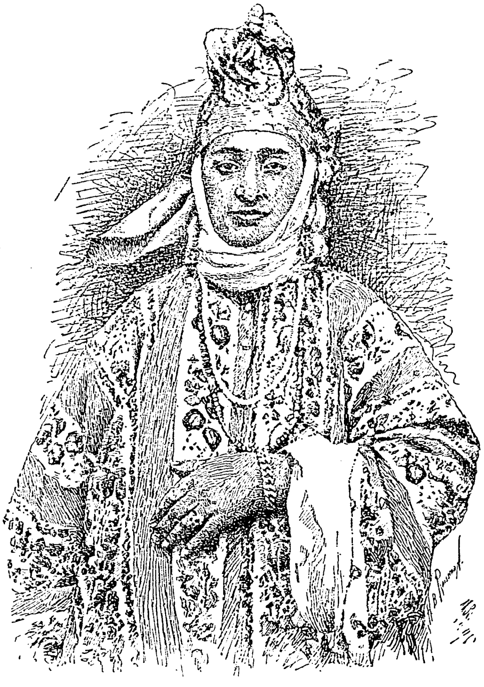
H. R. J. G. L.

SAMARIA (Hebrew, "Shomeron"; Aramaic, "Shamerayin," Ezra iv. 10, 17): City of Palestine; capital of the kingdom of Israel. It was built by Omri, in the seventh year of his reign, on the mountain Shomeron (Samaria); he had bought this mountain for two talents of silver from Shemer, after whom he named the city Shomeron (I Kings xvi. 23-24). The fact that the mountain was called Shomeron when Omri bought it leads one to think that the correctness of the foregoing passage is questionable. The real etymology of the name may be "watch mountain" (see Stade in his "Zeitschrift," v. 165 *et seq.*). In the earlier cuneiform inscriptions Samaria is designated under the name of "Bet Ḥumri" (= "the house of Omri"); but in those of Tiglath-pileser III. and later it is called Samirin, after its Aramaic name (comp. Rawlinson, "Historical Evidences," p. 321).

The Name.

The topography of Samaria is not indicated in the Bible; the mountains of Samaria are mentioned several times (Amos iii. 9; Jer. xxxi. 5; and elsewhere) and "the field of Samaria" once (Ob. 19). Through recent investigations it has become known that the mountain of Samaria is one situated in a basin surrounded by hills, six miles from Shechem, and almost on the edge of the maritime plain. Owing to its fertility, which is alluded to in Isa. xxviii. 1, Omri selected it as the site of his residence; and it continued to be the capital of the kingdom of the Ten Tribes for a space of two centuries, till it was destroyed by the Assyrian king (I Kings xvi. 29 *et passim*; II Kings i. 3, iii. 1, *et passim*). Isaiah called Samaria "the head of Ephraim" (Isa. vii. 9), and Ezekiel speaks of "Samaria and her daughters" (Ezek. xvi. 53). That the city was strongly fortified is evident from the fruitless sieges which it sustained (see below; comp. Josephus, "Ant." viii. 14, § 1). Ahab built there a temple for Baal with an altar for the cult of that divinity (I Kings xvi. 32); and perhaps the ivory palace (*ib.* xxii. 39) was also at or near Samaria. The king's palace was independently fortified (II Kings xv. 25), and it had a roof-chamber (*ib.* i. 2). The city gate of Samaria is often mentioned (I Kings xxii. 10; II Kings vii. 1, 18, 20; II Chron. xviii. 9); and there is a single reference to "the pool of Samaria" (I Kings xxii. 38). Still during the lifetime of Omri, Samaria was required by the father of Ben-hadad to lay out streets for the Syrians (I Kings xx. 34); but it is not stated whether Samaria was directly besieged by the Syrian king or whether Omri, being defeated in one of his battles, was obliged to make concessions in Samaria (see Omri). Samaria successfully sustained two sieges by the Syrians under Ben-hadad, the first of which was in the time of Ahab (901 B.C.; I Kings xx. 1 *et seq.*), and the second, nine years later, in the time of Joram, Ahab's son (II Kings vi. 24–vii. 7). In the first siege Samaria was afflicted by a famine caused by drought (I Kings xviii. 2), but more terrible was the famine caused by the second siege, when women ate their children and an ass's head was sold for eighty pieces of silver (II Kings vi. 25 *et seq.*). The miraculous rout of the Syrian army caused an extraordinary cheapness of provisions in Samaria (*ib.* vii. 16).



Jewess of Samarcand.
(From a photograph.)

Under Ahab.

Other notable events took place in Samaria: it was there that Ahab met Jehoshaphat, both of whom sat in the entrance of the gate to hear the prophecy of Micaiah (I Kings xxii. 10; II Chron. xviii. 2, 9). The seventy sons of Ahab were brought up in Samaria, and were slain there by command of Jehu, who destroyed "all that remained of the house of Ahab," as well as the temple of Baal (II Kings x. 1–27). According to II Chron. xxii. 9, Ahaziah, King of Judah, was killed at Samaria (comp. II Kings ix. 27). Joash, after having captured Jerusalem, brought to Samaria all the gold, silver, and vessels of the Temple and of the king's palace (*ib.* xiv. 14; II Chron. xxiv. 25). Pekah returned to Samaria with the spoils and a great number of captives of Judah, who were well treated in Samaria and afterward released (II Chron. xxviii. 8–9, 15).

In the seventh year of Hoshea, Samaria was besieged by Shalmaneser. Three years later it was captured by an Assyrian king (II Kings xvii. 5–6, xviii. 9–10) whose name is not mentioned; and although Josephus ("Ant." ix. 14, § 1) states that it was Shalmaneser, the Assyrian cuneiform inscriptions show that it was Sargon who ascended the throne in 722 B.C., and captured Samaria in the following year. The city, however, was not destroyed (comp. Jer. xli. 5). Two years later it made an alliance with Hamath, Arpad, and Damascus against the Assyrians, which failed through the overthrow of the King of Hamath (inscriptions of Sargon). The deported Israelites of Samaria as well as those of its dependencies were replaced by heathen from different countries, sent thither by the Assyrian king. The new settlers established there a mixed cult of Jahvism and heathenism (II Kings xvii. 24–41). According to the Jewish theory they were the founders of the Samaritan religion and the ancestors of the Samaritans. From the time of its foundation to its fall the city was a place of idolatry, not one of its kings being a worshiper of Yhwh. It was violently denounced by Amos (viii. 14), Isaiah (vii. 1, *passim*), Micah (i. 6), and other prophets, who also foretold the punishment of the city.

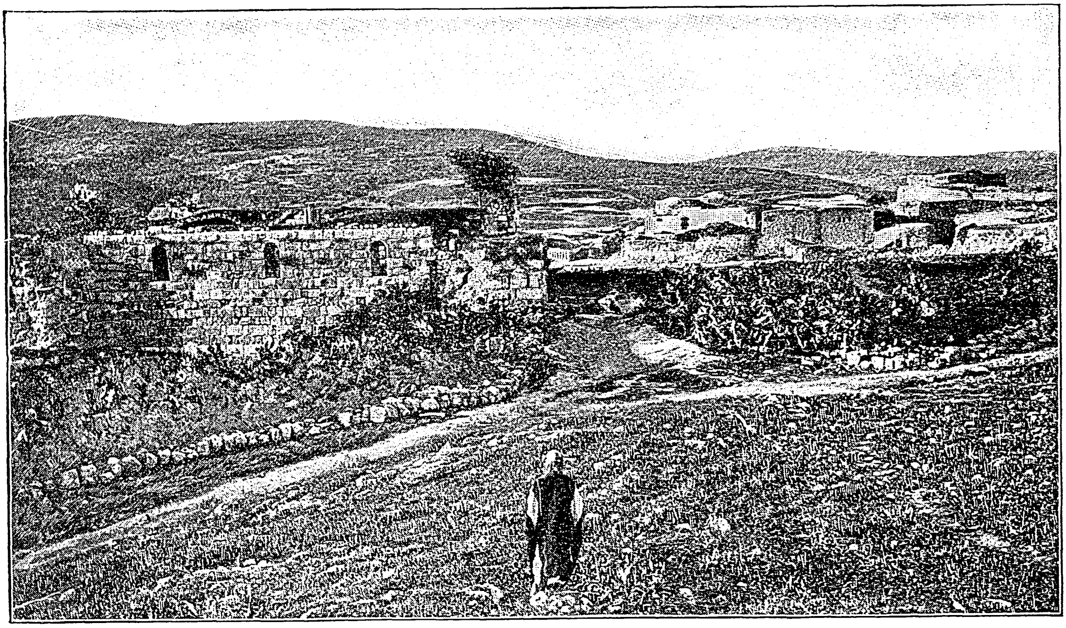
Dismantled and Destroyed.

Samaria emerges again into history four centuries after its capture by the Assyrians. The Samaritans, having assassinated Andromachus, governor of Cœle-Syria (332 or 331 B.C.), were severely punished by Alexander the Great, who colonized the city with Macedonians (331; Eusebius, "Chronicon," ed. Schoene, ii. 114). It appears also from Eusebius (*ib.* ii. 118) that a few years later, by command of Alexander, Samaria was rebuilt by Perdiccas. In 312 the city, which was still well fortified, was dismantled by Ptolemy, son of Lagus, and fifteen years later (*c.* 296) it was again destroyed, by Demetrius Poliorcetes (Eusebius, *l.c.*). Almost two centuries elapsed during which nothing is heard of Samaria; but it is quite evident that the city was rebuilt and strongly fortified, for at the end of the second century B.C. John Hyrcanus besieged it a whole year before he captured and destroyed it, by diverting certain streams, which flooded the lower part of the city (Josephus, *l.c.* xiii. 10, §§ 2–3; *idem*, "B. J." i. 2, § 7). The year of the conquest of Samaria is not clearly indicated. In Megillat Ta'anit it is stated that the city was captured on the 25th of Marheshwan (= November), and other circumstances connected with the siege indicate that it was taken shortly before 107 B.C.

Samaria, or its ruins, was in the possession of Alexander Jannæus ("Ant." xiii. 15, § 4), and was afterward taken by Pompey, who rebuilt it and attached it to the government of Syria (*ib.* xiv. 4, § 4; "B. J." i. 7, § 7). The city was further strength-

Rebuilt by Herod.

ened by Gabinius, on account of which the inhabitants are also called Γαβινιεῖς ("Ant." xiv. 5, § 3; "B. J." i. 8, § 4; Cedrenus, ed. Bekker, i. 323). Augustus gave it to Herod the Great, under whom it flourished anew; for he rebuilt it in 27 or 25 B.C. on a much larger scale—twenty stadia in circumference—and embellished it with magnificent edifices, particularly with the Temple of Augustus. Under Herod (whose wife was Mariamne) the city became the capital of the whole district, which also was called Samaria, the city itself being known as Sebaste, as is shown by the coins bearing the inscription Σεβαστηνῶν; this name is the Greek equivalent of the Latin "Augusta," the city being named in honor of Augustus Cæsar ("Ant." xv. 7, § 3; 8, § 5; "B. J." i. 8, § 4; 21, § 2; Strabo, xvi. 760). Sebaste is mentioned in the Mishnah ('Ar. iii. 2), where its orchards are praised. Josephus ("B. J." ii. 3, § 4; 4, §§ 2–3) speaks of soldiers of Sebaste who served in Herod's army and who later sided with the Romans against the Jews. After Herod's death Sebaste with the whole province of Samaria fell to the lot of Archelaus, after whose banishment it passed under the control of Roman procurators. Then it went over to Agrippa I., and again came under Roman procurators ("Ant." xvii. 11, § 4; "B. J." ii. 6, § 3). At the outbreak of the Jewish war it was attacked by the Jews ("B. J." ii. 18, § 1). Under Septimius Severus it became a Roman colony, but with the growth of Nablus or Shechem it lost its importance.



VIEW OF SAMARIA FROM THE SOUTHEAST.
(From a photograph.)

In the fourth century Sebaste was a small town (Eusebius, "Onomasticon," *s.v.*). Jerome (Commentary on Obadiah) records the tradition that Samaria was the burial-place of Elisha, Obadiah, and John the Baptist. Benjamin of Tudela, however, does not relate that these tombs were shown to him; he states only ("Itinerary," ed. Asher, i. 32) that traces of Ahab's palace were still visible, and that he found no Jews in the place (comp. *ib.*, Asher's notes, ii. 83). On the site of the ancient Sebaste now stands the small village of Sabasṭiyah, where traces of ancient edifices are still to be seen.

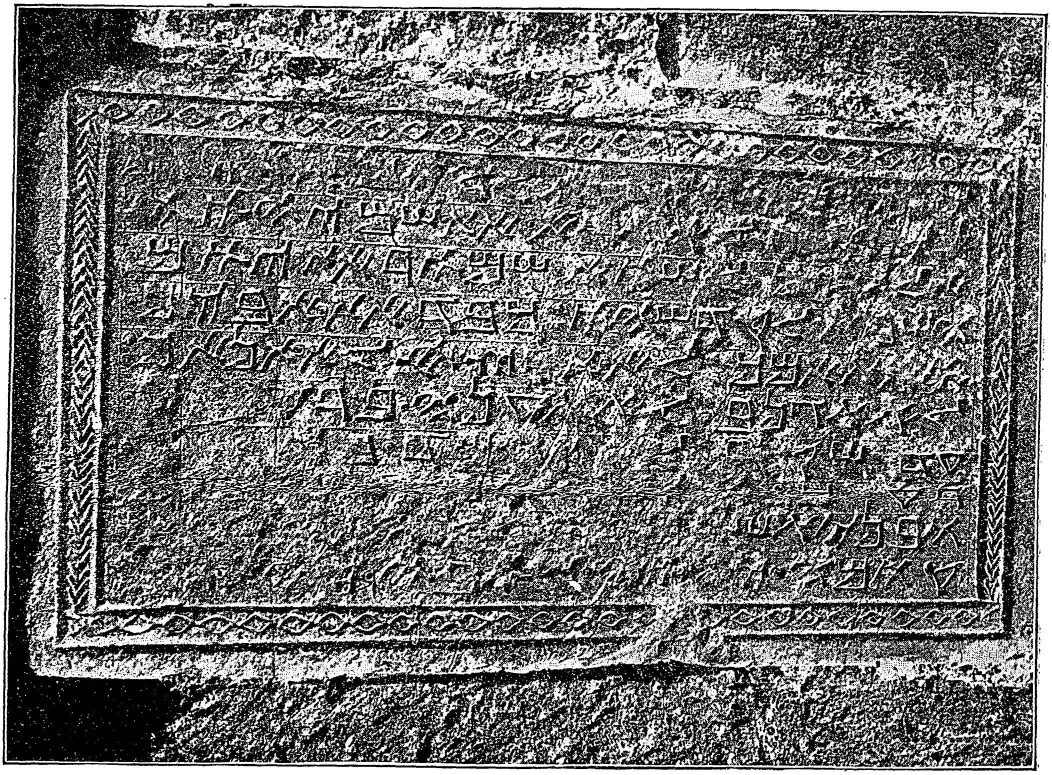
J. M. SEL.

SAMARITANS (Hebrew, שמרונים): Properly, inhabitants of SAMARIA. The name is now restricted to a small tribe of people living in Nablus (Shechem) and calling themselves "Bene Yisrael," or sometimes שמרים. Their history as a distinct community begins with the taking of Samaria by the Assyrians in 722 B.C.

——**Biblical Data:** On the separation of Israel and Judah, the ancient city of SHECHEM, which had been from the first so intimately connected with the history of Israel, became naturally the religious center of the Northern Kingdom. The political capital, however, was transferred by Omri to his newly built city of SAMARIA about 883 B.C., and the Israelitish kingdom continued to exist there until it fell before Assyria. In the fourth year of Hezekiah "Shalmaneser, King of Assyria, came up against Samaria, and besieged it. And at the end of three years they took it" (II Kings xviii. 9). The inhabitants were deported to various parts of Assyria and to "the cities of the Medes"; and colonists were sent to take their place. The colonists were soon after troubled by lions, which they regarded as a divine visitation due to their ignorance of the "manner of the god of the land." At their request an Israelitish priest was sent to them, who settled at Beth-el (*ib.* xvii. 28), with the result that a mixed form of religion was established, partly Israelitish and partly idolatrous.

The next reference to the people of Samaria, regarded as the remnant of Israel, is when Josiah suppressed the high places among them (*ib.* xxiii. 15, 19 *et seq.*) and collected money to repair the house of the Lord, from "Manasseh and Ephraim, and of all the remnant of Israel" (II Chron. xxxiv. 9). That the Israelitish element still held its own in the north, is shown by the incidental mention "That there came certain from Shechem, from Shiloh, and from Samaria," in the time of Jeremiah, desiring to join in the offerings at the Temple (Jer. xli. 5). Later on (and this is the last mention of the Samaritans in the Old Testament), their claim to a participation in the building of the Temple was rejected by Zerubbabel (Ezra iv. 3), no doubt on the ground of their mixed origin.

——**Critical View:** From a comprehensive view of the history of the period it is clear that several causes must have contributed to foster the revolt which ended so disastrously for Samaria. Tiglath-pileser III. (Pul) had died in 727 B.C., and it may well have been supposed that his successor, Shalmaneser IV., would find difficulties enough to occupy his attention elsewhere. Egypt had the best of reasons for encouraging rebellion in Syria as one means of checking the dangerously near approach of Assyria. The inhabitants of Samaria probably believed their city to be impregnable; but Assyria could not tolerate such an attack on her prestige. No sooner was Shalmaneser established on the throne than he must have started on a punitive expedition to Syria, and the fate of Samaria was sealed. He began the siege apparently in person, but did not live to see its inevitable result; for he died in 723. The city actually fell in the reign of his successor, Sargon (722), who, according to his own account, carried away 27,290 of the people. It is not to be supposed, however, that the country was in any sense depopulated by this means, though the persons removed were undoubtedly the more prominent and dangerous of the inhabitants, the rich, the priests, and the ruling class. But even such drastic measures did not entirely break the spirit of rebellion; for in 720 Syria had again united against the common enemy, and a fresh campaign became necessary. With this the political existence of Samaria ceased.



ANCIENT SAMARITAN INSCRIPTION.
(From a photograph by the Palestine Exploration Fund.)

From II Kings xvii., taken in conjunction with the Assyrian account, it appears that Sargon transplanted to Samaria colonists from various cities of Babylonia, probably as a precautionary measure. In Ezra iv. 2 the importation is ascribed to Esar-haddon, and in verse 10 of the same chapter to Osnappar (A. V. Asnapper). The latter of these names, being one not otherwise known either in the Biblical or in the Assyrian records, is probably a popular corruption. In the Assyrian accounts Sargon, as mentioned above, and Assurbanipal (669–625) are the kings who declare that they sent settlers into Samaria. Of course Esar-haddon may have done the same. The views now generally held are (1) that "Osnappar" is a corruption of "Esar-haddon," or (2) that "Osnappar" is a corruption of "Assurbanipal," or (3) that "Osnappar" and "Esar-haddon" are both corruptions of "Assurbanipal." The first is perhaps the simplest; according to it there were three importations of foreigners: (1) by Sargon; (2) by Esar-haddon, of which no record has yet been found on the Assyrian monuments; and (3) by Assurbanipal. The population, therefore, which then occupied the site of the defunct kingdom of Israel, and which was thenceforth properly called Samaritan, consisted of a substratum (probably a strong one) of Israelites, chiefly the poorer sort, with an unknown proportion of aliens, under an Assyrian governor. It was only natural that a population so constituted, and deprived of its priestly caste, should find itself ignorant of "the manner of the god of the land," and should ask for the services of a priest.

Under Persian Rule.

The Samaritans now disappear from the Old Testament and from the Assyrian accounts; and for the next stage in their career historians are dependent on Josephus. The empire of the world passed from Assyria to the Persians under Cyrus, and Samaria was governed by a Persian satrap. The rejection of Samaritan cooperation, as mentioned in Ezra iv. 3, and their consequent attempt to prevent the building of the Temple by an appeal to Xerxes, rendered a reunion with Judah clearly impossible. On the other hand, Samaria became the natural and conveniently placed refuge for all who were dissatisfied with the stringent reforms taking place in Jerusalem. The most important of these malcontents was the priest Manasseh; but Josephus' account of his secession is full of difficulty. His statement being considered in connection with what is known from Nehemiah to have been the condition of things at Jerusalem, the facts seem to be as follows: The governor of Samaria under Darius (probably Nothus, not Codomannus as Josephus says) was Sanballat, whose daughter was married to Manasseh, the son of the high priest at Jerusalem. In consequence of his foreign marriage Manasseh was expelled by Nehemiah, and was invited by his father-in-law to settle in Samaria. If this be the case mentioned in Neh. xiii. 28, the event would seem to have taken place about 430. Manasseh's advent no doubt had the effect of fixing the Israelitish character of the Samaritan religion, and that too on the basis of the religion of Israel as it existed before the reforms of Ezra. There seems to be no ground for believing in any admixture of heathen practises after this time. At any rate, a century later, in 332, by permission of Alexander, a temple was built on the holy hill of Gerizim, near Shechem, which thus became, if it had not formerly been so, the "ḳiblah" of Samaritan worship. Josephus, indeed, connects the building of the temple with the secession of Manasseh, putting both in the time of Alexander; but, unless Nehemiah's date be put 100 years later, the historian must have been, intentionally or otherwise, in error. It is most unlikely that there were two Sanballats whose daughters married sons (or a son and a brother) of high priests, and that these sons were expelled from Jerusalem at dates just 100 years apart. But it is conceivable that Josephus meant to discredit Samaritan pretensions by connecting the temple with Manasseh as a bribe for his apostasy.

Temple at Gerizim.

The temple existed for about 200 years, when it was destroyed, and soon afterward Samaria was occupied by John Hyrcanus, no doubt in revenge for its opposition to Judah in the time of Antiochus Epiphanes. The bitterness of feeling about this period is shown by the sentence in Ben Sira l. 25 *et seq.* (*c.* 200 B.C.), בשני גוים קצה נפשי . . . וגוי נבל הדר בשכם ("Two nations my soul abhorreth; and the third is no people: the inhabitants of Seir and Philistia and the foolish nation that dwelleth in Shechem"), and by the epithet, perhaps derived from this, in the Testaments of the Patriarchs, *Σικὴμ λεγομένη πόλις ἀσυνέτων.* The same contempt is exhibited later; for instance, in the story, which first appears in the Book of Jubilees, and afterward in the Midrash, that Mt. Gerizim was considered sacred by the Samaritans because the idols of Laban were buried there; and in the Gospels, *e.g.*, John viii. 48: "Thou art a Samaritan and hast a devil." The animosity was reciprocated, as may be seen from some well-known stories, such as that the Samaritans used to light beacon-fires in order to deceive the Jews as to the appearance of the new moon (R. H. ii. 2), and from several incidents mentioned in the Gospels. Such being the state of feeling, it is not surprising to find the Samaritans in the time of Herod, and earlier, generally siding with the enemies of the Jews. They had their reward when the country passed into the hands of the Romans. Samaria was rebuilt and embellished by Herod (whose wife Mariamne was a Samaritan) and was named by him Sebaste (see SAMARIA). Under Vespasian a revolt was put down with great severity, and the city of Shechem was occupied by the Romans, who called it Flavia Neapolis, whence the modern name of Nablus.

Temple Rebuilt by the Romans.

After the suppression of Bar Kokba's rebellion, the temple on Mt. Gerizim was rebuilt by the Romans in return for help received from the Samaritans. In the reign of Commodus misfortune again befell this people; but during the next hundred years, although their chronicles describe their condition as miserable, it seems that their fortunes must have somewhat improved. At any rate, early in the fourth century of the common era Baba "the Great," who was the eldest son of the high priest Nathanael, established a position as head of the community, and seems to have enjoyed a certain amount of power, which he used for the benefit of his people. He is said to have reopened the local synagogues (no mention is made of the temple, which seems to have been still in existence) and to have restored the services. He died in 362 at Constantinople. But such prosperity as may have been enjoyed under his rule, did not last long. In the fifth century various restrictions were put upon the Samaritans by the Romans, and in 484, in consequence of outbreaks against the Christians, their temple was again, and finally, destroyed. In 529, for similar reasons, their political existence was practically extinguished by Justinian. Henceforward, as their numbers and importance decreased, their external history is simply that of the rest of Syria. Internally there is little to relate except the succession of priests and the development of the literature.

In the fourteenth century occurred what may almost be called a literary renascence, due to the initiative of the high priest Phinehas b. Joseph, who held office from 1309 to 1363 and who was evidently a man of high character and strong influence. The movement, however, was purely local, producing no effect outside the community. In 1623(4) the last member of the high-priestly family, which claimed descent from the eldest son of Aaron, died. The office then devolved upon the junior branch, descended from Uzziel, the son of Kohath. Since that date the priest has called himself "ha-kohen ha-Lewi," instead of "ha-kohen ha-gadol" as previously.

Group of Samaritans.

(From a photograph by the Palestine Exploration Fund.)

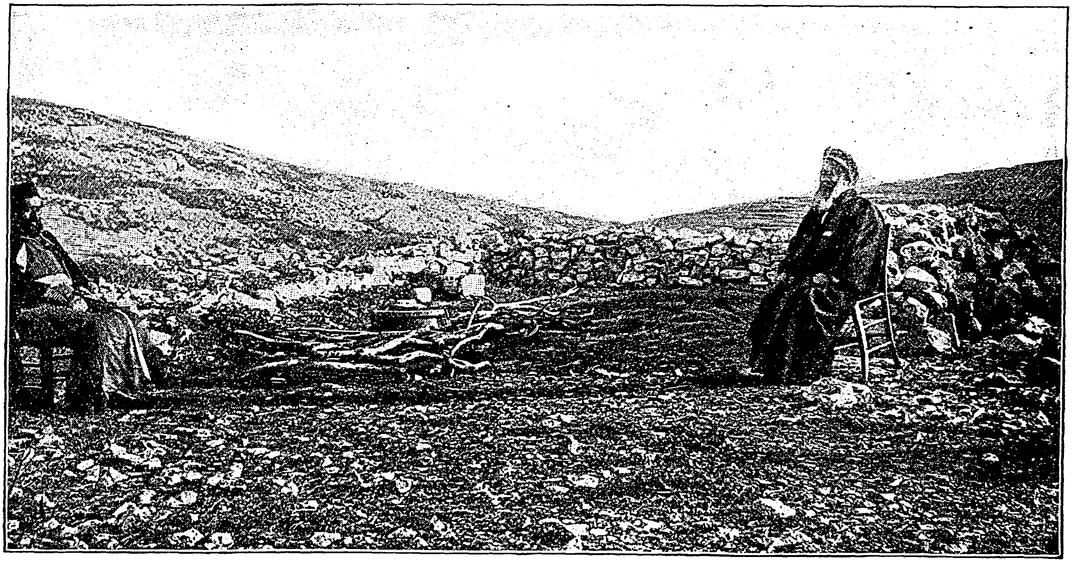
Samaritan Colonies.

Until the sixteenth century, and possibly later, Samaritan colonies existed in Damascus, Gaza, Cairo (see Egypt), and elsewhere. They are mentioned by Benjamin of Tudela, Obadiah di Bertinoro, and other travelers. In 1538 the high priest Phinehas b. Eleazar migrated from Damascus to Nablus, which may mean that the Damascus settlement had been reduced almost to extinction. The only remains of the race at present (1905) are a community of about 150 persons living at Nablus. They are of course under the Turkish governor of the town; but ecclesiastical jurisdiction is exercised over them by the Levite priest assisted by a subordinate priest ("shammash"), who is generally the successor to the higher office. At the present time the priest is Jacob b. Aaron, and the second priest is his cousin Isaac b. Amram.

——**Religion:** From the fifth century B.C. onward the relations between the Jews and the Samaritans were, as shown above, undoubtedly hostile. The opposition was, however, essentially political, the old rivalry between Israel and Judah persisting; personal relations must have been mutually tolerant, as appears from the Gospels, where, in spite of their contemptuous attitude, the disciples buy food in a Samaritan city (John iv. 8). Later on, when misfortune befell Jerusalem, when the Temple was destroyed, and the temporal hopes of Judah were shattered, political opposition ceased to have any reason for existence.

Relations Between Jews and Samaritans.

In the Mishnah it is evident that the differences have already become purely religious. The grounds for them are clear. If Manasseh, about 430, had brought with him from Jerusalem not only the Torah, but the system of belief and practise recognized there, that system must have been what is sometimes called Sadducean, or, more correctly, the old Israelitish creed as it was before the reforms of Ezra. At this point the religious development of the Samaritans was arrested. They adhered rigidly to the Torah, never admitted any of the prophetical teachings, never codified their canon law into a mishnah, and never developed their halakah to meet the necessities of altered conditions. It is therefore natural that while some of the Rabbis regarded them as "gere arayot," others, seeing their careful observance of the common Torah, considered them to be "gere emet." A few passages only can be quoted here. In Ber. vii. 1 it is laid down that a "kuti" can be counted as one of the three necessary at "birkat ha-mazon," while a "nokri" can not, and the reason given is that "a commandment which the Samaritans follow they observe much more scrupulously than do the Jews." According to Rabba, this was so whether a Samaritan was a "ḥaber" or an "'am ha-areẓ" (similarly in Dem. iii. 4; comp. the interesting passage in Sheb. viii. 10; Pirḳe R. El. xxxviii., end).



Samaritan Place of Sacrifice.
(From a photograph by the Palestine Exploration Fund.)

Talmudic Attitude.

The orthodoxy of the Samaritans is praised in similar terms with regard to their strictness in observing the commandments (Ḥul. 4a) and the rules relating to "sheḥitah" (*ib.*), "niddah" (Niddah 56b *et seq.*), contact with the dead (*ib.*), and purification. According to their own account in letters to Scaliger, Huntington, and others, they never postpone circumcision, even if the eighth day be a Sabbath; they allow no fire on the Sabbath; they recognize no system of "teḥum"; they force even children to observe the Yom Kippur fast; they make their "sukkot" of the trees mentioned in Lev. xxiii. 40, and do not follow the Jewish customs with regard to the lulab and etrog. On the other hand, they were considered lax in observing the law of the levirate and of marriage generally, so that marriage with them was forbidden (Ḳid. 76a).

This unfavorable view of them seems to have prevailed toward the end of R. Meïr's life and to have then become traditional. In the tractate Kutim the general principle is that they are to be trusted in so far as their own practise agrees with that of the Jews: in other respects they count as non-Jews. In several of the points mentioned their practise approximates that of the Karaites. The agreement, which has often been noted, is due rather to similarity of cause than to direct influence of either system on the other. The one is a continuation of the old Israelitish religion; the other, a return to it. Both are consequent on a literal interpretation of the Law; and both, therefore, reject all traditional developments.

Of the sects mentioned (by Epiphanius, the Fathers, Mas'udi, Judah Hadassi, and others) as existing among the Samaritans, nothing is known with certainty, though there is no reason to doubt that such divisions did exist. The Dositheans are the best attested. The chronicler Abu al-Fatḥ says that they arose after the Exile and had Judaizing tendencies. According to some Jewish authorities (*e.g.*, Pirḳe R. El. *l.c.*), Dustai was one of the (two) priests sent to them from Assyria (II Kings xvii. 27). The Dositheans can hardly have had anything to do with the early liturgical pieces for Sabbaths ascribed to Al-Dustan (see Dositheus).

Dogmas.

With regard to Samaritan dogma, it is only recently that any certain information has been available. The tractate Kutim sums up its charges against the Samaritans in their veneration of Mt. Gerizim as against Jerusalem, and their disbelief in the resurrection of the dead. The Christian Fathers (perhaps confusing them with the Sadducees) accuse them of disbelief in angels and in the immortality of the soul. Their earliest liturgies especially determine the amount of truth in these charges. The essential articles of faith refer to: (1) The unity of God; לית אלה אלא אחד is the constant refrain of their liturgy. Consequent on this is the careful avoidance of anthropomorphic expressions, which has often been pointed out in the Targum. God created without hands; He rested, but not from weariness. He made man in the image of the angels; and it was an angel who delivered the Law on Sinai. Prayers are offered to Him through the merits (בעמל) of the Patriarchs and Moses. (2) Moses as the only prophet. None can arise like unto Moses, according to Deut. xxxiv. 10 (where the Targum reads יקום for קם); hence they reject all the Jewish books except the Pentateuch. The Law which he gave is perfect, having been created before the world and brought forth by the hand of God from the depth of the very good. (3) Mt. Gerizim, which is the House of God, the place in which He chose to put His name. On it the twelve stones (Deut. xxvii. 4) are still shown; there the temple was erected; and there in the last days will the Shekinah reappear.

Samaritans at Prayer.

(From a photograph by the Palestine Exploration Fund.)

The "Taheb."

(4) The Messiah doctrine, which, though of less importance, is clearly defined. The term used is התהב (תהבה), which has been variously explained as "the restorer" or "he who returns." During all the time that has elapsed since the schism of Eli and the disappearance of the Tabernacle, the world (*i.e.*, Israel) has been suffering under the divine displeasure. This is called the period of פנותה. It will be terminated by the coming of the "Taheb," who will restore the period of favor (רחותה), establish the true religion, and destroy the followers of Ezra. He will live 110 years on earth, and then die. (5) The resurrection, which will take place after the death of the Taheb, and will be accompanied by the final judgment, יום נקם יום גדול, when the righteous will go into the garden of Eden, and the wicked be burned with fire. The Samaritans dwell at length on this doctrine in the funeral service. Some kind of forgiveness seems, however, to be possible after death for the faithful who die in their sins; for prayers are offered on their behalf.

Although the views sketched here do not differ fundamentally from Jewish beliefs, the details, or rather the restrictions, are no doubt due to that old Israelitish point of view which the Samaritans never really abandoned. The later developments, however, and even the terminology are often due to Moslem influence. Nor is this surprising in a people living among and entirely overshadowed by Mohammedans, speaking their language and in daily contact with them. At the present day, however, Samaritan learning and thought have practically ceased to exist. The venerable but unhappy remnant seems wholly occupied with the material problems of a struggle for existence, which can hardly be long continued.

Q. R.* vii. 121, viii. 562; Reland, *De Samaritanis*, 1707.

E. C. A. Co.

——**Anthropology:** The number of the once-numerous sect of the Samaritans has been gradually dwindling, until in Feb., 1901, the distribution of the total population was as represented in the following table:

Number of males 15 or more years of age	72
Number of females 12 or more years of age	44
Number of males under 15 years of age	25
Number of females under 12 years of age	11
Total number of males	97
Total number of females	55
Total number of both sexes	152

Most noticeable is the great preponderance of males over females; indeed, this is one of the most serious problems confronting the Samaritans at the present time. Trustworthy evidence points to the fact that in modern times there has been but little if any intermarrying with the other peoples of Syria.

Preponderance of Males.

The Samaritans themselves claim the perfect purity of their stock. Only as a last resort would they seek wives outside their own sect; and in this case they would naturally wish to marry among the people of the most closely allied religion, the Jewish. The Jews hate and despise the Samaritans with the greatest bitterness, and would do all in their power to prevent marriages between the two sects. Syrian Christians and Moslems would be equally averse to intermarrying with the Samaritans, both on account of their natural antipathy to this sect, and on account of the hardships which women must endure according to the rules of the Samaritan religion. These two factors, the natural inclination of the Samaritans to marry strictly among themselves, and the difficulty of forming marriages with other sects of Syria, would combine to preserve the purity of the stock, and at the same time to promote degeneracy by close interbreeding.

The statistics given in this article are based on measurements and other observations made on a series of forty-three male Samaritans. As eight of the individuals examined were less than twenty years of age, the averages have been made from the measurements of only thirty-five of the men.

	Average.	Maximum.	Minimum.
	mm.	mm.	mm.
Height, standing	1,730.	1.840.	1,630.
Length of head	188.	201.	172.
Breadth of head	147.	157.	137.
Cephalic index	*78.1*	*87.8*	*71.5*
Height of head (projection from tragus to vertex)	140.	158.	131.
Index of height of head	*74.7*	*80.4*	*68.7*
Height of face (nasion–mentum)	125.	140.	107.
Height of face (nasion–mouth)	79.	90.	71.
Breadth of face	132.	147.	123.
Facial index	*94.4*	*106.2*	*80.5*
Upper facial index	*59.7*	*69.8*	*51.7*
Interocular breadth	30.	34.	26.
Minimum frontal breadth	103.	116.	97.
Fronto-zygomatic index	*78.3*	*83.7*	*74.1*
Length of nose	55.	63.	47.
Breadth of nose	37.	42.	30.
Nasal index	*66.4*	*82.0*	*52.5*
Breadth of mouth	52.	61.	46.
Thickness of lips	17.	28.	11.
Length of right ear	65.	75.	53.
Length of second finger	103.	114.	96.
Breadth of hand	84.	92.	78.
	kilos.	kilos.	kilos.
Strength of right hand	33.7	62.	18.
Strength of left hand	30.2	57.5	16.

Tallest People in Syria.

These measurements, when compared with those of other races of Syria, prove to be most noteworthy. For example, the Samaritans are the tallest people in Syria. The Nuṣairiyyah of northern Syria, whose average height was found to be 1,704 mm., came second. Both the facial and upper facial indexes of the Samaritans are far greater than those of any other group; in the case of the former index, this sect is again most closely approached by the Nuṣairiyyah, with an average index of 89.7; of the latter index, by the Turkomans, with an average index of 55.5. In breadth of mouth the Samaritans occupy a midway position; but in thickness of lips they again head the list. The Syrian Gipsies, with an average thickness of 16, are second, and the Bedouins, with 15, are third. The length of second finger is greatest in the Samaritans. Next come the Nuṣairiyyah and Turkomans, each having an average of 102. But, while the Samaritans have a breadth of hand of only 84, the Nuṣairiyyah have 86 and the Turkomans 87. A long, thin hand is thus one of the Samaritan characteristics.

In view of the close interbreeding and possible degeneracy of the Samaritans, the strength of hands forms a most interesting basis of comparison. The Samaritans, in the strength of each hand, are the weakest of any of the groups examined. Next come the Turkomans, with 35.9 for the right hand and 35.7 for the left. The Druses, with 43.0 for the right hand and 41.3 for the left, are the strongest. The strength tests were made with the ordinary type of hand dynamometer.

The following is a seriation of the cephalic index:

Cephalic Index.	Cases.	Per cent.	Cephalic Index.	Cases.	Per cent.
71	1	2.9	80	2	5.8
72	2	5.8	81	1	2.9
73	2	5.8	82	3	8.5
74	3	8.5	83	3	8.5
75	1	2.9	84	1	2.9
76	3	8.5	85	..	....
77	2	5.8	86	..	....
78	5	14.3	87	..	....
79	5	14.3	88	1	2.9

Measurements of a series of 14 male and 5 female Samaritan crania showed an average cranial index of 76.5 for the males and of 78.0 for the females. Adding 1.5 to make the cranial index comparable with the cephalic index, 78.0 is given as the average for the males and 79.5 for the females. The close agreement between the average cephalic index, 78.1, and the corrected cranial indexes, gives added value to these results. There is a marked difference between the cephalic index of the Samaritans and that of the modern Jews, stated by Fishberg as 82, which is the result of observations on 1,071 individuals.

The pigmentation of the Samaritans, as indicated by the color of the hair and eyes, is shown in the following tables:

Hair.

Color.	Hair.		Beard.	
	Cases.	Per cent.	Cases.	Per cent.
Black	10	23.3	3	9.4
Dark brown	19	44.2	4	12.5
Brown	10	23.3	8	25.0
Chestnut	..	....	5	15.6
Blond	1	2.3	5	15.6
Red	..	....	2	6.2
Gray	3	7.0	5	15.6

Eyes.

Color.	Cases.	Per cent.	Color.	Cases.	Per cent.
Dark brown..	14	32.6	Gray........	4	9.3
Brown.......	15	34.9	Blue.........	7	16.2
Hazel........	3	7.0	Totals.....	43	100.0

Include a Blond Type.

These tables make it clear that the Samaritans are by no means an exclusively brunette type. As seen by the presence of blue eyes and light hair or beards in a considerable percentage of the individuals examined, there is, on the contrary, a distinct blond type noticeable in the group.

The general type of physiognomy of the Samaritans is distinctly Jewish, the nose markedly so. Von Luschan derives the Jews from "the Hittites, the Aryan Amorites, and the Semitic nomads." The Samaritans may be traced to the same origin. The Amorites were "men of great stature"; and to them Von Luschan traces the blonds of the modern Jews. With still greater certainty the tall stature and the presence of a blond type among the Samaritans may be referred to the same source.

The cephalic index, much lower than that of the modern Jews, may be accounted for by a former direct influence of the Semitic nomads, now represented by the Bedouins, whose cephalic index, according to measurements of 114 males, is 76.3. The Samaritans have thus preserved the ancient type in its purity; and they are to-day the sole, though degenerate, representatives of the ancient Hebrews.

J. H. M. H.

——**Literature:** The Samaritan language proper is a Palestinian Aramaic dialect, differing only slightly from the other dialects of Aramaic spoken in Syria, but preserving an archaic script. The confusion, or rather neglect, of the gutturals in pronunciation may be compared with a similar peculiarity of the Galilean dialect. The language must be studied in connection especially with that of the Jerusalem Talmud and the remains of Christian Palestinian Syriac. After the Arab conquest of Syria (632) the Samaritan vernacular gradually gave way to Arabic, and probably by the eleventh century, if not earlier, it was no longer popularly understood. From that time the literature is either in Arabic or, chiefly for liturgical purposes, in Hebrew, which becomes more and more corrupt as time goes on.

Samaritan Version of the Pentateuch.

Acquaintance with the literature began in 1616, when the well-known traveler Pietro della Valle brought from Damascus a copy of the Hebrew Pentateuch in the Samaritan recension. Since then many copies have come to Europe and America. The text, edited by Morinus from Pietro's manuscript, was published in Le Jay's Polyglot in 1645, and again in Walton's Polyglot in 1657. The new discovery was received with the greatest interest by Biblical scholars. It was found that the recension, while essentially agreeing with the Masoretic text, differed from it in some important particulars, all of which could not be due to scribal corruptions. The controversy as to the relative authority of the two texts was carried on with too much prejudice and too great acrimony on both sides ever to elicit the truth. Since that time a great advance has been made in critical methods; so that, while the question is by no means yet settled, the lines on which it must be studied are now clearly seen.

The first necessity is a satisfactory text. That of the polyglots is very inaccurate; and the latest edition (by Blayney, Oxford, 1790), though based on a collation of several manuscripts, gives no adequate account of the latter and makes no attempt to group them. A full list of variants, filling 107 octavo pages, was compiled by Petermann on the basis of a collation, made by the Samaritan priest Amram b. Solomon, with Blayney's text. The latter may therefore represent the official text, but can hardly be expected to be critical. Without any desire to prejudge the question, it may be pointed out, as already shown by Gesenius, that many of the variants are due (1) to the insertion of vowel-letters, or (2) to mere ignorance of the scribe, or (3) to the Samaritan interchange of gutturals. These would disappear in a critical text, and may be disregarded. Others are due (4) to an effort to make the text easier or more regular, as when common forms are substituted for rare forms, or היא, נערה are used for הוא, נער, in the feminine. These may also be set down to the copyist. But there still remain others which are more serious. They are mainly: (5) words and passages not found in the Masoretic text, and which appear to have been supplied from parallel passages or to be glosses representing a traditional exegesis; (6) substantial differences, many apparently favoring Samaritan views, *e.g.*, in the ages of the Patriarchs, in the avoidance of anthropomorphisms, and in the reading גריזים for עיבל in Deut. xxvii. 4. In a large number of the cases in classes 5 and 6 the Samaritan text agrees with the Septuagint; and, in the opinion of Frankel, the reading is often retranslated (sometimes wrongly) from the Greek. Whatever may be the real explanation of the facts, it should now be possible, given a sound text, to discuss in a scholarly and dispassionate spirit the question whether the recension represents a genuine tradition or not.

The "Samaritic" Version and Targum.

Next in order of time may be mentioned the version called by the Fathers *τὸ Σαμαρειτικόν*. Nothing of it remains; and whether it was really a Greek version, or a collection of passages, or was only a way of citing the Samaritan recension, is so uncertain that it is not worth discussing here. For other Greek works, of which still less is known, it will suffice to refer to the work of Freudenthal cited in the bibliography below.

The Targum, that is, the translation of the Pentateuch into Samaritan proper, or Aramaic, is linguistically of great interest. It was first brought to Europe, with the Pentateuch, by Pietro della Valle, and was likewise published in the polyglots; but the condition of its text is even less satisfactory than that of the Pentateuch. Petermann did indeed begin an edition, which was ably completed from his materials by Vollers; but it suffers from his having left no account of the manuscripts used. Any future edition must take account of the other dialects of Palestinian Aramaic, and of the work of Markah and the earlier liturgies. Very few complete manuscripts of the Targum exist in Europe; and these were all made long after the language had become extinct. The oldest is the Barberini Triglot (1226 C.E.); but there are considerable fragments, undated, which may be equally old.

Exegetically the Targum is of less importance, though it presents many interesting problems. It often agrees strangely with Onkelos, while in other places it differs from him without any apparent reason. Probably both versions go back ultimately to one oral Aramaic rendering which was traditional in Palestine and was written down with local differences. Kohn gives reasons for believing that it is a composite work by several hands, of various dates. Some parts of it, and some copies (especially Petermann's manuscript C) are strongly marked by Hebraisms, which Kohn considers to have been introduced at a late period. When the version, or any part of it, was written down, it is very difficult to decide. The only evidence available must be sought in a comparison with the work of Markah and the early liturgy. The most probable view seems to be that it is in the main a work of the fourth century of the common era. Native tradition is said to ascribe it to Nathanael, who died about 20 B.C. (Nutt, p. 108). The tradition may represent a fact if it means Nathanael the high priest, who was the father of Baba Rabba, and lived at the beginning of the fourth century C.E. This was a time of religious revival, when the liturgy was restored; and possibly Nathanael may have caused the Targum to be written down for use in the services.

Samaritan-Arabic Version.

The Samaritan-Arabic version exists in a number of manuscripts. The question of its author and date is full of difficulty, and has only recently been investigated in a really scholarly manner by Paul Kahle. His results are briefly these: the differences in the texts of various manuscripts represent different recensions; the original author was perhaps **Abu al-Ḥasan of Tyre,** and not, as is usually supposed, Abu Sa'id; the work was revised by Abu Sa'id in the thirteenth century, and this recension is the authorized Samaritan-Arabic version; there were, however, other recensions, some showing considerable divergence from that of Abu Sa'id.

In the main, these conclusions must be accepted, although Kahle's further investigations may modify some of them; but the date assigned to Abu Sa'id is not very convincing. There were certainly two persons of the name, who are not always easily to be distinguished. The first three books were published by Kuenen; but the whole text requires accurate editing before its character can be properly estimated. The translation is careful and close to the Hebrew. It is independent of Saadia, but bears some sort of relation to him. Whether, or how far, Saadia was directly used by the original translator, it is hard to say. It would, however, be natural that subsequent recensions should owe much to him. The relation of the translation to the Targum is also undetermined. Kohn contends that the Arabic translator either did not know or did not understand the Targum. While this seems, as Kahle says, to be an exaggeration, it is true that the version does not in any sense follow the Targum.

Commentaries.

Of the commentaries extant, first in importance, at any rate linguistically, is the work of **Markah,** in Samaritan-Aramaic, preserved at Berlin in a modern copy made for Petermann. Fragments of it also exist in a sixteenth-century manuscript in the British Museum, from which quotations were made by Castellus in his "Animadversiones" in vol. vi. of Walton's Polyglot. It is of the nature of a midrash dealing with passages of special interest, rather than a continuous commentary on the text. Apart from the difficulty of editing the text from practically a single manuscript, the language, which is evidently native to the writer (though not to the copyist), is difficult and the thought often obscure; but a correct text is indispensable to an adequate study of the Targum. With regard to the author, Markah, the chronicles tell us that he was the son of Amram b. Sered and that he lived in the time of the above-mentioned Baba Rabba, about the middle of the fourth century C.E. There is no reason to doubt this account, which fits in very well with indications from other sources. With the possible exception of his father, Amram, he is the earliest author whose work is extant under his own name; and the Samaritans are probably right in considering him the greatest as well as the oldest of their writers.

The Aramaic vernacular having become extinct by about the tenth century, the next commentary in order of time is one written in Arabic. Only a fragment of it, on Gen. i.–xxviii. 10, exists in a unique manuscript in the Bodleian Library, from which extracts were published by Neubauer, with a description. It was composed in 1053; but the author's name does not appear. Its chief interest lies in the fact that its explanations are frequently supported by quotations from books of the Old Testament other than the Pentateuch, and even from the Mishnah. The author is acquainted with the terminology of Rabbinite and Karaite commentators, besides having a good knowledge of Arabic and Hebrew grammar, although he does not know the triliteral theory of Ḥayyuj.

The most considerable work of this kind is the commentary in Arabic by **Ibrahim b. Ya'kub** on the first four books of Moses, composed in the fifteenth or sixteenth century and now preserved only in a modern copy at Berlin. The author is in an unusual degree typically Samaritan in his exegesis, carefully avoiding anthropomorphisms, pointing out the errors of Jewish teachers, and losing no opportunity of glorifying his own people and their traditions. His Arabic is of the half-vulgar kind habitually employed by Samaritan writers. Much the same description applies to a commentary on Genesis in the Bodleian Library. It is anonymous and undated; but it can hardly be much later than that of Ibrahim, since it was acquired by Huntington about 1680. Only ch. xlix. has been published (in Eichhorn's "Repertorium"). In 1753 **Ghazal ibn Abi al-Sarur** wrote a commentary in Arabic on Genesis and Exodus, entitled "Kashf al-Ghaya'ib," which exists in a manuscript in the British Museum. No part of it has been published. An Arabic commentary on the story of Balak, written by **Ghazal ibn al-Duwaik** (said to have lived in the 13th cent.), exists in a manuscript at Amsterdam; but none of it has been published. The few anonymous fragments and the names of authors whose works are lost need not be mentioned here.

Samaritan Group.
(From a photograph by the Palestine Exploration Fund.)

Liturgies.

The liturgies, a large and important part of the literature, are very imperfectly known at present. A number of selections have been published by Heidenheim; but, while he deserves full credit for first bringing them to notice, it must be confessed that, from the unsatisfactory manner in which the texts are edited and from the disconnected form in which they are published, very little use can be made of them. The manuscripts are very numerous, but nearly all of recent date. The cycle consists of the following divisions: (1) the "Defter"; (2) the services for the first month, chiefly Passover and Maẓẓot; (3) those for the seven Sabbaths following Passover, for לילת מקרתה, and for the Feast of Harvest; (4) those for the seventh month, including the ten days of pardon (יומי הסליחות) and those for the Day of Atonement and Sukkot; (5) those for circumcision, marriage, and burial.

Of these the "Defter" (Διφθέρα), the book par excellence, stands first in date and in importance. It seems to have been the nucleus of the liturgy, a sort of manual containing prayers, etc., suitable for various occasions. Religious services had no doubt always been held at the seasons ordained in the Pentateuch; but, whatever formularies were used, they have been entirely lost. The "Defter" marks a definitely new departure in the fourth century, as the special services show a new departure in the fourteenth century. It was composed by various authors, the chief being Marḳah, who, according to the chronicle, set in order the services of the synagogue for Baba Rabba in the fourth century.

Another division of it, called the "Durran," is by a certain Amram דרה, who may well be identical with the **Amram b. Sered** mentioned as the father of Marḳah. Both these authors write in the true Samaritan-Aramaic, Amram being perhaps the more obscure. His work is chiefly in prose, and consists of prayers, etc., for various occasions. Marḳah's work, on the other hand, shows a development in literary form, being more artistic, or perhaps artificial, in form. It consists of alphabetical hymns, each stanza having four members, but without rime. These together form the basis, and probably the oldest part, of the "Defter." At the beginning of the volume are some anonymous prayers—a prayer of Moses, a prayer of Joshua, and the prayers of the angels. Some of these are undoubtedly old; but, curiously enough, they do not appear in all the manuscripts, and their date is quite uncertain. Baneth conjectures that the prayer of Joshua is by a certain Joshua b. Baraḳ b. ʽEden, the patron of Amram b. Sered, and so an elder contemporary of Marḳah. But the identification rests on very slight evidence; and the prayer seems to be composite, or to combine two recensions. These introductory pieces are partly in Samaritan-Hebrew. Another writer of this period was perhaps **Nanah b. Marḳah,** if, as was probably the case, he was the son of the great Marḳah. His style, though not equal to Marḳah's, is similar. Manuscripts of the "Defter" are not numerous. The oldest are one in the Vatican Library, not dated, but perhaps of the thirteenth century, and one, dated 1258, in the British Museum. Others more or less complete are: one in Paris; one in Berlin; two formerly belonging to the Earl of Crawford, now in the John Rylands Library at Manchester; one in Keble College, Oxford; and some fragments. There is a very clear distinction between the earlier and the later manuscripts, the text having evidently been edited at some time after the thirteenth century.

To this nucleus other work was added from time to time. **Abu al-Ḥasan** of Tyre, who lived in the eleventh century, wrote a very popular hymn (אלה רב ולית כותה). He is no doubt identical with Ab Ḥasdah, who, as well as his son **Ab Gelugah,** wrote liturgical compositions. They still used Aramaic, though of a less pure kind than Marḳah's. The language seems to be already dead, and was only employed by them as being still considered the proper vehicle for liturgy. Then for three centuries no change appears to have been made. In the fourteenth century additions were made by **Joseph ha-Rabban,** by **Phinehas** the high priest (perhaps Joseph's son), and by **Abisha,** a younger son of Phinehas. These three took the bold step of abandoning Aramaic for Hebrew, which henceforth becomes the regular language for liturgical purposes.

Renascence in the Fourteenth Century.

In the fourteenth century there seems to have been a sort of renascence of Samaritan literature, which is very clearly seen in the development of the liturgy, and which was probably due to the high priest Phinehas b. Joseph. It was at his instigation that Abu al-Fatḥ wrote his chronicle (see below); and from the account there given it may be gathered that Phinehas was a man of exceptional character. At any rate, the elaboration of the liturgy must have received a fresh impetus about this time, as is seen from the inclusion of the fourteenth-century compositions in the "Defter." With them the "Defter" was finally closed; but the new literary or religious activity continued to show itself in the composition of special services. It is impossible to say when any of these took its present shape. From the dates of the writers it is clear that the growth was gradual and that it began with Phinehas and Abisha. In all the services the framework is similar, and perhaps always was so; but additional hymns continued to be included from time to time. The least change was made in the case of the service for the חג or pilgrimage up Mt. Gerizim, the most sacred function of all. Many of the hymns are of great length, generally alphabetical (sometimes also acrostic), in double lines, each section riming throughout on the same syllable. The Hebrew varies in quality according to the writer, and is generally very corrupt and obscure, being often mixed with Aramaic words and Arabic idioms, the latter increasing as time goes on.

Chief Authors.

The chief writers of whom anything is known are the following: Abisha b. Phinehas, mentioned above, who was very prolific and was, next to Marḳah, the most original and literary of the liturgists. He died comparatively young in 1376. His brother **Eleazar** the high priest (d. 1387), and his son **Phinehas,** also high priest (d. 1440), wrote a few pieces. Abisha died before his son Phinehas was born; and the child was brought up by his uncle Eleazar till he was in his eleventh year. Eleazar then died, after appointing as his nephew's guardian a certain **Abdallah b. Solomon,** to whose care Phinehas pays a grateful tribute in one of his compositions. Abdallah (who was a kohen) wrote a great number of liturgical pieces, among them being a large part of the marriage service. Nothing further is known of him; but as he must have been a man of mature years in 1387, his work can not be later than 1400. In style he is not much inferior to Abisha. His collaborator in the marriage service was **Saʽd Allah ben Ṣadaḳah al-Kathari,** who wrote also other pieces. There are no clear indications of his date; but, as he seems to have been a contemporary of Abdallah, he must have lived about 1400. He was probably of a Damascus family. A later high priest named Phinehas, no doubt one of the authors of that name, removed from Damascus to Nablus in 1538, accompanied by his assistant, **Abdallah b. Abraham.** The latter was an important author; and his father is probably to be identified with **Abraham Ḳabaẓi,** a writer of great reputation, as prolific as Abdallah b. Solomon, and perhaps equal to him in literary merit. In one of his hymns Abraham Ḳabaẓi speaks of himself as a pupil of the high priest Phinehas. Among other works he wrote a large part of the hymns for the חג or pilgrimage up Mt. Gerizim.

Lesser writers are here omitted, as well as many whose names, being not distinctive, afford no clew to their identity. The extension of the liturgy, however, did not cease with the sixteenth century. It has continued down to the present day, although literary merit has become less and less common. Most of the later copyists added something to the original stock. There are several members of the Danfi family: **Marjan** (= Ab Sekhuah) **b. Ibrahim** (about 1700), his son **Meshalmah,** his grandson **Marjan,** and his great-grandson **Abdallah,** who was writing as early as 1754. Of the Levitical family the best-known is the priest **Ṭabyah** (= Ghazal), a prolific and occasionally meritorious writer, who died in 1786. His son **Solomon,** also priest, who died at a great age in 1856(7), and his grandson, the priest **Amram,** who died in 1874, exhibit perhaps the extreme of decadence both in language and in thought. The latest addition is by **Phinehas b. Isaac,** nephew of Amram, who was living in 1894.

Chronicles.

Of the chronicles the earliest extant is that called "Al-Taulidah." The first part of it is ascribed to **Eleazar,** a younger son of the high priest Amram, writing in 1149. It was brought down to his own time by **Jacob b. Ishmael,** priest at Damascus in 1346, and afterward continued by others to the death of the priest Solomon in 1856(7). It is in Hebrew, and begins with an account of the traditional calculation of the festivals and the jubilees, as handed down from Adam to Phinehas, the grandson of Aaron, and through him to the existing priestly family. This introduction is by Jacob b. Ishmael. The chronicle proper begins with Adam, giving at first little more than the names and ages of the Patriarchs, and recounting how, in the days of Uzzi, the sixth priest after Aaron, the Tabernacle was destroyed, and the divine favor lost. The history becomes fuller from this point. It is fullest and most trustworthy in regard to the period just before 1149, when Eleazar made the first draft, and that before 1346, when Jacob continued it. The name of the later continuator is not given. As to the historical value of this and the other chronicles, it must be admitted that for events not immediately concerning the tribe, their chronology is erratic. Moreover, dates are only occasionally given. On the other hand, for domestic details, especially at the dates mentioned above, the chronicles seem to be quite trustworthy; and for the rest, though dates can not always be made out, the chroniclers are probably correct in their grouping of persons.

The next work of the kind in point of time is that called the "Book of Joshua" (see JOSHUA, THE SAMARITAN BOOK OF), composed, as Juynboll held, in the thirteenth century. Baneth is certainly mistaken in thinking that it owes its name to Joshua b. Baraḳ (see above). It is so called simply as relating chiefly the exploits of the Biblical Joshua; and its author is not known. It is in Arabic, and is in no sense a translation of the canonical book, being full of mythical stories, and of much less historical value than "Al-Taulidah."

Both of the foregoing, as well as other chronicles not now extant, were used by **Abu al-Fatḥ,** who compiled his work, in Arabic, in 1355, for the high priest Phinehas. As history, Abu al-Fatḥ's chronicle has most of the defects of the other two. Nevertheless the author certainly seems to have had some idea, however slight, of what history should be, and to have taken pains to compile a trustworthy account from the scanty material at his command. He starts from Adam and originally stopped at the time of Mohammed; but the history has been continued by later writers not named. If it is studied with care, and in connection with other sources, some results may be obtained; but history is not the strong point of the Oriental, and he must not be judged by Western standards, which, after all, are quite modern. Another chronicle has recently been published by E. N. Adler (who had the copy made in Nablus) and M. Seligsohn. It is in Hebrew, and clearly based on "Al-Taulidah." The introduction is omitted, but otherwise the form is the same, and the list of priests agrees exactly (according to the editors) with "Al-Taulidah." It is, however, much fuller, giving not only details, often very inaccurate, of foreign events, but also, what is much more useful, a great deal of information about Samaritan families. It extends from Adam to 1900 C.E. The editors have added a French translation, and notes pointing out its relation to the other chronicles, which greatly add to the usefulness of the edition.

Grammar.

In philology, a treatise on pronunciation was written by **Abu Sa'id,** the translator (?) of the Pentateuch, in the eleventh (?) century, in Arabic. It was published by Nöldeke. It does not attempt to give a complete system of Hebrew pronunciation, but only a series of rules intended to correct errors which the author has observed in his contemporaries. There is also a considerable work on grammar by **Ibrahim b. Faraj,** who lived in the time of Saladin (12th cent.). His system is based entirely on the Arab grammarians, whom he sometimes quotes word for word; and he probably knew the Jewish grammarians. Although the work is ill arranged and, where he is not following his authorities, incorrect, it has (like the last-mentioned) considerable interest as showing the pronunciation of Hebrew in the writer's own time. An account of it was published by Nöldeke. An abridgment of it was made by the high priest **Eleazar b. Phinehas,** who died in 1387. A sort of lexicon of Hebrew words, with their Arabic equivalents, was composed by the high priest **Phinehas,** either the father of this Eleazar, who died in 1363, or Eleazar's successor, who died in 1440. The manuscript is at Christ's College, Cambridge. Another manuscript, at Paris, is said to correspond closely to this, but to be independent of it.

A calendar was compiled by **Joseph** (?) **b. Ab Zehutah** in 1697; another by **Jacob b. Ab Sekhuah** in 1724; and a sequel to the same, a third, for the period 1689 to 1786, by **Marjan (Ab Sekhuah) b. Ibrahim al-Daufi,** who was living in 1739; besides the technical part, the last-cited calendar contains some interesting matter; it was continued by Marjan's son **Muslim.** Another calendar, of which the author is doubtful, was written in 1750. These are all in manuscripts formerly belonging to the Earl of Crawford, and are now in the John Rylands Library at Manchester.

Lastly, some miscellaneous works of a theological character must be mentioned. The difficulty of getting any acquaintance with them is much increased by the fact that very little of them has been published. The chief are as follows: (1) "Kitab al-Kafi," in Arabic, written in 1041 by **Yusuf ibn Salamah,** on the Mosaic laws. A manuscript of it is in the British Museum. (2) A similar work entitled "Kitab al-Ṭabbakh," in Arabic, by Abu al-Ḥasan of Tyre, who has already been mentioned as a liturgical writer of the eleventh century. The work deals largely with "sheḥiṭah" and with the differences between Jews and Samaritans (comp. No. 5, below). It was highly esteemed, and many copies of it exist; but nothing of it has been published beyond the rather full analysis in Nicoll and

Pusey's "Catalogue." (3) (*a*) "Kitab al-Ma'ad," in Arabic, by the same author, on the future life, with proofs from the Pentateuch, in a manuscript in the Bodleian Library, and (*b*) "Kitab al-Taubah," on repentance, in a manuscript at Amsterdam. (4) Two tracts by Abu Sa'id, the translator (?) of the Pentateuch in the eleventh (?) century, and another by an unknown author, all in Arabic, dealing with various passages of the Pentateuch. (5) On the questions in dispute between Jews and Samaritans (comp. No. 2, above), in Arabic, by **Munajja b. Ṣadaḳah,** who lived in the twelfth century at Damascus. The arguments are largely directed against Saadia. Only the second part is extant, in a Berlin manuscript, a modern copy made for Petermann. It has been very fully treated by Wreschner. Both Munajja's father, and his son, also called Ṣadaḳah, were authors, the latter, perhaps, of a treatise called "Kitab al-I'tiḳad," on the nature of God, found in a manuscript at Amsterdam. (6) An exposition of the story of Balak, by **Ghazal ibn Duwaik,** in an Amsterdam manuscript, and a treatise on the restoration of the kingdom, both in one of the manuscripts lately belonging to Lord Crawford. The author wrote in Arabic, and is said to have lived in the thirteenth century. At the end of the latter manuscript are two homilies, one by **Ṣaliḥ ibn Sarur ibn Ṣadaḳah** (? author or copyist) in the eighteenth century, and one by Abu Sa'id, which is probably identical with one of those mentioned under No. 4. (7) A commentary in Arabic on the "Kitab al-Asaṭir," ascribed to Moses. It gives a legendary account of the Patriarchs to the time of Moses, ending with a brief summary of later events. It was translated by Leitner (in Heidenheim's "Vierteljahrsschrift," iv. 184 *et seq.*) from a British Museum manuscript dated 1786. The author and date of composition are not known; but it mentions Maimonides. (8) On the Mosaic law, by **Abu al-Faraj ibn Isḥaḳ,** in Arabic, probably of the fourteenth century. It is found in a manuscript at Paris. (9) In praise of Moses, in Arabic, by **Isma'il al-Rumaiḥi,** who composed also some liturgical pieces. It was written in 1537. A manuscript of it exists in the British Museum, and another formerly belonged to Lord Crawford. (10) Two works in the British Museum, (*a*) apologetic, (*b*) on the history of the Patriarchs and Moses, may be identical with some of those mentioned above. (11) The letters written in answer to Scaliger, Huntington, Ludolf, De Sacy, and others, in Samaritan-Hebrew, some with an Arabic version, give interesting information as to the views and contemporary condition of the people.

No notice has been taken here of works which are known only by name.

SAMAU'IL IBN ADIYA. See Samuel ibn Adiya.

SAMBARI (CATTAWI?), JOSEPH BEN ISAAC: Egyptian chronicler of the seventeenth century; lived probably at Alexandria between 1640 and 1703. Of lowly origin and in the employ of Rabbi Joseph Ḥen, he spent his leisure time in historic studies, finding a mass of documents in the extensive library of the famous rabbi Abraham Skandari (the Alexandrian). Sambari knew Arabic, Hebrew, and Spanish, yet his Hebrew orthography and grammar are very faulty. According to his prefaces he wrote two works, only one of which has been printed. The first, entitled "Dibre ha-Ḥakamim," has either been lost or is buried in some library. It probably was a general history covering the time from Abraham to the Saboraic rabbis, or to the year 540 c.e. The second work, entitled "Dibre Yosef," is a continuation of the first; two copies are in existence, one in the Bodleian Library at Oxford, and the other in the library of the Alliance Israélite at Paris. The book deals with the history of the Fatimite califs of Egypt, the Abbassids of Spain, and the Osmanli Turks, and also with the history and literature of the Jews who lived under these rulers. In writing his "Dibre Yosef," the author used such sources as Elijah Capsali's "Debe Eliyahu," and other works. It was first published by Neubauer in his "Medieval Jewish Chronicles," i. 115-162, and afterward separately by A. Berliner (Frankfort, 1896). See also Egypt.

Bibliography: Cattawi, *Dibre Yosef*; Franco, *Histoire des Israélites de l'Empire Ottoman*, p. 91.

SAMBATION, SANBATION, SABBATION (SAMBAṬYON): In rabbinical literature the river across which the ten tribes were transported by Shalmaneser, King of Assyria, and about which so many legends subsequently accumulated that it was considered by some scholars to be altogether mythical.

Earliest Mention.

The name of the river occurs in the Targum of pseudo-Jonathan to Ex. xxxiv. 10: "I will remove them from there and place them beyond the River Sambation." R. Judah b. Simon said: "The tribes of Judah and Benjamin were not exiled to the same place as the ten tribes; for the latter were transported beyond the River Sambation," etc. (Gen. R. lxxiii.). The same statement is found in Num. R. xvi. and Yalḳ., Gen. 984. There is no indication whatever in these passages as to the origin of the name, nor as to any supernatural phenomenon in connection with the river. The only inference to be drawn from them is that the Sambation or Sabbation was a river of Media. It was therefore identified by Naḥmanides, in his commentary on Deut. xxxii. 26, with the Gozan of the Bible (II Kings xvii. 6 and elsewhere).

On the other hand, Josephus ("B. J." vii. 5, § 1) says that when Titus marched from Berytus (Beirut) to the other Syrian cities, driving before him the Jewish captives,

> "he then saw a river . . . of such a nature as deserves to be recorded in history; it runs in the middle between Arcea, belonging to Agrippa's kingdom, and Raphanea. It hath somewhat very peculiar in it; for when it runs, its current is strong and has plenty of water; after which its springs fail for six days together and leave its channel dry; . . . after which days it runs on the seventh day as it did before; . . . it hath also been observed to keep this order perpetually and exactly; whence it is that they call it the Sabbatic River ["Sabbation" or "Sambation"]—that name being taken from the sacred seventh day among the Jews."

Pliny, also, in his "Historia Naturalis" (xxxi. 2), speaks of the same river; but his observations are more in agreement with the Jewish spirit: he says that the river runs rapidly for six days in the week and stops on the seventh. It seems certain that it was to this periodic river that R. Akiba referred in his answer to Tineius Rufus. When the latter asked him why Saturday was superior to any other day, Akiba answered, "The River Sambation proves it" (Sanh. 65b). This answer is more complete in Gen. R. xi., in Tan., Yelammedenu, Ki Tissa, and in Aḥa (Aḥai) of Shabḥa's "Sheiltot," Bereshit: "The River Sambation proves it [the superiority of Saturday] because during the week-days it runs and causes stones to drift, but on Saturday it ceases to flow." Pethahiah of Regensburg says that in Jabneh there is a spring which runs during six days in the week and ceases to flow on Saturday ("Sibbub," ed. Prague, p. 5).

Periodical Cessation on the Sabbath.

The periodicity of this Palestinian river naturally gave rise to many different and fantastic legends. At first the phenomenon was considered to be supernatural; and, though there is no indication in the statement of either Josephus or Pliny that the cessation of the flow of the river occurred on Saturday, a legend arose to the effect that the rapid current and the cessation coincided respectively with the six week-days and Saturday. Even R. Akiba, who dwelt not very far from the river, answered evasively; so that it seems that even in his time there was a confusion between the Sambation of the ten tribes and the Sabbatic River of Josephus and Pliny. The legend did not stop there; in the course of time imagination changed the nature of the river also.

The first to disseminate the legends was Eldad ha-Dani. According to his narrative, the Sambation surrounds the land not of the ten tribes, but of the children of Moses, who have there a powerful kingdom. The origin of this legend is the passage Ex. xxxii. 10; and as in the midrashic version of Akiba's answer it is said that the river causes stones to drift, Eldad represents the Sambation as consisting entirely of sand and stones. His narrative is as follows:

> "The Bene Mosheh are surrounded by a river like a fortress, which without water rolls sand and stones with such force that if in its course it encountered a mountain of iron it would grind it to powder. On Friday at sunset a cloud envelops the river [in another version, the river is surrounded by fire], so that no man is able to cross it. At the close of the Sabbath the river resumes its torrent of stones and sand. The general width of the river is two hundred ells, but in certain places it is only sixty ells wide; so that we [on this side of the river] may talk to them [on the other side], but neither can they come to us nor can we go to them" (Epstein, "Eldad ha-Dani," p. 5 *et passim*).

A similar narrative, though stated from a different point of view, is found in the letter of Prester John (see D. H. Müller, "Die Recensionen und Versionen des Eldad ha-Dani," in "Denkschriften der Kaiserlichen Akademie der Wissenschaft," Vienna, 1892):

> "One of the wonderful things on earth is a waterless sea of sand ["mare harenosum"]; for the sand is agitated and swells in waves like every other sea, and is never at rest. At a distance of three days from this sand sea are certain mountains, from which descends a river of stones and without any water. It flows through our territory and falls into the sea of sand. Its current is maintained only for three days in the week; on the other four days the river is fordable. Beyond this river of stones dwell the ten tribes, who, though pretending to have kings of their own, are our subjects."

In the Hebrew version of this letter (see "Ḳobeẓ 'al Yad," iv. 69 *et seq.*) the text has been altered to favor the Jews, so that it agrees with Eldad ha-Dani. It reads as follows:

> "Know that from this stony sea there flows a river the source of which is in paradise. It runs between our territory and that of the great King Daniel. This river runs all the days of the week, and on Saturday it ceases to flow. It contains no water, but it causes everything in its course to drift to the Arenaso Sea ["Mare Harenosum"]. No one can cross it except on Saturday. We are obliged to place guards at the borders of our territory to defend them from the incursions of the Jews."

Thus, even according to the Latin text, the legend of the ten tribes being surrounded by a stone river was current among the Christians also.

Connection with the Alexander Legend.

Among the different versions of the Alexander legend is one which states that Alexander, when he was journeying toward the south of Egypt, arrived at a river which flowed with water for three days and with sand for three days, and that this was the Sambation of the Jews (Nöldeke, "Beiträge zur Geschichte des Alexanderromans," p. 48). As the narrator was probably a Christian, he does not say that the river ceased to flow on Saturday; but Ibn Faḳih, in his Arabic version, adds a statement to this effect (Nöldeke, *l.c.*). Ibn Faḳih is not the only Arab writer who mentions this river; Kazwini ("Cosmography," ed. Wüstenfeld, ii. 17) relates in the name of Ibn 'Abbas that one night the prophet asked the angel Gabriel to bring him to the land of the children of Moses ("Banu Musa"), who were reputed to be very righteous. Gabriel told him that it would take him six years to reach there and six years to return, and that even if he were there he would not be able to gain access to the Banu Musa, they being surrounded by a river of sand ("Wadi al-Raml") which flows with the rapidity of an arrow, resting only on Saturday. Mas'udi ("Prairies d'Or," i. 161) also mentions a river of sand, in Africa. Finally Grünbaum (in "Z. D. M. G." xxiii. 627) concludes that the Sambation legend was current among the Samaritans also.

This legend, interest in which seems to have become lessened in the course of time, was revived in the seventeenth century through the fantastic stories of Gershon b. Eliezer ha-Levi in his "Gelilot Ereẓ Yisrael" and of Manasseh b. Israel in his "Miḳweh Yisrael." The former relates that in 1630, while traveling in India, he arrived at Seviliah, two days' journey from the Sambation, where he heard the clattering noise of the river. He says:

> "It is seventeen miles wide and throws stones as high as a house. On Saturday it is dry; there is then not a single stone, and it resembles a lake of snow-white sand. The Gentiles who dwell near the river do not drink of its water, nor do they give it to their cattle, considering it a sacred river. The water has, besides, a curative power in leprosy and other diseases. The river ceases to flow on Friday, two hours before sunset; and during this interval before the Sabbath the Jews make incursions into the neighboring lands."

Manasseh b. Israel, while endeavoring to prove the existence of the Sambation, states, as a peculiarity of its sand, that even when it is kept in a glass it is agitated during six days of the week and is quiescent on Saturday ("Miḳweh Yisrael," x., No. 39).

Different Views.

There are thus essential differences even among the Jews with regard both to the nature of the river and to the people which it surrounds. There is a difference of opinion also as to the locality of the river. It has already been said that, according to the midrashim, the Sambation must be identified with some river of Media, and that Naḥmanides identified it with the Gozan of the Bible. Eldad ha-Dani placed it in the land of Havilah in the south of Cush, which, though sometimes denoting India, seems here to indicate Ethiopia; and the same location is to be concluded from the Alexander legend. Pethahiah of Regensburg says (*l.c.*) that it is distant ten days from Ezekiel's grave, which is itself one day's journey from Bagdad. Abraham Farissol says that the River Sambation is in upper India, higher up than Calcutta ("Iggeret Orḥot 'Olam," ch. xxiv.), which opinion was followed by Gershon b. Eliezer; but Manasseh b. Israel ("Miḳweh Yisrael," ch. x., xiii.), invoking the authority of ancient writers, thinks that the Sambation is near the Caspian Sea. The only point upon which the above-mentioned authors agree is that the name "Sambation" was given to the river on account of the cessation of its flow on Saturday; and this explanation is given by Elijah Levita ("Tishbi," *s.v.* "Sambation").

The critical views of modern scholars also differ. Reggio, arguing from the contradictions of the ancient writers, denies the existence of such a river. He thinks that the Sambation of the ten tribes, mentioned in the midrashim, is to be identified with the Euphrates, being so called because the Israelites after settling near that river were able to observe the Sabbath (comp. II Esd. xiii. 43-45). Reggio's opinion may be supported by the fact that the River Don is called by Idrisi "Al-Sabt," while Kiev is called by Constantinus Porphyrogenitus "Sambatas," each term meaning "resting-place," as both places were commercial stations and were so named by the Chazars. Fuenn concluded that the Sambation of the ten tribes is to be identified with the Zab in Adiabene, whither the ten tribes were transported; that the name "Sabatos," as this river is called by Xenophon, was subsequently altered to "Sabbation" and "Sambation"; and that later people confounded the Sambation with the Sabbatic River of Josephus and Pliny, and created many legends about the abode of the ten tribes (see Herzfeld, "Gesch. des Volkes Israel," i. 366). David Kaufmann, without discussing the existence of the river, explains the origin of the name "Sambation" as follows: "The legend originated with a river of sand and stones which, owing to a volcanic cause, might have been agitated. Its Hebrew name was 'Nehar Ḥol' (= 'river of sand'), equivalent to the Arabic 'Wadi al-Raml.' This name was later misunderstood to signify 'the river of the week-days,' and thus gave rise to the legend of a periodic river which alternated between Saturday and the week-days, whence its name 'Sabbation' or 'Sambation' (= 'Sabbatic river'). As the name does not indicate whether it flows or rests on Saturday, Josephus and Pliny interpreted the matter in contrary senses."

SAMEGAH (SAMIGAH), JOSEPH BEN BENJAMIN: Turkish Talmudist and cabalist of the sixteenth and seventeenth centuries; born at Salonica; died June 6, 1629, at Venice, where he was rabbi and head of the yeshibah. It appears from Isaac Ḥayyim Cantarini's "Paḥad Yiẓḥaḳ" (p. 10b, Amsterdam, 1685) that Samegah had been previously head of the yeshibah at Padua. Ḥayyim Benveniste and Joseph Solomon Delmedigo were among his pupils. He was the author of "Miḳra'e Ḳodesh" (Venice, 1586), a treatise, in two parts, on the 613 commandments. The first, in fourteen chapters, treats of the love and fear of God, and the second, in twenty-one chapters, of the mysteries and meaning of the commandments. He wrote also "Porat Yosef" (*ib.* 1590), containing, among other treatises, novellæ on a part of the "Sefer ha-Halakot" of Isaac Alfasi and R. Nissim (relating to the treatise Ketubot and a part of Ḥullin), and novellæ on a part of the tosafot to Ketubot, Beẓah, and Zebaḥim; and "Perush Derek Yamin" (*ib.* n.d.), a work containing homilies, cabalistic notes, and an explanation of the Ten Sefirot.

The work last mentioned is in reality an attack upon Menahem Azariah da Fano's "Yemin Adonai Romemah." Samegah's strictures were in turn refuted by Delmedigo in his "Mazref la-Ḥokmah." A decision of Samegah concerning the shaking of the Lulab is to be found in Samuel Algazi's "Toledot Adam Ḳaṭon" (Venice, 1587); a responsum of his concerning the "Miḳweh" of Rovigo, beginning "Arazim 'ale mayim," is to be found in the collection of responsa entitled "Mashbit Milḥamot" (*ib.* 1606); and, finally, Ghirondi was the possessor of a decision signed by Samegah and Simḥah Luzzatto. In his preface to the "Miḳra'e Ḳodesh," Samegah mentions two other works by himself—"Binyan 'Olam" and "Kebod Elohim."

SAMEK (ס): The fifteenth letter of the Hebrew alphabet. Its name may be connected with "samek" = "prop," "support." On the original shape of the letter see Alphabet. "Samek" belongs to the group of sibilants, with other members of which it interchanges, and its pronunciation is identical with that of the English surd "s." It occurs only as a radical, never as a formative element. As a numeral, "samek" (in the later period) has the value of 60.

SAMELSOHN, JULIUS: German ophthalmologist; born at Marienburg, West Prussia, April 14, 1841; died at Cologne March 7, 1899. Educated at the universities of Breslau and Berlin (M.D. 1864), he in 1867 settled as an ophthalmologist in Cologne. Samelsohn wrote several important essays upon ophthalmology, which appeared in Gräfe's "Archiv für Ophthalmologie" and in Knapp's "Archiv für Augenheilkunde." Well known is his "Die Bedeutung der Lichtsinnuntersuchung in der Praktischen Ophthalmologie," 1885, for which work he received the Gräfe prize. He was besides the author of "Ueber Augenerkrankungen bei Spinalleiden" and "Ueber die Incongruenz der Netzhäute."

S. F. T. H.

SAMFIELD, M.: American rabbi; born at Markstift, Bavaria, 1846. He received his education from his father, at the Talmudical school of Rabbi Lazarus Ottensoser at Hochstädt, at the public school in Fürth, at the University of Würzburg (Ph.D.), and from Rabbi Seligman Baer Bamberger, who gave him his rabbinical diploma. Emigrating to the United States in 1867, he served as rabbi of Congregation B'nai Zion at Shreveport, La., until 1871; he was then called to Memphis, Tenn., where he is still (1905) officiating as rabbi of the Congregation Children of Israel.

His activity in Memphis has been very successful. He was one of the founders of the United Charities of Memphis, of the Young Men's Hebrew Association, etc.; he has acted as president of the Southern Rabbinical Association; and he is the founder and editor of "The Jewish Spectator."

Bibliography: *The American Jewish Year Book*, 5664 (1903–4), p. 94.

A. F. T. H.

SAMILER (SMIELER), A. G. (ELIAKIM GÖTZEL; known also as **Mehlsack):** Russian Talmudist and a member of a prominent rabbinical family; born in Smiela about 1780; died at Brody July 17, 1854. He devoted special attention to the historical setting in rabbinical literature and wrote a number of valuable genealogical essays; one of these is in the possession of Solomon Buber, Lemberg, and another in that of Fischel Landau in Vienna. The only published work of his is "Sefer Rabiyah" (Ofen, 1837), a criticism of Zunz's "Gottesdienstliche Vorträge" and of Rapoport's biography of Kalir. On the title-page of this work he calls himself "Eliakim ben Judah ha-Milzahagi."

D.

SAMMTER, ASHER: German rabbi; born at Derenburg, near Halberstadt, Jan. 1, 1807; died at Berlin Feb. 5, 1887. From 1837 to 1854 he was rabbi and preacher in Liegnitz, Prussian Silesia, where he introduced German preaching and confirmation; from 1869 until his death he lived in Berlin.

Sammter wrote: "Die Unsterblichkeit Unserer Person Wissenschaftlich Beleuchtet" (Liegnitz, 1843); "Die Schlacht bei Liegnitz" (*ib.* 1860); "Chronik von Liegnitz" (2 vols., *ib.* 1861–62); "Die Schlacht an der Katzbach" (*ib.* 1863); "Masseket Baba Meẓi'a, Talmud Babylonium," with German translation and annotations, and with biographical sketches of the Talmudists and commentators (Berlin, 1877–79); "Mishnayyot," the six orders of the Mishnah, Hebrew text, with German translation and annotations (*ib.* 1884–88); "Der Rabbi von Liegnitz," historical narrative of the time of the Hussites (*ib.* 1886). The author had planned to publish the "Mishnayyot" in forty numbers, but only the first eight of the Seder Zera'im and the first two of the Seder Mo'ed appeared.

Bibliography: *Ha-Maggid*, 1887, xxxi. 56.

S. S. O.

SAMOSCZ, DAVID: German author of Hebrew books for the young; born at Kempen, province of Posen, Dec. 29, 1789; died at Breslau April 29, 1864. He went at an early age to Breslau, where he was a tutor and private teacher until 1822, when he entered business. Having met with reverses he toward the end of his life devoted himself again to literature. He was a prolific author of stories for the young, written in Hebrew and adapted mainly from the German, and of text-books of instruction in the Jewish religion.

His works include: "Ger Ẓedeḳ," Breslau, 1816, the history of the conversion of Joseph Steblitzki, written in German with Hebrew characters; "He-Ḥaruẓ wehe-'Aẓel, der Fleissige und der Träge," *ib.* 1817; "Pillegesh Pe-Gibeah, ein Biblisches Drama," *ib.* 1818; "Tokeḥot Musar, Campe's Sittenbüchlein in Hebräischer Uebersetzung," *ib.* 1819; "Resise Meliẓah, Hebräische Blumenlese," Dyhernfurth, 1822;

"Mafteaḥ bat Dawid, Hebräischer Briefsteller," Breslau, 1823; "Meẓi'at Ameriḳa," on the discovery of America (after Campe), *ib.* 1824; "Robinson der Jüngere," in Hebrew (also after Campe), *ib.* 1824; "Aguddat Shoshannim, Hebräische Gedichtsammlung," *ib.* 1825; "Halikot 'Olam, ein Sittendrama," *ib.* 1829; a text-book of Hebrew instruction in three parts: (1) "Esh Dat," a primer and a catechism, (2) "Ohel Dawid," a Hebrew grammar, and (3) "Shire Dawid," occasional poems, *ib.* 1834; "Rigshat Nafshi," a poem in honor of the visit of King Frederick William III. to Breslau, *ib.* 1835; "Ḳol Nehi" (*ib.* 1840), elegy on the death of Frederick William III., *ib.* 1840. Moreover, he contributed Hebrew poems to periodicals, such as "Bikkure ha-'Ittim," and to the works of his Breslau friends, M. B. Friedenthal, Jacob Raphael Fürstenthal, and others.

Bibliography: The bibliographical works of Fürst, Steinschneider, and Rosenthal, s.v.; *Orient, Lit.* vi., cols. 353 *et seq.*; *Tehillah le-Dawid*, a poem on the occasion of his seventieth birthday; *Allg. Zeit. des Jud.* 1860, p. 73; 1864, p. 353; Neustadt, *Josef Steblitzki*, p. 19, Breslau, 1894; Brann, in *Monatsschrift*, 1895, xxxix. 384.

President of Central Conference of American Rabbis; Rabbi of Temple Emanu-El, New York.

JACOB VOORSANGER, D.D.,
Rabbi of the Congregation Emanu-El, San Francisco, Cal.; Professor of Semitic Languages and Literatures, University of California, Berkeley, Cal.

FOREIGN BOARD OF CONSULTING EDITORS

ISRAEL ABRAHAMS, M.A.,
Coeditor of "The Jewish Quarterly Review"; Author of "Jewish Life in the Middle Ages," etc.; Reader in Talmudic, Cambridge University, England.

M. BRANN, Ph.D.,
Professor in the Jewish Theological Seminary, Breslau, Germany; Editor of "Monatsschrift für Geschichte und Wissenschaft des Judenthums."

H. BRODY, Ph.D.,
Rabbi, Nachod, Bohemia, Austria; Coeditor of "Zeitschrift für Hebräische Bibliographie."

ABRAHAM DANON,
Principal of the Jewish Theological Seminary, Constantinople, Turkey.

HARTWIG DERENBOURG, Ph.D.,
Professor of Literal Arabic at the Special School of Oriental Languages, Paris; Member of the Institut de France.

S. M. DUBNOW,
Author of "Istoriya Yevreyev," Wilna, Russia.

MICHAEL FRIEDLÄNDER, Ph.D.,
Principal of Jews' College, London, England; Author of "The Jewish Religion," etc.

IGNAZ GOLDZIHER, Ph.D.,
Professor of Semitic Philology, University of Budapest, Hungary.

M. GÜDEMANN, Ph.D.,
Chief Rabbi of Vienna, Austria.

BARON DAVID GÜNZBURG,
St. Petersburg, Russia.

A. DE HARKAVY, Ph.D.,
Chief of the Hebrew Department of the Imperial Public Library, St. Petersburg, Russia.

ZADOC KAHN,
Chief Rabbi of France; Honorary President of the Alliance Israélite Universelle; Officer of the Legion of Honor, Paris, France.

M. KAYSERLING, Ph.D.
(Deceased),
Late Rabbi, Budapest, Hungary; Late Corresponding Member of the Royal Academy of History, Madrid, Spain.

MORITZ LAZARUS, Ph.D.
(Deceased),
Late Professor Emeritus of Psychology, University of Berlin; Meran, Austria.

ANATOLE LEROY-BEAULIEU,
Member of the Institut de France; Professor at the Free School of Political Science, Paris, France; Author of "Israël chez les Nations."

ISRAEL LÉVI,
Professor in the Jewish Theological Seminary; Editor of "Revue des Etudes Juives," Paris, France.

EUDE LOLLI, D.D.
(Deceased),
Late Chief Rabbi of Padua; Late Professor of Hebrew at the University, Padua, Italy.

IMMANUEL LÖW, Ph.D.,
Chief Rabbi of Szegedin, Hungary; Author of "Die Aramäischen Pflanzennamen."

S. H. MARGULIES, Ph.D.,
Principal of the Jewish Theological Seminary; Chief Rabbi of Florence, Italy.

H. OORT, D.D.,
Professor of Hebrew Language and Archeology at the State University, Leyden, Holland.

ABBÉ PIETRO PERREAU,
Formerly Librarian of the Reale Biblioteca Palatina, Parma, Italy.

MARTIN PHILIPPSON, Ph.D.,
Formerly Professor of History at the Universities of Bonn and Brussels; President of the Deutsch-Israelitischer Gemeindebund, Berlin, Germany.

SAMUEL POZNANSKI, Ph.D.,
Rabbi in Warsaw, Russia.

E. SCHWARZFELD, LL.D.,
Secretary-General of the Jewish Colonization Association, Paris, France.

LUDWIG STEIN, Ph.D.,
Professor of Philosophy, University of Bern, Switzerland; Editor of "Archiv für Geschichte der Philosophie," etc.

HERMANN L. STRACK, Ph.D.,
Professor of Old Testament Exegesis and Semitic Languages, University of Berlin, Germany.

CHARLES TAYLOR, D.D., LL.D.,
Master of St. John's College, Cambridge, England; Editor of "Sayings of the Jewish Fathers," etc.

SYSTEMS OF TRANSLITERATION AND OF CITATION OF PROPER NAMES*

A.—Rules for the Transliteration of Hebrew and Aramaic.

1. All important names which occur in the Bible are cited as found in the authorized King James version; *e.g.*, *Moses*, not Mosheh; *Isaac*, not Yiẓḥaḳ; *Saul*, not Sha'ul or Shaül; *Solomon*, not Shelomoh, etc.

2. The spellings of names that have gained currency in English books on Jewish subjects, or that have become familiar to English readers, are generally retained; cross-references are given when topics are treated under forms transliterated according to the system tabulated below.

3. Hebrew subject-headings are transcribed according to the scheme of transliteration; cross-references are made as in the case of personal names.

4. The following system of transliteration has been used for Hebrew and Aramaic:

א *Not noted at the beginning or the end of a word; otherwise* ' *or by dieresis; e.g., pe'er or Meïr.*

ב	*b*	ז	*z*	ל	*l*	פּ	(*with dagesh*), *p*	שׁ	*sh*
ג	*g*	ח	*ḥ*	מ	*m*	פ	(*without dagesh*), *f*	שׂ	*s*
ד	*d*	ט	*ṭ*	נ	*n*	צ	*ẓ*	ת	*t*
ה	*h*	י	*y*	ס	*s*	ק	*ḳ*		
ו	*w*	כ	*k*	ע	'	ר	*r*		

Note: The presence of dagesh lene is not noted except in the case of פ. Dagesh forte is indicated by doubling the letter.

5. The vowels have been transcribed as follows:

◌ָ	(ḳameẓ) *a*	◌ֻ	*u*	◌ַ	*a*	◌ֱ	*e*	וֹ	*o*
◌ָ	(ḳameẓ ḥatuf) *o*								
◌ֶ	*e*	◌ֵ	*e*	◌ֳ	*o*	◌ִי	*i*		
◌ִ	*i*	◌ְ	*e*	◌ֲ	*a*	וּ	*u*		

The so-called "Continental" pronunciation of the English vowels is implied.

6. The Hebrew article is transcribed as *ha*, followed by a hyphen, without doubling the following letter. [Not *hak-Kohen* or *hak-Cohen*, nor *Rosh ha-shshanah.*]

B.—Rules for the Transliteration of Arabic.

1. All Arabic names and words, except such as have become familiar to English readers in other forms, as *Mohammed*, *Koran*, *mosque*, are transliterated according to the following system:

أ	*See* א *above*	خ	*kh*	ش	*sh*	غ	*gh*	ن	*n*
ب	*b*	د	*d*	ص	*ṣ*	ف	*f*	ه	*h*
ت	*t*	ذ	*dh*	ض	*ḍ*	ق	*ḳ*	و	*w*
ث	*th*	ر	*r*	ط	*ṭ*	ك	*k*	ي	*y*
ج	*j*	ز	*z*	ظ	*ẓ*	ل	*l*		
ح	*ḥ*	س	*s*	ع	'	م	*m*		

2. Only the three vowels—a, i, u—are represented:

◌َ	*a*	◌ِ	*i*	◌ُ	*u*

No account has been taken of the *imalah; i* has not been written *e*, nor *u* written *o*.

---

* In all other matters of orthography the spelling preferred by the Standard Dictionary has usually been followed. Typographical exigencies have rendered occasional deviations from these systems necessary.

3. The Arabic article is invariably written *al*, no account being taken of the assimilation of the *l* to the following letter; *e.g.*, *Abu al-Salt*, not *Abu-l-Salt*; *Nafis al-Daulah*, not *Nafis ad-Daulah*. The article is joined by a hyphen to the following word.

4. At the end of words the feminine termination is written *ah*; but when followed by a genitive, *at*; *e.g.*, *Risalah dhat al-Kursiyy*, but *Hi'at al-Aflak*.

5. No account is taken of the overhanging vowels which distinguish the cases; *e.g.*, *'Amr*, not *'Amru* or *'Amrun*; *Ya'ḳub*, not *Ya'ḳubun*; or in a title, *Kitab al-Amanat wal-I'tiḳadat*.

C.—Rules for the Transliteration of Russian.

All Russian names and words, except such as have become familiar to English readers in other forms, as *Czar*, *Alexander*, *deciatine*, *Moscow*, are transliterated according to the following system:

А а	*a*	Н н	*n*	Щ щ	*shch*
Б б	*b*	О о	*o*	Ъ ъ	mute
В в	*v*	П п	*p*	Ы ы	*y*
Г г	*h*, *v*, or *g*	Р р	*r*	Ь ь	half mute
Д д	*d*	С с	*s*	Ѣ ѣ	*ye*
Е е	*e* and *ye* at the beginning.	Т т	*t*	Э э	*e*
Ж ж	*zh*	У у	*u*	Ю ю	*yu*
З з	*z*	Ф ф	*f*	Я я	*ya*
И и І і	*i*	Х х	*kh*	Ѳ ѳ	*F*
К к	*k*	Ц ц	*tz*	Ѵ ѵ	*æ*
Л л	*l*	Ч ч	*ch*	Й й	*i*
М м	*m*	Ш ш	*sh*		

Rules for the Citation of Proper Names, Personal and Otherwise.

1. Whenever possible, an author is cited under his most specific name; *e.g.*, Moses Nigrin under *Nigrin*; Moses Zacuto under *Zacuto*; Moses Rieti under *Rieti*; all the Ḳimḥis (or Ḳamḥis) under *Ḳimḥi*; Israel ben Joseph Drohobiczer under *Drohobiczer*. Cross-references are freely made from any other form to the most specific one; *e.g.*, to Moses *Vidal* from Moses *Narboni*; to Solomon Nathan *Vidal* from Menahem *Meïri*; to Samuel *Kansi* from Samuel Astruc *Dascola*; to Jedaiah *Penini* from both *Bedersi* and *En Bonet*; to *John* of Avignon from Moses de *Roquemaure*.

2. When a person is not referred to as above, he is cited under his own personal name followed by his official or other title; or, where he has borne no such title, by "of" followed by the place of his birth or residence; *e.g.*, *Johanan* ha-Sandlar; *Samuel* ha-Nagid; *Judah* he-Ḥasid; *Gershom* of Metz; *Isaac* of Corbeil.

3. Names containing the words *d'*, *de*, *da*, *di*, *van*, *von*, *y*, *of*, *ben*, *ha-*, *ibn** are arranged under the letter of the name following this word; *e.g.*, de Pomis under *Pomis*, de Barrios under *Barrios*, Jacob d'Illescas under *Illescas*. The order of topics is illustrated by the following examples:

Abraham of Augsburg
Abraham of Avila
Abraham ben Azriel
Abraham de Balmes
Abraham ben Baruch
Abraham of Beja
Abraham ben Benjamin Aaron
Abraham ben Benjamin Zeeb
Abraham Benveniste

---

* When Ibn has come to be a specific part of a name, as Ibn Ezra, such name is treated in its alphabetical place under "I."

Note to the Reader.

Subjects on which further information is afforded elsewhere in this work are indicated by the use of capitals and small capitals in the text; as, Abba Arika; Pumbedita; Vocalization.

LIST OF ABBREVIATIONS

[Self-evident abbreviations, particularly those used in the bibliographies, are not included here.]
